The Company explains that chemicals are critical to IAWC's operations and the chemicals IAWC uses are carefully manufactured and transported to adhere to applicable standards and must be of the quality and specifications required by the American Water Works Association ("AWWA"). IAWC states that the chemical market has been highly volatile in 2022 compared to historical levels, driven by many factors such as COVID-19 impacts, inflationary growth in commodity prices, impacts on energy prices caused by the conflict in Ukraine, and overall supply and demand pressure within a consolidating chemical market. IAWC notes that prices have increased dramatically in 2022 because

of transportation costs, supplier consolidation, energy costs, and demand for other products.

The Company explains that its initial test year forecast incorporated these factors to the extent information was available to IAWC. At the end of 2021, the Company states, it had solicited and received bid pricing for 2022, but more than half of the responses were only for the first three to six months of 2022. IAWC explains that the increase in prices from 2021 to the 2022 bids (effective January 1, 2022) resulted in an increase of approximately 36% in chemical expense. The forecast developed by the Company in its initial filing resulted in over a 30% price increase from 2021 actual expense.

The Company maintains that its updated chemical pricing, however, was developed based on market developments and information that was not known until after the Company filed its case in February 2022. The information that the Company had at the time that it filed this case suggested that the drivers of chemical price increases were temporary factors in 2021 that could stabilize later in the year. After February 2022, IAWC notes, it became apparent that these factors were not temporary, but rather would be persistent. As a result, market factors have continued to put pressure on the chemical industry throughout the year, and the Company has seen continued price increases. IAWC contends that the Russian invasion of Ukraine in late February 2022 was a major factor, leading to higher energy prices (also impacting costs of chemical production), raw material cost increases (impacts from sanctions or shortages of imported materials, leading to much tighter supply and therefore, higher costs), and higher transportation costs (fuel cost increases) that have forced suppliers to continue raising prices throughout 2022. The Company points out that these factors were not known when IAWC's rate case was filed in early February 2022.

IAWC notes that examples include the price of phosphates and ammonia, which increased 30% by the end of March 2022, driven by the fact that Russia and Ukraine were among the top exporters of those agricultural commodities in the world prior to the conflict. The Company explains that natural gas price increases also resulted in higher costs of chemical production: natural gas prices fell 20% from October 2021 to January 2022, then increased by more than 80% from January 2022 to July 2022.

IAWC explains that the update to power expense for 2023 reflects two drivers: (1) the future sourcing event to replace current pricing agreements with Homefield Energy and Constellation NewEnergy ("CNE"), which will be effective January 1, 2023, with new rates under the same pricing structure (fixed price and capacity passthrough); and (2) the impact of the MISO Capacity Market auction results in April 2022.

Regarding the first driver, IAWC explains that it has two power providers that serve its operational footprint – Ameren Illinois Company d/b/a Ameren Illinois ("Ameren") and Commonwealth Edison Company ("ComEd"). IAWC's Ameren accounts are supported through an electric supply agreement with Homefield Energy. IAWC's ComEd accounts are supported through an electric supply agreement with CNE. IAWC states that the current agreements with Homefield Energy and CNE have been in place since 2016, when they were selected as the winning suppliers in a competitive sourcing event. IAWC notes that it has extended the term on these agreements several times with the same

pricing structure. The current pricing agreements, which have a lower fixed price amount than what was originally agreed to on the first agreement, expire in January 2023.

IAWC states that the most recent indicative prices for both IAWC's Ameren and ComEd accounts are significantly higher than the current fixed pricing. IAWC points out that the quoted price for the Ameren accounts is about 80% higher than the current price and for the ComEd accounts, quoted prices are 67% higher. The Company explains that these price comparisons are based on a three-year term with the prices even higher for one- or two-year terms.

IAWC states that for the second driver, the capacity auction in April 2022 resulted in an electricity increase to $236.66/megawatt ("MW")-day from $5/MW-day a year earlier, and the expectation of continued increases in capacity costs driven by growing capacity needs. A movement of $5/MW-day to $236/MW-day is substantial and not something the Company could have anticipated prior to the completion of the April auction. And, the Company maintains, the effect is significant: the April 2022 auction will increase the capacity cost pass-through by approximately $1 million over the next year (June 1, 2022 through May 31, 2023).

IAWC states that based on this market information, which reflects developments that occurred after IAWC filed its initial case, the Company increased its fuel and power cost forecast for 2023 by approximately $5 million.

The Company explains that the invasion of Ukraine also led to increased fuel (and thus transportation costs). Diesel fuel costs have risen since the rate case filing, increasing 50% since January of 2022, which has led to rising transportation costs. The Company concludes that all of these factors have resulted in unforeseen cost increases since IAWC's original rate case filing.

IAWC notes that AG witness Selvaggio asserted, "[s]ome magnitude of the [u]pdated [e]xpenses should have been known at the time IAWC filed this case" because "the [u]pdated [e]xpenses did not suddenly in mid-2022 become volatile compared to historical levels." IAWC maintains that it is true that there was price volatility, supply chain issues, and inflationary pressures impacting IAWC's costs in 2021, although many considered these to be temporary factors that could return to lower levels later in the year. As IAWC explained, those 2021 impacts were considered in developing IAWC's original test year forecast to the extent it was available at the time that forecast was prepared. There were critical and unforeseeable developments that occurred after IAWC filed its case, however, including the Russian invasion of Ukraine in late February 2022 and the MISO capacity auction in April 2022. IAWC points out that no party argues that the Company could have anticipated these major events in its initial forecast, nor could they, given that those events had not happened yet. IAWC maintains that its updated chemical, fuel, and power costs reflect those post-filing market changes.

IAWC explains that AG witness Selvaggio did not consider this new 2022 information. Her testimony focuses on 2021 information. For example, IAWC explains, she points to a December 2021 inflation rate of 7.0% in support of her assertions. But her source for the 7.0% figure also shows the monthly inflation rate increasing to 8.5% in March and 9.1% in June. It is this sort of new information, including the future direction

of inflation, which was not known to IAWC at the time it filed its case, that support IAWC's updated expense projections.

IAWC also explains that Staff and other participants have had an adequate opportunity to review the updated information. IAWC included the proposed update in its rebuttal testimony, giving parties an additional 44 days in advance of the deadline established by Section 287.30 for an update (August 12, 2022), four weeks for Staff and Intervenors to review before their rebuttal testimony, and six weeks for all parties to review before the scheduled hearings in this proceeding. IAWC notes that the ALJs' Ruling on Staff's Motion to Strike the update (which the AG supported) found that IAWC's proposed update was timely and that "IAWC introduced evidence of a material change affecting the revenue requirement and parties may review the information and respond in rebuttal testimony." ALJs' Ruling at 1.

Ultimately, IAWC states, with respect to the substance of the update, Staff does not make any adjustments to its updated costs, and the AG does not object to the update of pension/OPEB expense. IAWC points out that no other party addresses its proposed updates, and no party testified that IAWC's updated costs were imprudent, unreasonable, or unnecessary. IAWC explains that the AG's opposition to its updated expenses for chemicals, fuel, and power, waste disposal, Building Maintenance and Transportation expenses is not supported, because it does not recognize the significant changes that occurred after IAWC filed its case.

IAWC notes that Ms. Selvaggio also claimed that IAWC did not adequately support the proposed update to chemical, fuel, and power costs because IAWC did not perform an independent audit of its updated forecast and reflect that in an updated G-2 schedule. IAWC explains that Ms. Selvaggio's assertions, however, are technical in nature, and not related to the substance of the evidence supporting IAWC's updates to production, fuel and power costs. Further, IAWC posits, Ms. Selvaggio's argument assumes that an independent audit of the updated forecast was needed. As IAWC explains, a reexamination of its updated costs by its auditor was not necessary because the scope of the proposed update was limited to impacts on production, fuel, and power costs caused by extraordinary economic developments and price increases in 2022 (and pension/OPEB expense, which was supported by an actuarial study and which no party objects to). As set forth in the American Institutes of Certificated Public Accountants ("AICPA") Guide for Prospective Financial information ("AICPA Guide"), which governs forecast examination, a "responsible party should consider whether users would expect prospective statements to be updated." Under the circumstances, IAWC states that it determined that an updated examination of its projected statements of rate base and operating income would not be expected, and so an updated G-2 schedule was not required.

IAWC notes that its updated cost projections were nevertheless thoroughly vetted. The forecast update was developed through a comprehensive review of the Company's operations. IAWC explains that recent experience and developments were considered for their impact on the Company's initial test year projections, in order to make appropriate adjustments for known or projected changes to the original projections. Where necessary, contacts were made, by local and corporate management personnel, for prices of supply chain goods and services to confirm estimates.

IAWC also notes that the AG contends that a revised auditor statement should have been provided with IAWC's rebuttal testimony to verify that the new expenses comply with AICPA guidelines, and that the changes are necessary based on information that could not have been reflected in IAWC's direct testimony. Absent this revised auditor statement, the AG states that the Company's updated expenses lack the necessary and sufficient support from a certified public accountant. As IAWC explained, however, a reexamination of updated costs by IAWC's auditor was not necessary to support IAWC's updated costs or required by forecast accounting guidelines.

IAWC explains that the scope of the proposed update was limited to impacts on production, fuel, and power costs caused by extraordinary economic developments and price increases in 2022 (and pension/OPEB expense, which was supported by an actuarial study and which no party objects to). According to IAWC, there is no requirement that a "certified public accountant" provide evidence of the reasonableness of IAWC's update for these impacts. But, IAWC explains, it did provide evidence that its update was reasonable: the review of factors and assumptions underlying the update that the AG claims is lacking did take place, and IAWC's updated cost projections were vetted. IAWC also points out that the Company did identify other changes to the forecast. In the case of rate base, IAWC updated to actuals for 2021, but made no additional adjustments to rate base, even though capital investment projections are expected to increase beyond the Company's original filing. IAWC stated that other changes were, on a net basis, not deemed material and so were not reflected in revised schedules.

And the accounting AICPA Guide cited by the AG, does not require a "revised auditor report" in every instance. As set forth in the AICPA Guide, a "responsible party should consider whether users would expect prospective statements to be updated." Under the circumstances, IAWC determined that an updated examination of its projected statements of rate base and operating income would not be expected, and so an updated audit report (G-2 schedule) was not required.

In response to IIWC/FEA/CUB's assertion that the cost increases do not relate to the types of cost increases contemplated by Part 287, IAWC explains that IAWC witness O'Drain discusses market impacts on contracts and pricing for chemicals and power. Regardless, IAWC's test year cost updates relate directly to its revenue requirement and the need for that revenue requirement to be updated to reflect new information available after IAWC filed its case.

The Company notes that the AG also complains that IAWC did not provide updated G-3, G-5, and G-6 schedules. IAWC argues that these concerns are unfounded. IAWC explains that with respect to Schedules G-3 and G-5, those schedules continue to accurately reflect how IAWC's forecast was developed and remain unchanged from IAWC's original filing, so an update is not needed. Upon further review of Schedule G-6, IAWC agreed that the G-6 schedule could be viewed as affected by the forecast update and provided an updated version in its surrebuttal. The corresponding expense updates were previously included in the Company's rebuttal filings within Schedules C-2.16 Building Maintenance Expense and C-2.17 Transportation Expense.

Lastly, IAWC notes that the AG overstates the amount of chemical expense at issue in the update. The AG proposes IAWC's chemical costs should be reduced by

$8,734,519. But IAWC's update increased Projected Chemical expense by only $4,202,175. IAWC explains that the remainder of the chemical expense increase is a correction to the test year forecast that was not expressly contested: IAWC identified a correction to the 2023 test year chemical usage forecast, discussed by Mr. O'Neill (IAWC Ex. 14.00), that increased the test year projection of chemical expense by $4,527,803.

IAWC maintains that considering the requirements for an update, the record shows the ALJs should allow IAWC to update its future test year. IAWC states that the filings of the Staff and parties in this case concede that the update changes significantly and materially affect IAWC's revenue requirement. The ALJs found that IAWC's update filing was timely, with adequate time for review. IAWC argues that the updates could not have been reflected in the initial tariff filing, as they were not known at the time of the initial filing as explained above. Therefore, IAWC concludes, it has met the criteria for an update under Section 287.30 and its updated costs should be approved and reflected in the revenue requirement.

b. AG's Position

The AG requests that the Commission remove $15,124,519 from IAWC's operating expenses because the Company added these costs in rebuttal testimony and did not sufficiently justify the additional expenses. IAWC filed its proposed tariffs and supporting exhibits on February 10, 2022. In its direct testimony, IAWC proposed a total revenue requirement increase of $87,416,477, or 31.09% above present rates. AG Ex. 3.0 at 3. In its rebuttal testimony, IAWC requested an even higher increase of $101,127,863, or 35.97%, above present rates. *Id*. In surrebuttal, IAWC slightly reduced its proposed revenue requirement to $100,731,769.

IAWC's update included increases to the production expenses, building and maintenance costs, transportation expenses, pension expenses, and OPEB expenses it had identified only five months earlier. IAWC Ex. 15.00 at 3. The AG argues that it showed that IAWC's list of purportedly unforeseeable circumstances included conditions that predated its February 2022 filing and IAWC did not demonstrate that its updates were reasonable and prudent.

The Commission's rules permit updates to test year costs and expenses during a rate case proceeding, so long as the company provides evidence "that a significant and material change affecting the revenue requirement . . . has occurred." 83 Ill. Adm. Code 287.30(a). Evidence to support a "significant and material change" includes changes to contractual obligations, revenue requirements, changes in the number of customers served, and changes required by government agencies. 83 Ill. Adm. Code 287.30(c). IAWC bears the burden of proof and must provide substantial evidence to demonstrate that its expenses are reasonable. 220 ILCS 5/9-201(c); *see also Bus. & Prof'l People for the Pub. Interest v. Ill. Commerce Comm'n*, 146 Ill. 2d 175, 196 (1991). The AG argues that IAWC also failed to show how the impacts of COVID-19 pandemic and inflation significantly and materially changed from February 2022, when it filed direct testimony, to June 2022, when it filed rebuttal testimony.

Similar increases were anticipated by Northern Illinois Gas Company d/b/a Nicor Gas ("Nicor") in its 2021 rate case, filed more than a year before IAWC filed this case. *N. Ill. Gas Co. d/b/a Nicor Gas Co.*, Docket No. 21-0098 (tariffs filed January 14, 2021). In

that docket, Nicor's witness stated that "the financial markets have been in extreme turmoil and continue to exhibit unusual volatility," and that "[s]ince January 2021, several government assistance programs have passed, which intended to stimulate the U.S. economy . . . . This infusion of cash into the economy has created concerns about inflation. The Consumer Price Index, a common measure of inflation, increased by 4.2% from April 2020 to April 2021 - the largest 12-month increase since September 2008." *See* IAWC Cross Ex. 1 at 1. In its final Order in Docket No. 21-0098, the Commission pointed out that Nicor "argues that the use of forecasted debt rates is particularly important, given how atypical current conditions are . . . [and] in recent months many members of the Federal Open Market Committee have accelerated their timelines for when interest rates will rise." Docket No. 21-0098, Order at 71. It is unclear why these circumstances were not reflected in IAWC's direct testimony when Nicor, for example, was able to anticipate those circumstances more than a year earlier.

The AG states that according to IAWC, these examples are irrelevant because inflation rose even higher in 2022. The AG points out that IAWC failed to acknowledge that this rise was part of a greater trend of inflation, as exemplified by Nicor's testimony. There is nothing in the record to suggest that inflation was waning at the time IAWC filed its rate case in February 2022 or that IAWC did not already sufficiently incorporate inflation into its future test year expenses. Further, the AG notes that IAWC did not justify its delay in modifying its test year forecast until June 29, 2022 - 125 days after the Russian invasion of Ukraine, 76 days after the results of the MISO capacity auction were released, and 27 days after Staff and Intervenors filed their direct testimony. The AG maintains that this delay was unreasonably prejudicial and left Staff and Intervenors with only 17 business days to review and analyze the updated filings, issue discovery (with a seven-day discovery turnaround), develop a position on IAWC's update, and prepare rebuttal testimony.

The AG recommends that the Commission reject IAWC's proposed updates because the Company failed to provide sufficient evidence to support them. AG Ex. 3.0 at 19, 21. Ms. Selvaggio noted, "[w]hen expenses are selectively changed based on more recent information, the original rate base, capital structure, and other expenses may also need to be revised. An update should be reflective of all key factors and assumptions known at the time of the update." AG Ex. 3.0 at 19.

This position is supported by 83 Ill. Adm. Code 287.30(b). The AG asserts that IAWC failed to provide sufficient evidence for the Commission to make the determinations required by Section 287.30(b). The AG states that it is unclear why IAWC's initial filing could not have reflected the circumstances other utilities like Nicor were aware of. Furthermore, IAWC did not update many of its schedules until surrebuttal, denying Staff and the Intervenors' witnesses the opportunity to respond to these changes.

The AG points out that IAWC failed to update other schedules at all. For example, IAWC did not update its Schedule G-2, which should contain "a statement from the independent certified accountant that the preparation and presentation of the applicable schedules comply with the guidelines of the [AICPA Guide]." *Id.* at 21. This schedule is required by Commission rule, 83 Ill. Adm. Code 285.7010, and a revised auditor statement should have been provided with IAWC's rebuttal testimony to verify that the new expenses comply with AICPA guidelines, and that the changes are necessary based

on information that could not have been reflected in IAWC's direct testimony. Absent this revised auditor statement, the AG maintains, the Company's updated expenses lack the necessary and sufficient support from a certified public accountant.

The AICPA Guide states, "[i]t is not usually expected that prospective financial statements will be updated, and the responsible party may state in the presentation that it does not intend to update them." AG Ex. 3.0 at 22. However, in cases where statements are updated, "[u]pdating requires the reanalysis of key factors and assumptions and the preparation of new prospective financial statements." *Id*. The AICPA Guide also states that if forecasts need to be updated, "appropriate disclosure should be made to persons who currently rely or are likely to rely on the prospective financial statements." *Id*. This is consistent with Section 287.30(b), which requires the Commission consider whether Staff and other parties "will have an adequate opportunity to review the updated information." 83 Ill. Adm. Code 287.30(b).

The AG notes that IAWC argues that the AG's position that IAWC must update its schedules is "technical in nature, and not related to the substance of the evidence supporting IAWC's updates to production, fuel and power costs." IAWC IB at 16. IAWC also argues that it was not required to update its Schedule G-2 because the AICPA Guide states that a "responsible party should consider whether users would expect prospective statement to be updated," and that "IAWC determined that an updated examination of its projected statements of rate base and operating income would not be expected, and so an updated G-2 schedule was not required." *Id*. The AG shows that IAWC's suggestion that the Commission would not expect an updated statement from a certificated accountant to support the Company's increased costs and expenses is self-serving, erroneous, and unreasonable. IAWC must support all of its costs and expenses with substantial evidence to satisfy its statutory burden. 220 ILCS 5/9-201(c). This includes providing all the requisite schedules to support its costs and expenses.

IAWC's Schedule G-2 does not reflect its updated test year estimates. Schedule G-2 states, "[t]he Projected Financial Information reflects management's judgment as of February 10, 2022, the date of the Projected Financial Information." IAWC Sch. G-2 at 6. IAWC updated its test year expenses on June 29, 2022, negating the assumptions and conclusions of its February 10, 2022 Schedule. The AG maintains that the Commission should reasonably expect IAWC to provide an updated statement by a certified accountant to support its updated schedules because "an update to only certain aspects of the test year forecast without a consideration of all assumptions violates the integrity of the original projected information constituting the test year." IIWC/FEA/CUB IB at 3-4. IAWC cannot simply ignore its burden of proof by self-proclaiming that these updates are "technical in nature." The AG thus requests that the Commission deny IAWC's updated expenses because it failed to provide substantial evidence—through updated schedules—to support rebuttal changes to its revenue requirement. This results in a total reduction in operating expenses of $15,124,746.

c. IIWC/FEA/CUB's Position

It is the position of IIWC/FEA/CUB that IAWC significantly increased its overall requested revenue requirement in rebuttal testimony, from $87 million to $101 million (a

16% increase), for alleged increases in its projection of certain production costs (chemicals, fuel and power) and pension/OPEB costs.

IIWC/FEA/CUB point out that AG witness Selvaggio does not agree that IAWC provided evidence sufficient to justify an update under Section 287.30. AG Ex 3.0 at 19. IIWC/FEA/CUB agree that an update to only certain aspects of the test year forecast without a consideration of all assumptions violates the integrity of the original projected information constituting the test year. *Id*. When expenses are selectively changed based on more recent information, the original rate base, capital structure, and other expenses may also need to be revised. *Id*. An update should be reflective of all key factors and assumptions known at the time of the update. *Id*. The Company did not sufficiently justify that the alleged cost increase – which remain projections based on a future test year – are changes that could not have been reflected in the initial tariff filing and were not anticipated when the Company filed its case just a few months ago. Further, the cost increases do not relate to the types of cost increases contemplated by Section 287.30: contractual obligations, revenue requirements, additions or losses of customers served, and government requirements or levies. Additionally, due to the timing of the requested increase in these production costs, Staff and Intervenors did not have adequate time to fully investigate the basis for these costs. Thus, IIWC/FEA/CUB recommend the Commission disallow these additional costs of production, Building Maintenance, and Transportation.

d. Commission Analysis and Conclusion

The Commission notes that the ALJs already determined that the Company's update to Production, Building Maintenance, and Transportation expense met the standards of Section 287.30 of the Commission's rules, and the Company was permitted to update its schedules. ALJs' Ruling at 1. The question is whether the Company could have presented that information in its initial filing in February 2022. IAWC unequivocally claims that due to the Russian invasion of Ukraine, supply chain problems and significant commodity price increases in spring 2022, inflationary pressure, changes in monetary policy by central banks, and stock market decline, it was forced to increase its revenue requirement by $11.5 million.

The Commission agrees that this is not an insignificant increase; however, the standard by which operating expenses are judged is whether they are just and reasonable. As the Company points out, the AG does not argue they are imprudent, unreasonable in amount, or unnecessary. The record demonstrates that as of the Company's tariff filing, Russia had not yet invaded Ukraine. No party disputes that due in part to that conflict, chemical pricing, fuel, and power costs increased substantially, and supply chains were significantly affected globally. Therefore, IAWC's expenses were not knowable at the time of its initial filing. Further, MISO's capacity auction in April 2022, well after the Company's filing, caused a significant impact to IAWC power costs. While the Commission agrees with the AG that Nicor in earlier dockets mentions global financial volatility due to the pandemic, it does not and could not consider the Russian invasion or the MISO auction, which were significant, impactful, yet unpredictable events.

The AG states that the Company did not update its Section 285.7010 G-2 schedule with a new auditor's certification statement. According to Section 287.30(a), "[w]hen data

are updated, the utility shall also provide updated information for any affected schedules and work papers originally submitted as a requirement of 83 Ill. Adm. Code 285." 83 Ill. Adm. Code 287.30(a). Schedule G-2 was not affected by the update, however. The Independent Accountant's Report indicated that G-2 would not be updated due to differences between projected and actual results, even if those differences are material. The independent certified public accountant did not update the prospective financial statements, nor its report; thus Schedule G-2 was not affected. When the Company filed its rebuttal testimony, Staff filed a Motion to Strike, in part, due to a concern that certain information required to be updated by Section 287.30(a) was not provided. Staff noted three schedules requiring updates were not provided: Schedule C-4, Schedule C-11.3, and Schedule B-8.1. IAWC admitted Schedule B-8.1 was inadvertently omitted and provided the schedule. Schedules C-4 and C-11.3 have no bearing on the updated calculation. In neither the AG's Response nor its Reply to Staff's Motion to Strike, did the AG suggest that an updated Schedule G-2 was needed or required. The AG's contention that an updated Schedule G-2 Schedule is now necessary is not reasonable.

The Commission deems that the parties were not prejudiced by this test year update, as Staff and Intervenors were granted an extension to file their rebuttal testimony, and additional time for discovery was provided. Not only that, Staff and Intervenors had sufficient time to serve discovery or cross witnesses concerning the update. Moreover, Staff did not respond to the issue in its briefs, and included the increase in its revenue requirement schedules, implying Staff finds those expenses are reasonable.

2. Performance Pay

a. IAWC's Position

IAWC argues that it should be afforded full and complete recovery of its market-based employee compensation costs, including costs related to American Water Works Service Company ("Service Company") performance pay. IAWC states that this is especially true when no party has introduced any evidence that the Company's performance pay has created imprudent levels of employee compensation. IAWC notes that, to the contrary, the record contains uncontested evidence, including a compensation study, establishing that IAWC's employee compensation costs are prudently incurred, just, and reasonable. The Company concludes that it should be permitted to fully recover the totality of these costs, because:

- even including performance pay, the Company's employee compensation costs – including performance pay – are below market levels;
- Service Company costs to IAWC, which include employee compensation at cost, are considerably below the market prices for such services;
- the Company's ability to manage Operations and Maintenance ("O&M") costs and strategically grow its customer base has mitigated expense increases for and created greater efficiencies in operations that have allowed the Company's O&M cost per customer to remain virtually flat over the past decade;
- IAWC's performance pay program is applicable to all employees, including bargaining unit employees; and

- the level of excellence motivated, in part, by performance pay has reaped the desired results as, for the third consecutive year, IAWC received the J.D. Power award for ranking highest in customer satisfaction among water utilities in the Midwest.

IAWC states that accordingly, the Company's total market-based compensation costs should be recoverable like all other operating costs. The Company explains that under the standard articulated by the Commission in its Order in the Company's 2007 general rate case, disallowance of cost recovery for the performance pay component of the Company's total market-based compensation program is not justified here because the performance plans, including components tied to both operational and financial goals, produce demonstrable benefits for customers. IAWC further states that where Service Company costs have also been shown to be below market levels, there is simply no reason to look behind those costs at the employee compensation plans that underlie them as a rationale for disallowing clearly reasonable costs.

IAWC maintains that the Commission should permit IAWC to fully recover its total market-based compensation costs, and not disallow recovery of performance pay costs either as a component of the Company's employee compensation or as a component of Service Company costs.

IAWC explains that employee compensation is a necessary cost of providing utility service. Therefore, IAWC states that it should be assessed through the same lens as other operating costs: if it is prudently incurred and reasonable as measured relative to what the industry pays for the same services, it should be recoverable through rates. IAWC states further that accordingly, if the Company's total compensation level is in line with the market, regardless of the combination of fixed and variable payments that the employees earn, then the Company's total compensation expense should be fully recoverable. The Company explains that, in other words, the focus should be on whether the Company's overall level of compensation is reasonable, giving management the discretion to design the compensation package that is best structured to compensate employees properly and to motivate efficiency, safety, courtesy, and other valuable employee traits.

IAWC recognizes that the Commission has in the past disallowed costs associated with performance pay that are tied to financial goals, on the grounds that they "primarily benefit" shareholders. *Ill.-Am. Water Co.*, Docket No. 07-0507, Order at 25 (July 30, 2008). IAWC contends, however, that a number of circumstances have changed over the years, not least of which is that performance pay, including financial goals, has become an integrated part of the total compensation package that businesses – including utilities – pay to their employees, which is needed to ensure utilities can recruit and retain the expertise they need to continue to provide safe and reliable service. The Company further states that the financial metrics tied to performance pay do not "primarily" benefit shareholders, but rather benefit all stakeholders including customers, employees and investors. Moreover, for IAWC specifically, the Company notes that an important change has been to provide performance pay to union employees pursuant to collectively bargained agreements. IAWC states that with the inclusion of IAWC's union employees in the performance pay compensation plan, all of IAWC's employees' efforts are aligned to drive efficiencies in the business.

IAWC points out that, in fact, the Commission's standard for recovery of performance pay has never been an absolute bar to recovery. As stated in the Order in IAWC's 2007 rate case, the Commission has "generally disallowed such expenses except where the utility has demonstrated that its incentive compensation plan has reduced expenses and created greater efficiencies in operations which provide net benefits to ratepayers." Docket No. 07-0507, Order at 25. The Company states that as established by the record evidence in this case and as further discussed below, IAWC has met this standard and should be allowed to fully recover its total market-based employee compensation costs, inclusive of performance pay.

IAWC explains that in order to attract and retain committed, dedicated and highly qualified employees, IAWC must offer compensation that is on par with that offered by the market relative to companies with which IAWC competes for employees. The Company, therefore, targets its total direct compensation (base and variable compensation) for near the market median (50th percentile). The Company explains that by using a combination of fixed and variable compensation that includes performance compensation, IAWC satisfies a dual objective of reasonably compensating employees while motivating them to achieve goals that improve performance and efficiency to benefit customers.

IAWC explains that performance pay may be awarded under two plans – the Annual Performance Plan ("APP") and the Long-Term Performance Plan ("LTPP"). All full-time employees participate in the APP. This includes bargaining unit employees, who became eligible for APP in 2018, with their first payments in 2019.

IAWC notes that APP pay is based on a combination of individual performance and achievement of plan goals. Union employees' performance pay was established through collective bargaining and is based on the achievement of plan goals.

IAWC explains that eligibility for the LTPP is limited to certain exempt employees. The LTPP consists of restricted stock units ("RSUs") and performance stock units ("PSUs") based on three-year vesting periods. RSUs are based on time-based vesting and PSUs are based on time and performance vesting conditions.

IAWC states that as part of its direct case, the Company submitted a study by Willis Towers Watson ("WTW") that assessed both IAWC's total market-based compensation program and its performance compensation program. IAWC points out that the findings of WTW's compensation study are described in the direct testimony of Mr. Mustich. *See* IAWC Ex. 9.00. The results of this study were not contested.

IAWC explains that WTW showed that the Company's Target Total Direct Compensation (base salary, plus APP, plus LTPP) lies 11% below the competitive market median measured from a national market perspective but lies 9% below the competitive market median measured from a Midwest regional market perspective.

IAWC maintains that the Company's performance compensation plans align the interests of customers, employees, and investors. The plans emphasize customer service, environmental compliance, a safe work environment, other operational goals, and financial goals. IAWC states that all of the APP and LTPP plans' performance

objectives – both operational and financial – focus employees' efforts in ways that benefit customers.

IAWC states that the operational goals of the APP are designed to focus plan participants on the performance results that can most directly influence customer satisfaction, health and safety, and environmental performance. IAWC contends that customers benefit from the plan goals because operational performance is improved by controlling costs, capturing efficiencies, promoting effective safety and risk management practices, and enhancing customer service. The Company explains that performance is determined by goals that directly benefit customers by creating a more productive workforce that is focused on customer satisfaction and achieving efficiency, environmental and safety goals.

IAWC states that goals such as reducing Occupational Safety and Health Administration incidents increase both customer and employee safety, and that maintaining and improving high quality customer satisfaction and service quality also provide customer benefits. The Company explains that its customer satisfaction performance goals measure customer contacts at IAWC's customer service centers and in the field. They are benchmarked against other utilities' performance, as reported by third-party customer satisfaction surveys. IAWC notes that in 2021, IAWC again ranked first in the Midwest Region for customer satisfaction in J.D. Power's Water Utility Residential Customer Satisfaction Study. IAWC explains that J.D. Power's Overall Water Utility Satisfaction Index measures key performance indicators in six areas: delivery (including quality), price, conservation, billing and payment, communications, and customer service. Customer satisfaction often goes hand-in-hand with reducing customer complaints. IAWC notes that its Commission inquiries for 2021 are down by approximately 61% as compared to 2017 levels.

The Company contends that all of IAWC's goals, operational and financial, benefit the customer, employees, and investors (debt and equity). IAWC explains that the goals focus employees' efforts on controlling costs, capturing efficiencies, promoting effective safety and risk management practices, and enhancing customer service. IAWC concludes that the financial goals of the APP and LTPP are thus complementary to the operational goals, and benefit customers in many ways.

IAWC notes that, importantly, achieving performance pay financial goals, such as targeted earnings per share ("EPS") performance, demands attention to operating efficiency. That is, unless the utility controls its operating costs, it likely will not achieve a targeted EPS. The Company explains that financial goal-based performance pay ensures that employees at all levels of the organization, and not just the upper ranks, remain focused on increasing efficiency, decreasing waste, and boosting overall productivity while providing excellent customer service. As a result, IAWC argues, incentivizing employees to control operating costs unquestionably benefits customers. Consequently, when financial performance is achieved through efficiency, as the Company explains is the case here, the interests of customers, employees and investors are aligned.

IAWC notes that every company has financial targets. IAWC explains that its rate case is driven by investments the Company is making in the communities it serves to help strengthen those systems, and that growth targets are in place to help measure and

manage the pace at which the Company makes those investments and to communicate that to the investment community. IAWC states that meeting those targets will help attract the ongoing capital investments needed to maintain and improve its water and waste water systems. Furthermore, the Company explains that as Mr. Mustich testified, the performance goals of most utilities and companies in general industry are aligned, so IAWC's inclusion of financial goals in the APP program is simply aligned with the market for how employees are compensated.

IAWC notes that since the Company's last general rate case, acquisitions, and new challenges, including maintenance costs post-acquisition for systems in need of upgrades, increased fuel, power, and chemical costs, and compliance with changing regulatory standards, have increased IAWC's overall O&M costs. IAWC states that despite these cost pressures, IAWC has been highly successful in managing its O&M costs. The Company notes that its proposed O&M expense per customer has remained relatively flat for the past decade and that if IAWC's costs had increased at the same rate as inflation over the same 10-year period, those costs would have been 27% higher than they are (increasing operating expense and IAWC's rate request by over $30 million). IAWC states that its ability to hold O&M costs per customer steady is a customer benefit that no party disputes. IAWC explains that given its record of controlling its per customer O&M costs over the last decade, it is apparent that IAWC's intense focus on customers, improving water efficiency, and financial performance has benefited IAWC's customers, thus satisfying the Commission's standard for allowing recovery of these costs.

IAWC maintains that the efficiency promoted and incentivized by the Company's performance pay, including financial goals, also permits increased infrastructure investment without increased rates. Specifically, the Company explains that every dollar of operating expenses saved can fund over $8 of investment – without increasing customer bills. IAWC concludes that this benefits both customers and investors.

Furthermore, IAWC notes that because water and wastewater operations are capital-intensive and must constantly and consistently access the capital markets at reasonable cost, customers benefit from a utility's financial health. IAWC explains that a financially healthy utility benefits customers because it enables the utility to meet its service obligations with reasonable financing costs, which helps the Company mitigate its requested rate increase. The Company further states that when financial performance is achieved through efficiency, as is the case for IAWC, the interests of customers and investors are aligned.

Finally, IAWC states, the analysis of the affordability of the Company's historical and proposed rates performed by Company witness Rea demonstrates that the Company's efforts have provided net benefits to its customers. IAWC explains that Mr. Rea's analysis relates the median household income for customers in its service territory to IAWC's utility bills over time, and that even with the rate increases in this case necessitated largely by the capital program, Mr. Rea's analysis demonstrates that IAWC's water service, overall, has become more affordable over time and will remain affordable under the Company's proposed rates. The Company points out that an important way that IAWC maintains the affordability of water and wastewater service is by continuously seeking to improve business processes and make investments that improve operational efficiencies. IAWC states that performance objectives – both operational and financial –

focus employees' efforts in ways to continually improve, and that this allows it to manage and contain cost increases and benefit its customers.

In summary, IAWC explains that no party contends that the Company should not compensate its employees with a combination of fixed and performance pay. Neither do they quarrel with the evidence that financial goals are an element of virtually all compensation plans offered by utilities or businesses generally. Most importantly, IAWC notes, no party disputes that IAWC's total market-based compensation costs are reasonable. Nevertheless, IAWC states that parties oppose recovery for the performance pay component of the total market-based compensation program related to financial goals. The Company responds that all performance pay, including for financial goals, benefits customers (as well as investors and employees). For these reasons, IAWC maintains, the adjustments to remove performance pay related to financial goals should be rejected, and IAWC should be authorized to recover its full compensation costs.

The Company explains that arguments by Staff and Intervenors, including assertions that the Company has provided no new evidence aside from claims it has provided in its prior rate cases, or has not demonstrated a direct correlation or derivation between the financial factors within the Company's incentive pay programs and a direct benefit to customers, fail to meaningfully address the Company's evidence.

Specifically, the Company states that Staff and Intervenors fail to rebut: (1) the Company's undisputed evidence establishing that IAWC's total compensation for its employees, as well as Service Company costs, are below market, and thus reasonable; and (2) the Company's evidence that the Company's performance pay programs, including components linked to financial goals, provide concrete customer benefits. The Company notes that the AG, for example, expressly argues that whether IAWC's current compensation levels are below market rates is irrelevant, but responds that no party can dispute that, to attract and retain talent, IAWC must offer compensation that is on par with that offered by the market relative to companies with which IAWC competes for employees, and that no party disputes the Company's evidence that performance pay, including financial goals, has become an integrated, customary and accepted part of the total compensation package that businesses—including utilities—pay to their employees. The Company notes that Staff and Intervenors do not even mention, much less rebut, evidence establishing that an important recent change has been to provide performance pay to union employees pursuant to collectively bargained agreements, meaning that all of IAWC's employees' efforts are aligned to drive efficiencies in the business. The Company further notes that an example of the demonstrated, concrete benefits for customers provided by these components of the Company's performance pay programs, which Staff and Intervenors do not address, much less rebut, is the Company's effective management of O&M costs, contrary to Staff's claim that nothing has changed since 2007.

The Company notes in reply briefing in response to Staff and Intervenors that the Company does not dispute that the Commission has articulated a standard for assessing the recoverability of performance pay costs that such costs are not recoverable if they primarily benefit shareholders. The Company explains, however, that the fact that this is the Commission's stated standard, however, does not mean it is an insurmountable barrier to recovery of all performance pay costs tied to financial goals, as suggested by

Staff's and Intervenors' briefs. IAWC explains that instead, the Commission must consider the evidence presented by the parties and determine whether a given compensation program is reasonable overall. The Company notes that while the Commission has, in the past, considered whether performance pay tied to financial goals primarily benefits shareholders, that consideration does not establish, in this case, a presumptive standard upon which the Commission can ignore the evidence. The Company submits that Staff and Intervenors have not rebutted its evidence establishing that the components of its performance pay programs that are tied to financial goals provide meaningful, concrete benefits to customers, and do not primarily, much less exclusively, benefit shareholders.

Regarding Service Company costs, IAWC states that unrefuted evidence in the record demonstrates that the Service Company provides services to American Water Works Company, Inc.'s ("American Water") affiliates, including IAWC, at cost, and at prices that are considerably below the market prices for such services. The Company explains that the Service Company provides legal, finance, accounting, engineering, environmental, technology, customer and other valuable services to IAWC and its regulated utility affiliates. IAWC states that it submitted a study at the outset of the case which showed, among other things, that: (1) the Service Company's services were necessary; (2) the Service Company's historical period cost per IAWC customer is reasonable because it is in line with the cost per customer for the proxy service companies; (3) IAWC was charged a reasonable value for managerial and professional services during the 12 months ended June 30, 2021; and (4) the services that IAWC obtained were at costs appreciably lower than the prevailing market costs for such services. IAWC states that no party has proposed an adjustment to the overall level of Service Company charges or asserted that any Service Company service is unreasonable or unnecessary.

IAWC maintains that the opposing parties' proposed adjustments to performance pay nevertheless also remove Service Company performance pay costs related to financial metrics. The Company states that including Service Company performance pay in their adjustments, however, is misplaced. The Company explains that in examining costs for accounting, engineering, legal or other professional services, the inquiry would be as to the level of such costs, rather than whether, e.g., the firm in question provided a given benefit or not. IAWC contends that the overall question that a regulator should ask regarding these services is whether their cost is reasonable given the nature of the services and the market for them, and that Service Company costs should be treated no differently. The Company notes that here, no party disputes the reasonableness of overall Service Company charges, and that accordingly, the Company should be permitted to fully recover its Service Company costs.

IAWC also explains that recruiting skilled workers, as well as retaining existing trained workers, is critical to continuing to provide safe drinking water and perform satisfactory customer service. The Company explains that competition among companies to attract and retain the best and highest performing employees is keen, and that in recruiting new employees or retaining existing employees, both the Company and American Water compete with general industry in surrounding regions and nationally. IAWC notes that especially with respect to employee retention, the loss of skilled

employees imposes a real cost on a company that then needs to attract and train replacements.

IAWC notes that both Staff and the AG's adjustment to remove performance pay tied to financial goals exclude RSUs from the adjustment. IAWC states that as Staff acknowledges, RSUs represent the right to receive stock depending on an employee's continued employment with American Water through a defined vesting period, not the achievement of financial goals. IAWC explains that RSUs are awarded to encourage employee retention, which benefits customers by providing a stable and experienced leadership team. IAWC posits that maintaining a stable and experienced leadership team has benefits from an operational standpoint, allowing continuity of management of operational programs and personnel, which in turns promotes safe and reliable service and ongoing improvements in efficiency. The Company further explains that a stable team also avoids the costs of employee turnover, which can result in lost investment in employee training and the incurrence of costs for employee replacement, such as recruiting, hiring, and new training costs.

IAWC points out that only IIWC/FEA/CUB continue to insist that RSUs be excluded from recovery. IAWC states that IIWC/FEA/CUB's position is not consistent with Staff and the AG's position or recent Commission decisions on this issue. The Company notes that the Commission has approved recovery of the cost of RSUs in rates in several recent dockets for other utilities. *See Ameren Ill. Co. d/b/a Ameren Ill.*, Docket No. 18-0463, Order (Nov. 1, 2018); *N. Ill. Gas Co. d/b/a Nicor Gas Co.,* Docket No. 18-1775, Order (Oct. 2, 2019); *Ameren Ill. Co. d/b/a Ameren Ill.*, Docket No. 19-0436, Order (Dec. 16. 2019); *Ameren Ill. Co. d/b/a Ameren Ill.*, Docket No. 20-0308, Order (Jan. 13, 2021). Thus, IAWC concludes, even if the Commission were to disallow recovery of compensation costs tied to financial performance (which it should not for all the reasons explained above), it should permit recovery of the cost of RSUs.

b. Staff's Position

Staff argues that the Commission should approve Staff's proposed adjustments to remove the cost of incentive compensation that is based on financial metrics, not providing ratepayer benefits, just as it has done in numerous prior cases. Staff Ex. 3.0 at 7-9. Staff states that the Company has provided no new evidence aside from claims it has provided in its prior rate cases, that this portion of incentive compensation provides ratepayer benefits in the form of specific dollar savings or other tangible benefits. *Id*. at 9-10. Staff's direct testimony proposed to remove 50% of the cost of the Company's Annual Incentive Plan ("AIP") and 100% of the cost of the Company's LTPP within Staff Schedule 3.02 because they were based on the achievement of financial goals. In rebuttal testimony, Staff agreed with the Company that the portion of the Company's LTTP related to RSUs are not based on the achievement of financial performance; therefore, Staff revised its proposed adjustment in Staff Exhibit 11.0, Schedule 11.02.

Staff notes that in the Company's 2007 general rate case, the Commission summarized its practice on incentive compensation as follows:

> The Commission has consistently disallowed recovery of payouts that are tied to overall company financial goals. As is apparent from previous rate orders, the Commission has

> generally disallowed such expenses except where the utility has demonstrated that its incentive compensation plan has reduced expenses and created greater efficiencies in operations which provide net benefits to ratepayers. In this case, no such showing has been made by IAWC.

Docket No. 07-0507, Order at 25. In the Company's two succeeding general rate cases (*Ill.-Am. Water Co.*, Docket No. 09-0319 (Apr. 13, 2010); *Ill.-Am. Water Co.*, Docket No. 11-0767 (Sept. 19, 2012)), the Company removed these incentive compensation expenses from its initial filings.

In Docket No. 21-0198, a rate case filed by Utility Services of Illinois, Inc., now Prairie Path Water Company ("USI" or "PPWC"), Staff proposed to remove from USI's revenue requirement incentive compensation that was based on financial metrics which was not contested by the Company:

> USI notes Staff's position that financial goals and metrics provide benefits to shareholders but not necessarily to ratepayers, and that 60% of USI's Employee Incentive Plan ("EIP") plan is based on the Company's financial performance. USI asserts that in the interest of limiting the issues in this proceeding, the Company did not contest Staff's recommendation. No other party contests the Company's calculation of incentive compensation, as adjusted by Staff, and these amounts are approved.

Util. Servs., Inc., Docket No. 21-0198, Order at 24 (Dec. 1, 2021).

Similarly, in a North Shore Gas Company rate case the Commission agreed that:

> when incentive compensation seeks to achieve goals that primarily benefit shareholders, then it is reasonable to require that shareholders bear the cost of that incentive compensation.

N. Shore Gas Co. / The Peoples Gas Light and Coke Co., Docket No. 09-0166/09-0167 (Cons.), Order at 58 (Jan. 21, 2010); Staff Ex. 3.0 at 14.

The Company continues to dispute any disallowance of its incentive compensation programs arguing that its overall employee compensation costs, including performance pay, are already below market levels. IAWC Ex. 23.00 at 3-4. Staff asserts, however, that these arguments do not address Staff's initial concern since Staff's adjustments were not proposed because of the amount of incentive compensation awarded. Rather, the issue is whether incentive compensation based on financial metrics that benefit shareholders should be recovered from ratepayers at all. Staff Ex. 11.0 at 8. Staff argues that since the Company has, once again, not demonstrated a direct correlation or derivation between the financial factors within the APP and the LTTP and a direct benefit to customers, the Commission should again remove the incentive compensation costs listed on Appendices A-E from the revenue requirement, consistent with longstanding Commission practice.

c. AG's Position

The AG requests that the Commission reduce IAWC's performance pay expenses by $3,897,310 and its proposed payroll taxes by $298,144 because IAWC's proposal would require ratepayers to reward the Company's employees for achieving goals that primarily benefit IAWC's shareholders. IAWC provides employees with incentive compensation or "performance pay" through its APP and LTPP. AG Ex. 1.0 at 4. Under the APP, IAWC rewards employees with additional compensation based on individual performance and the achievement of certain Company operating goals (short-term compensation). *Id*. Under the LTPP, IAWC rewards employees based on increases to the Company's EPS and "total shareholder return" ("TSR") with RSUs and PSUs (long-term compensation). *Id*. at 5.

The AG recommends that the Commission remove certain APP and LTPP costs, because they are based on increasing EPS, TSR, and other increases to shareholder returns. *Id*. at 5. The AG asserts that it is unreasonable to include incentive compensation based on increased shareholder returns (or profits) in IAWC's revenue requirement because that would, "in effect, require[ ] customers to reward utility management on a contingency basis for requiring them to pay higher rates." *Id*. at 5. The AG further demonstrates that if the Company achieves higher earnings than authorized or expected, related incentive costs should be borne by shareholders—the beneficiaries of achieving these financial goals—rather than ratepayers, who already will bear the additional costs of rate increases. *Id*. Staff, IIWC/FEA/CUB, and the Municipalities also recommend that these costs be removed, for similar reasons.

Excluding financial incentive compensation from the revenue requirement is consistent with the Commission's previous decisions on this matter. For example, in IAWC's 2007 rate case, the Commission disallowed the Company's proposed incentive compensation costs and noted ratepayers should not "have to help encourage IAWC's employees to meet goals benefitting shareholders and meet minimum service obligations." Docket No. 07-0507, Order at 25-26. Similarly, IAWC accepted Staff's request to remove such costs in its 2011 rate case (Docket No. 11-0767, Order at 58), and withdrew its requested incentive compensation costs from its 2016 rate case (*Ill.-Am. Water Co*., Docket No. 16-0093, Order at 23, 37 (Dec. 13, 2016)).

Further, the Commission recently removed the costs of incentive compensation based on the achievement of financial goals in Nicor's 2021 rate case, stating that "the Commission has long held that incentive compensation costs based on financial performance that primarily benefit shareholders are not recoverable in rates." Docket No. 21-0098, Order at 35–36. The Illinois Supreme Court has also held that when expenses are incurred "to achieve goals that primarily benefit shareholders, then it is reasonable to require that shareholders bear the cost of that [expense]." *People ex rel. Madigan*, 2011 IL App (1st) 100654, ¶54.

IAWC witness Matthews argued that ratepayers should be required to pay these incentive compensation costs because IAWC's employee compensation is below market levels, IAWC has reduced expenses and created operational efficiencies that benefit customers, and no party disputed whether these costs were reasonable. IAWC Ex. 13.00 at 3-5. As demonstrated above, the AG maintains that these costs are not a reasonable

cost of service because they benefit shareholders rather than ratepayers. Further, the Commission has consistently held that ratepayers are not required to pay incentive compensation costs for activities that primarily benefit shareholders. The AG points out that IAWC has not demonstrated "that it is the Company's customers that *primarily* benefit, nor has it even attempted to quantify the specific dollar savings or other tangible benefit that has accrued directly to ratepayers rather than shareholders," as a result of achieving increases in IAWC's EPS or TSR, nor has it "shown that the cause of the reduced expenses and greater efficiencies is attributable to incentive compensation related to financial goals and not operational goals." AG Ex. 3.0 at 7 (emphasis in original).

The AG notes that whether IAWC's current compensation levels are below market rates is irrelevant. There is no indication that compensation is inadequate to maintain a stable workforce. Ratepayers should not be asked to pay conditional, incentive compensation to attract employees with incentives to prospective or current employees to achieve shareholder rather than operational goals. AG Ex. 3.0 at 7-8; *see also N. Ill. Gas Co. d/b/a Nicor Gas Co.*, Docket No. 04-0779, Order at 45 (Sept. 20, 2005).

The AG maintains that IAWC witness Matthews' testimony does not justify recovery of incentive compensation based on financial metrics in light of consistent Commission precedent. In Ameren's 2015 gas rate case, the Commission made clear that "[i]ncentive compensation costs based on financial performance that primarily benefit shareholders are not recoverable." *Ameren Ill. Co. d/b/a Ameren Ill.*, Docket No. 15-0142, Order at 44 (Dec. 9, 2015). Similarly, in Nicor's 2004 rate case, the Commission stated that a utility may only recover incentive compensation costs where it has demonstrated tangible ratepayer benefits in the form of "specific dollar savings or other tangible benefits" and that a public utility cannot recover these costs simply by making "vague allegations that ratepayers benefit from an incentive compensation program." Docket No. 04-0779, Order at 44-45. The Commission reiterated this point in a 2020 Order addressing Nicor's 2016 energy efficiency reconciliation, where it noted "the Commission's longstanding practice is that incentive compensation costs are not reasonable and recoverable unless the Company can demonstrate tangible benefits to ratepayers . . . . The Commission has previously found that incentive compensation incentive compensation related to financial goals primarily benefits shareholders and therefore shareholders should bear the costs." *N. Ill. Gas Co. d/b/a Nicor Gas Co.*, Docket No. 16-0458, Order at 12 (Mar. 4, 2020). In the instant case, IAWC failed to demonstrate that its performance pay based on financial metrics resulted in specific dollar savings or other tangible benefits to ratepayers. Instead, the record evidence demonstrates that IAWC awarded performance pay to its employees for increasing Company revenues, which primarily benefits shareholders. The AG maintains that when shareholders benefit, shareholders should bear the cost.

The AG also states that the Company's claims that no party has disputed the reasonableness of IAWC's charges is simply wrong. To the contrary, the AG, Staff, and IIWC/FEA/CUB all recommended that the Commission disallow these incentive compensation charges. AG Ex. 1.0 at 4-9; Staff Ex 3.0 at 7-12; IIWC/CUB/FEA Ex. 1.0 at 79-86. The Company claims that these charges were reasonable by citing to the charges that natural gas and electric utilities report to the Federal Energy Regulatory Commission ("FERC"), through FERC Form 60. AG Ex. 3.0 at 8-9. But IAWC does not

file a FERC Form 60—which does not apply to water and wastewater companies. FERC reporting also does not govern Illinois regulatory policy or even mean that the costs are recovered through state-regulated rates. Therefore, IAWC's reference to FERC reporting is not relevant to this proceeding.

The AG notes that IAWC argues that "the financial metrics tied to performance pay do not 'primarily' benefit shareholders, but rather benefit all stakeholders, including customers, employees, and investors." IAWC IB at 20. To support this position, IAWC provided a table that showed its APP for 2021. IAWC IB at 23. However, no party has proposed that IAWC not recover the 50% of its APP that directly benefits customers. In fact, the AG, Staff, and IIWC/FEA/CUB agree to recommend that the Commission only remove the 50% of APP costs which are based on financial goals/EPS because these goals primarily benefit shareholders. The AG demonstrates that the Commission must deny IAWC's proposed recovery of incentive compensation based on the achievement of financial goals because IAWC has not and cannot demonstrate that the achievement of financial goals primarily benefits customers.

For these reasons, the AG requests that the Commission reduce IAWC's general expenses by $3,897,310 and its proposed payroll taxes by $298,144, as presented on AG IB Attach A, Sch. 2.

d. IIWC/FEA/CUB's Position

IIWC/FEA/CUB observe IAWC proposes to include in rates 100% of its short-term and long-term incentive compensation, or approximately $6.5 million of expense and some capitalized costs. This includes $4.7 million of APP expenses and $1.8 million of LTPP expenses. IIWC/CUB/FEA Ex. 1.0 at 79. The adjustment proposed by IIWC/FEA/CUB witness Walters lowers the Company's incentive compensation expense by approximately $4.2 million. *Id*. at 86.

According to IIWC/FEA/CUB, IAWC has two incentive compensation programs. APP awards incentive compensation based on the achievement of a variety of operational and financial metrics. IIWC/CUB/FEA Ex. 1.0 at 81. The plan includes goals for safety (20% of APP), customer satisfaction (15%), environmental leadership (15%), and EPS growth (50%). *Id*. at 81. The environmental leadership component is based on maintaining water quality. *Id*. American Water discusses the EPS growth metric in its APP plan description:

> We must continue to grow because growing companies can offer stable jobs, competitive compensation and benefits, and more personal development opportunities. Additionally, growth means we can deliver our outstanding service to more customers and communities across the U.S. Adjusted EPS is a key measure of our financial and operational success; achieving our earnings and strategic goals creates long-term stockholder value and provides greater total return to our stockholders.

Id.; IAWC/CUB/FEA Ex. 1.18 at 14.

IIWC/FEA/CUB take no issue with IAWC recovering APP costs that directly benefit customers, which amounts to 50% of the APP costs proposed in this proceeding. *Id*. However, IIWC/FEA/CUB observe the financial metrics include no benefits for current IAWC customers. IIWC/CUB/FEA Ex. 1.0 at 81-82. Rather, the plan description above clearly shows the primary beneficiary of the financial metrics is shareholders. *Id*. at 82. IAWC's second incentive compensation plan is LTPP, which provides equity awards in the form of RSUs and PSUs. *Id*. IIWC/FEA/CUB point out that as noted in Mr. Walters' direct testimony, American Water's plan description describes the two components.

> The equity award includes Restricted Stock Units (RSUs) and a performance-based stock component, which awards Performance Stock Units (PSUs) based on American Water's Total Shareholder Return (TSR) ranking among peer companies and adjusted compounded Earnings Per Share (EPS) growth. This design aligns with the external market and helps keep American Water competitive with our peers in the utilities industry.
>
> * * *
>
> As an American Water employee and stockholder, you not only have the ability to influence our day-to-day performance, you also have the opportunity to share in the long term rewards of American Water's success. The weighting of LTPP is 30% RSU and 35% for each of the two PSU components. As the plan description highlights, the equity awards under this program align the interest of employees with shareholders and, therefore, should be paid for by shareholders and not customers.

Id. (*quoting* IIWC/CUB/FEA Ex. 1.18).

IIWC/FEA/CUB argue that as the plan description highlights, the equity awards under this program align the interest of employees with shareholders and, therefore, should be paid for by shareholders and not customers. *Id*. at 82.

IIWC/FEA/CUB point out that the Commission articulated its standard on allowable incentive compensation costs in the Nicor 2004 rate case. There, the Commission made clear that incentive compensation costs should be borne by shareholders rather than ratepayers when the payment of incentives is dependent upon, or triggered by, the achievement of financial goals. In Docket No. 04-0779, the Commission stated:

> Nicor argues that incentive compensation allows it to maintain a stable workforce "that provides safe, reliable service to [Nicor] customers, which is obviously to the customers' benefit" reveals two flaws. Most importantly, it is the duty of Nicor, as a public utility, to provide safe, adequate, reliable service. If Nicor fails to meet the financial targets, or any other goals that trigger incentive compensation payments, Nicor still has an obligation to provide safe, reliable service. Given that

> Nicor's incentive compensation outlays are so heavily dependent upon financial targets, the Commission does not believe this rationale is sufficient to require ratepayers to bear the cost of the payments.

Docket No. 04-0779, Order at 45.

This standard has been upheld repeatedly since that 2004 proceeding, not just for Nicor, but also other Illinois gas, electric, and water utilities. IAWC provides no evidence that differentiates its request in this proceeding from each of these Commission determinations.

It is IIWC/FEA/CUB's position that incentive compensation costs related to financial goals should not be included in rates for several reasons. *See* IIWC/CUB/FEA Ex. 1.0 at 85. First, shareholders can pay for the incentive compensation using the higher earnings achieved as a result of meeting the financial goals. *Id*. Second, including these costs in rates exposes customers to the risk of paying for incentive compensation without knowing if the financial goals will be achieved. Third, incentive compensation costs relating to financial goals do not provide any additional benefit to customers. *Id*. IIWC/FEA/CUB argue the Commission has therefore rightly excluded these costs from rates. Consistent with both Commission standards and fair and balanced regulatory practices, the Commission disallows incentive compensation costs based on financial goals because incentive compensation programs primarily designed to align the interests of executives with shareholders should be paid for by shareholders.

IIWC/FEA/CUB reason that in addition to excluding these costs because they are designed to primarily benefit shareholders, including such costs in rates is asymmetrical by creating risk to ratepayers but not shareholders, and therefore cannot meet the just and reasonable standard in the Act. IIWC/CUB/FEA Ex. 1.0 at 85; 220 ILCS 6/9-201. For example, if incentive compensation costs are borne by shareholders and excluded from cost of service, then shareholders will pay these incentive compensation costs only if the incentive targets are achieved. IIWC/CUB/FEA Ex. 1.0 at 85. If the incentive targets are achieved, then the Company's earnings and dividend-paying ability will be enhanced. *Id*. In this instance, shareholders can pay for the incentive compensation costs out of the higher earnings created by the employees achieving the incentive financial goals. *Id*. If the goals are not achieved, shareholders will not incur the incentive compensation costs. On the other hand, if the incentive compensation costs were included in cost of service, customers would be obligated to compensate for incentive compensation costs regardless of whether or not the incentive financial goals were actually achieved. *Id*. In this instance, customers would compensate the utility for incentive compensation expenses, but customers would not benefit from the achievement of the financial goals.

According to IIWC/FEA/CUB, in IAWC's last rate case, Docket No. 16-0093, the Company withdrew its proposal to recover its test year LTPP expenses and this program was not reviewed by the Commission. Docket No. 16-0093, Order at 37-38. The Company also withdrew its proposal to recover the 50% of APP expenses tied to financial metrics in response to Staff's questions. *Id*. In its final Order in Docket No. 16-0093, the Commission commented on whether it is appropriate for a utility to recover incentive compensation tied to financial metrics in its order as follows:

> The Commission agrees with the AG that when incentive compensation seeks to achieve goals that primarily benefit shareholders, it is reasonable to require that shareholders bear the cost of that incentive compensation. In a recent [Peoples Gas Light and Coke Company / North Shore Gas Company] rate case, the Commission stated that "incentive compensation related to financial goals, affiliate goals or shareholder goals should not be recoverable from ratepayers." Docket Nos. 09-0166/0167 (Cons.) Order at 58.

Id. The Commission did approve recovery of the APP portion tied to operational metrics in Docket No. 16-0093.

IIWC/FEA/CUB note that IAWC witness Matthews argues that the financial health of the utility ties directly to customer benefits because "Utility customers benefit directly from productivity and efficiency…. Infrastructure improvement is capital intensive and the ability of the Company to fund this capital due to its financial health directly impacts the ability for us to invest in our systems while maintaining affordable customer bills." IAWC Ex. 23.00 at 3. IIWC/FEA/CUB conclude this argument fully ignores the applicable legal standard, articulated above, which has been upheld for decades by the Commission, and flies in the face of the public policy supporting this legal threshold.

It is the IIWC/FEA/CUB position that IAWC witness Matthews' justification relies on the comparative studies she cites that show IAWC's compensation programs are comparable to and competitive with market practices of other similarly sized utilities. IIWC/CUB/FEA Ex. 1.0 at 83. From this she concludes that these costs represent reasonable market-based compensation and should be recovered from customers. *Id*. While it may be true that incentive compensation is a standard part of compensation packages made available by utility companies, importantly, Ms. Matthews does not offer any evidence on how these costs are typically treated for ratemaking purposes. *Id*. at 82. Mr. Walters testified that, in his experience, incentive compensation costs tied to financial metrics are often excluded from customers' rates. *Id*. at 83. Indeed, the portion of IAWC's incentive compensation tied to financial metrics is already excluded from rates and not currently being recovered from customers. *Id*. Ms. Matthews offers no evidence this has harmed the Company's ability to hire and retain employees. *Id*.

IIWC/FEA/CUB also point out that Ms. Matthews further states that "[a]ll of the APP and LTPP plans' performance objectives – both operational and financial – focus employees' efforts in ways that benefit customers." IAWC Ex. 23.00 at 2-3. IIWC/FEA/CUB argue that opportunely, by this argument, not one dollar of incentive compensation expense would be excluded as primarily benefitting shareholders, even when the compensation is solely tied to financial goals. As IAWC would have it, all incentive compensation expense benefits customers in some indirect way. This line of argument cannot withstand scrutiny.

IIWC/FEA/CUB also assert that the Commission should disallow the cost of RSUs for the same reasons LTPP costs should be disallowed. It is the IIWC/FEA/CUB position that while the Commission has previously allowed the cost of RSUs in incentive compensation expense, Mr. Walters testified that IAWC's RSUs are awarded through its

LTPP, which describes the awards as being designed to align the interest of employees and shareholders and therefore incurred to benefit shareholders. IIWC/CUB/FEA Ex. 2.0 at 10. Thus, these costs should not be treated differently than the rest of the LTPP costs, and should be disallowed under the same legal and policy prescriptions set forth above. Mr. Walters testified that "all costs of the LTPP, including RSUs, should be excluded from ratemaking cost of service, and the cost should be paid for by shareholders via meeting the LTPP award targets." *Id*. at 10. IIWC/FEA/CUB recommend that, to be consistent with Commission practice and law, the entirety of the LTPP costs, including the award of RSUs, be excluded from the Company's cost of service.

e. Municipalities' Position

The Municipalities oppose including the costs associated with the financial metrics in rates. While they did not file testimony concerning the inclusion of financial metrics in the calculation of IAWC's incentive compensation program paid by ratepayers, the Municipalities agree with the testimony filed by the AG, Staff, and IIWC/FEA/CUB.

The inclusion of financial metrics is inconsistent with past Commission dockets where these costs have been excluded because achieving EPS goals benefits stockholders, not ratepayers. Specifically, as explained by AG witness Selvaggio, in previous IAWC cases, (i) the Company withdrew a similar request, (ii) it did not object to the costs being excluded in another case, and (iii) in Docket No. 07-0507, the Commission specifically disallowed the costs in the Company's revenue requirements. AG Ex.1.0 at 6.

Because inclusion of financial metrics benefit shareholders, the Municipalities agree with the other Intervenors and Staff that the costs associated with the metrics should not be recovered from ratepayers.

f. Commission Analysis and Conclusion

The Commission has consistently found that incentive compensation programs related to financial goals primarily benefit shareholders and those costs should not be recovered by the utility from ratepayers. The testimony and evidence presented by IAWC does not distinguish this case from the Commission's prior rulings on this issue, and the Commission once again finds that incentive compensation based on financial metrics should be removed and not recoverable from ratepayers.

IAWC argues that the Commission should consider its performance pay programs as a whole and determine whether the overall level of compensation is reasonable. The Commission disagrees because it ignores the standard for recovery previously established by the Commission. If IAWC wants to recover incentive compensation expenses based on financial metrics from ratepayers, it must demonstrate that the expenses provide cost savings or other tangible benefits to ratepayers. The financial goals included in IAWC's performance pay that Staff and the AG seek to exclude primarily benefit shareholders, not ratepayers.

IAWC argues that its performance pay programs provide customer benefits through reduced expenses and greater efficiencies. However, IAWC has not shown that these customer benefits were caused by the performance metrics related to financial goals rather than the Company's operational goals. IAWC also argues performance pay

based on financial goals is an accepted part of total compensation packages in businesses. However, merely because financial metrics are standard practice in business compensation packages does not mean that such expenses should be recovered from ratepayers.

The Commission has also rejected arguments similar to IAWC's that its performance pay plans, including the financial goals, are needed to attract and retain a skilled workforce to provide safe and reliable service. In doing so, the Commission found that such arguments ignore the standard for recovery and the legal duty of a utility to provide safe, adequate, and reliable service. *See* Docket No. 04-0779, Order at 45-46.

Accordingly, the Commission approves Staff's proposed adjustments to IAWC's performance pay. The Commission notes that Staff's proposed adjustments are in line with those proposed by the AG.

IIWC/FEA/CUB support Staff and the AG's proposed adjustments, but further argue that RSUs included in the LTPP should also be excluded. IIWC/FEA/CUB contend that because RSUs are included in the LTPP they should not be treated any differently than other costs in the LTPP and therefore should be excluded. The Commission disagrees. RSUs have a defined vesting period and are not based on the achievement of financial goals. Just because some costs in an incentive compensation program should be disallowed because they do not primarily benefit ratepayers does not invalidate the program as a whole. Under IIWC/FEA/CUB's reasoning, the entirety of the APP should be disallowed even though there are parts of the program that provide tangible benefits to ratepayers. The Commission rejects IIWC/FEA/CUB's additional adjustment to IAWC's performance pay.

3. Rate Case Expense

a. IAWC's Position

IAWC notes that IIWC/FEA/CUB and Staff contend that a four-year amortization period should be approved for the rate case expense. The Company originally proposed the use of a two-year amortization period for rate case expense, but in rebuttal testimony revised its proposal to a three-year amortization period for rate case expense. In the interest of narrowing the issues in this case, however, the Company revised its proposed amortization period to four years in its surrebuttal testimony, which is consistent with the recommendation from IIWC/FEA/CUB and Staff. The Company note that AG witness Selvaggio, supported by the Municipalities, continue to propose a six-year amortization period.

The Company points out that key to the AG's position is the argument that the Commission currently allows the unpaid amount from one case to be included in the amortization period for the rate case expense in the next rate case. According to the AG, then, even if IAWC files another rate case within the next six years, it would still recover its full rate case expense from this docket. But as IAWC explains, the unamortized balance of rate case is not reflected in rate base. Thus, IAWC states that it will not recover the carrying cost, or time value of money, related to inclusion of unamortized balances in future rate case expense. IAWC concludes that the Company will not recover its "full"

rate case expense in a reamortization scenario. IAWC states that for these reasons, the amortization period should be reasonable and not extended out over many years.

The Company states that the AG's argument - that it is reasonable to expect that IAWC's riders will have the effect of postponing the need for IAWC to file another rate case in the near term – is entirely speculative. The Company notes that prior to this docket, IAWC filed general rate cases on August 31, 2007, May 29, 2009, October 27, 2011, and January 21, 2016; making the point that, historically, there is a three-year average between filings. Therefore, IAWC states, a four-year amortization period is reasonable. IAWC argues that six years is not, as it reflects twice as long an amortization period than IAWC's historical average timing of its filings supports. Accordingly, IAWC states that the Commission should approve the four-year amortization period and decline the AG's proposed six-year timeframe.

Regarding communications costs, based on the briefing of the parties, IAWC states that this is no longer a contested issue. Although IAWC believes its overall rate case expense projection remains reasonable, in order to narrow issues in this case, IAWC has reduced its rate case expense projections by $132,000, which is comprised of $32,000 related to audit fees and $100,000 of the AG's recommended $139,738 reduction related to communications costs. The AG agrees with IAWC's proposed reduction of communication expense, and the Company, Staff, and the AG now agree that the Commission should approve IAWC's rate case expense projections as reflected in IAWC Exhibit 25.03, page 2.

b. Staff's Position

Staff argues that the Commission should approve Staff's recommended four-year amortization period, which was agreed to by the Company. Staff initially proposed adjustments to increase the amortization period of rate case expense from two years, originally proposed by the Company, to six years based on the length of time since the Company's previous rate case. Staff Ex. 3.0 at 3-6.

In rebuttal testimony, the Company disputed Staff's proposed amortization period of six years and instead argued for a three-year amortization period due to the average time between the Company's three previous rate cases, not including this proceeding. IAWC Ex. 15.00 at 12. In rebuttal testimony, Staff noted that it generally agreed with the Company's position to use the amount of time between rate cases historically but opined that the timing of the current proceeding should be considered. Staff Ex. 11.0 at 4. Therefore, as a compromise, Staff revised its original proposal and proposed a four-year amortization period which is the average amount of time between the Company's previous three rate cases in addition to this proceeding. *Id*. at 5. Staff further agreed with IIWC/FEA/CUB's recommendation for a four-year period for amortizing rate case expense. *Id*. at 3-7, *citing* IIWC/CUB/FEA Ex. 1.0 at 79.

In surrebuttal testimony, the Company agreed to revise its proposed amortization period from three years to four years, which is consistent with the recommendation from Staff and IIWC/FEA/CUB. IAWC Ex. 25.00 at 10. Additionally, in response to the AG, the Company agreed to reduce total projected rate case expense by $132,000 which is comprised of $32,000 related to audit fees and $100,000 of the AG's recommended $139,738 reduction related to communications costs. *See* AG Ex. 3.0 at 12. The AG

continues to propose a six-year amortization period. AG Ex. 3.0 at 10. Staff and the Company's agreed upon four-year amortization period is reasonable based on past rate case frequency, and Staff argues that it should be adopted by the Commission.

In rebuttal testimony Staff provided an additional recommendation regarding Section 9-229 of the Act, which requires the Commission to expressly address the justness and reasonableness of the attorney and expert compensation expended by the public utility to prepare and litigate the rate case. Staff Ex. 11.0 at 6 (*citing* 220 ILCS 5/9-229). Staff did not propose a disallowance of any specific rate case expense costs in this proceeding, but Staff's adjustment to the amortization period for rate case costs reduces the amount of expenses included in the revenue requirement. *Id*. Therefore, Staff proposes that the final Order in this proceeding include a Commission conclusion based on the Company's partially agreed reduction to total rate case expense proposed by the AG and the amortization periods agreed to by the Company, Staff, and IIWC/FEA/CUB. Staff states that if the Commission makes any adjustments to the overall total of rate case expense or the amortization period at the conclusion of this proceeding, those adjustments should be reflected in the Commission's statement that sets forth the amount of rate case expense included in the revenue requirement.

c. AG's Position

In its surrebuttal, the Company reduced its total communication costs by $100,000. IAWC Ex. 25.00 at 11. The AG requests that the Commission accept this reduction.

In its direct testimony, IAWC requested that the Commission amortize its $2.508 million rate case expense over two years. In its rebuttal testimony, IAWC increased its proposed amortization period to three years. IAWC Ex. 15.00 at 12. In surrebuttal testimony, IAWC then increased its proposed amortization period to four years. The AG recommends that the Company's rate case expense be amortized over six years. AG Ex. 1.0 at 9. In support of this position, AG witness Selvaggio indicated that IAWC's current base rates became effective in December 2016 and that its new base rates will become effective in January 2023, more than six years later. *Id*. at 9. Ms. Selvaggio further noted that the Commission approved a two-year amortization period in the Company's last rate case and, as a result, ratepayers have paid IAWC's rate case expense more than three times, over the past six years. AG Ex. 3.0 at 11.

The AG notes that IAWC argues that historically it has filed rate cases at an average of every three years. However, the AG points out that this position ignores the fact that this is only IAWC's second rate case since the Commission amended the rules governing IAWC's Qualifying Infrastructure Plant ("QIP") Surcharge in 2015. *Aqua Ill., Inc. & Ill.-Am. Water Co.*, Docket No. 15-0017, Adopting Order (June 29, 2016). In Docket No. 15-0017, IAWC noted that the approval of its QIP Surcharge would result in "reduced rate case frequency." *Id*., First Notice Order at 9 (Sept. 10, 2015). The AG demonstrates that the truth of IAWC's prediction has borne out over the past seven years, with IAWC filing one rate case in 2016 and the present case in 2022. Further, IAWC has obtained multiple tariffs that track costs outside rate cases and allow the Company to adjust charges to customers based on these costs. These tariffs include at least eight riders, including some that are relatively new. *See, e.g*., IAWC Sch. E-1, Central Division Water. These riders are also included in the tariffs of IAWC's other water and sewage districts.

See IAWC Sch. E-1 and E-2. It is reasonable to expect that these riders will continue to have the effect of postponing the need for IAWC to file another rate case in the near term. The AG shows that it is unreasonable for IAWC's rate case expense to be amortized over a four-year period, at a higher per-year cost of $594,000 to ratepayers, compared to $396,000 per year under a six-year period, when the immediate history and its multiple riders that allow it to increase charges between rate cases show IAWC is likely to wait as long or longer before filing its next rate case.

Moreover, even if IAWC files another rate case within the next six years, it would still recover its full rate case expense from this docket. The Commission currently allows the unpaid amount from one case to be included in the amortization period for the rate case expense in the next rate case. In other words, "IAWC would recover its rate case expense regardless of when the next rate case is filed." AG Ex. 1.0 at 10-11. However, if the Commission adopts IAWC's shorter amortization period, the AG asserts that ratepayers are at risk of significantly over-paying the Company for the cost of this rate case through an amortized annual balance that would remain in base rates until IAWC files its next rate case. *Id*. at 11.

For these reasons, the AG requests that the Commission adopt a six-year amortization period for IAWC's rate case expense in this docket at an annual expense of $396,000 per year.

d. IIWC/FEA/CUB's Position

IIWC/FEA/CUB note IAWC estimates the rate case expense to be $2,508,000. IAWC Ex. 4.03. IIWC/FEA/CUB take the position that rate case expenses should be recovered over the time rates are expected to be in effect. IIWC/CUB/FEA Ex. 1.0 at 78-79. Therefore, given the current rates have been in effect for five years, IAWC's proposal for a three-year amortization of rate case expenses is inappropriate and not supported by evidence in this proceeding. *Id.* IIWC/FEA/CUB witness Walters recommends the amortization period for rate case expenses be increased to four years. *Id.* This is a reasonable estimate of the time rates approved in this proceeding will be in effect given the timeframe between IAWC rate cases. *Id.*

IIWC/FEA/CUB point out that as shown in IIWC/FEA/CUB witness Walters' Table CCW-R-1, the average span between rate case filing is 3.61 years. IIWC/CUB/FEA Ex. 2.0 at 10. Mr. Walters noted that the average time between rate case filings has increased, significantly, between every rate case since the 2007 rate case filing. *Id.* For example, the amount of time has increased from 637 days to more than 2,200 days. *Id.* at 11. The trend in the time between the Company's filings over this period is that each case is being filed approximately 525 days (or 1.44 years) later than the amount of time between filing the previous case. *Id.* If we add the trend in the increased amount of time between filings (1.44 years) to the average of 3.61 years, this would be a five-year rate case cycle, or, the midpoint between my proposal of four years compared to the six-year proposal by Staff and AG. *Id.* For these reasons, Mr. Walters and IIWC/FEA/CUB continue to support an amortization period of four years for the Company's rate case expense. *Id.*

e. Municipalities' Position

The Municipalities agree with the AG that IAWC's rate case expenses be amortized over a six-year period rather than the four-year period agreed to by the Company. Initially, the Company proposed recovering rate case expenses over two years but in rebuttal testimony extended the period to four years. The more appropriate period is six years.

IAWC's current rates became effective on December 13, 2016, and any rate approved in this docket will not become effective until early 2023. Based on the greater than six-year period between its last rate case and this docket, a six-year recovery period is more appropriate. There is no harm to IAWC in establishing the six-year recovery period because, if the Company files another rate case prior to the end of the six years, any unamortized portion of rate case expenses will be included in the next case. However, the reverse is not true. If the Company is granted a four-year recovery but waits beyond the four years to file a new case, the Company will have over-recovered rate case expenses from ratepayers—and the ratepayers would not receive a refund for the overpayment.

The Municipalities agree with the AG that the more prudent course is to amortize rate case expenses over six years.

f. Commission Analysis and Conclusion

The only contested issue remaining regarding rate case expense is the amortization period. The Commission must determine an appropriate estimate of the time rates approved in this proceeding will be in effect given the timeframe between IAWC rate cases.

IIWC/FEA/CUB recommend an amortization period of four years based on the average span between IAWC rate case filings. Staff and IAWC also agreed to a compromise position of a four-year amortization period. The AG and the Municipalities support a six-year amortization period based in part on the fact that it has been six years since IAWC's last rate case. Additionally, parties note that the time-period between IAWC rate cases has gotten longer over time.

The Commission finds that a four-year amortization period is reasonable and is approved. While IAWC's last rate case was six years ago, IAWC's historical average is closer to the four-year amortization period supported by IAWC, Staff, and IIWC/FEA/CUB.

The Commission has considered the estimated costs to be expended by IAWC to compensate attorneys and technical experts to prepare and litigate rate case proceedings and assesses that the amount included as rate case expense in the total revenue requirement of $594,000 is just and reasonable pursuant to Section 9-229 of the Act.

III. RATE BASE

A. Uncontested Issues

1. Adjustment to Rate Base for 2021 Actuals (including Materials and Supplies)

IAWC states that its initial filing showed actual rate base balances as of September 30, 2021. In rebuttal, IAWC notes that it updated its rate base to account for actual balances as of December 31, 2021, which decreased rate base by $19,158,203. The AG and Staff proposed other adjustments to rate base schedules based on actual balances as of December 31, 2021. IAWC points out that based on Staff and AG adjustments, the Company revised its rate base as shown Schedule B-1-Jurisdictional Rate Base Summary. Further, IAWC Exhibit 16.03 presents year-end 2021 adjustments to materials and supplies, construction work in progress, and contributions in aid of construction balances based on year ended December 31, 2021 amounts. These adjustments, IAWC notes, along with adjustments for all other rate base components for year-end 2021 actual balances that IAWC is accepting per the AG's proposed adjustments to rate base schedules based on actual balances through December 31, 2021, can also be found on IAWC Exhibit 16.01. IAWC states that the Company has not, aside from the update to actuals, proposed further additions to rate base projections for 2023.

In rebuttal testimony, Staff proposed Schedule 9.03 regarding adjustments to rate base, reflecting data for the future test year ending December 31, 2023. Staff Ex. 9.0 at 2. The Company did not contest Staff's proposed adjustment. Staff states that the Commission should approve Staff's adjustment to rate base for 2021 actuals.

The Commission finds that IAWC's adjustment to rate base for 2021 actuals is not contested, is reasonable, and should be approved.

2. Adjustments re: Acquisitions

Staff proposed adjustments for the acquisitions of Villa Grove and YES Companies EXP Fred, LLC ("Yes Communities"). For the acquisition of Villa Grove (Central Water and Wastewater), Staff Schedule 2.01 presented adjustments to gross utility plant in service, accumulated depreciation, and depreciation and amortization expense for changes in estimates of costs related to the acquisition of Villa Grove. Staff Ex. 2.0 at 3. The Company agreed with Staff's adjustment in rebuttal testimony, and this issue is no longer contested. IAWC Ex. 16.00 at 3; Staff Ex. 10.0 at 2.

For the acquisition of YES Communities (Central Water), Staff Schedule 2.02 presented adjustments to gross utility plant in service, accumulated depreciation, and depreciation and amortization expense for changes in estimates of costs related to the acquisition of YES Communities. Staff Ex. 2.0 at 3-4. The Company did not oppose Staff's proposed adjustment; however, the Company provided an alternative calculation that included updated information for the Yes Companies water in addition to the wastewater (Central Division Wastewater) that was referenced in Staff's direct testimony as an outstanding data request response to TM 13.04. IAWC Ex. 16.02. After reviewing the data request response and the Company's rebuttal testimony and schedules, Staff found no reason to object to the Company's proposed calculation. Staff Ex. 10.0 at 2-3. Staff also indicated in direct testimony that it had outstanding issues regarding the YES

Communities wastewater acquisition, year-end adjustments to material and supplies, contributions in aid of construction, and construction work in progress. Staff Ex. 2.0 at 9. Based on the review of the Company's responses to data requests and Ms. Haugen's rebuttal testimony (IAWC Ex. 16.00, 16.02, and 16.03) addressing those outstanding issues, Staff found no reason to object to the Company's responses as stated. Staff Ex. 10.0 at 6.

This issue is not contested. The Commission approves Staff's adjustments.

3. Qualified Infrastructure Plant ("QIP")

The Company included in its rate base investments that would qualify as QIP under 83 Ill. Adm. Code 656. IAWC explains that upon entry of a final Order, the QIP Rider will be impacted with a reset of certain factors based on the new authorized amounts from this proceeding. IAWC supports Staff's recommendation to include amounts for NetQIP and NetDep by rate zone in a Findings and Orderings paragraph in the Final Order of this proceeding to document the QIP costs included in this proceeding. The Company agrees with Staff's recommended language, subject to the correction of the 2022 Central Division depreciation expense amount to $5,873,284. Staff agrees with the Company's suggested correction, and the Company did not oppose the language and amounts for all other rate zones. Staff recommends including a Findings and Ordering paragraph in the Final Order of this proceeding concerning the future review of QIP costs. IAWC agrees with Staff's recommended language. The Commission finds that this resolution is reasonable and is approved.

4. Removal of Incentive Compensation Based on Financial Metrics Capitalized Since the Last Rate Case

IAWC states that Staff and AG proposed an adjustment to rate base and depreciation expense for prior and projected capitalized performance compensation for Total Company. IAWC agrees to accept a $133,299 decrease to rate base and a $3,563 decrease in depreciation expense, as calculated by the AG. The Commission finds that this adjustment is reasonable, and it is approved.

5. Corrections to Accumulated Deferred Income Taxes ("ADIT")

IAWC states that Staff proposed an adjustment to as-filed average test year State deferred tax liability from ($83,094,362) to ($83,265,495). Staff proposed an adjustment to as-filed average test year Federal deferred tax liability from ($190,262,871) to ($190,605,224). IAWC notes that the AG proposed adjustments for restatement of accumulated deferred income taxes ("ADIT"), reducing State ADIT by $1,088,689 and Federal ADIT by $1,845,074 for Total Company. The Company accepts these adjustments. The Commission finds that these adjustments are reasonable, and they are approved.

6. Calculation of Cash Working Capital ("CWC")

Staff proposed an adjustment to calculate the CWC component of rate base for each rate zone. Staff Ex. 1.0 at 7. Staff proposed these adjustments in order to demonstrate that the total revenues should equal the total expenses. *Id*. In rebuttal testimony, the Company responded by agreeing that the final balance of CWC will be established using the revenue requirement and methodology that is ultimately approved

by the Commission in this proceeding. IAWC Ex. 20.00 at 3-4. IAWC explains that the Company summarized IAWC's CWC requirements in Schedule B-8 of Exhibit 31.01 after making the agreed to corrections of the CWC studies.

The Commission finds that, subject to its conclusions on CWC above, IAWC's proposed CWC amount is reasonable, and it is approved.

B. Contested Issues

1. Cash Working Capital ("CWC")

a. IAWC's Position

IAWC explains that CWC is the amount of funds necessary to finance the day-to-day operations of the Company and is included in the determination of a utility's rate base. CWC bridges the gap between the time when funds are provided to the Company by investors to allow the Company to provide service to customers, and the time when revenues are received from customers as reimbursement for these services. IAWC explains that it determined its CWC requirement by conducting five lead-lag studies to determine the timing of IAWC's cash inflows and outflows in order to analyze the level of funding required to operate on a day-to-day basis.

IAWC states that only two elements of the CWC requirement remain at issue – adjustments proposed by Staff and Intervenors related to the treatment of regulatory expense and deferred taxes. IAWC argues that these adjustments should be rejected so that IAWC's CWC requirement properly reflects the amount of funds necessary to finance the day-to-day operations of the Company.

IAWC states that Staff and AG propose to remove regulatory expense (rate case expense) as an operating expense line item in the calculation of CWC. IAWC argues that Staff and the AG's adjustment to the treatment of regulatory expense in CWC should be rejected.

IAWC notes that the inclusion of regulatory expenses in the determination of CWC recognizes the fact the Company is currently making cash expenditures related to the current rate case for which ratepayers have not provided any funds. IAWC contends that the inclusion of regulatory expenses in the determination of CWC recognizes that prospectively, ratepayers will pay rates enabling the Company to recover their current cash expenditure, but the collection of the cash will experience revenue lag days, as do all revenues (e.g., Central Water revenue lag of 54.8 days). IAWC contends that only considering operating expenses that typically occur during a given year ignores that the Company is currently making cash expenditures related to the current rate case and will experience lag in its recovery.

IAWC notes that Staff and the AG argue that including the regulatory expense in the CWC calculation would transform it into an investment on which ratepayers would be required to pay a return, contrary to past Commission orders that the unamortized rate case expense should not be included in rate base. IAWC states that contrary to Staff and AG's assertions, IAWC is not recommending that the unamortized rate case expense should be included in rate base, and IAWC's recommendation does not transform this expense into an investment. Rather, IAWC recommends the inclusion of regulatory expenses in the determination of CWC to recognize the fact the Company is currently

making cash expenditures related to the current rate case for which ratepayers have not provided any capital towards, and that eventually collection of the cash will experience revenue lag days, as do all revenues. IAWC states that, in short, the Company's proposed treatment of regulatory expense is about the appropriate level of working capital for the Company, not the recovery of rate case expense. For this reason, IAWC's proposed inclusion of regulatory expense in the CWC calculation is reasonable and should be approved, and the Staff and AG adjustment to the treatment of regulatory expense in CWC should be rejected.

IAWC explains that deferred income taxes are collected from customers, but not due to be paid by the Company until a future date, and so are deducted from rate base as a source of cost-free funds. IAWC further explains that there is a lag in collection of deferred taxes, but when the deferred taxes account balance is deducted from rate base, that deducted balance includes an uncollected amount of deferred tax expense that is treated as if the amount was already collected.

IAWC states that AG witness Selvaggio proposes that deferred taxes be removed from the CWC calculation because deferred taxes are a non-cash item not currently paid, and including deferred taxes in the CWC calculation transforms the deferred income taxes into an investment on which ratepayers would be required to pay a return. IAWC states, however, that excluding the revenues associated with deferred taxes from the CWC calculation ignores the lag between IAWC's recorded deferred tax amount and its cash collection of that amount from customers. IAWC collects cash associated with its deferred tax liability from customers in the same way it collects all other revenues. But when the deferred taxes account balance is deducted from rate base, that deducted balance includes an uncollected amount of deferred tax expense that is treated as if the amount was already collected. Because of this treatment, IAWC states, when that balance is deducted from rate base, it overstates the actual amount of available cost-free capital by an amount equal to the revenue requirement lag days.

Furthermore, IAWC states, inclusion of deferred taxes in CWC would not turn deferred taxes into an investment on which ratepayers would be required to pay a return, because the deferred tax account balance is already treated as a cost-free source of cash that is deducted from rate base. The Company's CWC calculation accounts for the fact that the balance that was deducted from rate base included amounts (15% of the current year's deferred tax expense) that have not actually been collected from ratepayers yet.

IAWC states that the Company and the AG agree that deferred taxes are expenses not currently paid. But IAWC's lead-lag analysis already accounts for the fact that there is no current expense associated with deferred income taxes by applying a zero-day expense lead. Assigning a zero-expense lead to deferred income taxes in CWC recognizes that a portion of these cost-free funds have not actually been collected from customers. IAWC explains that their treatment of deferred income taxes is in accordance with the Commission's holding in Docket No. 16-0093 because IAWC's CWC proposal treats deferred income taxes as a non-cash expense by applying a zero-day expense lead.

IAWC explains that their treatment is thus wholly consistent with the Illinois Supreme Court decision cited by the AG, *City of Alton v. Ill. Commerce Comm'n*, that "A

working capital allowance is designed to provide a return on those funds which are used to pay expenses incurred before the income produced by those expenses has been received," *City of Alton v. Ill. Commerce Comm'n* ,19 Ill.2d 76, 85 (1960), because IAWC's proposal acknowledges the lag in receipt of income from customers related to deferred taxes. So, while it may be correct that "Such a [CWC] return is not justified where payments by the utility's customers make funds available to meet current expenses without additional investment by stockholders", (*id.*), in this case, the payments (in rates for deferred taxes) by the utility's customers to make funds available have not happened yet.

IAWC states that if the Commission adopts the AG's proposal to remove deferred income taxes from CWC, that decision will deprive the Company of an opportunity to earn a fair rate of return on their entire plant investment. Accordingly, IAWC urges the Commission to decline to adopt the AG's adjustment to CWC for deferred taxes.

For these reasons, IAWC concludes, the Commission should approve IAWC's CWC as presented in IAWC Exhibit 31.00.

b. Staff's Position

Staff argues that the Commission should approve Staff's proposed adjustments to calculate the CWC component of rate base for each rate zone. Staff Ex. 1.0 at 7. Specifically, Staff proposes removal of regulatory expense as an operating expense line item in the calculation of CWC.

As Ms. Pearce testified, Staff's position is that rate case expense should not be included in the calculation of CWC because the costs are given special recognition from a regulatory ratemaking perspective, and these costs are not representative of operating expenses that typically occur in the course of a given year. Staff Ex. 9.0 at 5. In Illinois, public utilities are permitted to accumulate the total approved rate case expense and amortize it over a specified number of years, as approved by the Commission in a rate proceeding. *Id*. It is unnecessary to include these expenses in the CWC calculation as any unamortized portion of rate case expense will be recovered from ratepayers. *Id*. at 6. Thus, investors will recover the total amount of rate case expense that is approved by the Commission, and there is no need to include the expenses in the CWC calculation. *Id*.

Additionally, Staff explains that rate case expenses are not representative of operating expenses as total rate case expenses are significant in dollar amount and are only incurred in the years that a utility is preparing and litigating a request for a rate increase. *Id*. Rate cases such as the instant case, filed pursuant to Section 9-201 of the Act, are not filed annually, but rather periodically. As a utility does not file a rate case every year, or incur rate case expenses every year, Staff notes that it logically follows that these costs require special treatment different than normally recurring operating expenses. *Id*. at 6-7. Further, Staff asserts that to include the costs in the calculation of CWC as normal operating expenses would distort the cost of service for the test year. *Id*.

IAWC argues that this treatment does not adequately compensate shareholders because the Company is currently making cash expenditures related to the instant rate case for which ratepayers have not yet provided any funds. Staff states that the costs of

a rate case are more properly viewed as deferred costs which should be spread among the years between rate cases — not as an investment on which shareholders should be allowed to earn a rate of return. If such costs were included in the calculation of CWC, that is exactly what the ratemaking impact would be.

For example, if the cost of approved rate case expenses were included as a cost in the CWC calculation and some number of lead days were assigned to the costs, the resulting amount would increase the total balance of CWC. Staff notes that, because the balance of CWC is reflected in rate base, that amount would earn an overall rate of return equal to the Commission-approved weighted average cost of capital ("WACC"). This would distort the calculation of CWC, however, because rate case expenses are not representative of service costs for a test period. *Id*. Staff notes that the well-established Commission practice of deferring rate case expenses and amortizing them over the estimated number of years between rate cases provides a reasonable method of recovery for these costs. It permits full cost recovery of the Commission-approved amount from ratepayers, while spreading those costs over the estimated period between rate cases, thereby maintaining a representative cost of service for the test year.

Based on this reasoning and the well-established treatment of rate case expense, Staff asserts that the Commission should approve Staff's removal of regulatory expense as an operating expense line item in the calculation of CWC. Further, in the final Order in this proceeding, Staff states the final balance of CWC should be updated to reflect the operating revenue and expenses ultimately approved by the Commission for each rate zone. Staff Ex. 9.0 at 7.

c. AG's Position

The AG proposes adjustments to IAWC's CWC to remove the Company's rate case regulatory expense and deferred taxes. *Id*. at 16. The AG proposes to remove the regulatory expense because regulatory expenses are non-cash expenses that should not be included as part of the Company's CWC. *Id*. at 17, 19. Including the regulatory expense in the CWC "transform[s] the annual amortization of rate case expense into an investment on which ratepayers would be required to pay a return," instead of a pass-through expense, which would not result in ratepayers paying IAWC a return. AG Ex. 3.0 at 15.

IAWC argues that it "is not recommending that the unamortized rate case expense . . . be included in rate base, and [that its] recommendation does not transform its expense into an investment." IAWC IB at 34. However, the AG notes that IAWC ignored that CWC — by definition — is included in rate base and entitled to a return. In fact, IAWC explicitly stated earlier in its Initial Brief that "[c]ash working capital is the amount of funds necessary to finance day-to-day operations of the Company *and is included in the determination of the utility's rate base*." IAWC IB at 32 (emphasis added). While IAWC attempts to distinguish CWC from rate base investments, the effect is the same — if the Company's rate case expense is included in CWC, then ratepayers will pay the Company's shareholders a return on this expense.

In 2018, the Commission rejected a similar attempt by USI to include its rate case regulatory expense in rate base. In the USI rate case, the Commission held that "it is long-standing Commission practice that a utility can recover its rate case costs as an

expense, but that the unamortized rate case expense should not be included in rate base," and "Rate base should include investments in the utility that result in an asset that is used and useful, which rate case expense is clearly not." *Util. Servs. of Ill., Inc*., Docket No. 17-1106, Order at 13 (Sept. 24, 2018). For these reasons, the AG requests that the Commission remove IAWC's proposed rate case regulatory expense from its CWC.

The AG also recommends that the Commission remove IAWC's deferred taxes from its CWC because deferred taxes are a non-cash expense that should not be included in CWC. AG Ex. 1.0 at 18. This proposal is consistent with the Commission's Order in IAWC's last rate case, Docket No. 16-0093, where it held that "[i]t is standard practice that deferred income taxes are treated like a non-cash item because they are not currently paid and, therefore, do not require any funds to pay the yet-to-be paid taxes." Docket No. 16-0093, Order at 16-17. The Commission also rejected the inclusion of deferred taxes in CWC in other dockets. *See, e.g*., *N. Shore Gas Co. / The Peoples Gas Light and Coke Co*., Docket Nos. 14-0224/14-0225 (Cons.), 2nd Amendatory Order, App. A at 9-10 and App. B at 9-10 (Feb. 11, 2015); Docket No. 15-0142, Order, App. Sch. 8; *MidAmerican Energy Co*., Docket No. 14-0066, Order, App. at 9 (Nov. 5, 2014).

Further, the Illinois Supreme Court found in *City of Alton*,

> A working capital allowance is designed to provide a return on those funds which are used to pay expenses incurred before the income produced by those expenses has been received. *Such a return is not justified where payments by the utility's customers make funds available to meet current expenses without additional investment by stockholders*. Where tax accruals actually make funds available, it is error for the Commission to ignore them and fail to offset the working capital allowance.

City of Alton,19 Ill.2d 76, 85 (emphasis added). The AG requests that the Commission remove IAWC's rate case and deferred tax expenses from its CWC calculation because they are non-cash expenses and because it is unreasonable and against Commission practice to permit IAWC to recover a return on these expenses. AG Ex. 3.1, Sch. B; AG Ex. 3.2, Sch. E.

d. Commission Analysis and Conclusion

IAWC asserts that its treatment of regulatory expense should be viewed in the context of what is the appropriate level of CWC for the Company and not about the recovery of rate case expense. IAWC claims that it is not recommending that the unamortized rate case expense should be included in rate base, yet that is exactly what IAWC's proposal does. IAWC seeks to include rate case expense as an operating expense, which is then included in the determination of the Company's CWC and ultimately rate base and thus IAWC's investors would earn a return on it. The Commission agrees with Staff that rate case expenses are not representative of operating expenses that typically occur in the course of a given year and should not be included in the calculation of CWC. Rate case expense is not an investment that results in an asset that is used and useful and is therefore appropriately excluded from rate base. *See e.g.* Docket No. 17-1106, Order at 13.

The Commission's longstanding practice allows for a utility to recover its rate case expenses through specialized ratemaking treatment, but those rate case expenses are not included in rate base. The Commission finds no reason to divert from this established practice based on the arguments and evidence in this proceeding.

The Commission further adopts the AG's adjustment to remove IAWC's deferred taxes from CWC. Deferred taxes are a non-cash item that should not be included in CWC. The Commission routinely rejects inclusion of deferred taxes in CWC and IAWC did not make any compelling argument to alter from this practice.

IV. CAPITAL STRUCTURE AND RATE OF RETURN

A. Uncontested Issues

1. Cost of Long-Term Debt

IAWC states that it updated the cost of debt for the actual 2022 and proposed 2023 issuances. Staff accepts the Company's updated cost of long-term debt of 4.43%. The Commission finds the Company's updated cost of long-term debt of 4.43%, as agreed by Staff, is reasonable and should be approved.

B. Contested Issues

1. Capital Structure

a. IAWC's Position

IAWC explains that capital structure components must support long-lived assets, such as IAWC's water and wastewater infrastructure (which includes over $1 billion in investment since IAWC's last rate case). Therefore, a utility's capital structure tends to include long-term securities, such as common equity and long-term debt. IAWC manages the mix of debt and equity in its capital structure with the intent of optimizing its overall cost of capital, while maintaining financial strength and stability. Maintaining financial strength and stability also includes maintaining strong credit metrics consistent with an investment grade credit rating that would allow IAWC to attract new capital at a reasonable cost in all market conditions. IAWC must attract new capital to continue making significant investments to meet its obligation to provide safe, adequate, and reliable water and wastewater services to customers and to maintain its water and wastewater infrastructure. IAWC notes that the record demonstrates that IAWC expects to invest nearly $480 million in capital projects in 2022 and 2023.

IAWC proposes that its forecasted stand-alone capital structure be used for ratemaking purposes in this case. Specifically, IAWC proposes a capital structure using thirteen-month average balances as of December 31, 2023 and composed of 1.81% short-term debt, 46.24% long-term debt, and 51.95% common equity.

IAWC witness Selinger testified that the Company's forecasted capital structure is consistent with the way that the Company's assets are capitalized, with the Company's future test year of 2023, and with IAWC's proposed use of thirteen-month average balances for all items within the calculated rate base. IAWC's forecasted capital structure represents how IAWC finances its independent operations and capital investments. IAWC states that its recommended capital structure includes the costs incurred for both

debt and equity financing based on the risk factors relevant to IAWC and is in line with its peer utilities with similar risk profiles.

IAWC witness Bulkley explained why the Company's capital structure is an important consideration in determining the appropriate return on equity ("ROE") in this case. Assuming other factors are equal, a higher debt ratio increases the risk to investors, with a greater debt service requirement resulting in less cash flow available for common equity holders. Ms. Bulkley further explained why it is appropriate to consider the equity ratio of her group of proxy companies in assessing whether the Company's proposed equity ratio is reasonable and in line with the Proxy Group as a measure of the requisite authorized ROE to compensate investors for that risk. IAWC points out that because the proxy companies are relied upon in establishing the authorized ROE for IAWC, it is important that the financial risk of IAWC be similar to the financial risk of the proxy group. IAWC explains that this is accomplished when the equity ratio of the subject company is within the range established by the Proxy Group. According to Ms. Bulkley's analysis, the average common equity ratio for the Proxy Group at the operating subsidiary level is 53.43% and the median common equity ratio is 53.61% for the year 2020, within a range from 41.92% to 60.04%. Thus, IAWC's proposed common equity ratio of 51.95% approximates the average and median equity ratios found in Ms. Bulkley's Proxy Group albeit slightly below the Proxy Group.

IAWC witness Bulkley also explained that the credit rating agencies' response to the Tax Cuts and Jobs Act of 2017 ("TCJA") must be considered when determining the equity ratio. All three rating agencies have noted that the TCJA has negative implications for utility cash flows, with Standard and Poor's ("S&P") and Fitch Ratings Inc. specifically identifying increasing the equity ratio as one approach to ensure that utilities have sufficient cash flows following the federal income tax rate reductions and the loss of bonus depreciation. As S&P has noted "'[r]egulators must also recognize that tax reform is a strain on utility credit quality, and we expect companies to request stronger capital structures and other means to offset some of the negative impact'." IAWC Ex. 11.00 at 57 *citing* Standard & Poor's Ratings, "U.S. Tax Reform: For Utilities' Credit Quality, Challenges Abound," January 24, 2018, at 5. Furthermore, S&P has stated that it expects continued pressure on cash flows over the near-term as utilities continue to increase leverage to fund capital expenditure plans to reduce greenhouse gas emissions and improve safety and reliability, and prolonged inflation and rising interest rates could further constrain the credit metrics for utilities.

IAWC contends that the cash flow concerns raised by credit rating agencies as a result of the TCJA, inflation, COVID-19, and increased capital expenditures underscore the importance of maintaining adequate cash flow metrics for the industry, as a whole, and IAWC, particularly, in the context of this proceeding. IAWC points out that, while IIWC/CUB/FEA argue that none of these factors support adopting a higher common equity ratio here, the facts show otherwise.

IAWC states that the concerns of the credit rating agencies also demonstrate that it is reasonable to rely on a higher equity ratio in this case than IAWC may have relied on, or that the Commission may have approved, in prior rate cases. The adoption of a higher equity ratio here further is supported by the Commission's authorization of capital structures involving similar equity ratios in recent rate cases for other public utilities. *See*

Docket No. 21-0098, Order at 71 (adopting a capital structure for ratemaking purposes with 54.459% common equity); Docket No. 20-0308, Order at 130 (adopting a capital structure for ratemaking purposes with 52% common equity); *Aqua Ill., Inc.*, Docket No. 17-0259, Order at 21-22 (Mar. 7, 2018) (adopting a capital structure for ratemaking purposes with 53.22% common equity).

IAWC concludes that, for these reasons, its proposed capital structure for the test year ending December 31, 2023 is reasonable and appropriate and should be adopted by the Commission for ratemaking purposes in this proceeding.

IAWC observes that Staff and IIWC/CUB/FEA recommend that the Commission disregard IAWC's proposed capital structure and impute to it a structure that includes more debt and less common equity. Staff proposes an imputed capital structure with 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity, while IIWC/CUB/FEA propose the use of an imputed capital structure in which the common equity ratio would be no higher than 50%. IAWC states that Staff witness Kight-Garlisch argued that the Company's proposed capital structure contains more common equity than needed to support a financially strong water utility. She based this assertion on the Company's proposed equity ratio being higher than the 2021 common equity ratio of its parent company (approximately 40%) and the alleged average 2021 equity ratios for the Proxy Group and water industry (43.70% and 47.45%, respectively). She also argued that the Company's proposed capital structure would produce a rate of return that appears to violate Section 9-230 of the Act.

IAWC contends that it does not appear that IIWC/CUB/FEA witness Walters performed any quantitative analysis or correlated his proposed capital structure with any actual number. Instead, IAWC notes, Mr. Walters pointed to the Company's currently authorized equity ratio of 49.80%, the common equity ratios the Commission previously has approved for IAWC, and IAWC's reliance on its parent as well as American Water Capital Corporation ("AWCC") to fund its external capital.

IAWC points out that the Commission has refused to adopt an imputed capital structure absent any material facts that a utility's capital structure was manipulated. *GTE N. Inc.*, Docket No. 93-0301, Order (Oct. 11, 1994); 1994 WL 711847. IAWC further points out that the Commission also has concluded that "imputing a hypothetical capital structure to determine a utility's rates is a serious adjustment," and a utility's capital structure should not be disturbed unless it is found to be unreasonable or imprudent. *N. Ill. Gas Co. d/b/a Nicor Gas Co.*, Docket No. 87-0032, Order (Jan. 20, 1988).

IAWC argues that merely concluding that because the capital structure of a utility contains more common equity than its parent, it must have been manipulated, is not, by itself, evidence of manipulation. In this case, IAWC points out, neither Staff nor IIWC/FEA/CUB have even suggested, much less provided evidence, that American Water is manipulating IAWC's capital structure. Moreover, as demonstrated below, Staff and Intervenors failed to present evidence in support of their imputed capital structures and to refute IAWC's showing that its proposed capital structure is consistent with how the Company's rate base has been financed and is reasonable and in line with its peer utilities. IAWC maintains that the Commission should reject Staff's and Intervenors' imputed capital structures.

IAWC states that in response to Staff witness Kight-Garlisch's contention that IAWC has higher financial strength than the Proxy Group and the water industry, IAWC presented evidence showing that the peer group capitalization ratios utilized by Ms. Kight-Garlisch are not comparable to IAWC's proposed ratemaking capital structure, resulting in an "apples to oranges" comparison. For example, Ms. Kight-Garlisch included as part of the debt component in her capitalization ratios the full amount of short-term debt for each utility. Pursuant to 83 Ill. Adm. Code 285.4020, for ratemaking purposes, IAWC reduced its short-term debt balance by the amount of construction work in progress ("CWIP") accruing an allowance for funds used during construction ("AFUDC"). IAWC explains that this adjustment impacts the other components of IAWC's ratemaking capital structure as that reduction shifts some of the short-term capitalization balance to the other components, primarily common equity. IAWC notes that Ms. Kight-Garlisch did not make a comparable reduction, so the total debt ratios included within the peer group capitalization ratios that she utilized are overstated and the common equity ratios are understated.

In particular, IAWC points out, that the three-year average equity ratios for the Proxy Group described by Ms. Kight-Garlisch likely would look different if they had been subject to the adjustment to short-term debt detailed in Section 285.4020 (which reduced IAWC's short-term debt balance by approximately 75%). IAWC points out, by way of illustration, the three-year average capitalization ratios for California Water Service Group are 9.68% short-term debt, 43.84% long-term debt, and 46.48% common equity. Applying the same hypothetical 75% adjustment to the short-term debt balance results in three-year average capitalization ratios of 2.71% short-term debt, 49.91% long-term debt, and 50.09% common equity. The impact of this adjustment results in a common equity ratio 3.61% higher than what is reflected in the three-year average common equity ratio included within Ms. Kight-Garlisch's analysis. While the exact adjustment for each company will vary on the amount of CWIP accruing AFUDC, this example illustrates that, to varying degrees, making the short-term debt adjustment required by Section 285.4020 would result in higher common equity ratios for each company included within the analysis and, therefore, for the Proxy Group.

Further, IAWC states, the Moody's Investors Service ("Moody's") Rating Methodology Scorecard relied upon by Ms. Kight-Garlisch to support her suggestion for lower equity ratios involves multiple scoring categories in addition to a variety of other factors when contemplating its ratings. IAWC notes that her direct testimony, however, admittedly only presented a subset of those methodologies, namely the financial ratios. IAWC notes that, as Mr. Selinger explained, the Moody's report also states that it "does not include an exhaustive treatment of all factors that are reflected in our ratings and further states that the scorecard is a summary that does not include every rating consideration and that the scorecard outcome is not expected to match the actual rating of each company." IAWC Ex. 17.0 at 17. IAWC points out that Ms. Kight-Garlisch acknowledged that the Moody's report that she relied upon "does not include an exhaustive treatment of all factors that are reflected in Moody's ratings." Staff Ex. 13.0 at 18. Nevertheless, Ms. Kight-Garlisch tried to produce what she believed Moody's might have produced in its ratings analysis for her lower equity ratios without using all of Moody's ratings criteria, both objective and subjective. As IAWC witness Bulkley explained, Staff's suggestion that IAWC would have an implied credit rating from Moody's

of A2 using Ms. Kight-Garlisch's analysis is unsubstantiated because she did not consider all the factors that Moody's evaluates to establish a credit rating.

Finally, IAWC notes, Staff's and Intervenors' proposal to use an imputed capital structure fails to sufficiently account for IAWC's operating risk. IAWC states that although omitted from her direct testimony, Staff witness Kight-Garlisch argued on rebuttal that IAWC's operating risk is similar or slightly less risky than American Water's operating risk. IAWC presented evidence showing that this is not the case. As compared to American Water, IAWC has its own unique operating risk, since the factors that impact operating risk vary across jurisdictions, including unforeseen maintenance expense, as well as the types of sharp increases in power and chemical costs that IAWC has presented evidence of here. IAWC states that if it were the only utility owned by American Water, the operating risk profile of the parent and subsidiary entities would essentially be identical. In contrast, American Water's operating risk profile reflects the risk of all its regulated subsidiaries such that if one subsidiary were to experience financial difficulty, American Water's overall loss would be mitigated as long as the other utilities remained financially viable. In this respect, American Water's ownership of multiple utilities in multiple jurisdictions is a form of diversification that allows it to mitigate its operating risk. Of course, IAWC cannot mitigate its operating risk in this fashion as it bears 100% of whatever its operating risk is. The Company explains that because IAWC cannot diversify its operating risk, its operating risk profile is greater than that of its parent.

IAWC witness Bulkley also testified that additional risk factors must be considered with respect to the overall effect on IAWC's risk profile relative to the Proxy Group. Ms. Bulkley identified at least two such risk factors at issue here: (1) the Company's substantial capital expenditure program; and (2) the Company's anticipated investment in acquired systems to ensure those systems comply with state and federal water standards.

IAWC contends that, given the flaws in Staff's analysis, including those described above, the Commission should reject Staff's and Intervenors' proposal to use an imputed capital structure in favor of adopting IAWC's stand-alone forecast capital structure. IAWC notes that, unlike Staff's imputed capital structure, IAWC's proposed capital structure is consistent with how the Company's assets and rate base will be financed, is determined by IAWC, and is in line with peer utilities of similar risk profiles.

As noted above, Staff witness Kight-Garlisch suggested that the Company's affiliations with unregulated or non-utility companies have increased its risk and thus its cost of capital in violation of Section 9-230 of the Act. IAWC points out that, according to Ms. Kight-Garlisch, the increased risk is evident "in comparing [IAWC's] implied Moody's credit rating of A2 to the Moody's Baa1 rating for American Water[,]" as can be seen in the ratings of two of IAWC's sister utility subsidiaries, as well as in the Company's proposed equity ratio that is higher than the equity ratio maintained by American Water. *See* Staff Ex. 5.0 at 9.

Section 9-230 of the Act states:

> In determining a reasonable rate of return upon investment for any public utility in any proceeding to establish rates and charges, the Commission shall not include any (i) incremental

> risk [or] (ii) increased cost of capital . . . which is the direct or indirect *result* of the public utility's affiliation with unregulated or nonutility companies.

220 ILCS 5/9-230. The plain language of Section 9-230 of the Act requires that the utility's stand-alone capital structure and risk be used as a starting point in determining its cost of capital. 220 ILCS 5/9-230. Any "incremental risk" inuring to the utility due to its affiliation with unregulated or nonutility companies must be excluded from the determination of the utility's cost of capital. *Id*. In other words, Section 9-230 precludes imputing to the utility the risk of affiliated companies. As applied here, the Commission must establish the ratemaking capital structure for IAWC, the operating company, on a stand-alone basis, as if the Company were seeking to attract capital in financial markets based on its own individual merits and risk profile.

IAWC states that Section 9-230 also requires a causal connection between the increased cost of capital and the utility's affiliation with unregulated or nonutility companies. The higher cost of capital must be "*because of* its affiliation with an unregulated or nonutility company[.]" *Ill. Bell Tel. Co. v. Ill. Commerce Comm'n*, 283 Ill. App. 3d 188, 207 (2d Dist. 1996) (emphasis added).

The simple fact that IAWC is affiliated with its parent company or that IAWC's capital structure is different from American Water's consolidated capital structure is not a sufficient basis for an adjustment to IAWC's proposed capital structure. IAWC points out that its affiliation with American Water has existed in its current form since 2007 (*see* Docket No. 06-0336) and the Commission has not found IAWC's capital structure to be in violation of Section 9-230 in any of the Company's rate proceedings filed since that time. In the Company's last rate case, Docket No. 16-0093, Staff proposed to reduce the common equity balance in IAWC's capital structure (from 51.01% common equity to 49.65% common equity) but did not point to Section 9-230 in support of that argument.

IAWC states that, in this case, Staff has not attempted to show that any "increased cost of capital" is the "result of" IAWC's affiliation with American Water. IAWC states more particularly that Staff failed to present any information showing that IAWC has incurred higher costs due to the financial decisions of American Water. IAWC further states that Staff did not identify any specific statements from analysts or actions taken by American Water that would indicate that IAWC specifically is affected by the risks of its affiliates. Instead, Ms. Kight-Garlisch's conclusion was based, in part, on a comparison of the implied Moody's credit rating of A2 for IAWC that she calculated (IAWC does not maintain separate ratings) to the Moody's Baa1 rating for American Water. As discussed above, Staff's suggestion that IAWC would have a credit rating from Moody's of A2 is unsubstantiated because Staff's analysis did not consider all the factors that Moody's evaluates to establish a credit rating.

Moreover, IAWC notes, Ms. Kight-Garlisch did not quantify any incremental risk or increased cost of capital that results from this comparison or IAWC's affiliation with American Water. IAWC points out that, in response to a data request, Ms. Kight-Garlisch admitted that she "did not perform any analyses to estimate an increase in the cost of capital for IAWC that relates to an increase in the cost of equity that relates to its obligation to the parent company." *See* IAWC Ex. 32.00 at 19. Nor did Ms. Kight-Garlisch conduct

any analysis demonstrating that IAWC's equity ratio is "more than needed." IAWC contends that, having failed to provide any analysis, Ms. Kight-Garlisch is left with unsubstantiated generalized statements concluding that a utility will often maintain a higher equity ratio than it otherwise would need, thereby increasing the cost of capital and violating Section 9-230 of the Act.

If anything, IAWC argues, it is Ms. Kight-Garlisch's analysis that violates Section 9-230. Ms. Kight-Garlisch's testimony acknowledges that utilities with higher debt ratios (and so lower common equity ratios) are riskier. Ms. Kight-Garlisch is imputing a riskier capital structure to IAWC, as can be seen in her Table 1 in direct and rebuttal testimonies, where IAWC's proposed capital structure has an implied Moody's rating of A1, while Staff's proposed capital structure has a lower implied rating of A2.

Further, IAWC states that Ms. Kight-Garlisch relies on the 2021 average equity ratio of the Proxy Group companies and water industry at the holding company level. IAWC states that by relying on the 2021 average equity ratio for her Proxy Group and the water industry at the holding company level, Ms. Kight-Garlisch is directly including the risks and capital costs of the unregulated or non-utility affiliates of the Proxy Group companies for purposes of formulating her equity ratio recommendation for IAWC.

In particular, IAWC notes that included in the 2021 average for the Proxy Group and the water industry relied upon by Ms. Kight-Garlisch is an equity ratio for 2021 for Essential Utilities ("WTRG") of 45.88% and for SJW Group ("SJW") of 39.34%. However, IAWC states, each of these companies contains long-term debt at the holding company level that was issued to fund acquisitions that are not a part of the regulated or financial capital structure of the operating utilities of either WTRG or SJW. For example, SJW funded its 2019 acquisition of Connecticut Water Service, Inc. ("CTWS") with the issuance of long-term debt totaling approximately $510 million. The debt issuances associated with the acquisition had a substantial effect on the capitalization of SJW and were the primary reason the debt ratio increased from 37.40% in 2018 to 61.52% in 2019. Because the debt used to finance the acquisition of CTWS is not a part of the regulated or financial capital structures of the operating subsidies of SJW, a review of SJW's capital structure that includes the parent company debt – as conducted by Ms. Kight-Garlisch – is inappropriate because SJW's capital structure at the holding company is not reflective of how comparable regulated water utilities are being financed. IAWC states that similar to SJW, Ms. Kight-Garlisch's consideration of WTRG's capitalization at the holding company level is inappropriate because it does not reflect how comparable regulated water utilities are being financed and would incorrectly reflect the additional risks and capital costs of WTRG in the ratemaking capital structure for IAWC.

IAWC explains that while it demonstrated that it is inappropriate to use holding company capital structure data for the Proxy Group as the benchmark for determining the reasonableness of the Company's proposed capital structure here, IAWC also demonstrated that corrections were necessary to Ms. Kight-Garlisch's analysis if such a benchmark were to be used. Specifically, IAWC points out that Ms. Bulkley adjusted Ms. Kight-Garlisch's analysis to exclude the equity ratios for SJW and WTRG since each included significant holding company level debt used to fund acquisitions that is not a part of the capital structures of the operating subsidiaries and to adjust Atmos Energy Corporation's equity to exclude the debt issued as a result of costs incurred due to Winter

Storm Uri that will not be included in the company's capitalization going forward. IAWC explains that these corrections result in a Proxy Group average equity ratio of 53.56% and a water industry average equity ratio of 51.80% for 2021, both of which are clearly in line with the Company's proposed equity ratio of 51.95%.

IAWC states that to further support her argument regarding the alleged violation of Section 9-230, Ms. Kight-Garlisch argued that the Moody's credit ratings of New Jersey-American Water and Pennsylvania-American Water reflect the effects associated with their affiliation with non-jurisdictional utility affiliates or non-utility companies similar to her contention regarding IAWC. IAWC explains that the credit ratings of New Jersey-American Water and Pennsylvania-American Water are not relevant to the question of the appropriate capital structure for IAWC in this proceeding. Each individual company is subject to its own capital needs, operating risks, and market conditions. And, even if their actual (and not implied) credit ratings somehow were relevant here, they do not support the Commission's adoption of Staff's imputed capital structure. IAWC explains that is because its proposed equity ratio is lower than the authorized common equity ratios of New Jersey-American Water and Pennsylvania-American Water of 54.56% and 55.24%, respectively. IAWC points out that it also is lower than the actual equity ratios of these affiliates for the most recent calendar year of 2021 (54.31% and 55.33%, respectively).

Finally, IAWC states, in response to Ms. Kight-Garlisch's suggestion that IAWC is not sufficiently insulated from American Water's business decisions, that IAWC is a separate legal entity that maintains an independent capital structure, approved by its Board, that supports the continued provision of safe, reliable, and affordable water and wastewater service for the benefit of its Illinois customers. IAWC states that it is a stand-alone business enterprise in all material respects including, but not limited to, its independent state operations, capital investments, management, and corporate governance. IAWC explains that its capital structure includes the costs incurred for both debt and equity financing based on the risk factors that are relevant to IAWC and, as described by Ms. Bulkley, is in line with its peer utilities with similar risk profiles.

IAWC maintains that its customers have benefitted and will continue to benefit from the independence of IAWC as a stand-alone business entity, as well as its affiliation within the larger American Water enterprise, including through IAWC's financing arrangement with AWCC. The Company explains that as a subsidiary of the larger American Water enterprise, IAWC's customers benefit from American Water's size and scale to realize cost savings, the most significant of which includes lower debt costs from the Financial Services Agreement with IAWC's affiliate, AWCC. Thus, IAWC concludes, its affiliation with American Water and AWCC decreases, not increases, IAWC's cost of capital. IAWC addresses Staff's argument that authorizing a higher equity ratio than is necessary due to a utility's association with non-regulated affiliates would increase the utility's overall cost of capital in violation of Section 9-230. IAWC maintains that the statute does not allow (much less require) reductions to equity simply to lower the equity ratio to a "necessary" level. Similarly, the statute does not allow the Commission to change debt-to-equity ratios if it wants to lower rates. Reductions in the equity ratio are only permitted if certain facts have been proved: that the higher costs were caused by affiliations with

unregulated or non-utility companies. IAWC states that Staff has not made the requisite showing here.

IAWC also addresses Staff's attempt to distinguish its position on the appropriate common equity ratio here from the position it took very recently in the last Nicor rate case, Docket No. 21-0098, where Ms. Kight-Garlisch supported a 54.459% common equity ratio for the utility. IAWC points out that Staff argues that the difference between Nicor and IAWC is that IAWC does not have the same ringfencing measures in place as Nicor does, so, according to Staff, IAWC is impacted by the decisions of its parent company in a way that Nicor is not. IAWC further points out that Staff did not identify specific ringfencing provisions that it felt should be employed, nor did Staff present any evidence that ringfencing would result in a lower equity ratio for IAWC. In addition, Ms. Bulkley testified that utility mergers often include a condition of maintaining a minimum equity ratio in order to protect the utility operating company, and that the use of a lower bound on the equity ratio as a ringfencing measure to insulate the utility operating company from the parent is the exact opposite of Staff's proposal here. Ms. Bulkley further testified that there is a strong linkage between Nicor's credit ratings and the parent company, and that Staff did not substantiate its argument that Nicor was in a better financial position than IAWC. For these reasons, IAWC maintains that Staff's attempts to distinguish its support of a higher equity ratio of 54.459% in the Nicor rate case are without merit.

IAWC notes that as demonstrated by its evidence, and described above, it is reasonable and appropriate to rely on the operating company capital structures that have been used to fund utility operations for the comparison of IAWC to the Proxy Group and other water utilities as a measure of the reasonableness IAWC's proposed capital structure here. If anything, IAWC argues, it is Ms. Kight-Garlisch's analysis, which imputes a riskier capital structure due to IAWC's affiliation with American Water and considers the increased risk associated with the non-utility and unregulated affiliates of the Proxy Group and water industry, that violates Section 9-230 of the Act, not the Company's proposed equity ratio of 51.95%.

b. Staff's Position

Staff witness Kight-Garlisch's overall cost of capital recommendation for IAWC equals 7.01%, which reflects a capital structure including 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity; her overall cost of capital recommendation for IAWC also reflects Staff witness McNally's 9.78% recommended cost of common equity. Staff Ex. 13.0 at 2, Sch. 13.1.

Ms. Kight-Garlisch testified that the overall cost of capital equals the sum of the costs of the capital structure components (i.e., short-term debt, long-term debt, preferred stock, and common equity) after weighting each by its proportion to total capital. A primary goal of regulation is to properly balance the interests of a utility's ratepayers and investors. As Ms. Kight-Garlisch explained, this is accomplished by minimizing the cost of reliable service to ratepayers while allowing utilities to earn a fair and reasonable rate of return on rate base. Staff Ex. 5.0 at 2. Under the traditional regulatory model, ratepayer and shareholder interests are balanced when the Commission authorizes a rate of return on rate base equal to the public utility's overall cost of capital, as long as that overall cost of capital is not unnecessarily expensive. When public utilities charge rates that reflect

an authorized rate of return that exceeds the cost of capital, consumers are encumbered with excessive prices. Conversely, when public utilities charge rates that reflect an authorized rate of return below the cost of capital, the financial integrity of the utility suffers, making it difficult for the utility to attract capital at a reasonable cost, and thus, impairing service quality. Consumers are best served when the authorized rate of return on rate base equals the overall cost of capital. Staff Ex. 5.0 at 3.

Staff explains that capital structure affects the value of a business and, therefore, its cost of capital, to the extent it affects the expected level of cash flows that accrue to parties other than debt and stockholders. Employing debt as a source of capital reduces a company's income taxes, thereby reducing the cost of capital. As reliance on debt as a source of capital increases, however, so does the probability of default. *Id.* at 4. As the probability of default rises, expected payments to attorneys, trustees, and other outside parties increase. Further, the expected cash flows decline as the company foregoes investment that would have been available to it had its financial condition been stronger, including the expected value of the income tax shield from debt financing. Beyond a certain point, a growing dependence on debt as a source of funds increases the overall cost of capital. Therefore, Staff states that the Commission should not determine the overall rate of return from a utility's actual capital structure if the Commission concludes that capital structure adversely affects the overall cost of capital. *Id.*

An optimal capital structure would minimize the cost of capital and maintain a utility's financial integrity. Unfortunately, Staff states, determining whether a capital structure is optimal remains problematic for a variety of reasons. Consequently, one should determine whether the capital structure is consistent with the financial strength necessary to access the capital markets under most economic conditions, and if so, whether the cost of that financial strength is reasonable. *Id.* at 5.

To evaluate the Company's proposal, Ms. Kight-Garlisch compared the Company's proposed forecasted debt ratio, along with three other financial ratios derived from data forecasted by the Company, to the actual 2021 and three-year average financial ratios for the Company, IAWC's parent company, American Water, the Proxy Group, and the Water Industry. Ms. Kight-Garlisch also compared the implied Moody's credit rating for each, based on those four ratios, using the Moody's Benchmark Ratios for regulated water utilities.

Moody's publishes ratio ranges that may generally be seen at different rating levels for regulated water utilities. In Staff's analysis, each ratio for IAWC, American Water, the Proxy Group, and the Water Industry was calculated for both 2021 and as a three-year average from 2019 through 2021. IAWC's ratios were also forecasted for 2023 based on both the Company's proposed revenue requirement and Staff's proposed revenue requirement for the Company in this case. The Moody's financial ratios imply credit ratings of A1 and A2 for the Company, Baa2, and Baa1 for American Water, A3 and A3 for the Proxy Group, and A3 and A3 for the Water Industry, based on 2021 data and 2019-2021 data, respectively. The Company has higher overall cash flow ratios and lower debt ratios (both indicative of higher financial strength) than American Water, the Proxy Group, and the Water Industry. Staff Ex. 5.0 at 7-8. Thus, Ms. Kight-Garlisch concluded that IAWC's proposed 51.95% equity ratio was unnecessarily high. Since the Company's proposed capital structure is not appropriate for determining IAWC's rate making capital

structure, Ms. Kight-Garlisch recommended using an imputed capital structure that contains 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity. Staff Ex. 5.0, Sch. 5.1.

Mr. Selinger criticizes Ms. Kight-Garlisch's Moody's credit rating analysis arguing that it was not a comprehensive analysis. IAWC Ex. 17.00 at 16-17. Staff disagrees. Moody's relies on several qualitative measures to assess a company's operating risk and to a lesser degree its financial risk. Moody's also relies on several quantitative measures, which are replicated in the ratio analysis presented by Ms. Kight-Garlisch. While Ms. Kight-Garlisch only presented the financial ratios in direct testimony, Ms. Kight-Garlisch's qualitative assessment of IAWC was provided to IAWC. Staff Ex. 13.0 at 18. Ms. Kight-Garlisch assessed IAWC's operating risk to be similar or slightly less risky than American Water's operating risk. *Id.* Thus, Staff argues that Mr. Selinger's criticism should be discarded, as it is without merit.

Staff notes that the Company's proposed equity ratio of around 52% is much higher than its riskier parent company's common equity ratio of only about 40% in 2021. In comparison to its peers, Staff argues that the Company's proposed capital structure indicates a relatively low degree of financial risk for a water utility. Specifically, the average 2021 equity ratios for the Proxy Group and Water Industry are 43.1% and 48.7%, respectively. The most recent three-year average equity ratios for the Proxy Group and Water Industry are 45.0% and 49.1%, respectively. This denotes a higher degree of financial risk than a common equity ratio of about 52%, as IAWC proposes for itself. Staff Ex. 5.0 at 8. Thus, the Company's proposed capital structure contains more common equity than needed to support a financially strong water utility.

In addition, Staff argues that the Company's proposed capital structure, which consists of approximately 48% debt and 52% equity, is not appropriate for determining the Company's capital structure. As a result, Ms. Kight-Garlisch recommended using an imputed capital structure that contains 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity. Staff Ex. 5.0, Sch. 5.1. Staff asserts that the Company's proposed capital structure would produce a rate of return that violates Section 9-230 of the Act. Section 9-230 states, "In determining a reasonable rate of return upon investment for any public utility in any proceeding to establish rates or charges, the Commission shall not include any (1) incremental risk, [or] (2) increased cost of capital…which is the direct or indirect result of the public utility's affiliation with unregulated or non-utility companies." 220 ILCS 5/9-230. The effect of the Company's affiliations with unregulated or non-utility companies on its cost of capital is evident in comparing its implied Moody's credit rating of A2 to the Moody's Baa1 rating for American Water. A similar effect can also be seen in the ratings of two of IAWC's sister water utility subsidiaries.

Staff asserts that it is essential to note that IAWC has less financial risk than American Water. IAWC's ratios imply financial strength equal to an A2 Moody's credit rating, whereas American Water's ratios imply financial strength consistent with its Baa1 credit rating. All else equal, a company with less risk can carry a lower percentage of equity on its balance sheet than a company with greater risk. Yet, the Company's forecasted equity ratio of around 52% is much higher than its riskier parent company's common equity ratio of only about 40%. Staff Ex. 5.0 at 11. Both the Company's implied credit ratings and financial ratios indicate that its affiliation with unregulated or non-utility

companies has increased its risk. Pursuant to Section 9-230 of the Act, the cost associated with that increased risk cannot be reflected in the Company's rates.

Staff notes that IAWC witness Selinger argues that IAWC's stand-alone capital structure should be used for setting rates in this case and that Staff has not demonstrated that Section 9-230 of the Act applies. IAWC Ex. 17.00 at 14. Similarly, IAWC witness Bulkley argues that under Section 9-230 of the Act, the Commission must establish the rate making capital structure on a stand-alone basis. IAWC Ex. 21.00 at 64-66. Staff contends that Mr. Selinger and Ms. Bulkley's arguments are without merit. Indeed, Section 9-230, by its very nature, requires a utility's affiliations to be considered when evaluating its capital structure. It is clear that corporations have incentive to maintain relatively low equity ratios (i.e., high debt levels) at the holding company level while maintaining relatively high equity ratios at the utility operating company level. This is detailed by the court in *Citizens Util. Bd. v. Ill. Commerce Comm'n*:

> When a larger corporation owns a utility, the corporation is generally motivated not to establish an optimal, lowest cost capital structure for the utility, but to use instead a structure with a greater percentage of equity than is optimal, thereby allowing the corporation to realize a greater return. The assured profits from the regulated utility can then bolster the security of the corporation, allowing it to sell its own debt instruments at lower cost and use the debt capital to finance riskier, unregulated and competitive ventures. Thus, the corporation maintains an overall capital structure with a higher proportion of low-cost debt, while reporting the capital structure of the owned utility with a higher proportion of high-cost equity.

Citizens Util. Bd. v. Ill. Commerce Comm'n, 276 Ill. App. 3d 730, 746 (1st Dist. 1995).

Thus, to service its parent's obligations, the utility subsidiary will often maintain a higher equity ratio than it otherwise would have needed, thereby increasing the utility's cost of capital, while leaving ratepayers with the costs. The legislature, through Section 9-230, has directed the Commission to protect ratepayers against the increased cost of capital sought by a utility with such an inflated level of equity. Specifically, in Illinois, "if a utility's exposure to risk is one iota greater, or it pays one dollar more for capital because of its affiliation with an unregulated or nonutility company, the Commission must take steps to ensure that such increases do not enter in its [rate of return] calculation." *Ill. Bell Tel. Co. v. Ill. Commerce Comm'n*, 283 Ill. App. 3d 188, 207 (2nd Dist. 1996).

Further, contrary to Ms. Bulkley's assertion, Staff argues that Section 9-230 of the Act does not state that rate making capital structures must be established on a stand-alone basis; rather, it states that no increased cost of capital resulting from a utility's association with non-utility affiliates can be reflected in the utility's rates. That is, the purpose of Section 9-230 of the Act is not to remove positive effects of a utility's unregulated affiliations from the utility's rates, but rather to protect Illinois utility ratepayers from any negative effects of those affiliations. Since common equity is a utility's most expensive form of capital, authorizing a higher equity ratio than is necessary due to a

utility's association with non-regulated affiliates would increase the utility's overall cost of capital, in violation of Section 9-230 of the Act. Conversely, reducing that equity ratio to remove the effects of risk resulting directly or indirectly from non-regulated affiliates would lower the utility's cost of capital and is, therefore, not a violation of Section 9-230 of the Act, but rather, a correction necessary to prevent such a violation.

Additionally, Mr. Selinger attempts to make a comparison to Ms. Kight-Garlisch's analysis in a Docket No. 21-0098, and her analysis in the instant proceeding. However, Staff states that Mr. Selinger fails to acknowledge that the facts and timing of Docket No. 21-0098 are distinguishable from this docket. Specifically, the most notable difference between Nicor and IAWC is that the rating agencies noted ringfencing measures in place at Nicor that insulated the company from its parent and resulted in higher stand-alone credit ratings for Nicor than its parent company from both Moody's and S&P. *S&P Global Ratings*, N. Ill. Gas Co. d/b/a Nicor Gas Co., April 9, 2020. IAWC does not have the same ringfencing measures in place and therefore, is impacted by the decisions of its parent company, American Water. Mr. Selinger also notes that in Docket No. 21-0098, Ms. Kight-Garlisch compared Nicor's proposed equity ratio to the three-year average equity ratios for the Gas Sample used to estimate the ROE for Nicor and Atmos Energy ("ATO"). IAWC Ex. 17.00 at 18-19. Mr. Selinger fails to acknowledge that ATO was the only company in the Gas Sample that, like Nicor, had credit ratings in the A range from both Moody's and S&P or that ATO's 3-year average common equity ratio was 58.59%. Docket No. 21-0098, Staff Ex. 3.0 (Cor.) at 9. These factors imply that Nicor's common equity ratio in Docket No. 21-0098 was reasonable at the time of Ms. Kight-Garlisch's analysis. Further, Staff witness Phipps testified that "[t]he Gas Sample serves as a proxy for the target company, Nicor [], and should therefore reflect the risk of Nicor []. If the proxy does not accurately reflect the risk level of the target company, an adjustment should be made." Docket No. 21-0098, Staff Ex. 4.0 (Cor.) at 24. Ms. Phipps determined that Nicor had lower risk than the Gas Sample and thus, adjusted the ROE estimate derived from the Gas Sample downward to reflect the lower risk of Nicor. *Id.* Thus, both the capital structure and the cost of equity for Nicor reflected its A2/A credit rating, and Staff contends that Mr. Selinger's comparison should be disregarded in its entirety.

Furthermore, Staff states that the Company's proposed capital structure indicates a relatively low degree of financial risk for a water distribution utility. In comparison, the average capital structures of the Proxy Group or the Water Industry are not nearly as conservative. The average 2021 equity ratios for the Proxy Group and Water Industry are 43.10% and 48.74%, respectively. Staff Ex. 5.0 at 11. The most recent three-year average equity ratios for the Proxy Group and Water Industry are 45.04% and 49.08%, respectively. Thus, the Company's 51.95% requested common equity ratio is much higher than those of the Proxy Group and Water Industry, which indicates a higher degree of financial risk for the Proxy Group and Water Industry relative to the Company. The Proxy Group's cost of common equity is a fair rate of return on common equity for the Company only if the total risk (business risk plus financial risk) for the Proxy Group and the Company are similar. However, given the Proxy Group's greater overall risk (A3), its cost of common equity would be too high to apply to a company with lower overall risk as implied in the Moody's ratios for the Company based on its proposed forecasted capital structure. Stated differently, if the Proxy Group's average capital structure were equal to the Company's proposed capital structure, the Proxy Group's cost of common equity

would be lower than the 9.78% value Mr. McNally estimated. Accordingly, Ms. Kight-Garlisch recommended imputing a capital structure for the Company.

The imputed capital structure that Ms. Kight-Garlisch recommended for IAWC in direct testimony was selected based on a comparison to the 2021 common equity ratios for three groups of companies. Ms. Kight-Garlisch's analysis was a three-pronged approach: 1) Ms. Kight-Garlisch considered the average equity ratio for the Proxy Group that forms the basis of both Ms. Bulkley's and Mr. McNally's cost of equity estimates; 2) Ms. Kight-Garlisch considered the average equity ratio for the Water Industry; and 3) Ms. Kight-Garlisch considered the Proxy Group's average equity ratio after removing any individual equity ratio for which the corresponding debt ratio exceeded the maximum Moody's Benchmark debt ratio for an investment grade credit rating. Since a number of individual equity ratios for the Proxy Group companies were noticeably low, and the Water Industry and modified Proxy Group equity ratios are very similar, Ms. Kight-Garlisch relied on the latter two groups and determined an equity ratio of 49.0% was reasonable for IAWC in this proceeding.

IAWC argues that Staff's and Intervenors' proposal to use an imputed capital structure fails to sufficiently account for IAWC's operating risk. Staff addresses IAWC's operating risk throughout its analysis. Ms. Kight-Garlisch's Moody's credit rating analysis was a comprehensive analysis; specifically, Moody's assesses a company's operating risk and financial risk. Ms. Kight-Garlisch assessed IAWC's operating risk and determined it to be similar or slightly less risky than American Water's operating risk. Since the Company's proposed capital structure was unnecessarily high and not appropriate for determining IAWC's rate making capital structure, Ms. Kight-Garlisch recommended using an imputed capital structure that contains 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity. Therefore, Staff states that the evidentiary record supports its assessment of IAWC's operating risk.

In her direct testimony, Ms. Kight-Garlisch testified that the proportion of short-term debt in her imputed capital structure equals the proportion of short-term debt in the Company's forecasted average 2023 capital structure. To calculate the Company's respective long-term debt ratio, Ms. Kight-Garlisch subtracted the Company's forecasted average 2023 short-term debt ratio from the imputed 51.0% (100% total capital - 49% common equity ratio) total debt ratio. Staff Ex. 5.0 at 13.

In rebuttal testimony, Ms. Kight-Garlisch had two corrections to her ratio analysis that resulted in 2021 and three-year average equity ratios for the Water Industry of 47.45% and 47.58%, respectively. Staff Ex. 13.0 at 3. Ms. Kight-Garlisch also revised her ratio analysis of the Proxy Group to reflect a $2.2 billion reduction in debt for ATO. The adjustment to ATO's debt results in the following revised 2021 ratios: 1) debt ratio of 40.4%; 2) equity ratio of 59.6%; 3) funds from operations ("FFO") to debt ratio of 24.15%, and FFO minus dividends to debt ratio of 18.11%. In addition, the adjustment to ATO's debt balance produced a corresponding adjustment to its equity ratio, which results in a 2021 and three-year average equity ratio for the Proxy Group of 43.7% and 45.2%, respectively. Ms. Kight-Garlisch adjusted the benchmark ratios for the Proxy Group accordingly to reflect the adjustment to ATO's debt balance. Additionally, she also updated IAWC's proposed capital structure ratios to reflect the Company's rebuttal testimony position and updated Staff's Proposed Capital Structure ratios to reflect Staff's

rebuttal testimony position. Staff Ex. 13.0 at 4. Although the ratios were updated from Ms. Kight-Garlisch's direct testimony, the updated ratios did not change her conclusions. Therefore, Ms. Kight-Garlisch's recommended an equity ratio of 49.0% and determined that it is reasonable for IAWC.

Ms. Bulkley argues that Ms. Kight-Garlisch's equity ratio analysis is flawed because it relies on the capital structures of the companies in the Proxy Group from which both Staff and the Company derive their ROE recommendations. Instead, Ms. Bulkley incorrectly compares the equity ratios proposed to equity ratios for the operating subsidiaries of the companies in the Proxy Group, which are substantially higher. IAWC Ex. 21.00 at 55. Additionally, Ms. Bulkley suggests that the equity ratios for three Proxy Group companies – ATO, WTRG, and SJW – need to be adjusted upward.

With regard to the Proxy Group, upon which both Staff's and Ms. Bulkley's ROE estimates were derived, Ms. Bulkley states, "[t]he proxy companies used in my analyses all possess a set of operating and financial risk characteristics that are substantially comparable to IAWC, and, therefore, provide a reasonable basis for deriving the appropriate ROE." IAWC Ex. 11.00 at 27. Thus, the Proxy Group Ms. Bulkley used in her cost of equity analysis was selected because she believed the Proxy Group to be a good proxy for, and similar in risk to, IAWC.

However, in comparing the operating subsidiaries of the fourteen Proxy Group companies, Ms. Bulkley effectively created a distinct sixty-seven company proxy group, which she has not demonstrated to be similar in risk to IAWC. The risk of an operating subsidiary can be different than its parent company. Staff Ex. 13.0 at 23-24. Thus, any analysis of the equity ratio based on a proxy sample should be based on the same proxy sample used to derive the ROE. To do otherwise might violate Section 9-230 of the Act since utility operating companies often have lower risk (i.e., higher credit ratings and higher equity ratios) than their parents, as is the case with IAWC's sister subsidiaries Pennsylvania-American Water Company and New Jersey-American Water Company compared to American Water. Further, contrary to Ms. Bulkley's assertions, no adjustments are necessary to the equity ratios of WTRG or SJW. The "comparable regulated water utilities" Ms. Bulkley is referring to in her statement are the operating subsidiaries that she has not shown are comparable to IAWC. The proper comparison is to the actual companies in the Proxy Group, which is the analysis presented by Staff. To adjust both WTRG's and SJW's capital structures would result in capital structures that would not reflect each company's actual equity ratio. Staff notes that Ms. Bulkley fails to acknowledge that acquisitions are not unusual occurrences – it is what occurred with ATO – but are well thought out plans and the capital structures of WTRG and SJW and reflect how the companies actually financed the acquisitions. Thus, no adjustment is needed to WTRG's or SJW's capital structure.

IAWC argues that there is no evidentiary basis for using the imputed capital structures proposed by Staff and Intervenors. IAWC relies on a past Commission Order, Docket No. 93-0301, to claim that an imputed capital structure cannot be used without proof of manipulation and argues that Staff has not provided any evidence that American Water is manipulating IAWC's capital structure. IAWC also contends that Staff failed to present evidence in support of its imputed capital structure and failed to refute IAWC's showing that its proposed capital structure is reasonable. In response, Staff states that

IAWC's proposed capital structure is fatally flawed because it reflects the increased risk of its affiliated parent corporation, American Water. Further, Staff argues the Company's proposed capital structure is unreasonable because it contains more common equity than needed to support a financially strong water utility. The Company's forecasted equity ratio of around 52% is much higher than its riskier parent company's common equity ratio of only about 40%. Staff Ex. 5.0 at 11. Staff notes that this is a fundamental flaw in the Company's proposed capital structure. As the Illinois courts have explained, "equity is a more expensive form of capital than debt." *Ill. Bell Tel. Co. v. Ill. Commerce Comm'n*, 283 Ill. App. 3d 188, 204 (2nd Dist. 1996). Subsequently, the "more equity in a utility's capital structure, the higher the ROR must be to recover the cost of capital." *Id*. *See also Citizens Util. Bd.,* 276 Ill. App. 3d at 744 ("[S]ince equity always costs more than debt, as a corporation increases its proportion of equity, its total cost of capital generally increases, although the cost of debt and the cost of equity both decrease."). It is clear that corporations have an incentive to maintain relatively low equity ratios (i.e., high debt levels) at the holding company level while maintaining relatively high equity ratios at the utility operating company level.

Thus, as Staff notes, to service its parent's obligations, the utility subsidiary will often maintain a higher equity ratio than it otherwise would have needed, thereby increasing the utility's cost of capital, while leaving ratepayers with the costs. The legislature, through Section 9-230, has directed the Commission to protect ratepayers against the increased cost of capital sought by a utility with such an inflated level of equity. Specifically, in Illinois, "if a utility's exposure to risk is one iota greater, or it pays one dollar more for capital because of its affiliation with an unregulated or nonutility company, the Commission must take steps to ensure that such increases do not enter in its [rate of return] calculation." *Ill. Bell Tel. Co.*, 283 Ill. App. 3d at 207. Since the Company's proposed capital structure is not appropriate for determining IAWC's rate making capital structure and reflects the incentives prohibited by Section 9-230 (harmful to ratepayers and beneficial to shareholders), Ms. Kight-Garlisch recommended using an imputed capital structure to correct the fatal flaws in the Company's proposal. Staff Ex. 5.0, Sch. 5.1.

Staff notes that the Commission has previously approved an imputed capital structure in similar circumstances. In Docket Nos. 11-0280/11-0281 (Cons.), the Commission determined that Staff's proposed imputed capital structure was reasonable and adhered to statutory requirements. *N. Shore Gas Co.,* Dockets No. 11-0280/0281 (Cons.), Order at 108-109 (Jan. 10, 2012). In Docket Nos. 11-0280/11-0281 (Cons.), Staff proposed an imputed capital structure because the Companies' proposed capital structure reflected the increased risk of its affiliated parent corporation. In addition to the Companies' proposed capital structure being in violation of Section 9-230, Staff argued that the Companies' proposed capital structure was unreasonable since it would have resulted in a lower degree of financial risk than its peers in the gas distribution industry, which causes the Companies' overall cost of capital to be unnecessarily expensive. *Id.* at 103. The Commission agreed with Staff's analysis determining that both the Companies' credit ratings and financial ratios indicate that their affiliation with the unregulated corporate parent has increased its risk. *Id.* at 108. Thus, the Commission determined that it "is prevented by the Act and precedent from adopting a capital structure that reflects the increased risk of [the unregulated corporate parent]." *Id.* The

Commission determined that Staff's analysis was reasonable and adhered to the statutory requirements. *Id.* Staff argues that the Commission should do the same here.

Further, Staff argues that IAWC's reliance on the Order in Docket No. 93-0301 is misplaced. In *GTE North*, the Commission rejected CUB's proposed imputed capital structure because it was not reasonable. *GTE North, Inc.*, Docket No. 93-0301, Order at 107 (Oct. 11, 1994). The Commission also found that CUB's assertion that GTE North's capital structure was manipulated was not supported by evidence. *Id.* While the Commission agreed with CUB's statement that a parent company has the ability and incentive to manipulate the capital structure of its subsidiaries; ultimately, CUB did not provide evidence to support its argument. *Id.* at 108. Contrary to IAWC's claim, CUB's proposal was not rejected simply because it had an imputed capital structure, rather it was rejected because CUB's proposed imputed capital structure was unsupported and unreasonable. Specifically, CUB's proposed capital structure would have resulted in a sixteen-percentage point decrease in the Company's actual common equity ratio. *Id.*

Therefore, Staff notes that *GTE North* does not stand for the blanket assertion that an imputed capital structure is inappropriate and should not be used. Nor does it stand for the proposition that an imputed capital structure can only be used if a party proves that the capital structure was manipulated. *Id.* Rather, *GTE North* highlights that the Commission cannot legally draw a conclusion without a preponderance of the evidence supporting that finding, and CUB failed to provide evidence to support its claim. *Id*. *GTE North* also emphasizes the requirement of reasonableness associated with Section 9-230 noting that "the Commission is charged with the responsibility of establishing a reasonable rate of return...[and] must examine the various components of the rate of return calculation to determine whether the components are reasonable." *Id.* at 106.

IAWC alleges that it is Ms. Kight-Garlisch's analysis that violates Section 9-230. IAWC argues that since Ms. Kight-Garlisch's analysis imputes a riskier capital structure due to IAWC's affiliation with American Water and considers the increased risk associated with the non-utility and unregulated affiliates of the proxy group and water industry, it violates Section 9-230.

Staff disagrees with IAWC's assertion. Staff argues that Section 9-230 of the Act does not state that ratemaking capital rate structures must be established on a stand-alone basis; rather, it states that no increased cost of capital resulting from a utility's association with non-utility affiliates can be reflected in the utility's rates. That is, the purpose of Section 9-230 of the Act is not to remove positive effects of a utility's unregulated affiliations from the utility's rates, but rather to protect Illinois utility rate payers from any negative effects of those affiliations. Since common equity is a utility's most expensive form of capital, authorizing a higher equity ratio than is necessary due to a utility's association with non-regulated affiliates would increase the utility's overall cost of capital, in violation of Section 9-230 of the Act. Conversely, reducing the equity ratio to remove the effects of risk resulting directly or indirectly from non-regulated affiliates would lower the utility's cost of capital and is, therefore, not a violation of Section 9-230 of the Act, but rather, a correction necessary to prevent such a violation.

For all of the reasons set forth above, Staff recommends the Commission adopt Staff's imputed capital structure for IAWC of 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity.

c. AG's Position

The AG supports the capital structure proposed by IIWC/FEA/CUB for the reasons set forth in the testimony of Mr. Walters. *See generally,* IIWC/CUB/FEA Ex. 1.0, 2.0.

d. IIWC/FEA/CUB's Position

According to IIWC/FEA/CUB, the Commission must consider the appropriate ratemaking capital structure in light of the prevailing law, including the Act and legal precedent. The Act mandates the Commission to only approve rates that are just and reasonable. 220 ILCS 5/9-101. IIWC/FEA/CUB note that this general principle has been further articulated by Illinois courts. The Illinois Appellate Court has found, "the Act requires the Commission to establish rates which are just and reasonable for both the investors and the consumers." *Citizens Util. Bd.,* 276 Ill. App. 3d at 737. Accordingly, IIWC/FEA/CUB recommend a 50.0% common equity ratio, which appropriately balances the Company's debt and equity capital, is consistent with the average capital structure regulatory jurisdictions around the country have authorized and will not cost customers more than is needed to support the Company's financial integrity and access to capital markets.

IIWC/FEA/CUB state that the Appellate Court has found, "the Commission should disallow recovery of any cost of capital in excess of that reasonably necessary for the provision of services. If a utility has included excessive equity in its capital structure, it has inflated the rate of return and its capital cost." *Id.* at 746. Thus, the Appellate Court has been clear that the Act requires an equity ratio that is no higher than is necessary to assure the Company's financial integrity. *Id*. at 737-46. As the evidence in this proceeding demonstrates, explained below, an equity ratio higher than the 50.0% would be excessive and therefore unjust and unreasonable under the Act.

IIWC/FEA/CUB observe that IAWC's current Commission-approved common equity ratio is 49.8%, which the Company agreed to in its previous rate case. Docket No. 16-0093, Order at 67. IIWC/FEA/CUB witness Walters recommended holding this figure at roughly its current level, no more than 50.0%, using the same proxy group as Company witnesses Bulkley and Selinger, excluding South Jersey Company, which has been targeted for acquisition by JP Morgan. IIWC/CUB/FEA Ex. 1.0 at 30, 61. Mr. Walters' recommendation more closely aligns with the capital structures of the proxy companies IAWC used to estimate its cost of equity than does the Company's overstated request of 51.95%. *Id.* at 61. As Mr. Walters documented in testimony, the utility industry's common equity ratio has not deviated significantly from 50%. *Id.* at 9. Peer gas utilities in states that, like Illinois, consider only investor-supplied capital typically have experienced annual median and mean common equity ratios of roughly 50% since at least 2010, with a 2022 median approved ratio of exactly 50.0%. *Id.* at 9-10. Utility credit ratings have experienced a strong upward trend over the last decade, with 76% of utility companies now boasting bond ratings from BBB+ to A-. *Id.* at 11. These data illustrate that a 50.0% equity ratio being the industry norm has bolstered industry financial health.

It is IIWC/FEA/CUB's position that utilities also have been able to access external capital to support capital expenditure programs with equity ratios similar to what Mr. Walters recommends. S&P Global Market Intelligence's 2022 Utility Capital Expenses Update report found significant growth in investment and capital expenditures across the utilities industry, including a 7.3% increase in capital expenditures across the small investor-owned water utility industry in 2022, on top of 4.9% growth in 2021. *Id.* at 11-12. Mr. Walters concurred with S&P Global Market Intelligence's forecast that this capital expenditure growth will continue to fuel utilities' profit growth into the foreseeable future. *Id.* at 13. Market valuations of utilities remain strong, with utilities commanding high prices when selling securities. *Id.* at 14. This growth and financial health has continued while ROEs have fallen to the mid-9% range. *Id.* That this observable utility industry market data has continued to demonstrate growth through the COVID-19 pandemic is a testament to the industry's financial stability. *Id.* at 15.

IIWC/FEA/CUB point out that Mr. Walters finds recent and announced Federal Reserve Bank monetary policy actions and the outlooks of independent economists both indicate a stable capital market environment for public utilities like IAWC. *Id.* at 15-22. Mr. Walters further cited CFA Institute Research Foundation's conclusion that history of similar past armed conflicts suggest the U.S. market impacts of Russia's invasion of Ukraine and related sanctions should be transitory. *Id.* at 22-23. Throughout the pandemic, inflation, rising interest rates, and Russia's invasion of Ukraine, the S&P 500 Utilities Index has significantly outperformed the market, as measured by both the S&P 500 and the Nasdaq Composite. *Id.* at 23.

According to IIWC/FEA/CUB, taken together, all of these data support Mr. Walters' recommendation to hold IAWC's approved common equity ratio steady at no more than 50.0% and provide no basis for saddling IAWC ratepayers with the expense of a significant equity ratio hike. The Commission should reject Company witness Selinger's argument that the TCJA, the COVID-19 pandemic, the Company's capital expenditure program, and IAWC's anticipated investment in acquired systems necessitate a higher common equity ratio. *See* Selinger, IAWC Ex. 17.00 at 24. TCJA went into effect over four years ago, yet none of the market data suggests TCJA negatively impacted the Company's ability to attract capital so as to require such intervention by the Commission. The entire country been affected by the COVID-19 pandemic, beginning in 2020, yet national utility industry data show overall credit upgrades, continued growth in capital expenditures, and a robust market for utility bonds. IAWC has maintained its A credit rating from S&P and Baa1 rating from Moody's with a "stable" outlook throughout the pandemic. IIWC/CUB/FEA Ex. 2.0 at 13. The Company's capital expenditures and system acquisitions since its last rate case have been supported by its 49.8% approved common equity ratio. Its capital program does not make IAWC unique among its peers. The Company's cash flow to capital expenditures ratio under its existing approved capital resembles that of the other proxy group utilities. *Id.* at 13-14.

IIWC/FEA/CUB point out that the Company already requests that ratepayers fund its capital investments and exorbitant system acquisition costs. Nothing in the record suggests ratepayers need to pay an inflated rate of return on capital expenditures, either through an increased equity ratio or an increased ROE, to support these programs.

IIWC/FEA/CUB recommend the Commission should reject the Company's attempt to pad its profit margin through an unwarranted increase in capital costs.

e. Commission Analysis and Conclusion

IAWC proposes a capital structure using thirteen-month average balances as of December 31, 2023 and composed of 1.81% short-term debt, 46.24% long-term debt, and 51.95% common equity. Staff's overall cost of capital recommendation equals 7.01%, which reflects a capital structure including 1.81% short-term debt, 49.19% long-term debt, and 49.00% common equity. IIWC/FEA/CUB recommend a 50.0% common equity ratio, based largely upon IAWC's current Commission-approved common equity ratio of 49.8%.

Generally, a utility's actual capital structure is adopted unless it is found to be unreasonable, imprudent, or unfairly burdensome. If found to be unreasonable, imprudent, or unfairly burdensome, then an imputed capital structure may be adopted. Here, as always, the objective of the Commission is to balance the interests of investors and consumers. As Staff notes, the optimal capital structure minimizes the cost of capital while maintaining the utility's financial integrity.

The Commission adopts the capital structure proposed by Staff. The Commission finds the use of actual data to be consistently more accurate than forecasted data. In that vein, Staff compared the Company's proposed forecasted debt ratio, along with three other financial ratios derived from data forecasted by the Company, to the actual 2021 and three-year average financial ratios for the Company, IAWC's parent company, the Proxy Group, and the Water Industry. The Company has higher overall cash flow ratios and lower debt ratios (both indicative of higher financial strength) than American Water, the Proxy Group, and the Water Industry; thus, Staff concluded, and the Commission agrees, that IAWC's proposed 51.95% equity ratio was unnecessarily high.

While IAWC claims that Staff's Moody's credit rating analysis is not comprehensive, the Commission agrees with Staff that Moody's relies on both qualitative and quantitative measures to assess a company's risk. The Company's requested equity ratio is much higher than those of the Proxy Group and Water Industry, which indicates a higher degree of financial risk for the Proxy Group and Water Industry relative to the Company. Further, IAWC's proposed equity ratio of around 52% is much higher than its riskier parent company's common equity ratio of approximately 40% in 2021. Staff notes that since common equity is a utility's most expensive form of capital, authorizing a higher equity ratio than is necessary would improperly increase the utility's overall cost of capital. If that increased equity ratio is due to a utility's association with non-regulated affiliates, that is a violation of Section 9-230 of the Act. Specifically, the appellate court has ruled that, in Illinois, "if a utility's exposure to risk is one iota greater, or it pays one dollar more for capital because of its affiliation with an unregulated or nonutility company, the Commission must take steps to ensure that such increases do not enter its [rate of return] calculation." Staff BOE at 4 (*quoting Ill. Bell Tele. Co. v. Ill. Commerce Comm'n*, 283 Ill. App. 3d 188, 207 (2nd Dist. 1996)).

Thus, the Company's proposed capital structure contains more common equity than needed to support a financially strong water utility due to its affiliate relationships, leaving ratepayers to pay higher costs than warranted, in contravention of Section 9-230

of the Act. For the foregoing reasons, the Commission rejects the Company's proposed capital structure and adopts Staff's proposal.

2. Cost of Short-Term Debt (Forecasted Interest Rates)

a. IAWC's Position

IAWC explains that to properly set IAWC's cost of debt, the Commission must determine the interest rates that will apply to the debt the Company will issue in the 2023 test year. IAWC proposes that its cost of short-term debt in this proceeding be set at a forecast interest rate of 3.198%. IAWC explains that this figure reflects IAWC's revised projections in rebuttal testimony to reflect ongoing market conditions and recent projected rates provided by Bloomberg Online. IAWC notes that Staff is the only other party to address this issue, and Staff proposed a cost of short-term debt of 2.07% based on July 18, 2022 interest rates for commercial paper. While Staff updated its proposal in rebuttal testimony to rely on July 2022 rates instead of May 2022 rates, Staff's recommendation does not reflect market expectations for short-term borrowing rates in the 2023 test year. IAWC urges the Commission to reject Staff's proposal.

IAWC notes that it presented evidence showing that all current information from the market signals that rates are rising and will continue to rise. IAWC explains that as of the time of IAWC's surrebuttal testimony filing on August 5, 2022, the Fed Funds Rate was at 2.5%. However, just one month prior to that date, this rate was 1.75%. Further, as of August 5, 2022, the Federal Reserve was expected to raise rates at least an additional 1% by the end of 2022, putting the Fed Funds rate above IAWC's forecasted short-term debt rate proposed here. IAWC also demonstrated that its actual short-term debt rate increased 175% from April 2022 to June 2022, and 87% from May 2022 to June 2022. IAWC states that the Secured Overnight Financing Rate, which is the benchmark based on the rates U.S. financial institutions pay each other for overnight loans, increased by 436% during that same period and by 714% from April 29, 2022 to August 1, 2022.

IAWC maintains that Staff's argument that the Commission should use current market interest rates in its cost of capital analysis is problematic for at least two reasons. First, IAWC observes that Staff's proposed short-term interest rate of 2.07% unquestionably is no longer "current." Second, IAWC points out that Staff's contention that only current market interest rates should be relied upon in a cost of capital analysis is inconsistent with Staff's own use of forecast data in this case. For example, Staff's Discounted Cash Flow ("DCF") analysis presented in connection with its cost of common equity proposal relied on growth rates forecasted by analysts.

In short, IAWC states, there is no indication as the 2023 test year draws closer that rates will not continue to rise; therefore, the Commission should set IAWC's cost of short-term debt at 3.198% as it is based upon reliable forecasts of short-term interest rates for the 2023 test year and reject Staff's proposal.

b. Staff's Position

Staff witness Kight-Garlisch recommended a cost of short-term debt of 1.04% in her direct testimony. Staff Ex. 5.0 at 13. However, in rebuttal testimony, Ms. Kight-Garlisch revised her recommendation and recommended a cost of short-term debt of 2.07%. Staff Ex. 13.0 at 7.

Ms. Kight-Garlisch noted that IAWC obtains short-term debt through a line of credit from AWCC, American Water's financing subsidiary. AWCC's commercial paper rating is P-2 from Moody's. Staff Ex. 13.0 at 7. The average term for IAWC's short-term debt is 15 days. *Id.* Thus, to estimate IAWC's cost of short-term debt using AWCC's cost of commercial paper, Ms. Kight-Garlisch converted the July 18, 2022, 15-day P-2 commercial paper discount rate of 2.04% into an annual yield of 2.07% using the formula discussed in her testimony. *See* Staff Ex. 13.0 at 7.

IAWC argues for the use of forecasted interest rate for the cost of short-term debt; specifically, Mr. Selinger proposes using a 3.198% forecasted short-term debt rate derived from Bloomberg Online for the year 2023. IAWC Ex. 17.00 at 26. However, as noted by Staff witness McNally, accurately forecasting interest rates is problematic. Staff Ex. 14.0 at 3. The difficulty in forecasting interest rates is further emphasized in IAWC's own one-month forecasts, which IAWC failed to address. IAWC presented a forecasted short-term debt interest rate for May 2022 of 1.11% based on information from Bloomberg online from April 2022. Staff Ex. 13.0 at 11. IAWC's actual cost of short-term debt was only 0.69% for May 2022. IAWC rebuttal testimony, Workpaper WPD-2b. IAWC's forecasted short-term debt interest rate for June 2022 was 1.70%, but IAWC's actual cost of short-term debt was 1.30%. Staff Ex. 13.0 at 11. Further, the Commission has previously concluded that:

> predicting the direction, magnitude, or timing of future interest rate changes with accuracy is not possible. The Commission observes that the record demonstrates that professional forecasting services relied on by the Companies have consistently over estimated future rates in recent years. Current interest rates have proven to be better predictors of future interest rates than professional forecasters.

Docket Nos. 14-0224/14-0225 (Cons.), Order at 111.

For this reason, the Commission has repeatedly rejected the use of forecasted interest rates and, instead, relied on current, observable market interest rates. Staff notes that IAWC failed to address the Commission's past practices of rejecting the use of forecasted interested rates due to the problematic nature of accurately forecasting interest rates. Staff argues that, significantly, actual, observable yields reflect market forces and investors' expectations for the future, while forecasts do not. Those factors are reflected in the return that investors are willing to accept in the market. As of July 18, 2022, investors were willing to accept a 2.07% return on 15-day P2 non-financial commercial paper. Staff Ex. 13.0 at 12. Staff notes that IAWC would like for the Commission to use forecasted interest rates not based on evidence, but rather based on the mere "indication as the 2023 test year draws closer that rates will continue to rise[.]" IAWC IB at 53.

Further, the use of current, observable market interest rates renders the use of forecasted interest rates unnecessary because actual yields reflect all relevant, available information, including investor appraisals of the value of current expectations for the future. In other words, if investors believe that the forecasts are valuable, that belief would be reflected in current market interest rates. Conversely, if investors believe the forecasts

are not valuable, that belief would also be reflected in current market interest rates. In sum, if one uses current market interest rates in a cost of capital analysis, speculation of whether investor expectations of future interest rates equal those from a particular forecasting service is unnecessary. Therefore, Staff states that the Commission should adopt a cost of short-term debt of 2.07% for IAWC, consistent with its previous decisions on this subject.

c. Commission Analysis and Conclusion

The Company and Staff dispute the interest rate on short term debt. Staff recommends the use of actual current market interest rates, and the Company uses a forecast based on Bloomberg Online. The Commission notes that interest rates on P-2 commercial paper were volatile, even during the three months when testimony was filed.

The Commission agrees with Staff that the Company's proposal of 3.198% is arbitrary. On the contrary, Staff uses the actual market interest rate as of July 2022, when Staff filed its rebuttal testimony. As the Commission has noted, "current interest rates have proven to be better predictors of future interest rates than professional forecasters." Docket Nos. 14-0224/14-0225 (Cons.), Order at 111. While the Commission agrees with the Company that interest rates increased significantly between May and September of 2022, the Commission finds that Staff's number is a more reasonable assessment of future interest rates.

3. Cost of Common Equity

a. IAWC's Position

IAWC observes that, arguably, the most difficult and highly contested issue in every rate case is the ROE — the return that the Commission authorizes a utility to earn on the equity invested in its property dedicated to the provision of public utility service. IAWC points out that the law requires the Commission to authorize a utility to earn a rate of return that is reasonably comparable to returns associated with competing investments of comparable risk.

IAWC explains that the issue is so difficult because, unlike other elements of a utility's cost of service, where reasonableness might be determined by a competitive bidding process or comparison to a (relatively) easily determined prevailing market price, the cost of equity analysis involves extensive financial modeling, which, in effect, is a type of reverse engineering, using forecasts, projections, and estimates to reveal an invisible investor-expected return embedded in, or implied by, verifiable market data, such as stock prices and interest rates.

IAWC states that this might sound like an academic exercise, but the implications are not academic at all — the returns the Commission authorizes have real world consequences for both regulated utilities and their customers. IAWC contends that a utility's ability to achieve and maintain financial stability, finance construction, and meet its service obligations depends to a great degree on its authorized return.

IAWC states that this case has proved no easier than other rate cases. The Company, Staff, and IIWC/FEA/CUB present the Commission with three ROE recommendations that cover a wide range: from 9.35% (IIWC/FEA/CUB) to 9.78% (Staff) to 10.25% (IAWC). IAWC notes, however, that only the Company's recommendation

reflects the reality in which the Company operates. Only the Company's analysis reflects current market conditions — an inflationary environment and rising interest rates that cause investors to expect higher returns from regulated utilities. IAWC argues that the analyses of Staff and IIWC/CUB/FEA are based on stale, irrelevant, and inapt data that does not capture the conditions expected to be present when the rates set in this proceeding go into effect, and their recommendations should not be relied on by the Commission. Accordingly, IAWC concludes, the Commission should set the Company's ROE at 10.25%.

i. Legal Standard

IAWC explains that the United States Supreme Court's decisions in *FPC v. Hope Natural Gas Co.*, 320 U.S. 591 (1944) ("*Hope*") and *Bluefield Waterworks & Imp. Co. vs. Pub. Serv. Commn. of W. Va.*, 262 U.S. 679 (1923) (*"Bluefield"*), established the standards for determining the fairness or reasonableness of a utility's authorized ROE. IAWC explains that among the standards established by the Court in those cases are: (1) consistency of the return with other businesses having similar or comparable risks; (2) adequacy of the return to support credit quality and access to capital; and (3) the principle that the specific means of arriving at a fair return are not important, only that the result leads to just and reasonable rates. As noted in *Bluefield*, a proper rate of return not only assures "confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit [but also] enable[s the utility] to raise the money necessary for the proper discharge of its public duties." *Bluefield*, 262 U.S. at 693. As the Court later explained in *Hope*, "[t]the rate-making process ... involves balancing of the investor and consumer interests." *Hope*, 320 U.S. at 603.

IAWC states that this Commission recognizes the *Hope* and *Bluefield* standards. Recently, in Docket No. 20-0308, involving the gas base rates of Ameren, the Commission stated that:

> As the Commission set out in Docket [No.] 16-0093, "In estimating the cost of common equity, the Commission must consider not only the outputs of the financial models, but whether the authorized ROE satisfies the standards set forth in *Bluefield*, 262 U.S. 679 and *Hope*, 320 U.S. 591." See Docket [No.] 16-0093, . . . Order at 65. "These decisions established that a regulatory body such as the Commission must consider whether an authorized return is sufficient to maintain the utility's financial integrity and to attract capital at reasonable terms, while ensuring that customers do not pay an excessive or unreasonable return on those rates". *Id*. at 65 (*citing Bluefield*, 262 U.S. at 692-93; Hope, 320 U.S. 591 at 603). *Bluefield* and *Hope* also dictate that the Company provide safe, reliable service at just and reasonable rates. *Bluefield*, 262 U.S. at 693; *Hope*, 320 U.S. 591 at 603; see also Docket 16-0093 at 65. The cases further state that the return on investment should be commensurate with returns investors could earn by investing in other companies of

> comparable risk. *Bluefield*, 262 U.S. at 692; *Hope*, 320 U.S. 591 at 603; *see also* Docket [No.] 16-0093 at 65.

Docket No. 20-0308, Order at 168. IAWC notes that the Commission has further explained that:

> The Commission understands that an authorized rate of return that is not competitive will deter continued investment in the State of Illinois. The Commission also appreciates that a reasonable authorized ROE helps ensure that the Company can attract capital in order to meet the Commission required infrastructure repair and replacement needs of the State. Notwithstanding, the Commission recognizes too that it should protect customers against bearing the cost of unreasonable returns through higher rates.

Docket No. 18-1775, Order at 119.

IAWC explains that utilities compete directly for capital with other investments of similar risk, which include other water, natural gas, and electric utilities. Therefore, IAWC maintains, the ROE awarded to a utility sends an important signal to investors regarding whether there is regulatory support for financial integrity, dividends, growth, and fair compensation for business and financial risk. IAWC contends that the cost of capital represents an opportunity cost to investors. IAWC states that if higher returns are available elsewhere for other investments of comparable risk, investors have an incentive to direct their capital to those investments. Thus, IAWC states, an authorized ROE significantly below authorized ROEs for other water, natural gas, and electric utilities can inhibit a utility's ability to attract capital for investment.

ii. Significance of Current Market Conditions

IAWC notes that the ROE estimation models rely on market data. IAWC states that it should not be surprising then that the results of the ROE estimation models can be affected by prevailing market conditions at the time the analysis is performed. While the ROE established in a rate proceeding is intended to be forward-looking, the analyst uses current and projected market data, specifically stock prices, dividends, growth rates, and interest rates, in the ROE estimation models to estimate the required return for the subject company.

IAWC states that the cost of equity for regulated utility companies is being affected by several factors in the current and prospective capital markets, including: (1) the dramatic shifts in market conditions during 2020, the economic recovery in 2021, the expectations for 2022, and the effect of these changes on the assumptions used in the ROE estimation models; and (2) effects of Federal tax reform on utility cash flows. In particular, IAWC points out, the Commission must take into account the increases in the Federal funds rate, the fact that inflation is at a 40-year high and increases in the yield on the 30-year Treasury bond ("T-bond"). IAWC argues that it is unreasonable to ignore the effects of current monetary policy intended to restore more normal inflation and to assume that it does not affect the cost of capital today.

IAWC states that the economy is currently in the recovery phase of the business cycle. Utilities, which are a defensive sector, have historically underperformed the market during periods of economic expansion. Therefore, IAWC states, investors are currently expecting utilities to underperform over the near-term, which means the share prices of utilities will likely decline. IAWC explains that a decline in share prices will increase the dividend yields of utilities and thus the cost of equity for utilities is expected to increase over the near-term. IAWC contends that this is important because the cost of equity in this proceeding is being estimated for the period that IAWC's rates will be in effect. Since the cost of equity is expected to increase over the near-term for utilities, ROE estimates based on current market conditions will understate the ROE during the period that the Company's rates will be in effect. The Commission should not compound that problem by basing the ROE determination on market conditions that are not up to date.

IAWC explains that these conditions have verifiable impacts on the financial modeling used to estimate ROE that should be addressed when choosing which inputs to use and how to weight the outcome of the models. IAWC further explains that the effect of the low interest rate environment can be seen in the low dividend yields for utilities, which result in DCF cost of equity estimates that are understating the forward-looking cost of equity. The Capital Asset Pricing Model ("CAPM") and Empirical CAPM ("ECAPM") offer some balance to the sensitivity of the DCF model to low Treasury yields. But low interest rates also affect the CAPM in two ways: (1) the risk-free rate is lower; and (2) because the market risk premium is a function of interest rates (i.e., it is the return on the broad stock market less the risk-free interest rate), the risk premium should move higher when interest rates are lower. Therefore, IAWC maintains, it is important to consider using projected market data in the models to estimate the return for the forward-looking period.

Additionally, IAWC states that relying exclusively on historical assumptions in these models, without considering whether these assumptions are consistent with investors' future expectations, will underestimate the cost of equity that investors would require over the period that the rates in this case are to be in effect. In this instance, IAWC states that relying on the historically low dividend yields that are not expected to continue over the period that the new rates will be in effect will underestimate the ROE for IAWC.

Furthermore, IAWC contends that the use of current averages of T-bond yields as the estimate of the risk-free rate in the CAPM is not appropriate since recent market conditions are not expected to continue over the long-term. Instead, IAWC proposes, analysts should rely on projected yields of T-bonds in the CAPM. The projected T-bond yields result in CAPM estimates that are more reflective of the market conditions that investors expect during the period that the Company's rates will be in effect.

iii. Financial Modeling

IAWC states that because the cost of equity is not directly observable, it must be estimated based on both quantitative and qualitative information. When faced with the task of estimating the cost of equity, analysts and investors gather and evaluate as much relevant data as reasonably can be analyzed. IAWC notes that several models have been developed to estimate the cost of equity, and Ms. Bulkley used multiple approaches

to estimate the cost of equity. As a practical matter, however, all of the models available for estimating the cost of equity are subject to limiting assumptions or other methodological constraints. Consequently, IAWC states that many well-regarded finance texts recommend using multiple approaches when estimating the cost of equity.

IAWC explains that the quantitative models then produce a range of reasonable results from which the market-required ROE is selected. That selection must be based on a comprehensive review of relevant data and information and does not necessarily lend itself to a strict mathematical solution. IAWC states that the key consideration in determining the cost of equity is to ensure that the methodologies employed reasonably reflect investors' views of the financial markets in general and of the subject company (in the context of the Proxy Group) in particular.

IAWC states that in a recent rate case, the Commission emphasized that it has traditionally considered the ROE estimates produced by several "financial analysis tools" in determining the reasonable cost of equity for a company. IAWC points out that the Commission considered the results of each of the models presented by the ROE witnesses. Specifically, the Commission noted that:

> each of the proposed models has arguable flaws. CAPM measures systemic risk, beta, for which the cost of equity must compensate investors, but parameters are measured against historical data. This creates a model that adjusts slowly to changes in the industry. In contrast, DCF models incorporate current market prices in the most recent dividends and growth outlook, thereby making DCF modeling, arguably, too sensitive to short-term market phenomena, which may not be representative of capital market conditions and the required investor returns that will prevail in the future. The bond yield plus risk premium models contain proxy sample flaws and can use outdated data. The expected earnings method incorrectly posits that earned returns on book common equity are the same as investor-required returns on common equity. The Commission has in the past rejected the use of bond yield plus risk premium models as well as the expected earnings analysis. While historically the Commission has focused on the DCF and CAPM models, the Commission acknowledges that there may be a value in exploring additional models presented by the parties, specifically the Risk Premium and Expected Earnings, to bring our methodology into closer alignment with how investors inform their investment decisions. The Commission is cognizant that other regulatory agencies are also considering this approach to ensure that the chosen return on equity is based on substantial evidence and does not overvalue any one model.

Docket No. 18-1775, Order at 119.

Ultimately, IAWC notes that the Commission authorized Nicor an ROE of 9.73%, which was based on the results of the DCF, CAPM, and risk premium models. Thus, IAWC states that the Commission recognizes the importance of considering the results of each model presented in the rate case to more accurately reflect the approach employed by investors in determining investment decisions.

iv. Proxy Group

IAWC explains that because the Company is not publicly traded, Ms. Bulkley used a Proxy Group of publicly traded companies that possess a set of operating and financial risk characteristics that are substantially comparable to IAWC in order to derive the Company's ROE. She began with the group of U.S. utilities that Value Line classifies as "Water Utilities" and "Natural Gas Distribution Companies". That combined group includes 17 domestic U.S. utilities. She simultaneously applied the following screening criteria to select companies that:

- pay consistent quarterly cash dividends because companies that do not cannot be analyzed using the Constant Growth DCF model;
- have investment grade long-term issuer ratings from S&P and/or Moody's;
- are covered by at least two utility industry analysts;
- have positive long-term earnings growth forecasts from at least two utility industry equity analysts;
- derive more than 60.00% of their total operating income from regulated operations; and
- were not parties to a merger or transformative transaction during the analytical periods relied upon.

IAWC explains that due to consolidation in the water utility industry, there is only a small group of water companies that can be included in the Proxy Group. Accordingly, IAWC states that Ms. Bulkley also considered the group of 36 companies that Value Line classifies as "Electric Utilities". In determining which electric utilities would qualify for inclusion in her Proxy Group, she relied first on the criteria used to screen the water and natural gas utilities. She then applied two additional screening criteria to only include electric utilities that would be considered risk comparable to IAWC. The Company explains that the Electric Utilities must have owned generation making up less than 10% of the company's MW-hours sales to ultimate customers to ensure that the Electric Utilities included did not own a substantial amount of generation, and therefore, had operations that were primarily transmission and distribution; and they must own water and wastewater operations.

v. Discounted Cash Flow Model ("DCF")

IAWC explains that the DCF approach is based on the theory that a stock's current price represents the present value of all expected future cash flows. IAWC notes that Ms. Bulkley employed the Constant Growth DCF model, which requires the following assumptions: (1) a constant growth rate for earnings and dividends; (2) a stable dividend payout ratio; (3) a P/E ratio; and (4) a discount rate greater than the expected growth rate.

IAWC contends that, to the extent any of these assumptions is violated, considered judgment and/or specific adjustments should be applied to the results.

IAWC notes that the dividend yield in Ms. Bulkley's Constant Growth DCF model was based on the proxy companies' current annual dividend and average closing stock prices over the 30-, 90-, and 180-trading days as of January 31, 2022. She used an average of recent trading days to calculate the price term in the DCF model to ensure that the ROE is not skewed by anomalous events that may affect stock prices on any given trading day. She explained that the averaging period should also be reasonably representative of expected capital market conditions over the long-term. However, the averaging periods that she used rely on historical data that are not consistent with the forward-looking market expectations. She cautioned, therefore, that the results of her Constant Growth DCF model using historical data may underestimate the forward-looking cost of equity. As a result, IAWC explains, Ms. Bulkley placed more weight on the mean to mean-high results produced by her Constant Growth DCF model.

IAWC notes that she also adjusted the dividend yield to account for periodic growth in dividends. Since utility companies tend to increase their quarterly dividends at different times throughout the year, it is reasonable to assume that dividend increases will be evenly distributed over calendar quarters. Given that assumption, it is reasonable to apply one-half of the expected annual dividend growth rate for purposes of calculating the expected dividend yield component of the DCF model. IAWC explains that this adjustment ensures that the expected first year dividend yield is, on average, representative of the coming twelve-month period, and does not overstate the aggregated dividends to be paid during that time.

IAWC explains that in its Constant Growth form, the DCF model assumes a single long-term growth rate in perpetuity. IAWC notes that in order to reduce the long-term growth rate to a single measure, one must assume that the dividend payout ratio remains constant and that EPS, dividends per share, and book value per share all grow at the same constant rate. IAWC points out that over the long run, however, dividend growth can only be sustained by earnings growth. For example, earnings growth rates tend to be least influenced by capital allocation decisions that companies may make in response to near-term changes in the business environment. Since such decisions may directly affect near-term dividend payout ratios, estimates of earnings growth are more indicative of long-term investor expectations than are dividend or book value growth estimates.

IAWC states that Ms. Bulkley's Constant Growth DCF model incorporates the following sources of long-term growth rates: (1) consensus long-term earnings growth estimates from Zacks Investment Research ("Zacks"); (2) consensus long-term earnings growth estimates from Thomson First Call (provided by Yahoo! Finance) ("First Call"); and (3) long-term earnings growth estimates from Value Line. She adjusted the dividend yield to reflect the growth rate that was being used in that particular scenario to ensure internal consistency in the calculations.

IAWC explains that Ms. Bulkley calculated a range of results for her DCF modelling. She calculated the low result for her DCF model using the minimum growth rate (i.e., the lowest of the First Call, Zacks, and Value Line earnings growth rates) for each of the Proxy Group companies. Thus, the low result reflects the minimum DCF

result for the Proxy Group. She used a similar approach to calculate the high results, using the highest growth rate for each Proxy Group company. The mean results were calculated using the average growth rates from all sources.

IAWC notes that in this inflationary environment, with rising interest rates, utility stocks are expected to underperform. Ms. Bulkley explained that, accordingly, it is important to consider the DCF results with caution because the DCF tends to understate the cost of equity in rising interest rate and higher inflationary environments. Accordingly, IAWC points out, she also gave weight to other ROE models.

vi. Capital Asset Pricing Model ("CAPM")

IAWC explains that the CAPM is a risk premium approach that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or "systematic" risk of that security. IAWC states that systematic risk is the risk inherent in the entire market or market segment. This form of risk cannot be diversified away using a portfolio of assets. Non-systematic risk is the risk of a specific company that can be mitigated through portfolio diversification.

IAWC explains that Ms. Bulkley relied on three sources for her estimate of the risk-free rate used in the CAPM: (1) the current 30-day average yield on 30-year U.S. T-bonds (i.e., 2.03%); (2) the projected 30-year U.S. T-bond yield for Q1 2022 through Q1 2023 (i.e., 2.42%); and (3) the projected 30-year U.S. T-bond yield for 2023 through 2027 (i.e., 3.40%). Based on current market conditions, she placed more weight on the results of the projected yields on the 30-year T-bonds. IAWC notes that, as discussed previously, the estimation of the cost of equity in this case should be forward-looking because it is the return that investors would receive over the future rate period. Therefore, IAWC concludes, the inputs and assumptions used in the CAPM analysis should reflect the expectations of the market at that time. IAWC notes that while she included the results of a CAPM analysis that relies on the then current average risk-free rate, this analysis fails to take into consideration the effect of the market's expectations for interest rate increases on the cost of equity.

IAWC points out that she used the beta coefficients for the Proxy Group as reported by Bloomberg and Value Line. The beta coefficients reported by Bloomberg were calculated using ten years of weekly returns relative to the S&P 500 Index. Value Line's calculation is based on five years of weekly returns relative to the New York Stock Exchange Composite Index.

IAWC notes that she considered an additional CAPM analysis which relies on the long-term average utility beta coefficient for the companies in her Proxy Group. IAWC explains that the long-term average utility beta coefficient was calculated as an average of the Value Line beta coefficients for the companies in her Proxy Group from 2016 through 2021.

IAWC states that Ms. Bulkley estimated the market risk premium as the difference between the implied expected equity market return and the risk-free rate. The expected return on the S&P 500 Index is calculated using the Constant Growth DCF model for the companies in the S&P 500 Index. In her calculation of the market return, Ms. Bulkley included companies in the S&P 500 Index that: (1) had either a dividend yield or Value

Line long-term earnings projection; and (2) had a Value Line long-term earnings growth rate that was greater than 0% and less than or equal to 20%. Based on an estimated market capitalization-weighted dividend yield of 1.62% and a weighted long-term growth rate of 11.28%, the estimated required market return for the S&P 500 Index is 12.99%. IAWC maintains that given the range of annual equity returns that have been observed over the past 95 years, a current expected return of 12.99% is not unreasonable. In 49 of the past 95 years (i.e., in approximately half of all observations), the realized total equity return was at least 12.99% or greater.

IAWC explains that Ms. Bulkley's traditional CAPM analyses produced a range of returns from 10.07% to 11.36%.

vii. Empirical CAPM ("ECAPM")

IAWC notes that Ms. Bulkley also considered the results of an Empirical CAPM ("ECAPM") in estimating the cost of equity for IAWC. In essence, IAWC explains, the ECAPM addresses the tendency of the traditional CAPM to underestimate the cost of equity for companies with low beta coefficients, such as regulated utilities. In that regard, the ECAPM is not redundant to the use of adjusted betas; rather, it recognizes the results of academic research indicating that the risk-return relationship is different (in essence, flatter) than estimated by the CAPM, and that the CAPM underestimates the "alpha," or the constant return term.

As with the CAPM, IAWC notes that Ms. Bulkley's application of the ECAPM uses the forward-looking market risk premium estimates, the three yields on 30-year Treasury securities noted earlier as the risk-free rate, and the Bloomberg, Value Line, and long-term average beta coefficients.

The ECAPM analysis results range from 10.77% to 11.74%.

viii. Recommended ROE

IAWC states that based on the results from these methodologies and the qualitative analyses presented in her testimony, Ms. Bulkley concluded that a reasonable range of ROE results for IAWC is from 9.90% to 11.25%. IAWC notes that Ms. Bulkley specifically recommended, however, that the Commission set the Company's rate of return on common equity at 10.25%. The recommended return of 10.25% considers current and prospective capital market conditions, as well as IAWC's company-specific risks relative to the Proxy Group, discussed below.

ix. Company-specific Risks

IAWC explains that the results discussed above provide only a range of the appropriate estimate of the cost of equity for a Proxy Group of comparable companies. IAWC argues that additional risk factors must be considered when determining where IAWC's cost of equity falls within the range of results. There are at least two: the Company's substantial capital expenditure program and, relatedly, its anticipated investment in acquired systems to ensure those systems comply with state and federal water standards. IAWC maintains that these factors should be considered with respect to their overall effect on IAWC's risk profile relative to the Proxy Group.

IAWC states that although there are several positive aspects of Illinois regulation that render IAWC somewhat less risky than the Proxy Group as a whole, the Company is not without unique risks as compared to the Proxy Group that suggest that the ROE should be within the range established by the average to the high end of the range of returns estimated for the Proxy Group companies. IAWC projects that the Company will spend approximately $1.063 billion on capital investments for the period from 2022-2026, including significant investment to replace aging infrastructure necessary to continue to meet the needs of its customers and to comply with various regulations. IAWC notes that this is a substantial increase in investment over the year-end 2020 net plant in IAWC of $1.77 billion.

IAWC states that from a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. An S&P 500 Index report explains this point in the context of the electric industry:

> We believe the higher capital spending and subsequent rise in debt levels could strain these companies' financial measures, resulting in an almost consistent negative discretionary cash flow throughout this higher construction period. To meet the higher capital spending requirements, companies will require ongoing and steady access to the capital markets, necessitating that the industry maintains its high credit quality. We expect that utilities will continue to effectively manage their regulatory risk by using various creative means to recover their costs and to finance their necessary higher spending.

IAWC Ex. 11.00 at 53.

IAWC explains that although this report refers to electric utilities, the same analysis applies to water utilities. Further, in an August 2016 report, S&P explained the importance of regulatory support for large capital projects:

> Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.

S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016 at 7. Further, IAWC faces risk associated with the acquisitions of water and wastewater systems. IAWC has acquired, or currently has pending at the Commission the acquisition of 37 water and wastewater systems. IAWC states that it

must operate in compliance with state and federal laws and regulations, many of which are included in the Clean Water Act of 1972, the Safe Drinking Water Act of 1974, and many U.S. Environmental Protection Agency ("EPA") regulations related to these Acts. IAWC explains that some of the acquired systems were not in compliance with state and federal laws and regulations and thus require significant investment and increased maintenance expense to meet and sustain compliance with federal and state laws and regulations. IAWC notes that these increased costs create additional risk for IAWC and require continued regulatory support. IAWC points out that in its most recent report on American Water, Value Line recognized the Company's commitment to the acquisition of small fragmented systems and the incremental investment required in these systems. IAWC notes that Value Line also noted that regulatory treatment remains a key factor in the Company's performance.

Accordingly, IAWC states, there would be no basis for concluding that IAWC's risk is lower than that of the Proxy Group, and the Company needs the full support of the Commission to sustain its financial performance and condition.

x. Response to other parties

As discussed, IAWC states that interest rates have increased and are expected to continue to increase to combat inflation. The Company explains that since utility stock prices are inversely correlated with the yields on long-term government bonds, rising interest rates are projected to result in declining utility stock prices and increasing utility dividend yields. IAWC states that this means ROE models that rely on current and historical market data (i.e., current share prices in the DCF model and current yields on T-bonds in the CAPM) will likely underestimate the cost of equity over the near-term.

IAWC notes that Ms. Bulkley explained that neither of the other ROE witnesses in this proceeding has fully considered the effect of a rising interest rate environment or the effects of inflation on the cost of equity for IAWC when developing their respective ROE recommendations. Since interest rates are expected to increase, it is reasonable to conclude that the DCF and CAPM results presented by Mr. McNally and Mr. Walters are likely understating the cost of equity for IAWC. Moreover, IAWC states that the expected increase in interest rates warrants consideration of other ROE estimation models such as the CAPM and ECAPM analyses, which may better reflect expected market conditions.

(a) Response to Staff

Ms. Bulkley explained that when Staff's analysis is adjusted to correct problems with the inputs, it produces reasonable results. IAWC states that although Staff witness McNally recommends an ROE for IAWC of 9.78% based on the average of his Constant Growth DCF result of 9.19% and his CAPM result of 10.38%, reasonable adjustments to his CAPM analyses to reflect more appropriate inputs would result in an adjusted ROE estimate that is consistent with Ms. Bulkley's recommended ROE of 10.25%.

IAWC notes that Mr. McNally relies on the spot yield on the 30-year T-bond as of May 12, 2022 which was 3.02% as the estimate of the risk-free rate in his CAPM; however, as of June 14, 2022, the spot yield on the 30-year T-bond was 3.45%, an increase of 43 basis points. IAWC contends that given that interest rates are expected to continue to increase, it is reasonable to rely on projected yields on the 30-year T-bond

as the risk-free rate assumption in the CAPM. Adjusting Mr. McNally's CAPM analysis to rely on the near-term projected 30-year T-bond yield from *Blue Chip Financial Forecasts* ("*Blue Chip*") results in an updated CAPM result of 10.50% which, when combined with his DCF result of 9.19%, results in an updated ROE for IAWC of 9.84% as opposed to Mr. McNally's 9.78% ROE recommendation.

Furthermore, IAWC states, adjusting Mr. McNally's CAPM analysis to rely on the near-term projected 30-year T-bond yield from *Blue Chip* and Value Line beta coefficients calculated using weekly returns as opposed to an average of beta coefficients calculated using weekly and monthly returns, results in an updated CAPM result of 11.24%. IAWC notes that the average of this CAPM result and the result from Mr. McNally's DCF analysis is an ROE of 10.22%, 44 basis points higher than Mr. McNally's recommended ROE.

And, IAWC states, while the adjusted ROE result of 10.22% is consistent with Ms. Bulkley's recommended ROE of 10.25%, it is important to note that the DCF model result Mr. McNally used to calculate his average ROE result is likely understating the forward-looking cost of equity. As Ms. Bulkley explained, the results of the DCF model are likely to increase during the period that IAWC's rates will be in effect given that interest rates are expected to increase.

Staff contends that IAWC witness Bulkley's ROE estimate is a "meaningless amalgam of data for multiple time periods" and that therefore Staff's conclusion is Ms. Bulkley's analysis is "unusable" for setting IAWC's rates." Staff IB at 34. The Company states that the flaw, however, is not in Ms. Bulkley's analysis, but in Staff witness McNally's analysis. The Company explains that Ms. Bulkley, unlike Mr. McNally, considered current and prospective market conditions, including the expectation that interest rates will increase over the near-term in response to increased inflation and the Federal Reserve's normalization of monetary policy. Her conclusion, in the exercise of her judgment as an experienced financial analyst, was that her recommendation of 10.25% was reasonable and appropriate.

The Company contends that Mr. McNally, on the other hand, offered a recommendation that was effectively frozen in time on May 12, 2022. As Ms. Bulkley observed, the use of spot market data, particularly the use of stale, historical data in an environment where monetary policy has been changing and is expected to continue to change, is likely to misrepresent market expectations. The Company states that Mr. McNally's failure to consider that interest rates were increasing at the time that he prepared his analysis, and have continued to increase since that time, results in an understatement of the cost of equity.

According to the Company, the record shows the following, all of which undercut Staff's analysis and recommendation:

- The data that has been presented in this case demonstrates that the Company is operating in a rising interest rate environment, which will increase the investor required ROE.
- In the weeks after Mr. McNally produced his ROE estimate, the Federal Funds rate increased by 150 basis points, inflation remained at a 40 year high of 9.0 percent and the yield on the 30-year T-bond was increasing.

- Staff's suggestion that changes in the market conditions should not be considered over the duration of a case violates the comparable return standard of the seminal *Bluefield* and *Hope* cases.
- The rates that will be set in this proceeding will need to be able to attract capital over a forward-looking period. Therefore, it is necessary that the most up to date information, including investors' expectations, be considered in the development of the ROE.
- Recent authorized ROEs provide a range of historical returns; however, in the current rising interest rate environment, it should be expected that ROEs will be at the higher end of the range, and even increase the high end of the range that was established based on lower interest rate and lower inflationary market conditions.

Additionally, Ms. Bulkley proposed two adjustments to Mr. McNally's CAPM analysis: (1) rely on the near-term projection of the 30-year T-bond yield published by *Blue Chip* as the estimate of the risk-free rate; and (2) rely on Value Line beta coefficients calculated using weekly returns as opposed to an average of beta coefficients calculated using weekly and monthly returns. These adjustments result in an updated CAPM result of 11.40% and an updated DCF and CAPM average of 10.22%—which is consistent with Ms. Bulkley's recommendation of 10.25%.

Staff notes that Ms. Bulkley cited a 30-year T-bond yield of 3.21% from June to support her argument that the 3.02% yield employed by Mr. McNally was too low. Staff then argues that "if one accepts Ms. Bulkley's argument that updates should be provided 'over the duration of the proceeding' and that a higher interest rate indicates that Staff's ROE estimate is understated, then the lower August 4, 2022, T-bond yield indicates that, if anything, Staff's ROE estimate is slightly overstated." Staff IB at 33. Staff reports that on August 4, the yield was 2.97%, below the May 12 effective yield of 3.02% that was used in Mr. McNally's ROE analysis.

The Company states that Staff relies on a scatter plot of authorized ROE data from January 2018 through May 2022 to argue that the Company's requested ROE is inconsistent "with prevailing capital costs." Staff IB at 35. The Company explains, however, that the record shows that the return that is authorized in this proceeding should be higher than the average authorized ROEs in the period from 2018 through the first half of 2022 because the cost of capital is now undeniably higher. The ROEs that were established over the time period cited by Staff were, according to the Company, likely based on data prior to the current rapid increase in interest rates and the persistent high inflation that has been experienced in much of 2022. Therefore, the Company concludes, it is reasonable to expect that decisions made using data from market conditions that were not characterized by 40-year high inflation, significant changes in monetary policy, and rising interest rates in response to these conditions, would be lower than the current investor-required return.

Lastly, the Company addresses Staff's proposed adjustments to the ROE, which the Company says are unwarranted. Staff proposes that the Commission make three conditional, downward adjustments to ROE: 10 basis points if the Commission adopts the Company's proposed capital structure; 5 basis points if the Commission approves

proposed Environmental Surcharge Rider ("Rider ESR"); and 4 basis points if the Commission permanently adopts the Bad Debt Expense Rider ("Rider BDE").

The Company explains that its proposed capital structure does not warrant a reduction in ROE. The Company states Staff's adjustment is based on a flawed comparison of average equity ratios of the proxy companies used to set the ROE at the holding company level rather than at the operating company level. IAWC says that its proposed equity ratio of 51.95% is below the average and well within the range of equity ratios for the utility operating subsidiaries of the Proxy Group companies. The Company contends that, given that the ROE is determined by, *inter alia*, the relative financial risk of the Proxy Group to IAWC, if IAWC's equity ratio is consistent with that of the Proxy Group – and it is, albeit slightly lower – then no adjustment is necessary. The Company further states that Staff provided no evidence as to the relative risk of IAWC compared to the operating subsidiaries of the Proxy Group companies.

The Company states that, moreover, ROE should not be reduced simply because the Company implements a cost recovery mechanism. Staff proposed additional reductions of 4 basis points for making Rider BDE permanent and 5 basis points for the approval of Rider ESR, or a total of 9 basis points: nearly the same, the Company points out, as Mr. McNally's proposed adjustment for the risk differential with the Proxy Group. Ms. Bulkley testified that Staff presented no convincing analysis to support its proposed adjustments for Rider BDE or Rider ESR. While Mr. McNally claimed the closer a company's pattern of recovery matches its pattern of cost incurrence, the lower the risk, the Company argues that he presented no specific identification of any changes in credit ratings that IAWC can expect as a result of approval of the riders in this docket. Rather, the Company explains, his adjustments were based entirely on his calculation of the generic spread between utility bonds rated A and Baa by Moody's. He then attributed a portion of the spread to each of the riders. The Company contends that he did not and could not demonstrate that approval of the riders would result in any change in IAWC's cost of equity, cost of debt or credit ratings, or that if such a change occurred, that his calculations accurately reflect the consequences. The Company states that his calculations offer only a veneer of reliability: they are in fact calculations, but Staff has not demonstrated that they represent what is likely to happen in the real world.

(b) Response to IIWC/FEA/CUB

IAWC states that Mr. Walters recommends an ROE of 9.35% for IAWC, which is the midpoint of his estimated range of 8.90% to 9.80%. Mr. Walters' DCF result sets the low end of this range, and his risk premium sets the high end of the range. The Company contends that the 9.35% ROE recommended by IIWC/FEA/CUB is simply too low to be adopted as—or even to be factored into—the ROE authorized in this proceeding.

The Company explains that Ms. Bulkley proposed three adjustments to Mr. Walters' ROE analyses to improve their reasonableness. These reasonable adjustments alone would increase Mr. Walters' ROE recommendation by nearly 50 basis points, from 9.35% to 9.83%. Even that adjusted amount likely understates the cost of equity during the period the rates will be in effect due to the reasonable expectation that interest rates will increase.

Before describing Ms. Bulkley's adjustments, the Company first points out that, in establishing his recommended ROE, Mr. Walters has not provided any analytical basis for assuming that the Company has less risk than comparable water and natural gas utilities. IAWC notes that this is particularly important as current market conditions demonstrate greater risk resulting from rising interest rates and persistent inflation that is higher than has been experienced in 40 years. IAWC states that considering these factors, Mr. Walters' recommendation, which is well below the historical average authorized ROEs, would not meet the comparable return standard of *Hope* and *Bluefield*.

The Company notes that Mr. Walters presents three DCF models — however, the only DCF model that Mr. Walters developed that produces results that are close to the 8.90% ROE that defines the bottom end of his range is the Constant Growth DCF model, which relies on projected earnings growth rates. The results of this model are a mean ROE of 8.69% and a median ROE of 9.00%. IAWC explains that excluding the DCF result for Middlesex Water Company, which was 3.90%, and is below Moody's utility bond yields, increases the average and median DCF result to 9.08% and 9.04%, respectively.

IAWC states that adjusting Mr. Walters' risk premium analysis to rely on the most recent *Blue Chip* report as of the date of Mr. Walters' analysis (April 29, 2022) and projected utility bond yields to be consistent with his use of projected T-bond yields, his risk premium would result in an ROE range of 10.29% to 10.95%. IAWC explains that the average of these adjusted risk premium results is 10.60% which is 80 basis points higher than the 9.80% ROE that Mr. Walters indicates his risk premium supports.

Additionally, IAWC explains, the results of Mr. Walters' CAPM analyses that are based on S&P Global market intelligence betas and the Kroll (formerly Duff & Phelps) market risk premium (which does not reflect the inverse relationship between interest rates and the risk premium) do not appear to be included in Mr. Walters' reconciled CAPM result and should not be considered. The remainder of Mr. Walters' CAPM analysis produce a range of results from 9.70% to 11.66%. The midpoint of the adjusted CAPM range is 10.68%.

IAWC points out that Mr. Walters relies on the midpoint of his range to determine his recommendation. IAWC explains that using the DCF, CAPM, and risk premium analyses, as adjusted, results in a midpoint ROE estimate of 9.83% (i.e., average of 9.05% and 10.60%). However, IAWC notes, if greater weight is placed on the results of the CAPM and risk premium to better approximate the market conditions expected during the period that IAWC's rates will be in effect than the adjusted ROE model results would produce an ROE that is generally consistent with Ms. Bulkley's recommended ROE of 10.25% and well above Mr. Walters' recommendation of 9.35%.

The Company contends that Ms. Bulkley's adjustments to Mr. Walters' analysis are reasonable because they reflect the reality in which the Company operates. As the Commission observed in Docket No. 18-1775, its determination of ROE has real world consequences:

> An authorized rate of return that is not competitive will deter continued investment in the State of Illinois. A reasonable ROE helps ensure that the company can attract capital in order to meet the Commission required infrastructure needs.

Docket No. 18-1775, Order at 119. In that proceeding, the Commission averaged the results of various financial models to calculate the required ROE. It excluded from consideration every result below 9.5% as being inadequate to be considered competitive. *Id*.

The Company states that, under the approach used by the Commission in Docket No. 18-1775, the intervenors' DCF result of 8.9%, CAPM result of 9.3%, and overall recommendation of 9.35% would be disregarded. The Company contends that the Commission should not gamble, as IIWC/FEA/CUB would, that the markets will fix themselves quickly and that a low ROE will somehow prove to be enough to encourage and support the continued investment that Illinois utilities require. The Company asks the Commission to see the intervenors' recommendation for what it is: a backward-looking analysis that does not rely on current monetary policy.

b. Staff's Position

Staff argues that the Commission should adopt Mr. McNally's cost of equity analysis. As discussed below, Staff notes that the models and inputs he relied upon have been repeatedly tested through litigation and found by the Commission, and the Appellate Court, to be financially sound. Staff demonstrates that this approach produces a reasonable estimate that maintains IAWC's financial strength and is consistent with the types of returns available to other utilities. In contrast, Ms. Bulkley's analysis relies on approaches rejected by the Commission and produces a cost of equity estimate that would unfairly burden ratepayers, in violation of the *Hope* and *Bluefield* standards.

The Company asserts that "[o]nly the Company's analysis reflects current market conditions — an inflationary environment and rising interest rates that cause investors to expect higher returns from regulated utilities." IAWC IB at 54. The Company further argues that Staff and IIWC/CUB/FEA analyses are "based on stale, irrelevant, and inapt data that does not capture the conditions expected to be present when the rates set in this proceeding go into effect" and that the Commission should not rely upon their recommendations. *Id.* Staff argues that the Company's assertions are meritless and lack support. Staff asserts that its ROE analysis produces a reasonable and fair ROE recommendation for IAWC and is based on reliable, current data. Contrary to the Company's claim, Staff states that its proper reliance on current market data does reflect current market conditions and is consistent with the data that this Commission has repeatedly endorsed and accepted in prior rate cases. In contrast, Staff argues that the Company seems to suggest that the Commission should endeavor to predict the future, repeatedly suggesting that the ROE the Commission adopts should reflect the ROE for the period over which the rates set in this case are to be in effect. As Staff explained, not only is that an impossibility, but the Company's analysis does not even attempt to do so. Rather, Staff argues that the Company cobbled together a meaningless amalgam of data for multiple time periods, combining speculation as to the interest rate in 2027 – the only input in its analysis that was actually projected – with stock prices from as far back as May of 2021 and beta estimates from as far back as 2016. Thus, unlike Staff's analysis, Staff argues that it is the Company's analysis that does not reflect current market conditions.

The Company further argues that neither Staff's nor IIWC/FEA/CUB's witness has "fully considered the effect of a rising interest rate environment or the effects of inflation on the cost of equity for IAWC when developing their respective ROE recommendations." IAWC IB at 72. The Company states that "ROE models that rely on current and historical market data (*i.e.*, current share prices in the DCF model and current yields on T-bonds in the CAPM) will likely underestimate the cost of equity over the near-term." *Id.* The Company continues to focus on the proposition that rising interest rates warrant a reliance on forecasts and updated analyses during the proceeding. According to Staff, the Company's attempt to argue that Staff did not properly consider the effect of a rising interest rate environment is unequivocally wrong. Staff explains in detail why its DCF model and use of current yields on T-bonds in the CAPM is reasonable and more reliable than the Company's models. Thus, Staff argues that the Commission should adopt Staff's ROE estimate of 9.78% and reject the Company's inflated ROE estimate of 10.25%.

i. Staff's Analysis

Mr. McNally estimated IAWC's investor-required rate of return on common equity to be 9.78%. Staff Ex. 6.0 at 18. Mr. McNally measured the investor-required rate of return on common equity with DCF and CAPM analyses. IAWC is a wholly-owned subsidiary of American Water and does not have market-traded common stock. Thus, to reduce measurement error, Mr. McNally applied those models to a sample of fourteen water utility and public utility companies (the "Proxy Group"). The Proxy Group was the same sample used by Company witness Bulkley in her analysis. Staff Ex. 6.0 at 2. The fourteen companies that compose the Proxy Group are: American States Water, Atmos Energy, California Water, Essential Utilities, Eversource Energy, Middlesex Water, NiSource, New Jersey Resources, Northwest Natural Gas, One Gas, SJW Group, South Jersey Industries, Spire, and York Water. IAWC Ex. 11.00 at 27-29.

(a) DCF Analysis

DCF analysis assumes that the market value of common stock equals the present value of the expected stream of future dividend payments. Since a DCF model incorporates time-sensitive valuation factors, it must correctly reflect the timing of the dividend payments that stock prices embody. The companies in the Proxy Group pay dividends quarterly. Therefore, Mr. McNally applied a quarterly DCF model. Staff Ex. 6.0 at 2-3.

DCF methodology requires a growth rate that reflects the expectations of investors. Mr. McNally used a constant growth DCF model in which he measured the market-consensus expected growth rates with 3- to 5-year growth rate forecasts published by Zacks, S&P's Market Intelligence, and Value Line. For each company in the Proxy Group, the average growth rate estimate was combined with the closing stock price and dividend data as of May 12, 2022. Based on this growth, stock price, and dividend data, Mr. McNally's DCF estimate of the cost of common equity was 9.19% for the Proxy Group. Staff Ex. 6.0 at 3-7.

(b) CAPM Analysis

According to financial theory, the required rate of return for a given security equals the risk-free rate of return plus a risk premium associated with that security. The risk

premium methodology is consistent with the theory that investors are risk-averse and that, in equilibrium, two securities with equal quantities of risk have equal required rates of return. Mr. McNally used a one-factor risk premium model, the CAPM, to estimate the cost of common equity. In the CAPM, the risk factor is market risk, which cannot be eliminated through portfolio diversification. Staff Ex. 6.0 at 7-8.

The CAPM requires the estimation of three parameters: the risk-free rate, the required rate of return on the market, and beta. For the risk-free rate parameter, Mr. McNally considered the 0.61% yield on four-week U.S. Treasury bills and the 3.02% yield on thirty-year U.S. T-bonds. Both estimates were measured as of May 12, 2022. Forecasts of long-term inflation and the real risk-free rate imply that the long-term risk-free rate is between 4.5% and 4.6%. Thus, Mr. McNally concluded that the U.S. T-bond yield is currently the superior proxy for the long-term risk-free rate. Staff Ex. 6.0 at 8-12. For the expected rate of return on the market parameter, Mr. McNally conducted a DCF analysis on the firms composing the S&P 500 Index. That analysis estimated that the expected rate of return on the market equals 12.97%. Staff Ex. 6.0 at 12-13. Finally, for the beta parameter, Mr. McNally combined adjusted betas from Value Line, Zacks, and a regression analysis. The Proxy Group's average Value Line, Zacks, and regression beta estimates were 0.82, 0.66, and 0.66, respectively. The Value Line regression employs 259 weekly observations of stock return data regressed against the New York Stock Exchange ("NYSE") Composite Index. Both the regression beta and Zacks betas employ sixty monthly observations; however, while Zacks betas regress stock returns against the S&P 500 Index, the regression beta regresses stock returns against the NYSE Index. Since the Zacks beta estimate and the regression beta estimate are calculated using monthly data rather than weekly data (as Value Line uses), Mr. McNally averaged the Zacks and regression results to avoid over-weighting monthly return betas. He then averaged that result with the Value Line beta, which produced a beta for the Proxy Group of 0.74. Staff Ex. 6.0 at 13-17. Inputting those three parameters into the CAPM, Mr. McNally calculated a cost of common equity estimate of 10.38% for the Proxy Group. Staff Ex. 6.0 at 17.

(c) Recommended ROE

Mr. McNally recommends a cost of common equity for IAWC of 9.78%, based on a simple average of the mean sample estimates from his DCF and risk premium models for the Proxy Group. Mr. McNally, however, noted that the Proxy Group Staff and the Company used to estimate IAWC's ROE serves only as a surrogate for IAWC. If IAWC is less risky than the Proxy Group, the ROE estimate derived from the riskier Proxy Group will be too high for IAWC. Conversely, if IAWC is riskier than the Proxy Group, the ROE estimate derived from the Proxy Group will be too low for IAWC. Therefore, Mr. McNally performed an analysis to assess IAWC's risk relative to that of the Proxy Group. That analysis indicated that the risk of IAWC is appreciably lower than the overall risk of the Proxy Group. Specifically, he found that IAWC's three-year averages (2019-2021) for the four ratios that Moody's focuses on to assess financial strength are consistent with a strong A2 rating, when weighted in accordance with the Moody's rating methodology for regulated water utilities. In contrast, the average credit rating for the Proxy Group was a weak A3.

Although his analysis indicates that the risk of IAWC is appreciably lower than the overall risk of the Proxy Group, Mr. McNally does not recommend a reduction to his ROE estimate, as Staff witness Kight-Garlisch recommended an adjustment be made to IAWC's capital structure to put it more in line with the risk profile of the Proxy Group. However, if the Commission rejects Staff's proposed capital structure in favor of the Company's proposed capital structure, Mr. McNally recommends adjusting his ROE estimate downward to align IAWC's authorized ROE with its lower relative risk profile. Staff Ex. 6.0 at 19-20. Mr. McNally estimated that conditional adjustment from the 31-basis point spread between long-term utility bonds rated A and Baa by Moody's, as of May 12, 2022. Because there are three sub-grades within each letter ratings (i.e., A1, A2, and A3 within the Moody's A rating range), he divided the spread between A and Baa utility bond yields by three to estimate a spread between the A2 and A3 ratings of 10 basis points, to estimate the adjustment. Thus, if the Commission rejects Staff's proposed capital structure in favor of the Company's proposed capital structure, Mr. McNally recommends adjusting the Proxy Group's ROE downward by 10 basis points (or 0.10%), producing an ROE estimate for IAWC of 9.68%. Staff Ex. 6.0 at 20-21.

Mr. McNally further advised that, if the Commission adopts the Company's Rider BDE and Rider ESR proposals, additional downward adjustments to the Company's ROE would be necessary to recognize the reduction in risk associated with those riders. Specifically, Mr. McNally explained that the closer a company's pattern of recovery matches its pattern of cost incurrence, the lower the operating risk. The purpose of both of the proposed riders is to help match IAWC's cost and recovery. Thus, downward ROE adjustments are necessary for each, if they are adopted. Staff Ex. 6.0 at 21, 23.

Mr. McNally estimated those adjustments based on the Moody's approach to water utility rating analysis. Among the various subfactors considered in its analysis, Moody's assigns 15% weighting to the cost and investment recovery sub-factor. Mr. McNally concluded that this sub-factor would improve by one credit rating for each the proposed riders. Since the sub-factor affected by the riders is assigned 15% weighting, Mr. McNally multiplied the previously noted 31-basis point spread between A and Baa long-term utility bonds by 15% to estimate the full incremental effect of each rider of 0.05%. Thus, he recommends an adjustment of 5 basis points, for the risk-reduction associated with Rider ESR. However, recognizing that Rider BDE was approved on a temporary basis in the Spring of 2021 and, thus, was in place for approximately 25% of the period over which Mr. McNally performed his relative risk assessment of IAWC vis-à-vis the Proxy Group, he recommends that the full 5 basis point adjustment be multiplied by 75%, to avoid duplicating the previously reflected effect of that rider. This results in a final adjustment of 4 basis points if the Commission grants the adoption of Rider BDE on a permanent basis. Staff Ex. 6.0 at 21-24.

ii. Analysis

(a) Overall Results

The Company's testimony regarding Staff's ROE analysis focuses largely on the proposition that rising interest rates warrant a reliance on forecasts and updated analyses during the proceeding. Ms. Bulkley objects that Mr. McNally relied on 30-year U.S. T-bond spot rate rather than forecasts and did not update his analysis after the May 12,

2022, analysis put forth in his direct testimony, which she concludes causes his results to understate IAWC's ROE. She claims that if updated, his results would be higher. IAWC Ex. 32.00 at 10-11. However, Staff argues that Ms. Bulkley did not demonstrate as much. In fact, she cannot know that to be true, as she never fully updated Mr. McNally's analysis. Ms. Bulkley merely noted that the T-bond yield, from which Mr. McNally drew the risk-free rate estimate used in his CAPM analysis, had risen after his analysis was performed. However, as Mr. McNally explained, even if an update to certain inputs would have an upward effect on the models, other components may have changed that would have a downward effect on the models. Thus, Staff asserts that a partial update will not produce an accurate estimate of the cost of common equity. Staff Ex. 14.0 at 7-8.

Moreover, Mr. McNally explained that updating an ROE analysis in the middle of a rate case is problematic for a number of reasons, particularly as it introduces the potential for gamesmanship, as parties will likely call for updates only when (and only to the inputs for which) doing so favors the outcome they seek. Staff Ex. 14.0 at 7-8. Nonetheless, Ms. Bulkley persisted, stating in her surrebuttal testimony that "it is necessary that the most up to date information … be considered" and that updates should be provided "over the duration of the proceeding." IAWC Ex. 32.00 at 4, 11. Yet, Staff notes that in that same surrebuttal testimony, filed August 5, 2022, she cited back more than a month prior, to the 3.21% yield from June 23, 2022, to claim that the 3.02% T-bond yield Mr. McNally employed was too low. IAWC Ex. 32.00 at 4, 11. However, if Ms. Bulkley had followed her own directive and reviewed the most up-to-date interest rates as of her surrebuttal testimony filing date, she would have come to a different conclusion. As indicated in her own testimony, by June 23, 2022, the 30-year T-bond rate was falling. IAWC Ex. 21.00 at 35. The interest rate continued to fall from that time, such that, by August 4, 2022, the 30-year T-bond yield had fallen below the yield relied on by Staff.[1] Thus, if one accepts Ms. Bulkley's argument that updates should be provided "over the duration of the proceeding" and that a higher interest rate indicates that Staff's ROE estimate is understated, then the lower August 4, 2022, T-bond yield indicates that, if anything, Staff's ROE estimate is slightly overstated. As indicated above, Staff does not agree with Ms. Bulkley's argument. Nonetheless, the fact the interest rates have fallen below the yield Mr. McNally employed undermines the thrust of the Company's position and validates the arguments Mr. McNally put forth with respect to forecasting interest rates and use of updates.

Ms. Bulkley repeatedly asserts that Staff's objective on this subject should be to estimate the cost of equity for the period over which the rates established in this case will be in effect and claims that her estimate accomplishes that objective. IAWC Ex. 21.00 at 5, 6, 11, 13, 25, 27, 34, 35, 37, 38, 44-46, 47, 78, 79, 85, 86, 87, 90, 100, 101-102, 111; IAWC Ex. 32.00 at 10, 22. Staff asserts that she is wrong on both counts. Staff states that the objective in this proceeding is to estimate the current investor-required rate of return, not to estimate what the cost of equity will be at some future time. In fact, the precise period over which the rates set in this proceeding will be in effect is unknown.

[1] Specifically, the 3.02% effective yield used in Staff's analysis was derived from bond equivalent yield of 3.00% as of May 12, 2022, for the 30-year T-bond. Staff Ex. 6.0, Sch. 6.5. As of August 4, 2022, the bond equivalent yield on that same security was 2.97%. Staff Cross Ex. 1.0.

Staff states that it is difficult enough to estimate the current investor-required return when actual data is available, but to attempt to project what investors will demand at some period in the future is pure speculation. Staff Ex. 14.0 at 4. Regardless, according to Staff, Ms. Bulkley's estimate does not represent a future cost of capital. In fact, it does not represent the investor-required rate of return at any given time, but rather, a meaningless amalgam of data for multiple time periods. Despite Ms. Bulkley's emphasis on developing an ROE for the period rates will be in effect, other than forecasted interest rates, no input in her analysis is projected. Staff states she did not forecast the market return; she did not forecast betas; she did not forecast future growth rate expectations; she did not forecast dividends; and she did not forecast stock prices. Most of the data inputs Ms. Bulkley employed are from January 2022. However, she used stock prices from as far back as May 2021 and beta estimates from as far back as 2016. IAWC Ex. 11.00 at 40; IAWC Ex. 11.06. In contrast, she used forecasted interest rates for as far forward as 2027. IAWC Ex. 11.00 at 45. As Mr. McNally explained, it is important to synchronize the inputs in an ROE analysis, as mismatching data from different time periods will not produce an accurate estimate of the market-required rate of return on common equity. Staff Ex. 6.0 at 6. Ms. Bulkley's mismatching of data renders her analysis unusable for setting IAWC's rates.

In contrast, Staff asserts that its analysis is based on the sound application of models and approaches repeatedly accepted by the Commission. Staff demonstrated that its recommendations result in financial ratios that maintain IAWC's financial health. Staff Ex. 14.0 at 14. Moreover, Staff also showed that its ROE recommendation is consistent with prevailing capital costs, while showing Ms. Bulkley's recommendation to be far from mainstream. Ms. Bulkley's 10.25% recommendation is higher than 90% of authorized ROEs since January 2018, with not one authorized ROE greater than her recommendation issued in the last three years. Indeed, her recommendation would have been well above average even in 2018, when the trend line was at its highest at proximately 9.75%, and the average has continued to fall through May of this year, with the trend line indicating the most recent outcome would typically be below 9.50%. In contrast, Mr. McNally's 9.78% recommendation is much more moderate, falling in the upper end of the middle third of authorized returns during that period.

As Ms. Bulkley noted in her testimony, the fair return standard established by the *Hope* and *Bluefield* decisions requires that the authorized return be consistent with the returns for other companies with similar or comparable risk. IAWC Ex. 11.00 at 9-10; IAWC Ex. 21.00 at 6-7. Mr. McNally's recommendation is consistent with that standard, while Ms. Bulkley's recommendation is unnecessarily high.

(b) DCF Analysis

Staff argues that the Value Line growth rates that Ms. Bulkley used in her DCF analysis are inflated and should be averaged with the Value Line growth rates for the Proxy Group. Doing so would decrease her recent Value Line growth estimate by approximately 100 basis points. This accounts for nearly the entire difference between her 9.51% DCF average and Mr. McNally's 9.19% DCF average. Staff Ex. 6.0 at 25-26. She also used 30-, 60-, and 180-day average stock prices; as discussed above, mismatching historical stock prices with current growth expectations increases the

inaccuracy of the estimate. In addition, Ms. Bulkley utilized an annual DCF model, which fails to account for the quarterly payment of dividends.

In contrast, to provide a true cost of equity estimate, Staff utilized a correctly specified quarterly DCF model with data properly synchronized as of its May 12, 2022, measurement date, using inputs and approaches consistently adopted by the Commission. Staff Ex. 6.0 at 3-7.

(c) CAPM Analysis

Staff notes that the primary differences between Staff's and the Company's CAPM analyses are the use of a spot or forecasted interest rate to estimate the risk-free rate and the use of beta estimates derived only from weekly observations or from both weekly and monthly observations. With respect to interest rate forecasts, Mr. McNally explained that it is preferable to rely on the recent spot rate, as the Commission has repeatedly done in prior rate proceedings. Staff argues that interest rate forecasts do not directly reflect investors' expectations but are merely analysts' proxies for the expectations of those actually investing their money. In contrast, and contrary to Ms. Bulkley's implications, Staff argues that current interest rates do reflect investors' current expectations regarding prospective market conditions. Actual current interest rates reflect all publicly available information, including any influence forecasts may have on investor expectations. Thus, Staff asserts that it is not only unnecessary, but inappropriate to employ proxies that do not reflect market forces to speculate regarding what investors' expectations will be in the future, as Ms. Bulkley repeatedly suggests, when current market data is available. Moreover, interest rate forecasts are notoriously inaccurate and, therefore cannot be relied upon, as Ms. Bulkley implicitly acknowledged. Staff Ex. 6.0 at 27-28; Staff Ex. 14.0 at 2-4. As she herself noted, the June 14, 2022, spot yield on the 30-year T-bond was more than a full percent off from the near-term projected yield she relied on in her CAPM, demonstrating the inaccuracy of her forecasts. IAWC Ex. 21.00 at 12-13. Indeed, in a prior proceeding, the Commission found:

> predicting the direction, magnitude, or timing of future interest rate changes with accuracy is not possible. The Commission observes that the record demonstrates that professional forecasting services relied on by the Companies have consistently over estimated future rates in recent years. Current interest rates have proven to be better predictors of future interest rates than professional forecasters.

Staff Ex. 6.0 at 27-28, *citing* Docket Nos. 14-0224/14-0225 (Cons.), Order at 111. For the foregoing reasons, the Commission has repeatedly rejected the use of forecasted interest rates in favor of spot yield.

Ms. Bulkley noted that interest rates rose after Staff's analysis was performed. She suggests that that validates her use of higher forecasted interested rates and shows that reliance on the current Treasury yield is likely to understate the cost of equity over the period that IAWC's rates will be in effect. IAWC Ex. 21.00 at 12-13; IAWC Ex. 32.00 at 10-11. Because Mr. McNally did not reconsider his analysis on that basis, Ms. Bulkley went so far as to state that "Mr. McNally appears determined to ignore financial reality." IAWC Ex. 32.00 at 10. Staff asserts that Ms. Bulkley's claims are unequivocally wrong.

The financial reality is that interest rates are volatile and accurately predicting them is impossible. Another financial reality is that the most recent 30-year T-bond yield in the record is below the rate from the date of Staff's analysis. Staff argues that by Ms. Bulkley's reasoning, if a higher ex post interest rate indicates Staff's risk-free rate estimate is understated, then a lower ex post interest rate would indicate Staff's risk-free rate estimate is overstated. None of that makes speculation as to the level of future interest rates any more accurate or reliable.

Ms. Bulkley claims that the use of spot yields can "bias" results downward due to potentially inefficient pricing. IAWC Ex. 21.00 at 12, 31. According to Staff, she did not, however, provide any evidence that May 12, 2022, was in any way an anomalous day in the markets or that spot yields on that date would lead to a biased ROE estimate. In contrast, Mr. McNally repeated his analysis once a week for three weeks to determine whether or not his proposed cost of common equity reflects anomalous data. The results of those three analyses are all within 16 basis points of one another, with the first result slightly lower than his recommended ROE of 9.78% and the second slightly higher. Staff states that this demonstrates that Mr. McNally's May 12th result was clearly not an anomaly, as the market was reasonably stable and not exhibiting any particular trend in one direction or the other at the time of his analysis. Thus, Staff argues, those results do not warrant the abandonment of the traditional Commission practice of relying on spot data, from which the Commission has stated it is reluctant to deviate. Staff Ex. 14.0 at 8; *see also N. Shore Gas Co. and Peoples Gas Light and Coke Co.*, Docket Nos. 07-0241/07-0242 (Cons.), Order at 92 (Feb. 5, 2008). Moreover, Staff states that Ms. Bulkley's argument in defense of the use of forecasts over spot yields is circular, as it is premised on the "expectation" that interest rates will continue to increase, for which the only evidence is her forecasts, the use of which is unnecessary and inappropriate, as discussed above.

With respect to beta estimation, Ms. Bulkley claimed that betas derived from weekly observations are superior to betas derived from both weekly and monthly observations, as Mr. McNally employed. IAWC Ex. 21.00 at 42. As Mr. McNally explained, the betas Ms. Bulkley and Mr. McNally employed are merely estimates of the true beta, which is unobservable. Consequently, which beta estimates are more accurate is unknown. The Value Line methodology is not inherently superior to Staff's or Zacks' beta methodology. In fact, different beta estimation methodologies can produce different betas when those methodologies employ different samples of stock return data. Thus, just as the analysts in this proceeding used multiple models to determine the cost of equity, Mr. McNally used multiple approaches to estimate beta. In contrast, Ms. Bulkley proposes to exclude monthly betas and rely solely upon weekly betas, a proposal which has been repeatedly rejected by the Commission. In adopting Staff's multiple-source approach to estimating beta, the Commission has stated:

> We agree that, in the same way we rely on multiple models to determine the cost equity, Staff's well-considered use of multiple beta sources is beneficial to reduce measurement error from any individual estimate. Moreover, we find that Staff's beta estimate appropriately weights the beta estimates from those three sources.

Docket Nos. 09-0166/09-0167 (Cons.), Order at 126-27. Further, the Commission's repeated conclusion that the use of both weekly and monthly betas is superior to the use of one or the other was upheld by the Illinois Appellate Court in Docket No. 13-0192. Staff Ex. 14.0 at 9.

(d) ECAPM Analysis

Ms. Bulkley's analysis includes the results of an ECAPM to which she applied adjusted betas. She argued that an adjustment to beta coefficients and an adjustment to the CAPM model are discrete, unrelated adjustments and that both adjustments are warranted. IAWC Ex. 21.00 at 47-51. Staff asserts that Ms. Bulkley's argument is misguided. Ms. Bulkley's ECAPM ostensibly attempts to adjust the CAPM for the flatness of the empirically measured security market line ("SML") relative to the predicted SML. Staff cited research by Litzenberger *et al.* that studied various ways to alter the CAPM itself or beta to address this discrepancy and, thus, bring the resulting predicted return more in line with actual results. Staff Ex. 6.0 at 28-29. Significantly, Litzenberger never combines adjusted betas, as both Ms. Bulkley and Mr. McNally employ, with alternative versions of the CAPM. In fact, Litzenberger observes that if the raw betas are adjusted, as Ms. Bulkley's are, then the cost of equity estimates using the resulting adjusted betas would be identical to those using unadjusted betas in an empirically-derived CAPM. Consistent with that finding, Mr. McNally demonstrated that the mathematical effect of either adjustment (to beta or to the CAPM model) is equivalent – it raises the returns for securities with raw betas below one and lowers returns for securities with raw betas greater than one. Thus, the beta adjustment does correct for the observed flatness in the linear relationship between risk and return, making the use of an adjusted beta when employing an ECAPM unnecessary, and vice versa. Staff Ex. 14.0 at 10. Ms. Bulkley, however, combined both adjustments. By using adjusted betas in the ECAPM model, she effectively adjusted twice for the flatness of the empirical SML and, thus, inflated the estimate of her sample's cost of common equity.

Staff argues that a review of recently authorized utility ROEs supports the conclusion that Ms. Bulkley's ECAPM estimates are inflated. The vast majority of recently authorized utility ROEs fall between 9.35% and 10.25% (with none above 10.25% in the last three years), indicating a central tendency in the mid to upper 9% range (the downward trend in those observations notwithstanding). Ms. Bulkley's average CAPM model result of 10.72% is already approximately 50 basis points higher than the high end of that range. Her average ECAPM result is significantly higher still, at 11.26%, a full percentage point above the high end of that range and approximately 150 basis points above its central tendency (again, ignoring the downward trend of those ROEs). This indicates that, contrary to Ms. Bulkley's conclusion, the CAPM is not understating returns for companies with betas less than 1.00, but rather, her ECAPM (using adjusted betas) is overstating them. That is consistent Mr. McNally's explanation that, by using adjusted betas in the ECAPM model, Ms. Bulkley effectively adjusted twice for the flatness of the empirically measured security market line and, thus, inflated the estimate of her sample's cost of common equity. Staff Ex. 14.0 at 11-12.

The Commission has consistently rejected the use of the ECAPM to determine the cost of common equity in several prior proceedings, stating in a previous IAWC rate case:

> The Commission cannot recall a proceeding in which it relied upon the ECAPM in establishing the cost of common equity for a utility. In the instant proceeding, the record supports a finding that use of adjusted betas in the ECAPM is inappropriate. As Staff witness Ms. Freetly explained, by using adjusted betas she already effectively transformed her Traditional CAPM into an ECAPM. Therefore, including an additional beta adjustment in the ECAPM model would result in inflated estimates of the samples' cost of common equity.

Docket No. 11-0767, Order at 109. Staff's position is that the Commission should likewise reject Ms. Bulkley's ECAPM in this proceeding.

(e) Staff's Conditional ROE Adjustments

As noted previously, Mr. McNally performed an analysis that indicated that the risk of IAWC is appreciably lower than the overall risk of the Proxy Group. Specifically, he estimated IAWC's implied credit rating to a strong A2, compared to a weak A3 average credit rating for the Proxy Group. Thus, he concluded that, if the Commission rejects Staff's proposed capital structure in favor of the Company's proposed capital structure, his recommended ROE for IAWC should be adjusted downward by 10 basis points. Staff Ex. 6.0 at 19-20. Ms. Bulkley dismissed that finding, arguing that his analysis does not take into consideration the regulatory and business risks that Moody's considers. IAWC Ex. 21.00 at 51-52. Staff states that she is wrong. As Mr. McNally explained, his analysis is based on the reasonable assumption that the regulatory and business risks of the sample companies, which are all regulated water and utility companies, are reasonably similar to those of IAWC. In fact, Ms. Bulkley concluded that the operating characteristics of the companies that compose the Proxy Group are "substantially comparable" to IAWC. Moreover, of the six supportive cost recovery mechanisms available in the states in which IAWC's parent, American Water, operates, Illinois is the only state to offer all of them, indicating that IAWC faces, if anything, less operating risk than water utilities operating in those other states. Further, the reasonableness of Mr. McNally's approach is corroborated by his application of the same credit rating estimation procedure to American Water and to Essential Utilities, which is one of the Proxy Group companies. Both of those companies have assigned credit ratings from Moody's that match the credit ratings he estimated for those companies. Moreover, Mr. McNally's one-notch adjustment was conservative, given that, not only did his analysis indicate an approximate 1.5 notch difference in ratings between IAWC and the Proxy Group, but the difference in risk between IAWC and the Proxy Group grew throughout the period studied. Staff Ex. 14.0 at 14-15.

Ms. Bulkley also suggested that the use of credit ratings in Mr. McNally's relative risk assessment is not appropriate because credit ratings do not relate to equity. IAWC Ex. 21.00 at 52. Again, Staff argues she is wrong. The risk/return tradeoff (i.e., investors require higher returns to accept greater exposure to risk) is a fundamental principle of finance. That concept forms the basis of Mr. McNally's adjustment. Issuer credit ratings reflect the general financial health of a company. In fact, Ms. Bulkley identifies long-term issuer credit ratings as one of the criteria she used to select the Proxy Sample, which she employed to estimate IAWC's ROE. While the relationship between credit ratings and

common equity risk is not perfect, credit ratings and common equity risk are certainly related. Common equity costs are affected by debt leverage; likewise, credit ratings are affected by debt leverage. That is, as debt leverage rises the cost of common equity rises and credit ratings fall, and vice versa. Thus, there is an inverse relationship between credit ratings and common equity costs, which is precisely the relationship Mr. McNally modeled. While there is no way to directly measure that relationship, to ignore the risk differential between IAWC and the Proxy Group, as Ms. Bulkley espouses, would clearly be inappropriate. Staff asserts that the approach Mr. McNally adopted is consistent with the approach Staff has taken, and the Commission has accepted, under similar circumstances in previous proceedings. Staff Ex. 14.0 at 15-16.

Ms. Bulkley's final argument against Mr. McNally's 10 basis point downward ROE estimate is that, while the development of an ROE from a Proxy Group of risk-comparable companies is based on relative risk, a comparative analysis is not part of a credit rating analysis. IAWC Ex. 21.00 at 53. Staff argues that this is a straw man argument and mischaracterizes Mr. McNally's performed analysis. Mr. McNally did not use a comparison to the Proxy Group to estimate IAWC's implied credit rating; rather, he completed an absolute assessment of IAWC's financial ratios. Mr. McNally concluded that those ratios are consistent with a strong A2 rating in accordance with the Moody's rating methodology for regulated water utilities. Only after establishing IAWC's risk profile did he compare that risk profile to that of the proxy sample to determine the relative ROE based on those risk profiles. Staff Ex. 6.0 at 19-20. Thus, Staff asserts that Ms. Bulkley's argument should be rejected.

Ms. Bulkley claims that Mr. McNally provided no support for his 4 basis point ROE adjustment for the Company's proposed Rider BDE or his 5 basis point ROE adjustment for the Company's proposed Rider ESR. IAWC Ex. 21.00 at 55. Staff argues that is inaccurate. In addition to the quantitative analysis that Mr. McNally provided for deriving the specific adjustments he proposes, he also provided a qualitative analysis of the need for the adjustment: Rider BDE addresses fluctuations in bad debt while Rider ESR ensures the recovery of capital investments related to new environmental regulations, both of which would draw IAWC's pattern of cost recovery closer to its pattern of cost incurrence, and thus, lower its operating risk. Staff Ex. 6.0 at 21-24. Ms. Bulkley does not deny that those riders would reduce IAWC's risk and, unlike Mr. McNally, did not provide any qualitative counterargument, much less present any quantitative analysis to refute his conclusion. Thus, according to Staff, his argument regarding the need for such adjustments stands unrefuted. Given that fact, it would be improper to not make an adjustment. Since, Ms. Bulkley provides no alternative for consideration, it is Staff's position that the Commission must adopt Mr. McNally's adjustments if the Commission approves Rider BDE and/or Rider ESR.

c. AG's Position

The AG supports the ROE recommendations proposed by IIWC/FEA/CUB for the reasons set forth in the testimony of Mr. Walters. *See generally,* IIWC/CUB/FEA Ex. 1.0, 2.0.

d. IIWC/FEA/CUB's Position

IIWC/FEA/CUB take the position that the Act tasks the Commission with determining the market-required cost of equity for IAWC and authorizing an equivalent ROE for the Company. A utility's cost of common equity is the expected return that investors require on an investment in the utility. IIWC/CUB/FEA Ex. 1.0 at 24. Investors expect to earn their required return through dividends and stock price appreciation. *Id.* at 24. The return is to be commensurate with the return investors could earn by investing in other companies of comparable risk. *Bluefield*, 262 U.S. 679, 692-693; *Hope*, 320 U.S. 591, 603. Under these precedents, a utility is allowed to earn a return sufficient to maintain its financial integrity and to attract capital at reasonable terms.

The Act requires that the Commission set just and reasonable rates. 220 ILCS 5/9-201(c). The purpose of this statutory provision is to "prevent exorbitant rates and unjust discrimination and undue preferences in rates" and to enable consumers to protect themselves. *Springfield Gas & Electric Co. v. Springfield*, 292 Ill. 236, 247, 126 N.E. 739, 744 (1920). Thus, the Act calls on the Commission to ensure IAWC's ROE is no higher than necessary to satisfy *Hope* and *Bluefield.* As the *Hope* decision noted: "fixing just and reasonable rates involves a balancing of investor and consumer interests." *Hope*, 320 U.S. 591, 603. IIWC/FEA/CUB's recommended ROE meets that standard.

Furthermore, according to IIWC/FEA/CUB, other jurisdictions have observed that regulation is not intended to allow a utility a ROE that is higher than necessary to meet the standards set in *Hope* and *Bluefield*. Regulation is intended to protect consumers from exorbitant prices and unfair business practices, as the provisions of the statutes establishing the regulation of utilities show. *See Pub. Sys. v. FERC*, 606 F. 2d 973, 979 n.27 (1979). IAWC's requested 10.25% ROE is higher than necessary to meet the standards set forth in *Hope* and *Bluefield* and therefore should be rejected.

IIWC/FEA/CUB note that in light of the lack of peer water utilities, IIWC witness Walters used the same Proxy Group of investor-owned gas utilities as Company witness Bulkley, excluding South Jersey Company, which has been targeted for acquisition by JP Morgan. IIWC/CUB/FEA Ex. 1.0 at 30. Mr. Walters observed that authorized utility ROEs have declined over the last 10 years, with industry averages consistently below 10% since 2011 for gas utilities and 2013 for electric utilities. *Id.* at 6-7. Since 2016, the majority of authorized gas utility ROEs have been below 9.7%, often below 9.5%. *Id.* at 8. There are fewer examples of authorized water utility ROEs to draw upon, but Mr. Walters cited S&P Capital IQ's analysis showing a range of 9.0% to 9.8% over the 12 months ending April 30, 2022. *Id.* at 8-9. As discussed above, the utilities sector has enjoyed financial stability and growth throughout this time period. *Id.* at 11-23. These trends illustrate that a decade of declining authorized ROEs, including the recent norm of ROEs in the mid-to-low 9% range, have supported utilities' financial strength.

IIWC/FEA/CUB point out that Mr. Walters observed that while IAWC does not receive credit ratings of its own, its parent company, American Water, and its financing entity, AWCC, both have A ratings from S&P and Baa1 ratings from Moody's. *Id.* at 26-27. S&P gives American Water an "Excellent" business risk rating and a "Significant" financial risk. *Id.* at 27. S&P stated in its most recent report concerning IAWC's parent company that American Water "will reduce its business risk by selling its [Homeowners

Services Group] business," which S&P believes "will almost certainly close." *Id.* at 27. In light of the Homeowners Services Group business sale and other factors, the report concluded, "[g]iven the company's relative positioning within its business risk profile and financial risk profile categories, we apply a positive comparable ratings analysis modifier," meaning the company's financial standing is even stronger than current statistics indicate. *Id.* at 27.

IIWC/FEA/CUB state that to determine IAWC's cost of equity, Mr. Walters utilized five financial projection models: (1) a constant growth DCF model using a consensus of analysts' growth rate projections; (2) a constant growth DCF model using sustainable growth rate estimates; (3) a multi-stage growth DCF model; (4) a risk premium model; and (5) a CAPM. *Id.* at 26. Mr. Walters input Proxy Group data through these models to calculate a range of reasonable cost of equity estimates. *Id.* at 26.

i. Constant Growth DCF Model

It is the IIWC/FEA/CUB position that the DCF model infers that a stock price equals the sum of the present value of expected future cash flows discounted at the investor's required rate of return or cost of capital. *Id.* at 31. For the constant growth DCF model, Mr. Walters input the average of the weekly high and low stock prices of Proxy Group utilities over the thirteen-week period ending April 29, 2022 and the most recently paid quarterly dividends reported in *Value Line*. *Id.* at 32-33. Mr. Walters found that securities analysts' growth estimates have been shown to be more accurate than historical data in predicting future returns. *Id.* at 33. Accordingly, Mr. Walters used the mean of professional securities analysts' earnings growth estimates as a proxy for investors' dividend growth rate expectations. *Id.* at 34. The mean growth rate for the Proxy Group was 5.99%; the median, 6.10%. *Id.* at 34-35. Using these inputs, Mr. Walters' constant growth DCF model calculated a mean return of 8.69% and a median return of 9.00%. *Id.* at 34. However, Mr. Walters found that the three- to five-year growth rates this model assumes are nearly 40% higher than the projected long-term gross domestic product ("GDP") growth rate of 4.10% and are therefore unsustainable. *Id.* at 35-36. Mr. Walters based this 4.10% figure and his finding that a utility's earnings and dividends cannot sustain long-term growth exceeding that of the U.S. GDP on his review of historical data and academic literature on the subject. *Id.* at 39-43.

ii. Sustainable Growth DCF Model

IIWC/FEA/CUB observe that Mr. Walters then conducted a sustainable growth DCF model analysis. A sustainable growth rate is based on the percentage of the utility's earnings that is retained and reinvested in utility plant and equipment (*i.e.*, rate base). *Id.* at 36. The model calculates the sustainable, or "internal," growth rate by subtracting the dividend payout ratio from one, reflecting the inverse relationship between payout and retention of funds. *Id.* at 36. Mr. Walters calculated the Proxy Group's long-term sustainable growth rate as an average of 6.05% and median of 5.59%. *Id.* at 37. Plugging these sustainable growth rates into the DCF model produced average and median cost of equity estimates of 8.74% an 8.11%, respectively. *Id.*

iii. Multi-Stage Growth DCF Model

IIWC/FEA/CUB point out that growth rates are not necessarily constant over time. *Id.* at 37-38. Accordingly, IIWC/FEA/CUB witness Walters also conducted multi-stage DCF model analysis applying different growth rates to short-term (first five years), transition period (next five years), and long-term (beyond ten years) time periods. *Id.* at 39. Mr. Walters applied the consensus analysts' growth rate (8.74% and 8.11%) to the short-term, the maximum sustainable growth rate (4.10%) for the long-term, and a linear interpolation between those two points for the transition period. *Id.* at 39, 43. The resulting estimates from his multi-stage DCF model analysis was a mean cost of equity of 7.08% and a median of 7.19%. *Id.* at 43.

Based on these six (three medians, three means) DCF model estimates, Mr. Walters concluded that a reasonable ROE based on his DCF analyses was 8.9%. *Id.* at 44. This figure was higher than all but the highest one of the estimates, the 9.0% median constant growth DCF model output. *Id.* at 44, Tbl. CCW-9.

iv. Risk Premium Model

IIWC/FEA/CUB state the risk premium model is based on the principle that investors require a higher return to assume greater risk. Common equity investments carry greater risk than bonds because bonds have more security of payment in bankruptcy proceedings and the coupon payments on bonds represent actual contractual obligations. *Id.* at 44. The risk premium model uses two estimates of an equity risk premium: (1) the difference between regulatory commission-authorized ROEs and contemporary U.S. T-bond yields; and (2) the difference between regulatory commission-authorized ROEs and contemporary Moody's "A"-rated utility bond yields. *Id.* at 44-45. Mr. Walters chose the years 1986 through 2021 because public utility stocks consistently traded at a premium to book value in that time period. *Id.* at 45.

IIWC/FEA/CUB witness Walters' analysis indicated an average equity risk premium over T-bond yields of 5.70%. *Id.* To account for fluctuations over time, Mr. Walters calculated five-year rolling averages ranging from 4.17% to 7.23% and ten-year rolling averages from 4.30% to 6.93%. *Id.* at 45-46, 47. Using the same method, Mr. Walters calculated an average risk premium over contemporary Moody's "A"-rated utility bond yields of 4.30% and five-year and ten-year rolling averages ranging from 2.80% to 5.97% and from 3.11% to 5.75%, respectively. *Id.* at 46.

IIWC/FEA/CUB point out Mr. Walters also considered the average utility bond yield spreads over T-bonds for utility bonds rated "A" (1.48%) and "Baa" (1.91%) for the same time period. *Id.* at 47-48. These yield spreads indicate that utility bond securities have average to above average demand relative to Treasury securities over the last several years. *Id.* at 48. Mr. Walters' recommended ROE for IAWC based on his risk premium study was 9.80%. *Id.* at 48-49.

v. CAPM Model

IIWC/FEA/CUB argue that the CAPM posits that the market requires a rate of return for a security equal to the risk-free rate, plus a risk premium associated with the specific security. *Id.* at 50. This mathematical model utilizes a beta coefficient that represents the investment risk that cannot be diversified away in a portfolio ("non-

diversifiable" or "systemic" risk). *Id.* at 50-51. For the market risk-free rate, Mr. Walters used *Blue Chip's* projected thirty-year bond yield of 3.30%, which Mr. Walters notes is higher (and therefore a more generous assumption to the Company) than the current thirty-year T-bond yield of 2.51%. *Id.* at 51-52.

IIWC/FEA/CUB observe that in selecting a beta, Mr. Walters rejected the current Proxy Group average and median *Value Line* beta estimates because, in his experience, these estimates have been abnormally high and therefore unlikely to be sustained long-term. *Id.* at 53. Instead, Mr. Walters relies on Market Intelligence's beta Generator model, which derives 0.57 average and 0.59 median betas from S&P 500 market data. *Id.* at 53-54.

According to IIWC/FEA/CUB, Mr. Walters derived his market risk premium estimates via two methods: risk premium and DCF. *Id.* at 54. He also considered the normalized market risk premium of 5.50% with the normalized risk-free rate of 3.00% published by Kroll. *Id.* at 54. Mr. Walters derived his forward-looking risk premium-based estimate by estimating the expected return on the market (via the S&P 500) and subtracting the risk-free rate. *Id.* at 54. He calculated the expected return on the S&P 500 by adding an expected inflation rate to the long-term historical mean real return on the market (achieved return above inflation). *Id.* Kroll estimates the historical mean real market return from 1926 to 2021 to be 9.20%. *Id.* at 55. A current consensus for projected inflation using Consumer Price Index is 2.60%. Taken together, the expected market return is 12.04%, which after subtracting the 3.30% projected risk-free rate yields a 8.74% market risk premium. *Id*.

IIWC/FEA/CUB state Mr. Walter's first constant growth DCF model estimate, using the FERC's method using the dividend-paying companies of the S&P 500 index, to estimate expected market return, produced an expected market return of 13.51%. *Id.* at 55-56. Subtracting the 3.30% projected risk-free rate brings the risk market risk premium to 10.20%. *Id.* Mr. Walters' second DCF-based estimate used all companies in the S&P 500 index rather than just the dividend-paying companies. *Id.* at 56. This method produced a 13.61% expected market return and therefore a 10.30% market risk premium (13.61% - 3.3% risk free rate = 10.30%). *Id.* Collectively, the DCF-based method produced an average expected market return of 13.56% and an average market risk premium of 10.25%.

IIWC/FEA/CUB indicate the three methods used to estimate the expected market return (*i.e.* risk premium method – 12.04% DCF method – 13.56% and Kroll's normalized method – 8.50%) produce an average expected market return of 11.37%. Mr. Walters' 11.37% average estimated expected market return exceeded the long-term market expectations of several financial institutions, in all but one case by more than double. *Id.* This comparison illustrated that, if anything, Mr. Walters' estimated market risk premiums were toward the higher end. *Id.* at 57. This characterization is further bolstered by Kroll's analysis, which finds the same low-end estimate (5.50%) but a significantly lower high-end estimate (7.46% compared to 10.25%). *Id.* at 58.

IIWC/FEA/CUB report that based on the nine different versions of the CAPM Mr. Walters applied, Mr. Walters estimated an average ROE of 8.97% and a median of 9.18%. *Id.* at 59-60. Accordingly, he recommends a CAPM ROE estimate of 9.3%. *Id.* at 60.

vi. ROE Summary

Taken together, Mr. Walters calculated recommended ROEs of 8.9% (DCF), 9.8% (risk premium), and 9.3% (CAPM). *Id.* at 61. Mr. Walters recommends as an ROE for the Company the midpoint of this range, 9.35%. *Id.* However, Mr. Walters based his recommendation on the assumption that the Company's approved common equity ratio not exceed 50.0%. *Id.* IIWC/FEA/CUB state that if the Commission approves an equity ratio greater than 50.0%, an ROE in the lower half of Mr. Walters' range would be more appropriate. *Id*.

(a) Response to IAWC

Mr. Walters testified that Ms. Bulkley's constant growth rate DCF results are based on unsustainably high growth rates, she relies on her "Mean High" DCF results produced using only proxy companies' highest growth rates, her CAPM uses inflated market risk premiums, and her ECAPM inappropriately relies on adjusted betas. *Id.* at 62. A conspicuous pattern one cannot help but notice in Ms. Bulkley's analysis is that every one of these suspect methodological choices points in the same direction of increasing the estimated cost of equity. Ms. Bulkley's analysis supports the reasonableness of Mr. Walters' recommendations once these inflationary flaws are corrected. *Id.* at 63. The corrected average ranges are 8.75% to 8.96% for DCF and an average of 9.55% for CAPM. *Id.* at 64. Mr. Walters' recommended 9.35% ROE falls squarely in the middle of this range. *Id.*

IIWC/FEA/CUB observe that for her constant growth DCF analysis, Ms. Bulkley assumes a 6.71% growth rate, which is dramatically higher than the 4.10% maximum long-term sustainable growth rate described above. *Id.* at 65-66. Ms. Bulkley could have corrected this unreasonable assumption by adopting a multi-stage DCF with an empirically-supported long-term growth figure, such as the long-term GDP growth rate Mr. Walters used. *Id*. Rather than correct for the inflationary impact of unreasonably high long-term growth rate estimates, Ms. Bulkley doubled down by affording particular weight to her Proxy Group's average high growth rate of 8.44%, which is more than double expected GDP growth. *Id.* at 66-67. Even her Proxy Group's average low growth rate of 5.09% exceeded the 4.10% estimated long-term growth rate of the U.S. economy; 8.44% is entirely implausible. *Id.* IIWC/FEA/CUB state that a more reasonable DCF estimate would fall between the average of Ms. Bulkley's mean and mean-low DCF results (8.75%) and the average of her median and median-low CDF results (8.96%). *Id.* at 67. Mr. Walters' constant growth DCF results of 8.69% (average) and 9.00% (median) provide an almost identical range. *Id.* at 67.

According to IIWC/FEA/CUB, Ms. Bulkley's CAPM analysis errs by relying entirely on a single DCF-derived expected market return, which overestimates the cost of equity. *Id.* at 68, 69. Mr. Bulkley's own testimony elsewhere recognizes the need to consider multiple analytical methods. *Id.* at 69 *quoting* IAWC Ex. 11.00 at 34. Academic literature on the subject stresses the importance of considering the results of multiple methods as well. *Id.* at 69-70. However, IIWC/FEA/CUB note that Ms. Bulkley fails to heed her own sound advice, conducting only one CAPM analysis, using only inputs that result in an unusually favorable number for her client. Mr. Walters recommends a simple fix. He takes no issue with Ms. Bulkley's risk-free rate estimates or her historical beta estimates.

Specifically, Mr. Walters recommends replacing Ms. Bulkley's inflated average return on the market with his estimate of 11.37%. *Id.* at 70. This results in a reasonable CAPM range of 8.95% to 10.09%, with an average of 9.55%. *Id.*

Mr. Walters takes issue with Ms. Bulkley's reliance on an ECAPM analysis with an adjusted beta coefficient. *Id.* at 71. Mr. Walters explains that the ECAPM method itself already applies weighting adjustments that are the mathematical equivalent of using the adjusted beta. *Id.* Performing both of these redundant adjustments inflates the estimated cost of equity by flattening the expected security market return line twice. *Id.* at 72-74. Academic research supporting the development of the ECAPM does not support using the method in this way. *Id.* at 73 (citing several published studies). Further, IIWC/FEA/CUB state that regulatory commissions have widely rejected the use of the ECAPM, particularly when it incorporates an adjusted beta. *Id.* at 74. Accordingly, Mr. Walters recommends the Commission reject Ms. Bulkley's ECAPM altogether. IIWC/CUB/FEA Ex. 1.0 at 74.

For the reasons stated above, IIWC/FEA/CUB urge the Commission to adopt Mr. Walters' recommended ROE of 9.35% and reject Company witness Bulkley's excessive request of 10.25%. IIWC/FEA/CUB note this recommendation is contingent on the adoption of an equity ratio equal to or less than 50.0%. If the Commission adopts a capital structure with more than 50.0% equity, IIWC/FEA/CUB request that the Commission approve an ROE lower than 9.35%.

e. Commission Analysis and Conclusion

Return on equity is the return that the Commission authorizes a public utility to earn on the equity invested in its property used in its provision of utility service. As has become typical, the three parties in this docket who addressed the cost of common equity have presented the Commission with three proposals, with three significantly different results. The Company proposes 10.25%; Staff proposes 9.78%; and IIWC/FEA/CUB propose 9.35%. The AG supports IIWC/FEA/CUB's analysis and proposed ROE.

As all parties repeatedly mention, the *Hope*/*Bluefield* body of caselaw dictates the goals of determining a reasonable rate of return. "An authorized ROE that is too low restricts the utility's access to capital at a reasonable cost. Conversely, an ROE that is too high will result in rates that are neither just nor reasonable." *N. Shore Gas Co.*, Docket No. 20-0810, Order at 85 (Sept. 8, 2021), *citing Bluefield*, 262 U.S. at 692; *Hope*, 320 U.S. at 603.

The crux of the Company's argument for an ROE that is higher than Staff/Intervenors is that the models are affected by the data at the time of the analysis, and there has been such a large market shift since 2020 as well as Federal tax reform that results in understated cost of common equity. For this reason, IAWC claims that using the DCF model understates ROE and must be balanced by the higher results from the CAPM and the ECAPM models. The Commission agrees with Staff that using its DCF model and the use of current yields on T-bonds in the CAPM is reasonable and more reliable than the Company's models. The Commission has always demonstrated a preference for current, accurate data in modeling for just that reason – it is current and accurate. The Company repeatedly complains that Staff uses data at the time it filed its testimony, versus repeatedly updating it, and the Company appears to pick and choose

what components of its analysis will consist of current data, past data, or forecasted data. The Commission agrees that not only is such a method not analytically sound, it appears only to produce the highest possible number. Moreover, the Company has total discretion as to when it decides to file a rate case and could choose to file a rate case when the financial data is not volatile.

Staff applied a quarterly DCF model that reflects the expectations of investors. Mr. McNally used a constant growth DCF model in which he measured the market-consensus expected growth rates with three- to five-year growth rate forecasts published by Zacks, S&P's Market Intelligence, and Value Line. The Commission finds this reasonable and consistent with a reasoned ROE analysis.

IIWC/FEA/CUB modeled three types of DCF analyses - Constant Growth, Sustainable Growth, and Multi-Stage Growth. IAWC critiques IIWC/FEA/CUB for their use of three different DCF models and claims that only the Constant Growth method produces an estimate close to their bottom range of ROE. IIWC/FEA/CUB counter that independent academic research on the subject has concluded that growth beyond the growth rate of the economy in which the Company operates cannot be sustained indefinitely and that this approach would assume annual growth rates 40% higher than the projected long-term gross domestic product growth rate. However, IIWC/FEA/CUB include an outlier utility with an ROE below 5%, which is atypical and should be removed. The Commission agrees with Staff and the Company that the Constant Growth method is the most accurate in this circumstance.

IAWC also criticizes Mr. Walters' use of old data for the Risk Premium model. IAWC claims Mr. Walters should have used a recent *Blue Chip* report and projected utility bond yields to be consistent with his use of projected T-bond yields. The Commission agrees that Mr. Walters' use of historical data (from 1986-2021) is flawed, although it disagrees with the Company's alternative proposal to rely on forecasted interest rates, as discussed below.

Staff notes that the primary differences between Staff's and the Company's CAPM analyses are the use of a spot or forecasted interest rate to estimate the risk-free rate and the use of beta estimates derived only from weekly observations or from both weekly and monthly observations. With respect to interest rate forecasts, Mr. McNally explained that it is preferable to rely on the recent spot rate, as the Commission has repeatedly done in prior rate proceedings. The Commission has also expressed its preference for using a combination of weekly and monthly beta estimates. Therefore, consistent with prior rate case proceedings, the Commission once again rejects the use of forecasted interest rates in favor of the recent spot rate and adopts Staff's use of a combination of weekly and monthly beta estimates.

To supplement its ROE proposal, IAWC uses the ECAPM, which produces an ROE that is consistently higher than the other proven methods. Specifically, IAWC's ECAPM analysis results range from 10.77% to 11.74%, which the Commission notes is not reasonably comparable to authorized ROEs for any Illinois water utilities in the last several years. The Commission agrees with Staff that the use of the ECAPM model as a component of ROE analysis has been continually proposed by utilities and rejected by the Commission. *See* Docket No. 11-0767, Order at 109. Staff, however, critiques other

specific aspects of IAWC's ECAPM method, such as Ms. Bulkley's use of weekly data in its beta adjustments. For these reasons, the Commission again foregoes the use of ECAPM.

The Commission has consistently approved the use of DCF and CAPM in modeling the cost of common equity. "Historically, the Commission has given substantial weight to the results of the DCF and CAPM analyses' of the parties' expert witnesses." *N. Shore Gas Co.,* Docket No. 20-0810, Order at 47-48 (Sept. 8, 2021). The Commission will again approve that modeling in this docket. The Commission finds that the DCF and CAPM models meet the goals of *Hope* and *Bluefield* in allowing the Company to attract capital yet charge reasonable rates. Therefore, the Commission adopts Staff's proposed ROE.

With the exception of South Jersey Industries, which Mr. Walters excluded from his analysis, the parties all use the same Proxy Group, a sample of fourteen water utility and public utility companies. The Commission agrees the Proxy Group is a reasonable sample upon which to apply the various models, since IAWC is wholly-owned by a parent and does not have its own market traded common stock.

The Company argues that its substantial capital expenditure program as well as its investment in acquired water systems to ensure those systems comply with state and federal water standards renders IAWC riskier than its cohorts in the Proxy Group such that no downward ROE adjustment should be made. However, Staff points out that based on credit ratings, IAWC is far less risky than its cohorts in the Proxy Group. As Mr. McNally explained, his analysis is based on the reasonable assumption that the regulatory and business risks of the sample companies, which are all regulated water and utility companies, are reasonably similar to those of IAWC. Since the Commission agrees with Staff's proposed capital structure, Staff's proposed 10 basis point reduction is not adopted.

The Commission declines to adopt Rider ESR or make Rider BDE permanent. *See* Section VI., below. Therefore, Staff's additional proposed downward adjustments for ROE need not be considered.

In its BOE, IIWC/FEA/CUB argue that if the Commission does not adopt its recommended ROE of 9.35%, the Commission should use an averaging approach. IIWC/FEA/CUB recommend the Commission instead average the DCF and CAPM results of Staff (9.79%) and IIWC/FEA/CUB (9.1%). This results in an ROE of 9.44%. IIWC/FEA/CUB BOE at 12.

IAWC asks the Commission to adopt a higher ROE than the 9.78% adopted in the Proposed Order, arguing that the Commission is not bound by Staff's decision to weight its DCF and CAPM results equally. Instead, in light of the record evidence regarding the substantial turbulence in the capital markets and current inflationary conditions, and their effects on the cost of capital, the Commission should employ its technical expertise and exercise its substantial discretion to weight Staff's DCF and CAPM results in a manner the Commission believes will produce a fair and reasonable ROE. IAWC suggests that the Commission use a weighted average, weighing the DCF 33% and the CAPM 67% in the average. The resulting ROE is 9.98%. IAWC BOE at 34-35.

The Commission declines to consider an averaging approach. Both IIWC/FEA/CUB's and IAWC's suggested alternatives seem to be means to an end result, rather than a reasoned basis for calculating ROE. The Commission has recently expressed that the averaging method is not precedent and on the two occasions where it used averaging, the Commission did not approve any of the underlying components of each party's method. Docket. No. 21-0198, Order at 83.

4. Recommended Cost of Capital

Having considered the conclusions above concerning the Company's capital structure and costs of debt and equity, the Commission finds that the Company should be authorized to earn a rate of return of 7.01%. The rate of return incorporates an ROE of 9.78%. The Company's rate of return was derived as follows:

Capital Component	Percent of Total Capital	Cost	Weighted Cost
Short-term Debt	1.81%	2.07%	0.04%
Long-term Debt	49.19%	4.43%	2.18%
Common Equity	49.00%	9.78%	4.79%
Total	100.00%		7.01%

V. RATE DESIGN

A. Uncontested Issues

IAWC states that it accepts Staff's recommendations regarding wastewater rate design for Jerseyville and Mount Pulaski pricing zones, where rates are dictated by the respective Asset Purchase Agreements.

1. Central Zone Collection-Only Rate

IAWC states that Staff recommended that the Commission approve the Company's proposal to place all current acquisitions that take service under individual tariffs on Central Zone wastewater rates, approve the Company's proposal to create a Collection Only rate option for the Central Zone wastewater tariff, and approve the Company's proposal to move Piasa wastewater service territory from its Chicago Metro rates tariff to the proposed Central Zone Collection Only tariff. The Company agrees with these recommendations. The Commission finds these recommendations are reasonable and they are approved.

2. Chicago Metro Rate Increase

IAWC notes that Staff recommended that the Commission approve the Company's proposal to increase rates in the Chicago Metro service territory sufficient to recover the full cost to serve the Chicago Metro customers (Recommendation #13). The Company agrees. The Commission finds this recommendation is reasonable, and it is approved.

3. Increase to Competitive Service Customers

IIWC/FEA recommend a minimum increase of 10% for Competitive Service customers. IAWC states that in the interest of narrowing the issues in this proceeding, the Company agrees to a 10% increase for Competitive Service customers. The Commission finds this recommendation is reasonable, and it is approved.

B. Contested Issues

1. Wastewater Revenue Requirement Reallocation

a. IAWC's Position

IAWC explains that treating wastewater to meet ever more stringent Illinois public health and environmental requirements requires significant investment and operational expertise. IAWC notes that this is particularly true for smaller or municipal systems that have experienced underinvestment over many years. IAWC states that many municipal and private water and wastewater systems, particularly in economically challenged regions of Illinois, are unable to afford adequate levels of investment, ongoing maintenance, and retention of operational expertise to ensure safe and clean drinking water and wastewater systems that protect the health and safety of the local communities, rivers, streams, and groundwater. The Company notes that investor-owned utilities such as IAWC, however, are well positioned to make significant ongoing investments in water and wastewater systems, and they have the required expertise to support investments.

IAWC notes that since the Company's last rate case, the Commission has approved the Company's assumption of responsibility for numerous such wastewater systems that require substantial investment. Certain of these systems have been included in IAWC's Central Wastewater tariff district. IAWC explains that if the revenue requirement for the Central Wastewater district – which includes investment that no party has contested – were recovered only from Central Wastewater customers, those customers would experience a rate increase of approximately 100%, or an increase of $31 over current bills, which would result in a monthly charge of approximately $61. IAWC asserts that to mitigate this rate increase, while continuing to advance Illinois clean water and environmental policy, IAWC is proposing to recover approximately $11.8 million of Central Wastewater revenue requirement from IAWC's water customers. IAWC explains that the result of this partial reallocation is that Central Wastewater customer rates would increase by $9.79 for the average wastewater customer, while IAWC water customers would pay on average only an additional $2.72 per month. IAWC explains that this reallocation ensures that rates remain affordable for all customers while avoiding rate shock for Central Wastewater customers and advances the critical policy goal of providing much needed investment and expertise to Illinois wastewater systems.

IAWC states that the Commission is not prohibited from making an allocation of wastewater revenue requirements to water customers when designing rates. IAWC asserts that there is clear and long-standing caselaw confirming the role of the Commission in ratemaking decisions. In fact, IAWC maintains, rate design is uniquely a matter for the Commission's discretion. The courts defer to the Commission's ratemaking authority, which is guided by discretion and sound judgment rather than strict formulaic analyses and does not require enabling legislation to guide its decisions.

IAWC asserts that the Staff and Intervenor claims that the Company's wastewater reallocation proposal is somehow unlawful or in violation of the Act are wrong. Both Staff and the Company agree that the Act contemplates the consideration of factors other than cost of service in regulatory decisions, and IAWC asserts that no party points to statutory language that states otherwise. Further, IAWC argues, regardless of how many bills have been introduced in the General Assembly regarding this ratemaking approach, the fact that those bills never made it through the legislative process does not mean that the approach is somehow now prohibited. No law prohibiting the Company's proposed reallocation exists. IAWC also states that despite the AG's mischaracterization of the legislative process, the Company's proposed reallocation is not proscribed by any legal authority, and the Commission does not require any enabling legislation to authorize its consideration of the Company's ratemaking proposal – it has the authority to exercise ratemaking discretion and adopt the Company's proposal.

IAWC explains that the U.S. Supreme Court case cited by the AG in support of its claim that the Commission's authority is restricted is irrelevant and easily distinguishable. In that case, the U.S. Supreme Court considered whether Congress had granted the U.S. EPA the authority to devise emissions caps based on a generation shifting approach that "restructur[es] the Nation's overall mix of electricity generation." *West Virginia v. EPA*, 142 S. Ct. 2587, 2595 (2022). The Court decided that issue under the major questions doctrine, which evaluates whether there is "clear congressional authorization" for the authority the agency claims. *Id*. That clear authorization is required because, as the Court explains, there are "'extraordinary cases' in which the 'history and the breadth of the authority that [the agency] has asserted,' and the 'economic and political significance' of that assertion, provide a 'reason to hesitate before concluding that Congress' meant to confer such authority." *Id*. (*citing FDA v. Brown & Williamson Tobacco Corp*., 529 US 120, 159-160, 120 S. Ct. 1291 (2000)). IAWC avers that such extraordinary circumstances are not present in this proceeding, where the Commission's authority to exercise ratemaking discretion is clear and long-standing and unequivocally authorized by the Act. And, while the EPA "admitted that issues of electricity transmission, distribution, and storage are not within its traditional expertise," *see West Virginia*, 142 S. Ct. at 2596, IAWC argues that the AG cannot reasonably claim that the Commission's authority is similarly limited here.

IAWC's proposed partial reallocation of wastewater revenue requirements to water customers asks the Commission to exercise its rate design discretion to further important policy goals for the water and wastewater industry, including the need to address water sector fragmentation, distressed and deteriorating systems, bill affordability, and water equity. This is consistent with the intent of the Act: "that the health, welfare and prosperity of all Illinois citizens require the provision of adequate, efficient, reliable, environmentally safe and least-cost public utility services at prices which accurately reflect the long-term cost of such services and which are equitable to all citizens." 220 ILCS 5/1-102. IAWC states that key goals and objectives include equity, affordability, and the fair treatment of customers and investors. 220 ILCS 5/1-102(d); *Util. Servs. of Ill., Inc*., Docket No. 14-0741, Order at 29 (Sept. 22, 2015), aff'd at *Lake Holiday Prop. Owners Assoc., Inc., v. Ill. Commerce Comm'n*, Case No. 3-15-0816 (3d. Dist. 2015) ("*USI 2014 Rate Order*").

IAWC asserts that these goals cannot be achieved through a strict reliance on cost causation principles alone – as the National Association of Regulatory Utility Commissioners ("NARUC") acknowledged in its 2022 Winter Policy Summit, "helping struggling customers pay their water and wastewater bills takes the combined efforts of utilities, regulators, policy leaders, and communities." IAWC Ex. 12.02 at 2. In fact, IAWC states, NARUC advocates "exploring whether consolidated pricing and/or consolidated water and wastewater revenue requirements assist utilities in leveraging economies of scale to achieve price stability by spreading costs across a broader customer base." *Id*. Thus, to "successfully balance safety, reliability, and affordability", utilities and regulators must critically consider regulatory mechanisms and competing principles of rate design to evolve modern ratemaking and address the real and significant concerns facing the industry today. *Id*.

IAWC explains that its proposed wastewater service rate design does just that. It calculates rates based on reasonable and well-supported cost of service studies that incorporate cost causation principles and relies on other principles of rate design – including but not limited to gradualism and affordability – to re-allocate a portion of the Central Zone wastewater revenue requirement to the Company's water customers. IAWC maintains that this proposal enables the Company to make continued and prudent investment in deteriorating systems while also ensuring that rates remain affordable for all of the Company's customers.

IAWC states that as explained in the 2022 Report Card for Illinois Infrastructure issued by the Illinois Section of the Society of Civil Engineers ("2022 Report Card"), "approximately 85% of Illinois' residents [10.9 million people] are served by more than 800 wastewater treatment facilities and 690 wastewater collection systems; the remaining [2 million] residents rely on septic systems." IAWC Ex. 22.01 at 20. The report finds:

> Far too often, the approach toward public infrastructure is to build and operate systems with minimal maintenance until the infrastructure wears out. Water systems need to fully account for the costs to manage their assets accounting for the life cycle of the system … agencies should be able to put together a maintenance and replacement plan for their water systems, similar to the way transportation agencies rate and schedule roadways for improvements. Thus, by appropriately managing all assets, a system's overall investment needs and operating costs can be reduced.
>
> Aging infrastructure and new wastewater discharge limits [also pose] challenges to Illinois' municipal wastewater utilities.
>
> Adequate prioritization of Illinois' water infrastructure is vital to protecting our abundant water resources and providing a safe and clean resource for all users. Unfortunately, deficiencies in Illinois' wastewater infrastructure poses a threat to our water resources.

Id. IAWC explains that the 2022 Report Card noted that Illinois needs $6.5 billion to meet the water quality and water-related public health goals of the Clean Water Act, according to survey results published in 2012. *Id*. at 22. IAWC notes that state and federal programs to help municipalities upgrade their aging water and wastewater systems, however, are inadequate to meet this significant need. The 2022 Report Card provides an example:

> The state of Illinois operates a Water Pollution Control Loan Program. Under this program, Illinois aids in construction and improvement of wastewater treatment facilities. Since 2018, Illinois has maintained a priority project list (PPL) with needed assistance that exceeds available funds. As such, Illinois continues to help as many applicants as possible with the existing resources. *For the Fiscal Year 2022, Illinois EPA has identified $1.7 billion in projects, of which only $350 million can be funded with available resources*. An examination of the PPL reveals many projects are for facility upgrades, including phosphorus removal to meet new permit limits, disinfection, and collection system repair.

Id. at 20-21 (emphasis added).

IAWC contends that as a result and because "federal funding cannot be used to pay for operations and maintenance… the burden falls on the rate payers." *Id*. at 21. These increased rates are "often insufficient to address the needs of an aging wastewater system" (*id*.) and the increased costs and decreased water quality often "perpetuat[es] environmental problems and caus[es] disproportionate harm to low-income communities." IAWC Ex. 12.01 at 2. IAWC notes that no witness in this proceeding challenges the underlying need for significant investments in water or wastewater infrastructure or disputes the level of investment required.

IAWC explains that municipal water and wastewater infrastructure in Illinois is specifically in distress, with potential adverse consequences for the health and safety of Illinois residents. As the 2022 Report Card explains, aging infrastructure and new wastewater discharge limits pose challenges to Illinois' municipal wastewater utilities, and many municipal systems face sewer overflow events that affect local waterways and pose risks to public safety, new groundwater quality standards regulating per- and polyfluoroalkyl substances ("PFAS"), and major operations and maintenance expense to improve deteriorating infrastructure. IAWC notes that systems are experiencing historic flooding in the midst of deteriorating infrastructure. Illinois citizens are faced with drinking water that fails EPA safety standards. Deteriorating wastewater infrastructure adversely impacts, and in fact endangers, drinking water quality as well. State and national policy, analyses, engineering reports, and legislation all come to the same conclusion – the water and wastewater industry is troubled and requires investment by large utilities with expertise and financial ability.

IAWC states that ESL illustrates this need for investment at the specific, municipal level. IAWC explains that the ESL sewer system has about 6,600 customer connections, serving the City's population of 25,000. ESL Ex. 1.0 at 2. ESL residents face numerous

economic challenges, with a poverty level of about 30%. *Id*. at 2-3. About two-thirds of the ESL system is a combined sanitary/stormwater system, with significant inflow and infiltration into the system, which results in regular combined sewer overflows and basement backups. *Id*. at 2. But with an uncollectible rate of about 30%, ESL lacks the funds to properly operate and maintain the system or make necessary investments. *Id*. IAWC contends that, as discussed below, it would be in a position to address these problems if it could purchase the system. But, IAWC maintains, approval of its wastewater revenue requirement reallocation proposal is needed to make that happen.

IAWC states that in February 2022, the NARUC Board of Directors published Resolutions on Water Equity that were passed by the Committee on Water. IAWC states that these Resolutions identified many of the pervasive concerns facing the water industry today, and concluded:

> Resolved that the Board of Directors of the National Association of Regulatory Utility Commissioners, convened at its 2022 Winter Policy Summit in Washington, DC, supports and encourages regulators, utilities, and policymakers to consider the paths to water equity identified herein; and be it further
>
> *Resolved*, that NARUC recommends that economic regulators consider and adopt as many as appropriate of the regulatory mechanisms identified herein as a means to achieving water equity; *and be it further*
>
> *Resolved*, that the Committee on Water stands ready to assist economic regulators with implementation of any of the paths to water equity set forth within this resolution.

See IAWC Ex. 12.01 at 2-3; https://www.naruc.org/resolutions-index/2022-winter-policy-summit-resolutions/.

IAWC states that the NARUC Resolutions are unequivocal. IAWC notes that they urge regulators and utilities to "advance water equity to ensure customers of all income levels have access to high-quality water," to "encourage and incentivize prudent, incremental, and consistent investment in water and wastewater infrastructure," and to ensure that "customers are able to pay for these essential services." *Id*. As part of this effort, the Resolutions ask utilities, regulators, policy leaders, and communities to consider alternative ratemaking mechanisms, including "exploring whether consolidated pricing and/or consolidated water and wastewater revenue requirements assist utilities in leveraging economies of scale to achieve price stability by spreading costs across a broader customer base." *Id*. at 2. IAWC points out that this approach is not novel – in July 2013, NARUC advised regulators to consider certain practices that were identified as "means to improve sustainable and continued investment in small water system infrastructure at cost-effective rates." One of the best practices identified was:

> …combining water and wastewater revenue requirements for purposes of rate cases, as appropriate, if the water and wastewater utilities are under the same ownership, which will

> reduce rate case expense and offer rate increase mitigation options driven by economies of scale that would be unavailable otherwise.

https://pubs.naruc.org/pub.cfm?id=53A0D971-2354-D714-51EB-8A01C0909879.

IAWC contends that this shows that its rate design proposal has, for many years, been considered to be fair, just, and a best practice to ensure water safety, reliability, and affordability for all customers – not just those who can afford to pay for consistent investment in their systems.

IAWC notes that Illinois already recognizes the need to assist small, struggling utilities that are unable to invest in and maintain infrastructure, with the passage of the Systems Viability Act ("SVA") in 2013 and its renewal in 2018. 220 ILCS 5/9-210.5. The SVA recognizes the value of giving municipalities and other water and wastewater systems the option to apply the financial and managerial resources of regulated public utilities to meet the challenge of providing safe water and sanitary services for their residents. The SVA provided a streamlined mechanism through which utilities with the financial, technical, and managerial expertise can acquire smaller systems and invest in their water and wastewater infrastructure, enhancing the adequacy, reliability, efficiency, and safety of service that is provided to water and wastewater customers in Illinois. IAWC explains that pursuant to this law, systems acquired pursuant to the SVA are subject to review in a docketed proceeding before the Commission. This review includes an analysis of rate base, current rates, future rates, and investment needs. The Company notes that, consistent with the policy intent of the SVA, IAWC has acquired and invested in smaller systems throughout Illinois; as discussed above, this has already improved water safety, reliability, and affordability throughout the state.

IAWC points out that no party disputes that IAWC has demonstrated the financial capability to make significant ongoing investments in water and wastewater systems, and has the managerial expertise needed to improve water and wastewater operations in the communities it serves. IAWC states that when permitted to do so, the Company can take advantage of significant economies of scale and spread a portion of needed investments over its broad customer base – approximately 375,000 customers, or a population of 1.3 million – at a time of historically high inflation when affordability concerns are paramount, to mitigate rate increases for the communities it serves.

IAWC contends that the benefits of these economies of scale are evident in the compliance costs of water quality mandates, as recognized by the EPA. For example, the cost of complying with the Safe Drinking Water Act was estimated by the Congressional Budget Office to be $4 per customer with systems servicing more than 500,000 people, but $300 per person in systems only serving up to 100 people. IAWC explains that it serves a population of approximately 1.3 million. The cost of complying with the Arsenic Rule provides a similar example. IAWC notes that cost of compliance depends on system size and ranges from $38 to $327 per household annually for small systems (less than 10,000) to $0.86 to $32 per household for larger systems. According to the EPA the disparity is "due to economies of scale" – larger systems are able to spread the costs of compliance over a larger customer base.

IAWC states that, as indicated, many water and wastewater systems in Illinois have neither the economies of scale nor the technical expertise needed to affordably meet increasingly stringent water and wastewater quality standards, from both capital investment and operational perspectives. As a result, investments and maintenance are deferred and the quality of water and wastewater service suffers. Acquisitions by a large water and wastewater utility such as IAWC, however, can facilitate the necessary investment and achieve these economies of scale. As discussed, the SVA is intended to support such acquisitions. But the SVA mechanism is not enough, by itself. IAWC maintains that the consolidation of water and wastewater systems, called for by NARUC and enabled by the SVA, is needed to fully allow infrastructure investments and operating costs to be spread over a larger customer base, thus dampening the effects of rate increases associated with these costs and investments on any single cluster of customers and providing long-term rate stability for all customers.

IAWC explains that its proposed revenue requirement reflects the acquisition of 14 wastewater systems since its last case - of these 14 systems, six were incorporated into the Central Wastewater tariff district. IAWC argues that these systems need substantial investment to address legacy infrastructure needs, in order to improve resiliency and protect the health and safety of customers. IAWC explains that this investment is underway: IAWC is working to improve the systems' ability to handle heavy rainfall, to protect against uncontrolled overflows of partially treated or untreated wastewater entering local water bodies and backing up within residential areas. IAWC asserts that examples of major investments include required improvements in the Village of Godfrey ("Godfrey") to address discharge permit requirements, administrative orders of consent, or Long-Term Control Plans to reduce Combined Sewer Overflows and Sanitary Sewer Overflows that could impact the health and safety of the communities and environment during large rain events.

IAWC notes that its investments have already provided specific and tangible benefits to those systems and to the State, as a whole. For example, prior to IAWC's acquisition of Godfrey's sewer system (approximately 6,200 connections) in November 2019, Godfrey had over 5.4 million gallons of sanitary sewer overflows during rain events between 1.5 to 5 inches during a 24-hour period. IAWC states that these events significantly and adversely affected residents and the environment of the community. In fact, the EPA, Region 5, had started an enforcement action against the Village to eliminate sanitary sewer overflows in four areas that had experienced systemic overflows. IAWC explains that upon acquiring the system, the Company became party to the enforcement action and entered into an Administrative Order on Consent to eliminate the sanitary sewer overflows in the four areas between 2022 and 2023. IAWC notes that the Godfrey community has already seen the benefit of the Company's investment work – during the recent rain event on Tuesday, July 26, 2022, where nearly four inches of rain fell over a seven-hour period, there were no sanitary sewer overflows within the community.

IAWC also notes that more work is and will be needed. As a result of IAWC's acquisitions of wastewater systems, the proportion of IAWC's investment in its wastewater facilities has increased from 10% in 2017 to 21% in 2023 ($55 million of the overall investment of $258 million planned investment). IAWC states that it anticipates $139 million in investment will be required in the wastewater systems during the period

2018 through 2023. As discussed, these investments will provide (and have already provided) tangible benefits for the communities these wastewater systems serve. And by extension, IAWC explains, these investments benefit Illinois as a whole, both environmentally, in improved water quality, and economically, through jobs created by the construction activities. To secure these benefits over the long term, IAWC contends, rate design policies such as IAWC's proposed partial wastewater revenue reallocation are needed to support the recovery of these substantial investments consistent with the goals of gradualism and affordability.

IAWC explains that the Company currently provides wastewater service under the Chicago Metro tariff, the Central Zone tariff, and several individual tariffs for recently acquired systems. IAWC's Chicago Metro wastewater tariff serves customers in the Company's Chicago area service territory and in the acquired service territory of Piasa. In this proceeding, IAWC proposes to increase rates for Chicago Metro wastewater customers by the total amount of the Chicago Metro revenue requirement increase over present rate revenues, resulting in an average increase to bills of approximately $7.12 per month. IAWC notes that, as discussed further below, no party contests this proposed rate increase.

IAWC explains that the Company's Central Zone wastewater tariff serves customers in selected service territories that were not included in rates in Docket No. 16-0093. IAWC notes that in this proceeding, it proposes to increase Central Zone rates by approximately $5.8 million – this increase will bring the Central Zone closer to Chicago Metro rates and continue the Company's transition towards single tariff pricing and a single consolidated wastewater tariff. Because many of the existing and future Central Zone customers come from systems that IAWC has acquired since its last rate case and which require significant investment in order to improve water quality and safety, this proposed rate increase does not, however, recover the entirety of the Central Zone revenue requirement increase.

Instead, the Company proposes to reallocate $11.8 million (or 20% of the Central Zone wastewater revenue requirement) to IAWC's existing water customers. IAWC argues that the impact of this reallocation is significant and undeniable. As explained above, if the Company sought to increase rates for Central Zone customers based on the total amount of the Central Zone revenue requirement increase, those customers would experience significant rate shock, doubling their bills with an average increase of approximately $31.35 per month. Under the Company's proposed reallocation, however, that rate shock would be alleviated, and Central Zone wastewater customers would experience an average bill increase of approximately $9.79 per month. In contrast, IAWC notes that the corresponding impact on the Company's water customers, who would absorb that revenue requirement reallocation, would be an average increase of only approximately $2.72 per month. As IAWC's affordability analysis shows, rates remain well within affordability benchmarks for both Central Zone wastewater, and importantly, water customers, under IAWC's proposal.

IAWC states that although multiple parties object to the Company's reallocation proposal, no party disputes the affordability analyses that underlie IAWC's proposal. IAWC points out that no party disputes that water industry fragmentation is a serious concern that has led national and state leaders to encourage acquisitions of small,

troubled systems and investment in deteriorating infrastructure that independently owned systems cannot provide.

IAWC states that the Company's proposal to reallocate a portion of wastewater revenue requirements to water customers allows the Company to manage needed investment in newly acquired systems in a way that maximizes the affordability of its service for all its customers, both newly acquired and existing. IAWC notes that it is true that the Company's proposal slightly increases costs for a large group of customers, by approximately four percent, but it does so to significantly improve affordability for smaller, more vulnerable, groups of customers. IAWC explains that this reallocation will benefit all communities by creating economies of scale and spreading the cost of system improvements across a bigger base.

And crucially, IAWC states, approval of its proposal would align the Commission's regulatory policy to be constructive and consistent with the intent of state law and policy—namely in recognizing that water and wastewater consolidation is in the public interest and provides communities that otherwise are unable to invest in and manage critical infrastructure a mechanism to ensure that their residents have access to clean water.

IAWC explains that approval of its proposal would promote Illinois environmental policy goals. As discussed above, IAWC states that the SVA supports the acquisition of and investment in smaller systems throughout Illinois, thereby improving water safety, reliability, and affordability throughout the state. IAWC's proposed wastewater revenue reallocation furthers the policy objectives of the SVA, in the ratemaking context. It represents a rate design that, at its core, establishes a regulatory path towards water equity, safety, and reliability through critical investments in vulnerable water and wastewater systems across the state while providing for affordability of service for all IAWC customers.

IAWC states that the Company already considers the potential rate impact of future investments on the acquired system and the customers in the consolidated rate class the acquired system will join when the Company's acquisitions are reviewed by the Commission. IAWC explains that for those acquisitions that were approved pursuant to the SVA, the Commission evaluated and ultimately approved each system's rate base, revenue requirement, any potential revenue shortfalls, proposed rates at close, and the full consolidation of those systems into the Company's existing tariff groups. IAWC notes that the SVA expressly authorizes this approach. 220 ILCS 5/9-210.5(f). IAWC asserts that all of its acquisitions were found to be necessary for the public convenience and necessity, and in no instance has the Commission determined that the proposed rates are contrary to the public interest. IAWC argues that the AG's request that the Commission "maintain the current regulatory landscape" ignores this law, contradicts Commission acquisition approval orders, and dismisses national policy urging regulators, stakeholders, and utilities to undertake exactly what IAWC is requesting here. AG IB at 25.

IAWC states that its proposal also represents a form of "consolidated pricing" or "consolidated water and wastewater revenue requirements" that the NARUC Resolutions on Water Equity recommend as a pathway to affordability:

> Whereas helping struggling customers pay their water and wastewater bills takes the combined effort of utilities, regulators, policy leaders, and communities. Potential pathways to address affordability include: … (5) *exploring whether consolidated pricing and/or consolidated water and wastewater revenue requirements assist utilities in leveraging economies of scale to achieve price stability by spreading costs across a broader customer base*;

IAWC Ex. 22.00 at 10 (emphasis added).

The Company states that the plain language of the NARUC Resolutions on Water Equity is a clear endorsement of IAWC's acquisition activity and the Company's proposal to reallocate a portion of its wastewater revenue requirement to water customers.

IAWC maintains that its proposal is also consistent with the NARUC Resolutions on Water Equity generally, which recognize prudent investment as the best means to improve water and wastewater efficiency and the importance of addressing water and wastewater sector fragmentation. *Id*. at 9-10.

IAWC states that the example of ESL starkly illustrates how IAWC's reallocation proposal supports NARUC and Illinois policy goals, and conversely how rejection of its reallocation proposal could frustrate those goals. IAWC states that ESL, where 30% of the population lives in poverty, faces significant problems with its wastewater system. ESL sought to sell the system in early 2020, issuing a Request for Qualifications ("RFQ") and Request for Proposals ("RFP") for a sale. IAWC Ex. 12.00 at 8. IAWC was very interested in the potential sale and believed that the Company could bring its substantial experience to the table and benefit the community by acquiring the System. Consequently, IAWC spent considerable time drafting a response to the RFP. But ultimately, IAWC notes, it did not submit a bid. IAWC explains that a major issue that kept arising in developing the bid was the level of customer rates. The rates necessary to support the purchase and, more significantly, the level of investment that would enable the Company to provide safe and reliable service, were higher than IAWC believed the community could afford. As IAWC's president explained, a modification in the regulatory landscape – a reallocation of the wastewater revenue requirement to water customers – was needed to help smooth the rate structure IAWC could offer to ESL residents while allowing necessary investments in the system.

IAWC asserts that it would be prepared to submit a bid for the system if the proposed wastewater revenue requirement reallocation were granted in this case. IAWC states that ESL needs to have safe, reliable, and affordable service for its citizens. IAWC notes that if an acquisition were to occur as a result, the Company would provide the much-needed management and operational expertise, as well as required capital investment in the ESL system. IAWC contends that this would be a tremendous benefit to the residents of ESL. The Company would be able to provide the same high level of service to wastewater collection customers as it currently provides to its water customers in ESL and to its wastewater customers, generally.

IAWC explains that parties' testimony in opposition to IAWC's wastewater revenue requirement reallocation proposal falls into three main categories: that the proposal is

contrary to the cost causation principle of rate design, that IAWC's proposal is "unfair" to water customers, and that the increase to Central wastewater rates reflects "mismanagement" on IAWC's part. IAWC states that none of these arguments blunt the point of the Company's proposal.

IAWC notes that much of the objection to the Company's proposal centers around perceived violation of the cost causation rate design principle. IAWC explains that while cost causation is the foundation of the Company's rate design proposals (as demonstrated in the Company's cost of service ("COS") studies), it is almost the entirety of Staff and Intervenors' rate design proposals in this case. IAWC further states that while it does not dispute that it is a widely accepted principle of rate design that customers should pay for the costs that they cause to be incurred – however, cost causation is not the only rate design principle that the Commission should consider when establishing rates, nor can it be. Additional factors that impact the development of rate design include consideration of principles like avoidance of undue discrimination, efficiency of use, gradualism and stability, predictability of revenue for the service provider, and social objectives such as affordability and equity. IAWC emphasizes that the balancing of rate design principles is well-established in Illinois and is recognized by the Act. The language of Section 1-102 of the Act clearly establishes that equitable rates can and should be based on more than cost causation alone. IAWC notes that Staff acknowledges that the Act contemplates the consideration of "factors other than cost of service in regulatory decisions." Staff IB at 46, *citing* 220 ILCS 5/1-102(d)(iv). Rather than prohibit or constrain the use of those additional rate design factors, the Act simply requires that, in the interest of the "fair treatment of consumers and investors … the rationale for [the consideration of factors other than cost of service] should be set forth." 220 ILCS 5/1-102(d)(iv).

IAWC contends that it is undisputed that strict adherence to cost causation does not guide every element of traditional rate design. For example, within districts and customer classes, IAWC argues that nobody would suggest that rates for customers served by a more expensive new main should be higher than those in a neighborhood served by an existing main. As IAWC has pointed out, the Company's proposal is analogous to other widely accepted practices that spread costs over a broader customer base in order to improve affordability for a smaller group of customers, even when one customer's actual cost of service varies from the cost to serve his or her neighbor. These practices include single tariff pricing, the use of energy efficiency and rebate programs by energy utilities, and the low-income tariff programs that are currently gaining traction in Illinois.

IAWC notes that while each opposing party dismisses out of hand the similarities between the Company's reallocation proposal here, and the widely accepted use of single tariff pricing, rebate programs, and – increasingly – low-income programs, no party is able to articulate how those approaches are functionally different. The Company's proposal to reallocate a portion of wastewater revenue requirement to water customers is in the public interest because it is in the long-term best interest of all customers, supporting necessary and critical investments in vulnerable water and wastewater systems across the state and ensuring that investments will continue to be made in these communities in a way that does not expose customers to rate shock while maintaining the affordability of water and wastewater services for all customers. IAWC argues that it is in the public

interest to charge larger groups of customers a little more in order to reduce costs for smaller groups of vulnerable customers, greatly improve affordability of service for them, and improve affordability for all customers.

IAWC notes that its proposed low-income tariff accomplishes the same goal. It moves costs away from a relatively small group of customers in order to significantly improve affordability of service for that group and moves those costs to a larger group of customers where the affordability of service is not significantly harmed. All parties in this case that have commented on the Company's proposed tariff support this effort. While the method of cost-recovery is still being litigated in this proceeding, non-low-income customers will be expected to assume increased costs to support a smaller, more vulnerable group of low-income customers. Non-low-income customers will not receive that service (the discounted volumetric rate) but will still assume costs associated with that benefit.

IAWC also explains that its proposal is analogous to designing rates for single tariff or consolidated pricing – charge larger groups of customers a little more to reduce costs for small groups of vulnerable customers, greatly improve affordability of service for them, and improve affordability for all customers. IAWC explains that single tariff pricing has long been ratemaking practice in Illinois generally and for IAWC specifically. As the Commission explained in IAWC's 2007 rate case, single tariff pricing is "the use of a unified rate structure for multiple water (or other) utility systems that are owned and operated by a single utility, but that may or may not be contiguous or physically interconnected" and noting that for the IAWC system, the Commission has approved gradual movement towards increased single tariff pricing. Docket No. 07-0507, Order at 94. And as the Commission found when approving the rate consolidation of many small water and sewer divisions for USI, consolidation "will allow the Company to spread capital costs over a larger base of customers, thus mitigating rate shock to a smaller stand-alone division's customer base when infrastructure improvements are necessary." *USI 2014 Rate Order* at 30.

IAWC believes that the same logic applies here. IAWC explains that consolidated ratemaking expands the customer base over which water and wastewater investments are made so that the cost impacts of those investments to customers can be smoothed out and ultimately minimized in the long run. IAWC explains that instead of individual communities' bearing the cost of significant investments when those investments are made in rate cases, those investments are spread over broader groups of customers to mitigate the impact of significant rate changes on everyone. All IAWC water and wastewater customers benefit from this consolidated pricing at varying times and will continue to do so in the future. The Company argues that its proposal to reallocate a portion of wastewater revenue requirements to water customers is a logical extension of that practice: it moves the immediate cost of upfront needed investment away from smaller communities where the cost impacts of those investments are significant to a larger group of water service customers, in order to mitigate the rate impacts of these needed investments for everyone.

IAWC states that parties' concerns ignore that IAWC is an integrated water and wastewater service utility. IAWC explains that water and wastewater services are - although sometimes separate - inextricably linked and often rely on the same services

related to collecting, treating, and moving water and wastewater. IAWC does all these things with the same workers, same tools and equipment, same service company, same funding and capitalization process, and the same capital structure for both water and wastewater operations. Rate design for individual services offered by a multi-service utility like IAWC necessarily involves an allocation of costs between the two services across the entire IAWC system of which all customers, including water-only customers, are a part of. More important, IAWC explains, the opposing parties ignore the indisputable fact that water and wastewater are part of one continuous cycle, from extraction from surface and groundwater resources to treatment, to distribution, to various uses, to collection, treatment and then discharge back into surface and groundwaters.

IAWC also states that its proposal is consistent with other key rate design principles as well. It supports the rate design principles of gradualism and affordability, while ensuring also that the Company is able to recover the Commission-approved revenue requirement needed in this case to effectively invest in and manage the business. In particular, IAWC notes, the reallocation supports gradualism by reducing the significant rate shock to Central Zone customers and improves affordability of service to this group of customers.

IAWC states that the proposal also supports the continued investment in communities across the state where water and wastewater investment is needed. Ultimately, the Company's proposal for reallocation of a portion of the wastewater revenue requirement to water customers takes a long-term view of rate design and its impact on continued investment and job creation in the state, and the affordability of service in communities across the state. IAWC explains that this proposal encourages and supports continued investment in water and wastewater systems and communities across the state while improving the affordability of service for customers both in the short term and in the long term.

IAWC explains that the Company's rate design proposals in this case are designed to recover targeted revenues by customer class for water customers and by tariff zone (Chicago Metro and Central) for wastewater groups. IAWC explains that the foundation for these targeted revenues is Revenue Stability and Cost Causation. IAWC explains that Revenue Stability is achieved by allocating the entire proposed revenue requirement to customer groups so that rates can be designed to recover the Company's approved revenue requirement. Targeted revenues then begin with the results of the Company's cost of service analysis, which allocates revenue requirements to customer class based on cost causation principles. IAWC explains that the class allocation of costs from the cost-of-service analysis, which reflect cost causation principles and only cost causation principles, are then adjusted to reallocate revenues from some classes to other classes to accommodate other rate design goals.

IAWC states that although COS is the foundation of IAWC's rate design, it is not the only consideration that may be used to determine whether rates are just and reasonable - the Commission is permitted under the Act to consider many factors other than costs when designing rates, including equity, which is the fair treatment of customers and investors. *USI 2014 Rate Order* at 29; 220 ILCS 5/102(d).

IAWC further states that any consideration of rate design must consider these principles too, as the testimony of the various parties on other rate design issues illustrates. For example, virtually all parties in this case have either proposed or agreed to rate design adjustments in the name of gradualism, and in some cases have argued that proposals made by the Company and other parties don't consider gradualism enough.

IAWC notes that its proposal to reallocate a portion of wastewater revenue requirement to water customers supports these other rate design principles, including gradualism and affordability, while ensuring also that the Company is able to recover the Commission-approved revenue requirement needed in this case to effectively invest in and manage the business. IAWC points out that the proposal also supports the continued investment in communities across the state where water and wastewater investment is needed.

IAWC states that as the parties' embrace of gradualism as a rate design principle in other contexts demonstrates, exclusive reliance on cost causation for rate design overlooks the complexity of measuring and allocating joint and common costs. IAWC maintains that avoidance of undue discrimination, efficiency of use, gradualism and stability and predictability of revenue for the service provider are also important rate design considerations. Social objectives, such as affordability and equity, are more recent principles that are also used by utilities and regulators to guide rate design decisions. IAWC's proposal to reallocate wastewater revenue requirements is consistent with these other rate design principles, and the fact that it is not strictly based on cost causation is not a basis to reject it.

The Company's proposal to reallocate a portion of wastewater revenue requirement to water customers is not "unfair" to water customers – it is in fact in the public interest because it is in the long-term best interests of all IAWC customers. IAWC notes that this proposal supports necessary and critical investments in vulnerable water and wastewater systems across the state and ensures that investments will continue to be made in these communities in a way that does not expose customers to rate shock, while maintaining the affordability of water and wastewater services for all customers.

IAWC points out that examples of this already exist. IAWC notes that low-income discount tariffs slightly increase costs for a large group of customers in order to significantly improve affordability for smaller, more vulnerable groups of customers. As discussed above, consolidated pricing spreads the costs of utility investments over large groups of customers so that individual groups of customers immediately benefiting from a large investment project aren't forced to absorb the entire cost of that investment as if they were making the investment on their own. IAWC also notes that consolidated pricing is now widely accepted as wise public policy because ultimately, it is in the long-term best interests of all customers. IAWC explains that water customers in one area of the Company's service territory might not get immediate direct benefit from paying for a portion of the Company's wastewater investments in another area because they receive sewer service from another provider, but they also do not immediately benefit from paying for a portion of the Company's water investments in that other area either. The Company has many water customers who today are not also wastewater customers, but the rate design that benefits all customers the most in the long-term is one that allows for making

cost-effective water and wastewater system investments without significantly impacting the affordability of service. IAWC concludes that the Company's proposal for reallocation accomplishes these goals.

IAWC argues that the Intervenors' objections to the Company's proposal are not persuasive because they look at rate design principles based on a snapshot in time. IAWC notes that there is little to no discussion from Intervenors around rate design policy and its effect on future investment in water and wastewater systems in the state, or the future affordability of service in the communities IAWC serves. But it is critical to take a long-term, not short-term view. IAWC states that the Company's proposal for reallocation of a portion of the wastewater revenue requirement to water customers takes a long-term view of rate design and its impact on continued investment, job creation, and the affordability of service in communities across the state.

IAWC also asserts that the Municipalities, which include Champaign, rely heavily on cost causation, arguing that the Company's proposed reallocation is "unjust and unreasonable…because it would make customers pay for a service they do not receive." Municipalities IB at 8. As an example, the Municipalities argue that "it is neither appropriate from a rate design or policy perspective to have Champaign customers subsidize customers in other locations through the State of Illinois by surcharging them for services that are not provided to them by IAWC." *Id* at 6. IAWC asserts that the premise of this argument – that IAWC is "surcharging" Champaign for services that are not provided to them by IAWC – is incorrect. IAWC is not charging water customers for a service it is not providing, IAWC is charging water customers for water service. The rates for that water service are higher than a strict 1:1 ratio to the cost of service. But this is not unusual – it is routine for rate design proposals to set rates that do not match the cost of service; in fact, various parties have proposed rate designs that do not exactly match the COS.

IAWC further notes that the Municipalities' opposition to the socialization of costs associated with utility services that do not confer a direct benefit is surprising, considering that in the Company's 2007 rate case, the Commission approved significant investment in Champaign, including a new production and treatment facility and six new wells. Docket No. 07-0507, Order at 49-52. The cost of those investments in Champaign totaled approximately $60 million. Docket No. 07-0507, IAWC Ex. 7.00 (Rev.) at 18. In a subsequent rate case, the Commission approved consolidation of Champaign into IAWC's Zone 1 tariff group, thereby spreading the costs of the Champaign investments over a larger customer base, sparing Champaign residents higher rates. Docket No. 09-0319, Order at 154. Champaign, a party to that proceeding, notably, did not object to having the costs of those investments allocated to other IAWC customers.

Thus, IAWC concludes, while water-only customers in Peoria and Champaign may not immediately benefit from supporting wastewater investments in Alton and Granite City, all customers on the system at one point will benefit from the ability to spread investment costs in individual communities across a large statewide customer base through. Water customers in Champaign helping to support wastewater investments in Alton is not fundamentally different than water customers in Champaign helping to support water investments in Alton, and vice versa. IAWC maintains that this

arrangement is ultimately in the long-term best interest of all customers, as it helps improve the affordability of service across the state.

IAWC states that another misguided claim in opposition to IAWC's proposal is that acquisition activity was not managed effectively given the rate shock for Central Zone wastewater customers (in the absence of reallocation), and the suggestion that if the magnitude of Central Zone wastewater costs proposed for recovery are excessive, the Company's shareholders should share this cost burden.

IAWC explains that this unsubstantiated assertion is contradicted by examples that show the opposite: IAWC is effectively managing its acquisitions to provide investment with tangible customer benefits, and so fulfilling the policy goals discussed above and reflected in mechanisms like the SVA. IAWC notes that each acquisition has been reviewed and approved by the Commission and found to be required for the public convenience and necessity. IAWC states that there are clear examples that demonstrate that IAWC's acquisitions were not only managed effectively, but they provided specific and tangible benefits to those systems and to the State, as a whole.

IAWC states that significant infrastructure investment in newly acquired systems is not a sign of mismanagement, but is expected, especially in situations where the acquired systems may have been under-invested in the past. IAWC explains that these investments affirm that IAWC is making the infrastructure improvements which are necessary to advance the public interest of Illinois and its citizens, as well as providing the environmental resources for now and into the future, in ways that were directly expected when the acquisitions were approved. In fact, because these investments and the increase in rates they often necessitate were directly anticipated, and in many cases have already been reviewed by the Commission as part of QIP reconciliation and acquisition approval dockets, the assertion that shareholders should bear the revenue shortfall is completely untenable. IAWC notes that this is especially true when the investments made in these under-capitalized systems benefit the State and its citizens in the form of cleaner water and jobs created by the construction activities.

In summary, IAWC states that it is essential that the Commission's regulatory policy be constructive and consistent with the intent of state law — namely in recognizing that water and wastewater consolidation is in the public interest and providing communities that otherwise are unable to invest in and manage critical infrastructure a mechanism to ensure that their residents have access to safe and reliable water and wastewater service. IAWC maintains that reallocation will benefit all communities by creating economies of scale and spreading the cost of system improvements across a bigger base, while at the same time supporting investment in smaller, under-invested systems and improving water quality and meeting state policy goals. Parties' objections to IAWC's proposal disregard both the long-term environmental benefits and economies of scale that the wastewater revenue requirement reallocation supports, for IAWC's recently acquired wastewater systems and for systems where IAWC's investment could make a real difference, like ESL. But IAWC urges the Commission to focus on these important policy goals and approve its wastewater revenue requirement reallocation proposal to support them.

b. Staff's Position

Staff recommends the Commission reject the Company's proposal to reallocate approximately $11.8 million of IAWC's wastewater revenue requirement to be recovered from IAWC's water customers. Staff Ex. 15.0 at 14.

Staff notes that one of the fundamental goals of equitable ratemaking is that the costs of supplying public utility services are allocated to those who cause the costs to be incurred. 220 ILCS 5/1-102(d)(iii). In fact, the Act indicates that if factors other than COS are considered in regulatory decisions, the rationale for these actions should be set forth. 220 ILCS 5/1-102(d)(iv). Thus, Staff argues COS and cost causation should be primary considerations for the Commission.

Staff witness Boggs explained that although concepts such as gradualism, undue discrimination, and efficiency of use, among others, can be considered in rate design proposals, the Company's proposal to reallocate costs from one utility service to another utility service would violate basic cost causation principles. Basic cost causation principles would necessitate wastewater customers to pay rates to recover all costs that the Company incurs to provide service to wastewater customers. Staff opines that IAWC's proposal to have water customers pay rates so the Company can recover a portion of the costs to serve wastewater customers runs counter to the cost causation principles of rate design. Staff Ex. 7.0 at 37.

IAWC witness Rea argues that the Company's proposal is in the public interest in the same way as single tariff pricing and the rebate programs applicable to Illinois gas and electric utilities. IAWC Ex. 18.00 at 34. Staff asserts that Mr. Rea's argument is without merit. Single tariff pricing is guided by ratemaking principles whereas the Company's proposal runs afoul to ratemaking principles since it results in water customers subsidizing wastewater customers. Staff argues that there is very little parallel between the Company's reallocation proposal and single tariff pricing. In Docket No. 92-0116, single tariff pricing was an issue in the Company's rate case proceeding. *Ill.-Am. Water Co*., Docket No. 92-0116, Order at 35-46 (Feb. 9, 1993). In Docket No. 92-0116, the Company proposed to consolidate the Southern Zone to achieve consolidated pricing for the Company's Southern Division. Staff agreed with IAWC's single tariff pricing proposal to consolidate pricing of the Company's Southern Division (which has since been consolidated with the Central Division). *Id*. at 38. In Docket No. 92-0116, the Southern Division to be consolidated was a water division only. Staff explained that although differences existed in the COS for each of the separate districts to be consolidated, each district had similar sources of supply; the districts shared common costs and paid the same Customer Charge; had similar usage characteristics by customer class; and the Company would have a larger base of customers to spread costs so no individual district would be impacted severely if a capitol project became necessary for an individual district. *Id*. The Commission approved the Company's proposal to implement single tariff pricing in the Southern Division. *Id*. at 45.

Staff argues that this proceeding is distinguishable from Docket No. 92-0116 for multiple reasons. Specifically, IAWC's water and wastewater customers do not have the same Customer Charges (current Customer Charge for Central Division water is $20, current Customer Charge from Central Zone wastewater is $14.50); water and sewer

customers do not have the same usage characteristics; and water and wastewater are separate utility services. Further, in Docket No. 92-0116, customers were not paying monthly fees to an unrelated utility while also subsidizing the costs to serve a different utility from which they received no services, as would be the case with IAWC customers in Champaign and Farmington in this proceeding. Thus, Staff asserts that the Company's comparison of its proposed reallocation to single tariff pricing fails.

Furthermore, Staff notes there is no enabling legislation in Illinois that allows reallocation of costs from one utility service to an entirely different utility service. The Company states, "The Commission is not prohibited from making an allocation of wastewater revenue requirements to water customers when designing rates." IAWC IB at 78. Staff states that the Company's assertion is misguided. One of the fundamental goals of equitable ratemaking is that the costs of supplying public utility services are allocated to those who cause the costs to be incurred. 220 ILCS 5/1-102(d)(iii). In fact, the Act indicates that if factors other than COS are considered in regulatory decisions, the rationale for these actions should be set forth. 220 ILCS 5/1-102(d)(iv). Thus, Staff notes, the Act requires the Commission to consider COS and cost causation in setting rates.

Staff recommends that the Commission reject the Company's proposal to reallocate a portion of the Company's wastewater revenue requirement to water customers and recommends that the revenue shortfall be recovered by Central Zone wastewater customers through rate design. Staff Ex. 7.0 at 38-39. Specifically, Staff witness Boggs recommends instituting smaller annual increases for Central Zone wastewater rates until rates are adequate to generate full COS revenue recovery. *Id*. Staff's approach would not involve re-allocating costs to an entirely different utility service customer base. Staff argues that its approach is consistent with the rate design concept of cost causation – i.e., recovering costs from those who caused the cost to be incurred – which is a primary objective of rate design. *Id*. at 38-39. Staff also argues its proposal is consistent with the guiding rate design principles of gradualism, simplicity and feasibility, and affordability. Staff Ex. 15.0 at 14. Implementing annual step increases in rates, as proposed by Staff witness Boggs, would benefit customers by reducing the magnitude of rate increases in the short-term and gradually increase rates until the Company reaches full revenue recovery from Central Zone wastewater customers – i.e., gradualism. Staff Ex. 7.0 at 39.

c. AG's Position

The AG requests that the Commission reject the Company's proposal to reallocate $11.8 million of its Central Zone wastewater revenue requirement to water customers, who in most cases do not receive wastewater service from IAWC. Tacitly acknowledging that this would be radical departure from well-settled ratemaking policy, the Company asked for a "modification in the regulatory landscape." IAWC Ex. 12.00 at 9. The AG urges the Commission to decline IAWC's invitation to "evolve modern ratemaking" in this manner because it would be contrary to the Act, violate well-settled ratemaking principles, and would result in unfair and unreasonable rates to water customers.

The fundamental dictate of ratemaking under the Act is that all rates or other charges "be just and reasonable," and "[e]very unjust or unreasonable charge . . . is

hereby prohibited and declared unlawful." 220 ILCS 5/9-101. To aid in the interpretation of this statutory directive, the AG explains how the Act specifies that utility regulation should be designed to promote fair and equitable treatment of consumers and investors, meaning, in part, that "the cost of supplying public utility services is allocated to those who cause the costs to be incurred." 220 ILCS 5/1-102(d)(iii).

Accordingly, the principle of cost causation—that the COS should be paid by those who cause it—is a requirement of the Act and is well-established in Commission practice. *See, e.g.*, Docket No. 17-1106, Order at 61 (adopting Staff's recommendation to remove demand-related costs from proposed customer charges because it was "consistent with cost causation principles); *Commonwealth Edison Co.*, Docket No. 10-0467, Order at 231-32 (May 24, 2011) (concluding that "it is important to design rates that reflect cost causation" and when rates "do not accurately reflect cost causation, that inefficiency results and society suffers"); *Central Ill. Light Co. d/b/a AmerenCILCO*, Docket Nos. 09-0306–09-0311 (Cons.), Order at 295 (Apr. 29, 2010) ("It is a widely held ratemaking policy that rates should be designed to reflect cost causation, maintain gradualism, and avoid rate shock."). For this reason, combination gas and electricity utilities, such as Ameren and MidAmerican Energy Company, set the rates for each service separately. For example, the revenue requirement for Ameren gas and electric services are set independently, with its electric delivery service set under Section 16-108.5 (*see Ameren Ill. Co. d/b/a Ameren Ill.*, Docket No. 21-0365), whereas its gas delivery service is set under Article IX of the Act. *See* Docket No. 20-0308.

Illinois courts have held that it is unjust and unreasonable for a water and sewer utility to charge individuals for a service they do not receive. *Citizens Util. Co. v. Ill. Com. Comm'n*, 157 Ill. App. 3d 201, 206-207 (1st Dist. 1987). In *Citizens Util. Co*., the Commission found that a water and sewer utility "charged a noncustomer for services which were never rendered" for seven years and ordered the utility to repay the amounts in question. *Id.* at 206. As the court noted, "it would be difficult to envision a more unjust and unreasonable charge than for a service never rendered by a utility." *Id.* at 207 (internal quotations omitted). The situation in this proceeding is scarcely different for the Company's water customers — like the residents and businesses in the Municipalities — who already obtain wastewater service from a different provider. IAWC is asking these customers to pay for a service they do not receive. The AG therefore requests, consistent with case law, that the Commission reject this "unjust and unreasonable charge" for "services never rendered." *Id.* at 206.

The AG also points out that legislation enabling this type of reallocation has been proposed, and rejected, multiple times, providing further proof that such a reallocation would exceed the Commission's authority. Legislative archives show that multiple bills have been introduced in the General Assembly that would change the language of the Act to expressly allow water and wastewater utilities to allocate costs across services. In each case, the Company actively supported these bills by filing witness slips in support. And in each case, the bills failed to become law. Having failed to secure the necessary legislation, the Company is now asking the Commission to exercise authority it has, to date, not previously claimed. The Commission should deny the Company's attempt at an end run around the legislative process and continue to apply fundamental ratemaking principles that are consistent with the Act and fundamental fairness.

The Company attempts to dodge the issue of cost causation by arguing that the Commission may consider ratemaking principles other than cost causation when approving rate designs. *USI 2014 Rate Order* at 29-30. In the *USI 2014 Rate Order*, the Commission concluded that it "is permitted under the Act to consider many factors other than costs when designing rates," including "equity, which is the fair treatment of customers and investors." *Id*. at 29 (*citing* 220 ILCS 5/1-102(d)). The Company argues that, in addition to cost causation, the Commission ought to consider principles such as revenue stability, efficiency of use, gradualism, avoidance of undue discrimination, simplicity and feasibility, and affordability. But as the AG explains, the Company's proposed rate design failed on its own terms because the balance of these factors clearly weighs against the reallocation of sewer costs to water customers.

First, the AG explains that the Company does not further the cause of equity by using a radical approach to rate design to enable the Company to acquire more systems, as the Company's use of the ESL demonstrates. The Company, which currently provides water service to ESL, claimed that it "would be prepared to submit a bid" on the ESL wastewater system if the reallocation were approved. IAWC IB at 94. The Company declined to submit a bid previously out of concern that the community would not be able to pay the higher rates associated with IAWC's management of the system. *Id*. But under the Company's proposed reallocation, "[ESL] water customers, like all water customers, would be paying higher water rates to cover the cost of wastewater acquisitions of other systems." AG Ex. 4.0 at 11. Regardless of whether the Company ultimately acquires, or even bids on, ESL's wastewater system, under the Company's approach, ESL water customers would see an increase to their bills that they can ill-afford under the Company's proposal.

The AG likewise explains how the other factors the Company urges the Commission to consider do not support the proposed reallocation. Recovering the COS from customers who do not receive the service is neither simple nor feasible, and it unduly discriminates against those customers who do not receive sewer service from IAWC. As for gradualism and affordability, the alternative rate design proposed by Staff discussed below would address these important principles by phasing in the increased rates over time while at the same ensuring that the COS is borne by those who caused it. Staff Ex. 7.0 at 39.

IAWC also argued that the reallocation is "analogous to designing rates for single tariff or consolidated pricing," which "has long been ratemaking practice in Illinois generally and for IAWC specifically." IAWC IB at 95. As AG witness Larkin-Connolly explained in rebuttal, "[w]hile it is correct that principles such as single tariff pricing are designed to capture the stability and benefits of economies of scale for a large customer base, pricing is based on the costs of providing a consistent service to consumers." AG Ex. 4.0 at 14. The Company "ignores the requirement that costs be related to the service customers actually receive by suggesting that recovering wastewater costs from water customers is somehow akin to single tariff pricing." *Id*. at 248-50. The Company's analogy failed because "it does not accurately parallel the scenario where a water-only customer, that has a septic system or is served by a non-IAWC wastewater provider, is asked to subsidize wastewater services *it does not and cannot* receive." *Id*. at 15 (emphasis in original). Moreover, the Company's claim that the proposed reallocation had "long been

ratemaking practice in Illinois" is contradicted by the Commission's consistent treatment of gas and electric services provided by the same utility as separate (as noted above), the Commission's rules (83 Ill. Adm. Code 280) that require separate billing for separate services, and the Company's inability to point to a modern example of the Commission having approved a comparable rate design.

The AG explains that the proposed reallocation is proscribed for good reason, as it would result in unjust and unreasonable rates for those customers who are asked to pay for a service from which they receive no benefit. In the Central Zone alone, only 25% of IAWC water customers also receive wastewater service from the Company, meaning that 75% of Central Zone water customers get their wastewater service from elsewhere, either via septic systems or another provider. AG Ex. 2.0 at 16. Thus, under the Company's proposal, the vast majority of water customers would be paying for wastewater services from another provider and for IAWC services that they do not receive. *Id*.

The AG points out that the Company's proposal is even more unreasonable when considering why the Company is seeking to reallocate the wastewater revenue requirement to water customers. The Company claimed that the reallocation is necessary to prevent rate shock. *See* IAWC Ex. 7.00 at 16. But the Company admitted that the only customers who would experience significant rate increases without the reallocation are those on newly acquired systems. AG Ex. 2.3. In other words, the Company is seeking to reallocate wastewater revenue because, by its own admission, its costs exceed what it can reasonably expect to charge these newly acquired customers and maintain affordable wastewater service. *Id*. This is troubling given that the Company has acquired 29 water and wastewater systems since its last rate case, with at least eight more on the way. IAWC Ex. 4.05. Based on the testimony submitted in this proceeding, the Company expects this trend to continue, and it appears its appetite for acquisitions is directly related to its request for the ability to reallocate revenue requirements across types of service. *See* IAWC Ex. 12.00 at 2 ("With the reallocation of a portion of IAWC's wastewater revenue requirement, [IAWC] will have the regulatory treatment needed to support acquiring and investing in these systems . . . ."). In light of this admission, the AG cautions the Commission against straying from well-established ratemaking principles, which would encourage IAWC to make costly acquisitions that harm existing ratepayers and will result in rate shock for the acquired customers.

The Company claims that the SVA (220 ILCS 5/9-210.5), which was enacted in 2013 and renewed in 2018, is evidence that this type of reallocation is consistent with a State policy of promoting system consolidation. The Company claims that the SVA provided a "streamlined mechanism" through which utilities can obtain approval to acquire smaller systems, addressing the issue of water system fragmentation. Because the legislature purportedly supports system consolidation, the Company reasons, then it must also support novel rate designs like the proposed reallocation in order to facilitate acquisitions of smaller water and sewer systems. But the AG points out that nothing in the SVA indicates a legislative intent, implicit or otherwise, to disregard traditional ratemaking principles such as cost causation. Indeed, the General Assembly has on multiple occasions refused attempts to make this reallocation the explicit policy of the State of Illinois. The AG urges the Commission to resist making policy judgments that

the General Assembly considered and rejected to upend long-settled principles of rate regulation.

Instead, the AG argues that the Commission should maintain the current regulatory landscape to ensure that acquisitions by private companies are in the public interest. As Mr. Larkin-Connolly testified, "a water utility should be encouraged to appropriately account for costs and risk when it acquires systems, while at the same time ensure that the acquired customers continue to receive affordable service." AG Ex. 4.0 at 13. Moreover, this should be done "without unfairly burdening existing customers or customers who do not receive the service (i.e., wastewater services) from IAWC." *Id*. at 13. Put simply, when determining whether to acquire a system, the Company should "consider the potential rate impact of future investments on the acquired system and the customers in the consolidated rate class the acquired system will join." *Id*. at 19. If shareholders are unwilling to bear the consequences of costly acquisitions, they should not be made.

In lieu of the reallocation, the AG recommends that the Commission adopt the approach proposed by Staff witness Boggs. *See* Staff Ex. 7.0 at 38-39. Under Mr. Boggs' approach, the Company would "institute annual step increases that are one-sixth of the way to full cost recovery for the next six years," which corresponds to the amount of time since the Company's last rate case filing. *Id*. at 38. This approach would adhere to the established rate design principles of gradualism and cost causation. Staff Ex. 7.0 at 39; AG Ex. 4.0 at 20. While this approach would result in a portion of the wastewater revenue remaining unrecovered from ratepayers, Staff Ex. 7.0 at 39, the AG argues that the Company's shareholders should bear the cost of management's decisions to acquire these wastewater systems. The Company's shareholders benefit from the wastewater acquisitions far more than the water customers in the Municipalities, and when expenses are incurred "to achieve goals that primarily benefit shareholders, then it is reasonable to require that shareholders bear the cost of that [expense]." *See People ex rel. Madigan*, 2011 IL App (1st) 100654, ¶54.

The AG argues that the Company is asking the Commission to exercise unprecedented authority. The Company admitted as much when it asks the Commission to "evolve modern ratemaking" and "modify the regulatory landscape" by approving the proposed reallocation. IAWC IB at 80, 94. As the AG points out, legislation enabling this type of reallocation has been proposed and rejected multiple times. Even if the Commission could exercise this extraordinary legal authority, the AG argues, it should decline to do so here because the Company has failed to demonstrate a compelling rationale from a public policy and rate regulation perspective. Thus, the Commission should not approve an unjust and unreasonable rate design that the legislature and courts have refused to endorse. For these reasons, the AG requests that the Commission deny the Company's request to reallocate a portion of its wastewater revenue requirement to water customers.

d. IIWC/FEA/CUB's Position

IIWC/FEA/CUB take the position that IAWC's proposed reallocation of wastewater revenue requirements to water customers violates basic principles of cost causation. Staff Ex. 7.0 at 37. IIWC/FEA/CUB witness Walters testified that the Company's proposal

to have water customers subsidize service to wastewater customers should be rejected. If there is a need to mitigate the increase in rates to wastewater customers, it would be appropriate to spread the wastewater COS over all IAWC wastewater customers in the State. IIWC/CUB/FEA Ex. 1.0 at 76. It is not appropriate to require customers of the water utility to subsidize service for customers of the wastewater utility. *Id*. The requested subsidy should be denied.

IIWC/FEA/CUB note that Staff has made a proposal, which would mitigate the rate increase that would result for wastewater customers if there is no reallocation of a portion of the Central Zone wastewater revenue requirement to water customers. Staff has proposed that IAWC institute an annual six-step increase for Central Zone wastewater customers, until wastewater rates are set at a level that allows recovery of the wastewater revenue requirement from wastewater customers, without recovery of any wastewater revenue requirement shortfall from other customer groups. Staff Ex. 7.0 at 38-39. In the alternative, IIWC/FEA/CUB agree with Staff's proposal and maintains their opposition to any reallocation of the Central Zone wastewater revenue requirement to water service customers.

e. IIWC/FEA's Position

IIWC/FEA oppose the reallocation of the wastewater revenue requirement to water customers. IAWC originally proposed to reallocate $14,284,494 (reduced to $11.8 million in rebuttal) in costs to serve Central Zone wastewater customers to all water customers. IAWC Ex. 7.00 at 14; IAWC Ex. 18.00 at 42.

IIWC/FEA note, as several witnesses testified in this proceeding, shifting costs of wastewater customers to water customers is contrary to cost causation principles and wastewater revenue requirements should be recovered from wastewater customers. IIWC/FEA Ex. 1.0 at 12-13; Champaign Ex. 1.0 at 4-5; Staff Ex. 7.0 at 37; AG Ex. 2.0 at 16. Furthermore, IAWC's proposal to reallocate wastewater costs to water customers violates a primary rate design objective to recover costs from those who cause the incurrence of those costs. Staff Ex. 7.0 at 39. IIWC/FEA confirm it is an underlying goal and objective of regulation in Illinois that "the cost of suppling public utility services is allocated to those who cause the cost to be incurred." 220 ILCS 5/1-102(d)(iii). IIWC/FEA argue the evidence in this case supports the conclusion that the reallocation of wastewater revenues to water customers would result in unfair and inequitable water rates and, thus, is inappropriate from a ratemaking perspective. AG Ex. 2.0 at 4-5.

IIWC/FEA recommend spreading the original $14.3 million Central Zone wastewater revenue requirement (now $11.8 million) across all IAWC wastewater customer classes in Illinois. IIWC/FEA assert this approach better reflects cost causation and is consistent with how water rates have been transitioning to consolidated or single tariff pricing over the years. IIWC/FEA Ex. 1.0 at 13. Under this approach, the entire water revenue requirement would remain with water customers across the State and the wastewater revenue requirement would remain with wastewater customers throughout the State. *Id*.

In the alternative, IIWC and FEA believe Staff's recommendation to phase in the increase necessary for wastewater customers, as proposed by Staff witness Boggs, would be an appropriate approach. Mr. Boggs recommended a six-step annual rate

increase for the Company to allow it to fully recover the cost to serve Central Zone wastewater customers through equal and progressive annual increases until IAWC files its next rate case. Staff Ex. 7.0 at 39. IIWC and FEA understand that under the Staff's proposal, any revenue shortfall from wastewater customers associated with the six-step approach would be the responsibility of the Company. *Id*. at 38-39.

IIWC/FEA conclude the Commission should reject IAWC's proposal to reallocate a portion of the wastewater revenue requirement for the Central Zone to water customers. IIWC/FEA point out the proposal is inconsistent with fundamental ratemaking principles and Illinois regulation. IIWC/FEA also note the reallocation is opposed not only by IIWC/FEA, but also the AG, Champaign, and Staff.

IIWC/FEA recommend that the Commission adopt the IIWC/FEA proposal to spread the Central Zone wastewater requirement among all wastewater customers in the State or, in the alternative, adopt Staff's six-step increase approach to phase in the increase for wastewater customers, with any shortfalls in recovery from wastewater customers being the responsibility of the Company.

f. Municipalities' Position

The Municipalities oppose IAWC's request to shift $11.8 million of wastewater revenue requirements to water customers, which would impose improper charges on water customers who do not even receive wastewater service from the Company. Imposing costs on customers who do not receive the services is inappropriate and contrary both to established Commission practice and the Act.

The Municipalities witness Nagy testified that Champaign maintains its sanitary sewer collection system within Champaign's city limits. Wastewater treatment is provided by the Urbana and Champaign Sanitary District ("UCSD"), a municipal corporation created in 1921 to provide wastewater treatment for Champaign, Urbana, and the Villages of Bondville and Savoy. Champaign Ex. 1.0 at 2-3. The monthly bill for sewage treatment for a residential customer using 3,500 gallons of water is $20.39 per month in Champaign. Champaign Ex. 1.0 at 4. "For Champaign customers who already pay separate wastewater fees, it is neither appropriate from a rate design or policy perspective to have Champaign customers subsidize customers in other locations through the State of Illinois by surcharging them for services that are not provided to them by IAWC." Champaign Ex. 1 at 4-5. IAWC's proposal would require customers located within the Municipalities to pay twice for wastewater service—once to the entity that actually provides the service and a second time to IAWC for "services" that the Company does not, and cannot, provide.

The Act requires that a utility's rates and other charges for "any service rendered or to be rendered" must be just and reasonable. 220 ILCS 5/9-101. "A public utility is entitled to just and reasonable compensation for the service given to the public." *United Cities Gas Co. v Ill. Commerce Comm'n*, 163 Ill.2d 1, 23-24. It is, therefore, just not reasonable for utility customers to pay more than what the service provided to them is reasonably worth, nor should they pay for costs not legitimately incurred for their benefit. *Id*. at 24. In *Citizens Util. Co.*, the water utility provided no wastewater service but charged the customer for the service. The court agreed with the Commission's ordering a refund of the charges because "it would be difficult to envision 'a more unjust and unreasonable

charge than for a service never rendered by a utility.'" *Citizens Util. Co.*, 157 Ill. App. 3d at 207. The Commission "must ensure that consumers are treated fairly (220 ILCS 5/1102(d) (West 2008), that the 'application of rates is based on public understandability and acceptance of the reasonableness of the rate structure and level.'" *Apple Canyon Lake Prop. Owners' Ass'n v Ill. Commerce Comm'n*, 2013 Il App (3d) 100832, ¶41.

IAWC argues that the improper cost shifting was necessary because, if the Company had to collect the wastewater costs from wastewater customers, those customers would see a large increase in their bills. The Municipalities assert that the problem is one of IAWC's own making. The Company admitted that it made various acquisitions of wastewater systems by apparently paying too much for them, leaving IAWC with insufficient capital to make necessary improvements. AG Ex. 2.0 at 15. The Commission should not encourage the Company to continue making bad investment decisions by allowing it to impose improper costs on water customers who do not benefit from IAWC's wastewater system. As the court noted in *Central Ill. Pub. Serv. Co. v Ill. Commerce Comm'n*, 243 Ill. App. 3d 421, 428 (4th Dist. 1993), one of the goals and objectives of utility regulation "is to ensure that 'the cost of supplying public utility services is allocated to those who cause the costs to be incurred.'" *Id*. at 428. To allow IAWC to allocate wastewater costs to water customers would violate the goal and objective of allocating costs to those who cause the costs to be incurred.

g. Commission Analysis and Conclusion

The Commission agrees with Staff and Intervenors that allowing IAWC to reallocate approximately $11.8 million of IAWC's Central Zone wastewater revenue requirement to be recovered from IAWC's water customers would violate the standard principle of cost causation. A regulatory objective in Illinois is that "the cost of suppling public utility services is allocated to those who cause the cost to be incurred." 220 ILCS 5/1-102(d)(iii). IAWC's proposal would be a direct violation of this principle and it is rejected.

IAWC points to policy direction from NARUC. Policy directions are not statutory regulations, like the principle of cost causation. As other parties indicate, such a policy change would be more appropriately addressed by the General Assembly.

The Commission understands the problems faced by small water and wastewater companies and the aging of those systems. IAWC made the business decision to acquire 14 wastewater systems since its last rate case, six of which were incorporated into the Central Zone division, that need improvements to the wastewater systems. As a result of IAWC's business decisions, this results in the current problem of a significant increase in rates to wastewater customers in the Central Zone. Staff's general proposal to gradually increase rates to customers in the Central Zone appears reasonable. However, Staff's proposal to have any revenue shortfall be covered by the Company would result in IAWC being unable to recover its Commission-approved revenue requirement, and thus violate the Commission's policy of implementing cost-based rates. Therefore, the Commission rejects Staff's proposal as written.

Both IAWC and IIWC/FEA's proposals, in different ways, attempt to mitigate rate shock by spreading out the costs over a larger customer base. While IIWC/FEA's proposal to allocate the original $14.3 million (now $11.8 million) of IAWC's Central Zone

wastewater revenue requirement to all wastewater customers in Illinois to some extent also goes against cost causation principles, it at least applies to customers that are receiving the same type of services from IAWC.

The Commission finds value in combining elements of both Staff's initial proposal and IIWC/FEA's proposal in a way that avoids under-recovery by IAWC of its full revenue requirement and sunsets the allocation of portions of Central Zone's wastewater revenue requirement across all IAWC's wastewater customers within a fixed time-frame. Accordingly, based on the evidence and proposals presented in this docket, the Commission adopts the following approach: re-allocating in the first year following the effective date of the new rates the $11.8 million in IAWC's Central Zone wastewater revenue requirement across all IAWC's wastewater customers statewide, as IIWC/FEA propose, followed in the second through sixth years by an incremental phase down of the socialization, similar to what Staff proposes. Specifically, beginning in the second year after the rates' implementation, the share of the $11.8 million Central Zone wastewater revenue requirement borne by the non-Central Zone wastewater rate customers should be reduced from non-Central Zone rates by one fifth, with an equivalent amount added to the Central Zone wastewater rates. This incremental shifting of costs from the non-Central Zone to the Central Zone should continue annually each year for five years. Thus, beginning in the sixth year after the rates are implemented, Central Zone wastewater rates will fully satisfy cost causation principles by entirely recovering the $11.8 million in revenue requirement at issue. Simultaneously, in the sixth year, non-Central Zone wastewater rates will cease covering any portion of Central Zone wastewater revenue requirement. The Table below illustrates the Commission's adopted approach.

Example Methodology Table for Allocation of $11.8 Million in Revenue Requirement Across IAWC Wastewater Rate Zones			
Year	**Non-Central Zone Wastewater Rate Allocation**	**Central Wastewater Rate Zone Allocation**	**Total IAWC Revenue Requirement Recovered**
Year 1	# Non-Central Zone Ratepayers / Total # IAWC Wastewater Ratepayers * $11.8 Million	# Central Zone Wastewater Ratepayers / Total # IAWC Wastewater Ratepayers * $11.8 Million	$11.8 Million
Year 2	(% Non-Central Zone Ratepayers out of Total * $11.8M) * 0.8	(% Central Zone Ratepayers out of Total * 11.8M) + (% Non-Central Zone Ratepayers out of Total * 11.8M * 0.2)	$11.8 Million

Year 3	(% Non-Central Zone Ratepayers out of Total * $11.8M) * 0.6	(% Central Zone Ratepayers out of Total * 11.8M) + (% Non-Central Zone Ratepayers out of Total * 11.8M * 0.4)	$11.8 Million
Year 4	(% Non-Central Zone Ratepayers out of Total * $11.8M) * 0.4	(% Central Zone Ratepayers out of Total * 11.8M) + (% Non-Central Zone Ratepayers out of Total * 11.8M * 0.6)	$11.8 Million
Year 5	(% Non-Central Zone Ratepayers out of Total * $11.8M) * 0.2	(% Central Zone Ratepayers out of Total * 11.8M) + (% Non-Central Zone Ratepayers out of Total * 11.8M * 0.8)	$11.8 Million
Year 6	(% Non-Central Zone Ratepayers out of Total * $11.8M) * 0.0	(% Central Zone Ratepayers out of Total * 11.8M) + (% Non-Central Zone Ratepayers out of Total * 11.8M * 1.0)	$11.8 Million

This compromise mitigates rate shock, permits IAWC to recover its full revenue requirement, and adheres to rate design principles of cost causation, gradualism, and affordability without shifting some portion of the $11.8 million at issue onto the IAWC's non-Central Zone water or wastewater customers for a potentially longer period, until IAWC's next rate case.

2. COS Studies

a. IAWC's Position

IAWC explains that its water and wastewater COS studies, provided as IAWC Exhibits 7.05 and 7.06, are analyses that calculate IAWC's total investment and operating costs incurred to provide service to various customer groups, or service classes, for the purpose of establishing cost-based rates. IAWC explains further that the COS studies provided in this proceeding allocate the Company's total revenue requirement for water and wastewater operations, respectively, to various cost categories. The revenue requirement for each of those cost categories are then allocated to customer classes using a class allocation factor that differs depending on the nature of the costs.

IAWC explains that the methodology used in the COS studies in this proceeding differs from that used in Docket No. 16-0093, where the Company's external consultant allocated account balances directly to customer class using an appropriate class allocation methodology. In this proceeding, however, the Company has determined that its proposed two-step COS allocation methodology simplifies its cost-of-service analysis and makes the resulting allocation to customer classes more intuitive. IAWC states that adopting an approach that first allocates revenue requirement and account balances to cost categories, after which the cost category revenue requirements are allocated to customer classes, unbundles the Company's revenue requirement into business functions and allows stakeholders to see what the COS is for each customer class by business function.

Notably, IAWC states that no party has offered any substantive criticisms of the Company's proposed methodologies – Staff is the only party to specifically object to the Company's proposed COS methodologies, and that objection is based entirely on a preference to avoid deviation from methodologies previously reviewed and approved by the Commission. IAWC points out that Staff specifically recommends that the Commission bind IAWC to its historical COS analyses "until such a time that the Company's methodology is litigated and determined to provide. . . beneficial improvements…" Staff Ex. 15.00 at 21. IAWC points out that it is unclear what additional litigation Staff seeks, given that this is a contested case, IAWC proposed its COS methodologies at the outset of this proceeding, and all parties, Staff included, have been offered the opportunity to litigate its analyses throughout this proceeding. And, IAWC argues, short of implementing the rates based on the COS analyses offered here, Staff has not clarified how "beneficial improvements" can otherwise be demonstrated. IAWC also asserts that Staff has not offered any evidence that IAWC's COS studies and underlying analyses are somehow deficient or incorrect, nor has Staff provided any alternative analyses for consideration.

IAWC notes that IIWC/FEA is the only other party in this proceeding to raise concerns about the Company's proposed COS studies. IAWC explains that while IIWC/FEA generally agree with the classifications and cost allocations in the Company's COS studies, IIWC/FEA identify a concern that the Company's maximum day and maximum hour ratios may need to be updated and recommends that IAWC perform an updated demand study in its next rate case proceeding. IAWC notes that concern, and IAWC's agreement to perform an updated demand study in its next rate case proceeding, is discussed further below.

IAWC states that it provided substantial evidence that its COS studies are reasonable and appropriate, including testimony discussing its rationale for implementing a change in methodologies. IAWC argues that Staff ignores this evidence, and instead mischaracterizes the Company's testimony and discovery responses, arguing that IAWC "used a different methodology in this rate case because the same methodology was used and approved in a COS study for an electric utility filed by MidAmerican Energy Company." Staff IB at 49. IAWC asserts that this assertion, which is based on a discovery response provided by IAWC (*see* Staff Ex. 7.0, Att. 7.01) is simply wrong.

IAWC explains that in that discovery request, Staff asked for an explanation of the differences between the COS studies submitted in this proceeding compared to those approved in Docket No. 16-0093. Staff also asked for a detailed rationale for each change. In response, IAWC explained that it changed its COS methodologies:

> because the two-step approach simplifies the cost-of-service analysis and makes the resulting allocation to customer class more intuitive. This approach unbundles revenue requirement into business functions and allows stakeholders to see what the cost of service is for each customer class by business function.

Staff Ex. 7.0, Att. 7.01.

IAWC explains that its discovery response clarified that the COS studies utilized in this case and the approach described above and in IAWC Exhibit 7.00 are similar in these respects to the electric COS study filed by MidAmerican Energy Company in Docket No. 14-0066. IAWC asserts that it has been clear about the rationale behind its proposed COS studies and methodologies, a rationale that Staff has not addressed or rebutted, and Staff's misstatement of the record is wrong and should be rejected.

Moreover, IAWC states that it has demonstrated that the operational differences between water/wastewater utilities and electric utilities (like MidAmerican Energy Company) do not change the fundamental process of functionalizing, classifying, and allocating costs which is at issue in this case. Electric utilities and water utilities both have production, transmission, distribution, metering, and customer service functions to which revenue requirements are assigned and that are allocated to customer class using a variety of allocation methodologies. The fact that they operate differently does not change this fundamental foundation for how the COS study in each case could or should be structured.

IAWC argues that it is well-established that prior Commission orders are not controlling: the Illinois Supreme Court has "long recognized that the Commission 'is not a judicial body, and its orders are not res judicata in later proceedings before it.'" *Commonwealth Edison Co. v. Ill. Commerce Comm'n*, 2016 IL 118129, ¶24 (*citing Miss. River Fuel Corp. v. Ill. Commerce Comm'n*, 1 Ill. 2d 509, 513 (1953)). And, IAWC asserts, the Commission must consider the issues in this proceeding based on the evidence and record established in this docket. *Commonwealth Edison Co. v. Ill. Commerce Comm'n*, 405 Ill. App. 3d 389, 407-408 (2nd Dist. 2010); *Miss. River Fuel Corp*, 1 Ill. 2d at 513.

IAWC asserts that the Company's proposed COS studies in this proceeding are intuitive, easier to understand, and a significant improvement over the Company's past studies. IAWC further states that the evidence and record in this proceeding are clear – IAWC's proposed COS studies, including its classifications and cost-allocations, are reasonable, supported by the evidence, and should be adopted.

Water COS Study

IAWC states that it has provided two water COS studies in this proceeding, consistent with its proposal to consolidate water service rates: a primary COS study that includes all water service except for Pekin, and a separate COS study for the Pekin district. IAWC's water COS study allocates the total revenue requirement for IAWC water operations to various cost categories, which are then allocated to the various customer classes IAWC services, with different cost categories allocated to customer classes using a class allocation factor that differs depending on the nature of the costs.

IAWC explains that most of the accounts that make up the Company's revenue requirement are directly assigned to a single cost category (including net plant for Collecting and Impounding Reservoirs, Purchased Water for water pumping, and Water Treatment labor expenses). Accounts not directly assignable to a single cost category are allocated among cost elements based on appropriate allocation factors (including general and intangible plant, miscellaneous rate base deductions, administrative and general expenses, and payroll taxes). IAWC explains that the cost categories that the Company assigns to specific accounts include:

- Variable Costs, such as purchased electric power, purchased water, treatment chemicals and waste disposal costs that tend to vary directly with the amount of water consumed and are allocated to customer classes in direct proportion to each class's annual water consumption.
- Capacity Costs, such as source of supply, water pumping, water treatment, transmission mains, distribution mains, and storage, which refer to the cost of owning, operating, and maintaining the Company's water production, pumping, and distribution system that do not vary directly with the amount of water consumed and are generally allocated to customer classes through the Base/Extra capacity methodology.
- Customer Related Costs, which are allocated to customer classes based on a weighted number of customers calculation (including metering costs and service line cost components) or based on the total number of customers in each class (including customer service cost components).
- Fire Service Costs, which are determined through information on firefighting requirements provided by the American Insurance Association and are split between private fire and public fire customer classes based on the relative potential water demand for each class.

IAWC explains that its water COS study is based on the AWWA M1 manual (Principles of Water Rates, Fees, and Charges), which provides guidance on the appropriate allocation methodologies to use in allocating different types of costs to customer classes. IAWC notes that pursuant to the AWWA M1 manual's guidance, it uses the Base/Extra capacity method to allocate production and distribution costs to customer classes. As Staff witness Boggs and IIWC/FEA witness Collins acknowledge, the Base/Extra capacity method is generally accepted as a sound method for allocating the cost of water service and was used by IAWC in previous rate cases. IAWC notes that the Base/Extra capacity methodology relies upon a combination of the average water consumption across the year for each customer class (the "Base" component) and the difference between each class's average daily consumption and estimated maximum daily consumption for the year (the "Extra" component) to allocate the fixed costs of the water production and distribution system to customers. IAWC explains that for each class, the Base/Extra allocator is calculated as a weighted average of the Base and Extra allocators, resulting in maximum day peaking factors and maximum hour peaking factors that are used in the COS study to allocate revenue requirements for various cost categories to customer class. The Company's maximum day and maximum hour peaking factors by customer class are the same factors that were used in the COS studies provided in Docket No. 16-0093. IAWC notes that while no party contests the use of the maximum day and maximum hour peaking factors in this proceeding, IIWC/FEA recommend that the Company update its peaking factors in its next rate case filing.

IAWC asserts that it provided substantial information in this proceeding explaining how each of its water cost categories were allocated to customer classes based on specific cost classifications and allocation methodologies. IAWC points out that no party contested the analyses underlying these cost allocations, including the allocation

methodologies and the cost categories used. IAWC contends that they should be approved.

Wastewater COS Study

IAWC states that it has provided two wastewater COS studies in this proceeding, consistent with the Company's proposal for wastewater rate design: a COS study for the Chicago Metro wastewater service, which is the legacy group of customers from the Company's last rate case (Docket No. 16-0093), and a second COS study for Central Zone rates, which includes all of the acquisitions included in this proceeding since Docket No. 16-0093 was completed. As with the water COS analyses, IAWC's wastewater COS study allocates the total revenue requirement for IAWC wastewater operations to four cost categories, which are then allocated between two service classifications IAWC serves (Collection Only, and Collection & Treatment) with different cost categories allocated to customer classes using a class allocation factor that differs depending on the nature of the costs.

IAWC explains that like water, the majority of the accounts that make up the Company's revenue requirement are directly assigned to a single cost category (including net plant for Treatment & Disposal functions, Sewage Treatment labor expenses, and plant related to Customer Facilities). IAWC states that accounts not directly assignable to a single cost category are allocated among cost elements based on appropriate allocation factors (including general and intangible plant, miscellaneous rate base deductions, administrative and general expenses, and payroll taxes).

IAWC provided substantial information in this proceeding explaining how each of its wastewater cost categories were allocated to service classifications based on specific cost classifications and allocation methodologies. IAWC notes that no party contested the analyses underlying these cost allocations, including the allocation methodologies and the cost categories used. IAWC concludes that they should be approved.

b. Staff's Position

Staff recommends the Commission reject the Company's COS allocation factor approach used in this proceeding.

The Company implemented a significant change in its COS study approach for the instant rate case filing. In this case, the Company first allocated the revenue requirement and account balances to cost categories. IAWC Ex. 7.00 at 42, 54. Staff witness Boggs explained that the Company used a different allocation approach in this case than the approach that the Commission approved in the Company's last rate case, Docket No. 16-0093. Staff Ex. 7.0 at 13. In Docket No. 16-0093, the Commission-approved COS study allocated account balances directly to customer classes using the appropriate class allocation methodology as detailed in Staff witness Boggs' direct testimony. Staff Ex. 7.0 at 10.

Staff witness Boggs explained that the COS study determines the cost to serve customers and, thus, provides the basis for designing rates for a utility. Specifically, a COS study is performed to allocate costs among all customer classes based on the responsibility of each respective customer class for the costs imposed on the utility. In other words, the various costs on the utility system are allocated among the customer

classes according to cost causation principles. The results are summarized in rate of return for customer classes, which document the relative performance of each customer class in recovering costs. Classes generating above average returns are considered to be paying more than their fair share of the Company's revenue requirement, while classes with below average returns are viewed as paying less than their fair share of the Company's revenue requirement. *Id*.

IAWC stated that it used a different methodology in this rate case because the same methodology was used and approved in a COS study for an electric utility filed by MidAmerican Energy Company in Docket No. 14-0066. Staff Ex. 7.0, Att. 7.01. Staff witness Boggs asserts that a COS study allocation method approved in an electric utility rate case is not appropriate for a water and sewer utility COS study. Staff Ex. 7.0 at 13. There are a multitude of differences between electric and water and sewer utilities so using methods that are specific to water and sewer utilities consistent with AWWA M1 manual are applicable in this proceeding. *Id*. Additionally, the COS study methods provided in the Company's most recent three rate cases (Docket Nos. 09-0319, 11-0767 and 16-0093) were consistent with what the Commission has approved in other water/sewer utilities in Illinois since at least 2009. *Id*. at 14.

Staff witness Boggs clarified that Staff does not object to the Company's Base-Extra Capacity method used in the Company's COS study. *Id*. at 11. Rather, Staff objects to the Company's method to first allocate the revenue requirement and account balances to cost categories and, after determining a revenue requirement for each cost category, the allocation of the cost category revenue requirement to each customer class using a single allocation methodology. *Id*. Using a new two-step approach obscures information Staff gleans from the typical water/sewer COS study, which allocates the account balances directly.

Staff argues that IAWC witness Rea mischaracterizes Intervenor testimony when he states that all parties to this proceeding have approved of the Company's proposed allocation process except for Staff. Staff also asserts that Mr. Rea mischaracterizes Intervenor testimony when he states that all parties to this proceeding have approved of the Company's proposed allocation process except for Staff. *Id*. at 56-57. While most Intervenors, including Staff have agreed that the Base-Extra Capacity approach to allocation is an accepted industry practice (Staff Ex. 7.0 at 9; AG Ex. 2.0 at 9; IIWC/FEA Ex. 1.0 at 7), none except Staff have commented on Mr. Rea's proposed process to allocate a revenue requirement for each cost category first and then allocate the cost category revenue requirement using a single allocation methodology for each cost category which deviates from the allocation process that has been approved by the Commission for at least a decade. Staff Ex. 15.0 at 19-20.

Staff argues that Mr. Rea errs when he contends that Staff's primary consideration for the COS study allocation approach is "doing things the way we've always done them." IAWC Ex. 18.00 at 56. His statement is inaccurate. Staff disagrees with the Company presenting a COS study methodology that deviates from the methods that have been litigated and found by the Commission to be reasonable for developing rate designs for water and wastewater utilities. Mr. Rea's methodology has not been proven to be a "beneficial improvement" to water and wastewater COS studies and he has failed to make

a convincing argument such that the Commission should consider his approach for approval.

c. IIWC/FEA's Position

IIWC/FEA generally agree with the classifications and cost allocations in the Company's Class Cost of Service Study ("CCOSS"). However, IIWC/FEA are concerned that the maximum day and maximum hour ratios need to be updated because, as discussed in more detail below, relying on the peak demand ratios contained in the Company's 2016 load study for the Company's current CCOSS may result in an inaccurate measure of the cost to the Company of providing service to each customer class. IIWC/FEA Ex. 10 at 5.

IIWC/FEA witness Collins explained peak demand ratios as follows:

> The class base, maximum day and maximum hour rates of water usage for customer classes serve as the basis for allocating base, maximum day and maximum hour capacity costs between the Company's customer classes.
>
> Maximum rates of water usage are expressed in terms of peak demand ratios, or peaking factors. The maximum rate of usage, whether daily or hourly, can be expressed as a percent of average annual usage (i.e., base usage). This percentage relationship to the base usage is the peaking factor.
>
> Typically, weather sensitive customers whose water consumption increases during the summer due to discretionary outdoor water use have higher peak demand ratios than customers whose water use is steady year round.

IIWC/FEA Ex. 1.0 at 4.

IIWC/FEA point out the maximum day and maximum hour peaking factors by customer class used in this proceeding are the same as those used in the COS studies provided in the Company's last base rate case proceeding, Docket No. 16-0093. IAWC Ex. 7.00 at 45. IIWC/FEA note, that according to the Company, IAWC has not conducted a new demand study in this proceeding because the Commission's Order in Docket No. 16-0093 stated that assuming there has not been a significant change in the ratio peak to average demand, IAWC needs to "only conduct a demand study using the AWWA-method once every ten years." *Id*. (quoting Docket No. 16-0093, Order at 90).

IIWC/FEA point out, since its last rate case, IAWC has acquired 15 new water systems and 14 wastewater systems, totaling over sixty thousand additional customer connections. IAWC Ex. 1.00 at 6. These new systems consist primarily of residential customers. IIWC/FEA Ex. 1.1. IIWC/FEA suggest this is significant to note because residential customers typically have larger extra capacity demands exceeding their base consumption when compared to non-residential customers. IIWC/FEA Ex. 1.0 at 5. IIWC/FEA indicate the Company has not examined the maximum day or maximum hour demand ratios of all of these newly acquired systems. IIWC/FEA Ex. 1.1. IIWC/FEA identify their concern that since the Company has continued to use the demand ratios based on the 2016 load study in the current CCOSS, these ratios may not result in an

accurate measure of the Company's cost of providing service to each customer class. As IIWC/FEA witness Collins explained, "relying on prior peak demand ratios will not accurately reflect each customer class's extra capacity demand, and therefore will not accurately allocate extra capacity costs across customer classes." IIWC/FEA Ex. 1.0 at 5-6.

IIWC/FEA recommend that the Company be required to conduct a new demand study which includes the load characteristics of the 15 newly acquired water systems and any other systems acquired before the next rate case and utilize the new maximum day and maximum hour customer class peaking factors in the CCOSS for the next rate case. *Id*. at 7. IIWC/FEA reveal the Company agrees "it would be useful to update the Company's capacity study in the next rate case to reflect the acquisitions the Company has made and might make before the filing of the next rate case." IAWC Ex. 28.00 at 40. IIWC/FEA recommend that the Commission require the Company to perform an updated demand study, which includes load data for all water systems acquired since the Company's last rate case up to its next rate case, for use in the Company's next water CCOSS.

d. Commission Analysis and Conclusion

No party takes issue with the Company's Base-Extra Capacity method used in the COS studies. Staff objects to IAWC's allocation factor, which first allocates the revenue requirement and account balances to cost categories and then to customer classes using a class allocation factor that differs depending on the nature of the costs.

The Commission is not averse to trying new allocation factors. As parties note, the allocation factor used by IAWC was approved once before for MidAmerican Energy Company. However, having reviewed the record, the Commission finds that IAWC has not fully supported its proposed change in this proceeding. IAWC makes assertions that the new two-step process is more simple, more intuitive, and will provide benefits to stakeholders. Staff claims that IAWC's proposed allocation factor obscures information that Staff uses in its analysis of the COS studies.

The traditional method used by IAWC, and approved by the Commission, is consistent with the AWWA M1 manual. Considering the record before the Commission, IAWC's new allocation factor methodology is rejected. IAWC is directed to provide COS studies for this rate case that apply the class allocation methods used in the COS studies previously approved in the last three IAWC rate cases.

IIWC/FEA's request for a new demand study, which is agreed to by the Company, is addressed in Section VIII.A.4 of this Order.

3. Central Division Class Revenue Allocation, including Large Public Authorities Class

a. IAWC's Position

IAWC states that its water COS study indicates that rates for the Central Zone Large Public Authorities class must be raised by approximately 55.6% in order to recover its COS. IAWC explains that in order to gradually increase rates to recover the class's COS, the Company proposed to increase rates by 25% with the uncollected revenue

requirement reallocated to other customer classes based on total present rate revenue by class.

IAWC states that to mitigate the reallocation of the cost to serve the Large Public Authorities Class from other customer classes, Staff recommends that the Company increase the Large Public Authorities water rate by 35%, reallocating the remaining 20.6% revenue shortfall to other customer classes. IAWC notes that in the interest of narrowing the contested issues in this proceeding, the Company accepted Staff's recommendation.

b. Staff's Position

Staff argues that the Commission should approve Staff's recommendation to increase the Large Public Authorities class rate by 35% to move the Large Public Authorities class closer to full COS recovery. Staff Ex. 7.0 at 31. The Company initially proposed to increase rates for the class by 25%, which is approximately one half of the 55.6% increase that the COS study indicates it would take for the Company to recover the full cost to serve this class. IAWC Ex. 7.00 at 9.

Mr. Boggs explained in testimony that, as with any customer class, one of the primary functions of rate design is to set rates so that the Company can fully recover the cost to serve a customer class from those who cause the Company to incur those costs. Mr. Boggs explained in testimony that, as with any customer class, one of the primary functions of rate design is to set rates so that the Company can fully recover the cost to serve a customer class from those who cause the Company to incur those costs. Staff Ex. 7.0 at 30. In this case, the Large Public Authorities class would require a 55.6% rate increase so the Company could fully recover the cost to serve the class. Staff Ex. 7.0, Att. 7.05. Because the Company proposes only a 25% rate increase for this class, the remaining approximately 30.6% of the needed rate increase would need to be collected from other customer classes. IAWC Ex. 7.00 at 9-10. The Company's initial proposal was to recover $419,587 from Central residential customers; $126,535 from Central commercial customers; $39,372 from Central industrial customers; $30,479 from Central public authority customers; $60,447 from Central resale customers; and the additional $12,015 from Central miscellaneous and private fire customers. Staff Ex. 7.0, Att. 7.05. The Company makes several proposals in this proceeding to reallocate revenues to other customer classes in an effort to mitigate the increases in revenue recovery that would be necessary for the Company to collect the full cost to serve smaller customer classes. Staff argues that proposing to increase rates for customer classes that do not contribute to the costs to serve - in this instance, the Large Public Authorities class - can result in unjust rate increases that must be absorbed by customers that are burdened with re-allocated costs that are above and beyond the cost the Company incurs to serve them. Therefore, Staff recommends increasing the Large Public Authorities class rate by 35% to move this rate class closer to full cost recovery.

c. IIWC/FEA's Position

IIWC/FEA agree that an increase of slightly above 50% is necessary but propose a more reasonable 27% increase for this class. IIWC/FEA Ex. 2.0 at 6. The IIWC/FEA proposal is greater than the 25% increase proposed by the Company and is in line with the system average increase for the Central Water Division. *Id*. at 6. Importantly, IIWC/FEA's proposal provides a more gradual movement toward COS. Such gradual

movement is more appropriate given the IIWC/FEA concerns raised regarding the accuracy of the Company's CCOSS. *Id*. at 6. IIWC/FEA assert the increases proposed by Staff and the Company should be rejected and IIWC/FEA's more reasonable recommended increase of 27% for the Large Public Authorities class should be accepted.

d. Commission Analysis and Conclusion

The Commission finds that increasing the Large Public Authorities class rate by 35% and reallocating the remaining 20.6% revenue shortfall to other customer classes, as agreed by Staff and the Company, is reasonable and is approved. The end purpose is to move the Large Public Authorities class more towards cost-based rates. This increase is a gradual step toward that purpose. Staff's proposal allows the Company to recover a substantial amount of its COS from the Large Public Authorities class while recognizing that a more significant increase in rates may result in rate shock for customers.

4. Central and Pekin Customer Charges

a. IAWC's Position

IAWC explains that its current rate structure for its Central Water, Lincoln, and Pekin rate zones include a monthly fixed customer charge that varies with the size of the meter and volumetric rates. IAWC states that the primary residential water service meter charge for most customers is set at $20 per month for a 5/8" meter, and the meter charge increases with the size of the meter. With the exception of South Beloit, Lincoln, and Villa Grove, IAWC is not proposing to change its monthly meter charges in this proceeding. IAWC states that its proposed customer charges generally collect the revenue requirement allocated to the metering, service line, and customer service business functions provided in the water COS study, ensures simplicity in the fixed rate assessed to customers, provides consistency in rates in the midst of a complicated rate design and fluctuating volumetric rates, and should be adopted.

IAWC notes that Staff argues that the customer charges for a 5/8" meter should be set at $18.21 for Central Zone customers and $18.41 for Pekin customers, in an effort to perfectly align with COS calculations. IAWC argues that Staff's proposal should be rejected – while Staff attempts to closely align the customer charge with COS calculations, the customer charge does not recover the entirety of the Company's total amount of fixed cost to provide service to customers. Moreover, Staff's proposed charges introduce a calculation that is neither simple nor consistent with previous rates and may introduce an element of confusion for ratepayers that observe a $1.79 (Central Zone) or $1.59 (Pekin) decrease in their monthly service charge, while simultaneously experiencing an increase in volumetric rates. IAWC contends that Staff's proposed changes to the Company's fixed customer charges offer no significant change in cost recovery, less clarity, less efficiency, and less consistency, and should be rejected.

IAWC points out that IIWC/FEA also propose a change to the Company's customer charges, recommending an increase in charges for meter sizes that are two-inches in diameter and greater, while removing an equivalent amount of revenue from the Company's proposed volumetric rate blocks (excluding the first block). IAWC argues that this proposal should also be rejected. Although IIWC/FEA argue that the "costs of

providing water utility service are primarily fixed in nature," IIWC/FEA provide no analysis, evidence, or rationale to support that proposal. IIWC/FEA does not make a recommendation addressing how much additional revenue should be collected from increased meter charges, or why the equivalent flow ratios established by the AWWA should be abandoned in this proceeding. IAWC concludes that IIWC/FEA's proposed change to the Company's customer charges should be rejected.

b. Staff's Position

The Company proposes to set the residential Customer Charge for 5/8" meter customers at $20 for Central Division and Pekin water customers. IAWC Ex. 7.00 at 7; IAWC Ex. 7.01 at 1. IAWC did not calculate a Customer Charge for any water service area in this proceeding. IAWC Ex. 7.00 at 7. The Company indicates setting meter charges precisely implies a level of precision that is not warranted for rate design purposes. IAWC Ex. 18.00 at 47. The Company states that simplicity and consistency in its Customer Charge are more reasonable and plausible than Staff's proposal of cost-based rates. *Id*. at 48.

The Company argues that the Customer Charge does not recover the entirety of the Company's total amount of fixed cost to provide service to customers, and that Staff's proposed charges introduce a calculation that is "neither simple nor consistent with previous rates and may introduce an element of confusion for ratepayers…." IAWC IB at 111-12. Staff argues that this is false and pure speculation by the Company. It is doubtful that ratepayers completely understand how Customer Charges are calculated nor what costs the Company attempts to recover. Staff states it would seemingly be easier for the Company to explain to an inquiring customer that Customer Charges are necessary to recover the fixed customer costs to provide service rather than explain to the customer that IAWC's Customer Charges are an arbitrary number that is set by the Company because it is easier for a ratepayer to understand a $20 Customer Charge than an $18.21 Customer Charge.

Staff recommends the Commission reject the Company's proposal to set the residential Customer Charge for 5/8" meter customers at $20 for Central Division and Pekin water customers (IAWC Ex. 7.00 at 7; IAWC Ex. 7.01 at 1) because the Company's proposed Customer Charges are not cost-based. Staff Ex. 7.0 at 24-25.

According to the Company's COS study (Staff Ex. 7.0, Att. 7.03), cost-based rates for Central Zone water indicate the Company would be able to recover the fixed costs that the Company incurs with a Customer Charge for a 5/8" meter of $18.21. *Id*. This fixed cost recovery would include Lincoln water customers in the Central Zone as proposed by the Company. For Pekin, the cost-based Customer Charge to recover the fixed costs to serve residential water customers calculates to $18.41 for a 5/8" meter. *Id*. Staff witness Boggs recommends approval of its proposed, cost-based Customer Charges.

IIWC/FEA indicates that it would be more appropriate to recover a portion of any approved revenue increase through the fixed monthly meter charges, with an offsetting reduction in volumetric rate blocks. IIWC/FEA Ex. 1.0 at 14. Staff recommends the Commission reject IIWC/FEA's recommendation to recover a portion of the revenue deficiency by increasing the meter charges for meter sizes that are two-inches and

greater. Staff Ex. 15.0 at 27. Specifically, IIWC/FEA does not provide any rationale or cost basis behind its proposal other than it would be more appropriate to make the change so that an equivalent amount of revenue could be recovered through the Usage Charge to offset the additional revenue being recovered through the Customer Charge from customers with meter sizes two-inch or larger. *Id*. The Commission has routinely approved water rate designs around the standard of the AWWA M1 manual which provides equivalent meter size pricing factors that correspond to the amount of water that flows through meter sizes greater than 5/8". Because IIWC/FEA does not provide a cost basis or rationale behind its proposal, Staff argues that the Commission has no foundation from which to consider approving the proposal and therefore, should reject it.

c. IIWC/FEA's Position

IIWC/FEA note the Company proposes to leave its current monthly meter charges unchanged, and to collect its claimed revenue deficiency primarily through volumetric rates. IAWC Ex. 7.00 at 7-8. IIWC/FEA propose to recover a portion of any approved revenue increase through the monthly meter charges, with an offsetting reduction in the volumetric rate blocks. IIWC/FEA Ex. 1.0 at 14.

Company witness Rea disagrees with the IIWC/FEA proposal stating IIWC/FEA provided no rationale to support their proposal other than to say it would increase fixed cost recovery and reduce volumetric revenues. IAWC Ex. 18.00 at 48. However, IIWC/FEA did indeed provide a rationale. IIWC/FEA witness Collins noted that the costs of providing water utility service are primarily fixed in nature, and importantly do not vary with the volume of water used by customers. IIWC/FEA Ex. 1.0 at 14. Although Company witness Rea agrees with this assessment, the Company's rate structure is primarily volumetric. IAWC Ex. 28.00 at 38.

IIWC/FEA explain that the Company's CCOSS shows that for the Central Water Division, approximately 5.6% of the total COS is variable and 94.4% is fixed. IIWC/FEA Ex. 2.0 at 8 *citing* Staff Ex. 7.05. Despite this fact, IIWC/FEA point out that under the Company's current rates, approximately 45% of revenues are collected through meter charges. IIWC/FEA Ex. 2.0 at 8. Under the Company's proposed rates, only about 36% of revenues would come from meter charges. *Id*. at 8.

IIWC/FEA emphasize that the costs of providing water utility service are primarily fixed in nature, and do not vary with the volume of water used by customers. Even so, IIWC/FEA note the Company continues to rely heavily on volumetric charges for collecting fixed costs. Since the Company's rate structure is largely based on volumetric charges, the Company recovers both Base and Extra Capacity costs through its volumetric charges. *Id*. at 8. IIWC/FEA argue this approach does not reflect a cost-based rate structure, fails to provide accurate price signals to customers, and can contribute to revenue instability for the Company. *Id*. at 8.

IIWC/FEA argue it is more appropriate, from a cost causation standpoint, to recover a portion of any approved revenue increase through the fixed monthly meter charges, with an offsetting reduction in volumetric rate blocks. IIWC/FEA Ex. 1.0 at 14. Therefore, IIWC/FEA witness Collins recommended recovering a portion of the revenue deficiency by increasing the meter charges for meter sizes that are two-inches and greater. *Id*. In doing so, an equivalent amount of revenue should be removed from the

Company's proposed volumetric rate blocks, excluding the first block of the Metered General Service rate structure. *Id*. at 14-15.

IIWC/FEA specify it is appropriate for the first volumetric rate block to be priced higher than the tail blocks due to the fact that the first volumetric block of the Metered General Service rate structure should primarily recover the utility's fixed costs of providing service to smaller volume users, such as residential and commercial customers. *Id*. at 15. IIWC/FEA suggest the tail blocks should be less expensive because they should primarily recover the utility's variable cost of providing service. *Id*.

Company witness Rea also criticizes IIWC/FEA's proposal because IIWC/FEA witness Collins did not make a recommendation on how much additional revenue should be collected from increased meter charges for two-inch meters and above. IAWC Ex. 18.00 at 48. While Company witness Rea is correct, IIWC/FEA point out the Company's rate design and proof of revenue workpapers are not set up in a manner that allows for efficient development and testing of alternative rate design by customer class and district. IIWC/FEA Ex. 1.0 at 15. However, IIWC/FEA witness Collins explained in his rebuttal testimony that, at a minimum, he recommends the amount of revenue collected under present meter charges as a percent of total revenue should be maintained, which would provide the Company more revenue stability than provided by the Company's proposal. IIWC/FEA Ex. 2.0 at 9.

IIWC/FEA assert that their proposal should be approved as it is simply more appropriate, from a cost causation standpoint, to recover a portion of any approved revenue increase through the fixed monthly meter charges, with an offsetting reduction in volumetric rate blocks. IIWC/FEA further argue that at a minimum, the percentage of revenue requirement collected through meter charges should remain the same as it is under current rates for those customers with meters of two-inches and above.

d. Commission Analysis and Conclusion

IAWC proposes to leave the monthly Customer Charge for a 5/8" meter for Central and Pekin customers unchanged at $20 per month. Staff proposes that the meter charges be based on the COS, which for demonstrative purposes would be $18.21 for the Central zone and $18.41 for the Pekin zone based on the Company's current COS study. IAWC states that "simplicity and consistency justifies leaving monthly meter charges unchanged . . . ." IAWC Ex. 18.00 at 48. IAWC opposes Staff's proposal primarily because IAWC believes it would cause customer confusion. The Commission finds that Staff's proposal to base the Customer Charge for a 5/8" meter for the Central and Pekin customers on the COS is just and reasonable. To the extent customers in those areas are confused as to why their Customer Charge is being reduced, IAWC should have the resources to address any such inquiries. The Commission further finds that, based on record evidence, IIWC/FEA's proposal lacks sufficient cost basis and foundation for the Commission to consider such a change. As the Company notes, IIWC/FEA make no recommendation regarding the amount of additional revenue that should be collected from increased meter charges for larger meters.

5. Lincoln Water Rates

a. IAWC's Position

IAWC states that in direct testimony, it proposed to continue movement towards single tariff pricing by moving rates in its Lincoln water tariff zone closer to the Company's Central Zone water rates. To do so, IAWC explains, it included revenue requirements for the Lincoln tariff zone with the Central Zone revenue requirements as an initial step that will eventually result in consolidating Lincoln Zone rates with Central Zone rates. Based on the Company's water COS study, the Lincoln zone would require an increase in its revenue requirement of $3.6 million on a stand-alone basis. IAWC states that it proposed, however, to limit that increase to approximately $2.3 million, which is roughly halfway between the increase that Lincoln customers would see if Lincoln rates continued to be calculated on a stand-alone basis and the total increase that the Company proposed in this proceeding.

IAWC notes that Staff acknowledged that under the Company's proposal, Lincoln water customers would experience an increase of approximately 25.79% to its customer charge, and an increase of approximately 84.42% to its usage charge, while approximately $1.3 million in revenues would be recovered from non-Lincoln customers. IAWC states that to reduce the amount of revenues that would be recovered from non-Lincoln customers, and in light of the benefits of allowing IAWC to spread out capital improvement costs over a larger customer base thereby mitigating potential rate shock when large improvement projects need to be made, Staff recommends that the Commission reject IAWC's proposed partial consolidation and instead approve full consolidation of the Lincoln water territory into the Central Zone water territory, increasing the customer charge for Lincoln water customers by 25.79% and increasing the usage charge by 139.51%. IAWC states that in the interest of narrowing the contested issues in this proceeding, IAWC accepts Staff's recommendation.

IAWC states that, while this issue is agreed between Staff and the Company, the AG argues that the Commission should reject Staff's proposal and either adopt IAWC's original proposed partial consolidation and rate increase, or that IAWC be required to submit an alternative Lincoln rate design that limits the revenue increase for any Lincoln water customer class to 50% of revenues for the class under current rates. IAWC states that the AG also recommends that, in the event the Commission does not adopt IAWC's proposal to reallocate a portion of its wastewater revenue requirement to water customers, any subsequent rate transition path the Company submits to move Central wastewater customers from the current rates to consolidated cost-based rates should also limit any single increase to 50% of revenues under the prior rate structure.

IAWC argues that the AG's position should be rejected. IAWC explains that the basis of AG witness Larkin-Connolly's argument that the revenue increases proposed for Lincoln customers are "excessive" is a misreading of the statutory language of Act by a witness with no legal background, proffering a novel interpretation of the Act for the first time in rebuttal testimony. Specifically, IAWC points out, Mr. Larkin-Connolly argues that Section 8-306(a) of the Act must be interpreted in the context of a base rate proceeding to require that "no customer should experience a bill increase of more than 50% in the

first billing period that new rates are adopted." AG Ex. 4.0 at 23. IAWC concludes that this interpretation has no basis in law or fact and must be rejected.

IAWC states that Section 8-306 of the Act requires that the Commission "shall prepare, make available to customers upon request, and post on its Internet web site information concerning the service obligations of water and sewer utilities and remedies that a customer may pursue for a violation of the customer's rights." 220 ILCS 5/8-306(a). This information is intended to "specifically address the rights of a customer of a water or sewer utility" in specific situations, including when "a customer's bill increases by more than 50% within one billing period", as well as when "a rate is filed, including without limitation a surcharge or annual reconciliation filing, that will increase the amount billed to the customer." 220 ILCS 5/8-306(a)(2), (6). In other words, IAWC explains, Section 8-306 establishes an informational requirement for the Commission regarding customer rights and has no bearing on a utility's tariff rate increase under Section 9-201 of the Act. Section 8-306 itself clearly delineates between a situation in which a customer's bill abruptly changes by more than 50% within one billing period, versus a situation in which a customer's bill changes due to a rate filing. IAWC asserts that it is a tenet of statutory interpretation that statutes should be considered as a whole, and "words and phrases should not be construed in isolation but must be interpreted in light of other relevant provisions of the statute." *People ex rel. Madigan v. Wildermuth*, 2017 IL 120763, ¶17; *citing Mich. Ave. Nat'l Bank v. Cty. of Cook*, 191 Ill. 2d 496, 504 (2000). IAWC argues that the AG's novel interpretation of the Act would ignore the other situations identified in Section 8-306(a), conflating abrupt changes between billing periods with bill increases related to rate filings in pursuit of a new and untimely proposed limit on rate increases allowed in this proceeding.

Further, IAWC explains, the Commission has never interpreted Section 8-306(a) to limit or somehow cap an increase in rates resulting from a rate case proceeding where the Commission has reviewed a Company's proposed rates and determined that they are just and reasonable pursuant to Section 9-201. IAWC states that Mr. Larkin-Connolly offers no evidence to support this novel interpretation of the Act, much less to demonstrate how such an interpretation comports with the other provisions of the Act governing changes in rates and hearings before the Commission to evaluate the propriety of those proposed changes. IAWC argues that the AG's recommendation that the Commission reject movement towards single tariff pricing and consolidation of Lincoln water customers with Central Zone customers, as well as the AG's proposal to impose a limit on rate increases in rate case proceedings regardless of the record evidence, should be rejected.

b. Staff's Position

Staff asserts that the Commission should approve Staff's proposal to consolidate the Lincoln water division with the Central Zone water division. The Company states that, in the interest of narrowing the issues in this proceeding, it does not oppose Staff's proposal to consolidate the Lincoln water division with the Central Zone water division. IAWC Ex. 18.00 at 2-3.

Staff recommends fully consolidating the Lincoln water service territory and the Central Zone service territory because it would move the Company toward single tariff

pricing, which is the use of a unified rate structure for multiple systems that are owned and operated by a single utility, but that may or may not be contiguous or physically interconnected. Staff Ex. 7.0 at 18. Staff states that consolidated rates service territories would allow IAWC to spread capital costs over a larger base of customers; thus, mitigating rate shock to a smaller standalone division's customer base when infrastructure improvements become necessary in a particular rate area. In addition, in the long-term, consolidated rates will allow the customers to experience lower rates via fewer rate cases and lower rate case expenses.

The Company provided a COS study and rate design for the Lincoln water service territory that assumes Lincoln is a stand-alone service territory. Staff Ex. 7.0, Att. 7.02. In that COS Study, the Company showed that if Lincoln stood on its own, a Customer Charge of $20.07 for a 5/8" meter would be necessary to recover the fixed costs the Company incurs to service the Lincoln water territory. The Usage Charge to recover the rest of the revenue requirement for a stand-alone Lincoln service territory would need to be $1.110145 per 100 gallons. The COS study for the Central Zone indicated that the Customer Charge of $18.21 for a 5/8" meter would be necessary to recover the fixed costs the Company incurs to service the Central Zone water territory and the residential Usage Charge would need to be $0.98198 per 100 gallons used to recover the rest of the revenue requirement for the Central Zone water district. Staff Ex. 7.0 at 18-19.

Staff witness Boggs explained that the Company has a history of consolidating smaller rate territories into larger rate territories where the territories have common rate structures, and the Commission has been amenable to those proposals. In a recent Company rate case, Docket No. 11-0767, the Company observed:

> The Commission has expressed a general policy of favoring cost–based rates and movement towards single tariff pricing and rate uniformity. The Docket [No.] 07-0507 Order (see pages 94-98) discussed various approaches to single tariff pricing. As discussed by the Commission, one approach is to combine individual rate areas with other rate areas and develop common rates for customers in the combined group based on the group revenue requirements.

Docket No. 11-0767, IAWC Ex. 5.0 at 20.

The Company does not object to Staff's proposal to consolidate the Lincoln water division with the Central Zone water division. IAWC Ex. 18.00 at 2-3. Consolidation would eliminate the recovery of $1.3 million in revenues from non-Lincoln water customers that was initially proposed by the Company to partially consolidate the Lincoln water division with the Central Zone water division. Although the Lincoln customers will experience a larger revenue recovery increase than what the AG recommends as a cap (50%), no other (non-Lincoln) customers will be required to contribute additional revenues to accommodate this proposed consolidation. If the Commission approves this consolidation move, Lincoln customers will be subject to the same rate increases as all other Central Zone water customers upon the Company's next rate design proceeding and will move the Company one step closer to achieving single tariff pricing for all its

water customers. Staff argues that the Commission should approve Staff's proposal to consolidate the Lincoln water division with the Central Zone water division.

c. AG's Position

The AG recommends that the Commission limit increases in the rates charged to Lincoln water customers to no more than 50% higher than the rates they previously paid. In an effort to move toward single-tariff pricing while mitigating the impact of rate increases on customers in the Lincoln water tariff zone, the Company initially proposed a transition rate that was less than the full Central Zone rate. IAWC Ex. 7.00 at 8. In direct testimony, however, Staff witness Boggs recommended that the Lincoln water rates be consolidated with Central Zone water rates in this proceeding. Staff Ex. 7.0 at 23. In response to Mr. Boggs' direct testimony, the Company adopted Staff's position and proposed consolidating the Lincoln water rates into the Central Zone rates. IAWC Ex. 18.00 at 3. Under the Company's revised rate design, water customers in the Lincoln service area would see a 73.55% increase in their rates, with residential customers seeing an even higher increase of 83.38%. AG Ex. 4.0 at 22. The AG opposes the consolidation of Lincoln water rates because it would result in rate shock to Lincoln water customers.

The AG recommends that the Commission adopt an alternative rate design limiting the increase for all Lincoln water customer classes to no more than 50% of revenues for the class under current rates. *Id*. at 24. The AG's recommendation is informed by the fact that the General Assembly appears to view rate increases of more than 50% as excessive. *Id*. at 23. Section 8-306(a) of the Act provides that the Commission must make "information concerning the service obligations of water and sewer utilities and remedies that a customer may pursue for a violation of the customer's rights" in certain specified situations. 220 ILCS 5/8-306(a). Among the situations where the Commission "shall specifically address the rights of a customer" is when "[t]he customer's bill increases by more than 50% within one billing period." 220 ILCS 5/8-306(a)(2). Mr. Larkin-Connolly testified that this strongly suggests that "no customer should experience a bill increase of more than 50% in the first billing period that new rates are adopted." AG Ex. 4.0 at 23.

Contrary to IAWC's claims, Mr. Larkin-Connolly did not assert that the Commission is obligated to limit the increase to 50% or less under Section 8-306(a). Rather, Mr. Larkin-Connolly "was concerned about the magnitude of the bill impacts that Lincoln water customers would experience by moving to fully consolidated Central water rates" and developed a recommendation to reduce the impact consistent with similar guidance under the Act. AG Ex. 4.0 at 21. Because Section 8-306(a) indicates a 50% or greater increase in one billing period may be considered a violation of a customer's rights, the AG argues that the Commission should carefully assess any situation where a utility requests such a rate increase.

The Company and Staff's proposed consolidation of Lincoln water rates into the Central Zone tariff would result in increases of more than 70% (and even higher for residential customers). *Id*. at 23. Thus, the Commission should order the Company to revert to the transition rate it originally proposed or order an alternative rate design that, in either case, does not result in an increase for any Lincoln water customer class of more than 50%.

d. Commission Analysis and Conclusion

As an initial matter, Section 8-306 of the Act establishes an informational requirement for the Commission regarding customer rights. IAWC asserts that the AG represents that Section 8-306(a) limits any increase in rates to 50% or less. The AG indicates that IAWC misconstrues AG witness Larkin-Connolly's testimony. The Commission finds that Section 8-306(a) does not limit or somehow cap an increase in rates resulting from a rate case proceeding where the Commission has reviewed a Company's proposed rates and determined that they are just and reasonable pursuant to Section 9-201.

IAWC and Staff agree to fully consolidate the Lincoln water territory into the Central Zone water territory. The AG opposes full integration at this time and suggests a more moderate approach is appropriate. The AG does not proffer a specific proposal but requests that the Commission either: (1) adopt IAWC's initial proposal; or (2) adopt any increase that the Commission deems reasonable provided it does not increase Lincoln's rates by more than 50%.

The Commission understands parties' concerns regarding rate shock in consolidating the Lincoln and Central Zone territories. However, fully consolidating the Lincoln territory with the Central Zone territory moves the Company towards single tariff pricing for its water customers. While this full consolidation will result in an increase in rates, this increase is reasonable and consolidation will allow IAWC to spread out capital improvement costs over a larger customer base, thereby mitigating potential rate shock when large improvement projects need to be made. Moreover, consolidation eliminates the need to recover revenues from non-Lincoln water customers, which would be the case under IAWC's initial proposal.

Staff's proposal to fully consolidate Lincoln into the Central Zone water territory is approved.

6. Public Fire Protection Rates

a. IAWC's Position

IAWC states that, although the Company's water COS study indicates that public fire surcharges should be raised in the Central Zone by 34.1% and in Pekin by 74.9% in order to recover the full COS, the Company proposed to raise public fire surcharges in all districts by 30%, with the uncollected revenue requirement reallocated to other customer classes based on total present rate revenue by customer class. IAWC explains that because most public fire surcharges are directly collected as meter charges from retail customers, it is the Company's position that the reallocation of public fire revenue requirement will not significantly affect the revenue requirement that would otherwise be allocated to those customer groups.

IAWC notes that Staff objected to the Company's proposal, and instead recommended that IAWC increase public fire charges in the Central Zone by 34.1% in order to allow the Company to fully recover its public fire protection costs. IAWC points out that Staff also recommended that the Company increase public fire charges in Pekin by 37.5%, which would allow IAWC to recover 50% of the increase that is required to recover full public fire protection costs from the Pekin public fire protection customers.

IAWC states that although the final percentage increases in the Central Zone and Pekin may ultimately change based on the final revenue requirement approved in this proceeding, IAWC agreed in rebuttal with Staff's rate design strategy to recover the entire COS for Public Fire from Central Zone customers and approximately one-half of the COS for Public Fire from Pekin customers.

IAWC states that while the Company and Staff are in agreement, IIWC/FEA argue that the Commission should reject Staff's proposal (agreed to by IAWC), reject IAWC's original proposal, and instead approve an increase of 27.6% for the Central Zone. IAWC explains that IIWC/FEA argue that Staff's proposed increase of 34.1% would increase the Public Fire Protection Class in the Central Zone above the class's COS, and that an increase of 27.6% is reasonable, because IAWC's "class [COS] study may not be producing the most accurate measure of the cost of providing service to each class." IAWC argues that IIWC/FEA's proposal should be rejected. First, Staff's proposed increase of 34.1% is, in fact, the increase needed to recover the class's COS. IAWC notes that IIWC/FEA's proposal would still require recovery of the shortfall in revenue from other customers. Second, IIWC/FEA's argument that the Company's COS studies may not produce the "most accurate measure" of the cost of providing service has no basis in the record. IAWC points out that IIWC/FEA has not provided any evidence demonstrating that IAWC's COS study is deficient or inaccurate, and likewise has not provided any analysis or evidence demonstrating why a rate increase of 27.6% is more reasonable or accurate than the increase agreed to by Staff and IAWC. IAWC concludes that the Commission should reject IIWC/FEA's proposal and adopt the rate design strategy agreed to between Staff and IAWC – namely, to recover the entire COS for Public Fire from Central Zone customers and approximately one-half of the COS for Public Fire from Pekin customers.

b. Staff's Position

Staff recommends the Commission approve a 34.1% increase to Public Fire Charges in the Central Zone. Staff Ex. 7.0 at 29. Staff witness Boggs explained that this will allow the Company to fully recover the public fire protection costs from those who caused the costs to be incurred by the Company. *Id*. In addition, Staff recommends an increase of 37.5% to Public Fire Charges for the Pekin service territory. *Id*. This recommendation will allow the Company to recover 50% of the increase that is required to recover full public fire protection costs from the Pekin public fire protection customers. *Id*. Fire protection costs should be fully recovered from those who cause the costs to be incurred by the Company. Because public fire costs are a benefit to the community, reallocation of some of the costs for Pekin public fire protection should be considered for this proceeding only. The increase for Pekin Public Fire Charges in the next rate proceeding filed by the Company should attempt to adequately recover the full cost of public fire costs in the Pekin service territory incurred by the Company.

The Company does not object to Staff's rate design strategy to recover the entire COS for Public Fire from Central Zone customers and approximately one-half of the increase in Public Fire indicated by a final COS study in this case to Pekin Zone customers. IAWC Ex. 18.00 at 3. Staff argues that the Commission should approve Staff's recommendation.

c. IIWC/FEA's Position

IIWC/FEA take issue with Staff witness Boggs' proposed revenue allocation for the Public Fire Protection class. Staff witness Boggs has proposed an increase of 34.1%, or approximately 1.25 times the system average increase for the Central Water Division, to the Public Fire Protection class. Staff Ex. 7.0 at 29; IIWC/FEA Ex. 2.0 at 6. Mr. Boggs argues his proposed increase will allow the Company to fully recover the public fire protection costs incurred by the Company. Staff Ex. 7.0 at 29. However, IIWC/FEA note IAWC's CCOSS shows that its proposed increase of 30.6% is sufficient to bring this class to COS. IAWC Ex. 7.05. IIWC/FEA point out Mr. Boggs' proposal would increase this class's rate above COS. Differing with both the Company's 30.6% and Staff's 34.1% proposal, IIWC/FEA have proposed a more reasonable 27.6% increase for this class. IIWC/FEA Ex. 2.0 at 6-7. IIWC/FEA believe this is most appropriate given that the Company's CCOSS may not be producing the most accurate measure of the cost of providing service to each class.

IIWC/FEA argue both the Company's and the Staff's proposals should be rejected and IIWC/FEA's 27.6% recommended increase for the Public Fire Protection class should be accepted.

d. Commission Analysis and Conclusion

As an initial matter, the Commission finds that IIWC/FEA's argument that IAWC's COS studies may not produce the "most accurate measure" of the cost of providing services is not supported by the record. Record evidence shows that Staff's proposed increase of 34.1% is an accurate measure of the increase needed to recover the class's COS. IIWC/FEA's proposal would still require recovery of the shortfall in revenue from other customers. Therefore, the Commission adopts the rate design strategy agreed to between Staff and IAWC – namely, to recover the entire COS for Public Fire from Central Zone customers and approximately one-half of the COS for Public Fire from Pekin customers.

VI. RIDERS

A. Uncontested Issues

1. Rider Factors

Below is a description, by rate rider, of each factor that will be set with the final order in this proceeding:

VBA

- Rate Case Revenue shall mean the dollar amount of volumetric revenues reflected in the revenue requirements approved by the Commission for the applicable Service Classification in the Company's most recent general rate case.
- Rate Case Sales ("RCS") shall mean the forecasted sales for customers for the identified Service Classifications in 100 gallons.
- Unit Production Cost shall mean the authorized amount of production costs (power, chemical, water waste disposal) divided by the RCS to determine a

cost per 100 gallons in the test year in the Company's most recent general rate case.

- Unit Treatment Cost shall mean the authorized amount of treatment costs (power, chemical, waste disposal) divided by the RCS to determine a cost per 100 gallons in the test year in the Company's most recent general rate case.

Invested Capital Tax ("ICT")

- Rate Case Expense shall mean the dollar amount of ICT expense reflected in the revenue requirements approved by the Commission in the Company's most recent general rate case.

QIP

- PTR = Pre-tax return as described in 83 Ill. Adm. Code 656.50(a)(1).
- 83 Ill. Adm. Code 656.50(a)(1): The pre-tax return is calculated using the weighted cost of debt and weighted cost of equity determined in the utility's last rate case for the rate zone. The weighted cost of equity is multiplied by the GRCF. The product is then added to the weighted cost of debt to obtain the pre-tax return.

Variable Income Tax

- OpInc represents the Operating Income from the Company's rate case used in setting base rates in effect during the Tax Period.
- PrIT represents Income Tax Expense included in the calculation of authorized revenue requirement and operating income from the Company's rate case used in setting base rates in effect during the current Tax Period.
- INT represents the Synchronized Interest from the Company's rate case used in setting base rates in effect during the current Tax Period.
- EDT is allocated to the tariff zones by using Factor F (Utility Plant Balance-Adjusted Average Balance) from the rate case.

IAWC states that the Company will provide compliance reports as required by the Illinois Administrative Code and/or the Company's tariffs, along with supporting workpapers that incorporate the results of the final Order of this proceeding on the calculation of each rider. The Commission finds IAWC's rider factors are reasonable and should be approved.

B. Contested Issues

1. Environmental Surcharge Rider ESR ("Rider ESR")

a. IAWC's Position

IAWC explains that in this proceeding, it is requesting approval to implement a new Rider ESR pursuant to Section 9-220.2(a) of the Act, for recovery between rate cases of the revenue requirement associated with non-QIP eligible capital investments made to comply with new and emerging state and federal environmental standards or to advance

state and federal environmental regulatory policy objectives. As explained by Company witnesses Selinger and O'Neill, these investments can be significant, are driven by changes to drinking water and wastewater standards over which IAWC has no control, are difficult to predict, and fluctuate from year to year.

Specifically, the Company states that it anticipates investing approximately $88 million over the next 5 years to address new and emerging regulations and standards through the construction of new facilities and equipment. The Company states that it anticipates that additional investment needed to address perfluorinated compounds, pharmaceuticals, personal care products, nanomaterials, microplastics and algal toxins will occur over the next decade that will impact both the water and wastewater systems. IAWC notes that with more than 80,000 chemicals currently being used in society, and about 2,000 new chemicals being developed each year, it is expected that future regulations will require the water and wastewater treatment facilities to make further improvements to protect the environment and health of the public. IAWC explains that some of the technology needed to remove these contaminants may require large investments that will impact the overall investment plan for the company. IAWC states that it will be required to incur costs in order to meet new environmental standards, but cannot with any reasonable specificity identify the amount, magnitude, or timing of those investment costs.

IAWC states that with the approval of Rider ESR, the Company can make prudent investments to address new regulations and standards and serve the long-term interests of customers in a fiscally prudent manner, while moderating future rate increases on customers more efficiently and effectively.

IAWC explains that Section 9-220.2(a) of the Act provides that "[t]he Commission may authorize a water or sewer utility to file a surcharge which adjusts rates and charges to provide for recovery of" purchased water, purchased sewage treatment service, qualifying infrastructure plant, and "(iii) other costs which fluctuate for reasons beyond the utility's control or are difficult to predict." 220 ILCS 5/9-220.2(a). Subsection (c) provides that "[o]n a periodic basis, the Commission shall initiate hearings to reconcile amounts collected under each surcharge authorized pursuant to this Section with the actual prudently incurred costs recoverable for each annual period during which the surcharge was in effect." 220 ILCS 5/9-220.2(c). The Company also cites *Citizens Util. Bd. v. Ill. Commerce Comm'n*, 166 Ill. 2d 111, 138, 651 N.E.2d 1089, 1102 (1995) ("[A] rider mechanism is effective and appropriate for cost recovery when a utility is faced with unexpected, volatile, or fluctuating expenses.").

IAWC further explains that the costs that it proposes to recover through Rider ESR are the kinds of costs that Section 9-220.2(a)(iii) was intended to address, as they both "fluctuate for reasons beyond the utility's control" and "are difficult to predict." 220 ILCS 5/9-220.2(a)(iii). IAWC states that Section 9-220.2(a) does not establish any additional limitations on the kinds of costs recoverable under this subsection. For example, it does not establish, require, or even discuss a minimum dollar threshold that would be used to determine if a proposed surcharge is lawful or appropriate. Nor does it limit eligible riders to addressing specific issues such as fluctuations in market or commodity prices. And, the Company explains, no such limitations have been imposed by the Commission's implementing regulations, which only address purchased water and sewage treatment

surcharges (83 Ill. Adm. Code 655 ("Part 655")), and qualifying infrastructure plant surcharges (Part 656).

In response to Staff's assertion that Section 9-220.2(a)(iii) does not contemplate capital assets or infrastructure, and that the language in the statute referencing 'other costs' refers to expenses rather than capital investments of new infrastructure, equipment, and technologies, IAWC notes that statute does not say "expenses." IAWC states that, consistent with Staff's argument, if the General Assembly only meant for this provision to allow recovery of "expenses," it could have specifically used the word expenses. IAWC explains that the General Assembly similarly could have expressly specified that "other costs" excludes capital investments (i.e., it could have said "other costs, except for costs associated with capital investments of new infrastructure, equipment, and technologies, which fluctuate for reasons beyond the utility's control or are difficult to predict"), but it did not. The Company explains that instead, the plain language of the statute establishes Section 9-220.2(a)(iii) as a "catchall" for any unpredictable costs fluctuating beyond the utility's control, without any other express limitation that those costs must be related, or not related, to capital investment, expenses, or any other type of cost. That the General Assembly defined a subset of "costs" recoverable under Section 9-220.2(a)(iv) as "costs associated with an investment in qualifying infrastructure plant" contradicts Staff's argument, as it confirms that the catchall "other costs" could include other types of "costs associated with investment." The Company notes that where statutory language is clear and unambiguous, statute must be applied as written, and a court or agency may not "depart from the plain language of the statute by reading in any exceptions, limitations, or conditions that would frustrate the expressed intent of the legislature." *M.U. by & Through Kelly U. v. Team Ill. Hockey Club, Inc*., 2022 IL App (2d) 210568, ¶ 25

IAWC notes that the State of Illinois has statutorily authorized cost recovery mechanisms associated with qualifying infrastructure (*see* 220 ILCS 5/9-220.2(a)(iv); 220 ILCS 5/9-220.3), renewable energy mandates (220 ILCS 5/16-107.6(h)), energy efficiency (220 ILCS 5/8-103), and zero carbon electricity generation (220 ILCS 5/16-108(k)). IAWC states that the Commission has recognized the need to utilize cost recovery mechanisms related to environmental compliance as well, having authorized recovery of expenses associated with manufactured gas plant remediation through cost recovery riders and cites *Commonwealth Edison Co*., Docket No. 05-0597, Order at 212-13 (Jul. 25, 2006) (authorizing rider to recover manufactured gas plant remediation costs). More recently, in Docket No. 20-0722, the Commission approved modified extension policies for Nicor to facilitate the connection of renewable natural gas facilities to the Company's distribution system. *N. Ill. Gas Co. d/b/a Nicor Gas Co.*, Docket No. 20-0722, Order (July 8, 2021). IAWC contends that this type of action demonstrates the Commission's ability to advance state environmental policy goals, while enhancing operational efficiency. As further discussed below, IAWC believes it is important to not only be a leader in environmental compliance but also in reducing its impact on the environment. IAWC proposes to do so by examining ways that the Company can become more energy efficient, and to recover through Rider ESR investment in facilities that would support those initiatives and goals.

The Company explains that it is subject to a host of new and emerging regulations and standards governing both water supply and wastewater treatment, and that while the undisputed need to meet environmental compliance standards is expected and ordinary, the costs and investments associated with doing so are not. The Company notes that even proposed regulations and standards can and do change and evolve up until rules are finalized, giving companies little certainty about the scope and extent, or the timing, of necessary investments. IAWC states that the regulatory and rulemaking processes for developing the new regulations provides the Company with an understanding of what limits may be forthcoming, but the lengthy regulatory processes often result in changes, updates, and modifications to the science, the proposed standards, and the guidance. IAWC states that the proposed methods of determining the health impact level of various contaminants, for example, can and do change before regulations are complete, and it is difficult for the Company to determine the level of investments, techniques, or treatments that will be needed until regulations are finalized and the maximum contaminant level ("MCL") is established.

IAWC explains that water and wastewater utilities are subject to a complex array of regulations at the federal, state, and local levels with respect to water quantity, water quality and other environmental aspects of their facilities and operations. IAWC notes that drinking water quality is addressed by a combination of federal regulations under the Safe Drinking Water Act of 1973 and state regulations under Title 35, Subtitle F, Chapter I and Chapter II of the Illinois Administrative Rules. The Company explains that the federal act established the EPA as the federal regulatory body governing drinking water. Pursuant to that authority, the EPA has established standards for contaminant levels in drinking water, mandatory treatment methods, monitoring and reporting requirements, and public notification mandates in the event of contaminant level or treatment method noncompliance. *See* 40 C.F.R. Parts 141-143. The EPA also has granted "primacy" to the Illinois EPA ("IEPA") to administer the federal regulatory standards.

IAWC states that in recent years there has been an increase in public concern over water quality standards and regulation. IAWC explains that this increase has led to increased stringency in EPA and state drinking water regulation, and the extension of regulatory protections through the establishment of MCLs or treatment requirements that target additional contaminants. MCLs determine the maximum level of each covered substance that is deemed safe for the customer, and include requirements for monitoring, remediation, and public notice when standards are exceeded. IAWC states that there are now MCLs for 88 individual organic and inorganic chemicals, including groups like trihalomethanes and haloacetic acids ("HA"), and E. coli bacteria indicator microorganisms. In addition, IAWC notes, treatment technology requirements include specifications for surface water filtration and groundwater disinfection cover protozoa, viruses, and other bacteria.

IAWC states that MCLs provide an example of how regulations can shift during the regulatory and/or rulemaking process. IAWC explains that regulations on contaminates usually take into account the potential human exposure and risks of adverse health effects based on readily available sciences and the technology available to detect and treat the contaminate. As science, and the understanding of the long-term health effects of the contaminants evolve, the considered MCLs can change during the development of the

underlying rules and regulations, as well as after the MCL is initially set. The Company notes that an example of this is the June 15, 2022 EPA issuance of interim updated drinking water Health Advisories for perfluorooctanoic acid ("PFOA") and perfluoroocatanesulfonic acid ("PFOS") that moved the 2016 HA level of 70 parts per trillion (ppt) for individual or combined concentrations of PFOA and PFOS to levels of PFOA and PFOS that are 0.004 ppt and 0.02 ppt, respectively. In addition, an example of an MCL that was changed after a rule was in effect was the January 2001 revised standard for arsenic in drinking water, which replaced the 1975 standard of 50 parts per billion ("ppb") with a limit of 10 ppb due to a better understanding of the human health effects associated with chronic low-level exposure to arsenic.

IAWC states that the EPA continues to make its regulations concerning disinfection byproducts more stringent, has identified new contaminants and established more stringent standards for existing contaminants, and now, the Company must anticipate that the EPA may adopt more stringent lead concentration requirements under the federal "Lead and Copper Rule."

IAWC states that currently identified contaminants are not the only contaminants the Company may have to address: with advances in testing and health research, experts are learning of new potential dangers in our drinking water chemicals that had not previously been detected (or were previously known but are being able to be detected in far lesser concentrations) and are now being discovered in the water supply. IAWC explains that these chemicals are known as "emerging contaminants" or "contaminants of emerging concern"; prior to the emergence of these contaminants, source waters were considered relatively clean and, for the most part, required minimal levels of treatment followed by disinfection. IAWC points out that emerging contaminants can now be detected at trace levels, and even these very small amounts can pose a chronic health risk. IAWC states that over the past several decades it has seen an increasing interest in identifying unregulated substances within the environment that may pose a risk to human health, aquatic life, or the environment. These substances may not have been previously detected or were at concentrations that testing, and monitoring equipment could not detect until recently. IAWC explains that in all cases, these substances are considered important to continue to monitor and evaluate as experts work to determine the true risk they pose to human health and the environment.

IAWC explains that stringent new drinking water standards to address these potent compounds demand more innovative treatment approaches. IAWC further explains that emerging pollutants such as perfluorinated compounds, pharmaceuticals, personal care products, nanomaterials, microplastics, and algal toxins are becoming more prominent within the source of water, wastewater and potential entry into our drinking water. IAWC states that most water and wastewater treatment facilities were not designed to address these pollutants and will most likely not be able to treat them to the lower levels of concentration that is expected to be considered in new regulations as those regulations address the long-term impact of lower levels of contaminates, which the health and science community has been able to determine through improvements in analytical instruments.

IAWC states that, for the most part, these emerging contaminants are not yet federally regulated. Regulations governing the treatment of emerging contaminants are

currently moving through the EPA evaluation and rulemaking process. IAWC notes that several statutes authorize the EPA and the states to address those emerging contaminants, the most prominent of which are the Clean Water Act and the Safe Drinking Water Act, which Congress established to restore and protect the quality of the nation's surface waters and authorized the EPA to set the standards for drinking water quality and monitors states, local authorities, and water suppliers who enforce those standards.

IAWC states that, for example, in the near term, the Company will need to address PFAS in drinking water. IAWC maintains that until final regulations are enacted regarding these emerging contaminants, it is difficult to determine what systems will be impacted or the extent to which IAWC will need to invest in its systems. PFAS are a group of manufactured chemicals that have been used in industry and consumer products since the 1940s because of their useful properties.

IAWC states that current studies indicate that in order to remove PFAS from drinking water, IAWC may need to employ additional treatment technologies at existing water treatment facilities; these treatments could include activated carbon treatment, ion exchange resins, high-pressure membranes, nanofiltration, or reverse osmosis. IAWC notes that a determination of what technologies to employ if PFAS compounds are present will require a review of the effectiveness of each technology and an analysis of the costs and operational feasibility for each location. IAWC cannot determine the scope or cost of these treatment options until final regulations have been enacted, but the remediation techniques may be potentially very extensive and expensive.

IAWC states that additional contaminants, such as Legionella and Endocrine-disrupting chemicals, are becoming more prevalent in the environment and are increasingly posing a greater risk to human health. IAWC notes that it will almost certainly be required to invest in its systems to address and remediate these contaminants, although the scope and cost of such efforts will not be known until final regulations are adopted. IAWC points out that it also must comply with new and emerging environmental standards for wastewater systems, which similarly will require IAWC to incur unpredictable costs.

IAWC notes that wastewater systems are also seeing continued and increased regulatory initiatives to address surface water quality and the environment as a whole. Wastewater utilities continue to see an effort to reduce the number of CSO and sanitary sewer overflows ("SSO") through discharge permits (National Pollutant Discharge Elimination System ("NPDES") permits) and agreements to ensure compliance in meeting the goals of the Clean Water Act. IAWC states that wastewater systems are also seeing an increasing emphasis on assisting with reducing nutrient pollution in lakes, rivers, and streams by addressing the amount of phosphorus and nitrogen that is released into the environment by wastewater systems.

IAWC points out that in the short term, phosphorus and nitrogen nutrients in the discharge of wastewater facilities are being further reviewed by the EPA and the IEPA for their impact to the nutrient enrichment of lakes, streams, and rivers. As NPDES permits for IAWC wastewater facilities are renewed, IAWC anticipates that more stringent phosphorus and nitrogen limits will be required for those wastewater facilities, and, consequently, improvements will be needed to meet these requirements. IAWC states

that it anticipates that it will need to invest in its system to address lower phosphorus and nitrogen limits through changes in chemical or biological treatment enhancements over the next five years.

IAWC states that it expects to continue to make the appropriate changes in process, and investments in enhancements to wastewater chemical and treatment facilities, to allow it to meet these current and emerging regulations. IAWC explains that through meeting clean water standards, it ensures that it is returning water to the streams, rivers and lakes that protects the environment and the health of the community. IAWC maintains that by making the prudent investments to ensure compliance with these standards, IAWC protects its customers and the communities that are served.

IAWC explains that the Company has already experienced changes in or new regulatory compliance initiatives that have required investment in its facilities in order to comply with the new or changed regulatory requirements. IAWC explains that since 2000, there have been 13 EPA rules or regulations that have had an impact on how IAWC monitors, operates, or treats the drinking water within its facilities and distribution systems. IAWC explains that due to the rules or regulations enacted since 2000, the Company has undertaken 19 direct projects with an investment of over $88 million in enhancements or additions to treatment facilities.

IAWC states that the Long Term 2 Enhanced Surface Water Treatment Rule ("LT2") (adopted in 2006), which is the second phase of rules required by Congress to address microbial pathogens, provides a good example of investments that would be recovered through Rider ESR. IAWC states that the rule supplements existing regulations by targeting additional Cryptosporidium treatment requirements in facilities that take steps to decrease formation of disinfection byproducts that result from chemical water treatment. This rule has required enhancements and improvements in IAWC's treatment facilities. IAWC notes that it has implemented UV disinfection and other enhancements to several water treatment facilities to meet LT2 Cryptosporidium requirements. These facilities include the ESL Water Treatment Plant, Granite City Water Treatment Plant, Alton Water Treatment Plant, and the Streator Water Treatment Plant. In addition, IAWC states that it expects to carry out improvements at the Cairo Water Treatment Plants to allow it to meet the requirements of the LT2 Cryptosporidium requirements that are included in this case.

IAWC explains that recent changes to Illinois Title 35, Subtitle F, Chapter I, Part 604, Section 604.725 now require that a minimum combined chlorine residual of 1.0 mg/L be maintained in all active parts of the distribution system at all times. IAWC states that this change makes meeting the Stage 2 Disinfectant By Product Rule requirements challenging at times. To meet the IEPA chlorine residual requirement, IAWC has proposed that numerous Rechloramination Stations be installed in several of its larger distribution systems over the next several years that are included within the case. Each Rechloramination Station is designed specifically for each location to account for the size of the station covers and the amount of water that is required to be treated and must take into account how the station features and aesthetics to fits into the community where it is located. Thus, IAWC states, the scope, cost, and timing of each project is variable and currently unknown.

IAWC states that it has experienced similar investment needs for wastewater as well: IAWC has invested approximately $6.7 million since 2017 on wastewater system improvements to address regulatory, administrative order of consent, or Long-Term Control Plans.

IAWC states that between 2024 and 2026, the Company expects to invest approximately $39 million, or approximately $12.8 million per year, on projects that it has currently identified to address regulatory requirements that have recently been revised or expected to be introduced or revised. IAWC explains that this represents a significant portion of IAWC's projected annual capital expenditures.

For example, to address water system requirements, IAWC anticipates investing approximately $6.5 million on projects to address IEPA Chlorine Residual requirements and Stage 2 DBPR requirements over the next several years through the continued addition of rechloramination stations and improvements at facilities to improve chlorine residual and chlorine contact time. IAWC notes that to address wastewater requirements, it expects to invest approximately $30.1 million in improvements to the wastewater collections system in Alton and Godfrey to address the requirements of the Long-Term Control Plan and the administrative order of consent that is in place for each of those communities. In addition, IAWC states that it expects to invest about $7 million in improvements to the Godfrey and Jerseyville WRF to address phosphorus removal associated with the reduction of nutrient limits to protect receiving waters that receive the WRF's discharge flow.

IAWC states that it also expects that additional investment will be needed to address regulatory requirements associated with emerging contaminates that have not been included in the present 2022 to 2026 Capital Investment Plans. IAWC states that it would expect that investments will be needed to address the removal of PFAS compounds at some of its groundwater facilities and that additional investment will be needed to address phosphorus and nitrogen nutrients limits at some of its wastewater reclamation facilities as their discharge permits are renewed. IAWC notes that at the present time, it has not included these within its Capital Investment Plans due to uncertainty of the projects and limited understanding of the types of investments that will be needed.

IAWC states that the Company anticipates that the additional investment needed to address perfluorinated compounds, pharmaceuticals, personal care products, nanomaterials, microplastics and algal toxins over the next decade will result in additional spend that would result in an annual investment of between $15 and $20 million in its water and wastewater systems.

IAWC explains that the Company's analysis of the type, level, and timing of system investment to satisfy environmental standards is impacted by a multitude of factors. The type, source, climate, and environment of each water and wastewater facility, along with the unique characteristics of the distribution system and the existing type and age of the treatment that each facility employs, are main contributors to the determination of when a new or updated investment is needed to meet regulatory limits. IAWC notes that unexpected changes in weather, such as greater intensity storms, drought, and long-term temperature changes can all impact the watershed and source of the raw water to the

Company's water and wastewater facilities, which subsequently affect the levels of naturally occurring or manmade contaminates that the Company regularly monitors, which can lead to an unfavorable change in the contaminate levels that require the Company to make an unplanned investment to ensure that customers' health is protected.

In addition, IAWC contends, there can be unintended consequences of a new regulation on an existing established limit, which the Company also cannot control. As an example, IAWC explains that when the State of Illinois made changes to Illinois Title 35, Subtitle F, Chapter I, Part 604, Section 604.725 to require that a minimum combined chlorine residual of 1.0 mg/L be maintained in all active parts of the distribution system at all times, these changes resulted in the use of more chlorine through the system to ensure compliance. IAWC states that the increase in the use of chlorine increased the likelihood that the amount of disinfection byproducts being created in the distribution system as the chlorine naturally degraded would exceed the limit set by the Stage 2 Disinfection By Product Rule. IAWC explains that this required the recent investment of approximately $1.8 million in rechloramination systems along with the anticipated investment of approximately $8 million over the next several years to allow for decentralized control of chlorine residuals and disinfection byproducts that was unplanned until the new regulations were put in place.

IAWC points out that Staff and the AG do not address, much less rebut, all of this evidence. The Company asserts that, instead, Staff and the AG attack a straw man argument that the Company has never made (i.e., that environmental regulation is somehow new or a "unique business challenge that only IAWC faces") or attempt to wave away the Company's evidence by unfairly and inaccurately characterizing it as "generalized and vague arguments about environmental regulation." *See* Staff Ex. 1.0 at 16; AG Ex. 2.0 at 25. In response to the AG's argument that decisions relating to environmental compliance are no different from any other decision utility management faces, the Company explains that the Company's unrebutted evidence establishes that these investments are, in fact, different than other investment decisions the Company faces. As an example, the Company notes that the investments required to comply with environmental regulations are quite different than investments necessary to replace aging facilities or water transportation or distribution infrastructure, which costs are much more predictable in both timing and amount, and the timing and extent of which are more within in the Company's control.

IAWC explains that consistent with Section 9-220.2 of the Act, Rider ESR would allow the Company to recover the cost for enhancement or improvements to treatment plant items or facilities that are necessary to meet the new and emerging treatment and/or water quality standards described above. Specifically, Rider ESR would recover costs for treatment structures, pumping equipment, generators, water quality sampling equipment, supervisory control and data acquisition ("SCADA") equipment, chemical equipment, and treatment equipment, as well as non-QIP distribution system structures, supply mains, power generation equipment, pumping equipment, transmission and distribution mains, and storage tanks to meet water quality standards within the distribution system. Inclusion of these items would allow the installation of enhanced and new facilities/equipment to meet new standards that allow IAWC to continue to provide high-quality water service and safe drinking water.

IAWC explains that not all investments to meet new standards and regulations will require new infrastructure or be recovered through Rider ESR. There are several investments that will need to be made to meet emerging standards and regulations from the EPA and IEPA that will involve the replacement of existing infrastructure that may be recovered through IAWC's existing QIP Rider. For example, IAWC explains that to meet most of the upcoming standards established by the Lead and Copper Rule and the Illinois Lead Service Line Replacement and Notification Act, along with investments necessary to reduce/eliminate CSO and SSO, IAWC will be required to replace existing water and wastewater system infrastructure, and the Company will seek recovery of those costs under the QIP rider. The Company notes that parts of CSO and SSO improvement projects will be included within Rider ESR, however. IAWC explains that a major portion of the improvements necessary to address CSO and SSO in wastewater systems is the replacement and renewal of gravity sewers and service laterals. This work would not be included within Rider ESR since it is related to the replacement and renewal of existing wastewater facilities and is eligible for the QIP Rider. IAWC further explains that there will be some level of investment associated with the installation of equalization storage and collection system additions that will allow the wastewater collection system to accommodate high flow conditions that will involve the installation of new facilities. IAWC states that it would propose that these types of investments in new facilities would be included within Rider ESR.

IAWC notes that it also believes it is important to not only be a leader in environmental compliance but also in reducing its impact on the environment. IAWC proposes to do so by examining ways that the Company can become more energy efficient, increasing use of renewable energy and increasing our alternative-fuel fleet. IAWC explains that all of this supports American Water's goal to reduce absolute scope 1 and scope 1 greenhouse gas emissions by more than 40% by 2025 from a 2007 baseline. IAWC states that it would support this through investment in facilities that will support its transition to alternative-fuel vehicles. These facilities could include electric charging stations and alternative-fuel storage, fueling stations. In addition, IAWC notes that it would continue to look to expand its renewable energy use through the installation of solar, wind and hydro facilities. IAWC proposes that these types of investments be included within Rider ESR.

IAWC states that the required investments covered by Rider ESR will benefit customers through the provision of safe and reliable water and wastewater service that meets evolving governmental requirements and advances environmental policy objectives. IAWC notes that implementation of Rider ESR would allow IAWC to recover these unpredictable costs in a timely manner, reducing regulatory lag and supporting the Company's efforts to comply with these important environmental requirements.

IAWC further explains that the Rider ESR mechanism will mitigate future rate increases as it will facilitate smaller, more gradual increases to customers' bills. Rider ESR's recovery of these investments, which represent a significant portion of the Company's annual capital budget, will occur over time and not all at once in a general rate proceeding. IAWC further explains that riders such as the proposed Rider ESR also have the potential to extend the period of time between rate case filings and reduce the expense associated with those proceedings.

IAWC states that a reliable water and wastewater system is an important asset to the entire community. It protects the public health and enhances the ability of the communities that IAWC serves to compete for new businesses and industries, which is often an important economic benefit to the community.

In addition, IAWC argues that Illinois, as a whole, would benefit from the investment made through Rider ESR. IAWC explains that jobs in water utilities are accessible to workers with a range of educational and training backgrounds and offer opportunities for workforce development and advancement. Contractors, too, will hire diverse individuals throughout the state to support the infrastructure enhancements and improvements funded by the Rider. IAWC states that according to a 2014 study undertaken by the Clean Water Council, 16 jobs throughout all sectors of the economy are supported for every $1 million spent on infrastructure. IAWC points out that the jobs created are not just in the construction industry, but in supporting fields such as architecture, engineering, industrial machinery, and truck transport. As such, IAWC states that not only would the increase in infrastructure investment maintain and improve service reliability, but it would also benefit the local economy as well since an improved water and wastewater systems and the resulting customer benefits noted above can also attract new business to the area and support economic development goals.

Moreover, IAWC states that there are many studies that show that increased spending on infrastructure investments produces positive economic development results. IAWC points out that in a study released in 2016 on the economic impact of under-investing in our water and wastewater infrastructure, the American Society of Civil Engineers estimated that remaining on the current track will cost American businesses $896 billion in sales between 2016 and 2025, and the cumulative loss to our GDP will be $508 billion, directly due to deteriorating water infrastructure. IAWC contends that a modest increase in investment would prevent 489,000 job losses during the same period. Additionally, IAWC points out that according to the U.S. Conference of Mayors, every dollar invested in water infrastructure adds $6.35 to the national economy. IAWC also points to additional studies that show further economic benefit in infrastructure investment, including recent EPA surveys which tallied a 20-year need of over $650 billion for needed water and sewer infrastructure improvement projects. IAWC maintains that this would create between 10.5 and 17.5 million jobs over 20 years or 525,000 – 875,000 jobs annually. IAWC concludes that annual creation of jobs would be enough to annually employ one third of our nation's 1.8 million annual bachelor's degree graduates.

IAWC states that these statistics would hold true for infrastructure investment in Illinois. IAWC explains that not only would the increase in needed infrastructure investment provide safe water and improve service reliability, but it would also benefit the local economy as well. IAWC states that a water and wastewater system that meets all standards and regulations not only benefits the customer but can also provide interest in a community for new businesses and support local economic development goals. The Company notes that, like its other evidence regarding this issue, Staff and the AG ignore or otherwise fail to rebut the Company's evidence regarding the anticipated benefits of Rider ESR.

IAWC notes that the Company's initial proposal for the design of Rider ESR was prospective based on a forecasting process where the Company would forecast the

amount of qualifying environmental capital expenditures it will make for the upcoming year to calculate the revenue requirement necessary to recover that capital investment, followed by a true-up reconciliation to actual investments at the end of each year. IAWC explains that the Company subsequently accepted Staff's recommendation that Rider ESR be implemented using a historic operation year. IAWC explains that this change will allow Staff and others to review ESR investments included for recovery in the mechanism after they are placed in service, which along with the Company's prior agreement to multiple reporting and auditing commitments, should alleviate concerns expressed by Staff and others associated with the nature and review of Rider ESR investments.

Additionally, IAWC notes that the Company accepted Staff's recommendation to limit the amount of ESR investments and proposed a cap at 2.5% of authorized annual base rate revenues. IAWC points out that the Company also agreed to add language to its proposed tariff that specifies: (1) that the Company will provide information regarding the state or federal regulation requiring each investment as part of its annual filings; and (2) to specify the months in which its ESR reconciliation charge would be charged/credited to customers. IAWC explains that to address other recommendations made by Staff, the Company included in its proposed Rider ESR tariff an O factor in the ESR reconciliation calculation that would address any adjustments made by order of the Commission, as well as language to specify that the ESR would be billed as a separate line item on customer bills.

IAWC notes that the Company made several other changes to respond to input from the AG:

- IAWC added language to the proposed tariff confirming that investments to be recovered will not be revenue producing.
- IAWC added language requiring the Commission to find that ESR investments are prudent, reasonable in cost, and used and useful.
- IAWC added an annual audit requirement, with the following conditions:

  The utility shall submit annually to the Commission's Manager of the Accounting department no later than September 15th, an internal audit report that determines whether:

  i. Internal controls are effectively preventing the double recovery of costs through the Rider ESR and other approved tariffs;

  Costs recovered through the Rider ESR are recorded in the appropriate accounts;

  i. Costs recovered through Rider ESR are properly reflected in the calculation of the surcharge percentage and annual reconciliation;

  ii. The Rider ESR surcharge percentage and annual reconciliation properly reflect all applicable adjustments from prior Rider ESR surcharge reconciliation Orders;

- The Rider ESR surcharges are properly calculated.

- The Rider ESR surcharge percentage is being properly billed to customers.
- IAWC will also submit information describing which environmental standard or policy objective requires each investment.

IAWC explains that other aspects of the operation of Rider ESR are as follows:

- All items included for recovery through the ESR, including capital costs and annualized depreciation and property tax expense, will be set to zero at the conclusion of the next IAWC rate case. At that time, the abovementioned items will be subsumed within IAWC's base rates and afforded ratemaking treatment similar to IAWC's other capital investments.
- The ESR shall not be applied to any add-on taxes, to any revenues attributable to the Purchased Water and Sewage Treatment Surcharges developed pursuant to Part 655, QIP Surcharges, or to any other revenues not recorded in a ESR base rate revenue account.
- The revenue requirement for the ESR will be calculated using the pre-tax return ("PTR") as approved as approved in the Company's most recent general rate case. In the event there is more than one PTR during an ESR period, the PTRs will be prorated based on the number of days they were in effect during the period.
- Rider ESR will use the depreciation rates approved by the Commission, for the respective plant accounts in which the specific items of qualified Environmental Surcharge Rider plant are recorded.
- Rider ESR will use the property tax rates currently in effect and applicable to the Company's investments.

The Company notes that many of Staff's arguments against Rider ESR appear either mooted or otherwise ignore these changes that the Company has adopted in response to Staff and Intervenor input. The Company notes that Staff's assertion that the cost of capital investments should not be recoverable prior to a determination of prudence and reasonableness ignores that the Company added language to the Rider ESR tariff requiring Commission to find that ESR investments are prudent, reasonable in cost, and used and useful, along with an annual audit requirement, as conditions of recovery. Similarly, Staff's arguments regarding "speculative changes" and capital investments that the Company "might make" to comply with environmental regulations are moot since the Company accepted Staff's recommendation that IAWC's proposed Rider ESR operate on a historic basis. IAWC states that for this reason, the Commission should reject Staff's recommendation that it "remove language from the rider that permits the Company to include investment projects to comply with 'emerging' standards or environmental policy objectives." Staff IB at 62. The Company explains that Staff's argument that "there is no limit on the amount of ESR investment the Company could project for a given operating period," is moot given the Company's agreement to cap the investments that could be recovered through Rider ESR at 2.5% of authorized annual base rate revenues.

The Company states that the Commission should reject arguments from Staff and the AG that these costs are more appropriately recovered through base rate cases. IAWC

states that these arguments are essentially arguments against rider mechanisms generally, with the AG arguing that riders eliminate regulatory incentives to control costs and can result in increased rates and revenues. IAWC notes that the legislature, however, has expressly provided for water and wastewater utilities to implement riders as a recovery mechanism for costs of the type proposed for Rider ESR. 220 ILCS 5/9-220.2(a)(iii). IAWC further notes that the Illinois Supreme Court has consistently upheld the Commission's authority to implement riders "in proper situations and under circumstances that are lawful and reasonable" and that "reflect the need for pragmatic adjustments," which the Company explains is the case here. *In Re N. Shore Gas Co*., Case No. 07-0241, Opinion 2008 WL 631214. The Company contends that the fact that the Company could recover these costs through base rate case proceedings does not necessarily mean that it must do so, and that instead, these costs are appropriately recovered through Rider ESR, consistent with legislative intent in establishing the rider framework in Section 9-220.2(a).

Finally, the Company responds to Staff's argument that the rate of return for Rider ESR should equal the midpoint of long-term Aaa-rated bond yields and the WACC most recently approved by the Commission in a rate proceeding. IAWC explains that, contrary to Staff's arguments, the fact that Section 656.50(a) of the Commission's rules provides that "the pre-tax return is calculated using the weighted cost of debt and weighted cost of equity determined in the utility's last rate case for the rate zone" supports the use of the same approach here. 83 Ill. Adm. Code 656.50(a). IAWC states that there is no principled distinction between the nature of the utility assets recoverable under water QIP riders, as to which the Commission determined that the appropriate rate of return is the utility's WACC, and the assets recoverable under Rider ESR. IAWC notes that, like Rider ESR, QIP riders include an annual reconciliation mechanism and a review of the prudence and reasonableness of assets.

IAWC asserts that the Commission should adopt the same approach for Rider ESR that it adopted for QIP riders, and that nothing in Staff's position justifies a different approach, including the electric utility consolidated billing ("UCB")/purchase of receivables ("POR") cases Staff cites. IAWC notes that those cases – which are over 10 years old and concern the rate of return on capital investment in implementation costs (namely, for information technology assets associated with billing processes) required for UCB and reflected in the UCB discount rate, are based on a different statutory provision applied in a vastly different factual context, with a citation to *Central Ill. Light Co. d/b/a AmerenCILCO*, Docket No. 08-0619 (Cons.), Order at 24 (Aug. 19, 2009). The Company explains that the costs at issue in those cases were also shared with retail electric suppliers through the calculated UCB discount rate, so the recovery "risk" that the Commission considered was very different than with Rider ESR investment. IAWC states that, accordingly, the cases Staff cites are not applicable to Rider ESR's rate of return.

IAWC concludes that given IAWC's acceptance of the proposal to shift Rider ESR to historical operation, and other changes recommended by Staff and Intervenors, IAWC's revised Rider ESR tariff is reasonable and should be approved.

b. Staff's Position

Staff argues that the Commission should reject the Company's proposed Rider ESR. The Company relies on Section 9-220.2(a) of the Act as the statutory basis for its proposed Rider ESR. *Id*. at 23-24. The Company hinges its argument on subsection (a)(iii):

> (a) The Commission may authorize a water or sewer utility to file a surcharge which adjusts rates and charges to provide for recovery of (i) the cost of purchased water, (ii) the cost of purchased sewage treatment service, (iii) *other costs which fluctuate for reasons beyond the utility's control or are difficult to predict*, or (iv) costs associated with an investment in qualifying infrastructure plant, independent of any other matters related to the utility's revenue requirement. A surcharge approved under this Section can operate on an historical or a prospective basis.

220 ILCS 5/9-220.2(a)(iii) (emphasis added).

However, Staff argues that the statutory language the Company relies upon in order to justify recovery through Rider ESR does not contemplate capital assets or infrastructure. Rather, the language in the statute referencing "other costs" refers to expenses rather than capital investments of new infrastructure, equipment, and technologies. This is evident when looking to the plain language of the statute in the next subsection. Specifically, subsection (a)(iv), refers to "costs *associated with an investment in [QIP]*…" (emphasis added). Staff's position is that this is significant because if the General Assembly intended to reference infrastructure in subsection (a)(iii), it would have explicitly done so as it did in subsection (a)(iv). The primary purpose of statutory interpretation is to ascertain and give effect to the intent of the legislature. *Skaperdas v. Cty. Casualty Ins. Co.*, 2015 IL 117021, ¶15. Legislative intent should be sought primarily from the language of the statute, since the language of the statute is the best evidence of legislative intent and provides the best means of deciphering it. *Bruso v. Alexian Bros. Hosp.*, 178 Ill. 2d 445, 451-52 (1997). The plain language of the statute is clear in that it does not list or anticipate recovery of cost of plant anywhere. Therefore, Staff asserts that the Company's reliance on Section 9-220.2(a) for the implementation of Rider ESR is unpersuasive and is not applicable to the costs in question.

While the Company maintains that the expenditures it proposes to recover through Rider ESR are unexpected, Staff argues that IAWC has failed to provide evidence that the costs are difficult to predict or that they fluctuate beyond the utility's control to merit rider recovery. Unknown costs are particularly "unpredictable" or "fluctuating" per the language in the statute. Staff points out that as a regulated entity, IAWC must be responsive to and in compliance with new standards and regulations. It is not a benefit to customers that the Company meet all standards and regulations; rather, it is a requirement of the utility as a regulated entity to be in compliance with standards and regulations. Environmental regulation is not new; nor are regulations in general. Changing standards and regulation have been, and will continue to be, a constant. It is the nature of the utility business environment that it must be responsive to statutory

environmental standards, and it is not a unique business challenge that only IAWC faces. Staff Ex. 1.0 at 16. The Company's generalized and vague arguments about environmental regulation are unconvincing to show that those particular unknown costs are unpredictable and fluctuating. Thus, Staff contends that the Company makes generalized and vague arguments about environmental regulation that are thoroughly unconvincing to demonstrate that Rider ESR is needed and that the costs are unpredictable and fluctuating.

Additionally, Staff states that Rider ESR is unnecessary and imposes additional costs to ratepayers equal to the revenue requirement for such non-QIP eligible capital investments between rate cases, prior to a determination of prudence and reasonableness by the Commission. Staff Ex. 1.0 at 14. Rider ESR would include not only a return on the cost of the capital investments, but also the cost of depreciation expense and real estate taxes. *Id*. Further, there is no limit on the amount of ESR investment the Company could project for a given operating period. *Id*. at 9. Staff argues that this could encourage unnecessary capital spending that would unreasonably increase customer bills. *Id*. Therefore, Staff concludes that the traditional method of filing a rate case is sufficient to provide the Company with a return of and on its additional capital investments. *Id*. at 15. As the frequency and timing of a rate case is up to the utility, the Company is free to file a rate case whenever it believes the existing rates are insufficient to cover operating costs and provide investors with a reasonable return. *Id*.

Moreover, the Company already has a QIP rider, authorized by statute, that allows recovery of capital investments between rate cases for QIP eligible plant additions. *Id*. at 16. As noted by Ms. Pearce, the cost of capital investments should not be recoverable prior to a determination of prudence and reasonableness, except as a result of statutory approval. Notably, there has been no showing that IAWC needs an additional rider to recover the projected cost of capital investments that IAWC might make "to comply with new and emerging state and federal environmental standards or to advance state and federal environmental policy objectives." *Id*. at 13. The Company also fails to acknowledge that some emerging standards and policy objectives might never be enacted; thus, only actual changes, not speculative changes, would result in actual investment costs to the Company. Further, if changes or standards were enacted, there would likely be ample time for water and wastewater utilities to comply with the final regulation. *Id*. at 10.

If the Commission decides to approve Rider ESR, which it should not, Staff recommends that the Commission instruct IAWC to change Rider ESR to include Staff's recommendations:

(1) To utilize a historical, versus prospective, investment period; and

(2) To remove language from the rider that permits the Company to include investment projects to comply with "emerging" standards or environmental policy objectives.

Staff Ex. 9.0 at 13.

The Company states it accepts Staff's recommendation to limit the amount of ESR investments and proposed a cap at 2.5% of authorized annual base rate revenues. The

Company goes on to explain it included in its proposed Rider ESR tariff an O factor in the ESR reconciliation calculation that would address any adjustments made by order of the Commission, as well as language to specify that the ESR would be billed as a separate line item on customer bills. *Id*. However, the Company's proposal does not address Staff's concerns that Rider ESR would encourage unnecessary capital spending that would unreasonably increase customer bills. Staff maintains that the traditional method of filing a rate case is sufficient to provide the Company with a return of and on its additional capital investments.

The Company also claims that its design of Rider ESR has evolved to address the input from parties in this case, and for that reason, it is now reasonable and should be approved. Staff disagrees. Staff has multiple issues with Rider ESR; further, the Company completely fails to address or adopt some of Staff's recommended changes. Specifically, the Company failed to remove language from the rider that permits the Company to include investment projects to comply with "emerging" standards or environmental policy objectives. Further, IAWC failed to adopt or respond to Ms. Kight-Garlisch's recommendation that the return component for Rider ESR equal the midpoint of long-term Aaa-rated bond yields and the WACC most recently approved by the Commission in a rate proceeding. Staff Ex. 13.0 at 10. IAWC proposes to use the pre-tax return approved in the Company's most recent rate case as the interest rate for the return component for Rider ESR. IAWC Ex. 6.02 at 2-3. In direct testimony, Ms. Kight-Garlisch recommended that the Commission rely on the customer deposit rate for the return component. Ms. Kight-Garlisch explained that, generally, when a return component is not stated in the Act or in the Administrative Code, the Commission utilizes the Customer Deposit Rate 5 as the return component for riders due to the low-risk nature of the rider assets and the short time horizon. Staff Ex. 5.0 at 6.

In response to Ms. Kight-Garlisch's recommendation in direct testimony, IAWC argued that the return component will be applied to capital assets and thus, should receive a rate that is higher than the customer deposit rate. In her rebuttal testimony, Ms. Kight-Garlisch adjusted her recommendation and recommended that the return component for Rider ESR equal the midpoint of long-term Aaa-rated bond yields and the WACC most recently approved by the Commission in a rate proceeding. Staff Ex. 13.0 at 10. Utilizing the approach recommended by Ms. Kight-Garlisch in her rebuttal testimony recognizes that, while Rider ESR ensures dollar for dollar cost recovery of Rider ESR assets, the prudency and reasonableness of Rider ESR assets will remain subject to periodic review by the Commission. Thus, there remains a degree of risk related to non-recovery of costs. Therefore, Ms. Kight-Garlisch relied on the midpoint between the ROE that the Commission authorizes for rate base assets and lower risk Aaa-rated bond yields.

The Company's proposal to apply the most recent Commission-authorized rate of return on rate base to the Rider ESR assets implies that the risk inherent in the recovery of Rider ESR assets equals the risk of the Company's assets included in rate base. Ms. Kight-Garlisch noted that Rider ESR has features that reduce the risk of Rider ESR assets relative to rate base assets. Staff Ex. 13.0 at 9. Specifically, Rider ESR includes an annual reconciliation mechanism that ensures dollar for dollar cost recovery. This effectively eliminates both regulatory lag and the risk of non-recovery of prudent and reasonable costs incurred by the Company in implementing the ESR program. *Id*.

As Ms. Kight-Garlisch notes, authorizing a rate of return for Rider ESR assets that exceeds the investor-required rate of return on ESR assets would not balance the interests of investors and ratepayers. Rather, it would benefit Company shareholders at the expense of customers because the portion of return that exceeds the investor-required rate of return would be collected from customers and passed through to investors. Investors would receive more return than they require given the risk level of the Rider ESR assets, and customers would receive no benefit from guaranteeing the recovery of prudent and reasonable ESR costs. As such, that reduced risk should be reflected in the cost of common equity used to calculate the rate of return component in Rider ESR.

Mr. Selinger argues that because IAWC's QIP rider uses the WACC to determine the revenue component, Rider ESR should also use the WACC. IAWC Ex. 17.00 at 31. However, the return component calculation for QIP riders is specified in Part 656.50(a). Specifically, the Commission rules require QIP riders to apply the pre-tax WACC from the last rate case. 83 Ill. Adm. Code 656.50(a). In contrast, there is no similar rule for the proposed Rider ESR.

Notably, the Commission has adopted a similar approach to Ms. Kight-Garlisch's rebuttal recommendation for estimating an authorized return for utility assets that were guaranteed dollar for dollar cost recovery and also subject to periodic reviews for prudence and reasonableness in Docket Nos. 08-0618/0619/0620 (Cons.) and Docket No. 10-0138. *Central Ill. Light Co. d/b/a AmerenCILCO*, *Central Ill. Pub. Service Co. d/b/a Ameren CIPS, and Ill. Power Co. d/b/a AmerenIP*, Docket Nos. 08-0619/08-0620/08-0621 (Cons.), Order at 32-33 (Aug. 19, 2009); and *Commonwealth Edison Co.*, Docket No. 10-0138, Order at 48 (Feb. 9, 2011).

Staff argues that it is clear that the Company's proposed use of the WACC from the Company's most recent rate case would not reflect the risk of Rider ESR and would be contrary to past Commission decisions. Staff also notes that the Company failed to address the Commission's previous decisions on riders that have similar risk to the Company's proposed Rider ESR. Therefore, Staff does not recommend approval of Rider ESR; however, if the Commission does approve Rider ESR (which Staff does not recommend), Staff recommends the Commission adopt Ms. Kight-Garlisch's revised recommendation regarding the return component for Rider ESR.

c. AG's Position

The AG recommends that the Commission reject the Company's proposed Rider ESR. The Company is proposing Rider ESR for the purpose of recovering its "costs associated with new investment in qualifying, non-QIP eligible utility plant required to comply with new or emerging federal and state environment and safety requirements or to satisfy other state or federal environmental policy objectives." IAWC Ex. 27.01 at 1. The AG explains that Rider ESR is not authorized under the Act, and it is not necessary because the costs in question are neither unpredictable nor uncontrollable such that a rider mechanism is necessary.

The Company asks the Commission to authorize Rider ESR under Section 9-220.2(a) of the Act. The AG explains that principles of statutory interpretation lead to the conclusion that Section 9-220.2(a) of the Act does not authorize Rider ESR.

When interpreting a statute, the "primary objective is to ascertain and give effect to the intent of the legislature," the most reliable indicator of which is the language of the statute. *Oswald v. Hamer*, 2018 IL 122203, ¶ 10. If a "literal reading of a statute produces absurd results, the literal reading should yield," and the statute must be construed in such a way that "avoids absurd or unjust results." *People v. Hanna*, 207 Ill. 2d 486, 498 (2003). The doctrine of *ejusdem generis* is particularly helpful "where a statute or document specifically enumerates several classes of persons or things and immediately following, and classed with such enumeration, the clause embraces 'other' persons or things." *Farley v. Marion Power Shovel Co.*, 60 Ill. 2d 432, 436 (1975). In such a case, "the word 'other' will generally be read as 'other such like,'" meaning that the "other costs" described in Section 9-220.2(a)(iii) should be read as other costs like purchased water, purchased sewage treatment, and qualifying infrastructure plant and "not of a quality superior to, or different from, those specifically enumerated." *Id*. Applying these principles of statutory construction, the AG demonstrates that Section 9-220.2(a) does not authorize Rider ESR.

First, recovery of capital investments needed to comply with environmental regulations would be fundamentally unlike the other items listed in Section 9-220.2(a). As AG witness Larkin-Connolly explained, costs that "fluctuate" and "are difficult to predict" in this context typically refer to "market or commodity prices that can be volatile and unpredictable." AG Ex. 2.0 at 27. Therefore, it is more likely that "the intent of this clause is to promote the adoption of mechanisms used to shield utilities from input cost volatility, not changes in regulations." *Id*.

Second, the Company's interpretation would lead to an absurd result. According to the Company, "Section 9-220.2(a) does not establish any additional limitations on the kinds of costs recoverable under this subsection." IAWC IB at 120. The Company interpreted the requirement that the costs in question be "difficult to predict" to simply mean that the Company does not know what they are yet (because, for instance, a regulation has yet to be finalized). IAWC IB at 119–20. Thus, the Company is effectively arguing that the Commission has authority to permit a rider for any costs that the Company may incur in the future, but which are not yet known. The AG argues that it is unlikely that the legislature enacted Section 9-220.2(a) with the intent of swallowing the traditional ratemaking process entirely, and therefore the Company's proposed interpretation of the Act should be rejected.

Even if the Act authorized Rider ESR, it would not be appropriate because the costs in question are neither unpredictable nor uncontrollable. As discussed above, Section 9-220(a)(iii) authorizes a rider to recover "other costs which fluctuate for reasons beyond the utility's control or are difficult to predict." 220 ILCS 5/9-220.2(a)(iii). Echoing the statutory language, riders are traditionally meant to recover "*unexpected, volatile, or fluctuating* expenses." *A. Finkl & Sons Co. v. Ill. Commerce Comm'n.*, 250 Ill. App. 3d 317, 327 (1st Dist. 1993) (emphasis in original). Thus, the Commission should only approve a rider "if the utility cannot influence the cost" and "the expense is a pass-through item that does not change other expenses or increase income." *Commonwealth Edison Co.*, 405 Ill. App. 3d at 414 (*citing Citizens Util. Bd.*, 166 Ill. 2d at 138).

As demonstrated by Staff and AG witnesses, the costs that the Company proposes to recover under Rider ESR are neither unpredictable nor beyond the Company's control. *See, e.g.*, Staff Ex. 9.0 at 8-10; AG Ex. 3.0 at 28; AG Ex. 4.0 at 26. With respect to

compliance-related costs, there is nothing new or exceptional about IAWC's need to comply with environmental and safety regulations; indeed, it is a core responsibility of any utility. *See* 220 ILCS 5/8-401. As Mr. Larkin-Connolly testified:

> Since Congress enacted the Safe Drinking Water Act [] in 1974, giving the [EPA] the mandate to set standards for drinking water quality, there have been dozens of regulations adopted at the state and federal levels that require water and wastewater operator compliance. Changes in water and wastewater regulations have been an ever-present factor in the industry for over 40 years.

AG Ex. 2.0 at 25. And as Staff witness Pearce pointed out, "[e]volving statutory environmental standards are the nature of the utility business environment and not a unique business challenge that only IAWC must address." Staff Ex. 9.0 at 9.

While regulations and compliance standards evolve, they are rarely unexpected or volatile. The AG illustrates how the "process for identifying and regulating new contaminants at the federal level is . . . clear and predictable" using several examples that the Company cited in support of Rider ESR. For instance, PFOS and PFOA — two of the "emerging contaminants" cited by the Company as the reason Rider ESR is necessary— have been under consideration by the EPA for over ten years. AG Ex. 2.0 at 25-26. As Mr. Larkin-Connolly explained, before the Company will have to implement any compliance changes, the EPA will commence a rulemaking process that will likely take at least one to two years and will ultimately set forth the standards for water utilities like the Company. *Id*. at 26. Once the rulemaking is finished and the standards are finalized, public water system providers will have at least three more years to comply with the final standards and up to five years if capital improvements are necessary. *Id*. In all, PFOS and PFOA have been "emerging" as a contaminant for over a decade since the Contaminant Candidate List process began, and regulations of these contaminants may not take effect for another five years. *Id*.

The Company also pointed to several other examples at the federal level. For instance, the Company cited the January 22, 2001 change to the standards for levels of arsenic in drinking water, which was reduced from 50 ppb to 10 ppb, as an example of changing regulations. But according to the EPA website, "[w]ater systems had to meet the new standard by January 23, 2006," meaning that the Company would have had a full five years to comply. Another example cited by the Company, the LT2 requiring monitoring and treatment of cryptosporidium for water systems that was published January 5, 2006, gave the largest systems more than six years to comply with the treatment technique requirements, and states were allowed to grant systems up to two additional years for capital improvements. The Company also points to the June 15, 2022 updated interim health advisory for PFAS as evidence of emerging contaminants it will need to address. However, in announcing the updated health advisories, the EPA noted that drinking water health advisories "are non-enforceable and non-regulatory," meaning there was not an immediate and uncontrollable regulatory requirement resulting from the updated advisory, and at the same time the EPA announced $10 billion in funding through the Bipartisan Infrastructure Law to assist systems in addressing PFAS and other emerging contaminants. At the state level, the Company pointed to the Stage 2

Disinfectant By Product Rule that the Illinois Pollution Control Board implemented in 2019. But the AG points out that there was nothing unique about this rulemaking. The proceeding began in August 2017 and did not conclude until August 2019, during which time it went through the ordinary procedural process of allowing for interested parties, including the Company, to provide input on the proposed rules. What these examples demonstrate is that the Company has "ample time" and considerable discretion in determining how to comply with applicable environmental requirements and standards. Staff Ex. 9.0 at 10; AG Ex. 4.0 at 30.

The AG notes that the Company appears to conflate costs that are "unpredictable" with costs that are unknown. AG Ex. 4.0 at 28. The Company knows that environmental standards will continue to evolve as they always have, but it does not know what the "anticipated costs associated with investment in order to meet new environmental regulations" will be. IAWC Ex. 14.00 at 7. The Company's argument appears to be that although the event that causes "the costs to be incurred (new environmental laws and regulations) are predictable, the Company's actions (capital investments) necessary to respond to the event are unpredictable because they depend on factors not yet known." AG Ex. 4.0 at 28. As Mr. Larkin-Connolly pointed out, however, it is true that "the Company cannot know all of the factors that may affect a future decision, but this is no different from any other decision utility management faces." AG Ex. 4.0 at 28. All water and sewer utilities need to make decisions regarding the capital investments that are necessary to provide safe and reliable service, taking into consideration factors such as "source water characteristics, environmental factors, distribution system characteristics, wastewater receiving streams, and climate impacts." *See* IAWC Ex. 14.00 at 8. Because these are investments that any such utility would need to make in the ordinary course of business, "it would be difficult, if not impossible, to distinguish between costs that are eligible for recovery through Rider ESR and costs that are simply normal costs IAWC incurred to satisfy its obligation to provide safe and affordable water and wastewater service." AG Ex. 3.0 at 30.

In addition to being largely predictable, the AG explains how the "non-QIP eligible capital investments" of the type the Company seeks to recover under Rider ESR are also within the Company's control. In defending Rider ESR, the Company states that "[i]t is difficult to determine what level of investments, techniques, or treatments will be needed until regulations are finalized and a [MCL] is established." IAWC Ex. 14.00 at 8. Thus, the Company admitted that once a new regulation or standard is finalized, it is the Company who will determine what approach to take. AG Ex. 4.0 at 30. This is to be expected; the determination of how to comply with applicable regulations and standards "is a key attribute of utility management." *Id*. As Mr. Larkin-Connolly testified, "[t]he mere fact that the Company must decide on how to implement or respond to a new regulation shows that it has some level of control over the costs." *Id*. The Company cannot claim that capital investments are outside of its control simply because it does not know what they are yet.

Similarly, the AG argues that "investments made to advance state and federal environmental regulatory policy objectives" are not costs that are beyond the Company's control that would be appropriate for recovery under Section 220.2(a) of the Act. IAWC Ex. 3.00 at 25. The Company attempted to use a broad definition of "regulatory policy

objectives" by including "increasing use of renewable energy and increasing [its] alternative-fuel fleet." In addition to the lack of limitation as to what types of regulatory policies are relevant to IAWC as a water and wastewater utility, IAWC has failed to show that its response to, and investments in response to, purported regulatory goals are beyond the Company's control. Similarly, it has not shown that the associated costs would be exceptionally volatile or unpredictable. *See* IAWC Ex. 6.00 at 26. Thus, the AG argues, IAWC has not shown that its proposed Rider ESR meets the standards for approval.

The AG also explains that the Company incorrectly claims that similar riders have not been approved for other utilities. IAWC cites two cases to support its claim that "[s]imilar mechanisms have been approved for Illinois energy utilities." IAWC IB at 120-121. However, neither of the mechanisms approved in the cited dockets are similar to IAWC's proposal. In Docket No. 05-0597, the Commission approved a rider for ComEd to recover the costs of environmental clean-up and remediation costs for specific sites related to historic manufactured gas plants ("MGP") because the Commission had previously approved cost-tracking riders for MGP site remediation costs and such costs could no longer be recovered through base rates. Docket No. 05-0597, Order at 212. The Commission denied recovery for non-MGP site cleanup, because ComEd "failed to demonstrate that non-MGP costs [were] reasonable, prudently incurred, related to delivery costs and are as volatile as MGP costs." *Id*. at 213. The Commission further pointed out that "there is no precedent for recovery of non-MGP costs through a rider." *Id*. In Docket No. 20-0722, the Commission approved a limited rider to allow Nicor to facilitate the connection of renewable natural gas facilities to its distribution system. Docket No. 20-0722, Order at 15-16.

In contrast to both of these dockets, IAWC's proposed rider is based on potential future "changes to drinking water and wastewater standards." IAWC IB at 118. IAWC claimed that it anticipates spending "approximately $88 million over the next [five] years to address new and emerging regulations and standards through the construction of new facilities and equipment," and "additional investment" to address other environmental concerns. *Id*. In other words, IAWC's proposal is not limited to environmental cleanup at specific historic plant sites or a narrow interconnection pilot project, but instead is a large-scale capital investment rider that would provide the Company with authority to heavily invest in new infrastructure to address vague environmental concerns, without rate case oversight. The AG argues that the Commission should reject IAWC's proposal because it is significantly broader in scope and costs than either the ComEd or Nicor proposals the Company cited as support.

The Company claims that its ability to recover costs under Rider ESR would benefit its customers and Illinois more broadly. These include the health benefits of safe drinking water, environmental benefits associated with compliance such as a reduction in nutrient enrichment and pollution in source waters, and economic benefits of infrastructure spending. But, the AG notes, compliance with environmental regulations and prudent investment in its systems are the baseline expectations of a utility. Thus, customers will recognize these benefits regardless of the cost recovery mechanism.

While there is no benefit to ratepayers, the AG explains that there are several risks if the Commission were to approve Rider ESR. The use of riders as a cost recovery

mechanism "eliminates the regulatory incentive to control costs between rate cases and undermines the principle that the utility must manage its aggregate costs to keep rates just and reasonable." AG Ex. 3.0 at 28. Mechanisms like Rider ESR "can increase rates and revenues even when a regulated utility company achieves its rate of return and does not have a revenue deficiency." *Id*. at 29. Moreover, allowing the Company to recover the proposed expenses through Rider ESR would simply incentivize the Company "to favor compliance steps that involve investment in new capital over possibly less expensive operating cost measures." AG Ex. 2.0 at 28. The AG explains that the only party that stands to benefit from a reduction in regulatory lag and oversight is the Company's shareholders.

As Staff witness Pearce stated, "the rider is unnecessary because the Company may file a rate increase whenever it believes revenues are no longer sufficient to cover operating costs and provide a reasonable return to its investors." Staff Ex. 9.0 at 13. On the other hand, the AG explains how the proposed rider would reduce regulatory lag and oversight, to the sole benefit of the Company's shareholders. It is a well-settled principle that the "rate making process . . . involves a balancing of the investor and consumer interests." *Ill. Bell Tel. Co*., 414 Ill. at 287 (1953), *citing Fed. Power Comm'n*, 320 U.S. at 603. The AG demonstrates that Rider ESR would upend that traditional balance because it is completely unnecessary and would allow the Company to immediately recover costs, including the return to investors, that can be adequately covered through general rates. Therefore, the AG requests that the Commission reject Rider ESR.

d. Municipalities' Position

The Municipalities agree with Staff and the Intervenors that IAWC's proposed Rider ESR should be rejected. The Company seeks the rider to cover what it claims are unpredictable capital costs it might incur to comply with changes in environmental regulations and standards. However, the rider is not necessary because the Company has failed to show that there is a reasonable expectation that such costs will occur. Indeed, the Company in its own briefs listed known rules, regulations, and standards and acknowledged the costs to comply with them. Therefore, the Company has not demonstrated that its costs "are difficult to predict" as required for approval of a rider under Section 9-220.2(a)(iii) of the Act.

Moreover, the Municipalities agree with AG witness Larkin-Connolly that the core function of water and wastewater utilities is:

> to comply with environmental and clean water laws and regulations to assure safe drinking water and a clean environment. Environmental compliance costs are not unique or unpredictable; and compliance should be an ordinary, ongoing utility function. A rider surcharge mechanism is not appropriate for costs that are a part of the utility's fundamental responsibility.

AG Ex. 2.0 at 22.

Because IAWC's request for Rider ESR does not meet the statutory requirements for a rider and because IAWC is seeking to recover costs associated with its "fundamental

responsibility" as a water and wastewater utility, the Municipalities assert that the rider should be rejected.

e. Commission Analysis and Conclusion

IAWC seeks approval of a new rider that will allow the Company to recover the revenue requirement associated with non-QIP eligible capital investments made to "comply with new and emerging state and federal environmental standards or to advance state and federal environmental regulatory policy objectives." IAWC IB at 3; *see also* IAWC Ex. 3.00 at 25.

Compliance with state and federal regulations is a requirement for all public utilities and is not unique to IAWC. As parties indicate, these regulations are on some level always in flux. Regulations governing the treatment of contaminants in water do change, as do federal and state environmental policy objectives. While specific changes themselves may be unpredictable, they are not unexpected. As the AG notes, two of the 'emerging contaminants' that IAWC refers to have been under consideration by the EPA for over a decade.

The Commission agrees with Staff, the AG, and the Municipalities that the challenges that IAWC faces in complying with new and emerging regulations or regulatory policy objectives is typical of any of the challenges faced by any utility management. The Commission finds it unreasonable to approve a rider mechanism that would arguably place greater risk on the ratepayer for the benefit of stakeholders because IAWC would be able to immediately recover costs, including a return to investors, under the rider subject to a reconciliation. Should IAWC's management find in the future that its existing rates are insufficient to comply with any environmental rules or regulations, the Company may elect to file a rate case.

Also concerning is the potential scope of the qualifying costs under Rider ESR. IAWC states that investments under Rider ESR would represent a significant portion of the Company's annual capital budget. As Staff correctly notes, Rider ESR is a broad capital investment rider that would provide IAWC with authority to make large capital investments in new infrastructure to address vague environmental concerns. While investments in infrastructure provide positive economic results that benefit ratepayers, that does not mean that such investments are reasonable or prudent, especially considering the broad scope and ambiguity of Rider ESR. Accordingly, the Commission rejects IAWC's proposed Rider ESR.

Because the Commission rejects Rider ESR, assuming arguendo it is properly allowable pursuant to Section 9-220.2(a) of the Act, the Commission need not address the statutory interpretation arguments raised by parties as to whether such a rider is permissible under the Act.

2. Bad Debt Expense Rider ("Rider BDE")

a. IAWC's Position

IAWC states that the Commission has the authority to, and should, approve Rider BDE on a permanent basis. IAWC notes that Staff witness Alan recommends the Commission reject the Company's proposal to make its current Rider BDE permanent. IAWC notes that Section 9-220.2 of the Act provides that a water or sewer utility may "file

a surcharge which adjusts rates and charges to provide for recovery of… other costs which fluctuate for reasons beyond the utility's control or are difficult to predict.…" 220 ILCS 5/9-220.2(a). IAWC states that it filed its original Rider BDE, effective December 20, 2020 "to recover incremental bad debt expense that fluctuates for reasons beyond the Company's control or are difficult to predict given the ongoing COVID-19 pandemic." *See* IAWC Tariff filing SRM #20-045, Cover Letter (Nov. 5, 2020). As stated in the tariff, "[t]he purpose of this Rider is to recover or credit the amount by which the Company's actual annual bad debt expense in a fiscal year ending in February exceeds or is less than the bad debt amount included in the Company's rates in effect for the reporting year… Costs subject to this Rider are those costs that are classified as bad debt expense in Account 670. IAWC explains that such adjustments will be the incremental difference between the amount of bad debt expense in Account 670 and the bad debt expense included in base rates and as allocated by customer class in the [COS] study for that case." ILL.C.C. No. 24, Section No. 1, First Revised Sheet No. 29 (Canceling Original Sheet No. 27).

IAWC explains that Rider BDE is consistent with Section 9-220.2, including its provisions for reconciliations that will compare revenues collected under these riders during the effective period with the anticipated amount of revenues that were to be recovered or refunded under the riders. IAWC Tariff filing SRM #20-045, Cover Letter (Nov. 5, 2020). IAWC explains that Rider BDE was extended through December 2023 by the Commission in Docket No. 20-0309. *Ill. Commerce Comm'n,* Docket No. 20-0309, Order on Reopening and Stipulation (Mar. 18, 2021).

With these approvals, IAWC notes, the Commission has found that Rider BDE is a proper and reasonable mechanism for recovering fluctuating bad debt expense as a result of the pandemic through 2023. But as IAWC explained, bad debt expense is expected to continue to fluctuate after 2023.

IAWC notes that, as Company witness Selinger testified, there are a variety of factors, both on a macro and micro level, that cause fluctuations in uncollectible expense. For example, IAWC states, the current elevated level of inflation is at a level not seen in decades. Furthermore, IAWC states, contrary to Staff's opinion, due to the ongoing and uncertain impacts of the COVID-19 pandemic, the ability to forecast the level of uncollectible expense in base rates continues to be challenging, and the historical approach utilized for setting a level of uncollectible expense in base rates carries risks for both customers and the Company. Additionally, IAWC states, the variability in uncollectible expense is not only related to severe events such as the pandemic. IAWC maintains that changes in economic conditions in general can drive these balances to significantly change from year to year. Further, the impact of new customer assistance programs is uncertain at this time and establishing IAWC's current Rider BDE on a permanent basis would ensure that customers receive the benefit of such reductions if they were to occur. IAWC explains that Staff's opposition to Rider BDE ignores a key element of IAWC's proposal – because proposed Rider BDE will adjust for the variance between the actual uncollectible expense incurred and the level of expense authorized in this case. The Company notes that should uncollectible expense go down (for example due to the impact of customer programs, such as the Low-Income Household Water Assistance Program), customers would receive a credit for that reduction.

According to IAWC making Rider BDE permanent is consistent with Section 9-220.2 of the Act, as the level of bad debt expense remains beyond IAWC's control and difficult to predict. Without question, the impact of the pandemic on bad debt costs is outside IAWC's control. But IAWC anticipates other impacts will continue to affect bad debt expense as well.

If costs are difficult to predict, as Section 9-220.2 contemplates, so inherently is the timeframe for that unpredictability. As such, Section 9-220.2 permits a Commission approved surcharge without a time limit. For example, not only was it unforeseen that Illinois would face COVID-19, but it was also unforeseen that it would last for multiple years. As such, making Rider BDE permanent is not only reasonable and beneficial to the Company and its customers, but consistent with Section 9-220.2.

IAWC points out that Staff witness Alan disregards that Illinois' energy utilities currently operate uncollectible ("bad debt") rate adjustment mechanisms on a permanent basis. IAWC notes that energy utilities have statutory bad debt riders. *See, e.g.,* 220 ILCS 5/16-111.8 (authorizing an uncollectible rider for electric utilities). The Company explains that water utilities experience the same fluctuations and unpredictability for bad debt expense as other types of utilities. Establishing Rider BDE on a permanent basis simply puts IAWC on the same footing as the energy utilities in terms of the ability to address these fluctuations and unpredictability in a manner that allows IAWC to recover its costs if bad debt expense goes up and protects customers if the expense goes down – as Section 9-220.2 intends.

Staff witness Alan claims that because the current Rider BDE is set to expire December 31, 2023, the Company has minimal risk associated with fluctuations in its uncollectible expense. However, IAWC states, contrary to Staff's opinion, as stated above, the expiration date of December 31, 2023 is not a reliable factor in predicting the end of unpredictable fluctuations in the Company's uncollectible expense. IAWC notes that Staff does not demonstrate that the same circumstances affecting IAWC's bad debt expense now will not be present in December 2023 and beyond. Further as explained above, there are other impacts to bad debt costs that qualify bad debt costs for recovery under Rider BDE pursuant to Section 9-220.2. IAWC explains that the unpredictability is the precise reason why Rider BDE should be made permanent.

IAWC also states that Staff's claims that "[t]here is no [] provision in the Act authorizing permanent uncollectible riders for water or wastewater companies" and characterizes Rider BDE as a rider "that do[es] not have a basis in statute but impact[s] the revenue requirement…", is clearly incorrect as a matter of law, as Rider BDE does have a basis in statute – in Section 9-220.2(a) of the Act. 220 ILCS 5/9- 220.2(a). IAWC states that Staff's own logic regarding Rider ESR, that "the statute referencing 'other costs' refers to expenses rather than capital investments of new infrastructure, equipment, and technologies", would suggest that Rider BDE is exactly the type of rider authorized by Section 9-220.2. IAWC states that in short, Rider BDE is authorized by statute, and the standard is whether its recovers costs "which fluctuate for reasons beyond the utility's control or are difficult to predict."

The Company states that Section 9-220.2 of the Act is the correct legal standard and that the record evidence shows that IAWC's bad debt expense "fluctuate[s] for

reasons beyond the utility's control or [is] difficult to predict…." For this reason, IAWC states, Staff's reliance on *People ex rel. Madigan*, where the court cites to a 2010 Appellate Court decision, *Commonwealth Edison Co. v. Ill. Commerce Comm'n*, 405 Ill. App. 3d 389 (2d Dist. 2010), is misplaced. IAWC explains that nevertheless, even if those cases do apply, they establish essentially the same standard: whether the expenses in question are unexpected, volatile, fluctuating or outside the utility's control. As explained above, Rider BDE meets this standard. The Commission has previously approved an extension to Rider BDE, demonstrating that it is a proper and reasonable mechanism for recovering fluctuating bad debt expense through 2023.

IAWC contends that Staff's own adjustment to test year uncollectible expense confirms that the expense fluctuates. Staff developed a revised test year level of uncollectible expense using a "normalization" approach of a three-year average of 2019-2021 expense. IAWC explains that this use of a multiyear average of actual data suggests a desire to smooth out annual variability in uncollectible expense – in other words, that the expense fluctuates. IAWC also explains that the fluctuation can be seen in IAWC's data on annual uncollectible rates by rate zone, which show, for example, uncollectible percentages for Central wastewater ranging from 1.66% to 3.66% over the 2019-2021 time period, and for Central water from 0.49% to 0.74% over that same period.

Accordingly, IAWC concludes, the Commission should approve Rider BDE on a permanent basis.

b. Staff's Position

Staff argues that the Commission should reject the Company's proposal to make Rider BDE permanent. First, the Company has failed to provide evidence that the fluctuations in uncollectibles expense is exceptional to demonstrate that the rider is necessary. When reviewing riders that do not have a basis in statute but impact the revenue requirement, the Commission has looked to the courts for guidance. The Appellate Court decision, *Commonwealth Edison Co.,* 405 Ill. App. 3d 389, noted that "exceptional circumstances" exist such that it finds that the expenses in question are unexpected, volatile, fluctuating or outside the utility's control. The Company has the burden of showing that the costs are fluctuating, unexpected, or volatile.

Staff argues that IAWC has failed to provide evidence that the costs are fluctuating, unexpected, or volatile. Staff witness Alan calculated the Company's three-year Company average of uncollectible expense percentage for years 2019 through 2021 as 0.73%, with 2021 being 0.77%. Staff Ex. 3.0 at 15-16. The Company's stated necessity for the rider is not supported by the data; specifically, the lack of significant fluctuation in the data provides only further support that the costs are not fluctuating, unexpected, or volatile. Further, uncollectible expenses are not unique to IAWC; rather, they are costs common to all water and wastewater utilities and operating expenses fluctuate year to year. *Id*. at 16. According to Staff, adopting Company witness Selinger's rationale regarding fluctuation would lead to the unreasonable conclusion that the Company should be allowed to recover any, and all of its costs through various riders because the argument could be applied to any expense that fluctuates at all, even a minimal fluctuation. *Id*.

Second, Staff states that the Company's argument that because Illinois' energy utilities have permanent uncollectible expense riders, water and wastewater companies should be given the same treatment, is unpersuasive. The Commission granted uncollectible riders for gas and electric utilities through specific authority provided in the Act. *See*

220 ILCS 5/16-111.8(a);

220 ILCS 5/19-145(a).

There is no such provision in the Act authorizing permanent uncollectible riders for water or wastewater companies. If the General Assembly intended for water and wastewater companies to have uncollectible riders, it would have explicitly stated so as it did for electric and gas utilities. The best evidence of legislative intent is the language used in the statute itself, which must be given its plain and ordinary meaning. *People v. Bywater*, 223 Ill. 2d 477, 481 (2006). "No rule of construction authorizes us to declare that the legislature did not mean what the plain language of the statute imports, nor may we rewrite a statute to add provisions or limitations the legislature did not include." *See Zahn v. North Am. Power and Gas, LLC*, 2016 IL 120526, ¶ 15. The Commission is a creature of statute, and when granting energy utilities' uncollectible riders, it looked to the Act authorizing such an action. Staff asserts there is no such authority here, and the Company's arguments that water/wastewater utilities should be authorized to have uncollectible riders simply because energy utilities have them, are unpersuasive and should be rejected by the Commission.

Third, Staff states it is important to note that the Commission chose not to make the uncollectible rider permanent in Docket No. 20-0309, but instead extended the rider through December 2023 due to the COVID-19 pandemic. The Commission recognized that the pandemic was an unusual circumstance, which is why the Company was permitted to utilize Rider BDE on a temporary basis only.

In rebuttal testimony, the Company disagreed with Staff's recommendations due to the following factors: elevated level of inflation and continued uncertainty regarding the economic consequences of the COVID-19 pandemic, aligning the Company with its peer Illinois energy utilities, and the differences the parties have had in this case recommending the amount of uncollectible expense to include in base rates. Staff Ex. 11.0 at 13; IAWC Ex. 17.00 at 39. With regard to inflation, Staff notes that the Company has minimal risk of significant fluctuations in uncollectible expense due to its current Rider BDE being extended to December 31, 2023, and its estimated length for rates to be effective from this case. The possible effect on the Company's uncollectibles will not occur until 2024 at the earliest. *Id*. at 14. Company witness Selinger also stated that new customer programs and other customer bill assistance funds may result in reduced uncollectible expense for the Company. *Id*. (*citing* IAWC Ex. 17.00 at 39). As to aligning with its peer energy utilities, Staff stands on its argument that there is no statutory authority for uncollectible riders for water/wastewater utilities as there is for energy utilities. Most notably, there is not a water/wastewater utility that currently has a permanent uncollectible rider. Thus, Staff argues that the Company's comparison ultimately fails.

Staff notes that the Company argues that Section 9-220.2 is a basis for approving proposed Rider BDE. IAWC IB at 144. However, Rider BDE is not consistent with Section 9-220.2 of the Act, which states:

> (a) The Commission *may authorize a water or sewer utility to file a surcharge which adjusts rates and charges to provide for recovery of* (i) the cost of purchased water, (ii) the cost of purchased sewage treatment service, (iii) *other costs which fluctuate for reasons beyond the utility's control or are difficult to predict*, or (iv) costs associated with an investment in qualifying infrastructure plant, independent of any other matters related to the utility's revenue requirement.

220 ILCS 5/9-220.2(a) (emphasis added).

Staff disagrees with the Company that the level of bad debt expense is "beyond IAWC's control" and "difficult to predict given the [COVID]-19 pandemic" in December 2023 and beyond. IAWC IB at 144-45. Aside from mere generalized statements that fluctuations are expected to continue past 2023, the Company fails to provide any actual evidence to support its claim that the costs are significantly fluctuating, unexpected, or volatile to justify making Rider BDE permanent.

The Company also argues that Staff has not demonstrated that Rider BDE should not be permanent. Staff argues that the Commission should reject this assertion. The burden of proof is on IAWC to prove that Rider BDE is just and reasonable on a permanent basis, not Staff. 220 ILCS 5/9-201(c). The Company argues that Staff witness Alan has not demonstrated that the same circumstances affecting IAWC's bad debt expense now will not be present in December 2023 and beyond. *Id*. However, according to Staff, IAWC's attempt to shift the burden of proof is inappropriate. Moreover, IAWC's attempt to deflect and shift the burden of proof only further demonstrates the Company's failure to prove that fluctuations and unpredictability will continue beyond December 2023.

Lastly, with regard to the Company's rebuttal argument that the different uncollectible expense amounts recommended by parties in this case supports the Company's proposal to make Rider BDE permanent is unconvincing. The Company accepted the AG's correction in its rebuttal position, and Staff concurred with the AG's correction. *Id*. at 15. Therefore, the uncollectibles amount in base rates is no longer contested and there is only one position in the record; however, this is not an argument in support of making Rider BDE permanent. *Id*.

Staff concludes that the Commission should reject the Company's proposal to make Rider BDE permanent.

c. Commission Analysis and Conclusion

The Commission does not find that IAWC has provided sufficient evidence that fluctuations in uncollectibles expense are unexpected or volatile so as to support permanent approval of Rider BDE. The Company asserts Rider BDE is necessary due to the ongoing impacts of the COVID-19 pandemic making it difficult for the Company to forecast the level of uncollectible expense. The Commission extended the effective date of Rider BDE through 2023. Other than general assertions made by IAWC, nothing in the

record indicates that fluctuations in uncollectibles expense due to the ongoing COVID-19 pandemic will continue beyond that date, let alone supports permanent adoption of Rider BDE. Moreover, as Staff notes, IAWC's claim that costs are fluctuating, unexpected or volatile is not supported by the data. Staff Ex. 3.0 at 15-16.

The fact that Illinois energy utilities have uncollectibles expense riders is not persuasive to justify approving a permanent rider for IAWC, especially considering that the energy utilities' uncollectibles riders were specifically authorized by the Act. *See* 220 ILCS 5/16-111.8(A); 220 ILCS 5/19-145(a). Accordingly, the Commission rejects IAWC's request to adopt Rider BDE on a permanent basis.

VII. LOW-INCOME TARIFF

A. Contested Issues

1. Eligibility Threshold

a. IAWC's Position

IAWC proposes new low-income discount tariff pricing to make water and wastewater service more affordable for customers with demonstrated income at or below 150% of the Federal Poverty Level ("FPL"). IAWC states that the affordability of water and wastewater service is essential. It is IAWC's position that everyone should have access to clean, safe, and reliable water and wastewater service, a priority that no party disputes. IAWC explains that in an effort to achieve this goal, IAWC's proposed low-income discount tariff is designed to assist customers with the affordability of their service by providing a rate that lowers their monthly bill and makes service more affordable. IAWC explains that its proposed tariff has the following features:

- The Company's proposed tariff will be available to all water and wastewater residential customers with household incomes at or below 150% of the FPL.
- The tariff will offer a 70% discount on the base volumetric charges to any qualifying water or wastewater customer for all usage during the month.
- There is no proposed cap on monthly usage for any qualifying customer.
- Total discounts provided the customers will be recovered from all customers through the Company's existing Volume Balancing Adjustment ("VBA") mechanism.
- IAWC's proposed low-income rate will not limit the amount of time a customer can take service through this tariff as long as the customer demonstrates household income at the qualifying level.

IAWC notes that while no party disputes the benefit of the Company's proposed low-income tariff, and Staff and the AG generally recommend that the Commission approve the Company's proposed tariff, Staff objects to the Company's proposed eligibility threshold, the Company's decision to not place a usage cap on the amount of service that can be taken under the tariff, and the method by which the Company should recover the shortfall in revenue resulting from the low-income discount. IAWC argues that Staff's criticisms of IAWC's low-income tariff prioritize consistency with another

utility's tariffs over the best interest of IAWC's customers, ignores detailed analyses performed at a community level, and should be rejected.

IAWC proposes to make its low-income discount tariff available to any residential customer with a demonstrated income at or below 150% of the FPL. IAWC explains that this threshold is based on extensive research into the Company's residential customer population, which provides the estimated number of customers by multiple of FPL and the expected Balance-to-Income ("BTI") ratios for each of those groups based on the Company's proposed rates.

IAWC estimates that there are approximately 46,000 residential water customers and approximately 9,000 residential wastewater customers in its service territory with household incomes at or below 150% of the FPL that would be eligible for the Company's proposed low-income tariff. IAWC explains that for customers in the income group at or below 150% of the FPL, the discounts offered under this tariff would reduce a typical bill for Basic Water Service (40 gallons per day per household member for a family of three) from $64.20 per month under proposed rates to $41.31 per month, which is a discount of 36% on the total bill and is less than what these customers would pay for basic water service under the Company's current rates. IAWC notes that the BTI ratio for this customer group would be reduced from approximately 7% to approximately 5% under the proposed discounts.

IAWC states that Staff opposes the Company's proposed eligibility threshold, arguing that IAWC should be bound to the 100% of FPL threshold approved for PPWC in Docket No. 21-0198, because "[t]here is no reason that the Commission should approve different income level thresholds for two water/wastewater utilities in the same state and whose territories and customer makeup is similar." Staff Ex. 15.0 at 4. IAWC contends that Staff offers no evidence or support for the assertion that the Company's territory and customer makeup is similar to that of PPWC (let alone why any similarities would justify mandating implementation of an identical low-income program). Instead, IAWC notes, it is clear that Staff's objection to the Company's proposed eligibility threshold is based on nothing more than a desire to avoid inconsistent eligibility criteria for residential customers. IAWC argues that this is not a reasonable justification for rejecting the Company's data-driven proposal, and that this approach assumes that IAWC must somehow overcome or disprove the standards implemented in the PPWC rate case, while simultaneously ignoring the substantial evidence presented by IAWC in this proceeding.

IAWC explains that of the approximately 46,000 residential water customers and approximately 9,000 residential wastewater customers in IAWC's service territory with household incomes at or below 150% of the FPL, IAWC has determined that approximately 20,000 of those customers (43%) are in the 100-150% FPL group that Staff's proposal would exclude from eligibility in the tariff based on the tariff program approved for PPWC. And, for the approximately 20,000 customers that Staff's proposal would exclude from eligibility for the low-income tariff, IAWC has estimated that bills resulting from the Company's proposed rates are expected to take up approximately 2.8% of household income – above the 2% BTI threshold that is generally regarded as being "affordable" for non-low-income customers. IAWC states that as acknowledged by the AG, the Company's proposed low-income eligibility threshold is supported by substantial community-level data - the Company's geospatial poverty analysis comprehensively

assesses the prevalence of poverty in its service areas through a specific service territory analysis of customers and income data available at the zip code level and does not rely on state-level averages. IAWC points out that in contrast, per Staff witness Boggs' explanation, the threshold level established for PPWC in Docket No. 21-0198 was done without actual data, including information supporting how many households would be eligible.

IAWC argues that it is well-established that "any finding, decision or order made by the Commission shall be based exclusively on the record for decision in the case." 220 ILCS 5/10-103. IAWC asserts that Commission practice is clear on this point – the Commission must have the power to "deal freely with each situation that comes before it, regardless of how it may have dealt with a similar or even the same situation in a previous proceeding." *Commonwealth Edison Co.*, 405 Ill. App. 3d at 407-408; *citing Miss. River Fuel Corp*, 1 Ill. 2d at 513. Therefore, "[a] record containing new evidence or argument that implicates past decisions compels reconsideration on the new record and may require a different result." *Commonwealth Edison Co.*, 405 Ill. App. 3d at 408. IAWC notes that the AG also acknowledges this point, stating that the Commission is not required to approve the same program for IAWC that it approved for PPWC.

IAWC notes that Staff offers no other justification for why the Company's proposed eligibility threshold should not be adopted. IAWC argues that binding it to another utility's rate design, simply because the other utility suggested it first, is unreasonable and ignores the reality of the Company's distinct and separate customer base, service territory, and proposed low-income program. IAWC concludes that the Company's proposed eligibility threshold of 150% of the FPL is reasonable, supported by evidence, and should be adopted.

b. Staff's Position

Staff states that the Company proposes low-income discount tariff pricing to make water and wastewater service more affordable for customers with demonstrated income at or below 150% of the FPL. IAWC Ex. 7.00 at 34-35. The tariff discount will be a 70% discount on all applicable base rate volumetric charges for qualifying customers. *Id*. at 35. The Company's proposal does not include any limits (or caps) on the number of participants in the program, the dollar amount of discounts provided to eligible customers, or the amount of monthly water or wastewater service that a qualifying customer can use under the discounted tariff. *Id*. at 35-36. The Company proposes to recover the costs of the discounts provided to customers through the Company's Rider VBA. *Id*. Staff objects to the Company's proposed eligibility threshold, the lack of inclusion of usage caps and its approach to cost recovery. Staff recommends the Commission approve the Company's low-income discount tariff with Staff's proposed modifications to the eligibility criterion, usage caps, and cost recovery. Staff Ex. 7.0 at 57.

Staff argues that the Commission should reject the Company's proposal to offer its low-income tariff to any water or wastewater customer whose household income is at or below 150% of the FPL. Staff Ex. 7.0 at 51. Staff recommends the tariff be available to all customers with demonstrated income at or below 100% of the FPL. *Id*. Mr. Boggs explained in testimony that the Commission recently approved this criterion for a discounted volumetric rate provided by PPWC. *Id*. at 51-52. In that docket, the company,

Staff, and the AG all agreed that the 100% threshold was "reasonable" and should be adopted.

As this is a new proposal from IAWC and the low-income rate approved in Docket No. 21-0198 is still in its infancy stage, Staff does not see a compelling reason to allow a different income eligibility threshold to be approved in two different water/wastewater utilities in Illinois. *Id*. at 52. Thus, to remain consistent, Staff recommends the Commission approve IAWC's low-income discount tariff to all customers with demonstrated income at or below 100% of the FPL. *Id*. Staff is unaware of any compelling reason that the Commission should approve different income level thresholds for two water/wastewater utilities in the same state and whose territories and customer makeup is similar. *Id*. at 52-53. Although Staff's recommendation may reduce the amount of IAWC customers that are eligible for the low-income discount rate tariff, this will also mitigate the reduced revenue from offering lower rates that will have to be recovered from customers that do not qualify for the discounted tariff. *Id*.

The Company argues that Staff's concerns regarding inconsistent eligibility criteria are not reasonable justifications for rejecting the Company's "data-driven" proposal. Staff argues that the Company's arguments are meritless. Staff has explained that both customer bases are made up of a combination of smaller, former municipal systems that were consolidated into a larger water and sewer utility system over time, and that both IAWC and PPWC's customer classes are spread across several counties in Illinois. IAWC's proposal could result in a customer being eligible in one community, but not in a neighboring community. Staff states that at this early stage of the low-income program, there is no reason for two Illinois water and wastewater utilities to offer different eligibility parameters for water and wastewater customers. Staff asserts that the Commission should approve Staff's recommended eligibility threshold that the tariff should be available to customers with demonstrated income at or below 100% of the FPL.

c. AG's Position

The AG argues that the Commission is not required to approve the same program for IAWC that it approved for PPWC. AG witness Larkin-Connolly pointed out, "Given the magnitude of the rate increases the Company proposes . . . , I view the adoption of this discount rate as an important affordability measure." AG Ex. 2.0 at 29-30. When compared with the Low-Income Home Energy Assistance Program ("LIHEAP"), Staff's proposed eligibility threshold is very low for a discount rate program and would thus omit many struggling ratepayers from participation in a program that would otherwise provide help to cover IAWC's increasingly unaffordable rates. Raising the eligibility threshold for certification to 150% gives greater opportunity for low-income customers to avoid being overburdened by IAWC's rate increases and allows a greater number of struggling ratepayers to participate in its program.

The AG shows that Staff's reliance on the PPWC program is also misplaced because the service areas of the two utilities are very different. USI has approximately 15,000 water customers and 4,000 wastewater customers spread over 22 districts. Docket. No. 21-0198, Order at 11, 36. In contrast, IAWC has 375,000 customers in more than 60 municipalities. *See* IAWC Municipality List; IAWC Ex. 1.00 at 4. IAWC's estimates show that approximately 46,000 of its residential water customers and

approximately 9,000 of its residential wastewater customers make less than 150% FPL—meaning that the number of customers eligible for IAWC's program is more than double USI's entire customer base. If the Commission caps IAWC's eligibility threshold at 100% FPL, then it would exclude approximately 20,000 customers from this program. Further, IAWC serves many Illinois cities (*e.g.* Peoria, Pekin, Champaign, ESL) as well as more suburban (Chicago area) and rural areas. The cost of living in these areas may be higher than in PPWC's service territory. As a result, the populations served by the two utilities are not comparable. The AG maintains that more flexible eligibility criteria that more closely mirrors eligibility in the Energy Assistance Act and the Water and Sewer Assistance Act is more appropriate for a utility of IAWC's size. *See, e.g.,* 305 ILCS 20/6 (Energy Assistance Act); 305 ILCS 21/20 (Water and Sewer Assistance Act).

The AG requests that the Commission reject Staff's proposal to lower IAWC's discount rate eligibility threshold to 100% FPL.

d. Commission Analysis and Conclusion

While Staff's 100% FPL eligibility threshold is reasonable, IAWC's proposed eligibility threshold of 150% of the FPL for participation in its low-income tariff is also reasonable and supported by substantial evidence that analyzes the Company's residential customer population, including the estimated number of customers by multiple of FPL and the expected BTI ratios for each of those groups based on the Company's proposed rates. Staff claims the Commission should make IAWC's low-income tariff consistent with the low-income tariff approved for PPWC in Docket No. 21-0198 in part because having consistent State-wide eligibility parameters places Illinois customers on a level playing field. Low-income tariff programs are relatively new. While uniformity among low-income tariff programs may be an appropriate goal in the future, the Commission must make a decision based on the evidence in this record. IAWC has a different service area than PPWC, including many more ratepayers in very different communities, and limiting the eligibility threshold to 100% of the FPL unnecessarily excludes struggling ratepayers from participating in the program. The Commission adopts IAWC's proposed eligibility threshold of 150% of the FPL.

2. Usage Caps

a. IAWC's Position

IAWC states that its proposed low-income discount tariff will be available to all customers in all pricing zones and will provide a 70% discount on all base rate volumetric charges in each district. IAWC notes that the Company has determined that it is in the best interest of IAWC customers to not impose a cap on the amount of water that can be used each month under the discounted rates because there is a strong positive correlation between the number of people living in a home and the amount of water used for basic water service in the home. In other words, the more people that reside in a household, the more water one can expect that household to use. IAWC explains that because the definition of FPL takes into account both household income and the number of people living in a home, and households with as many as six or seven people can qualify under the 150% of FPL provision for the proposed low-income tariff, it is appropriate to ensure that the potential benefits of the tariff are available to larger families that would qualify under the tariff's income guidelines. IAWC notes that the AG agrees

with this approach, acknowledging that "the variability in the size of low-income households makes it appropriate to forego a volumetric bill usage cap on discounted water," and given that "application of the discount to a specific usage cap had the potential to undermine the program's goal to keep water and sewer rates affordable for low-income households." AG Ex. 2.0 at 31.

IAWC states that Staff objects to this approach and argues that usage under the low-income tariff should be capped using "a similar usage forecast and calculations…as the Commission approved in Docket No. 21-0198." Staff Ex. 7.0 at 54. IAWC explains that Staff's justification for the usage cap is based, again, on a preference for consistency and a desire to bind IAWC to the tariffs approved for an unrelated utility with separate geographical service areas and customer base. Again, similar to Staff's objection to the Company's proposed eligibility threshold, there is no data or evidence supporting this proposal. IAWC maintains that Staff has not offered any analysis of how a cap on usage under the low-income rate may impact participation, customer bills, or affordability, not has Staff demonstrated why PPWC's usage forecast and calculations are reasonable or appropriate for use by IAWC. Staff also argues a usage cap is necessary to ensure that low-income customers are incentivized to conserve water in the same way as non-low-income customers. Again, IAWC notes, there is no evidence that low-income customers (who necessarily have lower income levels than the non-low-income customers) may lack incentives to conserve water or may otherwise use water and wastewater service indiscriminately. Neither has Staff demonstrated what factors may drive water conservation for non-low-income customers, such that they will conserve water whenever possible. IAWC further notes that under Staff's proposal (assuming an eligibility threshold of 150% of FPL), more than a quarter of potential eligible customers will see significant differences of anywhere between 16% and 78% depending on the size of the threshold.

b. Staff's Position

The Company's proposed low-income discounted tariff does not include any limit (or cap) on the amount of water/wastewater service that a low-income customer can use under the discounted tariff. IAWC Ex. 7.00 at 35. Staff objects to this aspect of the Company's proposal. Staff Ex. 7.0 at 53.

Staff witness Boggs recommends IAWC use a similar usage forecast and calculations for both its water and wastewater low-income tariff proposal as the Commission approved in Docket No. 21-0198. Staff Ex. 7.0 at 54. In that case, PPWC developed a low-income usage forecast model based on a bill frequency analysis of its residential bills and, from that model, PPWC estimated that the average low-income usage on a bill would be 2.299 kilogallons, equal to a 67% factor for low-income usage. *Id*. The Commission approved using this 67% factor to forecast total low-income sales for rate design purposes, which addressed the concerns of the AG regarding bill distribution effects of using the residential class average usage to forecast low-income sales. Docket No. 21-0198, Order at 105. Staff recommends that IAWC use a similar usage forecast and calculations for both its water and wastewater low-income tariff proposal. Staff Ex. 7.0 at 54. Staff asserts that since the low-income tariff rate proposals are in their infancy stage, having two different low-income tariff programs running simultaneously with different rules and eligibility requirements between similar utilities could lead to fairness concerns between the two customer bases. *Id*.

Staff witness Boggs calculated a usage cap for water and wastewater service for IAWC's proposed discounted tariff using the method approved by the Commission in Docket No. 21-0198. *Id*. Based on IAWC's usage calculations provided by the Company and the approved USI model described previously, the overall average water usage for IAWC customers is 4,130 gallons per month. The average usage among IAWC customers who do not use the average amount of water in a month is 2,314 gallons. In this IAWC proceeding, the usage adjustment would calculate to 56%. Staff Ex. 7.0 at 54-55, Att. 7.06.

Staff states that the Commission should reject the Company's proposal of no cap on the amount of monthly water or wastewater service that a low-income customer can use under the discounted tariff. Staff Ex. 7.0 at 55. Customers that qualify for the discounted tariff should have the same incentive to conserve water as the IAWC customers that do not qualify for the discounted tariff. The Company's calculated average water and wastewater usages among all customers includes all non-low-income and low-income users. Staff Ex. 7.0 at 55. Staff states that the Company has not provided information or documentation to illustrate that the family size differs among customers that qualify for the discounted tariff and customers that are ineligible for the discounted tariff. Staff's recommendation should provide all water and wastewater customers an incentive to conserve water whenever possible. *Id*.

c. AG's Position

The AG requests that the Commission deny Staff's proposal for a usage cap because the Commission is not required to approve the same discount rate program for multiple utilities. The AG notes that Staff's usage cap would arbitrarily limit the discounted service available to low-income ratepayers without regard to family size or location. Indeed, the poverty rate explicitly recognizes the higher costs associated with larger families, and the AG contends such families, while qualifying for the program, should be able to satisfy basic health and sanitation needs by using the amount of water appropriate to the number of people in the household. A usage cap based on an average family size would unreasonably limit the benefit available to larger families. The AG maintains that if the Commission were to approve Staff's proposal, then it would unreasonably force low-income ratepayers to ration their water use to avoid paying the full cost of IAWC's unaffordable service for any amount of water or wastewater used above the proposed caps. The AG thus requests that the Commission reject Staff's proposal to impose a cap on water and wastewater usage subject to IAWC's discount rate.

d. Commission Analysis and Conclusion

The Commission is not persuaded by Staff that a usage cap is necessary. As the Company points out, there is no evidence that low-income customers will use unreasonable amounts of water due to the reduced rates. Moreover, there is a strong positive correlation between the number of people living in a home and the amount of water used for basic water service in the home. As IAWC notes, it is appropriate to ensure that the potential benefits of the tariff are available to larger families that would qualify under the tariff's income guidelines.

Staff claims that having two different low-income tariff programs running simultaneously with different rules and eligibility requirements between similar utilities

could lead to fairness concerns is misplaced. Utilities offer many different products to their customers, some which are required by law and some which are not. Utilities are not required to offer low-income tariffs to their customers and therefore, are not required to mimic other utilities' nonstandard services.

3. Revenue Recovery

a. IAWC's Position

IAWC states that because it is unclear how many customers might avail themselves of the low-income rate to recover the cost of the 70% discount on volumetric rates provided to eligible customers through the low-income tariff, the Company proposes to use its VBA mechanism to recover the cost of the discount on volumetric rates provided through its low-income tariff. The VBA Rider, which is reconciled every year in a docketed Commission proceeding, allows the Company to recover shortfalls in volumetric revenues or provide credits from an overcollection of volumetric revenues to customers based on approved volumetric revenue requirements in this proceeding. Under this approach, IAWC explains, if all customers who were eligible for the tariff participated at full usage, the cost of the low-income program would be approximately $10.2 million. The associated increase in the VBA to recover this cost would be approximately $0.03 per hundred gallons, which for a low-income household of two person would equate to $0.78 per month. Because the typical discount for that low-income customer is approximately $16 per month, the associated increase in the VBA represents less than 5% of the total discounts available to low-income customers. IAWC argues that this approach is reasonable, avoids imprecise estimates of potential customer participation in the tariff, and ensures that any revenue shortfalls that accrue from the low-income program are reflected in the VBA calculation rather than guaranteeing the Company cost recovery based on a predetermined estimated level of cost.

IAWC notes that Staff objects to IAWC's proposal to recover the exact amount of its revenue shortfall through Rider VBA, arguing that Rider VBA was not established as a mechanism to recover loss of revenue as the result of offering a low-income rate through a discounted tariff, and that IAWC's proposal would potentially set a dangerous precedent by allowing the Company to reduce rates for an unlimited amount of water for a particular customer class knowing that there will be guaranteed recovery of that revenue somewhere else. Instead, Staff recommends that IAWC assume 100% participation in its low-income rate to develop a rate that recovers any revenue shortfalls from the low-income tariff through the volumetric rate in each respective water and wastewater division.

Again, IAWC contends, Staff's recommendation is designed to remain consistent with the method approved in Docket No 21-0198. And, again, IAWC states, Staff offers no evidence as to why this approach or Staff's proposed assumptions are appropriate or reasonable for IAWC. In fact, IAWC notes, Staff acknowledges the inexactitude of this proposal, recognizing that it is unlikely that the Company will get 100% participation from all customers who qualify. To address this imprecision, Staff simply recommends that the Company engage in annual reporting (excluding first-year statistics) to estimate the volumes of water and wastewater used by the number of low-income ratepayers and determine how to set non-low-income volumetric rates in future rate filings.

IAWC states that Staff has not provided any evidence demonstrating why this approach is reasonable, nor any justification for its application to IAWC beyond ensuring consistency with PPWC. IAWC explains that developing a volumetric rate that assumes a relatively large assumption of tariff participation into rate design will inevitably increase rates for customers with no ability to reduce those rates until the next rate case if there is less than 100% participation in the low-income tariff by eligible customers. In contrast, IAWC notes that its proposal results in lower rates for customers, and only recovers the cost of discounts offered through the tariff when those discounts are used; those costs are recovered in the next year, which further reduces the cost of the program for nonparticipants.

Further, IAWC states, Staff's concern that Rider VBA was not designed to recover revenue shortfalls resulting from a low-income rate is irrelevant, and that Staff offers no case law, evidence, or contradictory tariff language to support this view. IAWC points out that the first low-income rate for water and wastewater utilities was approved just nine months ago in Docket No. 21-0198 (which Staff has repeatedly cited). Therefore, IAWC states, indisputably, the Company's VBA Rider was approved by the Commission when a low-income discount tariff had not yet been contemplated, let alone litigated. Nevertheless, IAWC states, recovery of revenue shortfalls resulting from a low-income rate is consistent with the original purpose of the VBA Rider – to allow the Company to recover its approved volumetric revenue requirement, no more or less.

IAWC explains that as designed, its VBA tariff reconciles rate case volumetric revenues generally. IAWC asserts that in order for low-income discounts to not be recovered through the VBA, the tariff language of Rider VBA and the calculation of the factor itself would have to be amended to specifically exclude rate case revenues and actual revenues associated with low-income discounts. IAWC asserts that its VBA tariff carries the force of law, and Staff has not proposed any changes to the tariff language or to the VBA calculation that would specifically exclude the reconciliation of revenues associated with a low-income tariff. Without such changes, IAWC's VBA tariff would capture shortfalls in revenue associated with the low-income tariff in its revenue calculation. *See Sheffler v. Commonwealth Edison Co.*, 2011 IL 110166, ¶28 ("Once the Commission approves a tariff, the tariff is a law, not a contract, and has the force and effect of a statute"); *citing Adams v. N. Ill. Gas Co. d/b/a Nicor Gas Co.*, 211 Ill. 2d 32, 55 (2004).

IAWC also asserts that under Staff's approach, which would adjust volumetric rates to account for assumed participation levels, IAWC would still be required to use its VBA mechanism to reconcile total actual fiscal year volumetric revenues; thus, any deviation from Staff's assumptions about low-income discounts would cause a fluctuation in actual fiscal year volumetric revenues, which would again be recovered through the normal VBA process. Therefore, unless IAWC's VBA Rider is changed to specifically exclude fluctuations in revenues due to low-income tariff participation, any changes in revenues from Rate Case volumetric revenue due to differences between actual and forecasted low-income participation will flow through the VBA no matter what assumptions are initially made.

IAWC argues that Staff's additional objections to the use of Rider VBA to recover revenues associated with the low-income tariff are similarly unsupported. While Staff

maintains that Rider VBA was not intended to recover anticipated lost volumetric revenue, IAWC notes that this argument ignores that, in Docket No. 16-0093, the Commission approved Rider VBA and acknowledged its myriad benefits for the Company's customers, including that Rider VBA "supports revenues for programs and investments that improve water efficiency." Docket No. 16-0093, Order at 72. Thus, IAWC asserts, while the Commission did not directly address Rider VBA's relationship to low-income rates (nor would it, given that none would be proposed in Illinois for another five years), the Commission clearly anticipated reduced volumetric revenues resulting from Company-implemented programs. And, although Staff argues that the Company's proposed use of Rider VBA could somehow set an inappropriate precedent, Staff disregards the clear laws and regulations in place that prevent utilities from, on their own accord and independent of Commission oversight, setting (or decreasing) rates for specific groups based on an assumption that the VBA will reconcile the difference.

IAWC states that under Staff's proposal, the Company would be guaranteed this level of cost recovery automatically in rates every year, even for eligible customers that do not participate in the program, and those increased revenues would accrue to the Company's benefit rather than guaranteeing the Company full funding every year regardless of customer participation levels. IAWC asserts that such an approach will increase rates for customers with no ability to reduce those rates until the Company's next rate case, if there is anything less than 100% participation in the low-income tariff by the Company's estimated 46,070 eligible customers.

IAWC states that its proposed low-income tariff rate design is designed with the long-term best interest of its customers in mind, maximizes benefits to as many eligible customers as possible, and mitigates the cost of the program for all IAWC customers. IAWC argues that it should be adopted. In contrast, IAWC states, Staff's proposal reduces eligibility, reduces benefits, and increases costs to non-participating customers beyond what is necessary to fund the program. IAWC argues that Staff's reliance on the low-income tariff approved in Docket No. 21-0198 is inappropriate, unsupported, and should be rejected.

b. Staff's Position

Staff recommends the Commission reject the Company's proposal to recover the costs of the discounts provided to customers under the proposed low-income tariff through the Company's Rider VBA.

Rider VBA was established to ensure the volumes and revenues used in the rate case are trued up to the actual amounts of revenue if consumption drops or rises. Staff Ex. 7.0 at 57. Rider VBA is not an appropriate mechanism to recover loss of revenue as the result of offering a low-income rate through a discounted tariff for low-income customers as proposed by IAWC in this docket. *Id*. IAWC admits as much, stating that Staff "may very well be correct that Rider VBA does not contemplate revenue losses as a result of low-income rates because that Rider was developed at a time when low-income discount rates did not exist and were not proposed." IAWC Ex. 18.00 at 20. However, IAWC argues that Rider VBA does not address any specific cause of revenue fluctuation and does not distinguish between causes of revenue fluctuation. *Id*. The Company also asserts that Staff's concern that "Rider VBA was not designed to recover revenue

shortfalls resulting from a low-income rate is irrelevant." IAWC IB at 156. Staff asserts that the Commission should reject these arguments; Staff argues that the purpose of Rider VBA is exceedingly relevant. When the Commission approved IAWC's Rider VBA in Docket No. 16-0093, utilizing Rider VBA for the circumstances in this proceeding, as a mechanism to recover anticipated lost volumetric revenue, was not contemplated. Specifically, Rider VBA was designed to ensure that it collects the revenues authorized by the Commission, independent of changes in sales volume. Docket No. 16-0093, Order at 68. Rider VBA, as implemented since Docket No. 16-0093, compares the rate case authorized amount of volumetric revenues to actual volumetric revenues, net of production expenses (power, chemicals, and water waste disposal) that vary directly with sales levels, and provide a credit (if revenues exceed the authorized level) or a volumetric surcharge (if revenues are below the authorized level). *Id*. Netting production costs ensures that customers pay only those production costs for the actual amount of water delivered. *Id*. Under Rider VBA, prices will increase and decrease as sales volume changes between rate cases, but it will hold revenues at authorized levels. *Id*. Utilizing Rider VBA as proposed by the Company in this proceeding could set an inappropriate precedent for the use of Rider VBA in future proceedings and allow for recovery of items that are outside the scope of what is deemed appropriate for recovery under the rider. Staff states that IAWC would seemingly have the Commission ignore that Rider VBA should only recover volumetric charges, and instead, utilize Rider VBA as a mechanism to recoup, improperly, revenue shortfalls from the proposed low-income tariff.

Instead of improperly utilizing Rider VBA, Staff recommends the Company recover the revenue shortfall from customers that do not qualify for the discounted tariff through the Usage Charge. The Commission recently approved a similar approach in Docket No. 21-0198. Docket No. 21-0198, Order at 107. Consistent with the Commission's Order in that case, Staff recommends that IAWC use the 67% factor to estimate usage forecasts for water and wastewater customers who are at or below 100% of the FPL and would be eligible for the low-income discount tariff. To calculate rates in this case, the Company should assume 100% participation from all customers that are eligible by virtue of having annual income at or below 100% of the FPL. The Company should recover revenue shortfalls from non-low-income customers separately through the volumetric rate in the respective water and wastewater divisions. *Id*. To remain consistent with the method approved in Docket No. 21-0198 the Commission should approve IAWC using a 67% factor (2,767 gallons per month for water customers and 2,675 gallons per month for wastewater customers) to forecast its total low-income sales for rate design purposes. *Id*. It is also Staff's contention that a pitfall to recovering the revenue shortfall through Rider VBA is that revenue shortfall will be recovered from all customers, which could greatly reduce the benefits to low-income customers if large amounts of the revenue shortfall would need to be recovered from all customers.

The Company asserts that Staff's recommendation is designed to remain consistent with Docket No. 21-0198, and "offers no evidence as to why this approach or Staff's proposed assumptions are appropriate or reasonable for IAWC." IAWC IB at 155. This is false. Staff states that the Commission should remain consistent with the low-income tariff approved in Docket No. 21-0198, and Staff has provided several reasons as to why this is important.

Staff also recommended certain reporting requirements related to the Company's proposed low-income discount tariff. Mr. Boggs explained that, at the onset of offering this discount tariff, it is unlikely that the Company will get 100% participation from all customers who qualify. Staff Ex. 7.0 at 59. To estimate the volume of water discounted by the low-income tariff in future years, Staff recommends the Company provide an annual report documenting the percentage of eligible low-income ratepayers who have signed up to take advantage of the low-income tariff offering. *Id*. Staff recommends eliminating the first-year statistics for eligible customers and the volumes of water and wastewater used at the discounted rate because it is unknown how the low-income rate will be communicated to customers and how likely those customers will provide the income documentation to prove eligibility. After the tariff has been established for a year and the Company has had adequate opportunity to communicate the availability of the program, the Company's low-income statistics should be averaged for all subsequent years until the Company's next general rate case. *Id*. Upon that filing, the Company should have enough data to more accurately estimate the volumes of water and wastewater used by the number of low- income ratepayers that have proven eligibility and participated in the program. The data compiled should include the number of customers that have taken rates under the low-income tariff and the average volume of water used at the discounted rate. This data will aid in determining how to set non-low-income volumetric rates in future rate filings so the shortfall of revenues collected at the discounted low-income rate can be recovered through the volumetric rates paid by non-low-income ratepayers. *Id*. at 59-60. Staff made a similar recommendation in Docket No. 21-0198, which the Commission approved. Docket No. 21-0198, Order at 111.

For the foregoing reasons, Staff recommends the Commission adopt a low-income discount tariff for IAWC water and wastewater customers with the following modifications: the tariff should be available to customers with demonstrated income at or below 100% of the FPL and the tariff should include usage caps on the amount of monthly water or wastewater service that customers can use under the discounted tariff of 2,771 gallons for water customers and 2,675 gallons for wastewater customers. Additionally, Staff asserts that the Commission should reject the Company's proposal to recover the costs of the discounts provided to customers under the low-income tariff through Rider VBA. Staff argues that the Commission should approve Staff's recommendation that IAWC recover the revenue shortfall from non-low-income customers in the respective water and wastewater service areas as the customers using the discounted tariff rate. Staff also recommends the Company provide, in its next general rate case, an annual report documenting the percentage of eligible low-income ratepayers who have signed up for the low-income tariff offering. Staff also states the Commission should approve Staff's reporting requirements.

c. AG's Position

Staff proposed that IAWC assume 100% of eligible customers will enroll in the program and charge other ratepayers the costs of that participation upfront, rather than have IAWC recover the actual costs of participation through the Rider VBA. Staff Ex. 7.0 at 58. In contrast, IAWC proposed that it refrain from assuming the participation level upfront, and instead recover the actual costs of the program annually through its Rider

VBA. The AG supports IAWC's proposal because it is a more accurate measure of program participation and cost.

The AG demonstrates that assuming that 100% of eligible customers will participate is unreasonable and will inevitably result in costs that do not reflect the actual number of program participants. The AG offers LIHEAP, a statewide opt-in energy assistance program, as an example. LIHEAP experienced 13% to 25% participation from 2014 to 2020. *See* Docket No. 21-0198, Order at 109. The AG maintains that it is unreasonable to expect 100% of eligible customers to participate in IAWC's program when only 25% of eligible ratepayers participated in an established statewide program with similar opt-in application criteria. IAWC will recoup the full costs of the program through both proposals, but the AG contends that it is better to recover these costs through the Rider VBA after the Company and Commission know the actual participation levels. This will avoid creating large swings for Rider VBA to fill and prevent overcharging ratepayers upfront and then having to potentially refund them later through Rider VBA. The AG asserts that the Commission should not require customers to pay more for a program based on an unreasonable and unrealistic participation estimate.

The AG also points out that Staff failed to reconcile the fact that Rider VBA will be used to adjust the costs of recovery either way. According to the AG, the Commission is presented with two choices on this issue, either require ratepayers to pay Staff's unrealistic and inflated estimated costs of the program upfront and refund ratepayers for these excessive charges through the Rider VBA later; or permit the Company to charge ratepayers the actual costs of the program through the VBA, after the actual number of customers who participate in the program is known. The AG maintains that the second option is preferable because it is based on actual participation—not an unreasonable and unrealistic participation estimate.

For these reasons, the AG requests that the Commission adopt the revenue recovery mechanism proposed by IAWC.

d. Commission Analysis and Conclusion

Staff recommends that the Commission approve revenue recovery under the low-income tariff based on the process approved in Docket No. 21-0198. Staff also argues that using Rider VBA for cost recovery is counter to the purpose behind the approval of Rider VBA. Staff therefore suggests using 100% participation from all eligible customers to calculate rates in this case. Staff states the Company should recover revenue shortfalls from non-low-income customers separately through the volumetric rate in the respective water and wastewater divisions.

The Commission agrees that Rider VBA was not approved with a low-income tariff in mind. The VBA tariff, however, reconciles rate case volumetric revenues generally. "Rider VBA is designed to ensure that it collects the revenues authorized by the Commission, independent of changes in sales volume." Docket No. 16-0093, Order at 68. The Commission agrees with IAWC that Rider VBA benefits the Company's customers, and "supports revenues for programs and investments that improve water efficiency." *Id.* at 72.

Using 100% eligible participation for estimating purposes surely overstates the costs of the program. The Commission agrees with the AG that based on its experience with LIHEAP, there is never 100% participation among eligible customers.

The Commission further agrees with the AG that Rider VBA will eventually be used to adjust the costs of recovery. Ratepayers can pay Staff's overestimated costs of the program upfront and later be refunded through Rider VBA or, the Company can charge ratepayers the actual costs of the program through the VBA. The Commission finds that the second option is preferable because costs are based on actual participation. The Company's cost recovery proposal, supported by the AG, is approved.

Staff makes several recommendations on reporting the results of the low-income tariff. It does not appear any party objects to those; they are adopted.

VIII. OTHER

A. Uncontested Issues

1. Depreciation Study

IAWC states that Staff noted the depreciation study used for this case was calculated as of December 31, 2016. IIWC/FEA also recommend that IAWC be required to conduct an updated demand study. The Company has agreed to conduct a depreciation study prior to its next rate case. The Commission finds this is reasonable and it is approved.

2. Original Cost Determination

IAWC accepts the proposed original cost determination as of December 31, 2021 of $2,455,743,929. This issue is uncontested. The Commission finds this is reasonable and it is approved.

3. Gross Revenue Conversion Factor

IAWC explains that the Company's original filing applied a uniform gross revenue conversion factor ("GRCF") based on the total company average uncollectible rate provided in the Company's Schedule C-16. Staff and the AG proposed to apply a GRCF calculated using a zone-specific uncollectible rate. Staff proposed Schedules 9.07 for GRCF. Staff Ex. 9.0 at 2. IAWC did not contest Staff's Schedules.

The Company has updated its GRCF calculation based on the Company's proposed individual rate zones uncollectible percentage. These updates can be found in the Company's revised A-2.1 schedule. The Commission finds IAWC's updated GRCF is reasonable and it is approved.

4. Demand Study

IAWC notes that IIWC/FEA recommend that the Company be required to conduct a new demand study which includes load characteristics of the fifteen newly acquired water systems and the fourteen wastewater systems in this case in addition to any additional systems the Company acquires before the next rate case so that peaking factors updated for these acquisitions can be included in the next COS study provided by the Company, and Staff agreed with that recommendation. IAWC states that the Company agrees that it would be useful to update its capacity study in the next rate case

to reflect the acquisitions the Company has made and might make before the filing of the next rate case. The Commission finds this is reasonable and it is approved.

5. Typographical Errors

Staff identified typographical errors included in the Company's proposed Standby Water Usage Charges for its Central Division customers and the Company's proposed Metered Water Usage Charge for the Central Division (Pontiac District). Staff Ex. 8.0 at 3. Staff recommended that the Company correct those errors identified in Schedule E-1. IAWC Ex. 15.00 at 14. IAWC agreed to update and correct its proposed rates in its tariff pages filed in compliance with the final Order in this proceeding. *Id*. The Commission finds this is reasonable and is approved.

IX. FINDINGS AND ORDERING PARAGRAPHS

The Commission, having considered the record herein, is of the opinion and finds that:

(1) Illinois-American Water Company is in the business of furnishing water and sewer service to the public in various areas in the State of Illinois and is a public utility as defined in the Public Utilities Act;

(2) the Commission has jurisdiction over the parties hereto and of the subject matter herein;

(3) the findings and conclusions stated in the prefatory portion of this Order are supported by the evidence of record and are hereby adopted as findings of fact; Appendices A through E attached hereto provide supporting calculations for various conclusions in this Order;

(4) the test year in this proceeding is a future test year consisting of the 12 months ending December 31, 2023; this test year is appropriate for purposes of this proceeding;

(5) for purposes of this proceeding, Illinois-American Water Company's net original cost rate bases are set forth in Appendices A through E;

(6) the $2,455,743,929 original cost of plant for Illinois-American Water Company as of December 31, 2021 should be approved as the original cost of plant;

(7) a just and reasonable rate of return which Illinois-American Water Company should be allowed an opportunity to earn on its net original cost rate base is 7.01%; this rate of return incorporates a return on equity of 9.78%;

(8) the rates of return set forth in Finding (7) hereinabove result in operating revenues and net annual operating income as shown in Appendices A through E based on the test year herein approved;

(9) Illinois-American Water Company's rates which are presently in effect for water service and sewer service are insufficient to generate the operating income necessary to permit it the opportunity to earn a fair and reasonable return on net original cost rate base; the currently effective rates should be permanently canceled and annulled;

(10) the rates proposed by Illinois-American Water Company would produce a rate of return above a return that is fair and reasonable; Illinois-American Water Company's Proposed Tariffs should be permanently canceled and annulled;

(11) Illinois-American Water Company should be authorized to place into effect tariff sheets designed to produce annual operating revenues as contained in Appendices A through E, such tariff sheets to be applicable to service furnished on and after their effective date; with compliance tariffs to be filed annually which reflect the re-allocation stage of the Central Zone's wastewater revenue requirement; the terms and conditions in these tariff sheets should be consistent with Finding (17) below;

(12) the cost of service, interclass revenue allocation, wastewater revenue reallocation, rate design, and tariff terms and conditions found appropriate in the prefatory portion of this Order are just and reasonable for purposes of this proceeding and should be adopted;

(13) the 2021 actual and projected 2022 and 2023 QIP amounts for Central Water included in base rates are comprised of Utility Plant in Service of $215,171,408; $305,495,156 and $418,193,512, respectively; related accumulated depreciation of $8,686,824; $14,559,772 and $19,654,797, respectively; related accumulated deferred income tax of $22,060,880; $45,701,157, and $53,280,959, respectively, for NetQIP – Rate base of $184,423,704 for 2021, $245,234,227 for 2022 and $345,257,756 for 2023 and $3,920,937; $5,873,284; and $10,490,886 in annualized depreciation expense, respectively;

(14) the 2021 actual and projected 2022 and 2023 QIP amounts for Pekin Water included in base rates are comprised of Utility Plant in Service of $9,161,804; $15,111,206 and $21,086,089, respectively; related accumulated depreciation of $445,061; $751,144 and $1,037,664, respectively; related accumulated deferred income tax of $1,062,931; $2,230,519 and $2,907,895, respectively, for NetQIP – Rate base of $7,653,813 for 2021; $12,129,543 for 2022 and $17,140,530 for 2023 and $219,004; $229,479 and $240,146 in annualized depreciation expense, respectively;

(15) the 2021 actual and projected 2022 and 2023 QIP amounts for Lincoln Water included in base rates are comprised of Utility Plant in Service of $4,601,999; $15,539,951 and $31,414,074, respectively; related accumulated depreciation of $176,882; $445,963 and $746,579, respectively; related accumulated deferred income tax of $458,960; $1,624,459 and $1,724,395, respectively, for NetQIP – Rate base of $3,966,158 for 2021; $13,469,530 for 2022 and $28,943,100 for 2023 and $84,147; $88,586 and $93,105 in annualized depreciation expense, respectively;

(16) the 2021 actual and projected 2022 and 2023 QIP amounts for Chicago Metro Wastewater included in base rates are comprised of Utility Plant in

Service of $21,545,373; $32,916,397 and $41,425,245, respectively; related accumulated depreciation of $737,814; $1,441,240 and $1,604,755, respectively; related accumulated deferred income tax of $1,507,322; $2,794,412 and $3,005,914, respectively, for NetQIP – Rate base of $19,300,238 for 2021; $28,680,745 for 2022 and $36,814,575 for 2023 and $413,662; $703,427 and $329,170 in annualized depreciation expense, respectively;

(17) the new tariff sheets authorized to be filed by this Order shall reflect an effective date not less than five working days after the date of filing, with the tariff sheets to be corrected within that time period if necessary, except as is otherwise required by Section 9-201(b) of the Act as amended;

(18) the Commission has considered the estimated costs to be expended by Illinois-American Water Company to compensate attorneys and technical experts to prepare and litigate rate case proceedings and assesses that the amount included as rate case expense in the total revenue requirement of $594,000 is just and reasonable pursuant to Section 9-229 of the Act

(19) Illinois-American Water Company is directed to conduct a depreciation study and demand study prior to its next rate case;

(20) Illinois-American Water Company is directed to provide updated COS studies in accordance with the conclusions herein; and

(21) Illinois-American Water Company should be directed to conduct a new demand study that includes load characteristics of the fifteen newly acquired water systems and the fourteen wastewater systems in this case, and any additional systems the Company acquires before the next rate case, so that peaking factors updated for these acquisitions can be included in the next cost of service study provided by the Company.

IT IS THEREFORE ORDERED by the Illinois Commerce Commission that the Proposed Tariffs proposing a general increase in rates, filed by Illinois-American Water Company on February 10, 2022, are hereby permanently canceled and annulled.

IT IS FURTHER ORDERED that Illinois-American Water Company is authorized and directed to file new tariff sheets with supporting workpapers in accordance with Findings (11), (12), and (17) of, and other determinations in, this Order, applicable to service furnished on and after the effective date of said tariff sheets.

IT IS FURTHER ORDERED that upon the effective date of the new tariff sheets to be filed pursuant to this Order, the tariff sheets presently in effect for water and sewer service rendered by Illinois-American Water Company which are replaced thereby are hereby permanently canceled and annulled.

IT IS FURTHER ORDERED that the $2,455,743,929 original cost of plant for Illinois-American Water Company at December 31, 2021, is approved as the original cost of plant.

IT IS FURTHER ORDERED that Illinois-American Water Company comply with the requirements in Findings (19), (20) and (21) above.

IT IS FURTHER ORDERED that Illinois-American Water Company's 2021, 2022, and 2023 Qualifying Infrastructure Plant costs included in rate base in this proceeding for each rate zone are subject to review in the Illinois-American Water Company's annual Qualifying Infrastructure Plant reconciliation proceedings and the costs related to such Qualifying Infrastructure Plant are subject to adjustments for prudence and reasonableness in the annual Qualifying Infrastructure Plant reconciliation and future base rate proceedings.

IT IS FURTHER ORDERED that all motions, petitions, and objections which have not been disposed of are hereby deemed to be disposed of in a manner consistent with the conclusions herein.

IT IS FURTHER ORDERED that pursuant to Section 10-113(a) of the Public Utilities Act and 83 Ill. Adm. Code 200.880, any application for rehearing shall be filed within 30 days after service of the Order on the party.

IT IS FURTHER ORDERED that subject to the provisions of Section 10-113 of the Public Utilities Act and 83 Ill. Adm. Code 200.880, this Order is final; it is not subject to the Administrative Review Law.

By Order of the Commission this 15th day of December, 2022.

For an Annual Informational Filing

FINAL ORDER

On November 15, 2021, Virginia-American Water Company ("VAWC" or "Company") filed an application with the State Corporation Commission ("Commission") for an increase in rates ("Application" or "Rate Case"). On December 6, 2021, and December 9, 2021, the Company supplemented its Application.

On December 21, 2021, the Commission issued an Order for Notice and Hearing in VAWC's Rate Case, which, among other things, docketed the Company's Application; directed VAWC to provide notice of its Application; provided interested persons the opportunity to comment or participate in the proceeding; directed the Commission's Staff to investigate the Application; scheduled an evidentiary hearing; and assigned a Hearing Examiner to conduct all further proceedings in this matter on behalf of the Commission.

2022-00124

Notices of participation were filed in the Rate Case proceeding by the Hopewell Committee for Fair Water Rates ("Hopewell Committee"); the City of Alexandria, Virginia ("Alexandria"); and the Office of the Attorney General, Division of Consumer Counsel ("Consumer Counsel").

On March 3, 2022, the Commission entered an Order in Case Nos. PUR-2019-00176 and PUR-2020-00249 ("AIF Proceedings") which, among other things, found that the AIF Proceedings required further process and should be addressed as part of VAWC's pending Rate Case (Case No. PUR-2021-00255).[1] The Commission directed the Hearing Examiner assigned to the pending Rate Case to make findings and recommendations pertaining to the AIF proceedings in addition to any other findings and recommendations to be made as part of the Rate Case.[2] On March 14, 2022, the Hearing Examiner ruled that the AIF Proceedings would proceed concurrently with the Rate Case.[3]

On July 19, 2022, the Hopewell Committee, Alexandria, and Consumer Counsel filed their respective Rate Case testimony. On August 16, 2022, Staff of the Commission ("Staff") filed testimony pertaining to the Rate Case and the AIF Proceedings, and Consumer Counsel filed supplemental Rate Case testimony. On September 6, 2022, VAWC filed rebuttal testimony pertaining to the Rate Case and the AIF Proceedings. Public comments were also received in the Rate Case proceeding.

---

[1] *Applications of Virginia American Water Company for Annual Informational Filings*, Case Nos. PUR-2019-00176 and PUR-2020-00249, Doc. Con. Cen. No. 220310081, Order at 4-5 (March 3, 2022) ("AIF Further Proceedings Order").

[2] AIF Further Proceedings Order at 5. In a footnote to Ordering Paragraph (1), the Commission stated: "We leave to the Hearing Examiner's discretion whether and how to combine and/or consolidate Case Nos. PUR-2019-00176, PUR-2020-00249, and PUR-2021-00255." *Id.* n.19.

[3] Hearing Examiner Ruling at 2 (March 14, 2022).

On September 26, 2022, VAWC, Staff, and Alexandria (collectively, "Stipulating Participants") submitted a Joint Motion to Approve Stipulation together with a proposed Stipulation ("Stipulation") pertaining to the Rate Case and AIF Proceedings.[4] The Hopewell Committee and Consumer Counsel were not signatories to the Stipulation. Consumer Counsel, however, recommended the Commission approve the Stipulation as a reasonable resolution of the issues.[5]

The Stipulating Participants agreed as follows:[6]

> (1) To a rate increase that would produce additional annual jurisdictional revenues of $10.75 million;
>
> (2) For future cases requiring a capital structure and cost of capital until such time as VAWC files its next base rate case, the Stipulating Participants agree to a 9.7% return on equity ("ROE") and the following actual capital structure and cost of capital:

Component	Ratemaking Capital	Weight	Cost Rate	Weighted Cost
Short-Term Debt	$20,144,129	7.335%	1.838%	0.135%
Long-Term Debt	$141,673,355	51.590%	4.222%	2.178%
Preferred Stock	$0	0.000%	0.000%	0.000%
Common Equity	$111,850,200	40.73%	9.70%	3.951%
Investment Tax Credits	$946,123	0.345%	6.594%	0.023%
Total Capitalization	$274,613,807	100.00%		6.286%

> (3) To move forward with the second phase of consolidation for water service rates and the purchased water surcharge as proposed by the Company and consistent with the Partial Stipulation approved by the Commission in Case No. PUR-2018-00175;
>
> (4) To a 3-year amortization of the Company's COVID-19 regulatory asset balance as of June 30, 2021, resulting in an annual jurisdictional amortization amount of $272,812, as calculated in

[4] Exhibit 2.

[5] Tr. at 37.

[6] Stipulation at 1-4.

Staff's pre-filed adjustment. The Company will stop deferring COVID-19 related costs as of June 30, 2021, and will start amortization for book purposes as of May 1, 2022;

(5) The Company may record any amounts above or below the total Company amount of 2023 pension expense equal to $255,101 and OPEB[7] expense equal to ($437,969) authorized in rates to a regulatory asset or liability, as appropriate, from the effective date of new rates in this proceeding until the Company's next base rate case. Such deferral will be subject to earnings tests during the deferral period based on total Company earnings;

(6) The Alexandria Water and Wastewater Infrastructure Surcharge ("WWISC") Earnings Test issue in Case Nos. PUR-2019-00176 & PUR-2020-00249 will be litigated before the Commission based on the record and post-hearing briefs;

(7) To the level of write-offs for the Depreciation Reserve Deficiency, OPEB Deferral, and COVID-19 Deferral in the June 2020 Earnings Test (in Case No. PUR-2020-00249 as updated by Staff in this Rate Case (Case No. PUR-2021-00255)) as presented below:

- Depreciation Reserve Deficiency: $362,630
- OPEB Deferral: $42,827
- COVID-19 Deferral: $123,286; and

(8) The rates set forth on Attachment A to the Stipulation should be approved by the Commission and implemented by the Company effective May 1, 2022.

The public witness hearing was convened on September 27, 2022. The public evidentiary hearing was also convened on September 27, 2022, immediately following the public witness hearing, and concluded on September 28, 2022. VAWC, Alexandria, the Hopewell Committee, Consumer Counsel, and Staff participated in the hearing.

On November 2, 2022, VAWC, the Hopewell Committee, Alexandria, Consumer Counsel, and Staff filed post-hearing briefs.

[7] "OPEB" stands for "Other Post-Employment Benefits."

On December 2, 2022, the Report of Alexander F. Skirpan, Jr., Chief Hearing Examiner ("Report") was issued in the Rate Case and the AIF Proceedings. In the Report, the Chief Hearing Examiner recommended the Commission enter an Order which adopts the proposed Stipulation, subject to keeping the existing rate structure for Hopewell's potable industrial customers with each existing volumetric rate block changing by the same percentage. The Chief Hearing Examiner further recommended there be no refunds of WWISC revenues collected from Alexandria district customers. Specifically, the Report made the following findings:[8]

> (1) Based on the record and Stipulation, VAWC requires a rate increase that will produce additional annual jurisdictional revenues of $10.75 million;
>
> (2) VAWC's ROE is 9.7%, and the actual capital structure and cost of capital is as provided in the Stipulation and shown above, to be used for future cases requiring a capital structure and cost of capital until such time as VAWC files its next base rate case;
>
> (3) VAWC should move forward with the second phase of consolidation for water service rates and the [Purchase Water Surcharge] as proposed by the Company;
>
> (4) VAWC should use a 3-year amortization of the Company's COVID-19 regulatory asset balance as of June 30, 2021, stop deferring COVID-19 related costs as of June 30, 2021, and begin amortizing for book purposes as of May 1, 2022;
>
> (5) VAWC may record any amounts above or below the Company's amount of 2023 pension expense equal to $255,101 and OPEB expense equal to ($437,969) authorized in rates to a regulatory asset or liability, as appropriate, from the effective date of new rates in this proceeding until the Company's next base rate case. Such deferral will be subject to earnings tests during the deferral period based on total Company earnings;
>
> (6) VAWC should not be required to refund any WWISC revenues collected from Alexandria district customers during the Alexandria ET Period;

[8] Report at 106-107.

2022-00124

(7) As specified in the Stipulation, VAWC should be directed to write-off the Depreciation Reserve Deficiency of $362,630, OPEB Deferral of $42,837, and COVID-19 Deferral of $123,286;

(8) Except for the rates for Hopewell industrial potable water customers, VAWC should implement the rates set forth on Attachment A of the Stipulation effective May 1, 2022. The rate design for the Hopewell industrial potable water customers should be designed based on the current six-block rate structure with each existing volumetric rate block changing by the same percentage; and

(9) VAWC should refund, with interest as prescribed by the Commission, amounts collected as interim rates based on its Application in excess of the rates approved herein.

VAWC, Alexandria, the Hopewell Committee, Consumer Counsel, and Staff filed comments on the Report.

NOW THE COMMISSION, upon consideration of this matter, is of the opinion and finds as follows.[9]

Hearing Examiner's Report

After analyzing the law and weighing the evidence – and providing a thorough and detailed analysis thereof – the Hearing Examiner made the following recommendations:[10]

In accordance with the above findings, *I RECOMMEND* that the Commission enter an order that:
1. *ADOPTS* the findings in this Report and the Stipulation as amended; and
2. *DISMISSES* this case from the Commission's docket of active cases and passes the papers herein to the file for ended causes.

[9] The Commission has fully considered the evidence and arguments in the record. *See also Board of Supervisors of Loudoun County v. State Corp. Comm'n*, 292 Va. 444, 454 n.10 (2016) ("We note that even in the absence of this representation by the Commission, pursuant to our governing standard of review, the Commission's decision comes to us with a presumption that it considered all of the evidence of record.") (citation omitted).

[10] Report at 107 (emphases in original).

2012 SCC 32

Upon consideration of this matter, the Commission concludes that the Chief Hearing Examiner's findings (1)-(5), (7),[11] and (8)-(9), above, are supported by law and the evidence, have a rational basis, and are adopted herein.[12] In so concluding, the Commission approves the proposed Stipulation subject to keeping the existing rate structure for Hopewell's potable industrial customers with each existing volumetric block changing by the same percentage, as recommended by the Hearing Examiner.[13] In addition, the Commission provides further discussion below on its findings for purposes of this proceeding.

Proposed Refund of WWISC Revenues

The one exception to the Chief Hearing Examiner's findings and recommendations that the Commission does not adopt concerns Staff's recommended refund of certain WWISC revenues collected from the Alexandria district. The Chief Hearing Examiner explains:

> I believe the Commission could find that based on the Alexandria [Earnings Test] Period results, Staff's proposed refund of $419,803 of WWISC revenues collected from Alexandria customers is appropriate, based on the discussion above. However, while I find that earnings tests, by their nature, are not designed for granular causation analysis, in my opinion this case presents a situation for which the Commission should make an exception.[14]

---

[11] With respect to finding (7), the Commission approves an OPED deferral write-off amount of $42,827 as reflected in the Stipulation. *See* Staff's Comments at 5, n15 (stating that finding (7) contained an incorrect reference to an OPEB deferral write-off of $42,837, rather than the amount of $42,827 contained in the Stipulation).

[12] *See* Report at 106-107.

[13] In its Comments, VAWC indicated it would accept the Hearing Examiner's recommended modification to the Stipulation to continue the use of the existing six-block structure for Hopewell's industrial potable customers. VAWC Comments at 4. Staff similarly did not oppose this modification. Staff Comments at 5. The Hopewell Committee supported this modification. Hopewell Committee Comments at 3-4.

[14] Report at 106.

Staff, Consumer Counsel and Alexandria disagree with the Chief Hearing Examiner's recommendation not to require refunds.[15]

After fully considering all the evidence and arguments both for and against the proposed refunds, the Commission finds that the record supports requiring refunds of the WWISC revenues as proposed by Staff and will so direct. The Commission's original approval of the WWISC was expressly dependent upon the use of Earnings Tests and refunds on a going-forward basis to assure that operation thereof does not result in annual earnings above the authorized ROE.[16] In so ordering, the Commission, over the objection of VAWC, expressly directed "that the use of an Earnings Test should accompany the annual WWISC review and ... that refunds should be made to ratepayers, with interest, to the extent the WWISC collections result in annual earnings above the rate of return on common equity...approved below."[17] Indeed, the Supreme Court of Virginia – in affirming the Commission's approval of the WWISC – recognized this Earnings Test process as perhaps the most significant qualification placed by the Commission on the implementation of the WWISC.[18]

---

[15] City of Alexandria Comments at 2-3; Staff Comments at 6-11; Consumer Counsel Comments at 5-8.

[16] *Application of Virginia-American Water Company, For a general increase in rates*, Case No. PUE-2015-00097, 2017 S.C.C. Ann. Rep. 288, 290-291, Final Order (May 24, 2017) (hereinafter "2015 Final Order").

[17] 2015 Final Order at 291.

[18] *City of Alexandria v. State Corporation Commission*, 296 Va. 79, 818 S.E.2d 33 (2018) ("The SCC's review of the WWISC was not disconnected from its overall discretionary review of VAWC's request for an increase in its base rate. It was an analysis that looked at all of the facts presented in the aggregate and in light of the statutory factors. This is particularly evident in the extensive qualifications that the [Commission] placed upon the implementation of the WWISC. Perhaps the most significant is the Earnings Test, which takes into account all of the Alexandria district's revenues from base rates and from the WWISC to determine if VAWC earned more than its approved rate of return for that district.").

The Chief Hearing Examiner reasonably rejected the majority of VAWC's arguments against Staff's recommended refund.[19] The Report, however, ultimately recommends the Commission make an exception and not require a refund based on the fact that "the additional rate consolidation revenues collected from customers of the Alexandria district exceeds the level of revenues that Staff recommended be refunded."[20]

We are not persuaded to make an exception in this case. As recognized by the Chief Hearing Examiner, earnings tests are by their nature not designed for granular causation analysis, and we decline to conduct such an analysis here. The evidence in the record shows that in the Alexandria district, VAWC earned a 10.03% ROE for the 28-month WWISC period when both base rate and WWISC revenues are considered.[21] After accounting for refunds of $419,803, the Company's resulting earned return is 9.57%, which is above the weighted average benchmark of 9.55% determined by the authorized ROEs during the period.[22] Requiring refunds in this matter is supported by the record and, moreover, conforms with the Commission's original approval of the WWISC and the Court's affirmance thereof.

---

[19] Report at 104-106.

[20] Report at 106. The Report explains that "beginning in May 2019, the legislatively mandated consolidation to [single tariff pricing ("STP")] and the Commission's 2018 Rate Order 'resulted in an approximately $1,045,049 increase in annual revenue for the Company's Alexandria [d]istrict (which was balanced with decreases in other districts).'" Report at 106 (quoting Virginia-American Post-Hearing Brief at 24).

[21] Ex. 25 (Long Direct) at 18. While not dispositive to our decision herein, we note further that VAWC could have, but did not, present an alternative consolidated earnings test. The approved Stipulation in Case No. PUR-2019-00185 provided in relevant part: "To the extent the Commission approves the consolidation of the cost of service study for the Company's Alexandria district with the Company's other service districts, the Company may propose substitution of a consolidated earnings test for purposes of the WWISC subsequent to the effective date of such approval." Staff Comments at 11 n.43.

[22] Ex. 25 (Long Direct) at 18; Staff Comments at 9-10.

Rate Consolidation

As set forth in the Report, the Commission adopted the first one-third step toward statewide STP in Case No. PUR-2018-00175, including allocation of one-third of the PWS to the Hopewell and Eastern districts.[23] We agree with the Chief Hearing Examiner that based on the record of this case, the Commission should continue with the second one-third step towards statewide STP, by moving all rates, including the PWS, one-third closer to STP.[24]

Finally, the Commission notes that VAWC initially proposed a rate increase of $14.3 million.[25] Under the approved Stipulation, the Commission approves a $10.75 million rate increase,[26] which is supported by the record. In granting this approval, the Commission further notes its awareness of the ongoing rise in gas prices, inflation, and other economic pressures that are impacting all utility customers. We are sensitive to the effects of rate increases, especially in times such as these. The Commission, however, must follow the laws applicable to this case, as well as the findings of fact supported by the evidence in the record. This is what we have done herein.

Accordingly, IT IS ORDERED THAT:

(1) The Commission adopts the Chief Hearing Examiner's findings and recommendations, with the exception of adopting recommendation number (6) related to refunds of certain WWISC revenues collected from Alexandria district customers, and makes findings as set forth herein.

---

[23] Report at 101. *Application of Virginia-American Water Company, For a general increase in rates*, Case No. PUR-2018-00175, 2020 S.C.C. Ann. Rep. 236 (Nov. 6, 2020).

[24] Report at 100-102.

[25] Ex. 3 (Application) at 2.

[26] Report at 96; Ex. 2 (Stipulation).

(2) The Chief Hearing Examiner's recommendations are hereby ordered with the exception of adopting recommendation number (6) related to refunds of certain WWISC revenues collected from Alexandria district customers.

(3) The rates and charges approved herein are fixed and substituted for the rates and terms and conditions of service that the Company placed into effect on an interim basis on May 1, 2022. VAWC shall forthwith file revised tariff sheets incorporating the findings herein on rates and charges and terms and conditions of service with the Clerk of the Commission and the Commission's Division of Public Utility Regulation. The Clerk of the Commission shall retain such filing for public inspection in person and on the Commission's website: scc.virginia.gov/pages/Case-Information. Refunds of interim rates shall be made as required below.

(4) The Company shall recalculate, using the rates and charges approved herein, each bill it rendered that used, in whole or in part, the rates and charges that took effect on an interim basis and subject to refund effective May 1, 2022, and where application of the new rates results in a reduced bill, refund the difference with interest as set out below, within ninety (90) days of the issuance of this Final Order.

(5) The Company shall refund, with interest, $419,803 of WWISC revenues to the customers of the Alexandria district. Within ninety (90) days of the issuance of this Final Order, the Company shall complete refunds by check or through credits to customer bills.

(6) Refunds with interest for current customers may be made by a credit to the customers' accounts and shown on bills. If refunds with interest for current customers are made by a credit to the customers' accounts and shown on bills, the bills shall show the refund as a separate item or items.

(7) For former customers, refunds with interest that exceed $1 shall be made by check mailed to the last known address of such customers.

(8) VAWC may retain refunds owed to former customers when such refund amount is less than $1; however, if refunds owed to former customers in an amount less than $1 are retained by the Company, the Company will prepare and maintain a list detailing each of the former accounts for which refunds are less than $1, and in the event such former customers contact the Company and request refunds, such refunds shall be made promptly. All unclaimed refunds shall be handled in accordance with Code § 55-210.6:2.

(9) VAWC may offset the credit or refund to the extent no dispute exists regarding the outstanding balances of its current customers or customers who are no longer on its system. To the extent the outstanding balances of such customers are disputed, no offset shall be permitted for the disputed portion.

(10) Interest upon the ordered refunds shall be computed from the date payments on monthly bills were due as shown on the bills to the date each refund is made at the average prime rate for each calendar quarter, compounded quarterly. The average prime rate for each calendar quarter shall be the arithmetic mean, to the nearest one-hundredth of one percent, of the "Bank prime loan" values published in the Federal Reserve Bulletin of the Federal Reserve's Selected Interest Rates (Statistical Release H.15) for the three (3) months of the preceding calendar quarter.

(11) Within sixty (60) days of completing the refunds ordered herein, VAWC shall submit to the Divisions of Utility Accounting and Finance and Public Utility Regulation a report showing that all refunds have been made pursuant to this Final Order and itemizing the cost of the refund and accounts charged. The Company shall not recover the interest paid or the

2019 DEC 23 P 3:53

expenses incurred in making such refunds from water or wastewater rates and charges subject to the Commission's jurisdiction.

(12) The Company shall bear all costs incurred in effecting the refunds ordered herein.

(13) This matter is dismissed.

Commissioner Patricia L. West participated in this matter.

A COPY hereof shall be sent electronically by the Clerk of the Commission to all persons on the official Service List in this matter. The Service List is available from the Clerk of the Commission.

COMMONWEALTH OF VIRGINIA

STATE CORPORATION COMMISSION

APPLICATION OF

VIRGINIA-AMERICAN WATER COMPANY CASE NO. PUR-2023-00194

For a general increase in rates

JOINT MOTION TO ACCEPT STIPULATION

Pursuant to Rule 110 of the Rules of Practice and Procedure of the State Corporation Commission ("Commission"),[1] Virginia-American Water Company ("Virginia-American" or "Company"), the Staff of the Commission ("Staff"), the Office of the Attorney General's Division of Consumer Counsel ("Consumer Counsel"), the City of Alexandria ("Alexandria"), Covanta Alexandria/Arlington, LLC ("Reworld"), and the Hopewell Committee for Fair Water Rates ("HCFWR") (collectively, "Stipulating Participants") hereby request that the Hearing Examiner recommend that the Commission accept the attached Stipulation as a full and fair resolution of most of the issues in this proceeding.

This Stipulation is intended to resolve most of the issues between the Stipulating Participants regarding Virginia-American's Application for a general increase in rates. For the Company's proposal to implement a Universal Affordability Tariff, the Stipulation provides that the Commission will decide this issue based on the record and post-hearing briefs.

The Stipulating Participants respectfully request that the Hearing Examiner recommend approval of the Stipulation and that the Commission approve it.

[1] 5 VAC 5-20-110.

COMMONWEALTH OF VIRGINIA

STATE CORPORATION COMMISSION

APPLICATION OF

VIRGINIA-AMERICAN WATER COMPANY CASE NO. PUR-2023-00194

For a general increase in rates

STIPULATION

This Stipulation represents the agreement between Virginia-American Water Company ("Virginia-American" or "Company"), the Staff of the State Corporation Commission ("Staff"), the Office of the Attorney General's Division of Consumer Counsel ("Consumer Counsel"), the City of Alexandria ("Alexandria"), Covanta Alexandria/Arlington, LLC ("Reworld"), and the Hopewell Committee for Fair Water Rates ("Committee") (collectively, "Stipulating Participants") as to the application of Virginia-American for a general increase in rates ("Application"). This Stipulation resolves most of the issues raised in this proceeding, as specifically enumerated below. The Stipulating Participants hereby agree as follows:

1. Revenue Increase: The Stipulating Participants agree to a rate increase that would produce additional annual jurisdictional revenues of $14.6 million.

2. ROE and Capital Structure: For future cases requiring a capital structure and cost of capital until such time as Virginia-American files its next base rate case, the Stipulating Participants agree to a 9.7% return on equity ("ROE") and the following capital structure and overall cost of capital:

Component	Net Amount Outstanding	Weight	Cost Rate	Weighted Cost
Short Term Debt	$10,576,370	2.86%	5.43%	0.16%
Long Term Debt	$189,011,989	51.18%	4.26%	2.18%
Common Equity	$168,645,830	45.67%	9.70%	4.43%
Job Development Credits	$1,048,774	0.28%	6.78%	0.02%
Total Capitalization	$369,282,964	100.00%		6.79%

3. Consolidated Rates: The Stipulating Participants agree to move forward with the third and final phase of consolidation for water service rates and the purchased water surcharge as proposed by the Company and consistent with the Partial Stipulation approved by the Commission in Case No. PUR-2018-00175. The rate consolidation shall include the rates associated with the Cape Charles and E.L. Goddard systems as proposed in the Company's Application, as well as the rates associated with the Waverly system.

4. Pension/OPEB Deferral: The Stipulating Participants agree that Virginia-American may record any amounts above or below the Virginia-jurisdictional amount of Rate Year pension expense equal to $261,361 and other post-employment benefits ("OPEB") expense equal to ($480,033) authorized in rates to a regulatory asset or liability, as appropriate, from the effective date of new rates in this proceeding until the Company's next base rate case. Such deferral will be subject to earnings tests during the deferral period based on total Company earnings. The Company will begin a three-year amortization as of July 1, 2023, for the jurisdictional portion of the regulatory liability as of June 30, 2023. The annual jurisdictional amortization will total ($200,114) per year.

5. Depreciation Rates: The Stipulating Participants agree to the depreciation rates in Virginia-American's depreciation study, updated to include actual data from July 2023 through

December 2023. The Company will begin recording the depreciation rates as of January 1, 2024. The depreciation rates are set forth on Attachment A.

6. Resulting Rates: The Stipulating Participants agree that the rates and fees set forth on Attachment B should be approved by the Commission and implemented by the Company.

7. Universal Affordability Tariff: The Stipulating Participants agree that Virginia-American's proposal to implement a Universal Affordability Tariff will be decided by the Commission based on the record and post-hearing briefs.

8. 2023 Earnings Test: The Stipulating Participants agree that Virginia-American will write off the remaining balance of its COVID-19 jurisdictional regulatory asset.

9. This Stipulation represents a compromise for the purposes of settlement in this proceeding only and shall not be regarded as precedent with respect to any ratemaking or any other principle in any future rate case. The Stipulating Participants agree that the resolution of the issues herein, taken as a whole, and the disposition of all other matters set forth in the Stipulation are in the public interest. This Stipulation is conditioned on and subject to acceptance by the Hearing Examiner and the Commission and is non-severable and of no force or effect and may not be used for any other purpose unless accepted in its entirety by the Hearing Examiner and the Commission, except that this paragraph shall remain in effect in any event.

10. In the event that the Hearing Examiner or the Commission does not accept the Stipulation in its entirety, including the issuance of a recommendation by the Hearing Examiner that the Commission not approve the Stipulation, the Stipulating Participants retain the right to withdraw their support for the Stipulation. In the event of such action by the Commission or the Hearing Examiner, any Stipulating Participant will be entitled to give notice exercising its right

to withdraw support for the Stipulation; provided that the Stipulating Participants may, by unanimous consent, elect to modify the Stipulation to address any modifications required, or issues raised, by the Commission or Hearing Examiner. Should the Stipulation not be approved by the Commission, it will be considered void and have no precedential effect, and the Stipulating Participants reserve their rights to participate in all relevant proceedings in the captioned case notwithstanding their agreement to the terms of the Stipulation. If the Commission or Hearing Examiner chooses to reject the Stipulation, the Stipulating Participants may request that additional evidentiary hearings be convened, at which time additional testimony and evidence may be presented by the case participants and cross-examination may occur thereon regarding any issues arising in those proceedings. Further, to the extent that the Hearing Examiner's Report has been filed, the Stipulating Participants may seek leave to file additional comments on the Hearing Examiner's Report.

Accepted and agreed to this 19th day of September, 2024.

IN THE MATTER OF THE PETITION OF NEW JERSEY-AMERICAN WATER COMPANY, INC. FOR APPROVAL OF INCREASED TARIFF RATES AND CHARGES FOR WATER AND WASTEWATER SERVICE, CHANGE IN DEPRECIATION RATES, AND OTHER TARIFF MODIFICATIONS	))))))	ORDER ADOPTING INITIAL DECISION AND STIPULATION BPU DOCKET NO. WR24010056 OAL DOCKET NO. PUC 02409-24

Parties of Record:

Brian O. Lipman, Esq., Director, New Jersey Division of Rate Counsel
Bruce V. Miller, Esq., Cullen and Dykman LLP, on behalf of New Jersey-American Water Company, Inc.
Jay L. Kooper, Esq., on behalf of Middlesex Water Company
Martin C. Rothfelder, Esq., Rothfelder Stern, LLC, on behalf of Johanna Foods, Inc., Rutgers, The State University of New Jersey, Cogen Technologies Linden Venture, L.P., Phillips 66 Company and the Trustees of Princeton University
Anthony R. Francioso, Esq., Fornaro Francioso LLC, on behalf of Mount Laurel Township Municipal Utilities Authority

BY THE BOARD:[1]

By this Decision and Order, the New Jersey Board of Public Utilities ("Board") considers an Initial Decision ("Initial Decision") issued by Administrative Law Judge ("ALJ") Tricia M. Caliguire approving a Stipulation of Settlement ("Stipulation") resolving all issues in controversy in this matter.

BACKGROUND/PROCEDURAL HISTORY

On January 19, 2024, New Jersey-American Water Company, Inc. ("NJAWC" or "Company") filed a petition with the Board seeking approval of an increase in its base rates for water and wastewater service of approximately $161.7 million, or 16.89%, for services rendered on and after February 21, 2024 ("Petition").

NJAWC is engaged in the production, treatment, and distribution of water and the collection of wastewater within its defined service territory within the State of New Jersey. The Company's

[1] Commissioner Michael Bange recused himself due to a potential conflict of interest and as such took no part in the discussion or deliberation of this matter.

service territory includes portions of Atlantic, Bergen, Burlington, Camden, Cape May, Essex, Gloucester, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Union, and Warren counties. As of December 31, 2023, the Company provides service to approximately 668,000 water and fire service customers and 64,200 wastewater service customers.

PETITION

By the Petition, NJAWC requested an increase in its base rates of approximately 16.89%. According to the Petition, the Company's request is largely driven by capital investment required to maintain and improve the Company's infrastructure.

Additionally, NJAWC sought authorization to: a) reset the current Distribution System Improvement Charge ("DSIC") and Wastewater System Improvement Charge ("WSIC") charges; b) implement a Universal Affordability tariff with tiered rate discounts; c) continue deferred accounting treatment for pension and other post-employment benefits ("OPEB") costs; d) defer costs for accounting treatment of production costs; e) implement a revenue decoupling mechanism; and f) implement an uncollectible adjustment clause.

By Order dated February 14, 2024, the Board suspended the proposed rates until June 21, 2024.[2] The Board subsequently transmitted this matter to the Office of Administrative Law for hearing as a contested case where it was assigned to ALJ Caliguire.

Middlesex Water Company, Johanna Foods, Inc., Rutgers, The State University of New Jersey, Cogen Technologies Linden Venture, L.P., Phillips 66 Company, the Trustees of Princeton University, and the Mount Laurel Township Municipal Utilities Authority filed Motions to Intervene in this matter. All motions were unopposed and granted by ALJ Caliguire.

After proper notice in newspapers of general circulation throughout the Company's service territory and service of notice upon affected municipalities and counties within the Company's service territory, two (2) virtual public hearings were held on April 10, 2024 at 4:30 p.m. and 5:30 p.m. Two (2) members of the public attended, one (1) of whom provided comments. The Board received no written comments in this matter.

On April 23, 2024, and supplemented on May 3, 2024, NJAWC updated the Petition to include nine (9) months of actual data, and three (3) months of estimated data ("9+3 Update"). Based upon the 9+3 Update, NJAWC updated its proposed revenue requirement to an increase of $165.7 million.

By Order dated May 22, 2024, the Board further suspended implementation of the requested rates until October 21, 2024, unless prior to that date the Board made a determination disposing of the Petition or entered an Order further suspending the proposed revisions.[3]

[2] In re the Petition of New Jersey-American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications, BPU Docket No. WR24010056, Order dated February 14, 2024.

[3] In re the Petition of New Jersey-American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications, BPU Docket No. WR24010056, Order dated May 22, 2024.

On July 18, 2024, NJAWC updated its schedules to include twelve (12) months of actual data ("12+0 Update"). Based upon the 12+0 Update, NJAWC updated its proposed revenue requirement to $157.7 million.

STIPULATION

Following comprehensive discovery and settlement discussions, the Company, Board Staff ("Staff"), and the New Jersey Division of Rate Counsel ("Rate Counsel") (collectively, "Stipulating Parties"), executed the Stipulation, the key elements of which are as follows:[4]

A. Rate Increase

1. As of the effective date, defined below in the Stipulation, NJAWC will be permitted to increase its base rates in a manner designed to produce a total annual operating revenue increase for water and wastewater service of $79.5 million, an overall revenue increase of 8.53%.

2. The Stipulating Parties agree that the post-test year present rate revenues to which the $79.5 million increase will apply is $932,446,899.

3. The annual revenue requirement increase is based upon a rate base of $5,050,637,912.

4. The Stipulating Parties agree to an overall rate of return of 7.1522% and the Company's actual capital structure, as reflected in the Company's 12+0 Update at post-test year end of September 30, 2024, as follows:

Type of Capital	% of Total	Cost Rate	Weighted Cost Rate
Long-term Debt	45.00%	4.1604%	1.8722%
Common Equity	55.00%	9.6000%	5.2800%
Total Capital	100.00%		7.1522%

5. The Stipulating Parties acknowledge that the stipulated revenue requirement increase reflects consideration of a Consolidated Tax Adjustment.

6. The revenue expansion factor used to gross-up costs for income taxes, uncollectible expense, and Board and Rate Counsel assessments, is 1.47640, which consists of factors for state gross receipts and franchise taxes of 13.58692%, federal income taxes of 21.00%, for uncollectibles of 0.41279%, and for the Board/Rate Counsel assessments of 0.26313%.

7. The calculation of the revenue requirement is set forth in Attachment A of the Stipulation.

[4] Although summarized in this Order, should there be any conflict between this summary and the Stipulation, the terms of the Stipulation control, subject to the findings and conclusions in this Order. Paragraphs are numbered to coincide with the Stipulation.

B. Depreciation

8. The Stipulating Parties agree that NJAWC's water composite depreciation rate will be established at 2.44% and the wastewater composite depreciation rate will be established at 2.07%. With the conclusion of this proceeding, the Company will align the deprecation rates formerly of Environmental Disposal Corp. to the stipulated wastewater depreciation rates. Additionally, the Company will no longer utilize the units of production depreciation method for certain plant accounts. This water depreciation rate reflects the continued return to customers of a Non-Legal Asset Retirement Obligation of $48,000,000 at $1,200,000 a year over a forty (40)-year period as established in the Stipulation of Settlement in NJAWC's 2008 base rate proceeding at Docket No. WR08010020. A schedule detailing the stipulated depreciation rates is found in Attachment B of the Stipulation.

C. Amortization of Debits and Credits

9. The Stipulating Parties agree that the rate increase set forth in the Stipulation reflects an amortization of unamortized balance sheet accounts, in accordance with the following chart:

Account	Amortization Start / Revised Date	Amortization Ending Date	
Gain on Land Sales	9/1/2024	8/31/2026	
Acquisition Adjustments (excludes Haddonfield. Shorelands and Roxbury)	Various	Various	
Deferred Rate Case Expense (includes previous cases remaining balances)	9/1/2024	8/31/2026	(a)
Acquisition Adjustment - Appellate	9/1/2024	8/31/2026	
2019 BPU Management Audit	11/1/2020	10/31/2030	
Pre 1971 Investment Credit	Various	Various	
1986 Excess Deferred Income Taxes	Various	Various	
TCJA Excess Deferred Income Taxes - Protected (Grossed Up)	11/1/2020	Various	(b)
TCJA Excess Deferred Income Taxes - Unprotected (Grossed Up)	11/1/2020	10/31/2032	
MTBE	1/1/2011	12/31/2050	
Aluminum Sulfate	11/1/2020	10/31/2060	
Refund of COR	12/1/2008	11/30/2048	
WIPA Transaction Costs	9/1/2024	8/31/2026	
Energy Efficiency Program	9/1/2024	8/31/2026	

Notes:

(a) 50% of rate case expenses

(b) Monthly amortization will vary based upon Adjusted Rate Amortization Method ("ARAM").

D. Other Items

10. The Stipulating Parties agree that NJAWC withdraws from this proceeding, without prejudice, the Company's requests for a revenue decoupling mechanism, an uncollectible adjustment clause, and deferred accounting treatment of production costs.

11. The Stipulating Parties agree that the Company will continue deferred accounting treatment to record as a regulatory asset/liability, as appropriate, the difference between the pension and OPEB expense and the actual expense recorded for financial reporting purposes. The Stipulating Parties agree that the newly established annual authorized

levels of pension and OPEB expense will be $3,422,707 and ($5,375,690), respectively effective with the approved rates in this proceeding. The Company will defer the difference between the authorized amount and the actual amount recorded for financial reporting purposes as determined in accordance with generally accepted accounting principles, provided that such amounts are known, final, and not subject to updates or adjustments. The amortization of any approved deferral will be decided in the Company's next base rate case. Nothing in the Stipulation is intended to impair the ability of any stipulating party to challenge the prudence of the Company's calculated levels of pension and OPEB amounts that it proposes to recover from the regulatory asset/liability account in NJAWC's next rate case proceeding.

12. The Stipulating Parties agree that the Company use reasonable efforts to remove and provide testing to the retired meters. The Company shall provide quarterly reports to Staff and Rate Counsel stating the number of meters retired in place for that quarter, the number of meters replaced that quarter, the reason the meter was not removed at the time of replacement, and total meters retired in place.

E. <u>Tariff and Rate Design</u>

13. The Stipulating Parties agreed to the changes to the Company's tariff found in Attachment C of the Stipulation. The Stipulating Parties agree that within ten (10) days of a Board Order approving the Stipulation, NJAWC will file Attachment C of the Stipulation with the Board.

14. The Stipulating Parties agree that the present rate revenues to be used by rate class are those reflected in Attachment D of the Stipulation, which includes the agreed upon revenue increases by customer class. The bill impact for a residential customer, with a 5/8" meter, on Rate Schedule A-1, using 5,642 gallons of water per month, will be $5.33 or 7.05%. The bill impact for an Ocean City sewer customer using 5,642 of water per month will be $7.75 or 9.82%. The bill impact for a Statewide Collection System wastewater customer using 5,642 of water per month will be $5.12 or 7.62%.

15. The Stipulating Parties agree to the implementation of the Company's Universal Affordability tariff with the tiered rate discounts as reflected on Rate Schedule O-4 for water customers and Rate Schedule 9-A.2 for wastewater customers effective September 15, 2024, concurrent with the new rates agreed upon in this proceeding. The Company agrees to maintain its current Help to Others grant program.

16. The Stipulating Parties agree that Attachment E of the Stipulation represents the present rates and the stipulated rates to be utilized in this matter.

17. The Stipulating Parties agree that NJAWC's DSIC Foundational Filing, submitted on March 18, 2024 in BPU Docket No. WR24030187, must be approved by the Board before any new DSIC investment and/or DSIC rate recovery can occur and that the DSIC rate approved in BPU Docket No. WR22030230 shall be reset to zero on the effective date of new base rates in this case. The Company, under BPU Docket No. WR22030230[5], had implemented a DSIC surcharge annual revenue of $39,969,461, which was under the five percent (5%) cap.

[5] Due to a typographical error, the Stipulation incorrectly states the BPU Docket No. as WE22030230.

18. The Stipulating Parties agree NJAWC's WSIC Foundational Filing, submitted on March 27, 2024 in BPU Docket No. WR24030203, must be approved by the Board before any new WSIC investment and/or WSIC rate recovery can occur and that the WSIC rate approved in BPU Docket No. WR21060917 shall be reset to zero on the effective date of new base rates in this case. The Company, under BPU Docket No. WR21060917, had implemented a WSIC surcharge annual revenue of $1,882,593, which reached the five percent (5%) cap.

19. The Stipulating Parties agree that NJAWC's first Resiliency and Environmental System Investment Charge ("RESIC") Foundational Filing, submitted on April 19, 2024 in BPU Docket No. WR24040240, must be approved by the Board before the RESIC investment continues through the RESIC period. The RESIC will be reset in NJAWC's next base rate proceeding.

On August 13, 2024, Middlesex Water Company, Johanna Foods, Inc., Rutgers, The State University of New Jersey, Cogen Technologies Linden Venture, L.P., Phillips 66 Company, the Trustees of Princeton University, and the Mount Laurel Township Municipal Utilities submitted letters of non-objection.

INITIAL DECISION

By the Initial Decision, ALJ Caliguire found that the Stipulating Parties voluntarily agreed to the Stipulation and that the Stipulation fully disposes of all issues and is consistent with the law. As such, ALJ Caliguire ordered that the Stipulating Parties comply with the terms of the Stipulation and recommended the Initial Decision to the Board for adoption, modification, or rejection in accordance with N.J.S.A. 52:14B-10.

DISCUSSION AND FINDINGS

The Board, upon careful review of the record in this matter, including the Petition, Updates, and the Stipulation, agrees that the Stipulation is just and reasonable, voluntarily agreed to by the Stipulating Parties, and fully disposes of all issues in controversy in this matter.

In evaluating a proposed settlement for a requested rate increase pursuant to N.J.S.A. 48:2-21, the Board must independently review the record and determine, based upon substantial evidence therein, that the figures to which the Stipulating Parties have stipulated are just and reasonable.[6] The Board recognizes that the Stipulating Parties worked diligently to negotiate a compromise that meets the needs of as many stakeholders as possible. The Board further recognizes that the Stipulation represents a balanced solution considering the many complex issues addressed during the pendency of this proceeding.

Therefore, based upon the Board's review and consideration of the record in this proceeding, the Board **HEREBY FINDS** the Initial Decision and Stipulation to be reasonable, in the public interest, and in accordance with the law. Accordingly, the Board **HEREBY ADOPTS** the Initial Decision and Stipulation in their entirety, and **HEREBY INCORPORATES** the terms and conditions as though fully set forth herein, subject to any terms and conditions set forth in this Order.

[6] In re Petition of Pub. Serv. Elec. & Gas, 304 N.J. Super. 247, 270 (App. Div.), certif. denied, 152 N.J. 12 (1997); N.J.S.A. 48:2-21(d).

As a result of the Stipulation, an average residential water customer with a 5/8" meter, on Rate Schedule A-1, using 5,642 gallons of water per month, will see an increase in their monthly bill of $5.33 or 7.05%. For an Ocean City sewer customer using 5,642 gallons of water per month, the monthly impact will be an increase of $7.75 or 9.82%. For a Statewide Collection System wastewater customer using 5,642 gallons of water per month, the monthly impact will be an increase of $5.12 or 7.62%.

The Board **HEREBY ORDERS** the Company to submit revised tariffs conforming to the terms and conditions of the Stipulation and this Order by September 14, 2024 for rates effective September 15, 2024.

The Company's rates remain subject to audit by the Board. This Decision and Order shall not preclude the Board from taking any actions deemed to be appropriate as a result of any Board audit.

This Order shall be effective on September 11, 2024.

Anthony R. Francioso, Esq., for intervenor Mount Laurel Township Municipal Utilities Authority (Fornaro Francioso LLC, attorneys)

Record Closed: August 13, 2024 Decided: August 15, 2024

BEFORE **TRICIA M. CALIGUIRE**, ALJ:

On January 19, 2024, New Jersey-American Water Company, Inc. (NJAW) filed a petition with the Board of Public Utilities (Board) for approval of increases in tariff rates and charges for water and wastewater service, change in depreciation rates, and other tariff modifications. On February 21, 2024, the Board transmitted the matter to the Office of Administrative Law (OAL), where it was filed as a contested case, pursuant to N.J.S.A. 52:14B-1 to -15 and N.J.S.A. 52:14F-1 to -13. A telephone prehearing conference was conducted on March 6, 2024, and a prehearing order was issued on April 1, 2024.

Motions to Intervene were filed by Middlesex Water Company (Middlesex); Johanna Foods, Inc.; Cogen Technologies Linden Venture, L.P.; Rutgers, the State University; Phillips 66 Company; the Trustees of Princeton University; and the Mount Laurel Township Municipal Utilities Authority (MLTMUA). With no objections, the motions were granted by orders issued on March 8, 2024; March 26, 2024; April 5, 2024; April 19, 2024; and August 6, 2024.

On April 10, 2024, two duly-noticed public hearings[1] were conducted by the OAL using Zoom Video Communications, Inc., a remote video and audio platform. The petitioner, Staff of the Board, the Division of Rate Counsel, and members of the public participated in the public hearings and provided comments. At the first hearing, counsel for Howell Township explained his client's objections to the petition, and three private citizens joined the hearing but did not make comments. No members of the public appeared at the second hearing. All comments were transcribed and made part of the record.

On August 13, 2024, the parties filed a Stipulation of Settlement which resolves all issues in this proceeding. (J-1). Said Stipulation of Settlement has been signed by petitioner, Staff of the Board; and the New Jersey Division of Rate Counsel. On August 13, 2024, a letter of non-opposition to the Stipulation of Settlement was submitted by intervenors Cogen Technologies Linden Venture, L.P., Phillips 66 Company, Johanna Foods, Inc., the Trustees of Princeton University, and Rutgers, the State University of New Jersey. On August 13, 2024, Middlesex and MLTMUA submitted letters of non-opposition to the Stipulation of Settlement.

The Stipulation of Settlement indicates the terms of settlement and is attached and fully incorporated herein.

I have reviewed the terms of settlement and I **FIND:**

1. The parties have voluntarily agreed to the settlement as evidenced by their signatures or their representatives' signatures on the attached document.

2. The settlement fully disposes of all issues in controversy between the parties and is consistent with the law.

I hereby **FILE** my initial decision with the **BOARD OF PUBLIC UTILITIES** for consideration.

[1] Proof of publication was provided by petitioner to the court reporter, to all parties, and to me; the public notice and proof of its publication are part of the record transmitted to the Board with this Initial Decision.

This recommended decision may be adopted, modified or rejected by the **BOARD OF PUBLIC UTILITIES,** which by law is authorized to make a final decision in this matter. If the Board of Public Utilities does not adopt, modify or reject this decision within forty-five days and unless such time limit is otherwise extended, this recommended decision shall become a final decision in accordance with N.J.S.A. 52:14B-10.

Re: In the Matter of the Petition of New Jersey-American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications
BPU Docket No. WR24010056
OAL Docket No. PUC 02409-2024 S

Dear Judge Caliguire:

Enclosed for filing in the above-referenced proceeding is a Stipulation of Settlement with Attachments executed by and among New Jersey-American Water Company, Inc., the Office of the Attorney General of New Jersey, attorney for the Staff of the Board of Public Utilities, and the Division of Rate Counsel. With their permission, we are also filing letters of no objection to the Stipulation of Settlement on behalf of intervenors Middlesex Water Company and Mount Laurel Township Municipal Utility Authority. It is also our understanding that a letter of no objection will be forthcoming under separate cover on behalf of Rutgers, The State University of New Jersey, The Trustees of Princeton University, Johanna Foods, Inc., Cogen Technologies Linden Ventures, L.P., and Phillips 66 Company (collectively, the "OIW Customer Coalition").

We have also taken the liberty of preparing a proposed form of an Initial Decision for Your Honor's use and consideration.

Very truly yours,

Christopher M. Arfaa

TO: THE HONORABLE TRICIA CALIGUIRE, ADMINISTRATIVE LAW JUDGE

BACKGROUND

On January 19, 2024, New Jersey-American Water Company, Inc. ("NJAWC" or "Company") filed a petition, testimony, and exhibits (collectively, "Petition") with the New Jersey Board of Public Utilities ("Board" or "BPU") requesting an increase in operating revenues of $161.7 million, or approximately 16.89% over post-test year present rate revenues.

The Petition was based upon a twelve (12)-month test year ending June 30, 2024 and contained five (5) months of actual data and seven (7) months of projected data, including proposed post-test year adjustments that reflected changes in capital expenditures through December 31, 2024. The Petition also included changes in certain revenues and expenses through March 31, 2025.

On April 23, 2024, and supplemented on May 3, 2024, NJAWC submitted a "9+3 Update" filing containing actual data for the nine (9) months ending March 31, 2024, and revised projections through the post-test year period. On July 18, 2024, NJAWC submitted its final "12+0 Update" filing containing actual data for the twelve (12) months ending June 30, 2024, and revised projections through the post-test year period.

On February 21, 2024, the Board transmitted this matter to the Office of Administrative Law ("OAL") as a contested case where it was assigned to Administrative Law Judge ("ALJ") Tricia Caliguire. On February 14, 2024, the Board issued an Order suspending NJAWC's proposed rate increase until June 21, 2024.[1] By way of a second suspension Order issued May 22,

[1] In re the Petition of New Jersey-American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications, BPU Docket No. WR24010056, OAL Docket No. PUC 02409-2024 S, Order dated February 14, 2024.

2024, the proposed rate increase was further suspended until October 21, 2024.[2] On April 1, 2024, ALJ Caliguire issued a Prehearing Order establishing procedures and hearing dates for the conduct of this case.

After appropriate motions, Middlesex Water Company ("Middlesex"), Johanna Foods, Inc., Cogen Technologies Linden Venture, L.P., Rutgers, The State University, Phillips 66 Company, Merck and Co., Inc., The Trustees of Princeton University (collectively, "OIW"), and the Mount Laurel Township Municipal Utilities Authority ("MLMUA") were granted intervenor status.

After proper public notice in newspapers of general circulation within the Company's service territory and after service of notice upon affected municipalities and counties within NJAWC's service territory, two (2) virtual public comment hearings were held on April 10, 2024, at 4:30 p.m. and 5:30 p.m. Two (2) members of the public attended, one (1) of whom provided comments at the 4:30 p.m. virtual public hearing and no members of the public provided comments at the 5:30 p.m. virtual public hearing.

Extensive discovery was conducted, and several settlement discussions were held after notice to all parties. As a result of these discussions, NJAWC, Board Staff and Rate Counsel (collectively, "Stipulating Parties") reached this stipulation of settlement ("Stipulation") resolving all issues in this proceeding subject to the terms and conditions stated herein. It is the Stipulating Parties' understanding that Middlesex, MLMUA, and OIW will file letters stating that they have no objection to adoption of this Stipulation.

---

[2] In re the Petition of New Jersey-American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications, BPU Docket No. WR24010056, OAL Docket No. PUC 02409-2024 S, Order dated May 22, 2024.

STIPULATED MATTERS

A. Rate Increase

1. As of the Effective Date defined below, NJAWC will be permitted to increase its base rates in a manner designed to produce a total annual operating revenue increase for water and wastewater service of $79.5 million, an overall revenue increase of 8.53%.

2. The Stipulating Parties agree that the post-test year present rate revenues to which the $79.5 million increase will apply is $932,446,899.

3. The annual revenue requirement increase is based upon a rate base of $5,050,637,912.

4. The Stipulating Parties agree to an overall rate of return of 7.1522% and the Company's actual capital structure, as reflected in the Company's 12+0 Update at post-test year end of September 30, 2024, as follows:

Type of Capital	% of Total	Cost Rate	Weighted Cost Rate
Long-term Debt	45.00%	4.1604%	1.8722%
Common Equity	55.00%	9.6000%	5.2800%
Total Capital	100.00%		7.1522%

5. The Stipulating Parties acknowledge that the stipulated revenue requirement increase reflects consideration of a Consolidated Tax Adjustment.

6. The revenue expansion factor used to gross-up costs for income taxes, uncollectible expense, and Board and Rate Counsel assessments, is 1.47640, which consists of factors for state gross receipts and franchise taxes of 13.58692%, federal income taxes of 21.00%, for uncollectibles of 0.41279%, and for the Board/Rate Counsel assessments of 0.26313%.

7. The calculation of the revenue requirement is set forth in Attachment A to this Stipulation.

B. Depreciation

8. The Parties agree that NJAWC's water composite depreciation rate will be established at 2.44% and the wastewater composite depreciation rate will be established at 2.07%. With the conclusion of this base rate proceeding, the Company will align the deprecation rates formerly of Environmental Disposal Corp. ("EDC") to the stipulated wastewater depreciation rates. Additionally, the Company will no longer utilize the units of production depreciation method for certain plant accounts. This water depreciation rate reflects the continued return to customers of a Non-Legal Asset Retirement Obligation of $48,000,000 at $1,200,000 a year over a forty (40)-year period as established in the Stipulation of Settlement in NJAWC's 2008 base rate proceeding at Docket No. WR08010020. Attachment B hereto is a schedule detailing the stipulated depreciation rates.

C. Amortization of Debits and Credits

9. The Stipulating Parties agree that the rate increase set forth above in this Stipulation reflects an amortization of unamortized balance sheet accounts, in accordance with the following chart:

Account	Amortization Start / Revised Date	Amortization Ending Date	
Gain on Land Sales	9/1/2024	8/31/2026	
Acquisition Adjustments (excludes Haddonfield, Shorelands and Roxbury)	Various	Various	
Deferred Rate Case Expense (includes previous cases remaining balances)	9/1/2024	8/31/2026	(a)
Acquisition Adjustment - Appellate	9/1/2024	8/31/2026	
2019 BPU Management Audit	11/1/2020	10/31/2030	
Pre 1971 Investment Credit	Various	Various	
1986 Excess Deferred Income Taxes	Various	Various	
TCJA Excess Deferred Income Taxes - Protected (Grossed Up)	11/1/2020	Various	(b)
TCJA Excess Deferred Income Taxes - Unprotected (Grossed Up)	11/1/2020	10/31/2032	
MTBE	1/1/2011	12/31/2050	
Aluminum Sulfate	11/1/2020	10/31/2060	
Refund of COR	12/1/2008	11/30/2048	
WIPA Transaction Costs	9/1/2024	8/31/2026	
Energy Efficiency Program	9/1/2024	8/31/2026	

Notes:
(a) 50% of rate case expenses
(b) Monthly amortization will vary based upon Adjusted Rate Amortization Method ("ARAM").

D. Other Items

10. The Company stipulates, and the Parties agree, that it hereby withdraws from this proceeding, without prejudice, the Company's requests for a revenue decoupling mechanism, an uncollectible adjustment clause, and deferred accounting treatment of production costs.

11. The Stipulating Parties agree that the Company will continue deferred accounting treatment to record as a regulatory asset/liability, as appropriate, the difference between the pension and other post-employment benefits ("OPEB") expense and the actual expense recorded for financial reporting purposes. The Stipulating Parties agree that the newly established annual authorized levels of pension and OPEB expense will be $3,422,707 and ($5,375,690), respectively effective with the approved rates in this proceeding. The Company will defer the difference between the authorized amount and the actual amount recorded for financial reporting purposes as determined in accordance with generally accepted accounting principles, provided that such amounts are known, final, and not subject to updates or adjustments. The amortization of any approved deferral will be decided in the Company's next base rate case. Nothing in this Stipulation is intended to impair the ability of any stipulating party to challenge the prudence of the Company's calculated levels of pension and OPEB amounts that it proposes to recover from the regulatory asset/liability account in NJAWC's next rate case proceeding.

12. The Stipulating Parties further agree that the Company use reasonable efforts to remove and provide testing to the retired meters. The Company shall provide quarterly reports to Board Staff and Rate Counsel stating the number of meters retired in place for that quarter, the number of meters replaced that quarter, the reason the meter was not removed at the time of replacement, and total meters retired in place"

E. Tariff and Rate Design

13. Attachment C hereto is the agreed upon tariff reflecting changes implementing the revenue increase and other tariff changes agreed upon by the Stipulating Parties. The Stipulating Parties agree that within ten (10) days of a Board Order approving this Stipulation, NJAWC will file Attachment C with the Board.

14. The Stipulating Parties agree that the present rate revenues to be used by rate class are those reflected in Attachment D hereto, which includes the agreed upon revenue increases by customer class. The bill impact for a residential customer, with a 5/8" meter, on Rate Schedule A-1, using 5,642 gallons of water per month, will be $5.33 or 7.05%.[3] The bill impact for an Ocean City sewer customer using 5,642 of water per month will be $7.75 or 9.82%. The bill impact for a Statewide Collection System wastewater customer using 5,642 of water per month will be $5.12 or 7.62%.

15. The Stipulating Parties agree to implementation of the Company's Universal Affordability tariff with the tiered rate discounts as reflected on Rate Schedule O-4 for water customers and Rate Schedule 9-A.2 for wastewater customers effective September 15, 2024, concurrent with the new rates agreed upon in this proceeding. The Company agrees to maintain its current Help to Others grant program.

16. Attachment E hereto is "New Jersey American Water, Comparative Schedule of Present and Stipulated Rates." The Stipulating Parties agree that Attachment E represents the present rates and the stipulated rates to be utilized in this matter.

[3] Rate Schedule A-1 applies to "general metered residential, commercial, industrial, and municipal service throughout Service Area 1, Service Area 1A, Service Area 1B, Service Area 1C, Service Area 1D, Service Area 1E, Service Area 2, and Service Area 3, except as specifically provided elsewhere in this tariff."

17. The Stipulating Parties agree that NJAWC's Distribution System Improvement Charge ("DSIC") Foundational Filing, submitted on March 18, 2024 in BPU Docket No. WR24030187, must be approved by the Board before any new DSIC investment and/or DSIC rate recovery can occur and that the DSIC rate approved in BPU Docket No. WR22030230 shall be reset to zero on the effective date of new base rates in this case. The Company, under BPU Docket No. WE22030230, had implemented a DSIC surcharge annual revenue of $39,969,461, which was under the five percent (5%) cap.

18. The Stipulating Parties agree that NJAWC's Wastewater System Improvement Charge ("WSIC") Foundational Filing, submitted on March 27, 2024 in BPU Docket No. WR24030203, must be approved by the Board before any new WSIC investment and/or WSIC rate recovery can occur and that the WSIC rate approved in BPU Docket No. WR21060917 shall be reset to zero on the effective date of new base rates in this case. The Company, under BPU Docket No. WR21060917, had implemented a WSIC surcharge annual revenue of $1,882,593, which reached the five percent (5%) cap.

19. The Stipulating Parties agree that NJAWC's first Resiliency and Environmental System Investment Charge ("RESIC") Foundational Filing, submitted on April 19, 2024 in BPU Docket No. WR24040240, must be approved by the Board before the RESIC investment continues through the RESIC period. The RESIC will be reset in the NJAWC's next base rate proceeding.

F. Effective Date

20. The Stipulating Parties agree that they will use their best efforts to ensure that this Stipulation is presented to the Board for approval at its September 4, 2024, public agenda meeting, and that rates shall be effective September 15, 2024.

21. The Stipulating Parties agree that service of the Board Order approving this Stipulation shall be in accordance with N.J.S.A. 48:2-40 and will be effective ten (10) days from a Board Order accepting this Stipulation or upon electronic service of said Order on all parties, as permitted by the Board in Docket No. EO20030254 or on September 15, 2024, whichever is sooner.

G. Miscellaneous

22. The Stipulating Parties agree that this Stipulation has been made exclusively for the purpose of this proceeding and that this Stipulation, in total or by specific item, is in no way binding upon them in any other proceeding, except to enforce the terms of the Stipulation.

23. The Stipulating Parties agree that this Stipulation contains a mutual balancing of interests, contains interdependent provisions and, therefore, is intended to be accepted and approved in its entirety. In the event any particular aspect of this Stipulation is not accepted and approved in its entirety by the Board, or modified by the Board, each party that is adversely affected by the modification can either accept the modification or declare this Stipulation to be null and void, and the Stipulating Parties shall be placed in the same position that they were in immediately prior to its execution.

24. It is the intent of the Stipulating Parties that the provisions hereof be approved by the Board as being in the public interest. The Stipulating Parties further agree that they consider the Stipulation to be binding on them for all purposes herein.

25. The Stipulating Parties agree that this Stipulation represents a negotiated agreement and has been made exclusively for the purpose of this proceeding. Except as expressly provided herein, the Stipulating Parties shall not be deemed to have approved, agreed to, or consented to any principle or methodology underlying or supposed to underlie any agreement provided herein, in total or by specific item. The Stipulating Parties further agree that this Stipulation is in no way binding upon them in any other proceeding, except to enforce the terms of this Stipulation.

26. This Stipulation may be executed in as many counterparts as there are Parties to this Stipulation, and each such counterpart shall be considered an original; however, all such counterparts will constitute one and the same instrument.

AN INTRODUCTION TO CUSTOMERS

The approved tariff located in the Company's office at 1 Water Street, Camden, NJ, and on its website at https://www.amwater.com/njaw/customer-service-billing/your-water-and-wastewater-rates, is available for your review. The Company is obligated to keep its tariff current, including any changes approved by the Board of Public Utilities. The Company is required to maintain it in exactly the same format as the Company's tariff on file at the Board of Public Utilities, 44 South Clinton Avenue, 1st Floor, Trenton, NJ.

Through the Company's My Account portal, customers can complete some of the most common functions associated with their accounts and schedule some appointments. The Company's Customer Service personnel can also be reached at 1-800-272-1325 for assistance. If, after you review this tariff and discuss it with appropriate Company employees, you still have questions regarding clarification or interpretations, please contact the Board of Public Utilities, Division of Water at 1-609-633-9800 or the Board's Division of Customer Assistance at www.nj.gov/bpu/ or 1-800-624-0241.

You have the right to review this tariff at the Company's offices or at the Board's office in Trenton. Your inquiries will be handled by the Board's Staff in an expeditious manner in order to protect your rights as well as those of the water and/or wastewater Company. Please feel free to exercise this right by telephone or by visiting the Board's offices at any time between the hours of 9:00 a.m. and 4:00 p.m., Monday through Friday, or by writing a letter. The letter should contain the writer's name, address and phone number, including the area code. If the writer is a customer of record, the account number should be included.

The Company also has available in its office a leaflet entitled "The Utility Customer's Bill of Rights." This is a summary document; it does not include all customer rights or utility obligations.

New Jersey-American Water hereby adopts the rules and regulations promulgated by the Board of Public Utilities of the State of New Jersey, some of which are referenced herein, and all of which are herein adopted and incorporated by reference. New Jersey-American Water provides water and wastewater service to various municipalities, all in the State of New Jersey.

The Board of Public Utilities is responsible for the final interpretation and enforcement of a utility's tariff provisions and rates. The utility is bound by New Jersey's statutes and the Board's regulations. If a conflict should exist in the tariff that is detrimental to the customer, the Board's regulations supersede the tariff provision absent specific approval to the contrary by the NJ Board of Public Utilities. A utility company may provide for more liberal treatment than that provided for in the Board's regulations.

Tariff B.P.U. No. 8 - Water and Wastewater is divided into a water section and a wastewater section, preceded by standard terms and conditions which are universally applicable, standard terms and conditions applicable to water service only, and standard terms and conditions applicable to wastewater service only. Tables of contents for each section precede a series of sequentially numbered and lettered tariff rate schedules. The tables of contents denote the appropriate rate schedule applicability for all classes of service and are an integral part of this tariff.

DEFINITIONS - WATER

The following are definitions of specific terms that are used in this document:

1- "Board" or "BPU" shall mean the New Jersey Board of Public Utilities.

2- "Company" or "New Jersey-American Water" shall mean New Jersey-American Water Company, Inc. or, as applicable, any predecessor entity.

3- "Connecting line" is the portion of pipe that starts at the curb stop and conveys domestic water and/or fire service to the customer. The customer and/or premises owner owns, and is responsible for the operation and maintenance of the connecting line.

4- "Curb stop" is the fitting attached to the service line on the roadside utility right-of-way of the property and is used primarily for turning on and shutting off water at the curb in emergencies, for purposes of repair or to discontinue service to a customer.

5- "Customer" means a person that is an end-user, a customer of record or both, as defined in N.J.A.C. 14:3-1.1. "Customer of Record" means the person that applies for utility service and is identified in the account records of a public utility as the person responsible for payment of the public utility bill. A customer may or may not be an end-user. "End User" means a person who receives, uses, or consumes water or wastewater service. An end user may or may not be a customer of record.

6- "DEP" shall mean the New Jersey Department of Environmental Protection.

7- "End User" means a person who receives, uses, or consumes water or receives wastewater or fire protection service. An end user may or may not be a customer or a premises owner.

8- "Extension" is an addition to the existing system of mains, intended to service more than one customer, either at the time of installation or in the future.

9- "Interruptible Service" means service which may be interrupted in the sole discretion of the Company on not less than three (3) hours' notice to the customer by telephone or otherwise.

10- "Main" is a pipe or conduit for conveying water or wastewater. A "water main" will exclusively convey water and a "wastewater main" will exclusively convey wastewater.

11- "Meter" is a device to measure the quantity of water, wastewater and/or the rate of flow delivered to or from a customer.

12- "Meter pit" is a structure that houses a small meter or meters less than or equal to 2-inches. Unless agreed to by the Company and the customer, it is installed, furnished and maintained by the Company.

13- "Meter vault" is a structure that houses a meter or meters larger than 2-inches. Unless explicitly agreed to by the Company and the customer in writing, it is located and designed by the Company, and constructed, installed, furnished and maintained by the Customer at the sole expense to the customer. The Company will ensure that the vault is kept clear of any of its equipment that is no longer in service, to the extent possible.

14- "Person" means an individual, firm, joint venture, partnership, co-partnership, corporation, association, State, county, municipality, public agency or authority, bi-state or interstate agency or authority, public utility, regulated entity, cable television company, cooperation association, or joint stock association, trust, limited liability company, governmental entity, or other legal entity, and includes any trustee, receiver, assignee, or personal representative thereof. (N.J.A.C. 14:3-1.1)

15- "Premises" is defined as follows:

a) A building under one-roof, owned or leased by one customer and occupied as one place of business or residence.
b) A combination of buildings, owned or leased by one customer in one common enclosure, occupied by one family or business.

DEFINITIONS – WATER (Continued)

c) A combination of buildings, such as a garden type apartment, owned or leased by one customer, in one common enclosure, none of the individual buildings of which is adapted to separate ownership.
d) The one side of a double house having a solid vertical partition wall, so that it may be adapted to separate ownership.
e) A building owned or leased by one person, of more than one apartment and using in common one hall and one entrance.
f) A building owned or leased by one person, having a number of apartments or offices, and using a common one hall and one or more means of entrance.
g) A public building or a single plot such as a park or a playground.
h) A building or combination of buildings owned by one customer or entity located on contiguous property not intersected or intervened by another customer or entity.

16- "Premises owner" is the party who possesses the exclusive right to hold, use, benefit from, enjoy, convey, transfer, and otherwise dispose of the property. A premises owner may or may not be the customer of record or end-user, as defined in N.J.A.C. 14:3-1.1.

17- "PWAC" or "Purchased water adjustment clause" is a provision that authorizes a utility to adjust its rates to compensate for an increase or decrease in the cost of water purchased from a water purveyor. (N.J.A.C. 14:9-7.2)

18- "PWAC Year" shall mean the twelve-month period beginning each April 1 and ending March 31 of the following calendar year.

19- "Residential customer" means a customer who receives service from a regulated entity for use in a residence. (N.J.A.C. 14:3-1.1)

20- "Sales for Resale Customer" means a municipal water system, a Municipal Utilities Authority, a County Utilities Authority, a Water Supply Authority, district or commission or a water utility regulated by the Board.

21- "Service line" is the portion of pipe that starts from a main and ends at the curb stop. The service line is owned, operated and maintained by the Company. (N.J.A.C. 14:3-8)

22- "Tap" is the fitting inserted in the main to which the service line is attached. It is used to facilitate the tapping of the main and for shutting off water in case of repairs to the service line.

23- "Tariff," as referred to herein, is the entire "Tariff for Water and Wastewater Service" as the same may be amended or revised from time to time in accordance with N.J.A.C. 14:3-1.3, Tariffs.

24- "Water connection" includes all service line, taps and curb stops necessary to supply customers with water at their premises from the Company's water mains.

25- "Water service" is the act of providing water to a customer.

DEFINITIONS - WASTEWATER

The following are definitions of specific terms that used hereafter in the tariff. Additional definitions are set forth in the Definitions section of the tariff for water and wastewater service.

1- "New Account" as herein used shall be defined as an account opened as the result of the construction of a new building.

2- "Building Drain" shall mean that part of the lowest horizontal piping of a drainage system which receives the discharge from drainage pipes inside the walls of the building terminating five (5) feet outside the face of the building wall from whence it becomes known as the building sewer.

3- "Building Sewer" shall mean the extension from the building drain to service lateral line and/or other point of connection to the Company wastewater collection system.

4- "Biochemical Oxygen Demand", denoted hereinafter as "B.O.D.", shall mean the quantity of oxygen utilized (demanded) in the biochemical oxidation of organic matter under standard laboratory procedure in five (5) days when incubated at 20°C.

5- “Bulk User” means a municipality which has contracted with the utility for wastewater treatment services. The utility has no responsibility for construction of the mains connecting the Bulk User to the utility nor in the collection of payments of customers of the bulk user. Bulk User customers are not in the service territory of the utility.

6- "Suspended Solids" shall mean solids that either float on the surface of or are carried in suspension in water, wastewater or industrial wastes, and which are removable by laboratory filtering.

7- "pH" shall mean the logarithm to the base ten of the reciprocal of the weight of hydrogen ions in moles per liter of solution.

8- "Garbage" shall mean solid wastes from domestic and commercial preparation, cooking, dispensing or marketing of food or food products and from the handling, storage and sale of produce.

9- "Properly Shredded Garbage" shall mean garbage that has been shredded to such a degree that all particles will be carried freely under the flow conditions normally prevailing in the wastewater system with no particle greater than one-half inch (1/2") in any dimension.

10- “PSTAC” or “Purchased wastewater treatment adjustment clause” is a provision that authorizes a utility to adjust its rates to compensate for an increase or decrease in the cost of wastewater treatment purchased from a wastewater treatment purveyor. (N.J.A.C. 14:9-7.2)

11- “PSTAC Year” shall mean the twelve-month period beginning each April 1 and ending March 31 of the following calendar year.

12- "Slug" shall mean the discharge of water, sewage, or industrial waste which in concentration of any constituent or in quantity of flow exceeds for any period of duration longer than fifteen (15) minutes more than five (5) times the average twenty-four hour flow or concentration under normal operating conditions.

AN OVERVIEW OF CUSTOMER RIGHTS

(1) No public utility shall refuse to furnish or supply service to a qualified applicant. N.J.A.C. 14:3-3.1

(2) The utility shall not place the name of a second individual on the account of a residential customer unless specifically requested by said second individual. (N.J.A.C. 14:3-3.2(b))

(3) A customer has the right to have any complaint against the utility handled promptly by that utility. (Board Order, Docket No. CO8602155)

(4) Each utility shall, upon request, furnish its customers with such information as is reasonable in order that the customers may obtain safe, adequate and proper service. N.J.A.C. 14:3-3.3(a)) Each utility shall inform its customers, where peculiar or unusual circumstances prevail, as to the conditions under which sufficient and satisfactory service may be secured from its system. (N.J.A.C. 14:3-3.3(c)) Each utility shall supply its customers with information on the furnishing and performance of service in a manner that tends to conserve energy resources and water resources and preserve the quality of the environment. N.J.A.C. 14:3-3.3(d)

GENERAL RULES

1- The location of meters and the arrangement of the fittings and piping are subject to inspection and approval of the Company and should meet Company's requirements presented herein.

2- The Company will endeavor to provide a regular and uninterrupted supply of water through its facilities. However, if service shall be interrupted, irregular, or defective, or fail because of breakdown or emergency, the Company will not be liable for damage, inconvenience or lost income resulting there from.

3- A customer's responsibility to pay for service continues from the time service is commenced, pursuant to his/her application, until notice is received by the Company of a change of ownership or occupancy of the premises or notice is received by the Company to discontinue the applicable service. Upon receipt of such notice, the Company will arrange for a final meter reading and billing. No allowance will be made in case of non-occupancy, unless the Company is notified as stated above.

4- The Company does not undertake to render any special service or maintain any fixed pressure. In the event of an accident or for other reasons, the Company may shut off the water in its mains and pipes and may restrict the use of water whenever the public welfare may require it. All customers requiring an uninterrupted supply or a uniform pressure of water for any purpose, such as steam boilers, are cautioned to provide their own means of providing such special uninterrupted service. When the supply is to be interrupted or curtailed, the Company will endeavor to give notice.

5- The Company does not undertake to supply any uniform quality of water for special purposes, such as laboratories, manufacturing or processing plants, swimming pools, bleaching or dyeing plants, or laundries. Customers requiring water of special quality, or water free from discoloration or turbidity, are required to provide their own means of treating water, or provide such other protection as may be deemed necessary for the purpose required.

6- From time to time, the Company may provide public notices, specific notices, correspondence or other notifications ("Notices") regarding the presence of conditions affecting the quality and/or quantity of water service provided by the Company. (Examples of such Notices include, but are not limited to, boil water alerts, notice of hydrant and main flushing, and notice of water quality testing results.) These Notices may contain information about actions members of the public may wish to, are recommended to, or should take in response to the conditions identified in the Notice. In the event the Company issues a Notice, the Company will not be liable for any expenses or costs incurred by a customer or end-user for any action taken in response to any condition identified in the Notice.

GENERAL RULES (Continued)

7- Neither by inspection approval nor failure to approve, nor in any other way, does the Company give any guarantee, or assume any responsibility, expressed or implied, as to the adequacy, safety or characteristics of any structures, equipment, pipes, appliances or devices owned, installed or maintained by the customer or leased by the customer from third parties.

8- The Company will not be liable for any loss, injury, casualty, or damage resulting from the supply or use of water service, or from the presence or operation of the Company's structures, equipment, pipes, appliances or devices on the customer's premises.

9- No unauthorized person is permitted to turn the water on or off at any street valve, corporation stop, curb stop, or other street connection, or disconnect or remove any meter without the consent of the Company.

10- No agent or employee of the Company shall have authority to bind it, by any promise, agreement, or representation not provided in this tariff, or in any way inconsistent therewith.

GENERAL RULES (Continued)

11- Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

12- The quantity of water recorded by the meter shall be taken to be the amount delivered to the customer, except where the meter has been found to be registering fast by more than one and one-half percent (1.5%) or has ceased to register.

13- All service provided by the Company except public fire protection shall be metered. Thus, no unmetered water service connections are permitted except as otherwise set forth herein or approved by the Company.

14- The Company shall own and provide without charge for each customer supplied on a measured basis, a meter and such appurtenances related to the meter as are customarily furnished by the Company, such as encoders, radio transmitters, meter pits (but not meter vaults), or other devices designed to facilitate the collection of accurate and efficient meter reads.

15- The Company requires that all meters be housed inside meter pits (for meters that are less than or equal to 2-inches) or meter vaults (for meters that are larger than 2-inches). Where more than one service type exists (domestic, private fire protection or irrigation) all meters shall be housed inside a meter vault if any one meter is greater than two inches. The Customer is responsible for the installation and maintenance of meter vaults. All meter pits and meter vaults will be located outside of the Customer's structure in a location acceptable to the express approval of the Water Company. Notwithstanding the foregoing, the Company may grant an exception to this rule on a case by case basis at the Company's discretion.

16- The Company maintains and repairs meters except in case of misuse or damage by the customer or the customer's invitees, agents, representatives or contractors, in which case the Company shall charge the customer for repairing and replacing the meter, said charge to be based on the costs related to the removing, repairing, replacing and/or resetting the meter. The charge will be made in accordance with Rate Schedule P-2.

17- Where more than one rate schedule is available to particular customers, the utility shall have at all times the duty to assist such customers in the selection of the rate schedule most favorable for their individual requirements and to make every reasonable effort to ensure that such customers are served under the most advantageous schedule.

18- Upon the request of a customer, the Company shall send a Spanish language version of the notice of discontinuance for nonpayment. N.J.A.C. 14:3-3A.3(e)

19- The Company reserves the right to require any customer having unusual requirements of demand, services or supply to enter into a special written contract, which contract shall provide for the mutual obligations of the customer and Company. Special contracts will be filed with the Board.

20- In case of fraud, deception, illegal use, or when it is clearly indicated that the customer is preparing to leave, the Company may demand immediate payment of accounts and terminate service without further notice.

21- The Company reserves the right to change, take from or add to this tariff and the Standard Terms and Conditions, to the extent permitted by law, or permitted by the applicable regulations of the state regulatory body having jurisdiction.

22- For all materials furnished or services rendered to any governmental agency or unit of the United States, New Jersey, or sub-unit thereof, that is not covered by any other tariff provision or rate schedule, and which pertain to hydrants, meters or situations involving emergencies, the charges will be 10% more than the total of the following applicable items:

(a) Equipment and materials: actual costs;
(b) Labor charges: actual costs (including base plus fringe); and,
(c) Other charges: actual costs (such as permits, police protection, contractor labor, restoration, etc.).

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

DEPOSITS

1. If after notice of the methods of establishing credit and being afforded an opportunity, a customer has not established satisfactory credit, the utility may require a deposit. The deposit amount shall be determined in accordance with N.J.A.C. 14:3-3.4.
2. The utility must furnish a receipt to any customer posting a deposit. The deposit will be returned with simple interest at a rate established annually by the Board of Public Utilities. Once the customer has established satisfactory credit with the utility, the deposit shall be returned to the customer with interest due. The customer has the option of receiving the deposit refund either by a check or a credit on the account. If a residential customer's deposit is not returned, the utility shall credit the customer's account with the accrued interest once every twelve months, in accordance with N.J.A.C. 14:3-3.5.
3. Where a water or wastewater utility furnishes unmetered service, for which payment is received in advance, it may not require a deposit. N.J.A.C. 14:3-3.4(j)
4. The Company shall review a residential customer's account at least once every year and a nonresidential customer's account at least once every two years to determine whether the customer has established credit satisfactory to the Company. If this review indicates that the customer has met the utility's standard requirements for establishing credit, the utility shall refund the customer's deposit. N.J.A.C. 14:3-3.5, Return of deposits, interest on deposits.
5. If the deposit has remained with the Company for at least three months, without default, it will be returned to the customer with simple interest on an annual basis at a rate established annually by the Board of Public Utilities. Deposits shall cease to bear interest upon the discontinuance of service.

FORM OF BILL FOR METERED SERVICE

6. All bills will be computed in accordance with the rates of the Company as shown in this Tariff, and as the same may be amended or revised from time to time. Rates are subject to such changes as the state regulatory body having jurisdiction may require, authorize or allow.
7. A customer has twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted, or electronic transmission date for customers on electronic billing, to pay a bill. A water and/or wastewater company may not discontinue water or wastewater service unless it has provided written notice giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. This written notice shall be sent by first class mail, apart from the bill and as a separate mailing. (N.J.A.C. 14:3-3A.3 (c)) The notice shall not be given until after the expiration of the said twenty (20) days' time to pay a bill. (N.J.A.C. 14:3-3A.3(b)) The notice shall contain sufficient information for the customer to notify the Board of Public Utilities of the nature of the dispute. The utility shall make a good faith effort to determine which of its residential customers are over 65 years of age, and shall make good faith efforts to notify such customers of discontinuance of service by telephone in addition to notice by regular mail. This effort may consist of an appropriate inquiry set forth on the notice informing customers that they may designate a third party to receive notice of discontinuance.
8. Bills rendered must contain the following information: (a) the meter readings at the beginning and end of the billing period; (b) the dates on which the meter is read; (c) the number and kind of units measured; (d) identification of applicable rate schedule or statement that the applicable rate schedule will be furnished upon request; (e) the amount of the bill; (f) a distinctive marking to indicate an estimated, averaged, or remote meter index and web address and telephone number where the customer can obtain a description of the method used; (g) an explanation or statement of any conversion from meter reading to billing units or any other calculations or factors used in determining the bill; and (h) the gross receipts and franchise tax statement. N.J.A.C. 14:3-7.2

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

FORM OF BILL FOR METERED SERVICE (Continued)

9. Estimated Billing. If for any reason a utility cannot read a customer's meter, the utility may use estimated billing in accordance with N.J.A.C. 14:3-7.2(c). Customers may request a special reading for a meter where a high bill or other reason exists to believe the meter reading used for billing purposes is in error. Rules concerning estimated bills for residential customers are as follows:

   a. The Company shall maintain a regular meter reading schedule and make a reasonable effort to read all meters.

   b. The Company, upon request, must make available to all customers a postage-paid business reply card on which the customer may mark the meter reading. Said card shall have appropriate explanation. The utility must permit the customer to telephone the meter reading to the utility. The customer reading is to be used in lieu of an estimated reading, provided the reading is received in time for billing.

   c. When the Company estimates an account for four consecutive billing periods (monthly accounts), or two consecutive billing periods (bi-monthly and quarterly accounts), the Company must initiate a program to mail a notice marked "Important Notice" to the customer on the fifth and seventh months explaining that a meter reading must be obtained and said notice must explain the penalty for failure to complete an actual meter reading. After all reasonable means to obtain a meter reading have been exhausted, the Company may discontinue service provided at least eight months have passed since the last meter reading was obtained, the Board of Public Utilities has been so notified, and the customer has been properly notified by prior mailing. If service is discontinued and subsequently restored, the utility may charge a reconnection charge equal to the reconnection charge for restoring service after discontinuance for non-payment. The reconnection charge shall become due when service is restored, whether the Company or an authorized professional physically restores service. Unauthorized reconnections shall be considered theft of service. Unauthorized reconnections by a customer no longer in arrears, shall be considered tampering with utility facilities.

   d. The Company must submit to the Board of Public Utilities a statement detailing their estimating procedures.

   e. An estimated bill must be clearly designated as such.

   f. If low estimates result in a customer receiving an actual bill that is at least twenty five percent (25%) greater than the prior estimated bill, the Company shall allow the customer to amortize the excess amount. The amortization will be in equal installments over a period of time equal to the period when no actual meter reading was taken by the customer or the Company. (7) Annually, the Company shall notify all customers of their rights to amortize as set forth in N.J.A.C. 14:3-7.2.

BUDGET BILLING

10. The Company will make available to residential customers whose accounts do not reflect past-due balances the option to pay their bills on a monthly, budgeted basis. The budget billing plan year will be a twelve (12)-month time frame and allows a customer to pay a predetermined monthly amount, based upon the customer's average usage. If a customer is a new customer with little or no prior history of utility use, the monthly budget amount shall be determined using a reasonable estimate of likely usage. The budget billing plan will be made available to eligible customers by bill insert or bill message at least twice in each twelve (12)-month period.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

BUDGET BILLING (Continued)

11. The Company will "true up" the actual cost of service rendered as determined by actual meter readings and the actual monthly budgeted amount at the beginning of the budget plan year, and at least once during the budget plan year if the true-up performed during the customer's budget plan year reveals an increase or decrease of twenty-five (25) percent or more in the monthly budget amount, the Company will adjust the budget billing plan up or down, if necessary. There shall be no more than one such adjustment during the budget plan year. The Company will notify the customer of any change in the budget billing amount prior to such change.

12. A final bill for the budget plan year shall be issued in the last month of the budget plan year, and shall contain the month's monthly budget amount, plus an adjustment of any difference between said amount and the actual cost of service rendered during the budget plan year. Payment of this final balance due is required before the customer will be allowed to participate in the budget billing program for the upcoming budget billing plan year.

13. The Company shall notify the budget billing plan customers in writing of a revised monthly budget amount at least ten (10) working days before the due date the initial bill of the next budget plan year. Should the customer opt out of the budget billing plan, payment of the total charges incurred to date will be due immediately, or, in the alternative, agree to enter into a deferred payment agreement according to N.J.A.C. 14:3-7.7; or a credit will be applied to the account, whichever is applicable. The plan bill shall contain the information required by N.J.A.C. 14:3-7.2, Form of Bill for Metered Service, N.J.A.C. 14:3-7.3 Form of Bill for Unmetered Service, and N.J.A.C. 14:3-7.4, Method of Billing.

14. Should the customer breach the terms of the budget billing plan by failing to make the monthly payments as required under the plan or by having a budget billing plan payment returned due to insufficient funds, the Company reserves the right to terminate the customer's participation from the program; payment of total charges incurred to date will be due immediately, or, in the alternative, the Company and the customer will agree to enter into a deferred payment agreement according to N.J.A.C. 14:3-7.7.

FINANCIAL AID

15. The Company understands that from time to time its customers may have difficulty paying their water and/or wastewater bills issued by the Company. If at any time customers find that they cannot pay their water and/or wastewater bill by the due date, the Company requests that the customers contact the Company's Customer Service Center, prior to the due date, to work out a payment arrangement with the Company to avoid a shut-off of service, at 1-800-272-1325.

16. In addition to working out payment arrangements with customers in times of financial difficulty, the Company has also established a residential customer assistance program for its low-income customers who are having difficulty paying their water and/or wastewater bills issued by the Company. This residential customer assistance program, called the H2O Help to Others Assistance Program, is designed to provide financial assistance to qualified residential customers to pay their water and/or wastewater bills and protect them from an unnecessary discontinuance of their water and/or wastewater service. A grant from the H2O Help to Others Assistance Program may be awarded to cover a portion or all of the residential customer's outstanding bill based on the customer's ability to pay, income level and the availability of funds in the program. For more information about this program, please contact NJ Shares at 1-877-652-9426 or any subsequent program administrator whose contact information may be found on the Company's web site. Customers who qualify for the program are required to recertify income eligibility every two years.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

DEFERRED PAYMENT ARRANGEMENTS

17. A customer is entitled to at least one deferred payment plan in one year. In the case of a residential customer who receives more than one utility service from the same utility (ex: water and wastewater; gas and electric) and the amount which is in arrears is a combination of those services, the utility shall offer a separate deferred payment agreement for each service based on the outstanding balance for that service. (N.J.A.C. 14:3-7.7(b)2) The Company must renegotiate the deferred payment agreement should the customer document a significant change in financial situation. The Company must also issue a new discontinuance notice each time it intends to shut off service, including defaults on the terms of the agreement. In the case of a residential customer who receives more than one utility service from the same utility and has subsequently entered into an agreement for each separate service, default on one such payment agreement shall constitute grounds for discontinuance of only that service. N.J.A.C. 14:3-7.7(f)

DISCONTINUANCE OF SERVICE

18. A water and wastewater utility shall not discontinue service because of nonpayment of bills in cases where a charge is in dispute provided the undisputed charges are paid (N.J.A.C. 14:3-3A.2(e)5) and a request is made to the Board within five (5) days for investigation of the disputed charge. The Company must advise the customer of their right to appeal to the Board of Public Utilities. N.J.A.C. 14:3-7.6(b)

19. Basis for Discontinuance of Service. The Company shall have the right to suspend or curtail or discontinue service for any of the following reasons (N.J.A.C. 14:3-3A.1(a)):

    a. For the purpose of making permanent or temporary repairs, changes or improvement in any part of its system;

    b. For compliance in good faith with any governmental order or directive, regardless of whether such order or directive subsequently may be held to be invalid;

    c. For non-payment of a valid bill due for service furnished at a present or previous location, in accordance with N.J.A.C. 14:3-3A.2. However, non-payment for business service shall not be a reason for discontinuance of residence service except in cases of diversion of service pursuant to N.J.A.C. 14:3-7.8;

    d. For nonpayment of a deposit, in accordance with N.J.A.C. 14: 3-3A.9;

    e. For any of the following acts or omissions on the part of the customer:

        (i) Refusal of reasonable access to the customer's premises in accordance with N.J.A.C. 14:3-3.6;
        (ii) tampering with any facility of the Company;
        (iii) fraudulent representation in relation to the use of service;
        (iv) customer moving from the premises, unless the customer requests that service be continued;
        (v) providing service to others without approval of the Company;
        (vi) refusal to contract for service where such contract is required;
        (vii) connecting and operating equipment in such manner as to produce disturbing effects on the service of the Company or other customers;
        (viii) failure of the customer to comply with reasonable Standard Terms and Conditions;
        (ix) where the condition of the customer's installation presents a hazard to life or property; or
        (x) failure of a customer to repair any faulty facility of the customer.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

DISCOUNTINUANCE OF SERVICE (Continued)

20. Public Utilities shall not discontinue residential service except between the hours of 8:00 a.m. and 4:00 p.m. Monday through Thursday unless there is a safety-related emergency. There shall be no involuntary discontinuance of service on Fridays, Saturdays or Sundays or on the day before a New Jersey State holiday or on a New Jersey State holiday, absent such emergency. N.J.A.C. 14:3-3A.1(c)

21. Should a customer be more than 20 days delinquent in paying the monthly bill for service, or violate one or more of the standard terms and conditions of service contained in this or subsequent tariffs of the Company, the Company may discontinue service by giving 10 days' written notice of disconnection to the customer and, for wastewater service, a copy of such notice to the local Board of Health.

22. Notices herein of discontinuance of service shall be sent by first class mail, apart from the bill and as a separate mailing. (N.J.A.C. 14:3-3A.3(b)2) Customers are advised that it is illegal to operate a dwelling without adequately functioning wastewater facilities, and that the Company is required to notify local health authorities of wastewater service termination.

23. Medical Emergency. Notwithstanding the following, at the end of the period of medical emergency the customer remains liable to the Company for the charges for services rendered during the period of non-discontinuance, subject to the provisions of N.J.A.C. 14:3-7.6. (N.J.A.C. 14:3-3A.2(i)). Residential service may not be discontinued for non-payment for a period of 90 days if a medical emergency exists within the premises and which would be aggravated by the shut off so long as the customer provides the Company with reasonable proof of his or her inability to pay and a licensed medical professional's written statement as to the existence of the emergency, its nature and probable duration, and how the termination of service will aggravate the medical emergency. This period of non-discontinuance may be extended as set forth in N.J.A.C. 14:3-3A.2(j). The Company reserves the right to contest the validity of any claimed medical emergency before the BPU.

24. Utilities shall annually notify all residential customers that, upon request, notice of discontinuance of service will be sent to a designated third party as well as to the customer of record. This provision shall not apply if Company makes a good faith effort to contact all residential customers by telephone prior to discontinuance and file with the Board a statement setting forth such procedure. N.J.A.C. 14:3-3A.4)

25. The Company shall make every reasonable attempt to determine when a landlord-tenant relationship is known to exist, and if the tenants are not the customers of record but are end-users, as these terms are defined at N.J.A.C. 14:3-1.1. Discontinuance of service is prohibited unless the utility has given a 30-day written notice to the owner of the premises or to the customer of record to whom the last preceding bill was rendered. The utility shall use its best efforts to determine the names and addresses of each tenant, in order to provide such notice, for example, through mailings to landlords requesting a list of tenants. The utility shall use its best efforts to provide copies of the discontinuance notice to all tenants. In addition, the utility shall provide the tenant(s) with thirty (30) days' notice, which shall be hand delivered, mailed, or posted in a conspicuous area of the premises and in the common areas of multiple family premises. N.J.A.C. 14:3-3A.6.(a) If a utility uses posting as the method of notice, each utility shall use its best efforts to also place a copy of the notice on each tenant's car windshield or under the door of each tenant's dwelling. In the case of tenants of single and two-family dwellings, each tenant shall also be provided with a 30-day individual notice. Each utility shall offer the tenant(s) continued service to be billed to the tenant(s) unless the utility demonstrates that such billing is not feasible. Tenants seeking continuation of service under this provision shall supply the utility with a copy of a valid lease or rental agreement. The continuation of service to a tenant shall not be conditioned upon payment by the tenant of any outstanding bills due upon the account of any other person. The utility shall not be held to the requirements of this provision if the existence of a landlord-tenant relationship could not be reasonably ascertained. N.J.A.C. 14:3-3A.6.(b).

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

DISCOUNTINUANCE OF SERVICE (Continued)

26. The utility or its designated contractor shall have the right of reasonable access to customer's premises, and to all property furnished by the utility, at all reasonable times for the purpose of inspection of customer's premises incident to the rendering of service, reading meters, or inspecting, testing, repairing or conducting markouts, either itself or through its contractor designated to perform said markouts, in compliance with the Underground Facility Protection Act, N.J.S.A. 48:2-73 et seq., and N.J.A.C. 14:2, also known as the "One-Call rules," of its facilities used in connection with supplying the service, for the discontinuance of service for nonpayment after proper notice, or for the removal of its property. (N.J.A.C. 14:3-3.6(a)) Service can be discontinued for refusal of reasonable access to customer's premises for necessary purposes in connection with rendering of service, including meter and remote reading device installation, reading or testing, or the maintenance or removal of the utility's property. (N.J.A.C. 14:3-3A.1(a)5.i) Reconnection fees as shown on Rate Schedule P-2 and Rate Schedule 9-A will be charged upon restoration of service.

27. It is the responsibility of a customer who wishes to voluntarily discontinue his or her service to notify the Company and request a final reading. A customer wishing to discontinue service shall give notice to the utility. Within 48 hours of said notice, the utility shall discontinue service or obtain a meter reading for the purpose of calculating a final bill. Where such notice is not received by the utility, the customer shall be liable for service until the final reading of the meter is taken. Notice to discontinue service will not relieve a customer from any minimum or guaranteed payment under any contract or rate in accordance with the Standard Terms and Conditions on Sheet Nos. 23 and 24, nor will it mitigate any of the obligations on the Company's General Metered Rate Schedules. In accordance with N.J.A.C. 14:3-3A.1(b).

28. If a customer wishes to have his service physically disconnected, then notice as set forth within this tariff is required prior to such disconnection provided, however, that nothing herein shall operate to prevent the Company from discontinuing service at any time under conditions and for reasons set forth in this tariff; and provided further, that nothing herein shall be construed to prevent the making of contracts for extension of service or other special conditions.

29. When a customer is physically disconnected (water service) or the service lateral is plugged (wastewater service) for non-payment of a bill for, or violation of the standard terms and conditions of service, the customer will be required to pay, in addition to any outstanding or delinquent amount, the Company's actual cost of reconnection or $350.00, whichever is more, before service is restored. See Rate Schedules P-2 and 9-A. Wastewater service customers who remove plugs from their service laterals, and water customers who operate the curb stop to restore service after disconnection are tampering with Company property and may be charged with theft of service.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

RESTORATION OF SERVICE

30. Service shall be restored within 12 hours upon proper application when: 1. all of the conditions under which service was discontinued are corrected; and 2. payment of all charges due is received at the utility or at an authorized payment center and the utility has received notice of the payment. Any other provision notwithstanding, the utility shall restore service within 12 hours if there is a complaint involving such matters before the Board and Board staff so directs the utility. N.J.A.C. 14:3-3A.9. See Rate Schedules P-2 and 9-A for restoration of service charges. Restoration of water service performed outside of normal business hours as shown on Rate Schedule P-2 will be subject to the Emergency Reconnection service charge of $100 as shown on that Rate Schedule P-2.

THEFT OF SERVICE

31. Whenever the Company reconnects service to a customer under the following conditions, a charge will be rendered for providing this service as described in Rate Schedule P-2 or 9-A.

    a. Whenever the Company has determined that a customer's service has been reconnected without the permission of the Company after service has been terminated for non-payment of bills or violation of the Company's tariff, the Company will terminate the customer's service for a second time and give written notice to the customer that if service is reconnected again without the permission of the Company, it will be necessary for the Company to excavate and physically disconnect service. A reconnection charge will be applied as set forth in Rate Schedules P-2 or 9-A of the present tariff.

    b. Customers in default in the payment of a bill may be required to furnish a deposit or increase their existing deposit in an amount sufficient to secure the payment of future bills. Service shall not be discontinued for failure to make such deposit except after proper notice to the customer. If a customer who has made a deposit fails to pay a bill, the Company may apply such deposit insofar as is necessary to liquidate the bill and may require that the deposit be restored to its original amount. N.J.A.C. 14:3-3.4(f)

32. The Company has certain rights under the law to obtain the cessation of acts constituting theft of service that have been committed in violation of N.J.S.A. 2C:20-8, as well as complete restitution for any losses or damages it has suffered as a result of said acts. Customers who tamper with Company property to illegally restore service after being shut off for nonpayment or any other reason under N.J.A.C. 14:3-3A et seq. may be subject to fees pursuant to Rate Schedule P-2 and Rate Schedule 9-A and responsible for payment of any resulting damages.

LATE PAYMENT CHARGE

33. Should a nonresidential customer fail to make payment as specified under Terms of Payment in the Rate Schedules the Company may, on the twenty-sixth (26th) day, assess a late charge at the rate of 0.35%. Service to state, county or municipal government entities will not be subject to a late payment charge. The charge will be applied to all amounts billed and unpaid finance charges applied to previous bills. The amount of the late payment charge to be applied to the Customer's account shall be calculated by multiplying the previous unpaid bill amount by the late payment charge rate. When payment is received by the Company from a Customer who has an unpaid balance which includes charges for late payment, the Customer's payment shall be applied first to the oldest aged unpaid bill amount and its applicable late charge, and then to the next oldest aged bill amount and late charge. Notwithstanding the foregoing shut off provisions in accordance with N.J.A.C. 14:3-3A will still apply to past due accounts.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

METER

34. The utility must provide for one free water meter test during any twelve (12) month period if the customer so requests it. (N.J.A.C. 14:3-4.5) A meter of a customer who has a complaint filed with the Board reflecting on the accuracy of the meter shall not be removed from service by the utility during the pendency of said complaint or during the following thirty (30) days unless otherwise authorized or directed by the Board. (N.J.A.C. 14:3-4.8(c)) When a billing dispute is known to exist, the water utility shall, prior to removing the meter, advise the customer that they may have the meter tested by the utility or may have the Board witness a testing of the meter by the utility, and that in any event the customer may have the test witnessed by a third party. (N.J.A.C. 14:3-4.5(c)) A meter test arising from a billing dispute may be appropriate in instances which include, but not limited to, unexplained increased consumption, crossed meters, consumption while an account is vacant or any other instance where the meter's accuracy might be an issue in a bill dispute. (N.J.A.C. 14:3-4.5 (d)) The customer can apply to the Board for a Board inspector to test the customer's meter. (N.J.A.C. 14:3-4.5(e)) All costs for such a test shall be borne by the Company. N.J.A.C. 14:3-4.5(e)

35. If more than one meter test is made within a twelve (12) month period at the request of the customer and the meter is found to be accurate, the Company shall charge the customer for this meter test at the rate set forth in Rate Schedule P-2 for each additional test. (N.J.A.C. 14:3-4.5). If the meter is found to register fast by more than one and one-half percent (1.5%) of the water passed through the meter at full capacity, the customer will not be charged for the test. N.J.A.C. 14:3-4.6

36. Whenever a water meter is found to be registering fast by more than one and one-half percent, an adjustment of charges shall be made in accordance with the regulations which can be found at N.J.A.C. 14:3-4.6.

37. If a meter is found to be registering less than 100 percent of the service provided, an adjustment of charges may be made in accordance with the regulations which can be found at N.J.A.C. 14:3-4.6. In cases where the meter registers zero usage for an entire billing period, and the customer has knowingly taken and received water service, the customer shall be deemed to have reasonable knowledge that the meter may be defective or malfunctioning.

38. A water utility must maintain records of customers' accounts for each billing period occurring within a six year period. Such records shall contain all information necessary to permit computation of the bill. N.J.A.C. 14:3-6.1(b)

39. When the meter is not located inside the customer's building but outside in a meter pit, the customer shall not make connections or alterations inside the meter pit. All such connections are to be made outside of the meter pit on the customer's side of the meter. The meter pit or vault shall be installed at a location acceptable to, and with the express approval of, the Company. The Company may install, at the Company's discretion, radio transmitters or other remote meter reading devices on its meters and appurtenances as needed to promote efficient and accurate meter reads. Failure to comply with this requirement will be considered tampering with facilities of the Company and the customer will be subject to charges for repairs to damaged equipment and/or discontinuance of service.

40. When the customer's usage is obtained through an electronic ("encoder") read, that usage shall be deemed actual. No adjustment shall be made for a meter that is found to be registering less than 100 percent except in the case of meter tampering, non-registering meters or in circumstances in which the customer should reasonably have known that the bill did not reflect the actual usage. N.J.A.C. 14:3-4.6(d)

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

METER (Continued)

41. A customer having two or more meters (excluding meters for Service to Privately Owned Fire Protection Systems under applicable Rate Schedules set forth in the tariff) on the same premises will be charged at the tariff rate for the quantity of water equivalent to the sum registered on all of the meters on the premises, subject to a facilities charge equal to the sum of the facilities charges for each meter. Private Fire Protection services will be charged separately, in agreement to the present tariff.

APPLICATIONS FOR SERVICE

42. Inquiry for a water or wastewater service connection may be made by mail, telephone (888.237.1333) or via the Company's website at www.amwater.com/njaw, and the Company will provide and submit to the applicant, if necessary, any and all forms required to be filled out and signed by the owner, or their agents, for the premises to be supplied, including the identity of the customer of record before any new connection shall be installed. The application will not be processed until all forms are completed in full and any required supporting documentation is provided. Customers must agree to the terms, conditions and rates for service as set forth in this and subsequent tariffs of the Company.

43. Such inquiry shall be made in a reasonable time before such service is required for new buildings and premises not previously supplied to allow for the installation of service lines and accessories by the Company, as hereinafter defined.

44. Separate inquiry shall be made for each premises and for each type of service requested to be furnished (*i.e.* consumptive, irrigation, construction, wastewater, etc.)

45. Water and wastewater connections shall be made by the Company subject to the prior existence of a main that is adequately sized in terms of capacity and pressure required for the specific water connection within a public right of way or company easement abutting the property or premises to be served except in the case where the location of the connection is proposed to be on the long side of a divided (raised or grass) state highway, in which case the customer will be required to enter into an extension agreement. The acceptance of such inquiries for service shall in no way obligate the Company to extend its distribution or collection mains to abut the property or premises except as hereinafter provided.

46. The connection shall be in accordance with the applicable laws including but not limited to those of the BPU, DEP and all federal, state and local agencies.

47. In areas where the billing for wastewater service is based on the volume of water supplied to the premise by the Company, the Company will provide wastewater service only where the water used on the premises is measured by a water meter, subject to the limitations described within this paragraph, below. Where wastewater service is provided and water used on the premises is not supplied by the Company, then the water so used shall be measured by a meter furnished and installed by the Company at a location approved by the Company subject to the limitations described within this paragraph, below. Said wastewater charges shall be based on the volume of water supplied to the premises and measured by the water meter, unless the Company determines that, due to such issues as adverse ground conditions or due to other such unforeseen circumstances, or as required by other tariff provisions herein, it is impracticable or imprudent to install a water meter at the customer's premises in order to base wastewater service charges on the volume of water supplied to the premises as measured by said meter. In such situations, wastewater service billing will be based upon a flat rate, or a minimum usage as established by the applicable rate schedule within this tariff. In instances where a customer's water comes from a well, the Company will make a reasonable effort to install a meter on said well for purposes of determining wastewater service based on water consumption. However, if the utility determines that it is not feasible or practical to install a water meter on the well, the wastewater service billing shall be based upon a flat rate. In addition, should conditions in or around the well cause the meter to malfunction 2 times after installation, the Company has the right to remove the meter and to bill wastewater service on a flat rate, or a minimum usage as established by the applicable rate schedule within this tariff.

STANDARD TERMS AND CONDITIONS
WATER AND WASTEWATER

APPLICATIONS FOR SERVICE (CONTINUED)

48. The Company is not obligated to install more than one service and meter for each property or premises. Furthermore, in those instances where more than one service is requested the Company reserves the right to recapture all costs associated with the additional service(s).

49. Physical connections, such as cross-connections, interconnections, valves, pumps, or similar devices, either permanent or temporary, connecting the pipelines or facilities of the Company with other pipelines or facilities supplied with water from other sources will not be permitted without the express written consent of the Company. Water which has once been drawn from the Company's distribution network and used for any purpose or stored in tanks, is considered an unapproved source of supply.

50. The Company may require a cross-connection protective device on a customer's service, in accordance with N.J.A.C. 7:10-10, which will be purchased and installed at the expense of the customer. The cross-connection device shall be of the type approved by the Company. Inspection and testing at intervals, in accordance to N.J.A.C. 7:10-10, will be performed at the expense of the customer.

51. No device or connection is permitted between pipes carrying water from the mains of the Company and any portion of the plumbing system of the premises, which may under any condition permit back-flow or back-siphonage unless prior written permission has been granted by the Company.

52. Customers requesting a relocation of their service line will be required to pay a fee for the new service line and elimination of the existing service line.

53. Customers requesting a relocation of a Public Fire Hydrant will be required to pay a fee for its relocation.

54. Installation of electronic meter reading devices and other equipment designed to facilitate efficient and accurate meter reads, protect the integrity of the water system and/or quality of the water supplied by the Company may be required from any customer as a condition of service at the discretion of the Company.

55. Water sales to customers or entities using trucks or tanks that require additional attention can affect the Company's daily operations. A surcharge may be applied as listed in Rate Schedule P-1 of the present tariff.

56. A deposit may be required to guarantee payment for water service used for general construction and contracting purposes in an amount equal to the cost of the meter furnished. The deposit, less the cost of repairs to the meter, if any, will be refunded after surrender of the meter and payment of all charges for water supplied through it.

STANDARD TERMS AND CONDITIONS
WATER

WATER SERVICE AND CONNECTING LINES

Company Side – Service Lines

1. The Company is responsible for the installation and maintenance of the service line.
2. Only employees of the Company or persons duly authorized to do so by the Company are permitted to operate or otherwise access the curb stop.
3. No service line shall be used to supply more than one customer unless authorized in advance by the Company in writing.
4. Where two or more customers are supplied through a single service line, the customers and/or premises owner must provide a suitable location(s) for a separate meter and separate shut-off valve that will be dedicated to each customer. The piping of the building must be so arranged that each customer can be supplied through an independent meter, shut off valve and piping system as may be required by the Company, at the Company's sole discretion. The meter pit or vault shall be installed at a location acceptable to, and with the express approval of, the Company. Failure to comply with this provision may result in termination of service to all accounts serviced by a single connecting line when service to one account must be discontinued for non-payment or failure to otherwise comply with the terms and conditions of service provided for herein. Notice provisions outlined on Sheet No. 12, paragraph 25, will apply.
5. No single building or single group of buildings in one common enclosure and under one ownership shall be supplied by more than one of the same type of service line (i.e., only one domestic line and one fire line).

Customer Side – Connecting Lines

6. Connecting lines are owned, installed, maintained and repaired by the premises owner at the premises owner's sole expense. The connecting line should be maintained in a condition conducive for the Company to perform the services required to serve its customers. If the connecting pipe is not so maintained, any failure of this pipe following the operation of the curb stop by the Company will be the responsibility of the premises owner. While performing its duties, if the Company notices that the connecting pipe or other premises owner-owned and maintained appurtenances appear to be in poor condition, the Company will attempt to notify the premises owner of such, including that the owner may desire to contact a licensed plumber for a professional evaluation and/or repair of the connecting pipe and appurtenances. Failure to repair a leaking connecting line is grounds for termination of water service. N.J.A.C. 14:3-3A.1(a)5.
7. Notwithstanding any other provision of this tariff, the Company may, at its own expense, and with the permission of the customer, replace a customer's connecting line that is i) made of lead pipe, ii) made of pipe lined with lead or iii) made of ferrous-based pipe material capable of retaining lead particles.
   a. After the Company replaces the customer's connecting line, as described above, the customer will continue to own and be responsible for the connecting line, including maintenance of such line, in accordance with this tariff. The Company will offer the customer a warranty of the workmanship of its installation of the new connecting line for a period of 12 months following the date the customer signs the replacement agreement with the Company, with the Company's liability limited to the cost of repairing or replacing the customer's connecting line during that time. Except for the Company's limited liability under the 12-month workmanship warranty, the Company will not own nor assume any liability or responsibility with respect to the customer connecting line. The customer will agree to release and hold the Company harmless the Company, its contractors and subcontractors from and against all claims, liability and costs resulting from acts and omissions of Company and/or its approved contractors and/or subcontractors in installing the Customer service line pursuant to the replacement agreement.

STANDARD TERMS AND CONDITIONS
WATER

WATER SERVICE AND CONNECTING LINES

Customer Side – Connecting Lines (continued)

8. Connecting lines should be installed, without sharp bends, at right angles to the line of the street and shall be installed in the trench not less than 3-1/2 feet in depth to avoid damage and possible interruption to service caused by freezing. Other utility service lines shall not be installed in the same trench as the connecting line. No attachment shall be made to the connecting line between the curb stop and the meter except as otherwise authorized by the Company. Unauthorized attachments are grounds for termination of service. N.J.A.C. 14:3-3A.1(a)5.ii
9. Connecting lines should not be less than ¾ inch in inside diameter.
10. A customer must install a water pressure reducing valve where required by State of New Jersey plumbing code. If a water pressure reducing valve is required to be installed, the customer must install a pressure relief valve (collectively both are referred to as the "Valves"). In all cases, the costs of installation and maintenance of the Valves shall be borne by the customer. The customer shall own and be obligated to maintain the Valves. The Company will not be liable for damage due to meter failures if the customer is located in a high pressure zone and does not have a pressure reducing valve or has a pressure reducing valve downstream from a water meter that is installed inside the premises.
11. For meters less than or equal to 2 inches the pressure reducing valve will be located on the downstream side of the meter if the meter is located outside of the customer's premises and on the upstream side of the meter, if the meter is located inside of the customer's premises. For meters greater than 2 inches the pressure reducing valve will always be located on the upstream side of the meter.
12. The customer is required to make all changes in the connecting line due to changes in grade, relocation of mains, or other causes only if such changes are mandated by a municipality, county, state or other governmental body.

WATER MAIN EXTENSIONS

13. The Company will extend water service in accordance with all applicable laws of the State of New Jersey and Board of Public Utilities regulations and orders including N.J.A.C. 14:3-8.1 et seq. Mains will be extended to the mid-point of property frontage for residential properties, and along the entire frontage for commercial properties, regardless of where the service stub is installed.

    Information on how to apply for a water main extension can be found on the Company's website at https://www.amwater.com/njaw/About-Us/Providing-Solutions/Developers/.

CUSTOMER'S PREMISES

14. The Company may refuse to provide a water connection, or furnish water through a connection pipe already installed, when a customer's piping system is not installed in accordance with the regulations of the Company and of the municipality in which the premises are located; or when the system on the premises is not at sufficient depth to prevent freezing.
15. Customers shall not permit access to the meter and other appliances of the Company except by authorized employees of the Company or properly authorized state or local inspectors.
16. In all cases the customers should not interfere with property of the Company, but should immediately notify the Company of any problem.
17. It is the sole responsibility of each customer to ensure that all piping and appurtenances within a customer's premises comply with state, municipal and other public health regulations in force with respect hereto including state and local plumbing codes. The piping and appurtenances shall be maintained in a condition conducive for the Company to perform the services required to serve the customer.

STANDARD TERMS AND CONDITIONS
WATER

CUSTOMER'S PREMISES (CONTINUED)

18. In any premises where devices are used which might produce a back pressure, such as steam boilers, carbonation equipment for soft drinks, booster pumps, etc., a check valve shall be installed by the customer at the meter. In the event such check valve is installed, pressure relief valves should be provided by the customer in the system.

19. In any premises where an auxiliary water source is available, the pipes carrying water from the mains of the Company are required to be marked in some distinctive manner for ready identification.

PRIVATE FIRE PROTECTION SERVICE

20. Customers desiring a separate service connection for private fire service are required to make separate application for such service on forms prescribed by the Company. Private fire service installations are made in accordance with the provisions of this tariff regarding the installation of service and connecting pipes and other facilities.

21. Service lines designated for private fire protection are installed for customers requiring a private fire service to supply sprinkler heads, hydrants or hose connections. Any connection in which sprinkler heads and/or hose connections are supplied through a domestic service connection are considered "multi-use", are not considered as part of a private fire protection service, and shall not be deemed as part of this section. The utility shall have the right to suspend or curtail or discontinue service for any of the following acts or omissions on the part of the customer: tampering with any facility of the utility; fraudulent representation in relation to the use of service; and connecting and operating in such manner as to produce disturbing effects on the service of the utility or other customers. (N.J.A.C. 14:3-3A.1(a)5)

22. The connection shall be in accordance with the applicable laws including but not limited to those of the BPU, DEP and all federal, state and local agencies.

23. Unless specified by the Company, dedicated private fire service lines and facilities, including hydrants, are to be used exclusively for fire protection purposes and should be equipped with special meters.

24. No water should be used through private fire protection facilities except for permitted testing purposes or in case of fire. The use of private fire protection facilities for other reasons will result in termination of service following notification pursuant to N.J.A.C. 14:3-3A.1(d).

25. Residential customers served by a water service line of two (2) inches or less in diameter will not be imposed a standby fee for private fire protection.

26. A "multi-use" service is not a private fire service. Please refer to Schedule P-3 for the terms and conditions regarding multi-use service.

27. Private fire protection shall not be offered or charged for service to private fire hydrants connected after a master meter on a general metered or multi-use service. A master meter on a general metered or multi-use service with a hydrant will be billed pursuant to the applicable general metered rate schedule and considered as such.

28. The Company shall not be liable for any loss, injury, casualty or damage resulting from fire or water, or other agency, resulting from the supply or use of water service or the failure thereof, which may occur on account of the installation or presence of a private fire service connection, or from the presence or operation of the Company's structures, equipment, pipes, appliances or devices on the customer's premises, or connected therewith.

29. The Company may not discontinue water service unless it has provided written notice giving the customer at least thirty (30) days' notice prior to the proposed discontinuance. However, in case of fraud, illegal use, or when it is clearly indicated that the customer is preparing to leave, immediate payment of accounts may be required, and service may be discontinued without further notice.

STANDARD TERMS AND CONDITIONS
WATER

PUBLIC FIRE PROTECTION SERVICE

29. Upon application or request by a duly authorized representative of a municipality in the Company's service area, the Company will install fire hydrants for purposes of public fire protection. The locations of such hydrants are selected by agreement between officials of the municipalities and representatives of the Company after careful consideration. Municipalities or the designated customer of record (*e.g.* local fire district) shall pay the Company a charge for service to public fire hydrants within that municipality as provided in the applicable rate schedule set forth in this tariff.

MULTI-USE SERVICE

30. Multi-use service is only available to franchise customers who submit a completed application to the Company. By applying for multi-use service, the customer agrees to be responsible for all claims, costs and liability for personal injury, death and/or property damage, resulting from the customer's individual water system, unless caused by the negligence of the water utility. A "multi-use" service is not a private fire service. Please refer to Schedule P-3 for the terms and conditions regarding multi-use service.

31. All multi-use service lines shall be metered and the meter shall be located in a meter pit or vault located outside of the Customer's structure. The meter pit or vault shall be installed at a location acceptable to the express approval of the Water Company.

32. If a customer requests a change in meter size associated with a multi-service meter, the customer must re-apply for service and re-certify each item addressed below and in Rate Schedule P-3.

33. By applying for multi-use service, and operating the same, the customer agrees:

    a. The customer has complied with all of the terms and conditions set forth on Rate Schedule P-3;

    b. To include a backflow prevention device(s) as defined at N.J.A.C. 7:10-1.3, and as specified at N.J.A.C. 7:10-10.3;

    c. To be solely responsible for all costs and expenses relating to the installation, operation, maintenance, repair and replacement of the customer's water system, including the fire suppression system and backflow prevention device(s);

    d. To ensure that the customer's water system complies with the applicable requirements of the Uniform Construction Code in effect at the time of system installation, including any applicable building, plumbing and fire protection sub-codes;

    e. To ensure that the customer's water system is maintained in accordance with all applicable law so as to protect against backflow, back-siphonage and contamination of the potable water system; and

    f. To be subject to disconnection under the standard terms and conditions as apply to fire protection service or multi-use service in accordance with the Board's rules governing discontinuance of such service at N.J.A.C. 14:3-3A.4(k) and N.J.A.C. 14:9-8.3.

EMERGENCY RESPONSES DUE TO EXTRAORDINARY DEMAND AND/OR DIMINISHED SUPPLY

34. Discontinuance of service for failure to comply with use restrictions. For compliance by the utility in good faith with any governmental order or directive, notwithstanding that such order or directive subsequently may be held to be invalid, the Company may, upon reasonable notice, suspend, curtail, or discontinue service pursuant to N.J.S.A. 48:2-23, N.J.S.A. 48:2-24, and N.J.A.C. 14:3-3A for any of the following acts or omissions on the part of the customer:

    a. Connecting or operating any piping or other facility, including but not limited to, lawn sprinkling on the customer's premises in such a manner as to adversely affect the safety or adequacy of service provided to other customers present or prospective; or

STANDARD TERMS AND CONDITIONS
WATER

EMERGENCY RESPONSES DUE TO EXTRAORDINARY DEMAND AND/OR DIMINISHED SUPPLY

Discontinuance of service for failure to comply with use restrictions (continued)

b. Continuing waste of water by customers after notice from the utility through improper or imperfect pipes, fixtures, or failure to comply with restrictions; or

c. Failure to comply with the standard terms and conditions contained in this tariff or failure to comply with any state law, or the rules, regulations, orders or restrictions of any governmental authority having jurisdiction.

35. Water service shall be restored when the conditions under which such service was discontinued, as specified above, are corrected and upon the payment of the SPECIAL RESTORATION OF SERVICE CHARGE of $100.00 for each restoration.

36. The Company will endeavor to provide a regular and uninterrupted supply of water through its facilities. However, if because of emergencies beyond the control of the Company, including governmental mandate, service is interrupted, irregular, defective or fails, the Company will not be liable for damages or inconvenience resulting there from. In the event of an extraordinary demand and/or diminished supply, or when operational issues make such actions desirable, including, among other things, protecting the integrity of the system and permit conditions, the Company may restrict the use of water whenever the public welfare may require it and, if necessary, may shut off the water in its mains and pipes. In such cases the Company shall advise its customers by placing a prominent advertisement detailing the conditions and restrictions in a newspaper of general circulation in the utility service area. The notice will state the purpose and probable duration of the restriction or discontinuance. Failure to provide regular and uninterrupted service due to breakdowns is covered under other sections of this tariff.

37. The Company may restrict water service during certain periods, where the Company advises the Board of Public Utilities, in order to protect the public water supply, or otherwise to comply with any regulations, orders or decrees issued by the Governor of New Jersey or the Department of Environmental Protection, or any successor agency or department pursuant to the Water Supply Management Act, or other statutes or regulations of the state or federal government. Such interruptions or restrictions shall be reported to the Department of Environmental Protection, if necessary, and the Board by each utility by the speediest means of communications available, promptly followed by a detailed written report, pursuant to the provisions of N.J.A.C. 14:3-3.7 et seq. Thereafter the utility shall provide weekly reports for the duration of the emergency.

38. When the supply of water to individual customers is to be discontinued or curtailed for the customer's failure to comply with emergency water restrictions imposed because of extraordinary demand or diminished supply, the Company shall advise such customer(s) by placing a door tag on the front door of the home of the individual(s) in violation of the restrictions, at least twenty-four (24) hours prior to discontinuance or curtailment, or by giving another form of notice acceptable to the Board. The Company will advise business and commercial customers, in writing, by mailing a notice to the customers' billing address. In the case of door tags, they shall be sequentially numbered and include the date, time and nature of the violation and the procedure for restoration of service. All such notices shall be accounted for by the utility.

STANDARD TERMS AND CONDITIONS
WASTEWATER

A. WASTEWATER MAIN EXTENSIONS

Applicability

Applicable to all wastewater service customers served by the Company.

1. The Company will extend wastewater service in accordance with all applicable laws, regulations and orders of the State of New Jersey and Board of Public Utilities including N.J.A.C. 14:3-8, et seq.
2. Mains will be extended to the mid-point of property frontage for residential properties, and along the entire frontage for commercial properties, regardless of where the service stub is installed.
3. Documentation on how standard wastewater main extensions are handled can be found on the Company's website at https://www.amwater.com/njaw/About-Us/Providing-Solutions/Developers/.
4. Please also refer to Sheet No. 13, paragraph 28 of the Standard Terms and Conditions.

B. CALCULATION OF WINTER QUARTER CONSUMPTION

Applicability
Applicable to wastewater service customers served by the Company in in the Statewide Wastewater Collection Areas of Lakewood, Tewksbury Township, Service Area 1D, the former Applied Wastewater Management Service Area ("Applied"), Plumsted Township, Elk Township, the Boroughs of Haddonfield and Mount Ephraim, and the former Environmental Disposal Corp. Service Area ("EDC"), Rate Schedules 2-A, 6-A, 10-A, 11-A, 13-A, and 21-A.

Volumetric Wastewater Charge
The volume of wastewater discharged is assumed to equal water meter registration. The monthly Volumetric Wastewater Charge shall be determined based upon winter quarter consumption, but in no case less than 2,000 gallons per month. Winter quarter consumption shall be determined based on an initial water meter reading taken in December of one year with the concluding meter reading taken approximately 90 days thereafter in March of the following year.

The monthly Volumetric Wastewater Charge shall be determined as follows:

Meters read in January, February and March
The Volumetric Wastewater Charge for each respective month shall be determined by multiplying the applicable monthly usage times applicable volumetric charges.

Meters read in April through December
The Volumetric Wastewater Charge for each month April through December shall be based on the Monthly Usage Constant, equal to one-third of the winter quarter consumption, but in no case less than 2,000 gallons per month, multiplied by applicable volumetric charges.

In the case of new customers, the volume of wastewater discharged shall be determined as follows:

1. New Customers in an Existing Dwelling or Premises for Which Actual Full Period Winter Quarter Usage History is Available.
   Determination of the monthly use constant shall be based on the last known full period winter quarter usage at that property, but in no case less than 2,000 gallons per month. This monthly use constant will be used for billing purposes until the customer receives the January bill in the following year. The January and subsequent bills will be calculated in accordance with the method described in this Tariff for determining the monthly Volumetric Wastewater Charge.

STANDARD TERMS AND CONDITIONS
WASTEWATER

B. CALCULATION OF WINTER QUARTER CONSUMPTION (CONTINUED)

2. Existing or New Customers in an Existing or New Dwelling or Premises for Which No Full Period Winter Quarter History has Been Established.

a. For service established outside of the winter quarter:
Determination of the monthly use constant shall be based on 12,000 gallons per quarter (a monthly usage constant of 4,000 gallons) until the customer receives the January bill in the following year. The January and subsequent bills will be calculated in accordance with the method described in this Tariff for determining the monthly Volumetric Wastewater Charge.

b. For service established during the winter quarter:
Determination of the monthly use constant will be based upon the actual usage during the winter quarter with a minimum of 12,000 gallons (a monthly usage constant of 4,000 gallons). This monthly use constant will be used for billing purposes until the customer receives the January bill in the following year. The January and subsequent bills will be calculated in accordance with the method described in this Tariff for determining the monthly Volumetric Wastewater Charge.

C. SPECIAL REQUIREMENTS RELATING TO WASTEWATER SERVICE – COLLECTION SYSTEMS

Applicability

Applicable to wastewater service customers served by the Company in Bound Brook, Bridgewater, Haddonfield, the Egg Harbor City Utility, Howell Township, Lakewood Township, Mount Ephraim, Ocean City, Elk Township and the Borough of Somerville.

1. Separate and independent wastewater service lines shall be installed for each customer. All building drains and building wastewater appurtenances shall be the responsibility of the customer and shall be installed and maintained by the customer.
2. No customer shall discharge or cause to be discharged into the Company's system any storm water, surface water, ground water, roof runoff, sub-surface drainage, foundation or basement sump drainage, uncontaminated cooling water or unpolluted industrial process water.
3. No customer shall discharge or cause to be discharged into the Company's system the following described substances, materials, waters, or wastes without the prior written approval of the Company. Such wastes can harm either the wastewater system or treatment process and/or equipment, have an adverse effect upon the receiving stream for the treated wastewater, or can otherwise endanger life, limb or property or create a nuisance. In forming the opinions as to whether or not to permit the discharge, the Company will consider the effect upon receiving wastewater system, as well as the conditions placed upon the Company by its service agreements with the local treatment Utilities Authorities that treat the wastewater the Company collects.
4. The customer shall be responsible for maintaining and repairing the “building drain” and “building sewer.”
5. The customer shall be responsible for installing and maintaining a backwater valve in buildings that have fixtures below grade level. In the event of a gray water backup, the Company shall not be liable for any damage or inconvenience resulting from the absence/malfunctioning of this appurtenance.
6. The Company reserves the right upon completion of its findings to:
   a. Reject the wastes.
   b. Require pretreatment to an acceptable condition for discharge.
   c. Require flow equalization.

STANDARD TERMS AND CONDITIONS
WASTEWATER

C. SPECIAL REQUIREMENTS RELATING TO WASTEWATER SERVICE – COLLECTION SYSTEMS (CONTINUED)

7. In the event pretreatment facilities or flow equalization is required, the design and construction of such facilities shall be subject to approval of the Company and operation of said facilities shall be subject to inspection by the Company. Monitoring and/or sampling equipment shall be installed and operated by the customer as deemed necessary by the Company to ascertain proper operation of the pretreatment facilities.

8. The wastes requiring written approval are:
   a. Any liquid or vapor having a temperature in excess of 150ºF.
   b. Any waters or wastewaters containing phenols.
   c. Any waters or wastes having a pH in excess of 9.5.
   d. Any water containing unusual concentrations of inert suspended solids, such as, but not limited to, diatomaceous earth, lime and lime slurries or of dissolved solids such as but not limited to sodium chloride or sodium sulfate.
   e. Any water or wastewater containing excessive discoloration.
   f. Wastewater having unusual "B.O.D." concentration, suspended solids concentration or high chlorine demand in such quantities as to constitute a significant load on the treatment plant.
   g. Unusual volume of flow or concentrations of wastes constituting "slugs" as hereinbefore defined.
   h. Water or wastes containing substances not amenable to biological treatment processes as defined by a wastewater treatment plant owner or operator.

9. No customers shall discharge or cause to be discharged any of the following described waters or wastes to the wastewater system:
   a. Any gasoline, benzene, naptha, paints, lacquers, fuel oil or other flammable or explosive liquid, solid or gas which by reason of its nature or quality may cause fire or explosion or which, in any way, may be injurious to personnel or the wastewater system.
   b. Any water or wastes containing toxic or poisonous solids, liquids, or gases in sufficient quantity either singly or by interaction with other wastes to injure or interfere with any wastewater treatment process, constitute a hazard to humans or animals, create a public nuisance, or create any hazard in the receiving waters of the wastewater treatment plant.
   c. Any waters or wastes having a pH of lower than 5.5 or having any other corrosive property capable of causing damage or hazard to the wastewater system and/or personnel of the Company.
   d. Plating mill wastewater or other industrial process water containing spent pickle liquor, concentrated plating solutions, chromium, zinc and similar toxic heavy metals, cyanides and cleaning solvents.
   e. Any radioactive material.
   f. Any water or wastes containing fats, wax, grease, tar, oils or any other substances, whether emulsified or not which may solidify or become viscous at temperatures between 32º and 150ºF or which would impair, impede, affect, interfere with, or endanger personnel or the wastewater system.
   g. Any garbage not properly shredded.
   h. Any solids of such size or characteristic capable of causing obstruction to the flow in sewers, such as, but not limited to, ashes, cinders, sand, mud, straw, metal shavings, glass, rags, feathers, tar, plastic, wood, paunch manure, hair fleshings, offal, entrails, etc.

STANDARD TERMS AND CONDITIONS
WASTEWATER

C. SPECIAL REQUIREMENTS RELATING TO WASTEWATER SERVICE – COLLECTION SYSTEMS (CONTINUED)

10. Any customer discharging industrial wastes shall provide and maintain a control manhole suitable to facilitate observation, sampling and measurement of the wastes. The Company (and the local treatment Utilities Authorities that treat the wastewater the Company collects) shall have the right to inspect, sample, measure and analyze wastewater as they deem necessary.

D. SPECIAL REQUIREMENTS RELATING TO WASTEWATER SERVICE – TREATMENT SYSTEMS

Applicability

Applicable to wastewater service to customers served by the Company in Service Area 1D (former Applied), Plumsted Township, Service Area 1H (former Salem), Long Hill Township, the former EDC Service Area, and Tewksbury Township, except as specifically provided elsewhere in this tariff.

1. The within rates are applicable to normal wastewater, as defined by the New Jersey Department of Environmental Protection, namely 250 ppm.5 – day B.O.D. The utility company reserves the right to require pretreatment of the wastewater prior to discharge into sewers in the event that the wastewater contains harmful substances such as gasoline, PCBs, oil, explosive liquids, phenols, acids, alkalines, lint, excessive detergents or any other substance as defined by NJDEP. Each customer shall be fully responsible for proper use of the wastewater system and shall therefore not discharge any chemicals or contaminants which are toxic and which may cause damage to the wastewater system's electrical, mechanical, biological, or physical process components or may harm either the groundwater, soil or atmosphere, as listed on Schedule A on Sheet No. 27, as it may be periodically updated. Any cost involved in repairs of damage to the Company's facilities, environmental damages and penalties or fines levied against the utility caused by the introduction by the customer of unacceptable or harmful substances shall be the responsibility of the customer.

2. In accordance with the National Standard Plumbing Code adopted by the Uniform Construction Code of the State of New Jersey, no storm drainage system of a building shall be connected directly or indirectly to the sanitary drainage system. The company adopts the above provision and prohibits the drainage of storm water into its collecting system. Each customer shall be responsible to prevent any surface water or groundwater from entering into the wastewater system and therefore shall not connect or allow to be connected to the system any sump pumps, basement or crawl space drains, roof gutters, downspouts, or floor drains, and shall properly maintain all pipes and clean-outs to assure a watertight connection. Improperly discharging effluent from a non-approved drainage or collection system shall be considered the basis for immediate termination of service pursuant to N.J.A.C.14:3-3A.1 et seq. The Company will provide notice of the termination of service to the extent reasonably possible.

3. Garbage disposal units are not permitted unless specifically authorized by the Company.

4. Each customer shall prevent damage to all system components located on the property being served, including components located within easement area; maintain the grass growth and prevent the growth of trees, shrubs, and ornamentals within the easement areas; maintain and repair pipes connecting the home to the septic tank to prevent clogging and leaking; and to notify the Company of any damage which may occur to system components.

5. Because the wastewater system can only handle a limited quantity of water, each residential customer may discharge no more than the maximum average of 350 gallons per day, or 32,000 gallons per quarter, of wastewater. In order to verify compliance with this provision, each customer must allow a representative of the Company to inspect all plumbing components upon request and to obtain all water meter readings as may be required.

6. Customers may not trespass on Company property or enter any Company facility without a representative of the Company being present.

STANDARD TERMS AND CONDITIONS
WASTEWATER

C. SPECIAL REQUIREMENTS RELATING TO WASTEWATER SERVICE – TREATMENT SYSTEMS (CONTINUED)

7. A customer may permanently terminate service by giving notice to the Company, which shall terminate service within five (5) business days of receipt of each notification. Temporary discontinuance of wastewater service is not permitted and each customer shall pay the applicable fixed service charge and minimum monthly charge (i.e., "RATES"), per month or per quarter, as applicable, unless and until such time as a replacement customer commences service at the premise. Customers are advised that it is illegal to operate a dwelling without adequate functioning wastewater facilities, and that the Company is required to notify local health authorities of wastewater service termination.

SCHEDULE A

I. MATERIALS NOT TO BE DISPOSED THROUGH THE WASTEWATER SYSTEM

Grease
Wipes (baby, cleaning, flushable, wet)
Gloves (latex, rubber)
Food scraps
Plastics
Gasoline or motor fuels
Paint and paint thinners
Used motor oils
Petroleum solvents
Pesticides (solids or liquids)
Herbicides (solids or liquids)
Engine coolants (antifreeze)
Acids
Water softener backwash
Photographic development solutions

II. MAXIMUM PERMITTED DISCHARGE CONCENTRATIONS

"Biochemical Oxygen Demand" – 250mg/L
Chemical oxygen demand – 351 mg/L
Total organic carbon – 99 mg/L
Total solids – 1,608 mg/L
Volatile solids – 295 mg/L
Total suspended solids – 75 mg/L
Volatile suspended solids – 62 mg/L
Calcium – 59 mg/L
Magnesium – 33 mg/L
Sodium – 218 mg/L
Chlorine – 218 mg/L
Oil and grease – 22 mg/L
Total dissolved solids – 872 mg/L
Total Kjeldahl nitrogen – 60.7 mg – N/L
Ammonia nitrogen – 53.3 mg – NL
Phosphorus – 6.3 mg – P/L
Turbidity – 45 NTU
Ph – 5-9
Alkaline – 479 mg CaCo3/L
Hardness – 327 mg CaCo3/L
Volatile organics by GC/MS – Non-detectable
Pesticides – Non-detectable
Herbicides – Non-detectable

NEW JERSEY-AMERICAN WATER COMPANY, INC.
B.P.U. No. 8 – Water

Eleventh Revised Sheet: No. 28
Superseding Tenth Revised Sheet: No. 28

AREA SERVED – WATER SERVICE

This tariff shall apply to the service area of the Company, which includes all or part of the following municipalities and all other places as may be permitted by law. This tariff shall also apply to other systems under contract wherever served. Hereafter, and unless otherwise specified herein,

- **Service Area 1** refers to the water service area of New Jersey-American Water Company as it existed prior to January 1, 2007;
- **Service Area 2** refers to the water service area of the former Elizabethtown Water Company;
- **Service Area 3** refers to the water service area of the former Mount Holly Water Company;
- **Service Area 1A** refers to the water service area of the former South Jersey Water Supply Company;
- **Service Area 1B** refers to the water service area of the former Pennsgrove Water Supply Company;
- **Service Area 1C** refers to the service area of the former Shorelands Water Company;
- **Service Area 1D** refers to the service area of the former Applied Wastewater Management, Inc. ("Applied"); and
- **Service Area 1E** refers to the service area including all customers formerly served by the Borough of Haddonfield or located within the geographic boundaries of Haddonfield;
- **Service Area 1F** refers to the service area of the former Roxbury Water Company;
- **Service Area 1G** refers to the service area of the former Egg Harbor City Water & Sewer Utility ("Egg Harbor City Utility"); and
- **Service Area 1H** refers to the former service area of Salem City ("Salem").

Unless otherwise indicated, all municipalities and customers referenced below having no numeric designation next to their names were served by New Jersey-American Water Company as it existed prior to January 1, 2007. All municipalities and customers with a (2) designation next to their names were served by the former Elizabethtown Water Company prior to January 1, 2007; with a (3) designation next to their names were previously served by the former Mount Holly Water Company prior to January 1, 2007; with a (1A) designation next to their names were previously served by the former South Jersey Water Supply Company prior to November 1, 2007; with a (1B) designation next to their names were previously served by the former Pennsgrove Water Supply Company prior to November 1, 2007; with a (1C) next to their names were previously served by the former Shorelands Water Company prior to April 3, 2017; with a (1D) designation next to their names were previously served by Applied Wastewater Management, Inc. prior to September 1, 2010; and with a (1F) designation were previously served by Roxbury Water Company prior to January 1, 2019; with a (1G) designation were previously serviced by the Egg Harbor City Water & Sewer Utility prior to June 1, 2023; and with a (1H) designation were previously serviced by Salem City prior to June 25, 2024. Where a municipality was served in part by two of the former water companies listed above, service provided by New Jersey-American Water Company as it existed prior to January 1, 2007 shall be identified by a (1) designation. All municipalities for which the Company provides water service only to a portion of the municipality are reflected by a double asterisk (**) designation.

Issued: _____ Effective: September 15, 2024

By: Mark K. McDonough, President
1 Water Street, Camden, NJ 08102
Filed pursuant to Order of the Board of Public Utilities entered in
Docket No. WR24010056 dated _____.

RATE SCHEDULE A-1
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general metered residential, commercial, industrial, and municipal service throughout Service Area 1, Service Area 1A, Service Area 1B, Service Area 1C, Service Area 1D, Service Area 1E, Service Area 2, and Service Area 3, except as specifically provided elsewhere in this tariff. The charge for general metered service shall consist of the total of the Fixed Service Charge, the Water Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE
All general metered water service customers shall pay a fixed service charge based on the size of each meter installed by the Company. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56
3/4"	34.00	29.36
1"	56.61	48.89
1 1/2"	113.30	97.85
2"	181.38	156.64
3"	339.96	293.60
4"	566.28	489.05
6"	1,132.41	977.97
8"	1,811.83	1,564.73
10"	2,264.81	1,955.94
12"	2,830.77	2,444.71
16”	4,529.62	3,911.88

WATER CHARGE
In addition to the Fixed Service Charge set forth above, a charge will be made for all water used as registered by the meter.

	Gallons Per Month	Rate* Per 100 Gallons	Rate* Per 1,000 Gallons
Non-Exempt	All	$0.88724	$8.8724
Exempt	All	$0.76624	$7.6624

TERMS OF PAYMENT
Valid bills for general metered water service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days’ notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE A-2
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general metered sales for resale service throughout the entire territory served except as specifically provided elsewhere in this tariff. The charge for general metered service shall consist of the total of the Fixed Service Charge, the Water Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE
All general metered water service customers shall pay a fixed service charge based on the size of each meter installed by the Company. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56
3/4"	34.00	29.36
1"	56.61	48.89
1 1/2"	113.30	97.85
2"	181.38	156.64
3"	339.96	293.60
4"	566.28	489.05
6"	1,132.41	977.97
8"	1,811.83	1,564.73

12"	2,830.77	2,444.71
16”	4,529.62	3,911.88

WATER CHARGE
In addition to the Fixed Service Charge set forth above, a charge will be made for all water used as registered by the meter.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.88724	$8.8724
Exempt	All	$0.76624	$7.6624

TERMS OF PAYMENT
Valid bills for general metered water service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE A-19
GENERAL METERED AND FLAT SERVICE[1]

APPLICABILITY
Applicable for general metered residential and light commercial service throughout Service Area 1H, Salem, except as specifically provided elsewhere in this tariff. Those who receive metered water service will receive volume-based water service billings; all others will receive flat rate billings for unmetered service. The Company may require a water meter to be installed by any customer utilizing a well or other private water system at the property owner's expense. The charge for general metered service shall consist of the total of the Fixed Service Charge and the Water Charge.

FIXED SERVICE CHARGE
All general metered water service customers shall pay a fixed service charge based on the size of each meter installed by the Company. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

Size of Meter	Usage Allowance	Non-Exempt Per Month

TERMS OF PAYMENT
Valid bills for general metered water service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

[2] The rates on this schedule will increase by 3% on June 26th in 2026, 2027 and 2028 by the terms of the Agreement of Sale between the City of Salem and New Jersey-American Water Company, Inc.

RIDER A
ECONOMIC DEVELOPMENT PROGRAM

ELIGIBILITY:

- Minimum Annual Average Monthly Volume: 35,000 gallons per monthly billing cycle for new customers or a net increase of 35,000 gallons for existing customers meeting the additional provisions below.
- Employment of a minimum of ten (10) new full-time equivalent employees or a 50% increase in the number of new full-time jobs created, whichever is less, who will be employed in the new or expanded space.
- Customer Classes: General Metered Service Commercial and General Metered Service Industrial
  - Customer class exception: Residential uses in Commercial class (Apartments and condominiums) while considered commercial customers, are not eligible for this program.
- New customers who lease, purchase or construct new space for manufacturing, retail, research, office or warehousing.
- Existing customers who lease, purchase or construct new space for manufacturing, retail, research, office or warehousing and/or expand its existing operations.
- Any existing space that is reconverted for use for the purpose of qualifying under this program must have been vacant for a minimum of one (1) year.
- Application to New Jersey American Water shall be made on the Company's form, which must be completed and submitted by the customer and approved by New Jersey American Water, at the Company's discretion, before the customer may participate in the program.
- An annual certification is required. The certification shall be made on the form prescribed by New Jersey American Water by an officer of the customer stating that eligibility requirements have been met. Failure to submit the annual certification shall be grounds for termination of the customer's participation in the program.

BENEFITS:

- Credit on water consumption charge for up to four (4) years. Applicable fixed charges, PWAC charges, and any other applicable charges will continue to be applied at the standard rate, as set forth within this tariff.
- Amount of Credit on Water Consumption Charges:

Year	Amount of Credit
1st Year	50%
2nd Year	40%
3rd Year	25%
4th Year	10%

- Additional credit of five per cent (5%) on water consumption charges will be added to the above credits for all of the Company's customers who qualify for the Economic Development Program and who are also located in a "priority location" (Urban Enterprise Zone) as defined by the New Jersey Economic Development Authority.

NOTE:
The decision to accept the initial application, or continued participation, of a customer into the program resides with New Jersey American Water, at the Company's discretion. Also, the ability to include customers into the program is subject to available capacity as established through the New Jersey Department of Environmental Protection permitting process.

Failure of the customer to maintain the minimum monthly usage during 2 or more months in a rolling 12-month period shall be grounds to remove the customer from the Economic Development Program.

NEW JERSEY-AMERICAN WATER COMPANY, INC. Fourth Revised Sheet: No. 36.1
B.P.U. No. 8 – Water Superseding Third Revised Sheet: No. 36.1

RATE SCHEDULE C

SALES FOR RESALE – COMMODITY-DEMAND SERVICE

APPLICABILITY

Applicable to Sales for Resale customers served by the Company who have executed a Commodity-Demand Regional Water Sales Agreement ("Agreement") with an initial term of 10 years and a minimum Nominated Demand, as defined in the Agreement, of 50,000 gallons per day. The charge for service shall consist of the total of the Fixed Service Charge, the Commodity Charge, the Demand Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE

Continuous, except as limited by the terms of the agreement.

FIXED SERVICE CHARGE

All such customers shall pay a monthly fixed service charge based on the size of each meter installed by the Company, in addition to the charge for the commodity of water used and the charge for the demand nominated or experienced, whichever is greater. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56
3/4"	34.00	29.36
1"	56.61	48.89
1 1/2"	113.30	97.85
2"	181.38	156.64
3"	339.96	293.60
4"	566.28	489.05
6"	1,132.41	977.97
8"	1,811.83	1,564.73
10"	2,264.81	1,955.94
12"	2,830.77	2,444.71
16"	4,529.62	3,911.88

COMMODITY CHARGE

A charge will be rendered for all water used pursuant to the provisions of the Applicability section of this Rate Schedule C as follows:

	Rate Per 100 Gallons		Rate Per 1,000 Gallons	
Gallons Per Month	Non-Exempt	Exempt	Non-Exempt	Exempt
All	$0.06605	$0.05704	$0.6605	$0.5704

DEMAND CHARGE

A monthly charge will be rendered for all water available to the customer in accordance with the customer's Nominated Demand, as provided for in the Agreement.

Nominated Demand Charge Per Month			
Rate Per 100 Gallons of Nominated Demand		Rate Per 1,000 Gallons of Nominated Demand	
Non-Exempt	Exempt	Non-Exempt	Exempt
$7.8424	$6.77286	$78.4240	$67.7286

TERMS OF PAYMENT

Valid bills for sales for resale service furnished under this schedule will be rendered monthly in arrears and are due 30 days after the invoice date. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance.

SPECIAL PROVISION

*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

Docket No. WR24010056 dated _____.

RATE SCHEDULE D

SALES FOR RESALE – OFF-PEAK SERVICE

APPLICABILITY

Applicable to Sales for Resale customers served by the Company who have executed an Off-Peak Water Sales Agreement ("Agreement") with an initial term of 10 years and a minimum Off-Peak Demand, as defined in the Agreement, of 50,000 gallons per day. The charge for service shall consist of the total of the Fixed Service Charge, the Commodity Charge, the Demand Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE

Continuous, except as limited by the terms of the agreement.

FIXED SERVICE CHARGE

All such customers shall pay a monthly fixed service charge based on the size of each meter installed by the Company, in addition to the charge for the commodity of water used and the charge for the demand selected or experienced, whichever is greater. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established for a new customer or discontinued for a customer leaving the system permanently, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service. The fixed service charge shall not be prorated for any service provided during the months of May through September of each year.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56

16"	4,529.62	3,911.88

COMMODITY CHARGE

A charge will be rendered for all water used pursuant to the provisions of the Applicability section of this Rate Schedule D as follows:

	Rate Per 100 Gallons		Rate Per 1,000 Gallons	
Gallons Per Month	Non-Exempt	Exempt	Non-Exempt	Exempt
All	$0.06605	$0.05704	$0.6605	$0.5704

DEMAND CHARGE

A monthly charge will be rendered for all water available to the customer in accordance with the customer's Off-Peak Demand, as provided for in the Agreement. The Demand Rate is 91.96% of the Commodity-Demand Service Demand Rate set forth on Rate Schedule C.

Off-Peak Demand Charge Per Month			
Rate Per 100 Gallons of Off-Peak Demand		Rate Per 1,000 Gallons of Off-Peak Demand	
Non-Exempt	Exempt	Non-Exempt	Exempt
$7.21063	$6.22725	$72.1063	$62.2725

TERMS OF PAYMENT

Valid bills for sales for resale service furnished under this schedule will be rendered monthly in arrears and are due 30 days after the invoice date. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance.

SPECIAL PROVISION

*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE E
SALES FOR RESALE – MANASQUAN

APPLICABILITY
Applicable to Sales for Resale customers served by the Company in Service Area 1 who have executed Manasquan Reservoir Water Supply System Water Purchase Contracts and either: (1) whose purchases of water and rates of flow are in accordance with the provisions of Appendix A of this Rate Schedule; or, (2) who have executed a Water Resale and Treatment Agreement, in which case the terms of such Agreement, regarding purchase limitations, shall supersede the applicable Appendix A schedule herein.

CHARACTER OF SERVICE
Continuous, except as limited by the terms of the agreement.

FIXED SERVICE CHARGE
All such customers shall pay a Fixed Service Charge based on the size of each meter installed by the Company, in addition to the charge for the quantity of water used, if any, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

A charge will be made for all water used pursuant to the provisions of the Applicability section of this Rate Schedule E as follows:

	Rate Per 100 Gallons Non-Exempt	Rate Per 1,000 Gallons Non-Exempt
Uninterruptible	$0.21581	$2.15810
Interruptible	$0.88724	$8.88724

(Continued)

RATE SCHEDULE E
SALES FOR RESALE – MANASQUAN
(Continued)

DEFINITIONS:

UNINTERRUPTIBLE SERVICE
Uninterruptible service is water service to be provided to customers in quantities specified in Appendix A herein or Schedule A of the Water Resale and Treatment Agreement. The Annual Purchase Requirement is the minimum total volume of water per year which will be purchased take-or-pay by the customer from the Company. The Company agrees to provide to the customer the quantity specified in Appendix A herein or Schedule A of the Water Resale and Treatment Agreement unconditionally, except to the extent that: (1) the limitations of Appendix A herein or Schedule A of the Water Resale and Treatment Agreement apply to restrict the quantity of water which the customer may take on a maximum monthly, maximum daily and peak hourly basis; and, (2) in those cases where the contracts have been executed, the provisions of Section 5 of the Agreement, regarding force majeure events, may apply under certain circumstances. The rate may be found on Rate Schedule E of the present tariff.

INTERRUPTIBLE SERVICE
Interruptible service means a supply of water, to the extent that the Company in its reasonable judgment determines that it has excess water available above the Annual Purchase Period Limitations specified in Appendix A herein or Schedule A of the Water Resale and Treatment Agreement, which may be provided to the customer: (1) to meet extraordinary consumer demand requirements; (2) for occasional, temporary, or emergent needs; or (3) in such other circumstances as shall be agreed upon by the Company and the customer. The rate may be found on Rate Schedule E of the present tariff. In addition to the charge for the quantity of water used, if any, above the Annual Purchase Period Limitations specified in Appendix A herein or Schedule A of the Water Resale and Treatment Agreement, the Purchased Water Adjustment Clause (PWAC) Charge, as shown on Rate Schedule O-1 will apply.

TERMS OF PAYMENT
Valid bills for sales for resale service furnished under this schedule will be rendered monthly in arrears and are due 30 days after the invoice date. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). This water tax is not applicable for sales for resale service.

RATE SCHEDULE F
OPTIONAL INDUSTRIAL WHOLESALE

APPLICABILITY

Applicable only to customers that are served by the Company and that (a) use 9,350,000 or more gallons of water per month, each and every month (b) have loading factors (the ratio of maximum demand (peak load) to the average demand (load) during a given period) not in excess of 1.2 times their monthly consumption on an average daily basis. The charge for service shall consist of the total of the Fixed Service Charge, the Water Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE
All such customers shall pay a Fixed Service Charge based on the size of the meter installed by the Company. Customers with multiple meters shall be charged for each meter at the indicated rate. Whenever service is established or discontinued, all applicable fixed charged shall be prorated to the date of establishment or discontinuance of service as follows:

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56
3/4"	34.00	29.36
1"	56.61	48.89
1 1/2"	113.30	97.85
2"	181.38	156.64
3"	339.96	293.60
4"	566.28	489.05
6"	1,132.41	977.97
8"	1,811.83	1,564.73
10"	2,264.81	1,955.94
12"	2,830.77	2,444.71
16”	4,529.62	3,911.88

WATER CHARGE

Rate Per 100 Gallons		Rate Per 1,000 Gallons	
Non-Exempt	Exempt	Non-Exempt*	Exempt*
$0.44754	$0.38651	$4.4754	$3.8651

MINIMUM CONSUMPTION CHARGE
A minimum consumption charge is applicable. The minimum consumption charge is equal to 9,350,000 gallons of water per month multiplied by the appropriate Water Charge herein and the Purchased Water Adjustment Clause (PWAC) Charge, as shown on Rate Schedule O-1.

TERMS OF PAYMENT
Valid bills for sale of water under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days’ notice prior to the proposed discontinuance.

(Continued)

RATE SCHEDULE F
OPTIONAL INDUSTRIAL WHOLESALE
(Continued)

TERMS
Bills are rendered monthly in arrears.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

If monthly consumption on an average daily basis exceeds a load factor of 1.2 times the last (rolling) twelve months average monthly consumption on an average daily basis for three consecutive months, between April 1 and September 30, a customer will be removed from this Rate Schedule and will be billed under the General Metered Service Rate Schedule A-1. A customer eliminated from this Rate Schedule will continue to be billed under General Metered Service for a minimum of twelve months and will again be eligible for this schedule if, after twelve months, its monthly consumption on an average daily basis has not exceeded, for three consecutive months, 1.2 times the last twelve-month average monthly consumption.

A customer who anticipates exceeding the above stated load factor requirement may, in lieu of removal from this Rate Schedule, remain on this Rate Schedule by signing prior to such exceedance, a written commitment to a monthly consumption of 120% of their average monthly consumption during the prior 12 months, which will remain in place for 12 months. During this period, the usage set forth in the written commitment will be the minimum monthly usage required under this Rate Schedule for computing the applicable Minimum Consumption Charge.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE G
SALES FOR RESALE – SERVICE TO OTHER SYSTEMS

APPLICABILITY
Applicable to Sales for Resale customers receiving service from the Company as of December 8, 2008. Applicable to customers served by the Company throughout Service Area 2 that have a contract demand of 500,000 or more gallons per day pursuant to a contract entered into with the Company at the Company's sole option. The charge for metered Service to Other Systems Under Contract shall consist of the total of Water Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

CHARACTER OF SERVICE
Continuous, except as limited by written agreement.

WATER CHARGE

Consumption	Rate Per 1,000 Gallons	
	Non-Exempt	Exempt
All water usage	$3.4582	$2.9866

	Rate Per 100 Gallons	
	Non-Exempt	Exempt
All water usage	$0.34582	$0.29866

TERMS OF PAYMENT
Valid bills for sale of water under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance.

TERMS
Subject to written agreement.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE H
SALES FOR RESALE – PEAKING SERVICE

APPLICABILITY
Applicable to Sales for Resale customers for sales occurring during the Company's peak service period May 1 through September 30 who: (1) do not have a written agreement with the Company for the provision of water service; or (2) whose written agreement with the Company does not contain an annual purchase commitment. This Rate Schedule does not apply to customers taking service under Rate Schedule D (Off-Peak) during non-drought conditions unless otherwise provided for in that customer's agreement. During drought emergencies declared by the Governor, this Rate Schedule will be applied to all surplus water transfers ordered by the Commissioner of the Department of Environmental Protection to mitigate drought. The charge for this service shall consist of the total of the Fixed Service Charge, the Water Charge, the Purchased Water Adjustment Clause (PWAC) Charge as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K.

CHARACTER OF SERVICE
Interruptible.

FIXED SERVICE CHARGE
All such customers shall pay a fixed service charge, during any month when water is consumed pursuant to this Rate Schedule H, based on the size of each meter installed by the Company. Customers with multiple meters shall be charged for each meter at the indicated rate.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$22.65	$19.56
3/4"	34.00	29.36
1"	56.61	48.89
1 1/2"	113.30	97.85
2"	181.38	156.64
3"	339.96	293.60
4"	566.28	489.05
6"	1,132.41	977.97
8"	1,811.83	1,564.73
10"	2,264.81	1,955.94
12"	2,830.77	2,444.71
16"	4,529.62	3,911.88

WATER CHARGE
In addition to the Fixed Service Charge set forth above, a charge will be made for all water used as registered by the meter.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$1.05500	$10.5500
Exempt	All	$0.91112	$9.1112

TERMS OF PAYMENT
Valid bills for sales for resale service furnished under this schedule will be rendered monthly in arrears and are due 30 days after the invoice date. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service. Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE I
EMERGENCY OR BACKUP BULK RATE SALES

APPLICABILITY
Applicable to emergency/backup bulk sales to municipalities or other water purveyors in Service Area 1C, Shorelands, and only by yearly contract between the municipality or other water purveyor and the Company.

CHARACTER OF SERVICE
Continuous, except as limited by "Standard Terms and Conditions".

FIXED SERVICE CHARGE
All such customers shall pay a fixed service charge, during any month when water is consumed pursuant to this Rate Schedule I, based on the size of each meter installed by the Company, the Lead Service Line Replacement Charge (LSLRC), as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K. The Purchased Water Adjustment Clause (PWAC) Charge, as shown on Rate Schedule O-1, will apply to all water used in excess of any Annual Purchase Requirement. Customers with multiple meters shall be charged for each meter at the indicated rate.

Size of Meter	Non-Exempt Per Month
5/8"	$22.65
3/4"	34.00
1"	56.61
1 1/2"	113.30
2"	181.38
3"	339.96
4"	566.28
6"	1,132.41
8"	1,811.83
10"	2,264.81
12"	2,830.77
16"	4,529.62

WATER CHARGE
In addition to the Fixed Service Charge set forth above, a charge will be made for all water used as registered by the meter.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.62470	$6.2470

Exempt customers, as defined in N.J.S.A. 54:30A-50(c), are those public utility corporations which are subject to the payment of a tax based on gross receipts.

Non-Exempt customers are all other customers not entitled to the statutory exemptions provided pursuant to N.J.S.A. 54:30A-50(c). Uninterruptible customers are as defined in the Water Resale and Treatment Agreement.

TERMS OF PAYMENT
Valid bills for sale of water under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). This water tax is not applicable for sales for resale service.

RATE SCHEDULE J
SALES FOR RESALE – MANASQUAN

APPLICABILITY
Applicable to bulk sales to municipalities or other water purveyors taking water from the New Jersey Water Supply Authority ("NJWSA") delivered through Service Area 1C, Shorelands, pursuant to Water Resale and Treatment contractual requirements where they pay the NJWSA directly for the raw water.

FIXED SERVICE CHARGE
All sales for resale service customers shall pay a fixed service charge based on the size of each meter installed, in addition to the charge for the quantity of water used, if any, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Distribution System Improvement Charge (DSIC) as shown on Rate Schedule K. The Purchased Water Adjustment Clause (PWAC) Charge, as shown on Rate Schedule O-1, will apply to all water used in excess of any Annual Purchase Requirement. Customers with multiple meters shall be charged for each meter at the indicated rate.

Size of Meter	Non-Exempt Per Month
5/8"	$22.65
3/4"	34.00
1"	56.61
1 1/2"	113.30
2"	181.38
3"	339.96
4"	566.28
6"	1,132.41
8"	1,811.83
10"	2,264.81
12"	2,830.77
16”	4,529.62

WATER CHARGES
A charge will be made for all water used pursuant to the take or pay contractual agreement as follows:

	Non-Exempt Rate Per 100 Gallons	Non-Exempt Rate Per 1,000 Gallons
Uninterruptible	$0.31093	$3.1093

Exempt customers, as defined in N.J.S.A. 54:30A-50(c), are those public utility corporations which are subject to the payment of a tax based on gross receipts.

Non-Exempt customers are all other customers not entitled to the statutory exemptions provided pursuant to N.J.S.A. 54:30A-50(c). Uninterruptible customers are as defined in the Water Resale and Treatment Agreement.

TERMS OF PAYMENT
Valid bills for sales for resale service furnished under this schedule will be rendered monthly in arrears and are due 30 days after the invoice date. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days’ notice prior to the proposed discontinuance.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). This water tax is not applicable for sales for resale service.

NEW JERSEY-AMERICAN WATER COMPANY, INC. Seventeenth Revised Sheet: No. 37
B.P.U. No. 8 – Water Superseding Sixteenth Revised Sheet: No. 37

RATE SCHEDULE K
DISTRIBUTION SYSTEM IMPROVEMENT CHARGE

Applicable to all general metered service and sales for resale customers throughout the entire territory served.

CHARACTER
Continuous, except as limited by the “Standard Terms and Conditions”.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)
In addition to all other charges for general metered service (GMS) and sales for resale customers throughout the entire territory served, the following charges will be assessed on a fixed, per meter basis for each monthly bill.

RATE
This charge is in addition to Rate Schedules A-1 through A-18 as noted on those rate schedules, and, C, D, E, F, H, I and J.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$0.00	$0.00
3/4"	0.00	0.00
1"	0.00	0.00
1 1/2"	0.00	0.00
2"	0.00	0.00
3"	0.00	0.00
4"	0.00	0.00
6"	0.00	0.00
8"	0.00	0.00
10"	0.00	0.00
12"	0.00	0.00
16”	0.00	0.00

FILING
The DSIC is authorized pursuant to N.J.A.C. 14:9-10.1 et seq. and the procedures for filing, reviewing, approving and implementing the DSIC are set forth therein. The DSIC is based on the Company's Foundational Filing, which was reviewed and approved by the Board of Public Utilities. The approval process included public notice and four public hearings. The notice included proposed surcharge amounts, which were estimated based on projected construction schedules, costs and other factors. Pursuant to the approved Foundational Filing, the Company shall endeavor to make semi-annual DSIC filings at approximately six-month intervals. The DSIC is subject to a maximum amount and other limitations in N.J.A.C. 14:9-10.1 et seq.

TERMS OF PAYMENT
See Rate Schedules for applicable customer classes.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISION
*Non-Exempt consumption charges reflect a water tax of $.01 per 1,000 gallons of water consumed pursuant to N.J.S.A. 58:12A-21(a). Exempt consumption charges reflect a water tax of $.01 multiplied by 0.863621 per 1,000 gallons. This water tax is not applicable for sales for resale service.
Exempt rates are charged for service rendered to those customers entitled to statutory relief pursuant to N.J.S.A. 54:30A-50, et seq.

RATE SCHEDULE L-1
PRIVATE FIRE PROTECTION SERVICE

APPLICABILITY
Applicable for service furnished exclusively for private fire protection throughout Service Areas 1 and 1E, except as specifically provided elsewhere in this tariff. The charge for private fire protection service will consist of the total of the connection charge and the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2 and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES
1 – Service Charge

Size of Connection	Per Month
For each connection of 2" or less	$ 28.36
For each 3" connection	63.80
For each 4" connection	113.41
For each 6" connection	255.17
For each 8" connection	453.66
For each 10" connection	709.00
For each 12" connection	1,020.96
For each 16" connection	1,815.04

2 – Hydrant Charge

	Per Month
For each Hydrant	$66.00

TERMS OF PAYMENT
Valid bills for private fire protection service furnished under this schedule are to be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least thirty (30) days' notice prior to the proposed discontinuance. The Company will adhere to all applicable notification requirements found in N.J.A.C. 14:3-3A.4(j) before discontinuing service.

TERM
Continuous until water service to the customer is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

CONDITIONS
Subject to the "Standard Terms and Conditions", including those specific to Private Fire Protection starting on Sheet No. 20, except as otherwise set forth in this Schedule. Testing, inspection, maintenance, and repair of private fire hydrants shall be the responsibility of the property owner.

SPECIAL PROVISIONS

No additional charge shall be made for water used in extinguishing fires or for underwriters' tests where service is furnished under this schedule.

Private fire service lines shall be equipped with special meters and are to be used exclusively for fire protection purposes. No water shall be used through these connections except for purposes of underwriters' tests or extinguishment of fire. The use of private fire protection facilities for other reasons will result in termination of service following notification pursuant to N.J.A.C. 14:3-3A.1(d), and water charges will be computed under the General Metered Service Rate Schedule A-1.

Residential customers served by a water service line of two (2) inches or less in diameter will not be imposed a standby fee for fire protection system.

Rooming and boarding houses as defined in the "Rooming and Boarding House Act of 1974" and those residential health care facilities as defined in the "Health Care Facilities Planning Act," upon furnishing to the Company proof in the form of a license or certificate from the appropriate state agency that the particular facility or house is entitled to exemption, will be exempt from the charges of Rate Schedule L-1.

RATE SCHEDULE L-2
PRIVATE FIRE PROTECTION SERVICE

APPLICABILITY
Applicable for service furnished exclusively for private fire protection where multiple customers are served from one private fire service connection in Service Area 1 in the Townships of Logan and Woolwich, Gloucester County in the area formerly served by Logan Wells Water Company.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES
The charge for private fire protection shall consist of the total of the sprinkler head charge based on the number of sprinkler heads, the hydrant charge based on the number of hydrants, the Lead Service Line Replacement Charge (LSLRC), as shown on Rate Schedule O-2, and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

	Per Month
For each Sprinkler Head	$1.44
For each Hydrant	$66.00

TERMS OF PAYMENT
Valid bills for private fire protection service furnished under this schedule are to be rendered in monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least thirty (30) days' notice prior to the proposed discontinuance. The Company will adhere to all applicable notification requirements found in N.J.A.C. 14:3-3A.4(j) before discontinuing service.

TERM
Continuous until water service to the customer is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

CONDITIONS
Subject to the "Standard Terms and Conditions", including those specific to Private Fire Protection starting on Sheet No. 20, except as otherwise set forth in this Schedule. Testing, inspection, maintenance, and repair of private fire hydrants shall be the responsibility of the property owner.

SPECIAL PROVISIONS
No additional charge shall be made for water used in extinguishing fires or for underwriters' tests where service is furnished under this schedule.

Private fire service lines shall be equipped with special meters and are to be used exclusively for fire protection purposes. No water shall be used through these connections except for purposes of underwriters' tests or extinguishment of fire. Any water usage for other purposes will be computed under the General Metered Service Rate Schedule A-1.

Residential customers served by a water service line of two (2) inches or less in diameter will not be imposed a standby fee for fire protection system.

Rooming and boarding houses as defined in the "Rooming and Boarding House Act of 1974" and those residential health care facilities as defined in the "Health Care Facilities Planning Act," upon furnishing to the Company proof in the form of a license or certificate from the appropriate state agency that the particular facility or house is entitled to exemption, will be exempt from the charges of Rate Schedule L-2.

RATE SCHEDULE L-3
PRIVATE FIRE PROTECTION SERVICE

APPLICABILITY
Applicable for service furnished exclusively for private fire protection throughout Service Area 2, except as specifically provided elsewhere in this tariff. The charge for private fire protection service will consist of the total of the connection charge, the hydrant charge, the Lead Service Line Replacement Charge (LSLRC) as shown on Rate Schedule O-2, and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES

1- Service Charge

Size of Connection	Per Month
For each connection of 2” or less	$51.83
For each 3” connection	101.82
For each 4” connection	164.17
For each 6” connection	304.54
For each 8” connection	520.03
For each 10” connection	679.08
For each 12” connection	977.84
For each 16” connection	1,921.34
For each 20” connection	3,501.55

2- Hydrant Charge

	Per Month
For each Hydrant	$66.00

TERMS OF PAYMENT
Valid bills for private fire protection service furnished under this schedule are to be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least thirty (30) days’ notice prior to the proposed discontinuance. The Company will adhere to all applicable notification requirements found in N.J.A.C. 14:3-3A.4(j) before discontinuing service.

TERM
Continuous until water service to the customer is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

CONDITIONS
Subject to the "Standard Terms and Conditions", including those specific to Private Fire Protection starting on Sheet No. 20, except as otherwise set forth in this Schedule. Testing, inspection, maintenance, and repair of private fire hydrants shall be the responsibility of the property owner.

SPECIAL PROVISIONS
No additional charge shall be made for water used in extinguishing fires or for underwriters’ tests where service is furnished under this schedule.

Private fire service lines shall be equipped with special meters and are to be used exclusively for fire protection purposes. No water shall be used through these connections except for purposes of underwriters’ tests or extinguishment of fire. Any water usage for other purposes will be computed under the General Metered Service Rate Schedule A-1.

Residential customers served by a water service line of two (2) inches or less in diameter will not be imposed a standby fee for fire protection system.

Rooming and boarding houses as defined in the “Rooming and Boarding House Act of 1974” and those residential health care facilities as defined in the “Health Care Facilities Planning Act,” upon furnishing to the Company proof in the form of a license or certificate from the appropriate state agency that the particular facility or house is entitled to exemption, will be exempt from the charges of Rate Schedule L-3.

Reserved for future use.

RATE SCHEDULE L-7
PRIVATE FIRE PROTECTION SERVICE

APPLICABILITY
Applicable for service furnished exclusively for private fire protection throughout Service Area 3 and Service Area 1A, except as specifically provided elsewhere in this tariff. Applicable to municipalities for public fire protection service provided by the Company throughout Service Areas 1B and 1H, Salem, except as specifically provided elsewhere in this tariff. Applicable for flat rate fire protection service in the locations where the Company has facilities suitable and adequate for the desired service upon request from the proper authorities. The charge for public fire protection service will consist of the total of the monthly hydrant charge and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES

Hydrant Charge

	Per Month
For each Hydrant	$45.30

TERMS OF PAYMENT
Valid bills for public fire protection service furnished under this schedule are to be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

TERM
Continuous until water service to the municipality is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

Reserved for future use.

RATE SCHEDULE M-10
PUBLIC FIRE PROTECTION SERVICE

APPLICABILITY
Applicable to the municipality for all fire hydrants on public streets within Service Area 1D, formerly served by Applied Wastewater Management, Inc. ("Applied"), and Service Area 1F, Roxbury. The charge for public fire protection service will consist of the total of the monthly hydrant charge and the Special Program Charge (SPC) as shown on Rate Schedule O-3.

CHARACTER OF SERVICE
Continuous, except as limited by "Standard Terms and Conditions".

RATES

Hydrant Charge

	Per Month
For each Hydrant	$40.30

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

TERM
Continuous until water service to the municipality is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed service charges shall be prorated to the date of establishment or discontinuance of service.

CONDITIONS
Subject to "Standard Terms and Conditions".

Reserved for future use.

RATE SCHEDULE M-12
PUBLIC FIRE PROTECTION SERVICE

APPLICABILITY
Applicable to the municipality for all fire hydrants on public streets within Service Area 1G, the Egg Harbor City Utility.

CHARACTER OF SERVICE
Continuous, except as limited by "Standard Terms and Conditions".

RATES
Hydrant Charge

	Per Month
For each Hydrant	$15.00

TERM
Continuous until water service to the municipality is permanently discontinued. Whenever service is established or is discontinued, all applicable fixed service charges shall be prorated to the date of establishment or discontinuance of service.

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date. Thereafter, the Company may not discontinue water service unless written notice is provided giving the customer at least ten (10) days' notice prior to the proposed discontinuance. The 10 days shall begin on the postmark date of the notice. N.J.A.C. 14:3-3A.3.

CONDITIONS
Subject to "Standard Terms and Conditions".

RATE SCHEDULE O-1

PURCHASED WATER ADJUSTMENT CLAUSE (PWAC)

APPLICABILITY

Applicable to all Metered Water Customer classes served by the Company in all service areas for water service, except for Manasquan Uninterruptible Service, and those customers subject to Rate Schedules I and J, who will only be subject to the PWAC for any water used in excess of their Annual Purchase Requirement.

The PWAC charge, as defined under the Standard Terms and Conditions of this tariff, is designed to recover the cost of purchased water associated with the normal operations of the Company and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased water costs.

CHARACTER OF SERVICE

Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WATER ADJUSTMENT CLAUSE (PWAC) CHARGE

In addition to all other charges for metered service, the following charges per one hundred gallons or per one thousand gallons for all sales will be made to recover purchased water costs not included in the Water Charge or any other Charge:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.05289	$0.5289
Exempt	All	$0.04568	$0.4568

The PWAC Charge is also applicable to any difference between the quantity of water actually purchased by the customer and any applicable take-or-pay commitment.

FILING

The Company shall endeavor to make an annual PWAC filing no later than December 1st of each year proposing a PWAC rate to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PWAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PWAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PWAC charge for purchased water;
2. Projected rates supported by projected volumes, revenues, and projected purchased water costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PWAC rate.

The benchmark bill shall be the average residential water customer bill for a twelve-month period.

(Continued)

RATE SCHEDULE O-1
PURCHASED WATER ADJUSTMENT CLAUSE (PWAC)
(Continued)

PROVISIONS

Interest shall be passed onto customers through the PWAC rates at the beginning of each PWAC Year succeeding any PWAC year in which any monthly purchased water costs over recovery has taken place. Any debit or credit balance in the separate deferred net revenue or separate cost of purchased water accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of purchased water balances. Interest on such water costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C. 14:9-7.1, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7.1, et seq.

TERMS OF PAYMENT

See Rate Schedules for applicable customer classes.

CONDITIONS

Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

NEW JERSEY-AMERICAN WATER COMPANY, INC.
B.P.U. No. 8 – Water

Third Revised Sheet: No. 40.2
Superseding Second Revised Sheet: No. 40.2

RATE SCHEDULE O-2
LEAD SERVICE LINE REPLACEMENT CHARGE

APPLICABILITY

Applicable to all water customer classes served by the Company in all service areas for water service taking service under Rate Schedules A-1 through A-16 (GMS) and C, D, E, F, G, H, I, J, and L-1 through L12 (non-GMS). The Lead Service Line Replacement Charge is designed to recover project costs associated with replacing customer-owned lead service lines.

CHARACTER
Continuous, except as limited by the "Standard Terms and Conditions".

LEAD SERVICE LINE REPLACEMENT CHARGE (LSLRC)
In addition to all other charges for GMS and non-GMS customers throughout the entire territory served, the following charges will be assessed as follows commencing July 1, 2024:

- For each surcharge period, revenue responsibility shall be assigned to GMS customers on a volumetric basis in the same proportion as total revenue requirements were assigned to GMS in the Company's most recently concluded base rate case. Then the balance of the revenue responsibility shall be assigned to non-GMS as a fixed per customer surcharge based on the aggregate customer count of non-GMS customers.

- The non-GMS customer count and GMS volumetric usage will be updated with each surcharge filing. The non-GMS customer count will be updated to reflect the count at the end of the month prior to each surcharge filing. The GMS usage will be updated to reflect the actual usage from the six-month period during which the costs were incurred.

- GMS and non-GMS LSLRC revenue requirement allocation percentages will be updated following each base rate proceeding during the LSLRC recovery period.

RATE
This charge is in addition to Rate Schedules A-1 through A-16 (GMS) and C, D, E, F, G, H, I, J, and L-1 through L12 (non-GMS). The surcharge amounts for GMS and Non-GMS customers are as follows:

GMS Rate Per 1,000 Gallons	Non-GMS Fixed Charge Per Month
$ 0.8791	$21.24

The recovery of these costs will be shown as a LSLRC surcharge on each customer's bill.

FILING
The LSLRC is authorized pursuant to N.J.S. A. 58:12A-40, et seq. (Lead Service Line Replacement Law) and the procedures for filing, approving and implementing the LSLRC are set forth therein, along with the Company's Lead Service Line Replacement Plan, which was reviewed and approved by the Board of Public Utilities in BPU Docket No. WR22010017 on October 12, 2022, and the BPU Order approving said Plan.

The approval process for implementing this surcharge includes public notice and hearing. The notice included a proposed surcharge amount based on the actual project costs associated with the replacement of customer-owned lead service lines incurred by the Company between July 1, 2020 and October 31, 2022, as well as estimated surcharge amounts for the first five years of the lead service line replacement program, which were estimated based on estimated construction schedules, costs and other factors described in the approved Lead Service Line Replacement Plan. Pursuant to the approved Lead Service Line Replacement Plan, the Company shall endeavor to make semi-annual LSLRC filings at approximately six-month intervals. In addition, to ensure that customers are surcharged the proper amount, the Company will reconcile any over- or under-collections on an annual basis as part of its surcharge filings.

TERMS OF PAYMENT
See Rate Schedules for applicable customer classes.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

Issued: May 17, 2024

Effective: July 1, 2024

By: Mark K. McDonough, President
1 Water Street, Camden, NJ 08102
Filed pursuant to Order of the Board of Public Utilities entered in
Docket No. WR22010017 dated October 12, 2022.

RATE SCHEDULE O-3
SOCIETAL PROGRAMS

APPLICABILITY
Applicable to all water and wastewater customer classes served by the Company in all service areas taking water service under Rate Schedules A-1 through A-16 (GMS) and C, D, E, F, G, H, I, J, L-1 through L12, M-1 through M-12, and wastewater service under Rate Schedules 1-A through 19-A (non-GMS).

CHARACTER
Continuous, except as limited by the “Standard Terms and Conditions”.

RATE

SPECIAL PROGRAM CHARGE (SPC)

In addition to all other charges for GMS and non-GMS water and wastewater service, an SPC charge will apply from June 1, 2024 through May 31, 2027 to recover incremental costs incurred during the COVID-19 pandemic.

The following charges will be assessed as follows commencing June 1, 2024, subject to annual reconciliation:

GMS Rate Per 1,000 Gallons	Non-GMS Fixed Charge Per Month
$0.0551	$0.99

TERMS OF PAYMENT

See Rate Schedules for applicable customer classes.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE O-4
UNIVERSAL AFFORDABILITY

AVAILABILITY

Available to all residential water customers served by the Company in all service areas who meet the income criteria of 200% or less than the Federal Poverty Level ("FPL"). NJ Shares determines and maintains the qualification requirements for the Company's discount programs. Customers who qualify for the program are required to recertify income eligibility every two years.

APPLICABILITY

The discount will be applied to the Fixed Service Charge and Water Charge (volumetric) portion of the bill for water service. The discount will not be applied to the Purchased Water Adjustment Clause (PWAC) Charge, as shown on Rate Schedule O-1, the Lead Service Line Replacement Charge (LSLRC), as shown on Rate Schedule O-2, the Special Program Charge (SPC) as shown on Rate Schedule O-3, or the Distribution System Improvement Charge (DSIC), as shown on Rate Schedule K.

DISCOUNT

	Household Income	Fixed Service Charge Discount	Water Charge Discount
Tier 1	0% - 50% of FPL	60%	60%
Tier 2	51% - 100% of FPL	45%	45%
Tier 3	101% - 150% of FPL	30%	30%
Tier 4	151% - 200% of FPL	15%	15%

RATE SCHEDULE P-1
MISCELLANEOUS SERVICE

APPLICABILITY
Applicable throughout the entire area served by the Company for Miscellaneous Municipal Service, General Building Construction and Trucked Bulk Water Sales.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES
(a) Miscellaneous Municipal Service: Each customer shall pay for all water used for street sprinkling, street or sewer flushing, swimming pools or other miscellaneous uses at the General Metered Service Rates of this tariff as applicable. Water consumption will determined by metering or by such other method as may be mutually agreed upon by the customer and the Company. Fire hydrants are not to be used for this service without the express consent of the Company in each circumstance where this service is required. No person, other than municipal fire and Company personnel is permitted to operate or take water from any public fire hydrant for street sprinkling, flushing sewers, storm water drains, or any purpose unless authorized by the Company and the fire chief of the municipality in writing and upon the terms and conditions set forth by the fire chief and the Company therein.

(b) Water For Building Construction: Where water service is temporarily furnished for building construction and/or any other temporary use, it shall, wherever practical, be supplied through a meter at the General Metered Service Rates of this tariff as applicable. Should a new service be required to provide this temporary use, the customer shall pay the cost to install and remove the service. No person, other than municipal fire and Company personnel, is permitted to operate or take water from any public fire hydrant for building construction or any purpose unless authorized by the Company and the fire chief of the municipality in writing and upon the terms and conditions set forth by the fire chief and the Company therein.

(c) Bulk Water Sales for water transfers using Trucks and Tanks: Water sales to customers or entities using trucks or tanks to receive water service from the Company that require additional attention may affect the Company's daily operations. A surcharge in the amount of $50 may be applied for each such request in addition to the water charge as set forth in the applicable General Metered Service Rates of this tariff. If at any time the Company determines that a customer or entity has taken water without permission or proper compensation to the Company under this provision, the Company reserves the right to refuse to sell water to the customer or entity hereunder. Bulk Water Sales for water transfers using trucks and tanks in Service Area 1H, Salem, will be charged $19.95 per 1,000 gallons.

TERMS OF PAYMENT
All charges rendered under this Rate Schedule are in arrears for metered service and in advance for un-metered service. At the option of the Company, a deposit may be required for metered service billed in arrears, in accordance with N.J.A.C. 14:3-3.4, et seq. The Company may not require a deposit for un-metered service billed in advance in accordance with N.J.A.C. 14:3-3.4(i). Bills are due twenty (20) days from the date of the postmark on the envelope in which the bill is transmitted or electronic transmission date for customers on electronic billing.

TERM
Continuous until water service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISIONS
Where metered service is provided through a hydrant meter, a deposit equal to the cost of the hydrant meter may be required by the Company. The meter shall be kept safe and accessible during its use. The deposit, less the cost of repairs to the meter, if any, will be returned to the applicant by the Company after surrender of the meter and payment of all charges for water supplied through it.

RATE SCHEDULE P-2
MISCELLANEOUS SERVICE –
CHARGES NOT INVOLVING THE USE OF WATER

APPLICABILITY
Applicable to all classes of customers unless specified for the following classes of miscellaneous services throughout the entire area served by the Company.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RECONNECTIONS AND RECONNECTION CHARGE

1. Resumption of service rates due to: discontinuance of service as a result of non-payment of bills; violation of the Company's tariff rules; the voluntary request of the customer when the meter has not been removed (e.g. seasonal requests) or for customer's convenience, are set forth as follows.

Conditions	Rate
Normal working hours For the purpose of requests for reconnection services under this section, normal working hours are as follows: Monday through Friday* 8 AM to 6 PM Saturday* 8 AM to 2 PM *Except for holidays recognized by the State of New Jersey.	$28.00
After-hours restoration of service The Company has 12 hours from proper application by the customer to restore service, after all of the conditions under which such service was discontinued are corrected and the utility has received notice of payment. Requests for reconnection of service that must be worked all days and times outside of normal working hours as listed above, plus holidays recognized by the State of New Jersey, are subject to the after-hours restoration of service rate.	$100.00

2. Resumption of service when a customer's service has been reconnected without the permission of the Company after service has been terminated by the Company for non-payment of bills or violation of the Company's tariff. The Company will physically disconnect the customer's service for a second time and the customer will be required to pay, in addition to any outstanding or delinquent amount, the Company's actual cost of reconnection or $350.00, whichever is more, before service is restored. The Company shall give written notice to the customer that if service is reconnected again without the permission of the Company, it will be necessary for the Company to excavate and physically disconnect service and that a reconnection charge of $500, or the actual cost incurred by the Company to excavate and physically disconnect and reconnect the service, whichever is more, will be made. The Company may also seek criminal prosecution under N.J.S.A. 2C:20-8c as well as civil damages.

(Continued)

RATE SCHEDULE P-2
MISCELLANEOUS SERVICE –
CHARGES NOT INVOLVING THE USE OF WATER
(Continued)

3. Requirement for Customer to be Present for Reconnection. Customers must be present on the premises when the Company reconnects a discontinued water service to said premises. Notwithstanding the foregoing, if the customer is not present but has given consent to the Company to reconnect the water service in his, her or its absence, the Company may reconnect the water service. In such case, the customer is solely responsible for any damage incurred by the customer and/or to the customer's premises due to an approved reconnection of service when the customer is not present at the time of said reconnection, provided that the customer will not be responsible for damage due to the sole negligence of the Company.

CROSS CONNECTION INSPECTION CHARGE
A charge of $75.00 will be imposed by the Company for an inspection of each cross-connection device installed between an unapproved source of supply and the Company's water supply, subject to the availability of Company resources. The customer must provide proof of inspection.

METER TESTING AND REPLACEMENT CHARGE

1. Customer Request for Additional Meter Testing. If a customer requests that the Company test a meter during any twelve (12) month period in which the Company has already provided one free meter test per N.J.A.C. 14:3-4.5, or if the meter first referred to has been in use less than two years, and the meter is found to be accurate, the Company may charge the customer a fee for removing the meter and a fee for testing the meter as follows:

Schedule for removing and replacing a meter

Meter Size	Rate
Meters up to and including 2" in diameter	$37.00
Meters larger than 2" in diameter	Actual cost

These charges will not exceed the replacement cost of the meter.

Schedule for testing the meter

Meter Size	Rate
All meters from ⅝ inches up to 1 inch	$50.00
All meters from 1 ½ inches up to 3 inches	$75.00
All meters from 4 inches up to 10 inches	$100.00
All meters from 12 inches and larger	$125.00

2. Removing, Repairing and Replacing Meters damaged due to negligence of the customer. The Company may impose a charge on any customer who causes damage to a meter as follows:

(a) Repair Only: Actual cost of materials used to repair the meter, and the actual cost of labor required to repair and reinstall the meter.

(b) Meter Replacement for Non-repairable Meters: Actual cost of a new meter, materials used to replace the meter, and the actual cost to install the meter, including the cost of labor required to install the meter.

(Continued)

RATE SCHEDULE P-2
MISCELLANEOUS SERVICE –
CHARGES NOT INVOLVING THE USE OF WATER
(Continued)

BAD CHECK CHARGE
If the Company receives a negotiable instrument from a customer in payment of a bill, charge, or deposit due, and such instrument is subsequently dishonored or uncollectible for any reason, the Company shall charge the customer a handling charge per instrument of $15.00.

If a bad check charge is applied to a customer account, that amount, as well as the amount of the dishonored check shall be paid with cash, certified check, money order, bank check, or other means of guaranteed payment before such account shall be deemed paid. Additionally, if a customer presents two checks that are dishonored by the bank as a result of the customer's error, the customer will be required to pay by the methods stated above for a period of twelve months from the date of the last dishonored check.

The provisions of this tariff section shall not be deemed to require a customer to submit to automatic deduction from any bank account, credit card, or by on-line banking but the Company may offer same as an option provided the customer is presented with all other available options offered by the Company.

UNAUTHORIZED USE OF COMPANY FACILITIES
There will be a minimum charge of $500.00 for unauthorized use of Company facilities plus costs for repair of any damages to Company property resulting therefrom.

TERMS OF PAYMENT
Valid bills furnished under this schedule are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

TERM
Continuous until water service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISIONS
The Company may waive the fees and charges referenced in this Rate Schedule P-2 for a customer who is enrolled in the Company's H20 Help to Others Assistance Program or the H20 Help to Others Discount Program, provided that the customer is not deemed to have been abusing and/or taking advantage of the system, including but not limited to repeatedly requiring service reconnections more than three (3) times in any twelve (12) month period.

RATE SCHEDULE P-3
MULTI-USE SERVICE LINE

APPLICABILITY

The Company will provide an option to customers, upon request and where applicable, to use a "multi-use" service line per N.J.A.C. 14:9-8.3 et seq.

"Multi-use service" means water service that is supplied through one water line extending from the water main to the structure, and which is used for both domestic water service on the premises and for fire suppression service inside a structure. A multi-use service is not private fire protection service.

Terms and Conditions not defined specifically below for Multi-Use services shall be the same as those under the STANDARD TERMS AND CONDITIONS.

RATES

Rates applicable to multi-use service are those found in the Company's General Metered Service Rate Schedules in this tariff as applicable.

TERMS OF PAYMENT

A water utility may terminate a customer's multi-use service for non-payment of a valid water bill for multi-use service, in accordance with the Board's rules governing discontinuance of such service at N.J.A.C. 14:3-3A.4(j) and N.J.A.C. 14:9-8.3.

CONDITIONS

By applying for multi-use service, the customer or builder certifies that:

1. The customer or builder has hydraulically calculated the demand for the customer's or builder's water system, based on the simultaneous domestic and fire sprinkler demand. The customer or builder shall make this calculation in accordance with the Uniform Construction Code and any other applicable state or local codes; and

2. The customer or builder will ensure that the system is installed in accordance with the Uniform Construction Code at N.J.A.C. 5:23; and

3. The customer will, prior to installation of the meter, obtain and provide the Company with a copy of a valid construction permit in accordance with the Uniform Construction Code from the enforcing agency having jurisdiction over the system.

GENERAL TERMS AND CONDITIONS

1- By applying for multi-use service, the customer agrees to be responsible for all claims, costs and liability for personal injury, death and/or property damage, resulting from the customer's individual water system, and agrees that the Company shall not be so liable unless caused by the negligence of the water utility. (N.J.A.C. 14:9-8.3(d))

2- All multi-use service lines shall be metered, and the meter shall be located in a meter pit or vault located outside of the Customer's structure. The meter pit or vault shall be installed at a location acceptable to the express, advance approval of the Water Company, and otherwise shall comply with the Company's standard terms and conditions.

3- If a customer requests a change in meter size associated with a multi-service meter, the customer must re-apply for service and re-certify each item addressed in this Rate Schedule.

(Continued)

RATE SCHEDULE P-3
MULTI-USE SERVICE LINE
(Continued)

PROVISION OF SERVICES

By applying for multi-use service, and operating the same, the customer agrees:

1. To include a backflow prevention device(s) as defined at N.J.A.C. 7:10-1.3, and as specified at N.J.A.C. 7:10-10.3;

2. To be solely responsible for all costs and expenses relating to the installation, operation, maintenance, repair and replacement of the customer's water system, including the fire suppression system and backflow prevention device(s);

3. To ensure that the customer's water system complies with the applicable requirements of the Uniform Construction Code in effect at the time of system installation, including any applicable building, plumbing and fire protection sub-codes; and

4. To ensure that the customer's water system is maintained in accordance with all applicable law so as to protect against backflow, back-siphonage and contamination of the potable water system.

RATE SCHEDULE 1-A
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service in the City of Ocean City. The charge for wastewater service shall consist of the total of the Minimum Service Charge, the Volumetric Wastewater Charge, the Purchased Wastewater Treatment Adjustment Clause (PSTAC) Charge, as defined under the Standard Terms and Conditions in this tariff and as shown on Rate Schedule 1-B, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

MINIMUM SERVICE CHARGE
All wastewater service customers shall pay a Minimum Service Charge in addition to the Volumetric Wastewater Charge, if any. The Minimum Service Charge for a customer is determined every January 1 for the year based on the water usage for the prior July, August and September meter readings ("Summer Quarter Consumption") but in no event will a customer be billed for less than 7,480 gallons per year for wastewater service.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$1.53000	$15.3000

VOLUMETRIC WASTEWATER CHARGE
The volume of wastewater discharged is assumed to equal water meter registration. Charges shall be based on water consumption as indicated by water meter readings on a monthly basis.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.37520	$3.7520

TERMS OF PAYMENT

The following plan for payment of the Annual Minimum Service Charge is offered as a convenience to our customers and, in the case of seasonal service, does not relieve the customer of the liability to pay the entire Annual Minimum Service Charge if wastewater service is rendered for only a portion of the calendar year. In the case of a non-seasonal customer terminating their account, the customer shall be billed for service provided through the date of service termination.

A new customer, initiating service at existing premises, shall be billed for such service as of the account activation date. The new customer account usage will be based on the existing premises last known summer quarter consumption, until the new customer establishes a summer quarter consumption. A new customer account without established summer quarter consumption data will be required to pay a pro-rata share of the Annual Minimum Service Charge, until the new customer establishes a summer quarter consumption. The proration shall be based on the portion of the calendar year for which the customer receives service.

In addition, in the case of a reactivated account, the customer will be required to pay for the charges as if the account had been active as of January 1. The calculated Annual Minimum Service Charge will therefore be billed across the remaining installment billing periods in that calendar year.

For monthly billed customers, one-twelfth of the Minimum Service Charge shall be due and payable upon receipt of the regular bill for wastewater service.

If the Company determines by application of the following criteria that the customer's past record of payments does not warrant application of this payment plan, the Company may require payment of the entire service charge at one time rather than in installments.

1. If a customer has been terminated at least once in the past two years for non-payment of a bill for wastewater service; or,
2. If a customer receives three (3) Final Reminder Notices during a twelve-month period.

Usage charges based upon meter readings shall be billed in monthly in arrears. Valid bills for service furnished under this schedule are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

RATE SCHEDULE 1-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY
Applicable to all Wastewater Service customer classes including general residential, commercial, industrial and municipal wastewater service in the City of Ocean City. The PSTAC charge, as defined under the Standard Terms and Conditions in this tariff, is designed to recover the cost of purchased wastewater treatment and disposal costs associated with the normal operations of the Company, and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased wastewater treatment and disposal costs.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE
In addition to all other charges for general metered service, the following PSTAC charges per one hundred gallons and per one thousand gallons for all sales will be charged based on the Summer Quarter Consumption as defined in the Minimum Service Charge section of Wastewater-Rate Schedule 1-A to recover purchased wastewater treatment and disposal costs, but in no event will the consumption level for PSTAC be less than 7,480 gallons per year.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1000 Gallons
Non-Exempt	All	$3.11310	$31.1310

FILING
The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate or percentage to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

TERMS OF PAYMENT
See Rate Schedule for the applicable customer classes.

(Continued)

RATE SCHEDULE 1-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)
(Continued)

PROVISIONS

Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C. 14:9-7, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERM
Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE 2-A
GENERAL METERED SERVICE
STATEWIDE WASTEWATER COLLECTION AREAS

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service in the Statewide Wastewater Collection Areas including Lakewood, Elk Township, and the Adelphia System (service area of the former Adelphia Sewer Company) and other franchise areas within the Township of Howell. The charge for wastewater service shall consist of the total of the Fixed Service Charge, the Volumetric Wastewater Charge, the Purchased Wastewater Treatment Adjustment Clause (PSTAC) Charge, as defined under the Standard Terms and Conditions in this Tariff, shown on Rate Schedule 2-B (Lakewood), Rate Schedule 3-B (Howell and Adelphia System), and Rate Schedule 12-B (Elk Township), the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE
All wastewater service customers shall pay a Fixed Service Charge in addition to the Volumetric Wastewater Charge, if any, as follows:

	Non-Exempt
Fixed Service Charge per customer per month.	$17.00

VOLUMETRIC WASTEWATER CHARGE
The volume of wastewater discharged is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how monthly Volumetric Wastewater Charges are calculated.

Volumetric Charges

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.55730	$5.5730

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 2-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY
Applicable to all Wastewater Service customer classes including general residential, commercial, industrial and municipal wastewater service in the Statewide Wastewater Collection Area (Lakewood). The PSTAC charge, as defined under the Standard Terms and Conditions in this Tariff, is designed to recover the cost of purchased wastewater treatment and disposal costs associated with the normal operations of the Company, and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased wastewater treatment and disposal costs.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE
In addition to all other charges for general metered service, the following charges per one hundred gallons and per one thousand gallons for all sales will be made to recover purchased wastewater treatment and disposal costs not included in the Volumetric Wastewater Charge or any other Charge as set forth in Rate Schedule 2-A of the current Tariff:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$ 0.42215	$4.2215

FILING
The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate or percentage to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for purchased wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)
(Continued)

PROVISIONS

Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C., 14:9-7, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERMS OF PAYMENT
See Rate Schedule for the applicable customer class.

TERM
Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

Reserved for Future Use

RATE SCHEDULE 3-B

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY

Applicable to all Wastewater Service customer classes including general residential, commercial, industrial and municipal wastewater service customers provided service by the Company's Adelphia System (service area of the former Adelphia Sewer Company) and other franchise areas within the Township of Howell in Monmouth County. The PSTAC charge, as defined under the Standard Terms and Conditions in this Tariff, is designed to recover the cost of purchased wastewater treatment and disposal associated with the normal operations of the Company, and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased wastewater treatment and disposal costs.

CHARACTER OF SERVICE

Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE

In addition to all other charges for general metered service, the following charges per one hundred gallons and per one thousand gallons for all sales will be made to recover purchased wastewater treatment and disposal costs not included in the Volumetric Wastewater Charge or any other Charge as set forth in Rate Schedule 2-A of the current Tariff:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.69696	$6.9696

FILING

The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for purchased wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

(Continued)

RATE SCHEDULE 3-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)
(Continued)

PROVISIONS

Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C. 14:9-7 et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERMS OF PAYMENT
See Rate Schedule for the applicable customer class.

TERM
Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE 5-A
GENERAL FLAT RATE SERVICE
STATEWIDE COLLECTION AND TREATMENT AREAS

APPLICABILITY FOR GENERAL FLAT RATE WASTEWATER SERVICE CUSTOMERS
Applicable to all general flat rate wastewater service customers located in the Company's Tewksbury System (Pottersville - service area of the former Valley Road Sewerage Company) in the Township of Tewksbury in Hunterdon County, and Service Areas noted as (A) and (B), formerly served by Applied Wastewater Management, Inc. ("Applied"), on Sheet No. 44 (COWS) who are not water service customers of NJAWC. The Class A/Class B designations in effect at the time rates were set by the Board in Docket. No. WR11070460 (May 1, 2012) shall remain in effect unless changed by order of the Board. No new Class A designations shall be made except at the discretion of the Company. The Company's charge for wastewater service shall consist of the total of a Flat Rate Service Charge, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

FLAT RATE SERVICE CHARGE – GENERAL FLAT RATE WASTEWATER CUSTOMERS
All wastewater service customers shall pay a flat rate service charge as indicated below.

	RATE PER MONTH
CLASS A	$86.00
CLASS B	100.00

The Class A/Class B designations in effect at the time rates were set by the Board in Docket. No. WR11070460 (May 1, 2012) are as follows:

CLASS A
4 BEDROOM AGE RESTRICTED
3 BEDROOM AGE RESTRICTED
2 BEDROOM TOWNHOUSE
3 BEDROOM TOWNHOUSE AGE RESTRICTED
2 BEDROOM AGE RESTRICTED
1 BEDROOM TOWNHOUSE

CLASS B
DETACHED SINGLE FAMILY
3 BEDROOM TOWNHOUSE

CHARACTER OF FLAT RATE SERVICE
Continuous (unmetered), except as limited by the "Standard Terms and Conditions."

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 6-A
GENERAL METERED SERVICE
STATEWIDE COLLECTION AND TREATMENT AREAS

APPLICABILITY FOR GENERAL METERED WASTEWATER SERVICE CUSTOMERS
Applicable to all general metered wastewater service customers located in the Company's Tewksbury System (Pottersville - service area of the former Valley Road Sewerage Company) in the Township of Tewksbury in Hunterdon County, Service Areas noted as (A) and (B), formerly served by Applied Wastewater Management, Inc. ("Applied"), on Sheet No. 44 (COWS and Homestead) who receive volume-based water service billings from NJAWC, and the Mansfield Warehousing Area. The Company's charge for wastewater service shall consist of the total of the Fixed Service Charge, a Volumetric Wastewater Charge, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC) as shown on Rate Schedule 9-A.1.

RATES

FIXED SERVICE CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
All wastewater service customers shall pay a Fixed Service Charge as indicated below, in addition to the Volumetric Wastewater Charge, if any.

	RATE PER MONTH
Non-Exempt	$65.68

VOLUMETRIC WASTEWATER CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
The volume of wastewater use is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how monthly Volumetric Wastewater Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.78090	$7.8090

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 8-A
OTHER CONTRACTS

APPLICABILITY

Applicable to wastewater service customers located in the Service Areas noted as (D), formerly served by Applied Wastewater Management, Inc. ("Applied"), and C), formerly served by Environmental Disposal Corp. ("EDC") on Sheet No. 44 (Other Contracts).

CHARACTER OF SERVICE

Continuous (unmetered).

RATES

SERVICE AREA	CLASS	RATE PER MONTH	
Applied	Schools	$141.10	Per Formula*
Applied	Other	141.10	Per Equivalent Dwelling Units**
EDC	Bulk User***	8.8090	Per 1,000 Gallons

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

* Quarterly Charge = $423.30 x (Average Daily Enrollment x Student GPD)/300
Where Student GPD is as follows:
NJDEP projected usage per Elementary School student = 15 GPD
NJDEP projected usage per Middle School student = 20 GPD
NJDEP projected usage per High School student = 25 GPD

**An equivalent residential customer is based on 235 GPD

*** Rates for treatment of wastewater from BULK USER Customers delivered by said customers to the EDC treatment facility as set forth in this Tariff Sheet shall supersede the contractual rates and terms set forth in each of the Amended and Restated Sewer Allocation and Bulk User Agreements Between Environmental Disposal Corp. and the Boroughs of Bedminster, Far Hills, and Peapack and Gladstone ("Bulk User Agreements"), respectively.

RATE SCHEDULE 9-A
MISCELLANEOUS SERVICE CHARGES

APPLICABILITY
Applicable to all classes of customers unless specified for the following classes of miscellaneous services throughout the entire area served by the Company.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

BAD CHECK CHARGE
If the Company receives a negotiable instrument from a customer in payment of a bill, charge, or deposit due, and such instrument is subsequently dishonored or uncollectible for any reason, the Company shall charge the customer a handling charge per instrument of $15.00.

If a bad check charge is applied to a customer account, that amount, as well as the amount of the dishonored check shall be paid with cash, certified check, money order, bank check, or other means of guaranteed payment before such account shall be deemed paid. Additionally, if a customer presents two checks that are dishonored by the bank as a result of the customer's error, the customer will be required to pay by the methods stated above for a period of twelve months from the date of the last dishonored check.

The provisions of this Tariff section shall not be deemed to require a customer to submit to automatic deduction from any bank account, credit card, or by on-line banking but the Company may offer same as an option provided the customer is presented with all other available options offered by the Company.

RESUMPTION OF SERVICE AFTER PHYSICAL DISCONNECTION OR PLUGGING DUE TO NONPAYMENT OF BILLS OR VIOLATION OF THE COMPANY'S RULES

Wastewater Service	-	At any time	Greater of $350.00 or actual cost

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

SPECIAL PROVISIONS
The Company may waive the fees and charges referenced in this Rate Schedule 9-A for a customer who is enrolled in the Company's H2O Help to Others Program provided that the customer is not deemed to have been abusing and/or taking advantage of the system, including but not limited to repeatedly requiring service reconnections more than three (3) times in any twelve (12) month period.

RATE SCHEDULE 9-A.1
WASTEWATER SYSTEM IMPROVEMENT CHARGE

Applicable to all wastewater treatment and service customers on Rate Schedules 1-A, 2-A, 5-A, 6-A, 10-A, 11-A, 13-A, and 16-A.[4]

CHARACTER
Continuous, except as limited by the "Standard Terms and Conditions".

WASTEWATER SYSTEM IMPROVEMENT CHARGE (WSIC)
In addition to all other charges for wastewater collection and treatment throughout the entire territory served, the following charges will be assessed on a fixed, per meter or meter equivalent basis for each monthly bill.

RATE
This charge is in addition to Rate Schedules 1-A, 2-A, 5-A, 6-A, 10-A, 11-A, 13-A, and 16-A.

Size of Meter	Non-Exempt Per Month	Exempt Per Month
5/8"	$0.00	0.00
3/4"	0.00	0.00
1"	0.00	0.00
1 1/2"	0.00	0.00
2"	0.00	0.00
3"	0.00	0.00
4"	0.00	0.00
6"	0.00	0.00
8"	0.00	0.00
10"	0.00	0.00
12"	0.00	0.00
16"	0.00	0.00

FILING
The WSIC is authorized pursuant to N.J.A.C. 14:9-11.1 et seq. and the procedures for filing, reviewing, approving and implementing the WSIC are set forth therein. The WSIC is based on the Company's Foundational Filing, which was reviewed and approved by the Board of Public Utilities. The approval process included public notice and public hearings. The notice included proposed surcharge amounts, which were estimated based on projected construction schedules, costs and other factors. Pursuant to the approved Foundational Filing, the Company shall endeavor to make semi-annual WSIC filings at approximately six-month intervals. The WSIC is subject to a maximum amount and other limitations in N.J.A.C. 14:9-11.1 et seq.

TERMS OF PAYMENT
See the Rate Schedules for applicable customer classes.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

[4] Rate Schedule 16-A will not be subject to this surcharge until June 2, 2025.

RATE SCHEDULE 9-A.2
UNIVERSAL AFFORDABILITY

AVAILABILITY

Available to all residential wastewater service customers served by the Company in all service areas who meet the income criteria of 200% or less than the Federal Poverty Level ("FPL"). NJ Shares determines and maintains the qualification requirements for the Company's discount programs. Customers who qualify for the program are required to recertify income eligibility every two years.

APPLICABILITY

The discount will be applied to the Fixed Service Charge and Volumetric Wastewater Charge portions of the bill for wastewater service. The discount will not apply to the Purchased Wastewater Adjustment Clause (PSTAC) Charge, as shown on Rate Schedule O-1, the Special Program Charge (SPC) on Rate Schedule O-3, or the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

DISCOUNT

	Household Income	Fixed Service Charge Discount	Volumetric Wastewater Charge Discount
Tier 1	0% - 50% of FPL	60%	60%
Tier 2	51% - 100% of FPL	45%	45%
Tier 3	101% - 150% of FPL	30%	30%
Tier 4	151% - 200% of FPL	15%	15%

RATE SCHEDULE 10-A
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general metered residential, commercial, industrial and municipal wastewater service to customers served by the Company's Jensen's Deep Run System in the Township of Plumsted in Ocean County. The charge for wastewater service shall consist of the total of a Fixed Service Charge, a Volumetric Wastewater Charge, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC) as shown on Rate Schedule 9-A.1.

RATES

FIXED SERVICE CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
All wastewater service customers shall pay a fixed service charge as indicated below, in addition to the Volumetric Wastewater Charge, if any.

	RATE PER MONTH
Non-Exempt	$40.00

VOLUMETRIC WASTEWATER CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
The volume of wastewater discharged is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how monthly Volumetric Wastewater Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.78090	$7.8090

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

TERMS OF PAYMENT
Valid bills for wastewater service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 11-A
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general metered residential, commercial, industrial and municipal wastewater service to customers served by the Company's Haddonfield Collection System in Camden County. The charge for wastewater service shall consist of a Fixed Service Charge, a Volumetric Wastewater Charge based on the water consumption at the location for the same billing period, the Special Program Charge (SPC) as shown on Rate Schedule O-3, and the Wastewater System Improvement Charge (WSIC) as shown on Rate Schedule 9-A.1.

RATES

FIXED SERVICE CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
All wastewater service customers shall pay a Fixed Service Charge as indicated below, in addition to the Volumetric Wastewater Charge, if any.

	RATE PER MONTH
Non-Exempt	$12.50

VOLUMETRIC WASTEWATER CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
The volume of wastewater discharged is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how Monthly Wastewater Usage Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.51020	$5.1020

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

TERMS OF PAYMENT
Valid bills for wastewater service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 12-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY
Applicable to all Wastewater Service customer classes including general residential, commercial, industrial and municipal wastewater service in Elk Township. The PSTAC charge, as defined under the Standard Terms and Conditions in this Tariff, is designed to recover the cost of purchased wastewater treatment and disposal costs associated with the normal operations of the Company and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased wastewater treatment and disposal costs.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE
In addition to all other charges for general metered wastewater service, the following charges per one hundred gallons and per one thousand gallons for all sales will be made to recover purchased wastewater treatment and disposal costs not included in the Volumetric Wastewater Charge or any other charge as set forth in Rate Schedule 2-A of the current Tariff:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.40008	$4.0008

FILING
The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate or percentage to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for purchased wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

PROVISIONS
Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C., 14:9-7, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERMS OF PAYMENT
See Rate Schedule for the applicable customer class.

TERM
Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE 13-A
GENERAL METERED SERVICE

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service in the Borough of Mount Ephraim. The charge for wastewater service shall consist of a Fixed Service Charge, a Volumetric Wastewater Charge based on the water consumption at the location for the same billing period, and the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES

FIXED SERVICE CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
All wastewater service customers shall pay a Fixed Service Charge as indicated below, in addition to the Volumetric Wastewater Charge, if any.

	RATE PER MONTH
Non-Exempt	$12.50

VOLUMETRIC WASTEWATER CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
The volume of wastewater use is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how Monthly Wastewater Usage Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.01440	$0.1440

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

TERMS OF PAYMENT
Valid bills for wastewater service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 14-A
GENERAL FLAT RATE SERVICE[5]

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service to customers in Long Hill Township who do not receive volume-based water service billings from NJAWC. The Company may require a water meter to be installed by any wastewater customer utilizing a well or other private water system at the property owner's expense. The charge for wastewater service shall consist of the Fixed Service Charge and the Flat Rate Service Charge.

AVAILABILITY OF SERVICE
As the Company has implemented a voluntary wastewater connection ban due to excess wastewater flow, all requests for new wastewater connections to the Long Hill Township wastewater system will be granted at the sole discretion of the Company.

CHARACTER OF SERVICE
Continuous (unmetered), except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE – WASTEWATER
All wastewater service customers shall pay a Fixed Service Charge in addition to the Flat Rate Service Charge as indicated below. If a wastewater customer has multiple connections to a single property, only one Fixed Service Charge shall be applied to the wastewater customer.

	RATE PER MONTH Effective 10/23/2023	RATE PER MONTH Effective 10/23/2024
Non-Exempt, per unit	$15.47	$15.93

FLAT RATE USAGE CHARGE – WASTEWATER CUSTOMERS
All wastewater service customers shall pay a Flat Rate Usage charge as indicated below.

	RATE PER MONTH Effective 10/23/2023	RATE PER MONTH Effective 10/23/2024
Non-Exempt Residential, per connection	$50.84	$52.37
Non-Exempt Commercial, Industrial and Municipal, per connection	$106.09	$109.27

FIXED SERVICE CHARGE DISCOUNT – RESIDENTIAL WASTEWATER CUSTOMERS
Residential wastewater customers of Long Hill Township enrolled in the Township's Senior Discount Program as of October 22, 2020, shall receive a Fixed Service Charge discount of $40.00 annually, or $3.33 per month. After October 22, 2020, customers will no longer be added to this Fixed Service Charge Discount program.

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Fixed Service Charges and Flat Rate Service Charges shall be prorated to the date of establishment or discontinuance of service.

[5] The rates on this schedule will increase by 3% on 10/23/2024 by the terms of the Agreement of Sale between Long Hill Township and New Jersey-American Water Company, Inc.

RATE SCHEDULE 15-A
GENERAL METERED SERVICE[6]

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service to customers in Long Hill Township who receive volume-based water service billings from NJAWC. The charge for wastewater service shall consist of the total of the Fixed Service Charge and the Volumetric Wastewater Charge.

AVAILABILITY OF SERVICE
As the Company has implemented a voluntary wastewater connection ban due to excess wastewater flow, all requests for new wastewater connections to the Long Hill Township wastewater system will be granted at the sole discretion of the Company.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE
All wastewater service customers shall pay a Fixed Service Charge in addition to the Volumetric Wastewater Charge, as indicated below. If a wastewater customer has multiple connections to a single property, only one Fixed Service Charge shall be applied to the wastewater customer.

	RATE PER MONTH Effective 10/23/2023	RATE PER MONTH Effective 10/23/2024
Non-Exempt, per unit	$15.47	$15.93

VOLUMETRIC WASTEWATER CHARGE
The volume of wastewater discharged for monthly billing purposes shall be calculated by taking the total water metered (Actual Usage) for the six (6) winter months (January through March and October through December) from the preceding billing year, and dividing that Actual Usage by twelve (12).

If the meter is not read or incorrectly read for one or more months of the Actual Usage period as determined by the Company, the amount charged for those months shall be equal to the approximate average monthly usage among other billable months during the same period.

Volumetric Charges

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt Effective 10/23/2023	All	$1.93830	$19.3830
Non-Exempt Effective 10/23/2024	All	$1.99640	$19.9640

FIXED SERVICE CHARGE DISCOUNT – RESIDENTIAL WASTEWATER CUSTOMERS
Residential wastewater customers of Long Hill Township enrolled in the Township's Senior Discount Program as of October 22, 2020, shall receive a Fixed Service Charge discount of $40.00 annually, or $3.33 per month. After October 22, 2020, customers will no longer be added to this Fixed Service Charge Discount program.

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Fixed Service Charges shall be prorated to the date of establishment or discontinuance of service.

[6] The rates on this schedule will increase by 3% on 10/23/2024 by the terms of the Agreement of Sale between Long Hill Township and New Jersey-American Water Company, Inc.

RATE SCHEDULE 16-A
GENERAL METERED AND FLAT RATE SERVICE

APPLICABILITY
Applicable for general residential, commercial, industrial, and municipal wastewater service to customers in Service Area 1G, the Egg Harbor City Utility. Those who receive volume-based water service billings from the Company will receive volume-based wastewater service billings; all others will receive flat rate billings for unmetered service. The Company may require a water meter to be installed by any wastewater customer utilizing a well or other private water system at the property owner's expense. The charge for wastewater service shall consist of the total of the Fixed Service Charge, the Volumetric Wastewater Charge, the Purchased Wastewater Treatment Adjustment Clause (PSTAC) Charge, as defined under the Standard Terms and Conditions in this Tariff, shown on Rate Schedule 16-B, and the Wastewater System Improvement Charge (WSIC), as shown on Rate Schedule 9-A.1.

CHARACTER OF SERVICE
Continuous (unmetered), except as limited by the "Standard Terms and Conditions."

RATES

FIXED SERVICE CHARGE
All wastewater service customers shall pay a Fixed Service Charge in addition to the Volumetric Wastewater Charge, as indicated below.

	RATE PER MONTH
Non-Exempt	$12.50

VOLUMETRIC WASTEWATER CHARGE

The volume of wastewater use is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how Monthly Wastewater Usage Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.42240	$4.2240

FLAT RATE SERVICE CHARGE – WASTEWATER
All wastewater service customers shall pay a Flat Rate Service Charge as indicated below.

	RATE PER MONTH
Non-Exempt	$46.40

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Flat Rate Service Charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 16-B
PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY
Applicable to all Wastewater Service customer classes including general residential, commercial, industrial and municipal wastewater service in Service Area 1G, the Egg Harbor City Utility. The PSTAC charge, as defined under the Standard Terms and Conditions in this Tariff, is designed to recover the cost of purchased wastewater treatment and disposal costs associated with the normal operations of the Company and allow the Company to achieve a zero or near-zero deferred balance each April 1st on its purchased wastewater treatment and disposal costs.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE
In addition to all other charges for general metered service, the following charges per one hundred gallons and per one thousand gallons for all sales will be made to recover purchased wastewater treatment and disposal costs not included in the Volumetric Wastewater Charge or any other Charge as set forth in Rate Schedule 16-A of the current Tariff:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.44935	$4.4935

FILING
The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate or percentage to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for purchased wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

PROVISIONS
Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C., 14:9-7, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERMS OF PAYMENT
See Rate Schedule for the applicable customer class.

TERM
Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS
Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE 18-A
GENERAL FLAT RATE SERVICE[7]

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service to customers in the Borough of Bound Brook who do not receive volume-based water service billings from the Company. The Company may require a water meter to be installed by any wastewater customer utilizing a well or other private water system at the property owner's expense.

CHARACTER OF SERVICE
Continuous (unmetered), except as limited by the "Standard Terms and Conditions."

FLAT RATE SERVICE CHARGE – WASTEWATER
All wastewater service customers shall pay a Flat Rate Service Charge as indicated below.

	RATE PER MONTH
Non-Exempt	$40.77

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Flat Rate Service Charges shall be prorated to the date of establishment or discontinuance of service.

[7] The Flat Rate Service Charge will increase by 3% on 8/12/2025, and 8/12/2026 by the terms of the Agreement of Sale between the Borough of Bound Brook and New Jersey-American Water Company, Inc.

RATE SCHEDULE 19-A
GENERAL METERED SERVICE[8]

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service to customers in the Borough of Bound Brook who receive volume-based water service billings from the Company.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES

FIXED SERVICE CHARGE
All wastewater service customers shall pay a Fixed Service Charge in addition to the Volumetric Wastewater Charge, as indicated below.

	RATE PER MONTH
Non-Exempt	$5.00

VOLMETRIC WASTEWATER CHARGE
The volume of wastewater discharged is assumed to equal water meter registration.

Volumetric Charges

Customer Class*	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt Residential Tax Exempt Commercial – Class 1 Multiple-Dwelling	All	$0.65920	$6.5920
Commercial – Class 2 Industrial Significant Industrial Integrated Health Services and Successors Mixed Residential and Commercial Class 2	All	0.72510	7.2510
	All	0.82400	8.2400

*Customer Class as these terms were defined by the Borough of Bound Brook at the time of acquisition, as follows:

Residential: any property solely used as a home or residence, including single family, multi two-family, and single dwelling condominium form of ownership, discharging domestic waste.

Tax-Exempt: any property exempt from real property taxation, discharging domestic waste.

Commercial - Class 1: any nonresidential property solely used for nonresidential purposes, including the retail of nonprocessed goods or for office or other business uses discharging domestic wastes.

Multiple-Dwelling: A building containing three or more dwelling units, discharging domestic waste.

Commercial - Class 2: Any property used for nonresidential purposes, including any use not classified in "Commercial User Class 1," discharging domestic wastes. Class 2 users include but are not limited to: industrial park, any property utilized for preparing food for sale, hair and nail salons, barber shops, laundromats and dry cleaners, automotive and small engine repair and sales, fueling/service stations, and funeral homes.

Industrial - Any person or property who discharges, causes, or permits the direct or indirect discharge of nondomestic wastewater into the treatment works. All nondomestic wastes discharged by an industrial user shall be considered industrial waste. Multiple-Dwelling: A building containing three or more dwelling units, discharging domestic wastes.

Significant Industrial - A user defined as a significant industrial user pursuant to the rules and regulations of the Middlesex County Utilities Authority.

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Fixed Service Charges shall be prorated to the date of establishment or discontinuance of service.

[8] All rates on this schedule will increase by 3% on 8/12/2025, and 8/12/2026 by the terms of the Agreement of Sale between the Borough of Bound Brook and New Jersey-American Water Company, Inc.

RATE SCHEDULE 20-A

GENERAL METERED AND FLAT RATE SERVICE[9]

APPLICABILITY

Applicable for general residential, commercial, industrial and municipal wastewater service to customers in the Borough of Somerville and the portion of the Township of Bridgewater served by the Somerville System. Those who receive volume-based water service billings from the Company will receive volume-based wastewater service billings; all others will receive flat rate billings for unmetered service. The Company may require a water meter to be installed by any wastewater customer utilizing a well or other private water system at the property owner's expense. The charge for wastewater service shall consist of the total of the Fixed Service Charge, the Volumetric Wastewater Charge, and the Purchased Wastewater Treatment Adjustment Clause (PSTAC) Charge, as defined under the Standard Terms and Conditions in this tariff, shown on Rate Schedule 20-B.

CHARACTER OF SERVICE

Continuous, except as limited by the "Standard Terms and Conditions."

VOLUMETRIC WASTEWATER CHARGE

The volume of wastewater discharged is assumed to equal water meter registration. monthly Volumetric Wastewater Charges shall be determined based upon winter quarter consumption (detailed below), but in no case less than 2,493 gallons per month.

Customer Location	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Somerville	All	$0.34759	$3.4759
Bridgewater	All	0.48128	4.8128

FLAT RATE SERVICE CHARGE

Customer Location	Rate Per Month
Somerville	$32.00
Bridgewater	$40.33

CALCULATION OF WINTER QUARTER CONSUMPTION

Winter quarter consumption shall be determined based on an initial water meter reading taken in December of one year with the concluding meter reading taken approximately 90 days thereafter in March of the following year.

The monthly Volumetric Wastewater Charge shall be determined as follows:

Meters read in January, February and March

The Volumetric Wastewater Charge for each month shall be determined by multiplying the applicable monthly water usage times applicable volumetric charges, but in no case less than 2,493 gallons per month, multiplied by applicable volumetric charges.

Meters read in April through December

The Volumetric Wastewater Charge for each month shall be based on the Monthly Usage Constant, equal to one-third of the winter quarter water consumption, but in no case less than 2,493 gallons per month, multiplied by applicable volumetric charges.

In the case of new customers, the volume of wastewater discharged shall be determined as follows:

New Customers in Premises for Which Actual Full Period Winter Quarter Usage History is Available: Determination of the monthly discharge constant shall be based on the last known full period winter quarter water usage at that property.

New Customers in Premises for Which No Full Period Winter Quarter Usage History is Available: Monthly Volumetric Wastewater Charges will be calculated at the minimum of 2,493 gallons per month.

TERMS OF PAYMENT

Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Fixed Service Charges shall be prorated to the date of establishment or discontinuance of service.

[9] The rates on this schedule will increase by 3% on October 4th in 2025, 2026, and 2027, and by 4% on October 4th in 2028 and 2029 by the terms of the Agreement of Sale between the Borough of Somerville and New Jersey-American Water Company, Inc.

RATE SCHEDULE 20-B

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC)

APPLICABILITY

Applicable for general residential, commercial, industrial and municipal wastewater service to customers in the Borough of Somerville and the portion of the Township of Bridgewater served by the Somerville System.

CHARACTER OF SERVICE

Continuous, except as limited by the "Standard Terms and Conditions."

PURCHASED WASTEWATER TREATMENT ADJUSTMENT CLAUSE (PSTAC) CHARGE

In addition to all other charges for general metered service, the following charges per one hundred gallons and per one thousand gallons for all sales will be made to recover purchased wastewater treatment and disposal costs not included in the Volumetric Wastewater Charge or Flat Rate Service Charge any other charge as set forth in Rate Schedule 20-A:

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.52139	$5.2139

FILING

The Company shall endeavor to make an annual PSTAC filing no later than December 1st of each year, proposing a PSTAC rate or percentage to be effective on or about the following April 1st.

The notice of filing and of public hearing in the annual PSTAC proceedings shall include the specific rate change proposed to be implemented on April 1st. The notice shall also include the impact of such potential increases on a benchmark bill.

The annual PSTAC filing shall contain, but not be limited to, the following:

1. A reconciliation of actual versus estimated costs and revenues from the last Board approved PSTAC charge for wastewater treatment and disposal;
2. Projected rates supported by projected volumes, revenues, and projected purchased wastewater treatment and disposal costs;
3. Deferred balances and the timeframe over which they are proposed to be collected or returned;
4. A written explanation of the circumstances that caused the deferred balances in (3) above;
5. A written explanation of any significant activities or trends which may affect costs for the prospective period; and
6. Updated tariff sheets to reflect any change to the PSTAC rate.

The benchmark bill shall be the average residential wastewater customer bill for a twelve-month period.

TERMS OF PAYMENT

See Rate Schedule for applicable customer class.

PROVISIONS

Interest shall be passed onto customers through the PSTAC rates at the beginning of each PSTAC Year succeeding any PSTAC year in which any net monthly purchased wastewater treatment and disposal costs over recovery has taken place. Any debit or credit balance in the separate deferred revenue or separate cost of wastewater treatment accounts shall be determined monthly. Monthly interest shall be calculated on the average of the current and prior month's ending cumulative deferred revenue or cost of wastewater treatment balances. Interest on such wastewater treatment costs shall be calculated utilizing the rate of return on rate base utilized to set rates in the Company's last preceding base rate case, and shall be changed from time to time, consistent with N.J.A.C. 14:9-7, et seq.

The clause shall be subject to deferred accounting, consistent with N.J.A.C. 14:9-7, et seq.

TERM

Continuous until wastewater service to the customer is permanently discontinued.

CONDITIONS

Subject to the "Standard Terms and Conditions" except as otherwise set forth in this Schedule.

RATE SCHEDULE 21-A
GENERAL METERED AND FLAT RATE SERVICE

APPLICABILITY
Applicable for general residential, commercial, industrial, and municipal wastewater service to customers in the Environmental Disposal Corp. ("EDC") Service Area. Those who receive volume-based water service billings from the Company will receive volume-based wastewater service billings; all others will receive flat rate billings for unmetered service. The Company may require a water meter to be installed by any wastewater customer utilizing a well or other private water system at the property owner's expense.

CHARACTER OF SERVICE
Continuous (unmetered), except as limited by the "Standard Terms and Conditions."

FIXED SERVICE CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
All wastewater service customers shall pay a Fixed Service Charge as indicated below, in addition to the Volumetric Wastewater Charge, if any.

	Rate Per Month
Non-Exempt:	$43.14

VOLUMETRIC WASTEWATER CHARGE – GENERAL METERED WASTEWATER CUSTOMERS
The volume of wastewater discharged is assumed to equal water meter registration. See Standard Terms and Conditions – Wastewater, Sheet No. 23, for an explanation of how Monthly Wastewater Usage Charges are calculated.

	Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
Non-Exempt	All	$0.78090	$7.8090

FLAT RATE SERVICE CHARGE

	Rate Per Month
Non-Exempt	$74.38

TERMS OF PAYMENT
Valid bills for service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable Flat Rate Service Charges shall be prorated to the date of establishment or discontinuance of service.

RATE SCHEDULE 22-A
GENERAL METERED AND FLAT RATE SERVICE[10]

APPLICABILITY
Applicable for general residential, commercial, industrial and municipal wastewater service provided in the Salem System. The residential charge for wastewater service shall consist of the Flat Rate Service Charge. The commercial, industrial and municipal charge for wastewater service shall consist of the total of the Fixed Service Charge and the Volumetric Wastewater Charge.

CHARACTER OF SERVICE
Continuous, except as limited by the "Standard Terms and Conditions."

RATES

FLAT RATE SERVICE CHARGE
All residential wastewater service customers shall pay a Flat Rate Service Charge as follows:

	Rate Per Month
Non-Exempt	$56.88

FIXED SERVICE CHARGE
All commercial, industrial and municipal wastewater service customers shall pay a Fixed Service Charge in addition to the Volumetric Wastewater Charge, if any, as follows:

	Non-Exempt
Fixed Service Charge per customer per month.	$56.88

VOLUMETRIC WASTEWATER CHARGE
The volume of wastewater discharged is assumed to equal water meter registration. Charges shall be based on water consumption as indicated by water meter readings on a monthly basis.

Gallons Per Month	Rate Per 100 Gallons	Rate Per 1,000 Gallons
All	$0.88500	$8.8500

SPECIAL SURCHARGES

Item	Additional Cost
Per pound of BOD_5	$0.26000
Per pound of suspended solids	$0.16000
Septage rate per gallon	$0.08000

TERMS OF PAYMENT
Valid bills for wastewater service furnished under this schedule will be rendered monthly in arrears and are due twenty (20) days from the date of the postmark on the envelope in which the bill was transmitted or electronic transmission date for customers on electronic billing. All bills shall list a due date.

Whenever service is established or is discontinued, all applicable fixed charges shall be prorated to the date of establishment or discontinuance of service.

[10] The rates on this schedule will increase by 3% on June 26th in 2026, 2027 and 2028 by the terms of the Agreement of Sale between the City of Salem and New Jersey-American Water Company, Inc.

RE: IN THE MATTER OF THE PETITION OF NEW JERSEY AMERICAN WATER COMPANY FOR APPROVAL OF INCREASED TARIFF RATES AND CHARGES FOR WATER AND WASTEWATER SERVICE, CHANGE IN DEPRECIATION RATES, AND OTHER TARIFF MODIFICATIONS
BPU Docket No. WR24010056
OAL Docket No. PUC 02409-2024S

Dear Judge Caliguire:

Please be advised that Middlesex Water Company ("Middlesex Water"), an Intervenor in the above-referenced matter (New Jersey American Water Company's rate case proceeding), has reviewed the proposed final Stipulation of Settlement provided today with respect to that matter. Although Middlesex Water will not be a signatory to the Stipulation of Settlement, it has no objection to the same.

Respectfully submitted,

Jay L. Kooper
Vice President, General Counsel & Secretary

Re: In the Matter of the Petition of New Jersey American Water Company, Inc. for Approval of Increased Tariff Rates and Charges for Water and Wastewater Service, Change in Depreciation Rates, and Other Tariff Modifications
BPU Docket No. WR24010056
OAL Docket No. PUC 02409-2024 S

Dear Judge Caliguire:

Fornaro Francioso LLC represents Mount Laurel Township Municipal Utilities Authority in the referenced matter. With respect to this matter, this letter shall serve as confirmation to Your Honor that the Mount Laurel Township Municipal Utilities Authority will not be a signatory to the Stipulation of Settlement but will not be filing any opposition.

Thank you Your Honor for your attention to the foregoing.

Respectfully submitted,
FORNARO FRANCIOSO LLC

ORDERING PARAGRAPHS 56

PUBLIC SERVICE COMMISSION
OF WEST VIRGINIA
CHARLESTON

At a session of the PUBLIC SERVICE COMMISSION OF WEST VIRGINIA in the City of Charleston on the 23rd day of February 2024.

COMMISSION ORDER

The Commission grants a rate increase to West Virginia-American Water Company (WVAWC or Company) for its water operations in West Virginia. The Company originally filed for $41,175,752 in additional annual net water revenues over revenues at present rate, and $470,801 in additional annual sewer revenues over revenues at the present rates. The Commission grants a $24,133,275 increase in water rates including the incorporation of the previously approved Distribution System Improvement Charge (DSIC) surcharge and DSIC-related rate base investment through February 29, 2024, approved in this case. The Commission grants a net increase in sewer rates that will equal the percentage increase granted in the companion Water Rate Case after allocation of a portion of the sewer revenue requirements to the water operations.

BACKGROUND

The following is an abbreviated summary of the procedural background of the case. Additional procedural background can be found in Appendix A of this Order.

Water Rate Case Filing, Case No. 23-0383-W-42T

On May 1, 2023, the Company tendered for filing revised tariff sheets reflecting net increased water rates and charges of approximately $41.2 million annually (a 22.5 percent increase) for furnishing potable water to approximately 168,000 customers in Boone, Braxton, Cabell, Clay, Fayette, Harrison, Jackson, Kanawha, Lewis, Lincoln, Logan, Mason, Mercer, Putnam, Raleigh, Roane, Summers, Wayne, and Webster Counties, to become effective on February 24, 2024. (Tariff Form No. 8.) The requested increase incorporated the rate impact of the cumulative investment that has been (or is projected to be) placed into service through the date that the new base rates go into effect.

The $41.2 million requested increase in annual net water revenues consisted of an increase in base rates of $51.3 million in annual revenue, or approximately 28.0 percent, and a decrease in the Company's DSIC surcharge of $10.1 million in annual revenue, or 5.5 percent. The net effect of the overall $41.2 million is an annual revenue

increase of 22.5 percent. This requested increase included an allocation of a portion of a requested sewer revenue requirement to the water revenue requirement to support the same percentage increase in rates for both water and sewer customers. The Company also proposed a new set of low-income tariffs, and other rate mechanisms designed to allow annual issue-specific rate filings outside of traditional base rate filings.

Because of inter-utility operating agreements whereby the Company provides full service to customers of other utilities, the water service customers of the following utilities or entities will be directly or indirectly affected by the water rate changes:

- Boone County Public Service District;
- Cumberland Public Service District;
- Flatwoods Canoe-Run Public Service District;
- Jumping Branch-Nimitz Public Service District;
- Kanawha County Regional Development Authority;
- Lashmeet Public Service District;
- Lewis County Economic Development Authority;
- New Haven Public Service District;
- Oakvale Road Public Service District;
- Putnam County Building Commission;
- Salt Rock Public Service District; and
- Webster County Economic Development Authority.

(Tariff Form No. 8.)

The sale for resale customers potentially affected by the Company's tariff changes include:

- Bluefield Valley Water Works Company;
- Lavalette Public Service District;
- Flatwoods Canoe-Run Public Service District;
- Aqua Ohio Water;
- Jane Lew Public Service District;
- Lincoln Public Service District;
- City of Milton; and
- City of Hurricane.

Id.

Sewer Rate Case Filing, Case No. 23-0384-S-42T

On May 1, 2023, the Company filed revised tariff sheets reflecting sewer rates and charges of $470,801 annually, or approximately a 24.9 percent increase, for furnishing sewer utility service to 1,100 customers in Fayette County[1]. (Tariff Form No. 8[2]) The Company proposed to implement the sewer increase across-the-board to all customer classes. The increase included an allocation of the sewer revenue requirement to the water revenue requirement to support the same percentage increase in rates for both water and sewer customers. The Company also proposed a new set of low-income tariffs, and other rate mechanisms.

Combined Cases

The Company filed additional motions and support with its rate filings. Specifically, the Company filed:

- Proposed tariffs;
- Tariff Form No. 2 – Report on Tariff Change;
- Tariff Form No 8 – Public Notice of Change in Rates;
- A Utility Management Report as required by W. Va. Code § 24-2-4a; and information required by Rule 20.1 (Historic Rule 42) of the Rules for the Construction and Filing of Tariffs 150 C.S.R. 2 (Tariff Rules) (Rule 42 exhibit);
- Motion for Limited Waiver regarding public notice;
- Motion for Protective Order;
- Direct testimonies of Robert R. Burton, Christopher J. Carew, Michael P. Raymo, Christina E. Chard, Lori N. O'Malley, Charles B. Rea, Thomas G. O'Drain, Wesley E. Selinger, Melissa Ciullo, Ann E. Bulkley, Robert V. Mustich, and Patrick L. Baryenbruch.

On May 26, 2023, the Commission (i) made the Company a respondent in these proceedings, (ii) suspended the proposed increased rates and charges through February 24, 2024[3], (iii) granted a waiver to allow the Company additional

---

[1] The Company wastewater service was provided in only Fayette County at the time of the filing. Subsequent to the filing, the Company has expanded its wastewater service to Jefferson County. Rate changes from this case may eventually affect customers throughout the WVAWC wastewater service territory.

[2] The Tariff sheets filed included a proposed effective date of February 26, 2024 for certain new ratemaking proposal tariff sheets and February 25, 2024 for revised tariff sheets for wastewater service rates and charges. Tariff Form No. 8 indicated that the increased rates and charges were requested to go into effect February 25, 2024.

[3] Under West Virginia Code §24-2-4a, upon the filing of a schedule changing rates the Commission may suspend the operation of such schedule but not for a longer period than two hundred seventy days beyond the time when the requested rates would otherwise go into effect. Since the tariffs filed requested an effective date of February 25 or 26, 2024, and therefore would not have gone into effect until the proposed effective dates, the Commission's "suspension" did not change the originally requested effective date, as a suspension normally does, but merely clarified that the rates could not go into effect until the earliest

time to provide individual notice, (iv) set the intervention date, (v) granted requests to intervene from the Consumer Advocate Division (CAD) and the Kanawha County Commission (KCC), and (vi) encouraged the parties to submit a proposed procedural schedule by June 2, 2023.

By Order issued June 9, 2023, the Commission established a procedural schedule. The Commission held a virtual public comment hearing on November 2, 2023, and an evidentiary hearing on December 5th and 6th, 2023, at the Commission hearing room in Charleston, West Virginia.

DISCUSSION[4]

The Company's requested increase included the $10.1 million currently included in the DSIC surcharge and already being charged to customers. The effective increase in revenue requested by the Company, net of the DSIC surcharge already included in rates, is $41.2 million, and a sewer increase of approximately $470,000, with each representing an increase of approximately 22.5 percent over present rates. (Direct Testimony of Robert R. Burton, Burton Direct, at 4.)

I. RATE BASE

A. Overview

Utility plant and the appropriate level of rate base is the largest revenue requirement issue in this case. The Company presented its base rate filings in three parts: (1) a Historical Test Year (HTY) of January 1, 2022 through December 31, 2022, including terminal rate base as of December 31, 2022, and a capital structure based on the twelve months ending December 31, 2022; (2) the Addendum Period (Addendum or Addendum Period) of fourteen months (January 1, 2023 through February 29, 2024), with terminal rate base and a projected capital structure as of the end of that period; and (3) a Future Test Year (FTY) presentation covering March 1, 2024 through February 24, 2025 (end of the rate year), with a thirteen-month average rate base and capital structure. (Direct Testimony of Christina E. Chard, hereinafter Chard Direct, Co. Ex. CEC-D at 4.)

Staff and CAD recommended that the Commission deny the use of the FTY. Staff and CAD instead determined an appropriate average historical rate base matching the 2022 historical test year (HTY) and then applied certain post-test year adjustments as discussed herein.

---

proposed effective date, which would be February 25, 2024 for the rate changes and February 26, 2024 for the special rate mechanism tariff pages, unless otherwise ordered by the Commission.

[4] The hearing transcript for the evidentiary hearing held on December 5, 2023, is referred to as "Tr. I." The hearing transcript for the evidentiary hearing held on December 6, 2023, is referenced as "Tr. II."

B. Commission Rules for Rate Base Determination

Under Tariff Rule 19.4, the Commission requires utility rate filings and the supporting Rule 42 exhibits to be based on HTY average rate base made up of a thirteen monthly balance average of rate base components as of the beginning of the test year and as of the end of each month of a test year.[5]

As the Commission recognized in the Final Order in the Company's last base rate cases, Case Nos. 21-0369-W-42T and 21-0370-S-42T, the Commission has not limited rate base to the average HTY balance. *See generally*, February 24, 2022 Order in Case Nos. 21-0369-W-42T and 21-0370-S-42-T (February 2022 Order). Tariff Rule 19.4 specifically permits a utility to request an alternative rate base as long as it files data to represent the average HTY rate base filing requirement. The utility must show the departure in supplemental schedules filed in a separate Addendum to the required HTY Rule 42 exhibit. The supplemental schedules included in the Addendum must provide a complete description of the proposed departure from the required average HTY rate base and an explanation of the underlying reasons and justifications for the proposed departure.

The Commission has often limited departures from an average HTY rate base to plant that is non-revenue producing/non-expense reducing. This ensures that the matching of rate base to expected revenue and expenses is reasonably preserved. The Commission has also, on occasion, allowed HTY departures to apply to terminal treatment of rate base (point-in-time rather than average) at the end of the HTY and for utility plant investments that a utility forecasts to place in service after the HTY, including forecasted investments to the beginning of the period that new rates being adjudicated and determined by the Commission will go into effect.

Departure from the matching of an average HTY rate base and HTY units of revenue and expenses is a fact-based decision for the Commission and such departure in a prior case is not justification for departure in every subsequent case. In a C&P Telephone Company appeal of a Commission decision that disallowed rate base investment for purchases from an affiliate, Western Electric, made after the Commission had rejected certain downward rate base adjustments in at least three previous rate cases, the West Virginia Supreme Court of Appeals stated:

---

[5] This historical test year average, which is technically referred to as a thirteen-month average, begins with the end-of-month balances of rate base components immediately preceding the test year, which is also the beginning-of-first month of the test year rate base, and includes charges and credits added to (or deducted from) rate base each month of the test year. Thus, the required traditional average rate base matches actual rate base components during the test year to actual revenue and expenses incurred during the test year.

> Furthermore, it is generally recognized that the doctrine of stare decisis does not normally apply to administrative decisions. As Professor Davis states in his respected treatise:
>
> When the purpose is one of regulatory action, as distinguished from merely applying law or policy to past facts, an agency must at all times be free to take such steps as may be proper in the circumstances, irrespective of the past decisions.... Even when conditions remain the same, the administrative understanding of those conditions may change, and the agency must be free to act ....
>
> 2 K. Davis, Administrative Law § 18.09 (1958) (footnotes omitted.)
>
> *Accord*, State v. Alabama Public Service Commission, 293 Ala. 553, 307 So. 2d 521 (1975); Rumney v. Public Utilities Commissioner, 172 Colo. 314, 472 P.2d 149 (1970). The Commission's decisions in previous cases therefore do not preclude it from reaching an opposite result in this case.

C&P Telephone Company v. Pub. Serv. Comm'n of West Virginia, 300 S.E.2d 607, 613. (1982).

C. Positions of the Parties

1. The Company

Company Witness Burton testified that the most significant driver for the Company's need for rate relief is the Company's ongoing infrastructure investment. (Burton Direct at 4.) This investment, the Company argued, includes investment added since its last rate case as well as new investment projected to be made through early 2025. (Burton Direct at 6.) Mr. Burton testified that infrastructure investment accounts for more than two-thirds – approximately $36 million – of the Company's total requested revenue rate increase. (Burton Direct at 4.)

Company Witness Chard testified that the Company's HTY presentation contains the exhibits required under Tariff Rule 20.3 (Historic Rule 42). (Chard Direct at 23.) The Company derived the financial information contained in the

Rule 42 exhibit from its operational and financial records. The HTY in this case is the twelve months ended December 31, 2022. Id.

The Addendum Period reflects a forecasted terminal rate base for the period ending February 29, 2024. Id. The Company brought rate base components as well as the capital structure components forward to the period ending February 29, 2024. Id. Beyond that date, unlike our traditional consideration of terminal rate base adjustments for the test year and up to the date new base rates take effect, the Company further included an average projected rate base and projected revenues and operating expenses and taxes for the FTY beginning February 29, 2024. (Chard Direct at 23-24.)

The FTY presentation reflected a fully forecasted average rate base for the period ending February 28, 2025. According to Dr. Chard, the ending balances contained on HTY Statements A and B, which represent terminal rate base at December 31, 2022, are brought forward to Addendum Statements A and B. The ending balances contained on Addendum Statements A and B, which represent terminal rate base at February 29, 2024, are brought forward to FTY Statements A and B in the FTY. (Chard Direct at 24.) In addition, the Company added revenues to represent projected acquisition-related revenues for the FTY period. Id.

2. Staff

Staff opposed the Company's full Addendum rate base approach. Staff further opposed the Company's use of the FTY. Staff instead recommended a post-test year adjustment to include only DSIC-qualified plant. Staff recommended an annual revenue increase of $12.8 million for the water operations based on the use of the HTY after including certain adjustments for terminal treatment of DSIC-qualified plant rate base. (Direct Testimony of Susan E. Kuhn, Kuhn Direct, at 5.)

To the extent that Staff's recommended revenue requirement does not include full DSIC cost rolled-in to base rates, Staff also did not include the offset/netting of DSIC revenues.

Staff made several significant adjustments that differed from the Company's rate base adjustments. Staff removed a large portion of the non-DSIC rate base adjustments related to the Addendum Period, as explained above. Staff also recommended a lower adjustment than requested by the Company to reflect certain water utility acquisitions.

3. CAD

CAD proposed a base rate revenue increase of $25.0 million, or an increase of approximately 13.7 percent. After elimination of $10.1 million of DSIC surcharges, the net impact on customers would be an increase of $14.9 million, or 8.2 percent. (Direct Testimony of Ralph C. Smith, Smith Direct, CAD ex. RCS-D, at Schedule A, Bates 120.) CAD used an HTY with certain known and measurable adjustments. (Smith direct at 9.) CAD objected to the Company's proposed allocation of a portion of its sewer revenue requirement to water customers. (Smith Direct at 16.)

4. Company Rebuttal

Company Witness Burton addressed the testimony of Staff and CAD regarding the appropriate level of rate base in his rebuttal testimony. Mr. Burton testified that Staff's position would "effectively deny the Company the ability to ever earn its appropriate and authorized return on its investment in this case, even on actual investment that was known, measurable and prudent at the end of the historical test year." (Rebuttal Testimony of Robert R. Burton, Burton Rebuttal, at 2.) Mr. Burton further asserted that Staff's position would result in the DSIC rate not fully resetting, and "further drive the need for rate cases." (Burton Rebuttal at 3.)

With respect to CAD's position, Mr. Burton testified that CAD "took an approach more in line with the February 2022 Order in the last base rate case." Specifically, he testified that CAD recognized part of the Addendum Period investment, including the DISC investment in mains, hydrants, services, and meters. (Burton Rebuttal at 2.) Mr. Burton also testified that the CAD position "comes closer to accomplishing the policy goals of encouraging investment and resetting the DSIC rate." (Burton Rebuttal at 3.)

Mr. Burton contended that the positions of Staff and CAD reject constructive polices that support investment in aging infrastructure. Mr. Burton urged recognition of the FTY. Otherwise, he stated, the adoption of the Staff or CAD positions would undermine the Company's ability to attract capital investment and compromise its ability to continue investment in existing infrastructure and expand service to unserved or underserved areas, including those impacted by troubled and failing systems. (Burton Rebuttal at 4.)

In her rebuttal, Company Witness Chard testified that the difference amongst the parties' recommendations is the test year period. (Rebuttal Testimony of Christina E. Chard, Chard Rebuttal, at 5.) Ms. Chard produced a chart comparing each parties' determination of rate base in this proceeding:

Figure 3

(*See* Chard Rebuttal, Figure 3 at 6.)

According to Ms. Chard, CAD's "recommendation is not as stifling as the Staff's, but still results in an insufficient recognition of capital investment the Company has already made and that it reasonably projects to make in the rate year beginning February 29, 2024." (Chard Rebuttal at 5.)

D. Commission Rate Base Decision

The Commission is charged with "the responsibility for appraising and balancing the interests of current and future utility service customers, the general interests of the state's economy, and the interests of the utilities subject to its jurisdiction in its deliberations and decisions." W.Va. Code § 24-1-1(b). As we noted in the February 2022 Order, since the 1990's the Commission has approved a variety of approaches to rate base that modify the HTY approach.

The Company focuses extensively on Commission approval of the FTY. The Commission, however, will not grant that approval.

Each rate case decision is based on the facts and circumstances associated with that rate case. As the West Virginia Supreme Court agreed in the 1982 C&P case, "an agency must at all times be free to take such steps as may be proper in the circumstances, irrespective of the past decisions ... [e]ven when conditions remain the same, the administrative understanding of those conditions may change, and the agency must be free to act." C & P, supra at 613. Commission understanding of current conditions leads us to grant the use of certain adjustments included in the Addendum period.

The Staff presented its own Revenue Requirement Schedule and a reconciliation of differences between its adjustments from the Company's revenue requirement proposal. We find it convenient to adjust the Staff recommended revenue requirement elements for those rate base elements in controversy that will be allowed by the Commission.

1. Roll-in of DSIC Rate Base and Other Addendum Adjustments

The Company proposed to roll all current DSIC-related investments into the rate base in this proceeding and reset the DSIC surcharge to zero. (Company Initial Brief at 000013.) Staff did not account for a full reset of the DSIC surcharge to zero. (Staff Initial Brief, fn. 3 at 000006.) By contrast, Staff recommended that the Commission reset the DSIC, but carry forward about $9 million of terminal 2023 DSIC investment together with another $1.7 million of DSIC-eligible balances for January and February 2024, for a total of $10.7 million. (*See, e.g.*, CAD Initial Brief at 000009-10.)

Consistent with the February 2022 Order, the Commission finds that full roll-in of all DSIC investment up to February 29, 2024 in this case is appropriate. (February 2022 Order at 12.) The current DSIC surcharge will be reset to zero

effective with the date rates in this proceeding go into effect. A new DSIC surcharge, as approved in the pending DSIC proceeding, Case No. 23-0558-WS-DSIC, will be implemented pursuant to an Order that should issue within a few days of this Order.

In addition, while we are not bound by prior Commission decisions, we continue to see merit in adjustments in base rate cases to recognize not only DSIC qualified non-revenue producing, non-expense reducing rate base beyond the average HTY, but also post-test year investment that does not disturb the principle of matching rate base investment to revenue and expenses. The Commission does not usually allow post-HTY adjustments for plant investments that have not been identified as largely non-revenue producing, non-expense reducing. In this case, we find no evidence that the non-DSIC proposed Addendum plant additions are revenue-producing or expense-reducing to such an extent that including those plant additions will skew the relationship between rate base, revenue, and expenses.

We caution the Company not to attempt in future DSIC cases to bootstrap this decision to include plant investment beyond the specific plant categories we traditionally have allowed in prior DSIC cases. In this fully litigated base rate case, the parties had an opportunity to address, and the Commission had the opportunity to consider, the matching principle and whether there was a danger of skewing the matching relationships that might occur if the Company Addendum adjustments were allowed. In a DSIC case, we do not have before us all of the revenue requirement components in detailed Rule 42 format as evidence and do not wish to require that format. To do so would effectively do away with the expedited DSIC review and turn each DSIC case into a full base rate case. Solely based on the facts and circumstances of this base rate case, and without any requirement or representation that future cases will be afforded the same rate-making treatment, we will adjust the average HTY rate base to reflect the terminal treatment of the Addendum adjustments proposed by the Company up to February 29, 2024.

2. Acquisition Adjustment and Investments in Troubled Systems

The Company included investment and proposed investment in several water and sewer systems: Jefferson Utilities, Inc. (JUI), Valley Water & Sewer Services, Inc. (VWSS), East Jefferson Sewer Services, LLC (EJSS), and Shenandoah Junction Public Sewer, Inc. (SJPS) (collectively, JUI, *et al.*). In addition, the treatment of projected investments in certain troubled systems was an issue in this case. Those systems are: Armstrong Public Service District (Armstrong PSD);

Kanawha Falls Public Service District (Kanawha Falls); the City of Nitro (Nitro); and Boone-Raleigh Public Service District (PSD) sewer system.

The parties differ on the amount that should be included in the rate base for the purchase of the JUI, *et al.* systems.

The Company initially proposed JUI, *et al.* purchase costs roll-in of $36.9 million per the Company's Rule 42 Exhibit-Water, Supplement to Schedule C (Bates page 000241). (Company filing May 1, 2023). Later in rebuttal testimony, the Company adjusted the JUI, *et al.* cost-roll-in to $28.4 million to more closely match the Commission's ordered acquisition price of $27 million. (*See* Chard Rebuttal at 39.)

Staff Witness Kuhn asserted the Company's rate base adjustments do not reflect the actual prices at the October 2, 2023 closing date, nor do the Company's adjustments comply with the Commission's directives in the Commission's May 26, 2023 order in Case No. 22-0796-WS-PC (JUI, *et al.*). (Kuhn Direct at 24-25.)

The Company argued that the full acquisition price should be recognized in the rate base, along with the full acquisition and transaction costs. Indeed, the Company stated that these outcomes "formed the basis for the Company's decision to acquire these assets ... [otherwise] the Company assuredly would not have proceeded to acquire those asses for the $27 million amount specified in the Order." (Company Initial Brief at 21.)

CAD noted that the Commission approved a purchase price of $27 million for JUI, *et al.* (CAD Initial Brief at 13.)

We find that the Staff is correct that the Company has failed to comply with the Commission's directives in the Commission's May 26, 2023 order in Case No. 22-0796-WS-PC with regard to recording the JUI, *et al.* acquisitions. We made numerous attempts in the JUI, *et al.* to have the Company inform us of its Journal Entries and to direct the Company that it must comply with the Uniform System of Accounts (USOA) to record the acquisition. After several unsuccessful attempts to ascertain proposed Journal Entries that complied with the USOA, the Commission ordered the Company to file its Journal Entries reflecting such accounting upon closing the transaction. The Journal Entries filed by the Company did not follow the USOA. Under the USOA, utility plant acquisitions must be recorded by charging plant accounts with the original cost of the plant when it was first placed into service. The Company Journal Entries do not follow the USOA. The Company seems to be under the mistaken impression that if it records an acquisition adjustment, that amount will not be allowed in rate base. Thus, it apparently refuses to record an acquisition adjustment.

Indeed, the Commission did approve a purchase price of $27 million in the JUI, *et al.*, recognizing that the price, when recorded in accordance with the USOA would result in an acquisition adjustment (JUI, *et al.*, Order entered May 26, 2023, at Conclusion of Law No. 9.) Further, the Commission stated that it would allow the full purchase price to be included in the Company's rate base in future rate cases. Id. We simply cannot fathom why the Company refused to follow the Commission Orders and directives that: (i) the JUI, *et al.* property, plant, and equipment accounts, including accumulated depreciation accounts, related to the acquisition be recorded at original cost; and (ii) an acquisition adjustment be recorded following the USOA, even after the Commission clearly ruled that the $27 million, including the acquisition adjustment, will be allowed in rate base for setting base rates as required by W.Va. Code 24-2-4g.

We do not agree with the Company brief that Staff is attempting to remove the excess purchase price above net original cost from rate base. In its brief, echoing the rebuttal testimony of Company witness Chard, the Company states:

> Staff argued that ... an acquisition adjustment, similar to the one it advocated for unsuccessfully in the acquisition case, must be applied to reduce the rate base utility plant recognition to approximately $15.4 million, rather than the $27 million purchase price approved in the order approving the acquisition. Staff Ex. SEK-D at 23-30.

(Company Initial Brief at 000020.)

This is incorrect. The Staff testimony in the above-cited Direct testimony is very clear:

> Consistent with the Commission Final order in Case No. 22-0796-WS-PC, Staff's rate base **includes the Acquisition Adjustments**. For water, the total rate base net original cost is $15,367,368 net original cost **PLUS** the $8,104,885 acquisition adjustment or $23,472,253. For sewer, the total rate base is $495,950 net original cost **PLUS** the $2,916,393 acquisition adjustment or $3,412,343.

(Kuhn Direct at 23-30. Emphasis added)

Simple addition tells us that the Staff testimony and exhibits recommended inclusion of $26,884,596 in rate base related to the JUI, *et al.* acquisitions. If the Company has a concern about the $27 million purchase price and the Staff failure to include the purchase price for rate base revenue requirement purposes in this case, it should have rebutted, cross-examined, and briefed the $115,404 difference between the Staff numbers and $27 million rather than incorrectly arguing that the Staff is including "$15.4 million, rather than $27 million."

The $1.5 million transaction cost associated with the JUI, *et al.* acquisition is a legitimate unresolved issue. By misreading the Staff recommendation and focusing on a non-issue relating to the $27 million purchase price, the Company did not justify its proposed additions to the $27 million purchase price, including the $1.5 million transaction cost, leaving us with an insufficient record to include anything other than the $27 million purchase price in rate base in this case. Staff correctly points out that the Commission specifically addressed the transaction costs in the Order authorizing the acquisition of the JUI, *et al.* utilities:

> WAWC asked to include in rate base "the Company's reasonable transaction and acquisition costs (including legal and closing costs) related to the Transaction and obtaining Commission approval of it, to be determined after the closing has occurred but currently projected to be $1,500,000..." Application at 12. The Company should include transaction and acquisition in the appropriate accounts and disclose where those amounts will be booked when it files proposed journal entries as discussed herein. The actual costs will be subject to review for reasonableness and prudence in the next base rate case in which those costs are included for rate base purposes. Allowable acquisition and transaction costs should be incremental costs that would not otherwise have been incurred, but for the acquisition transaction approved herein. To the extent these costs are determined by the Commission to be necessary, reasonable, and prudently incurred, they will be included in rate base.

(JUI, *et al.*, Order entered May 26, 2023, at 25.)

When the Company filed its Journal Entries, it did not indicate the accounting for the $1.5 million by account or address the reasonableness of the costs, which were still estimated at the time. The filed Journal Entries are difficult to decipher, but it appears the Company recorded $28,384,593 in utility plant accounts and $35,993 in Construction Work in Progress. It also booked $1,134,307 in Inventory Accounts and $397,099 in what should have been Accounts Receivable (141), but the Account numbers used imply that the receivables were recorded as Notes Receivable (144 and 146). There was also a small amount of $14,241 for inactive Accounts Receivable and Penalties charged to an account that is not in the System of Accounts (590). There was also a charge of $3,052,122 for Contributions in Aid of Construction charged to Mains and Hydrants accounts with an offsetting credit to the Contributions Account(s) (271). The credits (payments) recorded were $29,967,134, ($27 million being identified as the purchase price). The aggregate $29,967,134 was credited to what appears to be a customer deposit account (235).

Disregarding the confusion over the accounts used, we can glean that the Company booked a $29,967,134 cost for purchasing the JUI, *et al.* property, $27 million of which was designated as a "purchase price, $1.5 million was designated as "acquisition cost 10/02/23 estimate", $411,241 was designated as "outstanding A/R [accounts receivable] at closing", and $1,055,793 was described as "designated interim projects."

Nowhere in the Journal Entries do we see charges and credits to Account 104, Utility Plant Purchased and Sold, even though the Uniform System Accounts requires:

> 104. Utility Plant Purchased or Sold
>
> A. This account shall be charged with the cost of utility plant acquired as an operating unit or system ... pending the distribution to appropriate accounts in accordance with Accounting Instruction 21.
>
> B. Within six months from the date of ... the utility shall file with the Commission the proposed journal entries to clear from this account the amounts recorded herein.

Accounting Instruction 21 is equally clear and unequivocal. After describing charges and credits in Account 104 and clearing Account 104 to appropriate plant (and other balance sheet) accounts, the instructions state: "The amount remaining in account 104 – utility plant Purchased and Sold, shall then be closed to Account 114 – Utility Plant Acquisition Adjustments."

Instructions for Account 114 state: "The amounts recorded in this account with respect to each property acquisition shall be amortized, or otherwise disposed of, as the Commission may approve or direct." (*See* Account 114, Accumulated Provision for Amortization of Utility Plant in Service.)

We have taken the time to explain the accounting for the acquisition of utility property because, after multiple attempts to ensure that the Company follows the System of Accounts, we have not yet been successful. We require information and justification by the Company to ensure proper recordation of acquired property and proper treatment of such property for rate making purposes. While prior Commission Orders are clear that the $27 million purchase price will be recoverable in rates, we also made it clear that additional related acquisition costs would be considered after the Company provided evidence related to such costs. In the acquisition case, we cautioned: "WAWC should file its proposed accounting for the acquisition adjustment so that the entire $27 million purchase price can be included in rate base and properly amortized in future rate cases." (JUI, *et al.*, Order entered

May 26, 2023, at 25.) With regard to costs other than the $27 million purchase price, the Commission said: "[t]he actual costs will be subject to review for reasonableness and prudence in the next base rate case in which those costs are included for rate base purposes ... [a]llowable acquisition and transaction costs should be incremental costs that would not otherwise have been incurred, but for the acquisition transaction approved herein ... [t]o the extent these costs are determined by the Commission to be necessary, reasonable, and prudently incurred, they will be included in rate base." Id.

The Company did not provide evidence of the reasonableness and prudence of costs beyond the $27 million purchase price. The Company did not provide evidence that acquisition transaction incremental costs would not otherwise have been incurred, but for the acquisition transaction. The Company did not provide evidence that allows the Commission to make an adjustment to include anything other than the $27 million purchase price in rate base in this case. Moreover, the Company did not argue that the apparent shortfall in the Staff proposed adjustment of $26,884,596 in the water and sewer cases is not included in some of the other going level or Addendum adjustments. Therefore, we will include the Staff proposed adjustments (which are functionally the same as the CAD proposed adjustments) in our final Revenue Requirement calculations in this case and the companion sewer rate case. If the Company has properly recorded in its books other transaction costs, or inventory costs, it can in future rate cases illuminate the Commission on the basis, reasonableness, and prudence of those costs and how they should be treated for ratemaking purposes.

Armstrong PSD, Kanawha Falls, and Nitro

The Company argued for the inclusion of projected acquisition costs for Armstrong PSD, Kanawha Falls and Nitro systems. Staff and CAD opposed the inclusion of the acquisition costs for these utilities in rate base.

The Company argued that it has "every reason to expect that the Armstrong PSD and Nitro transactions will occur in the FTY period." (Company Initial Brief at 000021.) The Company acknowledged that there is some uncertainty regarding an acquisition of Kanawha Falls, but argued that the Commission should include a projected acquisition in rate base in this proceeding. (Company Initial Brief at 000021.) On this, the Company stated that "[t]he fact that some investments may be uncertain does not mean that using an FTY is inappropriate, and certainly similar uncertainties have not prevented many other states from using this approach ... "[i]nstead, the Commission can apply [an] FTY and tailor the investments and costs it believes are reasonable within the context of FTY-based regulation." (Company Reply Brief at 000014.)

The Commission agrees with Staff and CAD, and will not include the acquisition of Armstrong PSD, Kanawha Falls, or Nitro in rate base.

First, in the Armstrong PSD distressed utility case, Case No. 22-0911-PWD-DU (the Armstrong DU Case), the Commission ordered the acquisition of Armstrong PSD by the Company. (*See* Armstrong DU Case, August 25, 2023, Commission Order.) That acquisition is not complete, and will not be complete by the end of February 2024. The parties have not submitted an acquisition agreement for approval by the Commission. In fact, the parties recently requested an extension of time to file a further progress report on or before Monday March 4, 2024, in order to consider funding developments regarding a Powellton Tank Project. (*See generally*, Armstrong DU Case, Joint Request for Extension of Time filed on February 2, 2024.) In that Joint Request for Extension of Time, the parties stated that certain grant funds made available for the Powellton tank project will remain available and will not have to be repaid "provided that the project is complete before the acquisition by [the Company] occurs." (Armstrong DU Case, Joint Request for Extension of Time at 000001.) Thus, the date of the acquisition, details of the acquisition, and final acquisition price are unknown. The Commission will not include this in rate base.

With respect to Kanawha Falls, the Commission has not ordered the acquisition of Kanawha Falls. Rather, the Commission ordered Kanawha Falls and the Company to enter into a public-private O&M agreement. (*See generally*, Case No. 22-0631-PWD-DU, Commission Ordered entered August 25, 2023.) Kanawha Falls and the Company have not, to date, been able to negotiate a mutually agreed-upon O&M agreement, and no acquisition has been requested, proposed, ordered, or approved by the Commission. Thus, the Commission will not include the projected acquisition costs in rate base in this proceeding.

Similarly, the Company has not filed a petition to acquire the Nitro system, nor has the Commission approved of an acquisition of Nitro. As such, the Commission will not include the Company's projected acquisition of Nitro in rate base in this base rate case.

3. Tax-Related Rate Base Adjustments

The Company and Staff disagree on the appropriate level of accumulated deferred income taxes (ADIT) at per books and going-level. In the Addendum Period, the Company further adjusted the ADIT credit to rate base while Staff did not include the addendum adjustments proposed by the Company.

The Company included HTY ADIT credits of $193,289,211 in its Rate Base, as compared to the Staff ADIT credits of $199,841,989, a variance of $6,552,778. At going-level, the Company included an adjustment increasing the ADIT credit balance by $4,430,870, as compared to a Staff adjustment increasing ADIT credits by $15,461,210, a variance of $11,030,340. As part of its Addendum Rate base, the Company further increased the ADIT credit balance by $6,851,823.

As we have stated, we intend to roll-in DSIC Rate Base, as well as non-DSIC Rate Base up to the end of the Company proposed Addendum Period. To ensure that the ADIT component of Rate Base matches the terminal Rate Base of DSIC and non-DSIC net plant investment we will adjust the Staff recommended Rate Base to include the variances in ADIT discussed above. We will also adjust the Staff recommended Rate Base by the full amount of the Company's "Total Addendum Going-Level Adjustments to Rate Base," identified by Staff in its Statement of Variances, but excluded from the Staff recommended Rate Base.

4. Negative Acquisition Adjustment

Similar to the tax related adjustment, the parties dispute the amount presented in Staff's adjustment No. 87. Staff adjustment No. 87 treats negative acquisition adjustments of $450,804 as a credit or increase to contributions in aid of construction (CIAC). (Staff Initial Brief at 000054.) Again, the Company agrees with the concept of this adjustment, but disputes the amount of the calculation. Id. Again, and for similar reasons, the Commission adopts Staff's adjustment No. 87. Staff's adjustment complies with the Commission decision in the February 2022 Order. *See* February 2022 Order at 15.

E. Cash Working Capital

Staff calculated a negative working case allowance, or cash working capital (CWC) requirement of $2,676,436 which is $416,436 greater than the Company's proposed negative CWC amount of $2,260,000. (Company Initial Brief at 000022.) Here, the parties used the same lead/lag days but the values are different based upon changes to rate base and expense. The Commission will set a reasonable level for CWC based on the numbers calculated by Staff and the Company. While each variance in expenses in our decision could cause a *de minimus* change in CWC, the net impact on Revenue Requirements would be even more *de minimus* on an allowance-for-return basis. Moreover, there is no single "correct" CWC Level because the accounts receivable and expense lags and leads can change from month to month. We will adopt the Staff level of CWC in this case. We also note

that we are concerned with the inclusion of non-cash items and items other than expenses in the lead-lag studies. The Rate Base increment is called "Working Cash Allowance" for a reason. The lead-lag studies should capture the time difference between the cash payment of expenses by the Company, and the day that the cash to cover the expense payments is received from customers. The Company is placed on notice that prior allowances of non-cash items and items other than expenses in a lead-lag study are subject to review in future cases and are not a "right," even if included in prior rate cases.

II. Capital Structure and Cost of Capital

A. Overview

The capital structure of a utility reflects all of the sources of capital used by the utility and consists of various types of capital supporting the utility's net utility assets. A utility capital structure will normally reflect the capital acquired through borrowing (debt capital) and through the issuance of stock, retained earnings, and other paid-in capital (jointly, equity capital). Other sources of utility capital, such as customer contributions, customer advances, and some deferred credits, could be treated as zero-cost capital. However, these credit balances are normally treated as a rate base offset and, therefore, are not included in the total capitalization of the utility.

For purposes of calculating the utility's cost of capital, the debt components are typically divided into short-term and long-term debt. Equity capital is divided into common equity and preferred equity. The measurement of the ratio of individual capital components to the total capital establishes the relationship for subsequent use in determining a composite weighted cost of capital. *See, e.g.*, West Virginia-American Water Co., Case No. 10-0920-W-42T, Comm'n Order at 10 (April 18, 2011). The cost rate for each type of capital is multiplied by the percentage that component comprises of the total capital structure to derive a weighted cost of capital for each component. The weighted costs are then added to reach a total cost of capital that is generally regarded as a measure of the overall Weighted Average Cost of Capital (WACC or WACOC), commonly referred to in ratemaking as Rate of Return (ROR), which is the percentage that a utility is traditionally authorized to earn on its rate base.

Because the cost rate authorized for equity capital is usually higher than the cost of a utility's debt, the ratio of debt and equity to total capital (capital structure) is often an issue in rate cases involving ROR. The Commission has historically

used a variety of techniques, and its judgment and experience, to determine a reasonable capital structure. Depending on economic or other circumstances, the Commission may review various historical, projected, and hypothetical capital structures. The Commission determines a capital structure that (i) is reasonable, (ii) fairly balances the interests of current and future customers, the general interests of the State's economy and the interests of the utilities and (iii) produces the lowest reasonable overall revenue requirement that maintains financial integrity and flexibility for the utility. *See*, *e.g.*, Black Diamond Power Co., Case No. 12-0064-E-42T, Comm'n Order at 4 (Aug. 10, 2012); W.Va. Code § 24-1-1.

While it might appear that a heavily leveraged capital structure (high percentage of debt) is preferred, the Commission considers the end result of an over-leveraged capital, such as low-interest coverage, to arrive at a reasonable capital structure that is neither overly leveraged with debt nor overloaded on the equity side. While parties to rate cases often rely heavily on the actual capital structure of a utility at a point in time or over a restricted time frame, such reliance does not reasonably consider the changes in capital structure over time or the danger of over or under-leveraged capital structure.

B. Capital Structure

As described above, the Company's rate filings were presented in three parts comprising three time periods: HTY, Addendum, and FTY. (Company's Initial Brief at 10, *citing* Chard Direct, at 4.) The Company focused on actual or projected capital structures expected for the Company during those time periods. We find such time-period restricted views of capital structure are helpful, but not dispositive of a reasonable capital structure.

Staff recommended a capital structure based on an HTY consisting of thirteen months ending December 31, 2022. CAD recognized part of the Addendum Period investment. The table below represents the differing approaches taken by the parties:

Table 2

Capital Structure Components - Positions of the Parties

	WVAWC FTY @ 10.50%			CAD Addendum @ 9.80%			PSC Staff HTY @ 9.30%		
	Percent	Cost	Wtd Cost	Percent	Cost	Wtd Cost	Percent	Cost	Wtd Cost
Long Term Debt	45.270%	4.790%	2.170%	46.370%	4.390%	2.040%	43.168%	4.500%	1.940%
Short Term Debt	1.920%	4.690%	0.090%	3.510%	5.320%	0.190%	5.916%	3.700%	0.220%
Preferred Stock	0.000%	0.000%	0.000%	0.000%	0.000%	0.000%	0.000%	0.000%	0.000%
Common Equity	52.810%	10.500%	5.550%	50.120%	9.800%	4.910%	50.916%	9.298%	4.730%
Total Cost of Capital			7.810%			7.140%			6.890%

(Chard Rebuttal at Figure 8.)

While the Company urges the Commission to adopt its FTY approach, the Commission declines to do so. Moreover, even if we had adopted the FTY for rate-making purposes, that would not be dispositive as to whether a projected capital structure containing nearly 53 percent equity is reasonable.

The Commission finds that using the Addendum Period is reasonable for this case. Once again, however, we must also consider the ranges of debt and equity capital structure ratios that are reasonable.

We determine that the capital structure recommended by the CAD is consistent with an Addendum Period rate base and also represents a reasonable capital structure comprised of approximately 50 percent debt and 50 percent equity[6]. Thus, the capital structure we will use is 3.51 percent short-term debt, 46.37 percent long-term debt, 0.00 preferred equity, and 50.12 percent common equity. We will also adopt the debt cost rates recommended by CAD.

C. Return on Equity

The West Virginia Supreme Court of Appeals has held that utility rates should allow a public utility the opportunity to earn a level of revenue sufficient to attract capital in the competitive capital market, balanced with the interests of the consuming public in receiving fair and reasonable rates. *See, e.g.*, Monongahela Power Co. v. Public Serv. Comm'n, 276 S.E.2d 179 (W. Va. 1981). The Commission determines a return on equity (ROE) based on empirical studies of returns in the capital markets while balancing the interests of ratepayers in receiving fair and reasonable rates. Black Diamond Power Co., Case No. 12-0064-E-42T, Comm'n Order at 5 (Aug. 10, 2012); West Virginia-American Water Co., Case No. 10-0920-W-42T, Comm'n Order at 15 (Apr. 18, 2011).

The Commission has, on numerous occasions, stated that recommendations of expert witnesses on cost of common equity are useful as guides, but that the determination of an appropriate cost of common equity for a utility must rest principally with the best judgment of the Commission. *See, e.g.*, West Virginia-American Water Co., Case No. 10-0920-W-42T, Comm'n Order at 18 (Apr. 18, 2011). The Commission recently stated that the data that underlies the recommendations of ROE witnesses must be evaluated and judged carefully and practically, based on our judgment of the methods used by the expert witnesses, the data presented by those witnesses and the current market conditions. There is

[6] The Company argument that its short-term debt was recently reduced does not change our decision regarding capital structure. Whether the debt is short-term or long-term debt is immaterial as far as capital structure is concerned. Different forms of debt are a factor impacting the interest rates.

no absolute, correct answer with regard to ROE even though the determination of a reasonable ROE involves calculations on a mass of data presented by expert witnesses. We have always held that the fair ROE result lies within a zone of reasonableness that is framed by the evidence, including the testimony and exhibits of the various witnesses. The final determination of ROE, however, rests with the Commission based on our judgment and the application of regulatory principles and policies that have been used by this Commission. Id.

The Company proposed an ROE of 10.50 percent, developed from a range of 10.00 percent to 11.00 percent. (Company Initial Brief at 000028.) Company Witness Bulkley provided an overview of the economic and legal principles regarding the determination of ROE. (Direct Testimony of Ann Bulkley, Bulkley Direct, at 6.)

Staff found WVAWC's proposed ROE excessive and unsupported. Staff Witness Estep recommended a ROE of 9.06 percent in 2021 and now recommends a ROE of 9.30 percent – based on his analysis of empirical data supporting a conclusion that the Company's cost of equity has increased since his testimony in November 2021. Similarly, CAD Witness Smith increased his ROE recommendation from a range of 9.00 percent to 9.50 percent in 2021 to 9.80 percent in this case. See below for comparison:

	Case Nos. 21-0369-W-42T 21-0370-S-42T	Case Nos. 23-0383-W-42T 23-0384-S-42T
Mr Estep		
DCF	9.06%	9.37%
CAPM (Scenario Range)	7.35% - 10.57%	8.85% - 10.83%
ROE Recommendation	9.06%	9.30%
Mr. Smith		
ROE Recommendation	9.00% - 9.50%	9.80%

(*See, e.g.*, Company Initial Brief at 000039.)

CAD did not sponsor ROE testimony, but recommended 9.80 percent contending that figure is reasonable because it is in line with the ROE of 9.75 percent included in the recent settlement filed in Mountaineer Gas's 2023 rate case. (Smith Direct at 26-27.)

Commission Decision

While we have at times in the past gone through each and every model presented by expert witnesses and offered criticism or support for their models and inputs, that exercise often leads one to conclude that the Commission is not applying its reasoned judgment to the facts and circumstances of a case and how those facts lead to a reasonable case specific ROR. In this case we are faced with

a number of models and inputs as well as observations of recent ROE decisions of other jurisdictions. We find it appropriate in this case to review and compare the outputs of the models.

Company Witness Bulkley presented a variety of models with multiple ranges under multiple scenarios. The witness criticized Staff for recommending a return below the 9.80 percent authorized by this Commission in the last rate case of the Company. This criticism is based on Ms. Bulkley's observations that financial markets and financial policies of the government have changed since that case, and in her view, the indicators all point to higher costs of equity today than at the time of the last rate case. There is apparent logic in her synergism comparisons. She does not consider, however, that the return on equity does not compress to a single, absolutely correct, answer. Instead, our analyses, as do hers, arrive at a range of returns that might extend well below and well above the single point established in a previous case, such as 9.80 percent. If for example the range of reasonableness in a previous case was 9.00 percent to 10.00 percent, approving a 9.80 percent allowable ROE would have required a myriad of considerations by the Commission that justified a return near the high end of the range. If the range changes to 9.30 percent to 10.30 percent in a later case, Ms. Bulkley would argue that because the models produced higher results, we must find something higher than 9.80 percent to be reasonable. We disagree. Conditions may have justified the high-end of the range decision in the last case and a mid-point, or 9.80 percent decision in the latter case. The ROE exercise is not a science that boils down to a precise formulistic answer. We take that into consideration as well as the judgment of an expert witness such as Ms. Bulkley into consideration, but we must ultimately apply our judgment and the end result of our decision in determining a reasonable ROE.

Company Witness Bulkley presented her opinion of an ROE range from 10.00 percent to 11.00 percent and ultimately recommended the midpoint or 10.5 percent. To properly analyze her two-point range and her arguments about the changing financial markets since the last case, we have reviewed the full range of her evidence and testimony.

We first consider Discounted Cash Flow (DCF) data. Based on several DCF models Company Witness Bulkley presented ROE outputs ranging widely from 8.21 percent to 10.74 percent. The average of that range is 9.48 percent. Clearly the DCF data indicates the possibility of a lower limit range for ROE well below the 10.00 percent chosen by Ms. Bulkley.

The same witness presented a narrower range, going from a low of 8.70 percent to a high of 10.11 percent in the Company's last base rate case, Case No. 21-0369-W-42T. Interestingly, the low end of her range in the last rate case was

nearly 50 basis points higher than the 8.21 percent low DCF number she presented in this case. Admittedly, the high end of her DCF range in the last rate case was only 10.11 percent, while the high end in this case is 10.74 percent. In the last rate case Ms. Bulkley presented a DCF range from 8.70 percent to 10.11 percent, or an average of 9.41 percent. In this case, her DCF range is a much lower 8.21 percent low point, to a high point of 10.74 percent. The average of her DCF range in this case is 9.48 percent, or only 7 basis points higher than the last case.

We next consider the Capital Asset Pricing Model (CAPM) data and ranges presented by Ms. Bulkley. She presented a CAPM range going from a low of 10.67 percent to a high of 12.18 percent (an average of 11.43 percent) in Case No.21-0369-W-42T. In her testimony in this case, considering capital markets that she believes justify a higher return than the last case, she calculated a DCF range with a low point of 9.87 percent and a high point of 10.55 percent. The average of her CAPM data in this case is 10.21 percent.

We have considered Ms. Bulkley's alternative CAPM recommendation, but we find it to be faulty and not useful for purposes of determining a reasonable ROE. Based on a theory that the traditional Capital Asset Pricing Model tends to "understate" the cost of equity for companies with low Betas, "such as regulated utilities" she presented an alternative CAPM approach called ECAPM. Other than a footnote reference to a book by Roger Morin entitled "New Regulatory Finance," and a brief description of ECAPM formula inputs, the witness did not explain why the traditional CAPM calculation, which derives the expected results of lower ROEs for lower-risk companies such as utilities, should be modified or "enhanced" using a mathematical formula purposely designed to drive those lower indicated returns upward.

We note that the ECAPM calculations result in outputs ranging from 10.43 to 10.94 percent. The midpoint of this range is 10.69 percent. This range and average is higher than those derived from her CAPM data, but that is to be expected because the ECAPM approach, by design, is structured to increase the CAPM-indicated return on equity for low-risk companies with low betas. The Commission will not use the ECAPM results in evaluating the ranges of ROE's because it is not sufficiently explained and supported by the testimony to allow us to determine whether the change or "enhancement" that is designed to increase the indicated ROE on companies with low betas (market risk) like regulated utilities is reasonable or appropriate.

The cross-model ranges of ROE recommended by the Company witness, based on the DCF model and CAPM model were from a low of 8.21 percent to a high of 12.18 percent. The average of that range is 10.19 percent.

The average of the DCF average of 9.48 percent and the CAPM average of 10.21 percent is 9.85 percent.

Based on these data and Ms. Bulkley's testimony, we find that her recommended range of 10.00 percent to 11.00 percent unreasonably discounts the low points of her DCF model outputs and unreasonably uses the high points of her CAPM analyses to justify the 10.00 percent low end and 11.00 percent high end.

Ms. Bulkley testified at length on accounting issues like flotation costs, environmental regulation risks, rate regulatory issues like capital spending related to troubled system and other perceived regulatory risks in West Virginia, and macro-economic factors such as inflation, elevated supply costs and increasing interest rates to support moving to a relatively high ROE as compared to the traditional models we have used. We have taken all of that testimony into consideration in making our decision.

The Company argued that the Staff recommendation was out of touch because, among other reasons, it was far below the 9.60 percent median of recently authorized ROEs for water and natural gas utilities. We note that the Company is correct that the Staff recommendation is below the 9.60 percent median of recently authorized ROEs for water and natural gas utilities. In fact, it is 54 basis points below 9.60 percent. However, the 10.5 percent recommended by the Company witness is 90 basis points above the median that she cited.

If we were to focus only on the Staff recommendation and the Company-proposed DCF and CAPM ranges, along with the 9.6 percent cited by the Company witness, we could conclude from the evidence that a 9.6 percent ROE is reasonable in this case. However, we have considered all of the evidence and determined that this is not the time to time to drop the ROE to 9.06 percent as recommended by Staff although we find the Staff recommendation to be well presented and based on a review of the data, albeit on the low side within a range of reasonableness. This is also not the time, and it would not be supportable by the evidence, to jump to the 10.5 percent requested by the Company which we find to be unreasonable.

Moreover, whether by accident or the natural outcome of common sense, we find that the intuitive 9.80 percent recommendation of CAD witness Smith falls within a range of reasonableness which is justified by the record developed by the Staff and Company. We are not basing our decision on the CAD recommendation but find it to be reasonable based on our own review of the entire record.

Based on the evidence and market conditions we should approve an ROE of 9.80 percent in this case. The academic models, the judgment of the expert witnesses, and the judgment of the Commission justify 9.8 percent ROE. The

Commission determines that a ROE of 9.80 percent is reasonable, falls within the range of reasonable ROEs presented by the parties, fairly balances the interests of WVAWC and its customers and meets the standards set forth by the United States Supreme Court and the Supreme Court of Appeals of West Virginia.

D. Summary of Capital Structure and Cost of Capital

Based on the discussion and determinations described above concerning the capital structure, cost of debt, preferred stock and ROE, the Commission determines that an overall weighted cost of capital of 7.134 percent is reasonable for establishing rates in this proceeding and fairly balances the interests of the Company and its customers. The component parts of the capital structure and cost rates are as shown in the following table:

	Percentage of Total Capital	Cost Rate	Weighted Cost
Short Term Debt	3.51%	5.32%	0.187%
Long Term Debt	46.37%	4.39%	2.036%
Equity	50.12%	9.80%	4.912%
			7.134%

III. Operating Income and Operation and Maintenance Expenses

A. Operating Income

1. Customer Attrition Adjustment

Staff opposed the customer attrition adjustment for residential customers. Specifically, Mr. Estep argued that the analysis going back to 2018 indicates that there is no significant ongoing decline and that the additional data going back to 2018 shows that the adjustment is not needed. (Direct Testimony of Roger Estep, Estep Direct, at 6-9.)

The Company argues that it still experiences customer losses in the residential classes and small growth in the commercial class. (Company Initial Brief at 000058.) The Company argues that the Commission allowed this adjustment in the February 2022 Order (*see*, February Order at 2022), and should continue to do so in this case (Company Initial Brief at 50). For the same reasons that the Commission approved this adjustment in the February 2022 Order, we will approve this adjustment in this proceeding.

B. Operation and Maintenance Expenses

The overall O&M expense proposed by the Company is $68,672,136. Staff and CAD took issue with several of the Company's adjustments to O&M expenses which are discussed below.

1. Huntington Temporary Intake

The Company included costs associated with an unexpected emergency project in its rate filing. In February of 2023, a train derailed in Palestine, Ohio, resulting in a chemical spill that impacted the Ohio River. (Company Initial Brief at 000055.) The Company incurred costs related to the deployment of a temporary intake at an alternative raw water supply source.

Staff and CAD argued for the removal of the Huntington Temporary Intake expense. CAD argued that the Company failed to support the amount of the deferral or that the event leading to the expense was rare. (CAD Initial Brief at 000018.) Similarly, Staff argued that the Company failed to provide the actual costs associated with the Huntington Temporary Intake at the time of the rate filing, and therefore the expense should be removed. (Staff Initial Brief at 000073-74.)

In the February 2022 Order, the Commission recognized that "[w]hen unplanned, extraordinary events occur and swift action is needed a utility should be able to act with confidence that prudently incurred costs can be deferred to await a future Commission ruling on whether to amortize the deferred costs, disallow recovery for good cause, or incorporate an averaging technique to reflect the fact that such costs are not annual occurrences but do recur from time to time." (February 2022 Order at 31.)

The choice of deferring and amortizing or averaging as well as the amortization period or the averaging period is a matter of judgment by the Commission. In the case of this cost, the Commission agrees with the Company request for deferral and will allow the expenses related to the Huntington Temporary Intake to be recovered amortized at 33.3 percent per year. The Company should credit deferred costs at the 33.3 percent annual rate. The net unrecovered cost will not be included in rate base. Because this amortization will expire after three years and may fully recover the cost of the intake before the next base rate case, it will be allowed as a revenue requirement in the next DSIC rate.

2. Reamer Hill Emergency Assistance

Similarly, the Company seeks recovery of costs associated with the emergency assistance it provided to a small community water system in Kanawha County. According to the Company, "[i]n a letter filed on June 13, 2022 in Case No. 21-0860-W-PC, the Company informed the Commission of the emergency aid it was providing and sought permission to book the associated expenses as a regulatory asset for recovery in a future rate case." (Company Initial Brief at 000054.) In that proceeding, the Commission ordered that "West Virginia-American Water Company shall book the expenses it incurs for its assistance to Reamer Hill Water Association, Inc. as a regulatory asset for recovery in a future rate case." Case No. 21-0860-W-PC, Commission Order dated July 29, 2022 at 5.

Staff and CAD urged the Commission to reject this expense, largely because the amount, $16,459, is not "extraordinary." (*See, e.g.*, Staff Initial Brief at 000073.) For the same reason that we will allow the expenses of the Huntington Temporary Intake, the Commission will allow the Reamer Hill Emergency Assistance Expense. Again, the Company may recover this expense amortized at 33.3 percent per year. The Company should credit deferred costs at the 33.3 percent annual rate. The net unrecovered cost will not be included in rate base. Because this amortization will expire after three years and may fully recover the cost of the intake before the next base rate case, it will be allowed as a revenue requirement in the next DSIC rate.

3. Cave Road Water Expenses

The parties agreed that Staff correctly calculated the billing determinants and revenue calculation for the Cave Road Water acquisition. (Staff Initial Brief at 000074; Company Reply Brief at 000030.) Staff rejected, however, the Company's proposed $92,948 expense adjustment which far exceeds the projected water revenues of $41,496 and included unreasonable estimates, considering the small number of Cave Road customers. (Staff Initial Brief at 000074; Company Reply Brief at 000030.) The Company argued that this fact does not mean that the Company will not incur these costs. (Company Reply Brief at 000030.) Moreover, the Company stated that the revenue calculation is based upon the initial rates of the Commission's rate phase-in for this acquisition. Id.

The Company proposed expense adjustment is problematic because it is late-filed with no detailed supporting documentation. Although it is a small amount relative to the total revenue requirement of the Company, the procedural problem inherent in late-filed changes to the Company case raises this adjustment to a level worthy of discussion in this Order. We have in the past warned utilities that they have the responsibility to prepare a full case and file a full case on all revenue

requirement items. Waiting until a party opposes a portion of a rate filing to input a totally new adjustment is not appropriate. A utility may rebut a party's case, but rebuttal that in effect says "yes, they are correct, but here is an offsetting adjustment that we forgot to make in our case originally" is not really rebuttal so much as it is creating a new case filing. That is not appropriate.

Even if there is a colorable justification for what amounts to a revised case filing, such a filing requires a high burden of proof. Bringing in an adjustment months after a case is filed is unfair to parties and does not afford the Commission sufficient time to test the reasonableness of such a late-filed adjustment.

The late-filed adjustment of $92,948 is comprised of certain incremental operating costs, including fuel and power, chemicals, and waste disposal. The total of these incremental operating expenses associated with serving the Cave Road customers is $24,808. The Company added an additional amount of $15,124 to the Company adjustment for distribution plant maintenance. Then, the Company added an amount of $53,016 for increased Service Company Expenses. Some adjustments for fuel, chemicals and waste disposal might be reasonable, but the Company must provide evidence and supporting documentation for the adjustments.

The Company offered no detail in support of its adjustment or how it was calculated other than to say in the rebuttal testimony, that "it was calculated on a per-customer basis." We accept the testimony as truthful, but it does not tell us what total data the Company used to assign, allocate, or calculate a Cave Road expense on a per-customer basis, whether the underlying costs were truly variable costs that would vary in direct proportion to the number of customers served, how the underlying costs were derived, or various other elements of the adjustment that would be necessary before we could find that it was correct and reasonable.

The $92,948 adjustment was not part of the Company's original filing and was not adequately supported by evidence. We will not include the adjustment in the revenue requirements approved by the Commission.

4. Labor Expense

The Company proposed going-level labor and labor related expense adjustments was based on 317 full-time positions – 314 positions supporting water operations and 3 positions supporting wastewater operations. (Direct Testimony of Lori N. O'Malley, O'Malley Direct at 6.) The Company has three classifications of employees: union/collective bargaining unit hourly employees (union positions or union employees); non-collective bargaining unit hourly employees (non-union positions or non-union employees); and exempt employees. (O'Malley Direct at 5.)

The Company adjusted the HTY labor expense to reflect a full complement of 357 water and sewer employees that are expected through the Addendum Period, which includes 18 positions for water operations to backfill employees that have left the business, 2 new positions, 18 water and sewer positions for the pending JUI, *et al.* acquisition, 3 positions for the PSD acquisition and the removal of one position which moved to American Water Works Service Company, Inc. (AWWSC). (O'Malley Direct at 6.)

The Company annualized and adjusted the HTY labor hours to a normalized level. (O'Malley Direct at 7.) These hours were then multiplied by the actual 2023 wage rates by employee position to determine an annualized going-level of expense through the end of the Addendum Period. Id. The Company then adjusted wage rates based on a three-year average of historical percentage increases, and the expense was annualized through the FTY. Id. In addition, to adjust the level of expense for union employees, the most recent collective bargaining agreements (CBAs) that remain in effect were used to determine going-level and FTY costs. Id. The CBA for the Laborers International Union of North America, Local 1353 expires on April 25, 2024. As such, the Company used an estimated wage rate increase based upon a national benefits agreement which allows a one-year extension of a CBA with a 3 percent wage increase. Id.

The Company calculated capitalization percentages based on the HTY ratio of direct labor dollars charged to capital to total direct labor costs and those that are charged to expenses. The capitalization percentages calculated in that manner are 39.37 percent for the Company's water operations, 7.98 percent for its sewer operations, and a total Company ratio of 39.06 percent. Id.

Staff used specific capitalization factors based on test year capitalization of the labor components (regular hours, overtime hours, shift premiums, meals, and performance plans) to reflect going-level costs. (Kuhn Direct at 18.) Staff calculated a 63.18 percent expense factor specific to the test year base, a 42.84 percent expense factor specific to test year overtime payroll, and a 65.26 percent expense factor specific to Performance Plan expense. Id. Staff's payroll adjustment results in total expensed payroll labor costs of $1,731 0,779. Staffs going-level payroll adjustment is $278,453 less than the Company's adjustment. Id.

CAD reduced labor costs by $256,473 to remove seven vacant positions as of June 30, 2023. This adjustment also reduces payroll tax expense by $20,088 and other employee benefits expense by $99,956 (CAD Initial Brief at 000020, *citing* Smith Direct at 64-66; Ex. LA-I, Schedule C-8; Ex. LA-I, Schedule C-9).

Both CAD and Staff denied labor costs associated with the acquisitions of Armstrong PSD, Kanawha Falls, and Nitro.

CAD also removed Long-Term Performance Plan (LTPP) costs. Company Witness O'Malley, in her rebuttal testimony, argued against CAD's position on this issue. Specifically, Ms. O'Malley testified that the Company's LTPP benefits customers and shareholders by reducing costs and disruptions associated with employee turnover by providing incentives for employees to remain with the Company and improve Company performance. (O'Malley Rebuttal at 000229.)

In the February 2022 Order, the Commission recognized that employee counts are almost always an area of contention. February 2022 Order at 40. In that case, the Commission adopted Staff's method of using test year hours worked applied to the Company's known pay rates. Id. We will adopt the Staff payroll adjustments.

The appropriate capitalization factor causes us concern that the factor can change from year to year and skew the relationship between expected payroll charged to expenses and expected capitalized payroll. The Commission will require the Company to defer any calculated capitalized payroll that is based on a capitalization factor that exceeds the factor included in this case. The Company should amortize deferred amounts as though they were included in the appropriate plant accounts, but the Company may also defer the amortization. The Commission will review the deferred amounts and the reasons for excess capitalized payroll in the next base rate case of the Company. The Company is on notice that the Commission will not allow an automatic transfer of the deferred excess capitalized wages to plant accounts in the next base rate case if the Commission determines that the Company reduced expected payroll costs charged to expenses below amounts allowed for ratemaking in this proceeding. The Commission will make a final determination on the disposition of the deferred amounts not transferred to appropriate plant accounts in the next base rate case.

In addition, as in the February 2022 Order, the Commission will allow the total LTPP in revenue requirements. Id. As it did in the February 2022 Order, the Commission agrees with the Company on this issue, and it is reasonable to maintain that course in this proceeding.

5. Training Expense

Staff calculated training expense based on a three-year average (Staff Initial Brief at 000067-68), while the Company used a five-year average (Company Initial Brief at 000049). The Company argued that the use of the five-year average "is necessary because training expense in 2020 was abnormally much lower because of work from home policies arising from the COVID pandemic." (Company Initial

Brief at 000049.) According to Staff, the difference in approaches produces a variance of $69,751.

The Commission agrees with the Company's approach here, and will approve the training expense based upon the five-year average. The Commission finds here that the Company's approach is reasonable, and that the COVID pandemic was a unique time in our recent history. The Commission may revisit this approach in future rate cases as we get farther in time from the COVID pandemic.

We will adjust the Revenue Requirement Staff Rule 42, which is the starting point for our calculation of revenue requirements, upward by $10,491. We cannot reconcile the Staff Rule 42 adjustments and variances from the Company numbers with the $69,751 variances cited in the Staff Brief. The Company made an adjustment to Training Expense of $11,296. (Company adjustment 30). Staff made an adjustment of $805 (Staff adjustment 32), creating a variance of $10,491.

6. Telephone Expense

Initially, the Company concluded that no telephone expense adjustment was necessary given that the test year amount of $906,979 aligned with the three-year average (2020-2022) amount of $927,539. However, Staff reduced the Company's telephone expense by $172,310 by calculating a three-year average based on what the Company referred to as "incorrect inputs." (Company Initial Brief at 000049.) In its Initial Brief, Staff conceded this issue. (Staff Initial Brief at 000069.) As such, we will not adopt the Staff adjustment.

7. Legal Expenses

In its Brief, Staff noted that the Company used a five-year average of the years 2018 through 2022 to determine going-level legal expense of $777,530. (Staff Initial Brief at 000069.) Staff further stated that it used a three-year average of the years 2020 through 2022 which results in a going-level expense of $593,185 for water operations, which is $184,345 less than that of the Company. (Staff Initial Brief at 000069.)

In the last rate case, Staff used a five-year average to account for the fluctuations in legal expense, an approach the Commission adopted. February 2022 Order at 35.

The Commission will adopt the Company's proposed adjustment, however, the variance between the Staff and Company going level expense is not $184,345. The Company used a five-year average of the years 2018 through 2022 to determine going-level legal expenses of $705,370 (Adjustment 40). Because the

test year legal expense was $777,530, the Company adjusted expenses downward by $72,160 (Adjustment 40). Using a different number of years for an average, Staff adjusted legal expenses downward by $184,345, creating a variance of $112,185. We will adjust the Revenue Requirements from the Staff Rule 42, which is the starting point for our calculation of Revenue Requirements, upward by $112,185 to adopt the Company adjustment.

8. Insurance other than Group Expense (IOTG)

The Company calculated going-level IOTG expense of $3,887,633 based upon the annualization of current insurance policy premiums for the twelve months ending December 31, 2022. The Company then adjusted the IOTG expense by applying specific policy escalation factors for each policy group for 2023 and 2024. (Company Initial Brief at 000052; Company Rule 42 Exhibit at Adjustment 41; O'Malley Direct at 28.) The Company also included a three-year average of actual retrospective premiums incurred in the going-level expense. Id.

CAD, on the other hand, recommended an IOTG expense of $3.617 million. (CAD Initial Brief at 000023.) CAD accepted the Company's proposed increase for 2023, but not 2024. Moreover, CAD used a two-year average of 2021 and 2022 costs. (CAD Initial Brief at 000023.)

In the last rate case, CAD argued that because this expense has fluctuated over the years, not using an average could over or understate this expense. February 2022 Order at 36. In fact, CAD argued for, and the Commission granted, the use of a five-year average in that case. Id. The Commission will not deviate from its holding on this issue in the February 2022 Order. Thus, the Commission will accept the Company's approach to IOTG expense.

9. OPEBs

The Company and Staff both proposed adjustments for OPEB. Staff made three adjustments to the Company's OPEB expense:

	Company	Staff
WV 2023 OPEB Service Cost	$166,444	$166,444
Increment for Approved Alternate Calculation	399,000	324,000
Total PBOP	565,444	490,444
Percentage to Expense	60.63%	60.63%
PBOP Expense	342,829	297,356
WV 2023 OPEB Non-Service Cost	(1,992,660)	(1,826,216)
Union Medical VEBA Amortization	166,288	0
Total OPEB Expense	(1,483,543)	(1,528,860)
Percentage to Water	100.00%	100.00%
Going-Level PBOP Expense	(1,483,543)	(1,528,860)
Less: Per Books Adjusted PBOP Expense	(2,788,774)	(2,788,774)
Adjustment	$1,305,231	$1,259,914

(See Rebuttal Testimony of Lori N. O'Malley, O'Malley Rebuttal, at 6.)

First, Staff used the 2024 amount of $324,000 for the "Increment Approved Alternate Calculation" instead of the incremental amount for 2023 of $399,000. (See Company Initial Brief at 000047; Staff Initial Brief at 62.) Next, Staff erroneously used the total OPEB expense amount for 2023 of ($1,826,216) instead of the non-service cost of ($1,992,660). Id. Third, Staff removed the Union Medical VEBA amortization in contradiction to the requirement to preserve the Union Medical VEBA established in the 2021 Rate Case. (Company Initial Brief at 000047, citing February 2022 Order at 42.)

Initially, Staff accepted the Company's position, that Staff should have used the WV 2023 OPEB Non-Service Cost amount of ($1,992,660) presented by the Company. (Staff Initial Brief at 62-63.) Thus, the Commission will accept the Staff and Company positions on that adjustment.

For the remaining OPEB issues, the Commission agrees with the Company's position here and adopts the Company's proposed OPEB expense.

IV. Revenue Requirements

The Commission will authorize the rate increase herein approved to be calculated by the Company on a percentage basis across-the-board to its water and sewer rate schedules as further described herein. The Commission has fully considered all of the issues presented by the parties in this proceeding. We have discussed many, but not all of the issues presented in this case. We will develop a Revenue Requirement for the Company by starting with the Revenue Requirement proposed by Staff and making adjustments thereto to reflect the Commission decisions on variances from the Company filing. Where we differ with the Staff variances from the Company, we have discussed those variances and adjusted the Staff numbers. In those instances, when we have not adjusted the Staff numbers, we have fully reviewed the differences between the Staff numbers, the Company numbers, and the recommendations of other parties and find that the Staff numbers for those Revenue Requirement components are reasonable and should be adopted by the Commission. Attached to this Order as Appendix B is a schedule showing the total water revenue requirements approved by the Commission.

V. Proposed Tariffs and Tariff Revisions

The Company proposed several new tariffs, including (i) a revenue stabilization mechanism (RSM); (ii) cost trackers, including a production cost tracker and pension and OPEB expense trackers; and (iii) low income tariff.

A. Revenue Stabilization Mechanism

The Company again proposed an RSM "to address its inability to recover Commission-established revenue requirement levels in the rate year and between rate cases." (Company Initial Brief at 000062.) As noted by Staff, the Commission denied a similar request in the February 2022 Order. February 2022 Order at 49-51.

As the Commission noted in the February 2022 Order, the Company's proposed RSM is "a radical change in regulatory policy in West Virginia." February 2022 Order at 51. Moreover, the RSM "implicitly shifts risk from investors to customers that would require an adjustment to the authorized rate of return." Id.

Staff and CAD requested that the Commission deny the request here for the same reasons that the Commission denied the similar request from the Company in the last rate case. The Commission has reviewed the Company's request, and sees no reason to depart from its reasoning in the February 2022 Order. As such, the Commission will deny the requested RSM in this proceeding.

B. Cost Trackers

The Company proposed what it called "fair and reasonable mechanisms to combat the negative effects of volatility in (1) production costs and (2) pension and OPEB expense." (Company Initial Brief at 000066.) This included a production cost tracker that it argued would protect both its customers and the Company against sustained volatility in production expenses, including chemical expense. Id.

In addition, the Company proposed a Pension and OPEB Tracker. The Company argued through Dr. Chard that this tracker would allow the Company to address fluctuations in pension and OPEB expense. (Company Initial Brief at 000069.)

Staff and CAD objected to these cost trackers. Staff witness Mr. Cooke recommended the Commission deny the Company's proposed production cost tracker because the Company's "production costs" do not compare in nature or magnitude to the costs utilities pass through in the current ENEC and PGA rate mechanisms. (Staff Initial Brief at 000020.) Mr. Cooke further noted "both the Company and Staff have included adjustments to the Company's per books amounts related to these costs." (Direct Testimony of Geoffrey M. Cooke, Cooke Direct, at 19.) Staff asserted that this proposed tracker does not encourage the Company "to reign in cost and to efficiently seek to keep the cost of certain items in check." (Staff Initial Brief at 000020.)

Similarly, Staff recommended the Commission deny the Company's proposed pension and OPEB tracker. Mr. Cooke noted that "the Company and Staff have included adjustments to the Company's per books amounts related to these costs." (Cooke Direct at 20.) Moreover, CAD stated that "[t]hese trackers are part of a slew of mechanisms the Company has proposed in this case that are designed to benefit stockholders with little to no benefit to ratepayers." (CAD Initial Brief at 000027.)

The Commission has reviewed the positions of the parties, and agrees with Staff and CAD. The Commission will deny the Company's request to include the production cost tracker and pension and OPEB expense tracker.

C. Low Income Tariff

The Company proposed a low-income tariff to assist low-income customers to replace the rate freeze established by the Commission in the 2022 Order for special reduced rate residential service (SRRRS) customers (the SRRRS Tariff). The SRRRS Tariff imposed a rate freeze for all customers who qualify. (February 2022 Order at 54-55.) Specifically, in the February 2022 Order, the Commission

required that the current tariff rates continue for an identifiable and limited number of certain low-income customers that are currently receiving (i) Social Security Supplemental Security Income, (ii) Temporary Assistance for Needy Families, (iii) Temporary Assistance for Needy Families-Unemployed Parent Program, and (iv) assistance from the Supplemental Nutrition Assistance Program if they are sixty years of age or older. These customers are the same customers included in W. Va. Code § 24-2A-5. In addition to the rate freeze, these customers received a statutory 20 percent discounted rate. W. Va. Code § 24-2A-5(b).

The Company's proposed Low-Income Tariff would be available to the Company's water and sewer residential customers with an annual household income at or below 200 percent of the federal poverty level (FPL)[7] and would discount an eligible customer's bill up to 65 percent. The proposed tariff would offer discounts for both the minimum charge and the usage rate. The table below depicts the different discounts under the Company's proposed Low-Income Tariff:

Range of Percentage of FPL	Discount Percentage
0% - 50%	65%
50% - 100%	50%
100% - 150%	30%
150% - 200%	15%

(Cooke Direct at 8.)

The Company included $229,200 in its O&M expenses related to Dollar Energy administrative expenses to administer the program. (*See, e.g.*, Staff Initial Brief at 000079.) The Company assumes a 25 percent participation rate, and proposed to establish a regulatory accounting deferral to address the difference in actual participation and assumed participation, and the difference in actual cost and the estimated cost related to Dollar Energy administrative expenses it included in its base rates. Id.

Staff and CAD oppose the replacement of the SRRRS with the proposed low-income tariff. Staff and CAD argued, in particular, that the low-income tariff would shift costs from the customers that signed up for the low-income tariff to the Company's other customers, including the 75 percent of the customers that would qualify for the low-income tariff but failed to sign up for the low-income tariff. (Tr. II at 82.)

[7] The FPL for 2024 for the contiguous U.S. states is $15,060.

The Commission will reject the proposed low-income tariff. The Commission will, however, expand the customers that qualify for the SRRRS Tariff from those customers that are currently receiving (i) Social Security Supplemental Security Income, (ii) Temporary Assistance for Needy Families, (iii) Temporary Assistance for Needy Families-Unemployed Parent Program, and (iv) assistance from the Supplemental Nutrition Assistance Program if they are sixty years of age or older, to include water and sewer residential customers with an annual household income at or below 200 percent of the FPL. Only customers that qualify for the statutory reduced rate will receive the 20 percent discounted rate. Customers that do not qualify for the statutory rate reduction, but have an annual household income at or below 200 percent of the FPL will receive the SRRS tariff rate established in the February 2022 Order. (February 2022 Order at 54.) The current SRRS rate will not be changed by this Order. As in the February 2022 Order, the Company should file separate tariff pages designated RS-1 SRRS, RS-1A SRRS, RS-1B SRRS, etc., applicable to only residential customers and reflecting the current residential rates and charges plus the roll-in of the current DSIC surcharge for this group of customers. When designing rates in compliance with this Order, the Company should calculate the SRRS base rates at their current level plus a roll-in of the current DSIC percentage.

The Commission will approve the included $229,200 in the Company's O&M expenses related to Dollar Energy administrative expenses to administer the expanded SRRRS program.

The Commission recognizes that the Company will lose revenue for the additional customers added to the expanded SRRRS tariff. We do not have a basis upon which to estimate the amount at this time. The Company can defer this amount and request it when it files its next DSIC proceeding. At that time the Commission will determine the appropriate recovery of the deferred amount and set a rate increment to recover going-forward lost revenue.

Kanawha County Commission

The KCC participated in this case through the testimony of then KCC President, W. Kent Carper. The KCC opposed the rate increase, citing, among other things, increased utility costs for West Virginia rate-payers. (Tr. I at 23-25.) Mr. Carper testified that no rate increase should be approved. (*See generally*, Direct Testimony of W. Kent Carper, Carper Direct, KCC ex. WKC-D.)

VI. Sewer Rate Case

A. Positions of the Parties

The positions of the parties on the use of a Historical Test Year, Addendum Test Year, or Future Test Year are explained in detail above in the discussion regarding the water rate case. While there are issues addressed in the water rate case section that do not apply to the sewer rate case, to the extent that the positions of the parties extend to the sewer portion of this order, they are discussed above.

B. Discussion and Commission Decision

The Commission discussed multiple issues in the water case Order, some of which apply to this case. The Rebuttal Testimonies and Briefs in the Water Rate Case and this case often combined both water operations issues and issues relating only to sewer to such an extent that extracting only the arguments and issues for this case would be difficult and not particularly productive.

We have developed our approved revenue requirement for this case using the Staff proposed revenue requirements and the Staff Statement of Variances as a starting point because those documents delineate sewer revenue requirement components where there are differences between the position of the Company and the Staff.

1. Summary of Capital Structure and Cost of Capital

As a preliminary matter, we discuss the overall rate of return that will be used in this case. The Commission determination of capital structure and cost of capital applies to both the water rate case and this Case. For a detailed discussion of the cost of capital, refer to the detailed discussion in the water case Order. We apply the same Capital Structure and Cost of Capital for the development of the Revenue Requirements in this case as discussed and approved in the water case Order.

Based on the discussion and determinations described in that Order concerning the capital structure, cost of debt, and ROE, the Commission determines that an overall weighted cost of capital of 7.134 percent is reasonable for establishing rates in this proceeding and fairly balances the interests of the Company and its customers. The parts of the capital structure and cost rates are shown in the following table.

	Percentage of Total Capital	Cost Rate	Weighted Cost
Short Term Debt	3.51%	5.32%	0.187%
Long Term Debt	46.37%	4.39%	2.036%
Equity	50.12%	9.80%	4.912%
			7.134%

2. Rate Base

The Company proposed a rate base of $4,151,314 for its going-level HTY Rate Base. (HTY Rule 42 Exhibit, 000057.) The Company then proposed adjustments that include the JUI, *et al.* acquisitions and the Boone Raleigh Public Service District Acquisition to arrive at an Addendum Rate Base of $11,576,431. Id. The Company also adjusted the rate base for its FTY proposal, increasing the rate base by $21,757,758, bringing its FTY rate base to $33,304,189. Id.

Staff started with a HTY. Staff then calculated adjustments of $8,883,628 to the historical rate base relating to the JUI, *et al.* acquisitions and the Boone Raleigh Public Service District acquisition. Including those adjustments, and other going-level adjustments, Staff proposed a going-level rate base $13,052,091. (Attachment CDW-2, Statement of Variances Between Company Rule 42 and Staff Rule 42, hereafter Statement of Variances, 0000188.) Therefore, the Staff recommended rate base to use for revenue requirements in this case is $3,115,758 higher than the Company Addendum rate base.

The Commission explained above in the water rate case that it was accepting the Addendum adjustments, but is not accepting the fully projected Future Test Year Adjustments. At the Company Addendum Rate Base, the Sewer Revenue Requirements would be calculated on a Rate Base of $11,576,091. We find the Staff recommendations in this case to be reasonable and internally consistent. Therefore, we will not accept the Company proposed $11.6 million Rate Base and will adopt the Staff recommended $13.1 million Rate Base.

The revenue at present rates recommended by the Company to determine how much of an increase is needed is $1,932,695. (Statement of Variances, 0000181.) This value is before the Company proposed FTY adjustments and is comparable to the Staff-proposed going-level revenue of $1,841,012. Id. Once again, the use of the Staff recommended number will produce a higher rate increase than we would arrive at if we adopted the $1,932,695 going-level revenue at present rates proposed by the Company before FTY adjustments. We find the Staff recommendations in this case to be reasonable and internally consistent.

Therefore, we will not accept the Company proposed $1.9 million revenue at present rates number and will adopt the Staff recommended $1.8 million as revenue at present rates.

The O&M Expenses proposed by the Company, before its FTY Adjustments, totaled $1,292,033. (Statement of Variances, 0000182.) Staff proposed O&M Expenses at going-level (excluding any consideration of a FTY) totaled $1,225,671. Id. Therefore, unlike the rate base and revenue at present rates items, the Staff recommended O&M Expenses reduce the revenue requirements, and resulting rate increase, by $66,362.

In the water rate case, we discussed several issues concerning the Staff averaging method of calculating a going-level adjustment and how it differed from the Company proposal and from what the Commission traditionally allowed. These Expense categories that we addressed in the water rate case are legal expenses, bad debt expenses, and training expenses. In the water rate case, we adopted the Company going-level adjustments for those expenses. In this case, the Staff adjustments for those categories of expense were $13,148 lower than the Company adjustments. (Statement of Variances, 0000182.) We will adopt the Company going-level adjustments for legal expenses, bad debt expenses, and training expenses, and increase the Staff recommended O&M Expenses by $13,148.

The Commission has fully considered all of the issues presented by parties in this proceeding. We have discussed many issues in this Order, but some have not been discussed. We will develop a revenue requirement for the Company by starting with the revenue requirement proposed by Staff and adjusting thereto to reflect the Commission decisions on variances from the Company filing. Where we disagree with the Staff variances from the Company, we have discussed those variances and adjusted the Staff numbers. When we have not adjusted the Staff numbers, we have fully reviewed the differences between the Staff numbers, the Company numbers, and the recommendations of other parties and find that the Staff numbers for those revenue requirement components are reasonable and should be adopted by the Commission. Attached to this Order as Appendix C is a schedule showing the total sewer revenue requirements approved by the Commission.

The Commission approves the calculation made by the Company to reallocate a portion of the sewer revenue requirements to the water operations to result in an increase in water rates and sewer rates by approximately equal percentages. The Company should make a similar pro-rata calculation, considering the rate increases approved by the Commission, and design sewer rates to produce the adjusted sewer revenue requirements so that the rates designed following this order reflect a pro-rata decrement from its originally proposed rates in this case.

VII. Protective Treatment

On May 1, 2023, the Company filed a Motion for Protective Order seeking protective treatment for the following information collectively referred to as the "Confidential Information":

a. information derived from American Water Works Company, Inc. ("American Water") tax returns, provided in response to the requirements of Rule 42, Statement A, Schedule 5 Supplemental Information in both the Water and Sewer Rule 42 Exhibits ("Tax Return Data"); and

b. information provided in response to Statement C (pages 14-16) in both the Water and Sewer Rule 42 Exhibits related to the details of the debt and equity positions of American Water, the Company's parent ("Parent Financial Data"); and

c. Exhibit RVM-1 to the Robert V. Mustich direct testimony (the Willis Towers Watson Total Remuneration Study) and portions of Water Workpapers 22-24 & 57; and Wastewater Workpapers 11-13 & 40, containing salary, wage, and other compensation detail ("Compensation Data"); and,

d. information relating to the Company's chemical unit pricing in Water Workpaper 35 and Wastewater Workpaper 22 ("Chemical Procurement Data.").

It is not necessary to resolve the issue of permanent protective treatment for the various documents designated as confidential by the Company at this time. No entity has requested that the Commission provide copies of any information designated as confidential and/or subject to interim protective treatment. The Commission will continue to segregate and maintain the documents described in the Company Motion for Protective Order and First Amendment to Motion for Protective Order under seal until the future time, if any, that the Commission receives a Freedom of Information Act request for them. On receipt of that filing, the Commission will notify WVAWC and provide it with an opportunity to argue whether the documents are entitled to permanent protective treatment, consistent with our handling of similar requests for protective treatment in recent cases.

Other Issues:

Our review in this case has been complicated by some incorrect or incomplete discussions in briefs. We hope that parties will strive to provide better briefs in future cases. References to Rule 42 Exhibit adjustments that are at issue should identify the Adjustment Numbers, not just a citation to testimony. Also, the

Bates numbered pages are not consistently referenced in briefs and testimony. If a witness has numbered exhibit or testimony pages internally, such as TE-D page 1 of 20, of Statement B, page 10 of 12 (which are Bates pages 0076 and 0121 in the filed document), references to that testimony or exhibits, either by Rebuttal witnesses or in briefs, should reference the Bates page numbers (page 0076 or page 0121, or Bates 76 or Bates 121), not the internal numbering (TE-D page 1 or Statement E page 12).

We have also determined that massive filings of testimony and exhibits that include both water and sewer testimony, exhibits, and data burden the record with documents that are too large. We will direct the Company to file future testimony and exhibits relating to a sewer filing as completely separate and stand-alone documents. In addition, the compilation of testimony and exhibits from multiple witnesses into single documents is not ideal. See, for example, the Company filing of direct testimony of twelve witnesses in a 915-page document which occupies 72 Megabytes. That large PDF should have been divided into several documents limited to 20 to 25 Megabytes.

Closing

In closing the Commission strongly encourages the Company to strive to conduct its operations in a safe, reliable, efficient manner, and make the most out of the cost efficiencies discussed in its witnesses' testimony, which should allow the Company to avoid another base rate filing in the near future. The Commission is very concerned about the trend of rising rates and the short periods between base rate cases. Given the DSIC mechanism and the Commission's treatment of the acquisition of troubled systems, the Company should continue to replace aging infrastructure and work with troubled systems[8].

[8] Troubled system costs that were not included in this base rate case were excluded because the acquisition or costs were not finalized and known and measurable. The Commission will continue to consider both rate base and operating costs associated with Company acquisition or operation of troubled systems between base rate cases at the time of its DSIC filings.

FINDINGS OF FACT

WATER RATE CASE

Rate Base

1. This rate filing originally proposed a rate increase of $41.2 million annually for water utility customers and $470,801 annually for sewer customers.

2. The Company's Rule 42 exhibit filed in this proceeding included a standard HTY presentation, the Addendum Period of fourteen months (January 1, 2023 through February 29, 2024), with terminal rate base and a projected capital structure as of the end of that period, and an FTY presentation covering March 1, 2024 through February 24, 2025 (end of the rate year), with a thirteen-month average rate base and capital structure. (Chard Direct at 4.)

3. Staff recommended an annual revenue increase of $12.8 million for the water operations based on the use of the HTY after including certain adjustments for terminal treatment of DSIC-qualified plant rate base. (Kuhn Direct at 5.)

4. CAD proposed a base rate revenue increase of $25.0 million, or an increase of approximately 13.7 percent. After the elimination of $10.1 million of DSIC surcharges, the net impact on customers is an increase of $14.9 million, or 8.2 percent. (Smith Direct, at Schedule A, Bates 120.) CAD used an HTY with certain known and measurable adjustments. (Smith Direct at 9.)

5. Staff made several adjustments to the Company's rate base. Staff removed all adjustments related to the Addendum Period. Staff also adjusted HTY rate base including:

- Operating revenues;
- Employee Labor Costs;
- Incremental Costs of Water Treatment;
- Acquisition from Jefferson Utilities (Salaries and Wages, Pensions and Benefits, Purchased Water, Fuel and Power, Chemicals, Waste Disposal, and Materials and Supplies Maintenance);
- Group Insurance;
- 401k Expense;
- Defined Contribution Plan Expense;
- Training Expense;
- Purchased Power from anticipated changes in water consumption;
- Chemicals Expense;

- Chemicals Expense from anticipated changes in water consumption
- Legal expense;
- Amortization – Reamer Hill Emergency Assistance;
- Amortization – Huntington Temporary Intake;
- Bad Debt Expense;
- Relocation Expense;
- Inventory Physical Write-off Scrap Expense;
- Meals Deductible;
- Dollar Energy Administrative Expense;
- State Business and Occupation (B&O) Taxes;
- Federal and State Income Taxes;
- Federal Income Tax Parent Company Loss Allocation;
- Capitalized OPEB Expense;
- Materials and Supplies;
- Retirement Work in Progress;
- Accumulated Deferred Income Tax Credit;
- Other Deferred Debits;
- Working Cash Component;
- Contributions in Aid of Construction; and,
- Accumulated Deferred Income Taxes.

(Kuhn Direct at 6-8.)

6. After the evidentiary hearing, the following ratemaking items, inter alia, are at issue: whether to reset the DSIC rate to zero; the treatment of the investment and proposed investment in the JUI, *et al*. water and wastewater systems; the treatment of projected investments in certain troubled water and wastewater systems (Armstrong PSD, Kanawha Falls, Nitro, and Boone-Raleigh PSD); and the amount of CWC.

Capital Structure and Cost of Capital

7. Staff recommended a capital structure based on a HTY consisting of thirteen months ending December 31, 2022.

8. CAD's recommendation on capital structure recognized part of the Addendum Period investment.

9. The table in Figure 8 in the Chard Rebuttal, included in §11.B., *supra*, represents the differing approaches taken by the parties.

Return on Equity

10. Company Witness Bulkley analyzes WVAWC as part of the water utility industry estimated capital market information in her DCF, CAPM, ECAPM and Expected Earnings Analysis compared to groups of comparable risk, publicly-traded water, natural gas and electric utility companies.

11. Company Witness Bulkley presented ROE outputs ranging from 10.00 percent to 11.00 percent and ultimately recommended the midpoint or 10.5 percent. (Bulkley Direct, at 62.)

12. Staff Witness Estep recommended an ROE of 9.06 percent in 2021 and now is recommending an ROE of 9.30 percent-a recognition that the Company's cost of equity as he analyses empirical data has increased since his testimony in November 2021. (Estep Direct, at 27.)

Operating Income

Customer Attrition Adjustment

13. The Company proposed a customer attrition adjustment. The Company argued that it still experiences customer losses in the residential classes and small growth in the commercial class. (Company Initial Brief at 000058.)

14. Staff opposed the customer attrition adjustment for residential customers. (Direct Testimony of Roger Estep, Estep Direct, at 6-9.)

Operation and Maintenance Expenses

15. The overall O&M expense proposed by the Company is $68,672,136.

16. The Company included costs associated with the temporary intake it constructed in Huntington, West Virginia, related to the February 2023, train derailment in Palestine, Ohio, which resulted in a chemical spill that impacted the Ohio River. (Company Initial Brief at 000055.)

17. Staff and CAD recommended removal of the Huntington Temporary Intake expense.

18. The Company requested recovery of costs associated with the emergency assistance it provided to a small community water system in Kanawha County. (Company Initial Brief at 000054.)

19. Staff and CAD urge the Commission to reject the small Kanawha County water system emergency assistance expense, on the grounds that the amount, $16,459, is not "extraordinary." (*See, e.g.*, Staff Initial Brief at 000073.)

20. The Company proposed an expense adjustment related to the Cave Road Water acquisition of $92,948.

21. Staff disagreed with the Company's proposed Cave Road Water Expense adjustment because the adjustment exceeds the projected revenues of $41,496, and includes unreasonable estimates, considering the small number of Cave Road customers.

22. The Company's proposed going-level labor and labor related expense adjustments based on 317 full-time positions – 314 positions supporting water operations and 3 positions supporting wastewater operations. (O'Malley Direct at 6.)

23. The Company adjusted the HTY labor expense to reflect a full complement of 357 water and wastewater employees that are expected through the Addendum Period, which includes 18 positions for water operations to backfill employees that have left the business, 2 new positions, 18 water and wastewater positions for the pending Jefferson Utilities, Inc. acquisition, 3 positions for the Boone-Raleigh PSD acquisition and the removal of one position which moved to AWWSC. (O'Malley Direct at 6.)

24. The Company annualized and adjusted the HTY labor hours to a normalized level. (O'Malley Direct at 7.)

25. The Company then multiplied its proposed labor hours by the actual 2023 wage rates by employee position to determine an annualized going-level of expense through the end of the Addendum Period. Id.

26. The Company adjusted wage rates based on a three-year average of historical percentage increases, and the expense was annualized through the FTY. Id.

27. The Company has calculated capitalization percentages based on the HTY ratio of direct labor dollars charged to capital to total direct labor costs and those that are charged to expenses. The capitalization percentages calculated in that manner are 39.37 percent for the Company's water operations, 7.98 percent for its wastewater operations, and a total Company ratio of 39.06 percent. Id.

28. Staff used specific capitalization factors based on test year capitalization of the labor components (regular hours, overtime hours, shift premiums, meals, and performance plans) to reflect going-level costs. (Kuhn Direct at 18.) Staff calculated a 63.18 percent expense factor specific to the test year base, a 42.84 percent expense factor specific to test year overtime payroll, and a 65.26 percent expense factor specific to Performance Plan expense. Id. Staff's payroll adjustment results in total expensed payroll labor costs of $17,310,779. Staffs going-level payroll adjustment is $278,453 less than the Company's adjustment. Id.

29. CAD reduced labor costs by $256,473 to remove seven vacant positions as of June 30, 2023. This adjustment also reduces payroll tax expense by $20,088 and other employee benefits expense by $99,956 (CAD Initial Brief at 000020, *citing* Smith Direct at 64-66; Ex. LA-I, Schedule C-8; Ex. LA-I, Schedule C-9). CAD also removed LTPP costs.

30. Staff and CAD objected to labor costs associated with the acquisitions of Armstrong PSD, Kanawha Falls, and Nitro.

31. Staff calculated training expense based on a three-year average (Staff Initial Brief at 000067-68), while the Company used a five-year average (Company Initial Brief at 000049).

32. Staff calculated training expense based on a three-year average (Staff Initial Brief at 000067-68), while the Company used a five-year average (Company Initial Brief at 000049). The difference in approaches produces a variance of $69,751.

33. Staff calculated legal expenses using a three-year average of the years 2020 through 2022 which results in a going-level expense of $593,185 for water operations. (Staff Initial Brief at 000069.)

34. The Company used a five-year average of the years 2018 through 2022 to determine going-level legal expenses of $705,370 (Adjustment 40).

35. The Company test year legal expense of $777,530, was adjusted expenses downward by $72,160 (Adjustment 40). Using a different number of years for an average, Staff adjusted legal expenses downward by $184,345, creating a variance of $112,185.

36. The Company calculated going-level IOTG expense of $3,887,633 based upon the annualization of current insurance policy premiums for the twelve months ending December 31, 2022, which was then adjusted by the application of

specific policy escalation factors for each policy group for 2023 and 2024. (Company Initial Brief at 000052; Company Rule 42 Exhibit at Adjustment 41; O'Malley Direct at 28.) The Company also included a three-year average of actual retrospective premiums incurred in the going-level expense. Id.

37. CAD recommended an IOTG expense of $3.617 million. CAD accepted the Company's proposed increase for 2023, but not 2024. CAD used a two-year average of 2021 and 2022 costs. (CAD Initial Brief at 000023.)

38. Staff made three adjustments to the Company's OPEB expense. First, Staff used the 2024 amount of $324,000 for the "Increment Approved Alternate Calculation" instead of the incremental amount for 2023 of $399,000. (See Company Initial Brief at 000047; Staff Initial Brief at 62.) Next, Staff used the total OPEB expense amount for 2023 of ($1,826,216) in error instead of the non-service cost of ($1,992,660). Id. Third, Staff removed the Union Medical VEBA amortization in contradiction to the requirement to preserve the Union Medical VEBA established in the 2021 Rate Case. (Company Initial Brief at 000047, *citing* February 2022 Order at 42.)

39. Staff accepted the Company's position that Staff should have used the WV 2023 OPEB Non-Service Cost amount of ($1,992,660) presented by the Company. (Staff Initial Brief at 62-63.)

Tariff Revisions

40. The Company proposed several new tariffs, including (i) a revenue stabilization mechanism (RSM); (ii) cost trackers, including a production cost tracker and pension and OPEB expense trackers; and (iii) low income tariff.

41. Staff and CAD objected to each of the above-referenced tariff revisions.

SEWER RATE CASE

42. The Company filed revised tariff sheets reflecting sewer rates and charges of $470,801 annually, or approximately a 24.9 percent increase, for furnishing sewer utility service to 1,100 customers in Fayette County. (Tariff Form No. 8.) The Company proposed to implement the sewer increase across-the-board to all customer classes. (Company Initial Brief at 000059.) The proposed increase included an allocation of the sewer revenue requirement to the water revenue requirement to support the same percentage increase in rates for both water and sewer customers. This increase would be $3,296,044 without the Company's proposed sewer to water allocation. (Company Initial Brief at 000060.)

43. Like the water filing, the sewer filing consists of an HTY presentation, addendum, and FTY presentations. Many of the adjustments in the water filing apply equally to the sewer filing, as do the Company's positions on capital structure, rate base, revenues, operating expense adjustments, and tax issues. (Company Initial Brief at 000059.) The testimony of Company witnesses on capital structure, rate base, revenues, Service Company expenses, income taxes and taxes other than income taxes applies equally in the sewer case. Id.

44. Staff objects to the sewer to water allocation. Staff recommended the Commission approve a sewer revenue increase of $1,233,523, or 67 percent. (Watson Direct at 4).

45. Staff's variances include: (1) Relocation Expenses; (2) Legal Expenses: (3) Rate Case Expenses; (4) Bad Debt Expenses; (5) Training Expenses; (6) Administrative Cost of Low-Income Tariffs; (7) Federal and State Income Taxes; and, (8) Federal Income Tax Parent Company Loss Allocation. (Staff Initial Brief at 000087.) Staff's position on these issues are the same as Staff's positions with regard to the Company's water service rate issues. Id.

Protective Treatment

46. WVAWC requested permanent protective treatment of the information filed under seal in this proceeding including material produced in its May 1, 2023 filing and discovery. (*See generally*, Motion for Protective Order.)

CONCLUSIONS OF LAW

Rate Base

1. [I]t is generally recognized that the doctrine of stare decisis does not normally apply to administrative decisions. As Professor Davis states in his respected treatise:

> When the purpose is one of regulatory action, as distinguished from merely applying law or policy to past facts, an agency must at all times be free to take such steps as may be proper in the circumstances, irrespective of the past decisions.... Even when conditions remain the same, the administrative understanding of those conditions may change, and the agency must be free to act ....

2 K. Davis, Administrative Law § 18.09 (1958) (footnotes omitted.) *Accord*, State v. Alabama Public Service Commission, 293 Ala. 553, 307 So. 2d 521 (1975); Rumney v. Public Utilities Commissioner, 172 Colo. 314, 472 P.2d 149 (1970). The Commission's decisions in previous cases therefore do not preclude it from reaching an opposite result in this case. C&P Telephone Company v. Public Service Commission of West Virginia,300 S.E.2d 607, 613 (1982).

2. Each rate case decision is based on the facts and circumstances associated with that rate case. As the West Virginia Supreme Court agreed in the 1982 C&P case, "an agency must at all times be free to take such steps as may be proper in the circumstances, irrespective of the past decisions.... Even when conditions remain the same, the administrative understanding of those conditions may change, and the agency must be free to act." C & P, supra at 613.

3. The Commission should approve the use of the Company's proposed Addendum Period in this case, Thus, the Commission should accept the Company's adjustments to provide terminal treatment to certain non-plant rate base items including materials and supplies, retirement work in progress, accumulated deferred income taxes, accumulated deferred investment tax credits, and other deferred debits.

4. The Commission should approve the roll-in of all current DSIC-related investment into rate base as proposed by the Company so that the current DSIC surcharge is reset to zero.

5. The Company has failed to comply with the Commission's directives in the Commission's May 26, 2023 order in Case No. 22-0796-WS-PC with regard to recording the JUI *et al.* acquisitions. Staff testimony and exhibits recommend a rate base related to the JUI, *et al.* acquisitions to be included in this case is $26,884,596. Because the Company has not provided evidence of the reasonableness and prudence of costs beyond the $27 million purchase price, it is reasonable for the Commission to adopt Staff's proposed adjustments related to the JUI, *et al.* acquisition in our final Revenue Requirement calculations in this proceeding and the sewer rate proceeding.

6. The Commission should not include the acquisition of Armstrong PSD, Kanawha Falls, or Nitro in rate base because the related expenses are not reasonably known.

7. Deferred tax balances related to tax timing differences that were not normalized for ratemaking purposes should not be included in the determination of rate base for rate making purposes. The Commission should adopt the Staff

adjustment to rate base for the deferred income tax items identified in Staff Adj. No. 83.

8. The Commission should adopt Staff's adjustment No. 87 because it complies with the Commission's decision in the February 2022 Order. (*See* February 2022 Order at 15) and there is no reason to depart from this treatment in the present proceeding.

9. Because the evidence does not support using different revenue lag days or different expense service periods the Commission will use revenue lag days as reflected in the Company's analysis of its actual lag in the calculation of CWC.

Capital Structure and Cost of Capital

10. A utility capital structure should normally reflect the amount of capital acquired through borrowing (debt), the issuance of stock (common and preferred), retained earnings and other paid in capital contributions from stockholders.

11. For purposes of calculating the utility's cost of capital, the debt components are typically divided into short-term and long-term debt. Equity capital is divided into common equity and preferred equity. The measurement of the ratio of individual capital components to the total capital establishes the relationship among the various capital sources for use in determining a composite WACC. West Virginia-American Water Co., Case No. 10-0920-W-42T, Comm'n Order at 10 (April 18, 2011).

12. The Commission uses the cost rates for long-term debt, short-term debt, preferred equity, and common equity, multiplied by its percentage of the total capital structure, to derive a weighted cost of capital of each component. The weighted cost for each capital component is then combined to reach a composite WACC that the regulator uses as a guide to assist in determining what a utility can earn on the cost of its investment. West Virginia-American Water Co., Case Nos. 15-0675-S-42T, 15-0676-W-42T, Comm'n Order at 62 (February 24, 2016).

13. The capital structure utilized by the Commission to establish rates in any case should closely approximate the ratios of the capital structure components that will be in place during the first year the rates will be in effect in order to finance the rate base that the Commission authorizes in this case. February 2022 Order at Conclusion of Law 15.

14. The Commission should adopt the capital structure recommended by the CAD because it is consistent with an Addendum Period rate base and also represents a reasonable capital structure comprised of approximately 50 percent

debt and 50 percent equity. A capital structure of 3.51 percent short-term debt, 46.37 percent long-term debt, 0.00 preferred equity, and 50.12 percent common equity should be approved, including the debt cost rates recommended by CAD. This capital structure is just and reasonable for determining the appropriate cost of capital in this case and provides a proper matching of the capital component ratios that will fund the rate base authorized in this case.

Return on Equity

15. Utility rates should allow a public utility the opportunity to earn a level of revenue sufficient to attract capital in the competitive capital market balanced with the interests of the consuming public in receiving fair and reasonable rates. Bluefield Water Works v. Public Service Commission, 320 U.S. 679 (1923); Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591, 64 S. Ct. 281 (1944); Permian Basin Area Rate Cases, 390 U.S. 747, 88 S. Ct. 1344 (1968); Monongahela Power Company v. Public Service Commission, 276 S.E.2d 179 (W.Va. 1981).

16. An ROE is based on empirical studies of returns in the capital markets while balancing the interests of ratepayers in receiving fair and reasonable rates. Black Diamond Power Company, Case No. 12-0064-E-42T, Order at 5 (August 10, 2012); WVAWC 2010 Rate Case Order at 15.

17. Upon review of the record presented in this case, and based on Commission judgment and expertise in this area, an ROE of 9.80 percent is just and reasonable and falls within the range of reasonable ROEs presented by the parties. The approved ROE fairly balances the interests of the Company and its customers, and meets the standards set forth by the Supreme Court of Appeals of West Virginia. (*See generally,* C & P Telephone Company, 300 S.E.2d 607.)

18. Based on the discussion and determinations described above concerning the capital structure, cost of debt, preferred stock and ROE, an overall weighted cost of capital of 7.134 percent which fairly balances the interests of the Company and its customers.

Operation and Maintenance Expenses

19. The Company's customer attrition adjustment using the adjusted customer counts that exclude the growth attributable to the new systems acquired by the Company is reasonable because customer additions from acquisitions are accounted for in the adjustments

20. Net unrecovered costs of the Huntington Temporary Intake and the emergency assistance for Reamer Hill should not be included in rate base.

21. It is reasonable to allow recovery through deferred and amortization of the expenses related to the Huntington Temporary Intake at 33.3 percent annual rate. Because this amortization will expire after three years and the Company may fully recover the cost of the intake before the next base rate case, the Commission should allow it as a revenue requirement in the next DSIC rate.

22. The Commission should allow recovery through deferral and amortization of the Reamer Hill Emergency Assistance Expense at 33.3 percent per year. Because this amortization will expire after three years and the Company may fully recover the cost of the intake before the next base rate case, it will be allowed as a revenue requirement in the next DSIC rate.

23. The Company's proposed Cave Road Water acquisition expense adjustment of $92,948 should not be allowed because the adjustment was not part of the Company's original filing and was not adequately supported by evidence.

24. Staff's proposed payroll adjustments are reasonable and will be accepted.

25. The Company should defer any calculated capitalized payroll that is based on a capitalization factor that exceeds the factor included in this case. Deferred amounts should be amortized as though they were included in the appropriate plant accounts, but the amortization may also be deferred.

26. The Commission should accept the LTPP expense proposed by the Company.

27. Staff agreed with the Company's adjustment to training expense, and the Company's adjustment should be accepted.

28. The Company's five-year average adjustment to account for fluctuations in legal expense is reasonable and should be accepted.

29. The Company's approach to IOTG expense is reasonable and should be accepted.

30. Staff and the Company's positions on the OPEB adjustment should be accepted. For the remaining OPEB issues, the Company's position is reasonable, and the Commission will adopt the Company's proposed OPEB expense.

Proposed Tariffs and Tariff Revisions

31. The Company's proposed RSM rider is unreasonable and should be denied because it implicitly shifts risk from investors to customers which would require an adjustment to the authorized rate of return. (*See* February 2022 Order at 52.)

32. The Company's proposed production cost tracker is not reasonable because the Commission generally does not use cost tracking and deferred accounting for specific elements of utility costs, and rate adjustments are included in the Company's per books amounts related to these costs.

33. The Company's proposed pension and OPEB expense tracker is not reasonable and will be denied because the Commission generally does not use cost tracking and deferred accounting for specific elements of utility costs, and rate adjustments are included in the Company's per books amounts related to these costs.

34. The Company's proposed low-income tariff is not reasonable and will be denied because the low-income tariff would shift costs from the customers that signed up for the low-income tariff to the Company's other customers, including 75 percent of the customers that would qualify for the low-income tariff but failed to sign up for the low-income tariff, and because the Commission finds it reasonable to expand the existing SRRS tariff.

35. One policy of good rate design is that: "rates should not be so high in any category or class that it would force the blessings of electrical service to be economically out of reach of the poor or to lose the benefits of high usage which redound to the benefit of all, including the disadvantaged." Appalachian Power Company, Case No. 7083, Order dated Jan. 31, 1975 at 145.

36. It is reasonable and in the public interest to exercise the Commission's ratemaking authority to expand the customers that qualify for the SRRRS Tariff from those customers that are currently receiving (i) Social Security Supplemental Security Income, (ii) Temporary Assistance for Needy Families, (iii) Temporary Assistance for Needy Families-Unemployed Parent Program, and (iv) assistance from the Supplemental Nutrition Assistance Program if they are sixty years of age or older, to include water and wastewater residential customers with an annual household income at or below 200 percent of the FPL. Only customers that qualify for the statutory reduced rate should receive the 20 percent discounted rate. Customers that do not qualify for the statutory reduction in rate, but have an annual

household income at or below 200 percent of the FPL should have their current tariff rates continue.

37. The rate increase approved in this Order applies on a percentage basis across-the-board to all water and sewer rate schedules except for those that qualify for the expanded SRRS tariff.

Sewer Case

38. Use of the Addendum Period is reasonable for this case, consistent with the determination of rate base for the water case.

39. For the reasons explained in the water case, the Commission should accept the adjustments in the sewer case that were accepted in the water case.

40. A rate base of $13,052,091 is just and reasonable for the determination of the cost of service in this proceeding.

41. The Commission should use the capital structure and resulting overall cost of capital of 7.134 percent discussed above as just and reasonable for determining the cost of service in this proceeding.

42. Upon consideration of the Company's method of allocating expenses for water and sewer operations, it is reasonable to determine the rate increase applicable to sewer operations using the same percentage increase in rates that is being approved for water operations. To the extent that the resulting revenues under-recover or over-recover the revenue requirements determined in the separate sewer revenue requirements, such difference should be pro-rated to all water and sewer customers.

ORDER

IT IS THEREFORE ORDERED that the Commission authorizes an overall increase in water base rates of $24,133,275, plus the amount determined to be an appropriate allocation of sewer revenue requirements as discussed herein, and a reduction in the DSIC Rate to zero, as set out in this Order and in the revenue requirements calculation, attached and incorporated herein as Appendix B, which Appendix B is hereby established as the cost of service and revenue requirement approved in these proceedings for the Company for providing water utility service to its customers in West Virginia.

IT IS FURTHER ORDERED that the Commission authorizes an overall increase in sewer revenue requirements of $1,192,685, minus the amount determined to be an appropriate allocation of sewer revenue requirements to water operations as discussed herein and as set out in the requirement calculation, attached and incorporated herein as Appendix C, which Appendix C is hereby established as the cost of service and revenue requirement approved in these proceedings for the Company for providing sewer utility service to its customers in West Virginia. Any difference between the approved increase and the increase produced at the overall net percentage increase will be spread prorata to all customers receiving an increase in water or sewer rates.

IT IS FURTHER ORDERED that no later than ten days from the date of this Order, the West Virginia-American Water Company must prepare and file with the Commission revised tariff schedules that reflect the increase to base rates by tariff classification as shown on Appendices B (water) and C (sewer) and consistent with the Commission decisions contained in this Order. The revised rates should reflect a single percentage across- the board increase to recover both the water and sewer increases approved herein. The percentage increase shall be calculated excluding miscellaneous operating revenue that is not directly related to usage rate revenues and the revenue from customers that qualified for the SRRRS rates in the test year. To the extent that the single percentage increase applied to sewer rates results in a revenue difference in sewer total proforma operating revenue from the revenue requirement authorized herein such difference will be spread prorata to all water and sewer tariff rates excluding the SRRS tariffs as discussed herein on a revenue basis.

IT IS FURTHER ORDERED that West Virginia-American Water Company file separate tariff pages designated RS-1 SRRS, RS-1A SRRS. RS-1B SRRS, etc., applicable to only residential customers and reflecting the current residential rates and charges plus the roll-in of the current DSIC surcharge for this group of customers that is the same group identified in W.Va. Code §24-2A-5.

IT IS FURTHER ORDERED that in future rate cases, the West Virginia-American Water Company will file testimony and exhibits relating to a sewer filing as completely separate and stand-alone documents and all testimony and exhibits in accord with the discussion herein under Other Issues.

IT IS FURTHER ORDERED that the West Virginia-American Water Company requests for permanent protective treatment of the material filed under seal in this proceeding are deferred pending a request for that information.

IT IS FURTHER ORDERED that on entry of this Order these cases shall be removed from the Commission's docket of open cases.

IT IS FURTHER ORDERED that the Executive Secretary of the Commission serve a copy of this Order by electronic service on all parties of record who have filed an e-service agreement, and by United States First Class Mail on all parties of record who have not filed an e-service agreement, and on Commission Staff by hand delivery.

A True Copy, Teste,

Karen Buckley

Karen Buckley, Executive Secretary

PROCEDURAL BACKGROUND

On May 1, 2023, West Virginia-American Water Company (WVAWC) filed a base rate case filing. The filing is seeking $41,175,752 in additional annual net water revenues over present rate revenues, or an overall increase in revenues of approximately 22.5 percent. The $41,175,752 consists of an increase in base rates of $51,308,960 in annual revenue and a decrease in the Company's Distribution System Investment Charge (DSIC) of $10,133,208 in annual revenue. The Company's filing also seeks $470,801 annually in additional wastewater revenues over present rate revenues, or an overall increase in revenues of approximately 24.9 percent. The annual wastewater revenue increase would be $3,280,265, or an overall annual increase in revenues of approximately 173.6 percent

On May 5, 2023, the Consumer Advocate Division (CAD) filed a Petition to intervene.

On May 9, 2023, the Kanawha County Commission filed a Petition to intervene.

On May 11, 2023, Direct Testimony of Robert R. Burton, Christopher J. Carew, Michael P. Raymo, Christina E. Chard, Lori N. O'Malley, Charles B. Rea, Thomas G. O'Drain, Wesley E. Selinger, Melissa Ciullo, Ann E. Bulkley, Robert V. Mustich, and Patrick L. Baryenbruch was filed by Counsel for WVAWC.

On May 15, 2023, Direct Testimony of Melissa Ciullo, Ann E. Bulkley, Robert V. Mustich, and Patrick L. Baryenbruch was filed by Counsel for WVAWC.

Also, on May 15, 2023, the Direct Testimony of Charles B. Rea, Thomas G. O'Drain and Wesley E. Selinger was filed by Counsel for WVAWC was filed.

On May 18, 2023, Comments were filed by City of Princeton.

On May 19, 2023, Comments were filed by the Cabell County Commission.

On May 22, 2023, Comments were filed by the Fayette County Commission.

Also, on May 22, 2023, Comments were filed by the Mercer County Commission.

On May 24, 2023, a Motion for suspension of proposed rates for full statutory period was filed by Staff.

On May 26, 2023, the Commission issued a Procedural Order setting a hearing for December 5, 2023, continuing, if necessary, through December 7, 2023. The Order further stated that: (i) the West Virginia-American Water Company is made a respondent to these proceedings and pending investigation and decision thereon the revised tariff sheets filed by WVAWC are suspended and use of the rates and charges stated therein deferred until the end of the day February 24, 2024, unless otherwise ordered by the Commission, to enable the Commission to examine and investigate the supporting data and provide time for Commission Staff to make reports concerning the matters involved therein; (ii) Case Nos. 23-0383-W-42T and 23-0384-S-42T are consolidated; (iii) the WVAWC motion for limited waiver of Tariff Rule 23 is granted and WVAWC must complete the mailing of notice of these rate cases in the form attached as Attachment A to individual customers within sixty days of the date of this Order; and (iv) the intervention deadline in this case is 4:00 p.m., Monday August 14, 2023; etc.

On May 26, 2023, Comments were filed by Jack Browning.

Also on May 26, 2023, an Initial Staff Memo was filed by Leslie Anderson.

On June 1, 2023, a Procedural schedule for the Commission's consideration was filed by Counsel for WVAWC.

On June 6, 2023, Comments were filed by Steve.

On June 9, 2023, the Commission issued a Procedural Order setting a hearing for December 5, 2023, continuing if necessary through December 7, 2023; Direct Testimony due by October 24, 2023, Including Rebuttal Testimony to WVAWC Testimony; Rebuttal Testimony to Staff and Interveners Direct Testimony due by November 10, 2023; Intervention Deadline August 14, 2023; Last Day to Serve Discovery Requests November 14, 2023; Last Day to Serve Discovery Responses November 28, 2023; Agreed Order of Witnesses and Filing of Stipulation November 30, 2023; etc.

On July 6, 2023, First data request of the West Virginia American Water Company was filed by Counsel for CAD.

On July 10, 2023, Affidavits of publication evidencing publication of the Public Notice of Change in Rates was published in The Hinton News, The Herald-Dispatch, Wayne County News, The Logan Banner, The Lincoln Journal, Coal Valley News, Roane County Reporter, The Jackson Star, The River Cities Register, The Exponent Telegram, The Weston Democrat, The Hurricane Breeze, Clay

County Free Press, The Fayette Tribune, The Register-Herald, Bluefield Daily Telegraph, Braxton Citizens' News, The Charleston Gazette-Mail, and Webster Echo, filed by Counsel for WVAWC.

On July 17, 2023, a Second data request of the WVAWC was filed by Counsel for CAD.

On July 20, 2023, a Response to CAD's first data request was filed by Counsel for WVAWC.

On July 26, 2023, another Response to CAD's first data request for information was filed by Counsel for WVAWC.

On August 7, 2023, a Response to CAD's second request for information was filed by Counsel for WVAWC.

On September 1, 2023, a Third data request of the WVAWC was filed by Counsel for CAD.

On September 15, 2023, a Fourth data request of the WVAWC, filed by Counsel for CAD.

On September 21, 2023, a Response to CAD's third request for information; pages 1-700 was filed by Counsel for WVAWC.

On September 28, 2023, the Commission issued a Procedural Order setting a Virtual Public Comment Hearing for November 2, 2023; that (i) the Commission will issue a press release detailing the process to register to speak at the virtual hearing; (ii) WVAWC shall publish the notice of the public comment hearing, attached hereto as Attachment A, one time not more than twenty days and not less than ten days prior to November 2, 2023, in qualified daily newspapers published in the counties in which the West Virginia-American Water Company serves its customers, making due return to the Commission of proper certification of publication as soon as that certification is received; etc.

On October 5, 2023, a Response to CAD's fourth request for information was filed by Counsel for WVAWC.

On October 6, 2023, the Commission issued a Procedural Order stating that the Commission would hold a virtual public comment hearing in these cases on Thursday, November 2, 2023, beginning at 5:30 p.m. The Commission will issue a press release detailing the process to register to speak at the virtual hearing; the

WVAWC shall publish the corrected notice of the public comment hearing, attached hereto as Attachment A, one time not more than twenty days and not less than ten days prior to November 2, 2023, in qualified daily newspapers published in the counties in which West Virginia-American Water Company serves its customers, making due return to the Commission of proper certification of publication as soon as that certification is received; the September 28, 2023 Order remains the same in all other respects.

On October 10, 2023, a Fifth data request of the WVAWC, filed by Counsel for CAD.

On October 17, 2023, a Motion to modify procedural schedule was filed by Counsel for WVAWC.

On October 20, 2023, a Response to CAD's fifth data request, pages 300-623 was filed by Counsel for WVAWC.

Also, on October 20, 2023, a Response to CAD's fifth data request, pages 1-299 was filed by Counsel for WVAWC.

Lastly, on October 20, 2023, the Commission issued a Procedural Order granting the motion to amend the procedural schedule to move the due date for Rebuttal Testimony from November 10, 2023 to being due November 9, 2023; etc.

On October 23, 2023, a Public Notice of change in rates with proposed effective dates was filed by Counsel for WVAWC.

On October 24, 2023, Confidential Direct Testimony of Ralph Smith was filed by Counsel for CAD.

On October 24, 2023, Direct Testimony of Ralph Smith and David Dismukes was filed by Counsel for CAD.

On October 24, 2023, Confidential Direct Testimony of Susan E. Kuhn was filed by Staff.

On October 24, 2023, Direct Testimony of W. Kent Carper was filed by Counsel for Kanawha County Commission.

On October 24, 2023, Direct Testimony of Susan E. Kuhn, Geoffery M. Cooke, Roger L. Estep, and Christine D. Watson was filed by Staff.

On October 27, 2023, the Commission issued a Procedural Order that WVAWC's proposed Public Notice is modified as reflected herein on Attachment B and approved for use. WVAWC should begin individual mailings and publish the public notice in Berkeley, Jefferson and Morgan Counties, as soon as possible; that West Virginia-American Water Company shall publish the notice of the public comment hearing, attached hereto as Attachment A, one time, as soon as possible, in qualified daily newspapers published in the counties of Berkeley, Morgan, and Jefferson, making due return to the Commission of proper certification of publication as soon as that certification is received; etc.

On October 31, 2023, pursuant to the October 27, 2023 Commission Procedural Order, a status update was filed by Counsel for WVAWC.

On November 9, 2023, Rebuttal Testimony of Robert R. Burton, Christopher J. Carew, Michael P. Raymo, Christina E. Chard, Lori N. O'Malley, Charles B. Rea, Melissa Ciullo, Ann E. Bulkley, and Robert V. Mustich was filed by Counsel for WVAWC.

Also, on November 9, 2023, the Transcript from hearing held before the Commission on Thursday, November 2, 2023, in Charleston, West Virginia, was filed.

On November 17, 2023, a Sixth data request of the WVAWC was filed by Counsel for CAD.

On November 22, 2023, the Commission issued a Procedural Order requiring WVAWC to publish the notice of the evidentiary hearing, attached hereto as Attachment A, one time, as soon as possible, in qualified daily newspapers published in each of the counties in which it provides service, making due return to the Commission of proper certification of publication as soon as that certification is received; etc.

Also, on November 22, 2023, a letter of protest was filed by the City of Charleston's City Council.

On November 27, 2023, an Objection to CAD's sixth request for information; CAD-A-7(d), CAD-A-8, and CAD-A-29(c-d) was filed by Counsel for WVAWC.

Also, on November 27, 2023, the Executive Secretary's Letter evidencing receipt of Protest letter filed by Emmett Pepper, City Councilor of City of Charleston was filed.

On November 28, 2023, a Response to CAD's sixth data request was filed by Counsel for WVAWC.

On November 29, 2023, a Motion to Compel was filed by Counsel for CAD.

On November 30, 2023, an agreed order of witnesses was filed by Counsel for WVAWC pursuant to the June 9, 2023 Procedural Order.

Also, on November 30, 2023, the Commission issued a Procedural Order requiring WVAWC to file responses to the remaining requests from the CAD's Sixth Request for Information as described in this Order by December 1, 2023; etc.

On December 1, 2023, Supplemental responses CAD-A-7, A-8, and A-29, pages 1- 287 was filed by Counsel for WVAWC.

Also, on December 1, 2023, the Commission issued a Procedural Order granting WVAWC's request to excuse the attendance of Thomas G. O'Drain and Patrick L. Baryenbruch at the evidentiary hearing and the Agreed Order of Witnesses is adopted; etc.

Lastly, on December 1, 2023, a replacement page for Statement B, Schedule 1-1 of the Staff Rule 42T-Water Exhibit was filed by Staff.

On December 5, 2023, Confidential Hearing Exhibits; Statement A - Schedule 5 - Water, Statement C - Capital Structure - Final - Water, Statement G Adjustment No. 22 and 35, and RVM-D Attachment 1 was filed by Counsel for WVAWC.

On December 7, 2023, an Affidavit of publication evidencing publication of the Notice of Change in Rates with Proposed Effective Dates in the Morgan Messenger, Journal (Martinsburg), and Spirit of Jefferson Advocate was filed.

On December 12, 2023, Exhibits from the hearing held before the Commission on Tuesday, December 5, 2023, in Charleston, West Virginia, was filed.

Also on December 12, 2023, the Transcript from the hearing held on Tuesday, December 5, 2023 in Charleston, West Virginia, before the Commission was filed.

On December 13, 2023, Exhibits from the hearing held before the Commission on Wednesday, December 6, 2023, in Charleston, West Virginia, was filed.

Also, on December 13, 2023, the Transcript from hearing held before the Commission on Wednesday, December 6, 2023, in Charleston, West Virginia, was filed.

On December 19, 2023, Confidential Exhibits from the hearing held before the Commission on Tuesday, December 5, 2023, in Charleston, West Virginia, was filed.

On December 21, 2023, Confidential CD Exhibits from the hearing held before the Commission on Tuesday, December 5, 2023, in Charleston, West Virginia, was filed.

On December 26, 2023, a Corrected Exhibit (WVAW S-1) from the hearing held before the Commission on December 5, 2023, in Charleston, West Virginia, was filed.

On December 27, 2023, a Second Corrected Exhibit from the hearing held before the Commission on December 5, 2023, in Charleston, West Virginia, was filed.

Also, on December 27, 2023, a Corrected confidential CD Exhibit from the hearing held before the Commission on Tuesday, December 5, 2023, in Charleston, West Virginia, was filed.

On January 6, 2024, an Initial Brief was filed by Counsel for CAD.

Also. on January 5, 2024, an Initial Brief was filed by Staff.

Further, on January 5, 2024, an Initial Brief was filed by Counsel for WVAWC.

Lastly, on January 5, 2024, an Affidavit of publication evidencing publication of the Notice of Public Comment Hearing in Clay County Free Press, Morgan Messenger, Webster Echo, Herald - Dispatch, Lincoln Journal, Logan Banner, Wayne County News Coal Valley News, Weston Democrat, River Cities Tribune, Jackson herald, Exponent Telegram, Fayette Tribune, Hinton News, Charleston Gazette-Mail, Hurricane Breeze, Roane County Reporter, Braxton Citizens' News, Register-Herald, Bluefield Daily Telegraph, Spirit of Jefferson Advocate, and Journal was filed.

On January 12, 2024, a Reply Brief was filed by Counsel for WVAWC.

Also on January 12, 2024, a Reply Brief was filed by CAD.

Lastly, on January 12, 2024, a Reply Brief was filed by Staff.

On February 9, 2024, Affidavits of publication evidencing publication of the Notice of Hearing in River Cities Tribune, Hinton News, Clay County Free Press, Wayne County News, Logan Banner, Lincoln Journal, Coal Valley News, Herald-Dispatch, Spirit of Jefferson Advocate, Charleston Gazette-Mail, Webster Echo, Weston Democrat, Jackson Herald, Exponent Telegram, Hurricane Breeze, Morgan Messenger, Roane County Reporter, Journal Martinsburg, Braxton Citizens' News, Fayette Tribune, Register-Herald, and Bluefield Daily Telegraph was filed.

Attachment 7

On March 31, 2023, Indiana-American Water Company, Inc. ("Petitioner," "Indiana American," or "INAWC") filed its Petition for General Rate Increase and Associated Relief under Ind. Code § 8-1-2-42.7, Surcharge Under Ind. Code § 8-1-2-46.2, and Approval of Plans to Develop Future Water Sources under Ind. Code § 8-1-2-23.5 and Notice of Provision of Information in Accordance with the Minimum Standard Filing Requirements with the Indiana Utility Regulatory Commission ("Commission"), seeking: (i) authority to increase its rates and charges for water and wastewater through a three-step rate implementation, (ii) approval of new schedules of rates and charges, (iii) approval of revised depreciation rates applicable to its water and wastewater plant in service, (iv) approval of the regulatory accounting treatment, (v) approval of Petitioner's extension of service to a Montgomery County Infrastructure Development Zone and authority to implement a surcharge under Ind. Code § 8-1-2-46.2, and (vi) approval of Petitioner's plans to develop future sources of water supply. That same day Indiana American also filed testimony and exhibits from the following witnesses[1]:

- Matthew Prine, President of Indiana American
- Gregory D. Shimansky, Director, Rates & Regulatory for American Water Works Service Company, Inc. ("Service Company")
- Matthew H. Hobbs, Director of Engineering at Indiana American
- Kari C. Britto, Vice President, Operations at Indiana American
- Charles B. Rea, Senior Director, Regulatory Pricing and Affordability for the Service Company
- Nicholas Furia, Assistant Treasurer for the Service Company
- Ann E. Bulkley, Principal at The Brattle Group
- Jennifer M.B. Grisham, Senior Manager of Regulatory Services for the Service Company
- Manuel Cifuentes, Jr., Senior Principal Regulatory Analyst for the Service Company
- Thomas G. O'Drain, Director of National Categories and Corporate Procurement for the Service Company
- Patrick Baryenbruch, President, Baryenbruch & Company LLC
- Larry E. Kennedy, Senior Vice President, Concentric Energy Advisors, Inc.

Petitions to Intervene were filed on April 5, 2023, by Citizens Action Coalition of Indiana, Inc. ("CAC"); on April 11, 2023, by the City of Crown Point ("Crown Point"); on April 17, 2023, by the Town of Schererville ("Schererville") and Sullivan-Vigo Rural Water Corporation ("Sullivan-Vigo"); on April 26, 2023 by a group of industrial customers of Indiana American[2] ("Industrial Group"); on May 4, 2023, by the Town of Whiteland ("Whiteland"); on May 19, 2023, by Borden Tri-County Regional Water District, Jackson County Water Utility, Inc., and the Town

[1] On April 28, 2023, Indiana American filed corrections to witnesses Shimansky and Rea testimony. On June 6, 2023, Indiana American filed its second submission of corrections to witnesses Shimansky, Britto, Bulkley, and Cifuentes and updates to certain of its financial exhibits. On August 29, 2023, Indiana American filed its third submission of corrections to witness Shimansky's direct testimony. All corrections were included in the evidence submitted at the hearing.

[2] The ad hoc group at time of intervention included, Cleveland Cliffs Steel LLC, Linda, General Motors, Haynes International, Inc., and United States Steel Corporation.

of Greenville, Indiana; and on July 13, 2023, by Hamilton County Regional Utility District ("District"), (collectively, the "Intervenors"). The Commission issued Docket Entries in which each of said petitions to intervene were granted; thus, all of the entities requesting intervention were made parties to this Cause. The Indiana Office of Utility Consumer Counselor ("OUCC") also participated.

A Stipulation as to Procedural Matters setting forth certain procedural matters that had been agreed upon with the OUCC, and Intervenors CAC, Crown Point, Schererville, Sullivan Vigo, and the Industrial Group was filed on April 21, 2023. By Docket Entry issued May 3, 2023, the Presiding Officers established certain procedural requirements, scheduling, and other matters. By Docket Entry dated June 23, 2023, the Presiding Officers modified the date by which the OUCC and all Intervenors were to file their respective cases.

Pursuant to Ind. Code § 8-1-2-61(b), a public field hearing was conducted on June 29, 2023, in Fishers, Indiana, which is the largest municipality in Petitioner's service area. Pursuant to the Commission's June 19, 2023 Docket Entry granting the OUCC's request for a second field hearing, a second field hearing was conducted on July 6, 2023, in the City of Gary. During the public field hearings, members of the public provided oral and/or written testimony in this Cause.

On July 21, 2023, the OUCC and Intervenors filed their respective cases-in-chief. The OUCC's case-in-chief included testimony and attachments from the following witnesses[3]:

- Scott Bell, Director of the Water/Wastewater Division
- Carla Sullivan, Utility Analyst in the Water/Wastewater Division
- Margaret Stull, Chief Technical Advisor in the Water/Wastewater Division
- Thomas Malan, Utility Analyst in the Water/Wastewater Division
- Jason Compton, Utility Analyst in the Water/Wastewater Division
- Shawn Dellinger, Senior Utility Analyst in the Water/Wastewater Division
- David Garrett, Resolve Utility Consulting, PLLC
- Jerome Mierzwa, Principal and Vice President, Exeter Associates, Inc.
- James Parks, Senior Utility Analyst in the Water/Wastewater Division
- Carl Seals, Assistant Director of the Water/Wastewater Division
- Kristen Willoughby, Utility Analyst in the Water/Wastewater Division

The OUCC also filed the written consumer comments pertaining to this docket and the relief requested as Public's Exhibit 12.

A group of sale-for-resale ("SFR") customers ("Wholesale Customers") filed the testimony of Eric Callocchia, Partner of NewGen Strategies & Solutions, LLC's Environmental Practice.[4]

[3] On August 2, 2023, the OUCC filed corrections to the testimony of Scott A. Bell, Carla F. Sullivan, and Thomas W. Malan and redlined schedules. On August 30, 2023, the OUCC filed additional corrections to Ms. Sullivan's testimony. All corrections were included in the evidence submitted at the hearing.

[4] The Wholesale Customers include the Towns of Schererville, Greenville, and Whiteland, the City of Crown Point, Borden Tri-County Regional Water District, Jackson County Water Utility, Inc., Hamilton County Regional Utility District, and the Sullivan-Vigo Water Corporation.

The District filed the testimony and attachments of Martin A. Wessler, CEO of Wessler Engineering.

The Industrial Group's case-in-chief included testimony and attachments from the following witnesses[5]:

- Michael Gorman, Managing Principal, Brubaker & Associates, Inc.
- Jessica York, Consultant, Public Utility Regulation, Brubaker & Associates, Inc.

Crown Point filed testimony from Gregory Guerrettaz, President, Financial Solutions Group, Inc.

Whiteland filed testimony and attachments of Carmen Young, Director of Administration for Whiteland.

CAC filed testimony and attachments from Benjamin Inskeep, CAC's Program Director.

On August 8, 2023, Indiana American filed rebuttal testimony, exhibits, and workpapers for witnesses Shimansky, Hobbs, Britto, Rea, Bulkley, Grisham, Cifuentes, and Kennedy.[6] Indiana American also filed rebuttal testimony for Melissa Ciullo, Vice President of Tax, and Michael Farrell, Senior Director with Willis Towers Watson. On the same day, the OUCC filed cross-answering testimony and exhibits of witnesses Stull and Mierzwa; the Industrial Group filed cross-answering testimony and exhibits of witness York; the Wholesale Customers filed the cross-answering testimony and exhibits of witness Callocchia; the District filed the cross-answering testimony of Wessler; and CAC filed cross-answering testimony of Benjamin Inskeep.

The Presiding Officers caused to be issued Docket Entries requesting additional information from Indiana American on June 12, 2023, August 4, 2023, August 17, 2023, August 25, 2023, August 30, 2023, and August 31, 2023, to which Indiana American filed its responses on June 13, 2023 (Pet. Ex. 25), August 8, 2023 (Pet. Ex. 26), August 21, 2023 (Pet. Ex. 27), August 30, 2023 (Pet. Ex. 28), August 31, 2023 (Pet. Ex. 29), and September 1, 2023 (Pet. Ex. 30).

The Commission held an evidentiary hearing in this Cause starting on August 31, 2023, at 9:30 a.m. and continuing on September 5, 2023, in Room 222 of the PNC Center, 101 West Washington Street, Indianapolis, Indiana. Indiana American, the OUCC, and Intervenors were present and participated through counsel. The testimony and exhibits of the parties were admitted into the record without objection.

Having considered the evidence presented and based on the applicable law, the Commission now finds:

1. <u>Notice and Jurisdiction</u>. Notice of the petition filed in this Cause was given and

[5] The Industrial Group filed corrections to its witnesses' testimony on July 24, 2023.

[6] On August 31, 2023, Petitioner filed a corrected Attachment CBR-7R to Mr. Rea's rebuttal testimony.

published by Petitioner as required by law, and Petitioner provided notice to its customers summarizing the nature and extent of the proposed changes in its rates and charges for water service. Pet. Ex. 1, Attachments MP-1 and MP-2.

Due, legal, and timely notices of the public hearings in this Cause were given and published as required by law. Petitioner is a "public utility" within the meaning of that term in Ind. Code § 8-1-2-1(a)(2) and is subject to the jurisdiction of the Commission in the manner and to the extent provided by the laws of the State of Indiana. Under Ind. Code §§ 8-1-2-42 and 42.7, the Commission has jurisdiction over Petitioner's rates and charges. The Commission also has jurisdiction over Petitioner's extensions of water and wastewater service to rural areas under Ind. Code § 8-1-2-46.2 and the development of future water sources under Ind. Code § 8-1-2-23.5. Accordingly, the Commission has jurisdiction over Petitioner and the subject matter of this proceeding.

2. Petitioner's Organization and Business. Indiana American is a public utility with its principal place of business located at 153 North Emerson Ave., Greenwood, Indiana. Indiana American provides water utility service to approximately 328,000 customers located in and around numerous communities throughout the State of Indiana. Indiana American also provides sewer utility service to approximately 2,400 customers located in Clark, Delaware, Hamilton, Wabash, and Vigo Counties.

Indiana American renders such water and wastewater utility service by means of utility plant, property, equipment, and related facilities owned, leased, operated, managed, and controlled by it which are used and useful for the convenience of the public in the production, treatment, transmission, distribution, and sale of water for residential, commercial, industrial, public authority, and sale for resale purposes, for the provision of public and private fire service, and for the provision of wastewater service.

3. Existing Rates. Petitioner's existing basic rates and charges for water and wastewater utility service were established pursuant to the Commission's Order in *Indiana-American Water Co.*, Cause No. 45142 (IURC June 26, 2019) (the "2019 Rate Order") and adjusted downward through a Settlement in Cause No. 45032 S4 (Petitioner's subdocket for addressing certain impacts of the Tax Cuts and Jobs Act of 2017) and also to reflect the removal of Utility Receipts Tax ("URT"). Since the 2019 Rate Order, Petitioner has also implemented a Distribution System Improvement Charge ("DSIC") pursuant to the Commission's Orders in Cause Nos. 42351 DSIC 12, issued March 17, 2021, 42351 DSIC 13, issued March 21, 2022, and 42351 DSIC 14, issued March 22, 2023. A Service Enhancement Improvement ("SEI") charge was authorized by the Commission's Orders in Cause Nos. 45609 SEI 1, issued February 22, 2023, and 45609 SEI S1, issued March 8, 2023.

4. Test Year. As authorized by Ind. Code § 8-1-2-42.7(d)(1), Petitioner proposed a forward-looking test period using projected data. As provided in the Commission's May 3, 2023 Docket Entry, the test year to be used for determining Petitioner's projected operating revenues, expenses and operating income shall be the 12-month period ending April 30, 2025. The historical base period is the 12-month period ending September 30, 2022.

5. Indiana American's Requested Relief. In its Petition, Indiana American sought Commission approval of an overall increase in rates and charges for water and wastewater service that would produce additional revenues in three steps of approximately $86.7 million, which would reflect an overall revenue increase of 31.1%. This overall revenue increase comprises a Step 1 increase of 15.49%, a Step 2 increase of 5.63% from Step 1, and a Step 3 increase of 7.45% from Step 2. As a rate mitigation effort, Petitioner requested to recover 65% of its total wastewater revenue requirement ($4,658,471 at Step 3) through wastewater rates. After reallocating $1,630,465 of the wastewater revenue requirement to water, the projected wastewater revenue requirement is $3,028,006.[7] Increases to industrial and SFR classes were to be capped at 1.5 times the overall water revenue increase. No increase to public and private fire service was requested. The remainder of the increase was to be allocated to residential and commercial classes in proportion to present rate revenues. Rates for Areas 1, 2, and 3 will be fully consolidated, phased in over the three steps.

As detailed in Indiana American's case-in-chief, Petitioner also requested Commission approval of a new schedule of rates and charges applicable to water and wastewater utility service, as well as approval of a new Universal Affordability Tariff for water service. Indiana American also requested approval of revised depreciation rates applicable to its water and wastewater plant in service, approval of regulatory accounting treatment, approval of Petitioner's extension of service to an Infrastructure Development Zone in Montgomery County and authority to implement a surcharge under Ind. Code § 8-1-2-46.2, and approval of Petitioner's plans to develop future sources of water supply.

6. Overview of the Evidence.

A. INAWC Case-in-Chief. Mr. Prine addressed Indiana American's provision of water and wastewater services in Indiana. He discussed the major drivers of Petitioner's request for rate relief in this proceeding, primarily the significant capital investments and other expenditures that Petitioner has made and plans to make through April 2025. He explained how Petitioner's ratemaking proposals are intended to support the more efficient use of water, investment in Indiana American's system, and the long-term interests of customers. Finally, he discussed Petitioner's corporate citizenship and community outreach efforts.

Mr. Shimansky testified on the test period used in this case and Petitioner's overall revenue requirement, rate base, depreciation, amortization, pension costs, and other post-employment benefit ("OPEB") costs, including Petitioner's request for regulatory accounting treatment of pension/OPEB costs, production costs, and certain costs associated with the proposed new

[7] On June 6, 2023, Petitioner filed a Second Submission of Corrections to Direct Testimony and Exhibits updating several financial exhibits reflecting an overall revenue increase of 31.77% or approximately $88.6 million. Petitioner explained that a re-run of its model would be done at rebuttal but offered to provide an updated CD of the model upon request of the Commission. At the Commission's request, Petitioner filed its updated full financial model on June 13, 2023. Subsequent to this filing, Petitioner indicated in an August 31, 2023 Docket Entry response that it did not increase its rate request when it filed its June 6, 2023 update. However, Petitioner compared its rebuttal position to the full financial model filed on June 13, 2023, noting that although it was accepting certain positions of other parties, the changes did not fully offset the net increase in revenue requirement filed on June 13, 2023. Pet.'s Ex. 29. Therefore, the Commission's determination of the issues identified in this Order uses the full financial model filed on June 13, 2023.

Universal Affordability Tariff. He also presented Petitioner's proposals related to: (1) an over-collection associated with the repeal of the URT, and (2) a surcharge related to an Infrastructure Development Zone established in Montgomery County.

Mr. Hobbs testified on the used and useful nature of the utility plant in service ("UPIS"), explained Petitioner's overall approach to capital management, and described the significant capital investments Petitioner has made and plans to make. He also described Petitioner's plans for future source of supply investments.

Ms. Britto described Petitioner's water and wastewater operations, commitment to water quality and safety, ongoing efforts to improve water and wastewater efficiency, and employee staffing levels and compensation.

Mr. Rea sponsored Petitioner's cost of service analysis and rate design proposals, affordability analyses, and revenue projections including adjustments to Indiana American's historical billing determinants.

Mr. Furia testified on the projected capital structure to be used for computing the weighted average cost of capital ("WACC") for Indiana American. The WACC is used as the authorized overall rate of return on rate base in this Cause.

Ms. Bulkley testified on the reasonableness of Petitioner's requested cost of common equity, capital structure, and requested authorized net operating income as compared to a fair return on the fair value of Petitioner's assets.

Ms. Grisham discussed and supported the level of operations and maintenance ("O&M") expense as it relates to: (1) labor and labor-related costs, (2) pension/benefits, (3) support services, (4) contract services, and (5) taxes other than income, with the exception of property taxes which was covered by Mr. Cifuentes.

Mr. Cifuentes discussed and provided support for the level of O&M expense as it relates to: (1) production costs, (2) other operating expenses not covered by Ms. Grisham, and (3) property taxes.

Mr. O'Drain testified in support of current and projected chemical pricing.

Mr. Baryenbruch offered support for the necessity and reasonable cost of services provided by the Service Company as shown by Petitioner's Service Company Market Cost Comparison.

Mr. Kennedy testified on the comprehensive depreciation study for water and wastewater plant in service.

Petitioner also provided its Financial Exhibit in support of its requested relief in this proceeding in Excel and PDF formats.

B. OUCC and Intervenors' Cases-in-Chief. The OUCC and Intervenors proposed a number of adjustments to Petitioner's proposed revenue requirements and took issue with numerous other components of Indiana American's case-in-chief and proposed rate increase.

For instance, the OUCC proposed a return on equity ("ROE") of 9.0% versus Petitioner's proposed ROE of 10.6% and recommended certain operating revenue and expense adjustments. The OUCC recommended seven changes to Indiana American's proposed water operations rate base, including changes to UPIS, cost of removal, retirements, and accumulated depreciation, all summarized in Table 7 of OUCC Exhibit 3. Specifically, the OUCC recommended adjustments related to the following: (1) Sheridan – Land for future wellfield, (2) Sheridan Water Treatment Plant, (3) & (4) Sheridan Main Extensions, (5) Winchester Water Treatment Plant, (6) Lake Station Wells and Treatment Plant, and (7) BT SOP 98-01 Costs. OUCC witness Parks recommended denial of Petitioner's two major projects, as well as disallowance of the $9.3 million transmission main Indiana American proposed from its Sheridan treatment plant to serve the District. Further, OUCC witness Seals discussed Indiana American's levels of non-revenue water and made recommendations regarding non-revenue water and other Indiana American operational issues. OUCC witness Willoughby recommended adjustments to non-construction costs for one of Petitioner's lift station projects, denial of another lift station project, and denial of Petitioner's proposed acquisition of property in Sheridan for new wellfields.

Industrial Group witness Mr. Gorman recommended adjustments to Petitioner's overall rate of return, return on common equity and capital structure, and other revenue requirement adjustments reflecting a reduction to total company revenue requirement from approximately $92.1 million over three steps to approximately $60.6 million. His recommended return on equity is 9.10%, which produces an overall return of 6.00% for 2023, 5.97% for 2024, and 6.08% for 2025. Mr. Gorman also proposed a three-year amortization period to return Indiana excess accumulated deferred income tax ("EADIT"), an adjustment to Petitioner's offset to its revenue requirement based on URT over-collection to include carrying charges at an 8% interest rate, an adjustment to projected O&M expense based on his proposed inflationary factors, and adjustment to projected residential sales to reflect a slowing in reduced use per customer, a reduction to projected contractor expense, and an adjustment to salaries and wages expense to address employee attrition. He also objected to the inclusion of the prepaid pension asset and the OPEB asset in Petitioner's capital structure.

Industrial Group witness Ms. York recommended adjustments to Petitioner's class cost of service study ("COSS") and its proposed spread of the requested revenue change across rate classes. Specifically, Ms. York recommended that any rate increase approved by the Commission be implemented in the form of an across-the-board rate, system average increase. In addition, Ms. York recommended that the Commission direct Indiana American to make meaningful movement toward cost of service for its wastewater customers to reduce the non-cost-based subsidy that is currently being provided by water customers. She also recommended that Petitioner be required to move toward class-specific rates, beginning with developing and implementing a separate rate schedule for the industrial class at the conclusion of this case. Lastly, Ms. York recommended that the revenue requirements associated with the DSIC and the SEI charge that are being rolled into base rates continue to be recovered from customers on a per meter basis, rather than a combination of meter charges and volumetric charges.

The Wholesale Customers witness Callocchia recommended the Commission reject Petitioner's COSS and require any increase to be implemented across-the-board to each customer class, make changes to Petitioner's proposed rate design to recover DSIC and SEI costs via meter charges, and require Petitioner properly calculate a transmission rate for Wholesale Customers.

CAC witness Inskeep and Crown Point witness Guerrettaz argued for a lower ROE and Mr. Inskeep made recommendations with respect to URT over-collection and certain existing fees and charges that would affect the overall revenue requirement.

C. INAWC Rebuttal. Mr. Shimansky rebutted positions taken by the CAC, Crown Point, Industrial Group, and OUCC, with respect to overall revenue requirements, rate base forecasts, specific projects included in the case, the Hamilton County Bakers Corner transmission main, the Montgomery County surcharge, Indiana State EADIT, prepaid pension and OPEB assets, proposed new regulatory accounts, depreciation and amortization, amortization lives, acquisition related expenses, recovery of deferred expenses, URT repeal impacts to revenues, operating revenues and associated adjustments, future test year filings, long-term planning, fees and charges, and Petitioner's tariffs. Mr. Shimansky testified that Petitioner is accepting certain Intervenor positions, including their position on Montgomery County and customer-side lead line property tax issues, the removal of certain expenses from the revenue requirement, and the update to the current IURC Fee.

Mr. Hobbs responded to criticisms raised by OUCC witnesses Bell, Parks, and Willoughby regarding Petitioner's proposed capital investments. Mr. Hobbs rebutted positions taken by the OUCC on the Winchester and Sheridan Major Projects, as well as other capital projects, and explained why these projects are necessary for Indiana American to continue providing safe and reliable service. Ms. Britto responded to OUCC witness Parks' recommendation that the Lake Station Water Treatment Plant ("WTP") should be removed from Petitioner's rate base, as well as to OUCC witness Seals' positions on non-revenue water and other Indiana American operations. She also addressed issues raised by Industrial Group witness Gorman and OUCC witness Malan regarding Petitioner's proposed headcount and line locate expense. Finally, she responded to issues raised by CAC witness Inskeep regarding Petitioner's disconnect process.

Mr. Rea responded to OUCC witnesses Bell, Sullivan, Compton, Dellinger, and Mierzwa, CAC witness Inskeep, Crown Point witness Guerrettaz, Wholesale Customers witness Callocchia, Whiteland witness Young, Industrial Group witnesses Gorman and York regarding issues related to: (1) affordability, (2) Universal Affordability Tariff, (3) cost of service, (4) water rate design, (5) revenue allocations, (6) wastewater revenue requirement reallocation, (7) Indiana American residential water usage analysis, (8) bill comparisons, and (9) revenue calculations.

Ms. Bulkley responded to the issues raised in the testimonies of OUCC witness Dellinger, Industrial Group witness Gorman, CAC witness Inskeep, and Crown Point witness Guerrettaz regarding a just and reasonable ROE and the appropriate capital structure for Petitioner in this proceeding.

Ms. Grisham addressed issues raised by the OUCC and the Industrial Group regarding labor and labor-related contract services, support services, and uncollectible expenses. Mr. Cifuentes responded to recommendations made by the OUCC concerning the proposed updates to

the gross revenue conversion factor, proposed changes to the late payment fee percentage, removal of annualization adjustments as it pertains to Building Maintenance & Supplies, Telecommunications, Postage Printing & Stationery, Office Supplies & Services, Employee Related Expense Travel & Entertainment, Miscellaneous Expense, and Maintenance Supplies & Services. He also addressed the Industrial Group's proposed adjustment related to the application of certain inflationary adjustments. Mr. Kennedy responded to the changes recommended by OUCC witness Garrett to the average service life and Iowa curve estimates. Ms. Ciullo supported Petitioner's method of calculating and including income tax expense and accumulated deferred income taxes ("ADIT") and addressed the proposal by OUCC witness Stull to change the tax accounting regulatory treatment of the tax repairs deduction, its impact on income tax expense and ADIT and her adjusted calculation for the Average Rate Assumption Method ("ARAM") component of EADIT giveback. Mr. Farrell responded to Industrial Group witness Gorman's recommendation that the prepaid pension asset and OPEB asset be removed from Petitioner's capital structure for ratemaking purposes.

D. Cross-Answering Testimony. The OUCC and Intervenors filed cross-answering testimony on various topics. For example, OUCC witness Stull responded to rate design issues associated with Indiana American's DSIC and SEI capital trackers raised by Crown Point witness Guerrettaz, Wholesale Customers witness Callocchia, and Industrial Group witness York. OUCC witness Mierzwa responded to various witness testimony concerning their positions on the water COSS, revenue allocations, and rate design proposals presented by Indiana American. Industrial Group witness York responded to the positions taken by OUCC witness Mierzwa regarding COSS and revenue allocation and to Wholesale Customers witness Callocchia's COSS recommendations.

CAC witness Inskeep provided cross-answering testimony regarding other parties' positions regarding the Universal Affordability Tariff. Wholesale Customers witness Callocchia responded to testimonies submitted by the OUCC, Industrial Group, and CAC related to their positions regarding Petitioner's COSS, rate design, and affordability. District witness Wessler addressed certain concerns or questions raised by OUCC witness Parks regarding the anticipated water needs in Hamilton County, Indiana, by discussing the anticipated development plans and overall need for potable water and fire protection service in the District's service territory.

7. Petitioner's Rate Base.

A. Utility Plant Forecast.

1. Major Projects. Indiana American proposed to include two major projects in this Cause—the Winchester Major Project and the Sheridan Major Project. Both projects consist of replacing existing an WTP with a new, higher capacity WTP. The Winchester Major Project's projected in-service date is April 30, 2025, with an estimated cost of approximately $25 million. The Sheridan Major Project's projected in-service date is August 31, 2024, with an estimated cost of approximately $29.82 million.[8]

[8] Based on Petitioner's December 27, 2023 Submission of Monthly Update, the estimated cost of the Sheridan WTP is $30,584,508 and the Winchester WTP is $24,191,828.

a. Winchester Major Project.

i. INAWC Case-in-Chief. Mr. Hobbs testified Petitioner is proposing to replace the Winchester WTP because the existing plant has capacity issues, structural issues, as well as safety and water quality/quantity concerns. With respect to capacity, Mr. Hobbs testified the existing aeralator/filtration system at Winchester was constructed in 2001 and does not provide adequate filtration capacity to reliably treat the maximum daily demands for the system. He further testified a December 2020 TIC Aeralator Evaluation report indicated the Aeralator system is in poor condition and the Winchester system is not able to deliver 3,500 gallons per minute ("gpm") for three-hour durations to meet fire flow recommendations. Based on the Structural Assessment Summary, there are also structural concerns with the existing chemical building. Additionally, Mr. Hobbs testified that there are safety concerns present with the existing chemical transport process, as well as chemical system deficiencies identified at the existing chemical feed building. He further testified no clearwell storage exists at the existing facility and the Winchester WTP does not provide chlorine contact time to meet 4-Log inactivation of viruses.

Mr. Hobbs sponsored relevant portions of the Winchester Comprehensive Planning Study ("CPS"), which discusses the recommended solution for each project as well as alternatives Petitioner identified for each portion of the project. While the TIC Aeralator Evaluation report identifies rehabilitation of the Aeralator unit as a potential alternative, Mr. Hobbs testified that attempting to improve the existing facilities is not recommended for several reasons, including the condition of the existing facilities and inadequate capacity of the existing facilities. He testified replacement of the facility is therefore recommended. Mr. Hobbs sponsored Attachments MHH-7 through MHH-13 of Petitioner's Exhibits 3 and 3-C providing additional support for the Winchester Major Project.

ii. OUCC. Mr. Parks recommended the Commission disallow including the Winchester Major Project in rate base because Indiana American failed to support the need for the project at the $25 million cost. Mr. Parks testified the proposed replacement plant is oversized, there is no Life Cycle Cost-Benefit Analysis ("LCCBA") of alternatives as required by Ind. Code § 13-18-26-3, and it is too expensive at $25 million or $12.68 million per MG of rated capacity, which exceeds costs paid by other utilities for groundwater treatment plants. In addition, Mr. Parks testified Indiana American has not supported the total replacement of the existing plant with a much larger plant, and that its requested project costs are prudent and in the best interest of customers. Mr. Parks further testified there are substantial cost discrepancies in Indiana American's cost estimates that Petitioner has not mentioned or explained.

Mr. Parks testified Indiana American did not evaluate any alternatives for the Winchester Major Project and did not perform a LCCBA. Mr. Parks testified a LCCBA analysis is required under Indiana law to receive an Indiana Department of Environmental Management ("IDEM") construction permit for water treatment plant modifications or expansions. Indiana American must prepare and certify with its permit application that it has completed a LCCBA in accordance with Ind. Code § 13-18-26-3. Mr. Parks recommended that Indiana American be required to identify alternatives as part of its standard capital planning efforts and comply with Ind. Code § 13-18-26-3.

With respect to his contention that Indiana American did not support the total replacement of the existing plant, Mr. Parks testified Indiana American should have evaluated other alternatives, including the rehabilitation and repainting of the Unilator as an alternative to replacement. Mr. Parks cited to the Winchester CPS portions, which indicates the life expectancy of the existing Unilator can range from 25 to 35 years. Mr. Parks testified Indiana American has not provided evidence that the Unilator cannot be rehabilitated and repainted. Mr. Parks further testified that despite Petitioner's claims that it cannot meet maximum day demand (0.85 MGD in 2023) when only two of the four filter cells are in service providing a 0.72 MGD firm capacity based on 3.0 gpm/ft, Indiana American can currently meet peak demand in its Winchester system. Additionally, Mr. Parks testified Petitioner does not need to increase the Winchester WTP's firm and rated capacities because the Winchester CPS indicates decreasing maximum day demand through 2035. Further, with respect to Petitioner's decision to construct a new clearwell as part of the Winchester Major Project, Mr. Parks testified Petitioner has not demonstrated that it is required by IDEM under the Groundwater Rule to meet a 4-Log virus inactivation.

As to the proposed $25 million cost of the Winchester Major Project, Mr. Parks calculated a capital cost of $12.68 million per MG of capacity and testified this capital cost is significantly above two other similar WTP projects. He compared the Winchester Major Project to the Eastern Bartholomew Water Corporation WTP[9] and the Batesville Water & Gas Utility WTP.[10] Mr. Parks updated the costs to 2023 and estimated total project costs of $11.12 million and $9.1 million for the Eastern Bartholomew plant and the Batesville plant, respectively. Mr. Parks estimated the new Winchester plant without the maintenance garage should cost $6.65 million. Mr. Parks also testified Indiana American's estimated costs for the new Winchester facilities have varied and increased substantially since 2021. Mr. Parks also testified the proposed design and site layout of the water treatment plant are oversized, overly lavish, expensive, and unwarranted.

iii. <u>INAWC Rebuttal</u>. Mr. Hobbs disagreed with Mr. Parks' recommendation to disallow the Winchester Major Project because it fails to recognize the age, capacity, condition, or process challenges associated with the current facility. Mr. Hobbs explained that while the age and condition of the Aeralator unit is one of the primary reasons Indiana American determined to replace the Winchester treatment plant, there are a number of other critical areas of treatment and resiliency that need to be addressed as part of the overall project. He explained these challenges include capacity concerns, structural concerns, and process challenges, in addition to the Aeralator unit, that need to be addressed at the plant.

Regarding Mr. Parks' contention that Indiana American did not consider rehabilitating the Aeralator unit and other alternatives for the plant, Mr. Hobbs testified Petitioner considered three alternatives for the Aeralator unit, including rehabilitation, as identified and discussed in the Winchester CPS. As to Mr. Parks' claim that Indiana American did not perform a LCCBA, Mr. Hobbs walked through the relevant provisions of Ind. Code ch. 13-18-26 and explained why he believes the statute is unclear about what is required. Mr. Hobbs further noted the statute is

[9] A 3.5 MGD rated capacity (all filters in service) groundwater treatment plant, office, lab, and clearwell placed in service on August 15, 2019 for a total project cost of $7.412 million, or $2.12 million per MG. Pub. Ex. 9 at 7-8.

[10] A 3.0 MGD rated capacity ion exchange groundwater softening plant that was placed in service in 2021. The total loan amount for the softening plant in 2019 was $6,053,911, or $2.02 million per MG as calculated by Mr. Parks. Pub. Ex. 9 at 8.

enforced by IDEM, and IDEM has not promulgated any regulations regarding what a life-cycle cost benefit analysis should include. He also testified that while IDEM has issued one guidance document, the document does not provide much additional insight into what is specifically required. Mr. Hobbs testified Indiana American followed the statutory language and compared the costs and benefits (not limited to monetized costs and benefits) of the proposed improvements to one or more alternatives.

Mr. Hobbs explained why Indiana American determined to replace the Aeralator unit instead of rehabilitating the unit as Mr. Parks suggests. He testified Winchester is the only district in Indiana American's system that is solely dependent on a single combination style unit or Aeralator for source of treatment, which adds operational complexity and maintenance challenges. He stated Petitioner's proposed separated process layout will allow the system's individual components (such as an individual filter) to be taken offline for maintenance and repair while maintaining treatment. Whereas, in contrast, Aeralators do not have the flexibility to take individual units offline for maintenance or repairs, and instead the entire unit must be taken out of service. Mr. Hobbs testified that the current Aeralator unit can only be taken out of service for approximately one-half day and rehabilitating the Aeralator unit is anticipated to take 4-5 months, which would require full temporary treatment during that time.

Further, Mr. Hobbs testified rehabilitation of the Aeralator does not consider the age and deteriorated condition of the existing Aeralator unit. He testified that at 22 years of service, the Aeralator is nearing its anticipated end of life. Mr. Hobbs explained that rehabilitating the existing Aeralator would also not address the issues of the existing Aeralator not being able to meet the maximum day demand of the system when two filters are out of service. Mr. Hobbs also disagreed that Indiana American does not need to increase the firm and rated capacity of the plant. He testified Mr. Parks' claim is based on his belief that it is acceptable for system demand to exceed firm capacity, which is not in alignment with water industry standards, Indiana Code, or the Ten State Standards. Mr. Hobbs reiterated that the existing Winchester plant does not have sufficient capacity to meet the current or projected maximum day demands of the system. Citing to the Winchester CPS, Mr. Hobbs testified Winchester had annual average day demands ranging from 0.508 MGD to 0.636 MGD and annual maximum day demands ranging from 0.724 MGD to 0.970, and these demands are projected to be 0.877 MGD, 0.859 MGD and 0.847 MGD for years 2025, 2030, and 2023.

Mr. Hobbs reiterated that addressing the Aeralator unit issues will not address the other challenges at the plant, including the lack of onsite clearwell storage, structural failures associated with the chemical building and the backwash holding tank, and the other challenges outlined in the Winchester CPS. Mr. Hobbs discussed each of these challenges and explained they need to be addressed in addition to the Aeralator unit. Mr. Hobbs testified that the new clearwell is needed to provide adequate fire flow protection in the system. He explained that the capacity from the current WTP is only adequate for meeting a fire flow demand of up to 2,500 gpm for the recommended 2-hour duration, and higher fire flows of 3,000 gpm to 3,500 gpm could not be sustained for the recommended 3-hour duration as needed for a significant number of commercial and industrial sites around the system. Mr. Hobbs also testified that one of the ancillary benefits of the added clearwell capacity is the achievement of 4-Log virus inactivation, which is an added benefit to Indiana American's customers and adds to system resiliency.

Regarding the cost of the Winchester Major Project and the cost estimates, Mr. Hobbs explained why Mr. Parks' comparisons to the Eastern Bartholomew Water Corporation and Batesville Water & Gas Utility water treatment plants are not appropriate. He testified that a more appropriate cost comparison would be to the Mooresville WTP that was completed more recently for a total cost of $21,708,452. Further, with respect to Mr. Parks' criticisms of Petitioner for providing varying cost estimates, Mr. Hobbs identified the various sources of the costs estimates Indiana American included in this Cause. He testified it is very rare that a cost estimate will remain the same from the preliminary identification and planning phase of a project to final design and construction of a project. Mr. Hobbs disagreed with Mr. Parks' contention the Winchester treatment plant is oversized and overly lavish, explaining recent water treatment plants constructed by Indiana American included similar amenities.

Mr. Hobbs reiterated that the Winchester Major Project is being competitively procured through a design-build proposal process and subsequent competitive sub-package bidding. He testified that Indiana American's estimated cost is therefore based on actual pricing. Further, Mr. Hobbs testified that only final, actual costs of the projects will be reflected in rate base.

iv. Discussion and Findings. With respect to the Winchester Major Project, the crux of the issue between Petitioner and the OUCC is whether Indiana American considered alternatives, such as rehabilitation of the existing plant, before making the decision to build a new water treatment plant. The OUCC contends Indiana American did not identify and consider alternatives for the plant and did not perform a LCCBA of these alternatives as required by Ind. Code § 13-18-26-3. Further, the OUCC contends Indiana American has not supported that total replacement of the plant is warranted and the plant is too expensive at $25 million.

As noted by Petitioner's witness Hobbs, Ind. Code § 13-18-26-3 is a statute enforced by IDEM. Ind. Code ch. 13-18-26 establishes conditions for receipt of an IDEM permit for water and wastewater treatment plants, one of which is for the applicant to certify that it has prepared and completed a LCCBA. *See* Ind. Code § 13-18-26-2. Whether Indiana American has complied with Ind. Code §§ 13-18-26-2 and -3 to prepare and complete a LCCBA for purposes of obtaining an IDEM permit is a decision to be made by IDEM, and not the Commission.[11] However, we agree with the OUCC that performing a life cycle cost analysis when determining whether to undertake a project, like construction of a new WTP, is generally a reasonable and appropriate first step because it can readily provide the necessary evidentiary support that the chosen project is reasonable, and that cost recovery should be authorized.

Although Indiana American argued that Ind. Code § 13-18-26-3 is unclear and that IDEM has not issued any specific guidance regarding a LCCBA, a life cycle cost analysis, which is a generally understood term in the engineering world, considers the total cost of building, as well as owning and operating, a particular asset and then compares that estimate to other alternative

[11] In the future, the Commission will request copies of the LCCBA for which a utility has certified to IDEM that it has performed.

assets.[12] This type of analysis, which considers the estimated costs of owning and operating an asset along with the cost of construction, is generally favored because it will identify and favor solutions that may have slightly higher, one-time construction costs but provide greater value through reduced day-to-day operating costs over years.

Although Indiana American did not provide such a full life cycle cost analysis, Mr. Hobbs provided Attachment MHH-7 of Petitioner's Exhibit 3C (the relevant portions of the Winchester CPS), which identifies and discusses the alternatives Petitioner considered for the Aeralator unit and other portions of the project. Mr. Hobbs explained that while Indiana American did consider rehabilitating the existing Aeralator unit, horizontal or vertical pressure filters for treatment as Petitioner is proposing with the Winchester Major Project will provide much greater flexibility for future operations. He also explained that the downtime associated with the rehabilitation work is anticipated to take four to five months and, during that time, full temporary treatment would be required. Mr. Hobbs also addressed the issues with rehabilitating the existing Aeralator and explained why the current unit, if rehabilitated, would still not be capable of meeting maximum day demands or address the other operational and structural challenges at the plant.

Ultimately, the record shows that the current Winchester WTP is not capable of meeting current or projected maximum day demands for the Winchester system and is not capable of meeting the recommended fire flows. The record further shows that the Aeralator treatment unit is the only source of treatment in the Winchester district, and Winchester is Indiana American's only system that is solely dependent on a single combination style unit or Aeralator for source of treatment. No evidence was offered to show that replacing or rehabilitating the Aeralator unit would produce any savings in the overall project cost, or that replacing the Aeralator unit would address any of the other challenges currently present at the plant.

As for the estimated cost of the Winchester Major Project, the OUCC took issue with the estimated $25 million cost, comparing it to two other treatment plants—Eastern Bartholomew Water Corporation and Batesville Water & Gas Utility. However, Mr. Hobbs explained why those plants were not good comparisons and presented evidence of the cost of the Mooresville WTP, which was completed more recently, of a similar scope, and reflects the price escalation for capital projects seen in recent years due to the COVID pandemic. The evidence further reflects that the project was procured through a design-build proposal process and subsequent competitive sub-package bidding. Thus, Indiana American's estimated cost is based on actual pricing.

Based on the evidence presented, we find that the Winchester Major Project is reasonable and necessary to address the challenges identified at the existing Winchester WTP and provide safe and reliable service to Petitioner's customers. We also find that the $25 million estimated cost of the project reflects the market price for this project. Once the project is complete and placed in service, Indiana American is authorized to true-up this cost to the actual cost of the project, subject to the compliance filing process discussed below.

Finally, regardless of any IDEM requirement concerning the performance of an LCCBA,

[12] *See e.g.,* American Water Works Association ("AWWA") Asset Management Definitions Guidebook at 18-19, and the Life-Cycle Costs Analysis by the National Institute of Standards and Technology (https://www.wbdg.org/resources/life-cycle-cost-analysis-lcca).

we encourage Indiana American to undertake a life cycle cost analysis that estimates the overall costs (planning, design, construction, commissioning, operations, maintenance, and retirement) of project alternatives when considering and evaluating future projects to demonstrate more easily that its chosen project is reasonable.

b. Sheridan Major Project.

i. INAWC Case-in-Chief. Mr. Hobbs explained Petitioner is proposing to build the new Sheridan Water Treatment Plant to help address challenges meeting maximum day demands, to help serve growth in the service area, and to address other operational challenges. With respect to the plant's capacity challenges, Mr. Hobbs testified the existing Sheridan WTP has a firm capacity of 0.4 MGD, has experienced maximum day demands that have exceeded the plant firm capacity, and is not designed for expansion. Mr. Hobbs further testified that much of the existing facility and equipment dates back to the 1960s and has limited remaining life. He also testified the existing facility uses chlorine gas, which can pose a safety hazard to both employees and customers, and does not have an ammonia feed system, which can present challenges for maintaining a stable chloramine level.

Mr. Hobbs sponsored relevant portions of the Sheridan CPS, which identified the alternative of rehabilitation and expansion of the existing plant to the Sheridan Major Project. Mr. Hobbs testified that while Petitioner considered continuing to use the existing facility, doing so was not the recommended solution for several reasons. He testified continuing to use the existing plant would require major facility upgrades and replacements, or essentially a rebuild of the existing facilities, along with requiring construction of new plant facilities for adequate capacity expansion, for conversion from gaseous chlorine to liquid sodium hypochlorite, and for addition of liquid ammonium sulfate. Mr. Hobbs testified that maintaining the existing facility would also require additional cost for providing treatment while it is rebuilt. Mr. Hobbs further testified that by constructing one new expandable facility, Petitioner can maintain safe and reliable service while the new facility is being completed. Mr. Hobbs sponsored Attachments MHH-14 through MHH-23 providing additional support for the Sheridan Major Project.

ii. OUCC. Mr. Parks recommended the Commission disallow the Sheridan Major Project because Indiana American failed to support the need for the project at the $29.82 million cost and did not support that a total replacement of the existing plant with a much larger plant, is prudent, reasonable, or in the best interest of customers. Like the Winchester Major Project, Mr. Parks testified the proposed replacement plant is oversized, has no LCCBA of alternatives as required by Ind. Code § 13-18-26-3, and is too expensive at $29.82 million or $15.38 per MG of rated capacity.

Mr. Parks testified Indiana American did not evaluate any alternatives besides replacement of the water treatment plant and did not conduct a LCCBA. Mr. Parks testified that Indiana American provided no testimony that a condition assessment was conducted to evaluate the equipment and treatment building to determine whether the existing facility could be expanded as an alternative to replacement. He testified there is no evidence that Petitioner considered the rebuild/expansion/upgrade alternative in any way other than in a perfunctory manner. Mr. Parks further testified that Petitioner does not need to increase Sheridan's firm and rated capacities and claimed that expansion in the near term (five years) does not appear to be needed and could be

delayed further if a fourth vertical pressure filter is added. Mr. Parks also testified that Indiana American should perform a regionalization study as identified in the Sheridan CPS and pause its plan to replace the Sheridan WTP until the study has been completed. He also took issue with the fact that Sheridan's new plant capacity does not include water demand for the new wholesale customer, the District.

Like the Winchester Major Project, Mr. Parks compared the Sheridan Major Project to the Eastern Bartholomew Water Corp. and Batesville plants and testified Sheridan's capital cost is significantly more expensive than these plants. Mr. Parks estimated the new Sheridan Water Treatment Plant to cost $7.0 million instead of the $29.82 million requested by Petitioner.

iii. INAWC Rebuttal. Mr. Hobbs disagreed with Mr. Parks' opinion and recommendation, testifying that Mr. Parks fails to recognize the age, capacity concerns, condition, operation, and process challenges of the Sheridan facility. Mr. Hobbs explained that Indiana American needs to replace the existing Sheridan treatment plant due to capacity concerns, the age of the facility, operational challenges, the need to switch from chlorine gas to liquid sodium hypochlorite, and to add an ammonia feed, among other issues.

Regarding the capacity challenges, Mr. Hobbs testified Petitioner already has challenges meeting maximum day demands and the near future potential growth in the service area will only exacerbate these concerns. He explained that between 2018 and 2021, the Sheridan system had annual average day demands ranging from 0.18 MGD to 0.22 MGD and annual maximum day demands ranging from 0.38 MGD to 0.41 MGD. Mr. Hobbs testified that maximum day demand of the low, base, and high scenarios is projected to increase to 0.53 MGD, 1.07 MGD, and 1.48 MGD respectively, by 2035. He explained that the existing Sheridan WTP has a total filtration capacity of 0.65 MGD and a firm filtration capacity of 0.43 MGD with one of the three filters out of service. Thus, the current firm filtration capacity is inadequate to meet the projected maximum day demands for all three scenarios. Mr. Hobbs testified the proposed water treatment plant is sized with a firm treatment capacity to meet the projected maximum day demands and can expand as additional capacity is needed. He also noted the Sheridan system is located in Hamilton County, which is one of the state's fastest growing counties, and therefore he anticipates the system demand to grow beyond the 15-year projected demand.

Mr. Hobbs responded to Mr. Parks' recommendation that Indiana American wait to construct the new Sheridan WTP until it completes a regionalization study and the relationship of the study to the District. He explained the purpose of the regionalization study is to determine the optimal means of providing water service to the District and all other regionalization areas between Sheridan and Noblesville, as well as to evaluate the impact and benefits of connecting Sheridan to Noblesville and the possibility of supplying water to Sheridan from Noblesville. He explained that Indiana American has not sized the new Sheridan WTP to serve a fully developed Bakers Corner, and the design of the plant at initial completion is intended to serve growth in Sheridan (the area proposed to be served by the District). Mr. Hobbs testified that the plant is being built so it can readily be expanded in the future and explained that if Indiana American determines to ultimately serve Hamilton County from the Sheridan WTP, Petitioner would expand the plant and add additional source of supply to do so.

Mr. Hobbs disagreed with Mr. Parks' recommendation that Indiana American should wait to construct the plant until completion of the regionalization study. He testified the Sheridan Major Project is to help address the current and projected water challenges in the system and the design of the plant at initial completion is intended to serve the growth in Sheridan. Mr. Hobbs testified that while the regionalization study will be helpful for determining how to serve the undeveloped areas in Northern Hamilton County in the long-term, as well as future growth in the service area, this study does not change that Indiana American cannot reliably meet Sheridan's maximum day demands today.

As to Indiana American's evaluation of alternatives for the Sheridan WTP, Mr. Hobbs testified the Sheridan CPS identified the following two alternatives: (1) constructing a new water treatment facility; and (2) conducting a facility assessment for complete rehabilitation/expansion of the current facility. Mr. Hobbs testified Petitioner determined Option 2 (rehabilitation/expansion of the existing plant) was not feasible because much of the existing facility and equipment dates back to the 1960s and has limited remaining service life. He explained Petitioner does not believe it would be a prudent investment to make costly repairs and updates to a 60-plus year-old facility that is already approaching the end of its useful life. He also identified the challenges associated with attempting to expand the plant, and questioned whether the current plant could be expanded. With respect to the LCCBA, Mr. Hobbs again explained that Indiana American followed the statutory language and compared the costs and benefits of the proposed improvements to one or more alternatives.

As for the cost of the Sheridan Major Project, Mr. Hobbs reiterated why Mr. Parks' comparisons to the Eastern Bartholomew Water Corporation and Batesville Water & Gas Utility water treatment plants are not appropriate comparisons. He testified the Sheridan Major Project was competitively procured through a design-build proposal process and subsequent competitive sub-package bidding, and therefore, Indiana American's cost is based on actual pricing. He again testified that a more appropriate cost comparison would be to the Mooresville WTP, which was completed more recently for a total cost of $21,708,452.

iv. Discussion and Findings. Like the Winchester Project, the major dispute between the parties with respect to the Sheridan Major Project is whether Indiana American considered alternatives to total replacement of the WTP and whether Indiana American evaluated these alternatives as part of a LCCBA. Here, the OUCC argued that Indiana American did not perform a condition assessment to evaluate the equipment and treatment building to determine whether the existing facility could be expanded as an alternative to replacement. Further, the OUCC argued Indiana American should pause its plan to replace the Sheridan WTP until a regionalization study is completed.

We again concur with the OUCC about the benefits of performing a life cycle cost analysis that compares the costs of construction and operation of an asset over its useful life with the costs of various alternative assets before embarking on a significant project. While Indiana American did not undertake such an analysis here, we find, in this instance, that Petitioner has sufficiently demonstrated the reasonableness and necessity for the Sheridan Major Project. Mr. Hobbs explained that Indiana American did consider rehabilitating and expanding the plant, but such option is not feasible or recommended because much of the existing facility and equipment dates back to the 1960s and is at the end of its useful life. Petitioner expanded on this issue in its response

to the Commission's August 25, 2023 Docket Entry, where it included pictures of the existing Sheridan WTP showing existing building deterioration, building footprint limitations for expansion, current use of gas chlorination, and the space for a fourth filter installation being occupied by laboratory and chemical use.

The evidence also demonstrates that Petitioner currently has challenges meeting maximum day demands and that potential growth in the service area in the near future will only exacerbate these concerns. Mr. Hobbs explained that even if the current plant could be rehabilitated, it would still need to be expanded to address these capacity challenges. He also explained why it is questionable whether the current plant could even be expanded, including the closeness of the wells and filter capacity limitations. Mr. Hobbs identified multiple challenges that would need to be addressed to expand the existing facility, and identified a number of other operational and structural issues that need to be addressed as part of the project.

With respect to the need for the new Sheridan WTP, Mr. Hobbs testified that the Sheridan system is located in Hamilton County, which is one of the fastest growing areas in the State. The record shows that Indiana American already has challenges meeting maximum day demands in the service area as the recent historical maximum day demand of 0.41 MGD is already nearly equal to the firm capacity (0.43 MGD) of the current 60-year old plant, without any consideration for growth. Given the likelihood for significant future growth in this area, these capacity challenges are likely to only get worse in the near future.

The OUCC argues that Indiana American should put a pause on the project until it has had the opportunity to conduct a regionalization study to determine how service should be provided in the service territory. However, as Mr. Hobbs explained in his rebuttal testimony, the design of the Sheridan Major Project at initial completion is intended to serve growth in Sheridan, and Indiana American cannot reliably meet Sheridan's maximum day demands today. Further, the record shows that the sizing of the WTP excludes the District's demand, so if it is determined through the regionalization study or other means that the Sheridan WTP will be used to serve this new customer, this will only exacerbate the capacity challenges Indiana American is experiencing in the Sheridan service area. We agree that while the regionalization study will be useful for helping Petitioner determine how to serve northern Hamilton County in the long-term, it will not address the current system capacity challenges or the other operational and structural concerns at the plant.

Like the Winchester WTP, the OUCC also took issue with Petitioner's estimated cost for the Sheridan Major Project of $29,817,795. Mr. Parks compared the Sheridan Major Project cost to the Eastern Bartholomew and Batesville plants and used this comparison to argue the cost of the project is too high. Mr. Hobbs disagreed with Mr. Parks that the Eastern Bartholomew and Batesville plants provided an appropriate comparison, and again pointed to the Mooresville plant as a more appropriate comparison.

For the reasons discussed previously for the Winchester Major Project, we do not need to address the issue of which cost comparison is more appropriate. The record shows that the Sheridan Major Project was bid and the estimate included in Indiana American's case-in-chief reflects the actual pricing received. We therefore find that the $29,817,795 estimated cost of the project reflects the market price for this project. Once the project is complete and placed in service, Indiana

American is authorized to true-up this cost to the actual cost of the project, subject to the compliance filing process discussed below.

2. Other Disputed Rate Base Items.

a. Main Extension to Hamilton County Regional Utility District.

i. INAWC Case-in-Chief. As part of its capital additions in this Cause, Indiana American proposed to extend 11,400 feet of 20-inch transmission main for Phase 1, and 7,700 feet of 16-inch transmission main for Phase 2, east from Sheridan to connect to the future District's water system at Springmill Road & 236th Street, more commonly known as Bakers Corner.[13] Indiana American proposed the project for inclusion because it entered into a SFR agreement to provide drinking water for the District located between Sheridan and Noblesville, and interconnection with an existing Indiana American Water system was required to serve District.

ii. OUCC. Mr. Parks took issue with the project and argued that the project is a main extension subject to the Commission's main extension rules under 170 IAC 6-1.5. Mr. Parks testified Petitioner should have developed a main extension agreement and developed the estimated costs to design and construct the main extension. He further testified that all costs, except a three-year revenue allowance, are the responsibility of the District and should be paid to Indiana American. Mr. Parks testified that the project costs should not be added to rates without a main extension payment by the District reflecting its contribution in aid of construction. Mr. Parks further testified that because it appears Petitioner has not properly characterized the project as a main extension, he recommended disallowing recovery of the capital costs in rate base.

iii. INAWC Rebuttal. Mr. Hobbs disagreed with Mr. Parks' contention that the new transmission main to connect Indiana American's system with the newly formed District is a main extension subject to the Commission's rules under 170 IAC 6-1.5. Mr. Hobbs testified the Indiana General Assembly enacted Ind. Code § 8-1-2-46.2(b) which provides:

> (b) Notwithstanding any law or rule governing extension of service, a water or wastewater utility may, on a nondiscriminatory basis, extend service:
>
> (1) for economic development purposes;
>
> (2) to rural areas; or
>
> (3) to developed but underserved areas;
>
> without a deposit or other adequate assurance of performance from the customer, to the extent that the extension of service results in a positive contribution to the utility's overall cost of service over a twenty (20) year period. For the purposes of this subsection, a water or wastewater utility's extension of service to a developed but underserved area will be considered as resulting in a positive contribution to the utility's overall cost of service over a twenty (20) year period to the extent that

[13] *See* Petitioner's Exhibit 3, Attachment MHH-4 at 1-2.

> rates to be paid by fifty percent (50%) or more of the customers who could be served by the extension of service would enable the utility to fully recover the weighted cost of debt and depreciation expense attributable to the cost of the main extension for the extension of service.

Mr. Hobbs testified that this is a unique main extension in one of the (if not the) fastest growing areas in the State.

Indiana American witness Shimansky sponsored the calculation showing Indiana American satisfied the 20-year test set forth in Ind. Code § 8-1-2-46.2(b). Mr. Shimansky explained how the test would be applied and sponsored Attachment GDS-2R, which showed the extension will result in a positive contribution of service in year 13. Mr. Hobbs testified that because the extension of service will result in a positive contribution to Indiana American's overall cost of service over a 20-year period, no deposit from the District was required and the Commission's main extension rules did not apply. Mr. Hobbs testified that Mr. Parks' testimony about a three-year revenue allowance and a requirement that Hamilton County fund a portion of the cost is therefore incorrect.

Mr. Hobbs reiterated why the new transmission main to the District is a unique main extension. He said it is well understood that Hamilton County has long been one of the fastest growing areas in the State. He testified that in a matter of a few years, much of the County has grown from towns and small cities surrounded by farmland into a densely populated and largely urban area. He further testified that growth has continued north in the County and has reached the point that only the northern portion of the County remains undeveloped.

Mr. Hobbs expanded on the purpose of the regionalization study, the relationship of the study to serving the District, and Indiana American's overall regionalization strategy for serving the new growth in northern Hamilton County. Mr. Hobbs explained that Indiana American has not sized the new Sheridan WTP to serve a fully developed Bakers Corner, but the plant is being built so that it can be readily expanded in the future if needed. Mr. Hobbs explained that a regional approach will be needed to meet this need so that development in Hamilton County is not hindered due to lack of capacity to serve new growth. Mr. Hobbs testified that Petitioner is in the process of conducting a regionalization study, and once the study is completed and Petitioner has a more complete understanding of the best way to bring water to the entirety of the undeveloped area in northern Hamilton County, Indiana American will be in a position to know whether the full buildout of Bakers Corner should be served by a further expansion of the Sheridan Plant, interconnection to a future expansion of the Noblesville Plant, a combination of the two, or some other option that has not yet been identified.

iv. Discussion and Findings. The crux of the issue between the parties with respect to this project is who should be responsible to pay for the transmission main to interconnect and serve the District. The OUCC argues this is a main extension that should be subject to the Commission's main extension rules at 170 IAC 6-1.5, and thus should be primarily funded by the District. In contrast, Indiana American argues this is a unique main extension that falls under Ind. Code § 8-1-2-46.2(b), which allows a water utility to, among other things, extend service for economic development purposes or to rural areas, without a deposit from

the customer if the extension of service results in a positive contribution to the utility's overall cost of service over a 20-year period.

Ind. Code § 8-1-2-46.2(b) authorizes a utility to extend service: (1) for economic development purposes; (2) to rural areas; *or* (3) to developed but underserved areas. (emphasis added). While Indiana American argues that the main extension is for economic development purposes, this does not appear to be supported in the record. Mr. Hobbs testified as to the expected growth in the area but did not specify the type of growth expected. Our review of the area reveals, except with some minor exceptions along U.S. 31, the main extension will likely be dominated by residential growth. However, the statute also authorizes the extension of service to rural areas and no party disputed that this main extension would extend service to a rural area of the State.[14]

Mr. Shimansky sponsored Attachment GDS-2R to Petitioner's Exhibit 15 showing the extension will result in a positive contribution of service in year 13. Mr. Shimansky assumes that the District's water use will increase to its projected usage of 2.45 MGD over a 20-year period by adding approximately 900 customers a year. However, this assumption has no foundation in the record and contradicts the District's own projections. In response to an OUCC discovery request, the District states there is no study that supports adding approximately 900 customers a year. Pub. Ex. CS-7, Part 1 at 2 of 335. The District goes on to note that for cash flow purposes, it has assumed growth of only 150 customers per year. *Id.* Further, the District projections show growth of approximately 150 customers per year for years one through ten and only 75 customers per year for years 11 through 20. Pub. Ex. CX-7, Part 2 at 151 and 154 of 252. Using the District's projections, the proposed extension will not result in a positive contribution of service until approximately year 33.

Based on the evidence presented, we find Indiana American has not satisfied the requirements of Ind. Code § 8-1-2-46.2(b) to demonstrate that the main extension will result in a positive contribution to the utility's overall cost of service over a 20-year period. As such, the Commission's main extension rules apply. Therefore, the estimated $9,238,302 project costs should not be added to rate base without a main extension payment by the District reflecting its contribution in aid of construction. If Indiana American proceeds with the project under the Commission's main extension rules, it is authorized to reflect its portion of the main extension cost in rate base, which is generally the revenue allowances provided by the main extension rules.

We further agree that a regional approach is needed to ensure the provision of water service keeps pace with development in Hamilton County. We believe the regionalization study Indiana American is in the process of conducting is a critical tool in determining how to serve these rural, undeveloped areas in northern Hamilton County in the long-term, as well as future growth in the service area. As such, we encourage Indiana American to complete the regionalization study to determine how best to regionalize service in Hamilton County in the future.

[14] Ind. Code § 8-1-2-46.2 does not define "rural area." The Mirriam-Webster Online dictionary defines "rural" as "relating to the country," which is consistent with the definition of "rural area" in other sections of Title 8 (i.e., Ind. Code §§ 8-1-2-87 and 89) as areas in Indiana but outside municipal corporate limits.

b. Future Source of Supply.

i. INAWC Case-in-Chief. Petitioner included four future sources of supply projects in this Cause: (1) Project I10-100020 – KOK Sheridan Property Acquisition for New Well or Wells ("Sheridan Property"); (2) Project I10-500003 – CRW SOS Test and Property Acquisition; (3) I10-600024 – NOB Hamilton Co SOS Property Purchase; and (4) Project I10-600010-03 – NOB WRCC SOS Property. Mr. Hobbs testified Petitioner prepared plans to develop each of these future sources of supply and is seeking approval of those plans and to add the actual costs of these sources of supply to the value of Petitioner's property pursuant to Ind. Code § 8-1-2-23.5.

Mr. Hobbs sponsored Petitioner's plans to develop each of these future sources of supply as Attachment MHH-24 to Petitioner's Exhibit 3, and testified the information required by Section 23.5 is included in Petitioner's plans for each of the future sources of supply. Mr. Hobbs testified that Indiana American's future source of supply plans are reasonable and prudent for the provision of safe and reliable service.

ii. OUCC. Ms. Willoughby challenged the Sheridan Property project. She recommended the Commission reject the $779,566 Indiana American requested to include in rate base for the proposed acquisition of property for the new well(s) in Sheridan because it is not currently necessary and prudent for Petitioner to acquire property for a future wellfield in Sheridan. She testified that the rates set in this case are intended for projects through April 2025, and population growth estimates through 2040 show that Sheridan will not be utilizing even half of its current wellfield capacity before the addition of proposed new Well No. 7. Therefore, she recommended the Commission deny the $779,566 requested for the acquisition of land for new well(s) in Sheridan.

iii. INAWC Rebuttal. Mr. Hobbs testified that he believes Ms. Willoughby's objection is actually to Ind. Code § 8-1-2-23.5, which allows a water utility to acquire vacant ground for a future well field before that land has been developed and becomes unavailable. Mr. Hobbs explained that the rate of growth and development in Sheridan creates the present need to obtain property rights for future sources of supply, and Indiana American is competing for property rights with development firms that intend to develop property for other purposes. Mr. Hobbs testified that if Indiana American's future source of supply plan is approved and the additional source of supply is captured in rate base, but not placed in service by the date identified in the timetable, then the statute sets forth a refund procedure to restore customers.

iv. Discussion and Findings. Ind. Code § 8-1-2-23.5 allows a public utility to seek Commission approval of a plan to develop a future source of water supply. Section 23.5(a) requires the utility's plan to include: (1) the timetable for placement in service of the future source of supply; (2) the cost of the source of supply; (3) the need for a new source of supply within the public utility's timetable; (4) the availability of alternatives to the proposed source of supply; and (5) the need to secure property rights to preserve and protect the planned future source of supply.

The only future source of supply project challenged was the Sheridan Property project. The

OUCC argues that this project should not be allowed in rate base because additional wellfield capacity is not currently needed in Sheridan and will not be needed by April 2025, the period rates are to be set for this Cause.

We agree with Indiana American that Ind. Code § 8-1-2-23.5 allows a water utility to acquire vacant ground for a future well field before that land has been developed and becomes unavailable, even if the completion date extends beyond the test year. However, we find Petitioner has failed to satisfy Ind. Code § 8-1-2-23.5(a)(4) with respect to the Sheridan Property project. Petitioner's Exhibit 3, Attachment MHH-24, which contains Petitioner's plan for each of the source of supply projects, provides the following for the Sheridan Project:

> Indiana American Water has initiated a preliminary hydrogeologic study to evaluate potential locations for development of ground water source of supply in the area. Ground water source of supply is preferred and anticipated to be available for the projected demands. *Alternatively, development of a surface water source of supply could be evaluated.* The development of surface water requires additional challenges and time that may not be available depending on rate of drinking water demand growth.

Id. at 67, emphasis added. No specific surface water source was identified, no analysis was provided, and no conclusions were rendered concerning possible alternatives to the proposed project.[15] Instead, Petitioner's plan simply indicates that development of a surface source of supply *could be* evaluated. Accordingly, because Petitioner failed to sufficiently address the availability of alternatives to the proposed Sheridan Property project, we cannot find Petitioner's plan for that project is reasonable and prudent for the provision of safe and reliable service at this time.

As for the other three source of supply projects, we find Indiana American has included the information required under Ind. Code § 8-1-2-23.5(a) and the plans for those three projects are reasonable and prudent for the provision of safe and reliable service for the reasons set forth in Mr. Hobbs' direct testimony and Attachment MHH-24. Accordingly, we find Petitioner may reflect the costs of developing the following in rate base as set forth in Ind. Code § 8-1-2-23.5(b): (1) Project I10-500003 – CRW SOS Test and Property Acquisition; (2) I10-600024 – NOB Hamilton Co SOS Property Purchase; and (3) Project I10-600010-03 – NOB WRCC SOS Property.

c. Lake Station Water Treatment Plant.

i. INAWC Case-in-Chief. Indiana American did not discuss the Lake Station WTP and wells in its case-in-chief testimony.

ii. OUCC. Mr. Parks recommended the Lake Station WTP and wells be removed from Indiana American's rate base because they are not needed from a technical, operational, or economic standpoint. Mr. Parks testified that the WTP and wells have been continually out of service since February 5, 2019, and have not produced any finished water for over four years. Mr. Parks explained that while Indiana American provided testimony in Cause No. 45041 that it would maintain and regularly place the plant into operation to ensure rapid

[15] Petitioner's response to our August 17, 2023 Docket Entry provided no additional information. Pet. Ex. 27.

reliability to use during peak demand days, or as emergency supply, Indiana American has not restarted the wells and treatment plant nor produced any water since closing on the acquisition. Mr. Parks further testified that Indiana American was not able to show it is incurring O&M costs to keep the Lake Station WTP in a state of ready availability if needed during peak day demands or emergencies.

Mr. Parks testified that the Lake Station WTP is not needed during peak demand days or emergencies. He explained that Indiana American meets peak demand in its Northwest Indiana District without operating the Lake Station treatment plant and has also met demand in Northwest Indiana during voluntary shutdowns of the Ogden Dunes WTP without the Lake Station WTP on-line. Mr. Parks also testified that reopening the existing East Chicago interconnection and purchasing water would serve as a lower marginal cost alternative than restarting the Lake Station wells and WTP in response to an emergency. Finally, Mr. Parks testified that Indiana American did not propose any "ratemaking options that might mitigate the impact of the purchase price" of the wells and WTP as suggested by the Commission in its Order in Cause No. 45041.

OUCC witness Stull sponsored Petitioner's adjustment to remove $6,539,385 from rate base for the Lake Station wells and WTP. *See* Pub. Ex. 3, Attachment MAS-1 at 3.

iii. <u>INAWC Rebuttal</u>. Indiana American witness Britto testified that contrary to Mr. Parks' testimony, the Lake Station WTP is fully operational and is maintained day-to-day in standby status. Ms. Britto testified that the WTP maintains an active WT3 Operator License through IDEM and has all of the necessary equipment (including chemicals and chemical feed equipment) to produce potable, finished water. Ms. Britto further testified that maintenance is regularly performed, and Indiana American personnel operate the wells and pumps on a monthly basis to ensure the plant remains fully operational. She also testified that at least one employee is on-site at the WTP each day to do visual inspections and confirm there are no issues at the plant. The WTP also maintains its own chemicals inventory and disinfection chemicals are kept on-site in the event treatment is needed.

Ms. Britto further explained the WTP is maintained in standby status to minimize the day-to-day operations and maintenance expense associated with operating the plant. She testified the WTP can be transitioned out of standby status to produce potable finished water within 24 hours. Ms. Britto testified that this is how Indiana American intended to operate the Lake Station WTP when it acquired the system in Cause No. 45041.

Ms. Britto disagreed with Mr. Parks' contention that the Lake Station WTP is not needed during peak day demands or emergencies and explained why the Lake Station WTP is needed in an emergency situation to serve the Northwest District.

Finally, Ms. Britto disagreed that reopening the East Chicago interconnection would serve as a lower cost alternative compared to operating the Lake Station WTP in standby status as Indiana American currently does. Ms. Britto testified that Indiana American cannot simply open a valve and obtain water from the interconnection, and that in order to take East Chicago water into the Northwest Operations Distribution system, Petitioner would need to overcome the East Chicago Free Chlorine water with high quantities of chlorine injected at the connection site of the two systems. Ms. Britto explained that Indiana American does not currently have this equipment

installed and the system is not equipped to do this. She said treating the water at the point of entry would require the construction of a structure to house the chlorine, chlorine inventory onsite, flow control equipment, chemical feed equipment and monitoring equipment. In addition to these capital investments, Ms. Britto testified there would be additional O&M costs associated with operating this equipment, including maintenance costs, security costs, and labor costs to maintain the site. She testified that this is just one example of why providing water via the East Chicago interconnect would not provide a lower cost marginal alternative in an emergency situation.

Indiana American witness Shimansky responded to Mr. Parks' contention that Indiana American did not propose "ratemaking options that might mitigate the impact of the purchase price" of the wells and treatment plant. Mr. Shimansky testified Petitioner has greatly reduced the level of O&M expense at the plant to minimize the impact of purchasing the plant. He provided Petitioner's Exhibit 15, Attachment GDS-1R, which showed the customer bill impact from having the Lake Station plant ready to activate in an emergency is 12 cents per month.

iv. Discussion and Findings. Before addressing the parties' dispute over whether the Lake Station WTP should continue to be maintained as an emergency backup source of water supply, we must address an error in the OUCC's proposed accounting for its recommendation. In Cause No. 45041, the Commission found the Lake Station WTP to be used and useful.[16] The Commission's Order was affirmed on appeal on this specific question. *Ind. Off. of Util. Consumer Counselor v. Indiana-American Water Co., Inc.*, 129 N.E.3d 833 (table), 2019 WL 2608488 (Ind. Ct. App. 2019) (unpublished opinion).[17] We also approved in that same Order, the journal entry to record the acquisition of the Lake Station WTP as used and useful utility plant. The OUCC's position is that used and useful plant is no longer needed and is therefore no longer used and useful, which is essentially an argument that the plant should be retired. As Mr. Shimansky testified on rebuttal, the retirement of depreciable utility plant is recorded by debiting Account 108 (Accumulated Depreciation) and crediting UPIS for the original cost of the asset reflected on the utility's books. 170 IAC 6-2-2(a) and 1996 Uniform System of Accounts, Instruction 27(B)(2). The effect of these entries is offsetting—there is zero impact on net original cost rate base. *See*, e.g., *Ind. Mich. Power Co.*, Cause No. 44182 at 59 (IURC July 17, 2013). As such, even if we were to accept the OUCC's position, the effect of doing so would not produce the result that the OUCC seeks. There would be no reduction to net original cost rate base.

With the understanding that we are not addressing an issue that affects net original cost rate base, we now address the main dispute between the parties—whether the Lake Station WTP and wells are currently in operation and used and useful to Indiana American. This same issue was raised in the Lake Station acquisition case, where the parties disputed whether the Lake Station WTP assets would be used and useful following the acquisition.

While the OUCC asserted that the Lake Station WTP has remained out of service since February 5, 2019, and is not currently in operation, Indiana American provided evidence that it is

[16] Jt. Pet. of Indiana-American Water Co., Inc. and the City of Lake Station, Indiana, Cause No. 45041 at 32 (IURC Aug. 15, 2018).

[17] Ind. Off. of Util. Consumer Counselor, Town of Schererville v. Indiana-American Water Co., Inc., 137 N.E.3d 922 (Ind. 2019), transf. denied.

in operation and being maintained in standby status in the event of an emergency. Ms. Britto testified that the plant maintains an active WT3 Operator License through IDEM, it has all of the necessary equipment to produce potable, finished water, maintenance is performed regularly at the plant, and Indiana American personnel operate the wells and pumps on a monthly basis to ensure the plant remains fully operational. The evidence further demonstrates that the WTP can be transitioned out of standby status to produce potable finished water within 24 hours in the event of a chemical spill in Lake Michigan or another emergency requiring the plant to provide emergency capacity to the Northwest Indiana District.

The OUCC also questioned whether Indiana American needs the plant to serve the Northwest District in emergency situations, noting that Indiana American has met demand in Northwest Indiana during shutdowns of the Ogden Dunes WTP without the Lake Station plant online. On rebuttal, Indiana American explained why, and under what circumstances, Indiana American would need the Lake Station plant to serve the Northwest District in the event of an emergency. Pet. Ex. 17-C at 12. While Indiana American has not yet been required to activate the Lake Station WTP in an emergency situation, Ms. Britto's testimony demonstrates probable scenarios where this situation could become a reality.

The OUCC also argued that reopening the East Chicago interconnect would provide the lowest marginal cost alternative compared to the Lake Station WTP to provide service in response to an emergency. However, Ms. Britto explained why reopening the East Chicago interconnect is not feasible and would not provide a lower cost alternative to maintaining the plant in standby status. The evidence demonstrates that Indiana American cannot simply open a valve from the interconnect and the two water systems are incompatible because East Chicago is a free chlorine system whereas the Northwest District is a total chlorine system.

Finally, the OUCC argued that Indiana American has not proposed ratemaking options to mitigate the cost of the Lake Station WTP and wells. The language from our Order in Cause No. 45041 (at 32) encouraged Indiana American to propose ratemaking options that might mitigate the impact of the purchase price in future cases "*if it does in fact turn out the WTP and wells are not used and useful to Indiana American following the acquisition*." The evidence demonstrates that Indiana American has reduced O&M expenses at the plant to only those required to maintain the plant in standby status. Mr. Shimansky calculated a customer bill impact of 12 cents per month from having the Lake Station plant ready to be activated in an emergency.

Accordingly, based on the evidence presented, we find that the Lake Station WTP and wells are currently used and useful to Indiana American to provide service in the event of an emergency in the Northwest District. Indiana American has also taken steps to minimize the plant's O&M expense to mitigate costs to customers while still ensuring the plant's availability in the event of an emergency. As such, we find that the assets are appropriately included in rate base in this Cause.

d. Lift Station Replacement Projects.

i. INAWC Case-in-Chief. Indiana American proposed Project I10-110002 – Kokomo Wastewater Sheridan 6th Street Lift Station Replacement

("6th Street Project").[18] The project would replace the existing lift station that is past its useful life and currently cannot handle peak flows associated with the sanitary basin. While significant customer growth is not anticipated in the basins, increased inflow and infiltration ("I&I") present capacity concerns in these areas. Petitioner noted overflows downstream of the lift station as well as flooding of the wet well during wet weather conditions. The current lift station mechanical and electrical components are in poor condition and at the end of their useful life. Additionally, the lift station is located within the State Road 38 right-of-way and the location and lack of safe access poses a safety risk to personnel during regular maintenance and operation.

Petitioner also proposed Project I10-110003 – Kokomo Wastewater Sheridan Maple Run Lift Station ("Maple Run Project").[19] The project includes improvements to the existing Maple Run Lift Station pumping and electrical, as well as the addition of a metering vault structure. Improvements are needed to provide necessary pumping capacity for the South drainage sub-basin. The Maple Run lift station capacity is limited by a number of factors such as wet well size, pump capacity, force main size, and downstream discharge location capacity.

ii. OUCC. With respect to the 6th Street Project, Ms. Willoughby recommended the Commission disallow the inclusion in rate base of $1,791,005 because Indiana American did not provide sufficient evidence to support replacing the lift station or the cost estimate. She testified it is an imprudent use of ratepayer funds to install larger equipment to handle I&I without addressing the underlying cause for the I&I. Further, Ms. Willoughby testified Petitioner has not provided documentation to support replacement of the lift station based on its condition, or to support the cited safety concerns for relocating the lift station. She testified that having a lift station in the right of way is not unusual and does not necessarily make the location unsafe. Ms. Willoughby also took issue with Indiana American's cost estimates and testified that Petitioner needed to provide documentation and calculations to support how the cost estimate was assembled.

With respect to the Maple Run Project, Ms. Willoughby recommended the Commission deny a portion (the final amount is confidential) of the proposed costs for overestimation of labor, contingency, and indirect overhead costs. She testified that Indiana American provided conflicting cost estimates for the project, and Petitioner's cost estimates include errors.

iii. INAWC Rebuttal. Regarding the OUCC's recommendation to disallow the 6th Street Project, Mr. Hobbs explained that addressing I&I in the basin as Ms. Willoughby suggests will help the entire system with a reduction in eventual treatment but will not address the issue that the station is undersized for the number of customers it serves, or address the other significant project drivers, such as the condition of the lift station, lack of current pumping capacity, site access, safety, and security. Mr. Hobbs testified Indiana American has attempted to address the I&I issues in the basins but addressing I&I will not obviate the need for replacement of the lift station. With respect to the current capacity concerns at the lift station, Mr. Hobbs testified that equivalent dwelling unit estimates coupled with a peaking factor of four indicate that the station needs to be sized at a minimum for a peak flow of approximately 370 gpm.

[18] Petitioner's Exhibit 3, Attachment MHH-4 at p. 3.

[19] *Id.* at p. 5.

Mr. Hobbs testified that during a 2019 draw down test, the current pumps were not able to achieve the estimated 370 gpm flow rate needed, where pump 1 at 196-gpm and pump 2 at 122-gpm pumped a combined 270-gpm.

With respect to the condition issues, Mr. Hobbs sponsored photos of the lift station at Attachment MHH-10R of Petitioner's Exhibit 16 to show the heavily corroded discharge piping without protective coating, control panel structural supports with excessive corrosion, surface deteriorating of concrete, access hatches without secondary safety protection, wetwell exhaust vent located between the sidewalk and road, and a 230-volt control panel in poor condition. With respect to the safety issues, Mr. Hobbs testified there is currently no dedicated access for employees to safely park and maintain the station, and they are currently using an undeveloped lot at the corner of State Road 38/6th and Main Street for wetwell maintenance. Mr. Hobbs explained that if the lot becomes inaccessible in the future, it will require employees to park vehicles and equipment along State Road 38, and this could result in safety issues for employees and traffic flow disruptions for the public.

Regarding Petitioner's cost estimates for the Maple Run Project, Mr. Hobbs testified that Petitioner provided two cost estimates for the lift station project that were prepared at different times, which is why the cost estimates Petitioner provided for the project differ. As to the errors Ms. Willoughby identified, Mr. Hobbs stated that the cost estimates Indiana American provided are just that, estimates. He explained that as costs mature through the implementation process, the estimates will be updated through monthly reforecasting where any potential overestimating of labor in the estimate will be corrected when the actual costs of the project go into rate base. Mr. Hobbs testified the cost estimate issues raised by the OUCC are generally not relevant, because it is the actual costs of the project that will be reflected in rate base.

iv. Discussion and Findings. With respect to the 6th Street Project, the OUCC argues the capacity issues at the lift station are the result of I&I in the system, which should be addressed before installing larger equipment. While we agree larger equipment should not be the first solution to I&I, the evidence demonstrates that Indiana American conducted a system wide collection system evaluation that included an assessment of I&I issues. Pet. Ex. 16, Attachment MHH-1R. It shows Indiana American has attempted to address specific I&I issues associated with infrastructure upstream of the 6th Street lift station, but the station is still undersized.

The record also shows that capacity issues are not the only driver of the project, as components of the lift station are in poor condition and the location of the lift station in the public right-of-way poses security and safety concerns to Indiana American's employees and the public. Pet. Ex. 16, Attachment MHH-10R. Petitioner identified several issues related to age and system deterioration that need to be addressed, including piping restrictions and electrical issues. These issues indicate that replacement of the lift station is needed to maintain operation. In addition, while site safety does not appear to be a concern today, the evidence demonstrates that future planned road improvements are likely to create safety and security concerns.

Accordingly, we find that replacement of the 6th Street lift station is necessary to address the capacity, condition, safety, and security concerns identified by Petitioner, and is required for

Indiana American to provide safe, adequate, and reliable service to its customers. For those reasons, we find the 6th Street Project should be approved.

With respect to the Maple Run Project, the OUCC did not take issue with the project itself, but rather raised concerns about the cost estimates Indiana American provided to support the project. While Petitioner's cost estimate is a planning-level estimate, we find such estimate to be sufficient at this time. As Mr. Hobbs explained on rebuttal, it is the actual cost of the project and not the estimates that will be reflected in rate base. For this reason, we find the Maple Run Project should be approved and the amount that should be reflected in rate base for the project is the actual cost of the project upon completion.

e. BT SOP 98-01.

i. INAWC Case-in-Chief. Indiana American sought to include its Business Transformation costs (referred to as "BT SOP 98-01") in rate base in this Cause. As part of its total company rate base, Indiana American proposed to include $7,170,944 of BT SOP 98-01 costs as UPIS, as well as $6,619,332 of accumulated depreciation associated with the BT SOP 98-01 project.

ii. OUCC. Ms. Stull recommended Indiana American's request to include these costs in rate base be denied. She explained that the BT SOP 98-01 costs refers to expenditures associated with implementation of American Water's customized SAP software system. She said SOP 98-01 provides guidance on accounting for the costs of computer software developed or obtained for internal use and requires training and data conversion costs be expensed as incurred.[20] Ms. Stull noted that, in Cause Nos. 44450 and 45142, Indiana American sought to capitalize these costs for ratemaking purposes, which the OUCC opposed but did not object to the recovery of the costs over time through amortization. She noted that in settlements, these costs were excluded from rate base but amortized over 13 years, which has effectively allowed Indiana American a "return of" but not a "return on" the expenditures.

Ms. Stull clarified that the OUCC does not oppose Indiana American's continued ability to earn a return of the expenditures. However, she said Indiana American should not be authorized to earn a return on the expenditures because they are not construction costs used to produce plant that is used and useful in the provision of utility service under Ind. Code § 8-1-2-6. She further testified that Petitioner neither supported why these costs should be included in rate base nor why the treatment of these costs should deviate from prior Commission rate orders for Indiana American.

iii. INAWC Rebuttal. Mr. Shimansky disagreed with Ms. Stull's recommendation that the BT SOP 98-01 costs be disallowed. With respect to Ms. Stull's contention that these costs do not qualify for inclusion in rate base because they are not construction costs under Ind. Code § 8-1-2-6, Mr. Shimansky testified that capital dollars spent do not have to be related to "construction" to be recovered in rate base. He testified that capital dollars, or any asset, represents money spent today that creates a benefit for future periods. He further

[20] SOP is a Statement of Position issued by the American Institute of Certified Public Accountants, which is considered to be a source of generally accepted accounting principles.

testified that Ind. Code § 8-1-2-6 also provides that rate base includes "the cost of bringing property to its then state of efficiency," which is precisely what the BT SOP 98-01 asset represents. Mr. Shimansky explained that the planning, data conversion, training deployment, and stabilization costs invested in the Business Transformation program and recorded as SOP 98-01 assets were critical to bringing the Business Transformation investment to its current state of efficiency. He testified that the OUCC is not opposed to the collection of the BT SOP 98-01 asset, and if the asset is eligible to be collected in rates, it should also be included in rate base.

As for the costs not being included in rate base in prior rate cases, Mr. Shimansky testified the treatment of the BT SOP 98-01 costs in Indiana American's prior rate case was pursuant to a settlement and for the purpose of reaching a resolution in that case. Mr. Shimansky explained Petitioner did not agree to remove it permanently from rate base nor did it agree not to include it in the rate calculations in its next rate case.

iv. Discussion and Findings. In Cause No. 44059, Indiana American sought approval of expenditures for the design, development, and implementation of its Business Transformation program, which was to replace and upgrade its information technology systems. In that Cause, the Commission approved an agreement by the parties that Indiana American could defer for future recovery the estimated $6,800,000 of associated costs and that the deferred costs should be amortized over ten years. In a settlement approved by the Commission in Cause No. 44450, the parties agreed that all BT SOP 98-01-related assets should be depreciated, or amortized, over 13 years rather than the ten years approved in Cause No. 44059.

As an initial matter, we agree with the OUCC that given Petitioner's decision to request authorization to include the BT SOP 98-01 costs in its base rates after such costs were previously excluded, Indiana American should have included a discussion to support the reasonableness of its request in its case-in-chief. Nonetheless, we find the evidence supports including these costs in rate base.

We recently addressed the inclusion of these types of software costs in rate base in *Aqua Indiana, Inc.*, Cause No. 45675 (IURC Jan. 18, 2023). There, the utility sought preapproval of design, implementation, and development costs associated with improvements to its information technology systems and software under Ind. Code § 8-1-2-23. The OUCC argued that the software costs were not appropriate for pre-approval under Ind. Code § 8-1-2-23 because they did not qualify as an extension, construction, addition or improvement to plant and equipment. *Id.* at 9. The OUCC also argued that these costs, which generally accepted accounting principles ("GAAP") require to be expensed, should not be capitalized in rate base because they did not result in utility assets. *Id.* at 5-6. We disagreed and found that the software qualified for pre-approval and authorized the costs to be included in rate base.

We are dealing with the same type of costs here. These deferred expenses are linked to software and associated with an asset includable in utility plant. Therefore, the unamortized balance of the deferred costs can be included in rate base. Whether the costs received preapproval under Ind. Code § 8-1-2-23 does not affect, or alter, the manner in which such costs are treated for ratemaking purposes. We also disagree with the OUCC's argument that the treatment of these costs in the 2019 Rate Order should dictate how these costs are treated in this Cause. As Mr.

Shimansky explained on rebuttal, the agreement to exclude these costs from rate base in Cause No. 45142 was done for purposes of reaching a settlement. Nothing in the settlement reflects Petitioner's agreement that these costs should be excluded from rate base.

Accordingly, we find that the BT SOP 98-01 cost Petitioner proposes to include in rate base in this Cause is eligible to earn a return on as part of its rate base. As such, we find these costs were appropriately included in rate base in this Cause and should be approved.

f. Acquisition Related Costs.

i. OUCC. Ms. Stull noted that INAWC has been authorized to include in its rate base legal fees incurred by the utility related to its acquisition of water and wastewater utilities. She expressed concern with Indiana American's practice of embedding into rate base legal expenses based on fixed fee agreements. Ms. Stull explained in Cause No. 45461, the Commission found that such fees could properly be included in rate base pursuant to Ind. Code ch. 8-1-30.3, but that such expenses must be reasonable and the appropriate time to challenge the reasonableness of such costs was in the utility's next rate case. She noted the Commission also expressed an expectation that, in the future, Indiana American should provide a more accurate and detailed estimate of incidental expenses and other costs of acquisition. Ms. Stull noted the Commission made similar findings in Cause No. 45550 involving Petitioner's acquisition of the Town of Lowell's system.

Ms. Stull raised concern that Indiana American is not adequately incented to control its acquisition costs because it is permitted to include its legal expense in rate base, where it will earn a return as if it is an investment. She noted that acquisition cases have become less controversial and involved and argued that Indiana American's fixed fee arrangements present a significantly large expense for a simple case (*e.g.*, $120,000 for the Claypool case) but does not afford protection for the ratepayer in the case of protracted acquisition cases.

Ms. Stull suggested Indiana American is not monitoring these fixed fee arrangements to determine if they are a good deal for customers. She recommended that Indiana American be required to present support for the reasonableness of legal costs with the case-in-chief testimony in its rate case and keep track of the hours spent by outside counsel for evaluation. She did not, however, propose any adjustment in this case to Petitioner's rate base.

ii. INAWC Rebuttal. Mr. Shimansky responded to Ms. Stull's concerns by stating that "hours" are not the only factor in considering the value of legal representation. He testified that Indiana American's lawyers have actively negotiated and revised the "fixed" fees to match the reasonable reality of a case. He gave the example of the fixed fee for the Claypool acquisition which, as Petitioner told the OUCC in discovery, was reduced at the request of general counsel for Indiana American after it became apparent that the OUCC was not going to engage in the more litigious approach it has taken in other acquisition cases. He testified this disproves Ms. Stull's theory that Indiana American has no incentive to monitor the fees in relation to the level of work required.

iii. Discussion and Findings. Through our prior acquisition orders, we have made it clear that the reasonableness of legal expense incurred by

Petitioner in acquisition cases under Ind. Code ch. 8-1-30.3 is an issue to be addressed in Petitioner's next rate case. *See e.g., Indiana-American Water Co., Inc. and Wastewater One, LLC*, Cause No. 45461, at 13, (IURC June 2, 2021). As the party seeking cost recovery of such expenses, Indiana American bears the burden of demonstrating the reasonableness of such costs.

While the OUCC expressed concern with Petitioner's use of fixed fee arrangements for legal fees and the lack of information provided by Petitioner that would allow it to easily determine whether such arrangements would produce lower outside counsel fees, the OUCC did not offer any evidence disputing the reasonableness of the legal expenses requested by Petitioner or request that we disallow any expense. Rather, the evidence of record reflects that INAWC takes steps, even after executing fixed fee arrangements with outside counsel, to monitor and mitigate legal fees incurred in connection with INAWC's acquisitions. Pet. Ex. 15 at 37-38.

We do, however, agree that Indiana American could have provided testimony or other evidence in its case-in-chief to support the reasonableness of its legal expenses. While the OUCC urges us to order Petitioner to require its outside counsel to documents its hours when using a fixed fee arrangement, we decline to do so. As we have encouraged Indiana American to provide more detailed estimates of its expenses and costs of acquisition in its case-in-chief filings under Ind. Code ch. 8-1-30.3, we encourage Indiana American to provide additional detail in its base rate case-in-chief filings concerning the reasonableness of its acquisition legal expenses for which it seeks recovery, including an explanation for why its chosen legal fee arrangement was appropriate and resulted in reasonable costs and the reason(s) any expenses were not within the range of estimated costs identified in the acquisition case.

Accordingly, we accept the amount of legal expense Petitioner has proposed for each of its acquisitions that are to be included in rate base in this case.

B. <u>Quantification of Original Cost Rate Base</u>. Based upon our findings above, we find that Petitioner's net original cost rate base projected as of Step 1 is as follows:

Attachment 7

Utility Plant:	Total Company	Water	Wastewater
Plant in service	$2,491,462,490	$ 2,470,774,861	$ 20,687,629
BT SOP 98-01	7,170,944	7,119,313	51,631
Deferred depreciation	8,311,140	8,277,794	33,346
Post-in-service AFUDC	7,137,440	7,123,318	14,122
Total Utility Plant	2,514,082,014	2,493,295,286	20,786,728
Accumulated Depreciation:			
Plant in service	618,690,066	616,302,719	2,387,347
BT SOP 98-01	5,364,418	5,325,794	38,624
Deferred depreciation	4,791,904	4,770,447	21,457
Post-in-service AFUDC	4,206,403	4,197,650	8,754
Total Accum. Depreciation	633,052,791	630,596,610	2,456,182
Net Utility Plant	1,881,029,223	1,862,698,676	18,330,546
Deductions:			
Contributions in aid of construction	210,713,116	210,528,039	185,076
Customer advances for construction	62,267,845	61,809,736	458,109
Capacity Adjustment - Somerset	309,000	182,091	126,909
Total Deductions:	273,289,961	272,519,866	770,094
Additions:			
Acquisition Adjustment (net)	8,524	-	8,524
SEI Deferred Depr, Property Taxes & PISCC	4,364,489	4,364,489	-
	2,241,938	2,227,653	14,285
Total Additions:	6,614,951	6,592,142	22,809
Total Rate Base	$ 1,614,354,213	$ 1,596,770,952	$ 17,583,261

We further find, for purposes of Step 2 rates, that Petitioner's net original cost rate base forecasted as of April 30, 2024 (the beginning of the test year) to be $1,679,732,875 as follows:

Attachment 7

Utility Plant:	Total Company	Water	Wastewater
Plant in service	$2,602,876,784	$ 2,579,745,204	$ 23,131,580
BT SOP 98-01	7,170,944	7,119,313	51,631
Deferred depreciation	8,311,140	8,277,794	33,346
Post-in-service AFUDC	7,137,440	7,123,318	14,122

C. Fair Value of INAWC's Rate Base.

1. INAWC Case-in-Chief. Ms. Bulkley performed an analysis to estimate the fair value of INAWC's rate base. She testified that the methodology that she relied on is generally consistent with the methodology that has been used by the Commission to establish the fair value of INAWC's assets in prior rate proceedings. This methodology begins with the fair value rate base that was established in the last rate proceeding. The historical fair value rate base is trended to current dollars using an inflation index, CPI-U, to establish the current value of the fair value rate base from the prior case. She stated that because INAWC's last general rate case resulted in a settlement that did not specify a fair value rate base, she relied on the fair value rate base that was estimated as of the conclusion of the test year in Cause No. 44450 of $1,222,819,707. She then escalated the fair value rate base from January 28, 2015 (the end of the test year in Cause No. 44450) to the end of each of the projected periods in this case, using the average inflation factor for the period from January 2015 through the end of each of the periods proposed by Petitioner to be utilized as rate base cutoffs for the three-step implementation of rates in this Cause. Ms. Bulkley noted that this methodology is consistent with the methodology that was relied upon in Cause No. 44022, the most recent fair value determination made by the Commission for

Petitioner.

The net investor supplied additions used in Ms. Bulkley's fair value analysis are the difference between the original cost rate base in Cause No. 44450 and the pro forma net investor supplied additions through the periods ending July 31, 2023, April 30, 2024, and April 30, 2025. Her resulting fair value rate base was $2,372,363,444 at July 31, 2023, $2,474,101,830 at April 30, 2024, and $2,667,265,966 at April 30, 2025. Ms. Bulkley compared the fair value rate base for each of the periods to a reproduction cost new less depreciation study that was prepared by Petitioner using the Handy-Whitman Index and included in her workpapers. After comparison, Ms. Bulkley concluded the methodology previously used continues to be a reasonable method for determining fair value.

Ms. Bulkley then calculated the return on the fair value rate base using the same approaches that were applied in Cause No. 44022. Each of these approaches makes an adjustment to the WACC to remove inflation from the fair value rate base where inflation has been applied. She walked through the methodologies and results of each. She clarified that the first component of the fair value rate base is the value as estimated in Cause No. 44450, which is escalated by inflation. The second component is net investor supplied capital since the last rate proceeding, which does not include inflation. The fair value increment is determined by comparing the operating income from the fair value rate base to the operating income derived by applying the original cost return to the original cost rate base for each period, ending July 31, 2023, April 30, 2024 and April 30, 2025. This resulted in a fair value increment of $33,861,953 at July 31, 2023, $35,673,678 at April 30, 2024 and $38,990,129 at April 30, 2025. Pet. Ex. 7 at 63 and Attachment AEB-10.

Ms. Bulkley explained that while each of the methodologies is a reasonable approach to estimating the fair value operating income, Petitioner is not proposing to rely on the fair value increment that results from the methodologies described above. Rather, Petitioner proposes to include only the return on the Indiana Cities Acquisition Adjustment that has been authorized by the Commission in other proceedings through informed fair value ratemaking. Below is the resulting Return on Indiana Cities Acquisition Adjustment presented by Ms. Bulkley:

Return on Indiana Cities Acquisition Adjustment

Date	Indiana Cities Acquisition Adjustment	Return on Indiana Cities Acquisition Adjustment
July 31, 2023	$4,713,294	$319,090
April 30, 2024	$4,362,716	$294,483
April 30, 2025	$3,895,280	$267,995

2. Industrial Group. Mr. Gorman testified that the fair value increment as proposed by Ms. Bulkley is not appropriate and inflates the compensation provided to the utility above a fair and reasonable level. He stated her fair value increment proposal is severely flawed and he recommends it be rejected and not relied upon by the Commission for any purpose in setting rates in this proceeding. As an example, he noted the starting point for her fair value rate base was the estimate provided in Cause No. 44450, which was never approved as reasonable by the Commission, and therefore, is not a reasonable de facto estimate of Petitioner's

fair value rate base.

3. INAWC Rebuttal. In response to Mr. Gorman's concerns with her calculation of the fair value increment, Ms. Bulkley testified that the basis of her analysis was not the findings from the settled case. Instead, her estimate of the fair value rate base builds on what Petitioner presented in its evidence in the settled case, which is based on the last fair value finding from a litigated case. Moreover, Ms. Bulkley pointed out that the methodology she relied on in developing the fair value rate base has been relied on by the Commission in several prior cases. Ms. Bulkley explained that in these cases, the Commission methodology begins with the fair value rate base from Petitioner's last fair value finding in a rate case and trends the rate base using a cost inflation index. The Commission then adds net plant additions to determine the updated fair value of the plant. She reiterated that Petitioner is proposing to recover the return on the acquisition adjustment for the Indiana Cities acquisition, not the fair value increment on the entire rate base.

4. Discussion and Findings. Although Indiana-American appears to request that we make a finding of the fair value of Petitioner's rate base, Ms. Bulkley testified that Petitioner is not asking the Commission to rely on, or otherwise use, the fair value of its rate base as calculated through her fair value methodology for any ratemaking purpose except for the calculation of a specific fair value increment to the return on the Indiana Cities Acquisition Adjustment. Pet. Ex. 7 at 64. No party objected to the inclusion of an adjustment for the Indiana Cities acquisition, and as discussed below, when calculating a fair rate of return for INAWC, we will reflect that specific adjustment.

In addition, rather than rely on Ms. Bulkley's calculation of the fair value of its rate base to serve as the statutory "fair value" of its rate base under Ind. Code § 8-1-2-6 for ratemaking purposes, Petitioner proposed the use of its net original cost rate base as of the close of its test year to calculate its fair rate of return. No party objected to the use of net original cost as the basis for a fair value finding. Accordingly, we find a determination of the fair value of Petitioner's rate base to be unnecessary and conclude that Petitioner's net original cost of its rate base, adjusted by our other findings contained in this Order, is the appropriate and proper statutory fair value of its used and useful plant and equipment. Based on our findings herein, we find the resulting return on Indiana Cities Acquisition Adjustment as follows:

Date		Indiana Cities Acquisition Adjustment		Return on Indiana Cities Acquisition Adjustment
July 31, 2023		$4,713,294		$319,090
April 30, 2024		$4,401,669		$297,113
April 30, 2025		$3,934,233		$270,675

8. Fair Rate of Return.

A. ROE.

1. INAWC Case-in-Chief. Ms. Bulkley supported Petitioner's proposed ROE and testified in support of INAWC's projected capital structure. She recommended

an ROE of 10.60% as reasonable and appropriate for this proceeding.

In determining her recommended ROE, Ms. Bulkley first developed a proxy group of utility companies that face similar risk as INAWC. To that proxy group, she applied the Constant Growth Form of the Discounted Cash Flow ("DCF") model, the Capital Asset Pricing Model ("CAPM"), and the Empirical Capital Asset Pricing Model ("ECAPM"). Her recommended ROE also takes into consideration the following factors: (1) INAWC's capital expenditure program relative to the proxy group companies; (2) the test year convention mechanism used to set rates for INAWC; (3) the risk associated with variations in volume/demand and the resulting effect on INAWC's revenues and cash flows; and (4) INAWC's proposed capital structure as compared to the capital structures of the proxy group companies. She stated that while she did not make specific adjustments to her recommended ROE for these factors, she did consider them in the aggregate when determining where her recommended ROE falls within the range of the analytical results.

Ms. Bulkley testified that she considered the following key factors in her cost of equity analyses and recommended ROE: (1) the standards established by the U.S. Supreme Court's *Hope* and *Bluefield* decisions for determining a fair and reasonable authorized ROE for public utilities; (2) the effect of current and prospective capital market conditions on the cost of equity estimation models and on investors' return requirements; (3) the results of several analytical approaches that provide estimates of Petitioner's cost of equity; and (4) Petitioner's regulatory, business, and financial risks relative to the proxy group of comparable companies in determining where Petitioner's ROE should fall within the reasonable range of analytical results to appropriately account for any residual differences in risk.

Ms. Bulkley presented the results of her Constant Growth DCF, CAPM and ECAPM analyses, ultimately leading to a range from 10.00% to 11.00% as reasonable.

Ms. Bulkley explained that utilities compete directly for capital with other investments of similar risk, which include other water, natural gas, and electric utilities. Therefore, the ROE authorized for a utility sends an important signal to investors regarding whether there is regulatory support for financial integrity, dividends, growth, and fair compensation for business and financial risk. She testified that the regulatory framework is one of the most important factors in debt and equity investors' assessments of risk and that credit rating agencies consider the authorized ROE and equity ratio for regulated utilities to be important for two reasons: (1) they help determine the cash flows and credit metrics of the regulated utility; and (2) they provide an indication of the degree of regulatory support for credit quality in the jurisdiction. She stated not only do credit ratings affect the overall cost of borrowing, they also act as a signal to equity investors about the risk of investing in the equity of a company. She testified that providing the opportunity to earn a market-based cost of capital supports the financial integrity of Petitioner, which is in the interest of both customers and shareholders.

Ms. Bulkley walked through the effect current and prospective market conditions have on the cost of equity for Petitioner, stating that the combination of persistently high inflation, and the Federal Reserve's changes in monetary policy contribute to an expectation of increased market risk, and an increase in the cost of the investor-required ROE. She explained that because the share prices of utilities are inversely correlated to interest rates, and government bond yields are already

substantially greater than utility stock dividend yields, the share prices of utilities will likely decline, which is the reason a number of equity analysts have classified the utility sector as either underperforming or underweight. She said the expected underperformance of utilities means that DCF models using recent historical data likely underestimate investors' required return over the period that rates will be in effect. In addition, Ms. Bulkley testified that prospective market conditions warrant consideration of forward-looking cost of equity estimation models such as the CAPM and ECAPM, which may better reflect expected market conditions.

Ms. Bulkley described her process of selecting a group of proxy companies to estimate the cost of equity for INAWC. She then walked through her use of the Constant Growth DCF model, the CAPM, and the ECAPM methods for estimating the cost of equity. The mean and median DCF results using the average growth rates ranged from 9.65% to 9.97%, and the mean and median results using the maximum growth rates ranged from 10.76% to 11.04%. Her traditional CAPM analyses produced a range of returns from 10.19% to 10.88% and her ECAPM analysis results ranged from 10.77% to 11.29%. Ms. Bulkley performed a flotation cost calculation and used it to identify a recommended ROE within the range of ROE estimates from her various models. Ms. Bulkley also explained that from a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. She noted that Petitioner's capital expenditure requirements as a percentage of net utility plant are significant and will continue over the next few years. Additionally, similar to a number of the operating subsidiaries of the proxy group, Ms. Bulkley noted that INAWC does have a capital tracking mechanism to recover some of Petitioner's projected capital expenditures.

2. <u>OUCC and Intervenors</u>. OUCC witness Dellinger recommended an ROE of 9.00%. He derived this recommendation from an analysis of the Constant Growth DCF model, the Two-Stage DCF model, the CAPM and the ECAPM. Mr. Dellinger discussed his approach to these models and how they differed from Ms. Bulkley's approach. As to the appropriate proxy group, Mr. Dellinger explained why he included some additional companies and excluded others from those used by Ms. Bulkley.

Mr. Dellinger described the DCF model, his results, and how his results compared with Ms. Bulkley's results. His Constant Growth DCF analysis produced a 9.0% ROE for the mean calculation and a 9.32% ROE for the median. Mr. Dellinger discussed how the limitations and weaknesses of the Constant Growth DCF model are addressed by using a two-stage model. His Two-Stage DCF model resulted in a 7.61% ROE for the Mean calculation and an 7.16% ROE for the median calculation.

Mr. Dellinger described the CAPM, his preferred metric for interest rates (the 7-day yield of the 30-year treasury), and the calculation of Beta. He also discussed the equity risk premium component and the issues with Ms. Bulkley's calculation. He also discussed a logical inconsistency in Ms. Bulkley's DCF used for her CAPM due to a mismatch between the inputs Ms. Bulkley's used in her model. Mr. Dellinger ultimately recommended a CAPM ROE of 7.39% calculated on the Mean and 7.38% calculated on the Median. He also ran an ECAPM, which then resulted in an ROE of 7.59% calculated on the Mean and 7.54% calculated on the Median. He did not recommend reliance on the ECAPM, because he did not believe it to be a compelling model.

Mr. Dellinger explained why his results, which were lower than those of Ms. Bulkley, were appropriate and reasonable. He discussed the historic spread between U.S. Treasury rates and Indiana American's awarded ROEs over time. Mr. Dellinger testified that flotation costs should not be reflected in a higher cost of equity, as investors adjust a stock's market price to account for the fact that a portion of the proceeds they pay for shares does not go to Petitioner issuing equity.

Industrial Group witness Gorman recommended an ROE of 9.10%, which was 30 basis points less than the midpoint of his recommended range to "offset some of the excessive cost to ratepayers created by INAWC's unreasonable equity-thick ratemaking capital structure and mitigate, in part, its cost of service increase and related adjustment to tariff rate charges" in the proceeding. IG Ex. 1 at 5. Mr. Gorman also recommended that the Commission not adjust the ROE for the recovery of flotation costs because it is not based on the recovery of reasonable flotation expenses for Petitioner.

Mr. Gorman reviewed market evidence concerning how regulatory decisions and authorized returns on equity for regulated utility companies have supported utilities' access to capital, financial integrity, and credit standing. He testified the industry authorized returns on equity for water utilities have ranged from 9.04% to 9.76% for the period of 2014-2022. He also noted that in the only rate case for a water utility to date in 2023 that identified an equity return, the approved return on equity was 8.70%. Based on these authorized ROEs, he said credit rating agencies have rated the credit standing of regulated utilities as "stable" and the credit quality of the industry has increased over the last few years.

Mr. Gorman also testified regarding the investment risk of INAWC and its proposed capital structure. He explained that INAWC's capital structure has a far greater common equity ratio in comparison to authorized rate-setting capital structures allowed for electric, natural gas, and water utilities over the last several years. He testified that INAWC's equity thick capital structure has the effect of increasing charges to customers, relative to the industry average ratemaking capital structure, with a revenue impact that is comparable to a 120 basis point differential in the return on equity. Mr. Gorman's recommended ROE represents a movement of a little over half of this 120 basis point difference from the high end of his recommended range of 9.0% to 9.8%.

Mr. Gorman explained the methods he used to estimate INAWC's cost of common equity including several variations of the DCF model, the risk premium model, and the CAPM and the inputs he used in applying these models. His DCF recommendation was 9.00%. His CAPM analysis resulted in 10.10% and his Risk Premium analysis resulted in 9.55%.

Crown Point witness Guerrettaz did not perform any quantitative analyses regarding the cost of equity for Petitioner. Mr. Guerrettaz instead estimated that a reasonable authorized ROE for Petitioner is 9.00% based on his understanding of the financial markets and Petitioner's business characteristics. He testified that Petitioner has extremely low business risk because it: (1) sells an essential service, (2) enjoys traditional rate regulated revenue pricing without competition, and (3) grows rate base, revenues, and profits through utility acquisitions and risk-reducing tracking mechanisms. Mr. Guerrettaz stated that the business risk of Petitioner and its parent company is nominal based on stock prices and dividend growth.

CAC witness Inskeep recommended the Commission reject Petitioner's proposed ROE to mitigate the rate impact of an "extraordinary utility unaffordability crisis." CAC Ex. 1 at 36. He noted the Commission has approved ROEs for Indiana American of 9.70% (Cause No. 44022), 9.75% (Cause No. 44450), and 9.80% (Cause No. 45142) as compared to Indiana American's proposal in this case of 10.6%. He stated that customers do not derive a tangible benefit from an increased ROE, rather a higher ROE reflects a higher profit margin for Indiana American's shareholders at the cost of higher rates for its customers.

3. INAWC Rebuttal. Responding to the issues raised by the OUCC and Intervenors, Ms. Bulkley testified the primary factors that should be considered are: (i) the importance of investors' actual return requirements and the critical role of judgment in selecting the appropriate ROE; (ii) the importance of providing a return that is comparable to returns on alternative investments with commensurate risk; and (iii) the need for a return that supports a utility's ability to attract needed capital at reasonable terms. She also considered the effect of current and expected capital market conditions on these factors.

Ms. Bulkley asserted that the OUCC and Industrial Group ROE are inconsistent with recent changes in market conditions and do not reflect the current cost of equity. She noted that interest rates have increased since Petitioner's last rate proceeding, and authorized ROEs have increased from 2021 through 2023, which demonstrates that borrowing costs and the cost of equity have increased. She testified that Mr. Gorman's and Mr. Dellinger's proposals that the Commission reduce Petitioner's currently authorized ROE are directionally inconsistent with market conditions and the investor required ROE. She stated that a comparison of Mr. Gorman's ROE recommendations in various rate proceedings in Indiana since 2019 demonstrates that his recommended ROE in this proceeding is inconsistent with the increase in the cost of equity reflected in his model results and that his proposed risk adjustment reduction to the ROE of 30 basis points is arbitrary and asymmetric given his past testimony.

Ms. Bulkley testified that making reasonable adjustments to the OUCC's cost of equity analyses of Mr. Dellinger results in a range of returns from 9.53% to 10.82%, which demonstrates that Petitioner's requested ROE is reasonable and appropriate. She disagreed with the composition of his proposed proxy group and the application of his constant growth DCF model. Ms. Bulkley also explained her disagreement with Mr. Dellinger's criticisms of her DCF, CAPM and ECAPM analyses.

Ms. Bulkley testified that while Mr. Gorman states that he relies on the midpoint of his DCF results, as well as the midpoint of the results of all his cost of equity analyses as his overall ROE recommendation, he incorrectly states the midpoint of his DCF results and the results of his overall cost of equity analyses. She said simply correcting these two errors produces a midpoint ROE of 9.60% instead of the 9.40% stated in Mr. Gorman's testimony.

When Mr. Gorman's risk premium analysis is adjusted to reflect the inverse relationship between interest rates and the equity risk premium, Ms. Bulkley showed the cost of equity is 10.86%. She stated this change increases Mr. Gorman's cost of equity range of 9.10% to 10.86%. Thus, the midpoint, which is the central tendency that forms the basis for Mr. Gorman's market cost of equity recommendation, would be 9.98%.

Ms. Bulkley defended her use of flotation costs by stating that such costs, just like rate base investments, are part of the invested costs of the utility, and the need to reimburse shareholders for the lost returns associated with equity issuance costs has been recognized by the academic and financial communities. Ms. Bulkley did not address Mr. Guerrettaz's and Mr. Inskeep's ROE recommendations other than to recommend they be dismissed summarily because neither provided an independent analysis.

4. Discussion and Findings. In setting the rate of return, the Commission's decision must be framed by *Bluefield Waterworks & Improvements Co. v. Pub. Serv. Comm'n*, 262 U.S. 679, 43 S.Ct. 675 (1923) and *Fed. Power Comm'n v. Hope Natural Gas, Co.*, 320 U.S. 591, 64 S.Ct. 281 (1944).[21] The general standards these cases established require a cost of common equity set by the Commission to be sufficient to establish a rate of return that will maintain the utility's financial integrity, attract capital under reasonable terms, and be commensurate with the returns of other businesses of comparable risk.

The Commission is also mindful that "the cost of common equity cannot be precisely calculated and estimating it requires the use of judgment." *Indiana-American Water Co.*, Cause No. 44022, at 35 (June 6, 2012). Due to this lack of precision, the use of multiple methods is desirable, in part, because no one method will produce reasonable results under all conditions and in all circumstances. The Commission is also mindful of the strengths and weaknesses of the various models typically used to estimate a utility's cost of common equity, and we find that with appropriate and reasonable inputs, models such as the DCF and other methods can produce reasonable estimates of a utility's cost of common equity. Consistent with the standards in *Hope* and *Bluefield*, as well as under Indiana law, INAWC's authorized return on equity should be reasonable given the totality of the circumstances.

The parties proposed various returns using the DCF model and other methods as bases for their positions. Ms. Bulkley's analysis of INAWC's cost of equity produced a range of 10.00% to 11.00% with the recommendation that the Commission adopt an ROE of 10.60%. The OUCC's analysis produced a range of 7.16% to 9.32% with a recommended ROE of 9.00%. Mr. Gorman's analysis for the Industrial Group produced a range of 9.00% to 9.80% with a recommended ROE of 9.10%, adjusted downward 0.30% from 9.40% due to Petitioner's capital structure. Accordingly, the overall recommendations provided by the witnesses would place the approved return on equity between 9.0% to 10.6%.

In addition to the recommendations of these experts and while not determinative of the ROE in this case, we note the ROE awarded Indiana's vertically-integrated electric utilities outside of settled cases has been trending lower over time. *See, e.g.,* Indiana Michigan Power Company, 10.2% in Cause No. 44075 (2013); Indianapolis Power and Light Company, 9.85% in Cause No. 44576 (2016); Northern Indiana Public Service Company LLC, 9.75% in Cause No. 45159 (2019); Indiana Michigan Power Company, 9.70% in Cause No. 45235 (2020); and Duke Energy Indiana, LLC, 9.70% in Cause No. 45253 (2020). We also note that Petitioner's current ROE of 9.80% was approved in 2019 pursuant to a settlement reached in Cause No. 45142. While we find the overall

[21] *See also, Indianapolis Power & Light Co.*, Cause No. 44576 at.41 (IURC March 16, 2016).

downward trend instructive, we also recognize the change in general economic factors, like the increase in interest rates, since these orders were issued.

Our determination should also appropriately consider Petitioner's specific risk characteristics, such as the mitigation of risk associated with Petitioner's use of regulatory mechanisms, including a forecasted test year in this proceeding and the trackers approved for INAWC. In addition to the DSIC and SEI trackers, the Commission also approved in Cause No. 45043, a lead service line replacement program under Ind. Code ch. 8-1-31.6. The effect of these tracking mechanisms is to reduce the uncertainty of the earnings that an investor can expect. *See Ind. Mich. Power Co.,* Cause No. 44075 at 42-43 (IURC Feb. 13, 2013). Moreover, in this case, INAWC is adding two major projects into rate base, along with substantial costs associated with its acquisition of Lake Station, which removes even more risk from Petitioner.

Having taken into consideration the observable market data reflected in the record, and a general assessment of the investment risk characteristics of the water and wastewater utility industry, combined with a thorough understanding of the Indiana jurisdiction and its risk mitigation ratemaking mechanisms, and INAWC in particular, and the expert witness recommended range identified above, the Commission finds a reasonable range for Petitioner's ROE is 9.3% to 9.9%. The resulting midpoint of this range is 9.60%. Taking into consideration all the evidence presented and based on the rising capital cost environment, the Commission finds that an ROE of 9.65% would represent a fair and reasonable rate.

B. Cost of Debt. Petitioner's projected cost of long-term debt as of July 31, 2023 is 4.73%, and 4.71% as of April 30, 2024 and as of April 30, 2025 is 4.71%. The computation of these costs is shown on INAWC Financial Exhibit CC, Schedule CC1, Workpaper 2 contained within Petitioner's Exhibit 29. No party disputed these costs.

C. Capital Structure.

1. INAWC Case-in-Chief. Mr. Furia presented Petitioner's projected capital structures as of July 31, 2023, April 30, 2024, and April 30, 2025 to be used for computing Petitioner's WACC at each of the three steps proposed for rate implementation. These dates match the dates used to calculate the proposed rate base for each of Step 1, Step 2, and Step 3. Mr. Furia explained that the revenue requirement for each proposed increase will use Petitioner's actual capital structure as of these dates when rates go into effect. He used Indiana American's actual capital structure as of September 30, 2022 and adjusted the component balances in that capital structure to reflect all changes expected to occur by July 31, 2023, April 30, 2024 and April 30, 2025. He reflected expected long-term debt maturities on January 1, 2024 and May 1, 2024, a common equity infusion that occurred in March of 2023, new long-term debt issuances planned for November 2023 and May 2024, and a common equity infusion planned for May 2024, as adjustments to arrive at the capitalization for the forecasted test year.

The total projected capitalization of Indiana American as of April 30, 2025 is $1,731,127,386, and the overall WACC is 6.88%. This WACC reflected Petitioner's proposed cost of common equity of 10.60%. The total projected capitalization of Indiana American as of April 30, 2024 is $1,545,974,304, and the overall WACC is 6.75%, and also reflects a cost of common equity of 10.60%. The total projected capitalization of Indiana American as of July 31, 2023 as

filed in Petitioner's case-in-chief was $1,511,522,316, and the overall WACC was 6.77%, and also reflected a cost of common equity of 10.60%.[22] Mr. Furia described the bases for various components on Schedule CC1, including accumulated depreciation on contributed utility plant for Muncie Sewer, OPEBs, the prepaid pension asset, all included at zero cost. With respect to OPEBs and the prepaid pension asset, because the balance for the relevant time periods represented asset positions, they were included in the capital structure as negative values.

Mr. Furia described adjustments to INAWC's long-term debt balance to reflect: (1) maturity of the 6.990% first mortgage series B on January 1, 2024; (2) maturity of the 2.300% tax-exempt bonds on January 1, 2024; (3) maturity of the 7.110% taxable series general mortgage bonds on May 1, 2024; (4) the new taxable debt issuance in the amount of $23,000,000 planned for November 2023; and (5) the new taxable debt issuance in the amount of $96,658,000 planned for May 2024. He described the new long-term debt Petitioner plans to issue in November 2023 and March 2024. Indiana American's projected cost of long-term debt as of July 31, 2023 was 4.73% and the projected cost of long-term debt as of April 30, 2024 and as of April 30, 2025 is 4.71%. Pet. Ex. 13 and 14, Financial Exhibit CC, Schedule CC1.

Mr. Furia described adjustments to INAWC's common equity component of its capital structure to reflect: (1) a common equity infusion of $53,000,000 on March 15, 2023, (2) a common equity infusion of $73,600,000 planned for May 2024, and (3) changes to the retained earnings balance that are expected to occur between September 30, 2022 and April 30, 2025. He stated these adjustments reflect Petitioner's projections for the 2023-2025 period and are based on Petitioner's projected capital requirements and the need to maintain appropriate capital structure ratios.

INAWC witness Bulkley testified that comparing Petitioner's projected equity ratio as of April 30, 2025 of 56.15% (excluding the adjustments for zero cost capital items) demonstrates that Petitioner's requested equity ratio is within the range of equity ratios for the proxy group. She further stated Petitioner's proposed equity ratio is reasonable considering that credit rating agencies have identified the outlook for the utility sector as "negative" due to the negative effect on the cash flows and credit metrics associated with increasing interest rates, inflation and commodity costs, and the pressure that those factors place on customer affordability and utilities' prompt rate recovery.

2. <u>OUCC and Industrial Group</u>. OUCC witness Dellinger did not disagree with the Petitioner's proposed capital structure for purposes of determining the WACC. However, Mr. Dellinger did testify about how Petitioner's capital structure has changed over time, becoming more weighted toward equity and more expensive for customers and implicating affordability.

He stated that customers benefit from having an optimal capital structure (meaning the lowest reasonable WACC), but gross profitability declines as more debt is included in the capital structure, because in a regulated environment profits come from the return on equity. Mr. Dellinger stated that in the present case, Indiana American's cost of debt is 4.71% and its after-tax cost of

[22] This was updated in Petitioner's Response to Request No. 2 to the Commission's August 30, 2023 Docket Entry (Pet. Ex. 29) to $1,527,028,439 and an overall WACC of 6.73%.

equity is 14.13%, so the cost of equity is three times the cost of debt. He showed that in each case since 2010, the percentage of equity in the capital structure has increased. Mr. Dellinger also noted that in Petitioner's last financing case (Cause No. 45660), the final order for which was issued less than one year prior to this case, INAWC projected that this ratio would start to decrease. But instead, it has increased again and is now projected to be 56.15%. He testified that if the capital structure had the same equity percentage in this case as it did in 2012 (48.98%), the step 3 annual revenue requirement would be $6.2 million lower.

OUCC witness Ms. Stull recommended adjustments to Petitioner's projected balance of ADIT to account for adjustments she proposed to the amortization of EDIT and the calculation of income tax expense but otherwise accepted Petitioner's proposed capital structure components. She recommended two adjustments that affected the amount of ADIT to be included in Petitioner's capital structure: (1) a reduction to income tax expense to incorporate the repairs deduction for ratemaking purposes and (2) an adjustment to the amortization of EDIT. Ms. Stull explained that because she proposed to include the repairs deduction in the determination of income tax expenses for ratemaking purposes, there would be no difference between book and tax on a going forward basis and, therefore, no additional ADIT (related to the repairs deduction) should be projected for Steps 1, 2, or 3. She further explained that, due to the way Petitioner projected and presented its ADIT balances, the effect on ADIT as a result of this adjustment was not readily transparent. She estimated the effect to ADIT by multiplying the repair deduction by 25% and reducing ADIT accordingly. Ms. Stull's adjustment was a $2,927,966 reduction to ADIT in Step 2 and a $9,439,895 reduction to ADIT in Step 3.

Industrial Group witness Gorman testified that Indiana American's projected capital structure is not reasonable because it imposes excessive cost on its retail customers. He testified that Petitioner's equity ratio is excessive relative to its bond rating, and the capital structure largely attributes credit benefits to support its parent company's bond rating, rather than being structured to support a regulated Indiana utility capital structure. Mr. Gorman acknowledged that the Commission has historically declined to make pro forma adjustments to utilities' capital structures but recommended the Commission consider the excessive cost INAWC imposes through its "equity rich capital structure" in determining a reasonable ROE that reflects Petitioner's actual financial risk to ensure that the overall rate of return and the resulting costs imposed on customers are just and reasonable. He presented a comparison of Petitioner's projected capital structure to those used to set rates in the utility industry, concluding that INAWC's capital structure "has a far greater common equity ratio in comparison to authorized rate-setting capital structures allowed for electric, natural gas and water utilities over the last several years." IG Ex. 1 at 65.

Mr. Gorman also objected to the inclusion of the prepaid pension and OPEB assets in INAWC's capital structure. Mr. Gorman testified that the prepaid pension asset reflects funds provided by customers through rate revenue, which Petitioner has been able to use to offset its actual pension expense. As the prepaid pension asset was funded by collections from customers, rather than shareholder contributions, Indiana American is not entitled to a return of that sum by including the asset in its capital structure or cost of service. He stated Petitioner did not show that the amount of pension expense included in cost of service and recovered in customer rates during the time the prepaid pension asset was accumulated was limited to Petitioner's annual pension expense. Specifically, he presented a table comparing actual pension expense to the amount reflected in rates and testified that, since 2020, there has been an overcollection that has fully

compensated for most of the current prepaid pension asset. He proposed a similar adjustment to the OPEB asset included in the capital structure.

3. INAWC Rebuttal. Ms. Bulkley explained that Mr. Gorman's analysis of recent authorized equity ratios for water and natural gas utilities was flawed because he included limited-issue rider cases in his benchmarking analysis, relied on the mean and median authorized equity ratios for water and natural gas utilities in each year since 2013, and incorrectly asserted that Petitioner's projected equity ratio is higher than the maximum authorized equity ratios of the water and natural gas utilities since 2013. She explained that the "maximum" authorized equity ratio that Mr. Gorman reflects in his testimony is the highest average or median result over that time period, not the highest overall authorized equity ratio over that period. She testified that from 2013 through 2023, the range of authorized equity ratios was 42.01% to 60.59%, meaning Petitioner's projected equity ratio of 56.16% is well within the range of the authorized equity ratios for natural gas utilities over this period.

She also explained Mr. Gorman's comparison of Petitioner's projected capital structure to the capital structures of the holding companies in the proxy group is flawed because it is not appropriate to compare the projected equity ratio of Petitioner to the average equity ratio of the proxy group at the holding company level. Additionally, she stated, if the capital structures at the holding company level are considered, the market value of debt and equity must be used to estimate the percentage of debt and equity in the capital structure, not the book value of debt and equity as Mr. Gorman has done. She stated that relying on a cost of equity estimate based on market values but a capital structure based on book values, results in the incorrect conclusion that a return reflecting the financial risk of the market value equity ratio would be sufficient to compensate investors for a much more highly levered capital structure based on book value. She testified that Petitioner's projected ratemaking capital structure of 56.16% is consistent with the actual capital structures of the operating utility subsidiaries of the proxy group of 56.09%.

INAWC witness Farrell responded to Mr. Gorman's recommendation to remove the prepaid pension and OPEB assets from the capital structure for ratemaking purposes. He explained that Petitioner has followed GAAP to record its annual pension costs and cash pension plan contributions, which has resulted in a prepaid pension asset on Petitioner's balance sheet. Mr. Farrell stated that any asset on Petitioner's balance sheet is inherently financed through Petitioner's capital structure until it is recognized as expense on Petitioner's income statement. Mr. Farrell said it is those cash contributions that have resulted in the existence of the prepaid pension asset in the first place and the substantial benefits to customers include lowering pension costs and providing a source of ADIT.

INAWC witness Ciullo presented the ADIT associated with Petitioner's prepaid pension asset and prepaid OPEB asset is $1,687,610 and $1,647,921 respectively. Mr. Farrell testified that the lower pension and OPEB expense and accelerated income tax deductions directly lower costs to customers. He explained that the cash pension plan contributions reduce pension expense. In addition, Mr. Farrell explained that the economic benefit of the tax deductibility of Petitioner's pension plan occurs when Petitioner contributes cash to the plan—not when it books (and reflects in regulatory accounting) its pension expense. As with other circumstances where the timing of tax deductions is different from the timing of book expense (e.g., utility plant depreciation), the financing value of the income tax benefits should accrue to the benefit of customers. He also noted

that to the extent that a prepaid pension asset is excluded from the calculation, it would be inequitable to include the ADIT balance related to prepaid pension in rate base because it is a well-known regulatory principle that the inclusion in the capital structure of ADIT should only include ADIT for book-tax differences included elsewhere in the revenue requirement determination.

Mr. Farrell testified that the prepaid pension asset represents the cumulative difference between Indiana American's contributions to the pension trust and cumulative pension expense. He said the entire balance represents investor supplied funding and, as a result, is entitled to a return, which supports Petitioner's position of including the prepaid pension asset as a negative zero cost component of the capital structure. The same is true of the OPEB asset. Mr. Farrell explained that in a situation where the pension or OPEB expense is negative, the "other side of the pension credit entry" is to a prepaid pension asset (or OPEB as the case may be). He said typical reasons for a negative pension expense are expected return on plan assets in excess of other components of pension cost and positive plan experience (e.g., lower than expected health care cost increases or participation rates). He pointed out that Petitioner cannot access these pension assets because employers are not permitted to access funds from an ongoing pension or OPEB plan other than for the payment of benefits under that plan.

Mr. Shimansky responded to Mr. Gorman's comparison of actual pension expense to the amount used to set the revenue requirement for calculating rates. He testified that, absent deferred accounting, Mr. Gorman's attempt to compare pension expense in later years to pension expense included in the revenue requirement to deny proper recovery of costs in a rate case would be prohibited retroactive ratemaking. Further, he noted that customers pay rates and have no claim to variances between the level of expense in rates and actual expenses in later years. Finally, he presented analyses showing that throughout the period of Mr. Gorman's analysis, Indiana American had not earned its authorized rate of return.

4. Discussion and Findings. Addressing Mr. Gorman's Prepaid Pension and OPEB asset position first, the inclusion of a prepaid pension asset in either the utility's rate base or capital structure has been previously addressed in other Indiana utility rate cases. For example, in *Indiana Michigan Power Co*., Cause No. 44075 at 10 (IURC Feb. 13, 2023), we found that:

> [T]he record reflects that the prepaid pension asset was recorded on the Company's books in accordance with governing accounting standards. The record also reflects that the prepaid pension asset has reduced the pension cost reflected in the revenue requirement in this case and preserves the integrity of the pension fund. Petitioner made a discretionary management decision to make use of available cash to secure its pension funds and reduce the liquidity risk of future payments. In addition, the prepayment benefits ratepayers by reducing total pension costs in the Company's revenue requirement. Therefore, we find that the prepaid pension asset should be included in Petitioner's rate base.

These findings were upheld on appeal. *Ind. Office of Util. Consumer Counselor v. Ind. Mich. Power Co.*, 7 N.E.3d 1025 (Ind. Ct. App. 2014) (transfer denied); *see also Duke Energy Indiana, LLC*, Cause No. 45253 at 26-27 (IURC June 29, 2020). For OPEBs, this treatment has been

confirmed for more than thirty years. *Ind. Bell Tel. Co., Inc., et al*, Cause No. 39348 (IURC Dec. 30, 1992).

Petitioner has demonstrated a projected prepaid pension asset of $10,463,716 and an OPEB asset of $11,254,406 in Step 3, and the prepaid pension and OPEB assets have been recorded on Petitioner's books in accordance with applicable accounting standards. The record also reflects that the prepaid pension asset has reduced the pension cost reflected in the revenue requirement in this case, and the asset serves to preserve the integrity of the pension fund. The prepayment benefits customers by reducing total pension costs in Petitioner's revenue requirement. The record also reflects that the entire balance of the prepaid pension asset represents investor supplied funding and, as a result, is entitled to a return, which supports Petitioner's position of including the prepaid pension asset as a negative zero cost component of the capital structure. The same is true of the OPEB asset. Petitioner's evidence showed that it does not have access to funds from the ongoing pension or OPEB plan other than for the payment of benefits under the plan. Therefore, we find that the prepaid pension and OPEB assets should be included in Petitioner's capital structure as offsets to zero cost capital as proposed by Petitioner.[23]

As to Mr. Gorman's reliance on comparisons of past amounts reflected in rates to actual expense to disallow the prepaid pension asset, we agree with Mr. Shimansky that this would constitute prohibited retroactive ratemaking. *Office of Util. Cons. Couns. v. Duke Energy of Ind.*, 183 N.E.2d 266 (Ind. 2022).

Turning now to the appropriate equity component to use in the capital structure for setting rates for Petitioner, we find that Petitioner's forecasted capital structures at each of the relevant cutoff dates for the implementation of rates in three steps are reasonable. Longstanding Indiana precedent requires the use of a utility's actual, not hypothetical, capital structure when setting rates. Hypothetical capital structures are contrary to Indiana law. *See Public Service Comm'n of Ind. v. Ind. Bell Tel. Co.*, 235 Ind. 1, 130, N.E.2d 467 (Ind. 1955). Although we are dealing with a future test period and using forecasted capital structures at this point in the process, Petitioner's proposal will incorporate its actual capital structure, not a forecasted capital structure, when implementing its Step 1, 2, and 3 rate increases. We find the proposed equity and debt components to be comparable to those of similarly situated utilities and in line with this Commission's prior findings on what constitutes a reasonable capital structure to satisfy the *Bluefield* and *Hope* standards and our charge under Indiana law to ensure that rates are just and reasonable while affording the utility an opportunity to earn a fair return. Accordingly, as referenced above, we reject Mr. Gorman's invitation to adjust the ROE based on the projected capital structure. We accept Petitioner's projected capital structures in this case.

Finally, the OUCC proposed changes to the regulatory treatment of the repairs deduction for federal income tax purposes and raised issues concerning the appropriate amortization of EADIT. Industrial witness Gorman has proposed to accelerate the amortization of Indiana EADIT. All of these issues, to the extent they were to be accepted, would have an impact on ADIT reflected

[23] Because we reject the Industrial Group's recommendation to remove the prepaid pension and OPEB assets from Petitioner's capital structure, we need not make the adjustments, correctly recommended by Petitioner, to the ADIT balances included in the capital structure were those assets to be removed.

in the capital structure. Later herein, we reject Ms. Stull's and Mr. Gorman's proposals and so there is no need to adjust ADIT flowing from these positions for purposes of the capital structure.

D. Overall WACC. Petitioner's projected capital structure and WACC were included in Financial Exhibit CC, Schedule CC1 of Petitioner's Exhibit 13 and its supporting workpapers. The overall WACC was calculated by summing the component costs of the capital structure, with each component weighted by its respective proportion to total capitalization. Based on the projected capital component balances and component costs described in Mr. Furia's direct testimony, and as updated for July 31, 2023 actuals, Indiana American's projected WACC is 6.88% as of April 30, 2025, 6.75% as of April 30, 2024, and 6.73% as of July 31, 2023 as shown on the financial exhibits provided with Petitioner's response to the Commission's August 30, 2023 Docket Entry.

Based upon the foregoing findings and after giving effect to the ROE we authorize above, we find that Petitioner's forecasted capital structure and weighted cost of capital as indicated below is reasonable and should be adopted for purposes of setting rates in this proceeding:

Attachment 7

	Step 1			
	As of 7/31/23	Percent of Total	Cost	Weighted Cost
Common Equity	$ 716,559,651	47.41%	9.65%	4.58%

Accumulated Depr on Contr Utility Plant for Muncie Sewer	102,776	0.01%	0.00%	0.00%
Prepaid OPEBs (Other Post Retirement Employee Benefits)	(11,254,406)	-0.65%	0.00%	0.00%
Accumulated Deferred Investment Tax Credits - Pre 1971	-	0.00%	0.00%	0.00%
Job Development Investment Tax Credits (JDITC) - Post 1970	585,133	0.03%	7.47%	0.00%
Prepaid Pension	(10,463,716)	-0.60%	0.00%	0.00%
Total Capital Structure	$ 1,731,127,385	100.0%		6.42%

We find that these respective WACCs, adjusted to reflect Petitioner's actual capital structure at the time and applied to Petitioner's actual net original cost rate base per our previous findings plus the remaining unamortized balance of the Indiana Cities acquisition adjusted as of the same applicable date, represents a fair return on the fair value of Petitioner's used and useful property.

9. Disputed Test Year Revenues. The tables below are summaries of Step 1 and Step 2 pro forma present rate adjustments. The adjustments in bold were disputed and are discussed

below.

Step 1	Water			Wastewater

A. <u>Normalization of Billings – Declining Use</u>.

1. <u>INAWC Case-in-Chief</u>. Mr. Rea presented a quantitative analysis of water consumption by INAWC's customers. He explained the modeling used to develop the revenue forecasts for the residential customer class and the development of the revenue projections for all customer classes (residential, commercial, industrial, public authorities, and sales for resale). He testified that the parameters and relationships necessary to analyze declining water use, weather impacts on water consumption, and the impact of COVID on water consumption for customers were estimated using statistical linear regression modeling. Mr. Rea testified his regression models show a trend of declining use identified for residential customers of approximately 585 gallons per year per customer. He stated several factors drive the decline in residential customers' usage, including the incremental introduction of low-flow fixtures and appliances, new regulations that lead to further reductions in fixture flow rates, conservation programs, and public initiatives that have led to greater consumer water conservation awareness. Mr. Rea testified that INAWC's modeling normalizes for weather and COVID and shows that there is a pervasive decline in residential usage over the past ten years, a trend expected to continue in the future.

2. <u>OUCC and Intervenors</u>. While both OUCC and Industrial Group recognized the impact of declining residential water usage per customers, OUCC witness Dellinger and Industrial Group witness Gorman provided testimony proposing different estimated levels of forecasted use per customer than Petitioner using different methodologies than INAWC to arrive at those estimates. Mr. Gorman proposed a 1.1% decline from Year End 2022 use per customer to yield 3,941 gallons per customer per month for the 12-months ended December 2023 and 3,897 gallons per customer per month for the 12-month period ending December 2024. Mr. Dellinger

proposed a 0.89% decline from the 12-month period ended September 2022 to yield a projection of 4,019 gallons per customer per month for 12-months ended December 2023 and 3,971 gallons per month for the 12-month period ended April 2025. Mr. Gorman's estimates were higher than Petitioner's by approximately 40 gallons per month and Mr. Dellinger's estimates were higher than Petitioner's by approximately 100 gallons per month.

OUCC witness Dellinger testified that INAWC's declining use projections are not consistent with other information Petitioner has produced regarding general average declines in usage of 2% per year, and target reductions in water usage presented in American Water's investment literature. He testified that advances in water saving technology drives enhanced efficiency and that this trend should, over time, reduce the need for larger water and wastewater treatment plants, allow for lower storage and pumping requirements, and generally provide savings and benefits to society at large.

Mr. Dellinger testified Petitioner is not requesting a percentage reduction from actual usage but instead proposes to use the output of a regression analysis, which results in a much steeper decline for the period between the base period and calendar year 2023, to estimate future usage. Rather than producing a "trendline," he said Petitioner produced a future monthly projection of estimated flows based on estimated precipitation, estimated cooling degree days, monthly adjustments, and an estimated 585-gallon annual decline. Mr. Dellinger pointed to inconsistencies in Petitioner's monthly model between forecasted maximum monthly usage values and the historical data. He testified the means to capture the decline in customer use is via an annual trendline applied to actual usage, and not a monthly model with significant and unnecessary complexity.

Mr. Dellinger conducted his own analysis using annual data instead of monthly data with no weather variables and a single COVID impact variable to measure the impact on usage due to the COVID pandemic in 2020 and 2021. He acknowledged that weather affects usage, but the effects are more pronounced on a monthly basis, and for declining usage what is important is the underlying trend of lower use on an annualized basis. He stated he did run regression models on an annualized basis incorporating weather adjustments, but weather adjustments did not have statistical significance or relevance to the annualized analysis.

Industrial Group witness Gorman testified that Petitioner's projected use per forecasted level of customers over the forecast period understates a reasonable estimate of residential sales throughout the forecasted test period. He testified that Petitioner's use of declining use per customer based on ten years of historical trends does not reflect actual, recent, historical data. It fails to acknowledge that declining use per customer will slow over time as customers continue to replace old less water-efficient appliances with new more efficient ones—a factor Petitioner notes as among those driving customer declining use over the historical time period. Further, Mr. Gorman testified that a review of INAWC data shows that declining use per customer has begun to slow and thus, assuming the trend continues, Petitioner has understated customer use through the forecast period, understated revenue at current rates, and inflated the claimed revenue deficiency. Mr. Gorman presented an analysis to show that there is an obvious change in use per customer on a normalized sales basis but that the relative change is not linear from year to year. Mr. Gorman concluded that on an annual basis, the declining use per customer has changed from

approximately 1.5% per year decline over the period 2013-2017, slowing to approximately a 1% per year decline over the period 2019-2022, which forms the basis for his proposal.

3. INAWC Rebuttal. Mr. Rea disagreed with Mr. Dellinger's approach to modeling residential usage without reflecting weather effects and his approach of using less data to forecast usage. In response to Mr. Dellinger's modeling that input both cooling degree days and precipitation on an annualized basis, he stated the results were not surprising because using fewer data points doesn't make the weather impacts go away, it just makes it harder to identify the impacts. Mr. Rea took exception to Mr. Dellinger's approach of ignoring the impacts of weather on water consumption. He testified it makes no sense to argue that it is better to model annual data to get an annual answer and ignore weather impacts than to model monthly data, understand weather impacts, normalize for them, and sum monthly normalized results to get an annual answer. He performed a comparison of the results of Mr. Dellinger's modeling approach using actual (non-normalized) annual usage compared to weather-normalized data and testified the weather-normalized model shows more declining usage. He testified the results of his comparison validate the results from the monthly model.

In response to Mr. Gorman's analysis, Mr. Rea did not dispute that the percentage change in residential usage is smaller in the latter half of the ten-year historical period than the first half. However, without a finding that the change in trend is statistically significant, Mr. Rea testified it is impossible to know whether the change in trend is real or simply by happenstance. He therefore disagreed with Mr. Gorman's conclusion that there has been a significant and lasting reduction in the rate of declining residential usage use per customer.

4. Discussion and Findings. All parties who offered testimony on the level of declining use by INAWC's residential customers recognized some level of expected annual reduction per customer. Mr. Rea, on behalf of the Petitioner, estimated a reduction of 585 gallons per customer, per year based on a linear regression model. Pet. Ex. 5 at 68. Mr. Gorman calculated a reduction of approximately 520 gallons per customer per year using the ten-year average from the results of Petitioner's linear regression model. IG Ex. 1 at 28, Table 5. The OUCC calculated a decline of 436 gallons per customer, per year based on a linear regression model. OUCC Ex. 6 at 3-4. The difference in the parties' positions, as explained above, is in how the amount of annual per customer declining use was calculated.

The results of the parties' regression models or average of a model are shown below. A negative number implies a decline in usage whereas a positive number implies an increase.

Attachment 7

Year	INAW normalized use (weather and Covid) per customer	% change year-to-year	OUCC normalized use (Covid) per customer	% change year-to-year	Industrial Group (INAW 10-Year Average	% change year-to-year
2013	4.422		4.346		4.422	
2014	4.343	-1.787%	4.310	-0.836%	4.343	-1.787%
2015	4.279	-1.474%	4.273	-0.844%	4.279	-1.474%

2020	4.144	0.242%	4.270	3.449%	4.144	0.242%
2021	3.898	-5.936%	4.144	-2.944%	3.898	-5.936%
2022	3.984	2.206%	4.019	-3.033%	3.984	2.206%
2023	3.901	-2.078%	3.982	-0.905%	3.939	-1.128%
2024	3.852	-1.252%	3.946	-0.913%	3.895	-1.128%
2025	3.804	-1.268%	3.910	-0.921%	3.851	-1.128%
INAW Average 2013 - 2022				-1.128%		
OUCC Average 2013 - 2022				-0.851%		
Average INAW and OUCC 2013 - 2022				-0.989%		

The Commission believes the output of regression analysis can provide important data to determine future residential usage per customer, but reviewing the results both in the periods from where the original data came from (2013-2022) and the forecast period (2023-2025) provide an important reasonableness check.

Simply looking at the data above raises concern with the reliability of INAWC's and the OUCC's model. Mr. Rea used ten years of monthly data, which was normalized for weather and COVID. The results showed there is a year-to-year decrease from 2013 to 2018, which appears logical, particularly as we agree that usage per customer has decreased over time with water saving appliances. However, in 2019 and 2020, usage per customer increases. Then, in 2021 there is a significant decline (-5.94%), which is twice the next largest decline and over five times the ten-year average of -1.128%. Finally, in 2022, it increases 2.206%. Thus, in those four years, the model predicted three years of increase and one relatively large decrease, indicating a random, rather than a "pervasive," decline over the past ten years as Mr. Rea suggests. The forecast results from Petitioner's model also raises concern. Petitioner's regression model declined by -2.078% in 2023, which is above any decline until 2018, but drops to -1.252% in 2024, and -1.268% in 2025. We also reject Mr. Rea's proposition that the Commission should focus on the Adjusted R-Squared, which is a measure of how well the regression line or model approximates actual data. The Commission does not view this as a competition and the winner has the highest Adjusted R-Squared. In fact, Mr. Rea's original model only has an Adjusted R-Squared of 84.7%, while Mr. Dellinger's model has an Adjusted R-Squared of 87.5%.

The OUCC's model used ten years of annual data, which was normalized only for COVID. The model showed that weather was not a statistically significant variable. The results show a steady decline from 2013-2019, but 2020 has a relatively large increase, and 2021 and 2022, a relatively large decrease, which is unexplainable based on the previous years. The forecast results from the OUCC's model are more consistent for 2023, 2024, and 2025, showing -0.905%, -0.913%, and -0.921%, respectively. We are also not sufficiently concerned to eliminate the OUCC's model, as Mr. Rea argues, because it used annual data instead of monthly data, since there was no evidence showing that one year in the ten-year data set was an outlier when considering weather or that there is a trend in weather, such as hotter and/or dryer, over the past ten years.

The Industrial Group used the ten-year average from the results of Petitioner's linear regression model because he argued the period 2013-2017 is different from 2019-2022. However, because of our concerns with Petitioner's results, we reject Mr. Gorman's declining usage of 1.128% per year as our ultimate determination.

As indicated above, the output of regression models is informative but given our concerns over the results of the regression models, we believe Mr. Gorman's method of taking an average has merit. As shown above, INAWC's ten-year average is -1.128% and the OUCC's ten-year average is -0.851%. Because we do not believe one regression model to be superior to another, we find the average of INAWC's and the OUCC's (-0.989%) is a reasonable approximation of the yearly decline in residential usage per customer. This percentage reduction will be applied to the monthly average actual usage per customer beginning with the 12 months ending December 2022 of 4.058, which results in the following table.

	Usage Per Month	Gallons Per Year	Decline in Gallons Per Year
For the 12 Months Ended 12. 31. 2022	4.058	48,702	
For the 12 Months Ended 12. 31. 2023	4.018	48,220	-482
For the 12 Months Ended 12. 31. 2024	3.979	47,743	-477
For the 12 Months Ended 12. 31. 2025	3.939	47,271	-472

Using Petitioner's model, which multiplies the forecasted adjusted volume by the appropriate rate block to calculate the adjustment, we find appropriate to use a pro forma declining usage adjustment of ($1,584,569) for Step 1 and ($1,390,474) for Step 2, which results in total pro forma declining usage of ($2,975,043).

B. Customer Normalization.

1. INAWC Case-in-Chief. Mr. Rea explained the development of INAWC's pro forma revenue in this case. A summary of pro forma revenues for Indiana American's water and sewer operations under present and proposed rates is provided in Petitioner's Exhibit 14, Schedules REV1 W and REV1 WW, which show operating revenues by customer class for the base year under present rates (12-months ended September 30, 2022) and for the Step 1 (12-months ended December 31, 2023) and Step 2 and Step 3 (12-months ended

April 30, 2025) forecast periods. He testified that base year revenues for the 12 months ended September 30, 2022 were based on actual billing determinants for the base year period and were annualized using the rates that became effective November 2022 that reflect the impact of removing the URT from revenue requirements. Revenues for future test year at present rates for Step 1 were based on current rates and projected billing determinants by customer class for the 12-month period ending December 31, 2023, as well as projections for other miscellaneous revenues.

These projections of revenues for the Step 1 period at present rates compared to the calculated revenue requirement for the same period is the basis for the requested increase in this case for Step 1. For Step 2, revenues at present rates were based on proposed rates from Step 1 and projected billing determinants by customer class for the 12-month period ending April 30, 2025. For Step 3, revenues at present rates were based on proposed rates from Step 2 and projected billing determinants by customer class for the 12-month period ending April 30, 2025.

Mr. Rea testified that for each class, forecasted sales were determined by multiplying forecasted customer counts for each class by forecasted use per customer. Metering billing determinants were developed by applying forecasted customer counts to the base year pattern of meter sizes in each class. Usage billing determinants were determined by applying forecasted sales to the base year pattern of usage by rate block in each class. Forecasted billing units for both monthly meter charges and usage were multiplied by current rates to get forecast revenue at present rates for Step 1 and were multiplied by Step 1 proposed rates to get forecast revenue at present rates for Step 2 and then multiplied by Step 2 proposed rates to get forecast revenue at present rates for Step 3.

Mr. Rea detailed the specific factors for forecasting customer and usage by customer class components for organic growth for each class. He explained how the various components of Other Revenues were developed. He also explained the calculation of revenues under proposed rates utilized the following billing determinants: billing determinants for Step 1 are based on forecasted usage and customer count information for the 12-month period ending December 2023. Billing determinants for Step 2 and Step 3 are identical and are based on forecasted usage and customer count information for the 12-month period ending April 2025.

2. OUCC. OUCC witness Sullivan raised issues with respect to certain elements of Petitioner's revenue calculations. Regarding INAWC's proposed adjustment for non-residential declining use, Ms. Sullivan testified that using a three-year average consumption rate (October 1, 2019 through September 30, 2022) is not appropriate because consumption levels between April 2020 and December 2021 were affected by COVID. Although Indiana American considered this in its residential consumption analysis, it was not given consideration in Mr. Rea's non-residential customer consumption analysis. For her analysis, Ms. Sullivan instead calculated a ten-year median value from the ten years of historical data provided by Petitioner to forecast future non-residential consumption. She testified using a median value of the ten years of data would eliminate the high and low values from non-typical years, like years with droughts and pandemics.

Ms. Sullivan also testified regarding INAWC's proposed adjustment for organic growth. She said Petitioner did not project any growth for its non-residential customer classes after December 31, 2023, but non-residential growth should be recognized through the end of the future

test year, April 30, 2025. She also calculated a different Step 1 organic customer growth adjustment by using the OUCC's average customer consumption values instead of Petitioner's values and calculated a different Step 2 adjustment by including non-residential customer class growth through April 30, 2025.

3. INAWC Rebuttal. Mr. Rea did not take issue with the OUCC's adjustment for residential customer counts, which were nearly identical to Petitioner's. However, because he disagreed with the OUCC's forecast of residential use per customer, he disagreed with Ms. Sullivan's residential class revenue adjustments. Similarly, he disagreed with Ms. Sullivan's commercial class adjustment that was based on the OUCC's use per customer projection for 2023, which is a reduction from 2022 but was well above any level seen in the 2017-2021 timeframe. Mr. Rea stated Petitioner's projections for use per customer for commercial customers are more in line with recent history and should be used instead of the OUCC's projections. He further disagreed with OUCC industrial usage forecasts showing increases in 2024 and 2025 that are higher than any year in the historical period. He stated this is not a realistic result for a class that has shown flat or even slightly declining usage over time. He testified that Petitioner's forecast of usage is more realistic and reflective of current usage levels in both 2021 and 2022.

With respect to Ms. Sullivan's adjustment for the Public Authorities class, Mr. Rea testified that the combination of the ten-year median use per customer for the Public Authorities class and the customer growth function employed by Ms. Sullivan results in total usage for the class that is higher than any annual usage for this class would suggest. He said that this results from using a use per customer data point in the historical data that is not consistent with the customer counts that serve as the base for the forecast which come from a different year, producing what he described as a gross mismatch in this class between projections and historical reality.

4. Discussion and Findings. INAWC and the OUCC used the same general methodology for forecasting residential customer count with the only difference being when to begin the forecast period. Petitioner begins the forecast period October 2022, while the OUCC begins the forecast period January 2023. In rebuttal, Mr. Rea did not take issue with the OUCC's customer count adjustment. The Commission believes that when actual data is available, it should be used. Thus, we find the OUCC's residential customer count should be adopted, which is shown in the table below.

3 months ending 12.2022	12 months ending 12.2023	12 months ending 12.2024	12 months ending 12.2025
289,845	292,295	294,672	296,930

The non-residential customer total usage is customer count multiplied by the usage per customer. INAWC did not model non-residential usage per customer using regression analysis, but instead used, in many cases, an average based on the three-year average for the 12 months ending September 2020 through September 2022, which includes the COVID years of 2020-2021. In addition, customer counts for several non-residential customer classes were based on the count as of September 2022. Mr. Rea argued that using a consistent methodology across all customer

classes is preferable, such that all classes are treated equitably and no bias is built into the forecast process.

For usage per customer, OUCC witness Sullivan used the ten-year median (2012-2021) because it eliminates the high and low values for non-typical years (i.e., droughts and pandemics). Generally, for customer count the OUCC used actual customer count for October through December 2022 and customer growth was based on the methodology used for residential customers.

The Commission is not persuaded that the median over the past ten years is a good predictor of future water usage per customer for the non-residential class and finds it preferable to use an average of more recent years. The Commission also questions the reasonableness of reaching back to 2012 for the start of the ten years when, for residential usage per customer, both the OUCC and INAWC start in 2013. We agree with Petitioner that for certain non-residential customer classes the OUCC's methodology results in abnormally high total billed usage. However, while we agree a three-year average is a better predictor, we do not agree that in all cases the years 2020, 2021, and 2022 should be used to calculate the average. The use of the same methodology across the non-residential customer classes may produce an unrealistic forecast. Thus, the Commission examined INAWC's data from 2018 through 2022, attempting to avoid the COVID years and years that appeared to be an outlier, and determined, based on its review, which of the five years should be used to determine the three-year average and a reasonable predictor of future usage per customer.

For customer counts, the parties generally differed on whether to use actual figures for the three months October through December 2022. As with residential customer growth, the Commission believes that when actual data is available, it should be used.

Accordingly, our findings on customer count and usage per customer for the Commercial Class, Industrial Class, Public Authority Class, and Sale-for-Resale Class are shown in the table below.

Class of Customer	3 Months Ending 12.2022 Customer Count	3 Months Ending 12.2022 Avg. Usage Per Customer	12 Months Ending 12.2023 Customer Count	12 Months Ending 12.2023 Avg. Usage Per Customer	12 Months Ending 12.2024 Customer Count	12 Months Ending 12.2024 Avg. Usage Per Customer	12 Months Ending 12.2025 Customer Count	12 Months Ending 12.2025 Avg. Usage Per Customer
Commercial[1]	28,552	26.598	28,733	26.181	28,860	26.183	28,994	26.184
Industrial[2]	654	564.140	653	609.972	653	609.972	653	609.972
Public Authority[3]	2,185	54.150	2,244	66.386	2,367	66.449	2,514	66.517
Sale-for-Resale[4]	24	N/A	24	N/A	24	N/A	24	N/A

1. Only difference in count was use of actual data.; Year 2020 usage/customer is outlier, used average of 2019, 2021, and 2022.
2. INAWC count is more accurate.; Years 2018 and 2020 usage/customer are outliers, used average of 2019, 2021, and 2022.
3. OUCC count is more accurate.; Years 2018 and 2019 usage/customer are outliers, used average of 2020, 2021, and 2022.
4. There is no disagreement on count.; used INAWC billed usage per customer.

These figures were entered into Petitioner's model, which multiplies the forecasted adjusted volume by the appropriate rate block to calculate the adjustment. Using this methodology results in a pro forma customer growth adjustment of $3,039,147 for Step 1 and $3,434,062 for Step 2.

	IURC
Step 1 - Customer Growth Adjustment:	
Residential	$ 1,308,578
Commercial	313,836
Industrial	189,475
Public Authority	881,020
Miscellaneous	-
Sale for Resale	-
Fire	346,238
Step 1 Adjustment -- Increase (Decrease)	**$ 3,039,147**
Step 2 - Customer Growth Adjustment:	
Residential	$ 1,873,505
Commercial	398,463
Industrial	-
Public Authority	789,235
Miscellaneous	-
Sale for Resale	-
Fire	372,859
Step 2 Adjustment -- Increase (Decrease)	**$ 3,434,062**

C. Low-Income Pilot Program ("LIPP") Discount Adjustment.

1. OUCC. Ms. Sullivan recommended an additional $15,259 in revenues related to the LIPP, for a $25,521 increase to operating revenue to eliminate the discounts provided under Petitioner's low-income pilot program during the base period based on the amount recorded to its general ledger during the base year.

2. INAWC Rebuttal. Mr. Shimansky explained that under the settlement approved in Cause No. 45142, a regulatory asset was established for the customer-funded portion of the total program costs. The total amount of discounts provided under the LIPP is recorded as a debit to revenues (having the effect of decreasing revenues) but then the customer-funded portion is credited to revenues (having the effect of making the revenues whole for that portion) and debited to the regulatory asset. Petitioner only added back $10,262 to adjust for the LIPP because that is the portion (the non-deferred company contributions to the LIPP) by which the revenues were decreased.

3. Discussion and Findings. The evidence reflects that the portion of the discount that represents the customer-funded portion of the LIPP discounts and is recorded to the regulatory asset to be collected at a later date was already added back to revenues. The revenues for this portion of the discount that is attributable to the customer obligation does not need to be added back a second time. Accordingly, we find Petitioner's adjustment should be accepted.

D. DSIC Revenue Adjustment.

1. OUCC. Ms. Sullivan also proposed an adjustment to forecasted operating revenues related to Cause No. 42351 DSIC 14 ("DSIC 14"). She testified that INAWC's forecasted DSIC revenues were overstated by $85,983, because to include anything other than the approved amount of DSIC revenues could result in INAWC's revenues being adjusted twice—once in this case and again when the reconciliation is calculated. From the amount authorized in DSIC 14 ($35,316,103), she subtracted DSIC revenue included in the base year operating revenues ($11,366,769). As a result, she recommends a $23,949,334 increase to base year operating revenue to reflect total authorized DSIC revenues based on total DSIC revenues authorized by the Commission in DSIC 14**.**

2. INAWC Rebuttal. Mr. Shimansky responded by explaining that Ms. Sullivan's adjustment was based upon a figure from the DSIC 14 Order before it was adjusted as called for in that order. He said the DSIC 14 Order required INAWC to revise its DSIC factor to adjust the property tax expense for accrued depreciation when submitting its tariff. After giving effect to this language, he said the final total DSIC revenues is $35,316,103.

3. Discussion and Findings. Both Indiana American and the OUCC agree that Petitioner's forecasted DSIC revenues equal $35,316,103, the amount authorized in DSIC 14. However, they have different pro forma DSIC revenue adjustments because they each used different base year amounts. Ms. Sullivan determined that base year DSIC revenues total $11,366,769, resulting in a pro forma increase of $23,949,334. Mr. Shimansky, however, determined base year revenues of $11,280,786, resulting in a pro forma increase of $24,035,317. Although the OUCC's lower pro forma adjustment amount would result in a higher rate increase, Mr. Shimansky recommended the OUCC's proposed adjustment be denied. Accordingly, we accept Petitioner's pro forma DSIC revenue adjustment.

E. Late Fee Adjustments.

1. OUCC. OUCC witness Sullivan also recommended an increase to operating revenues for late fees based on application of the late fee ratio (using the same methodology as Petitioner) to the OUCC's recommended operating revenues. She testified the late fee ratio reflected in Petitioner's late fee adjustment was 0.5108%

2. INAWC Rebuttal. Mr. Shimansky testified that because Indiana American disagreed with the OUCC's proposed adjustment to operating revenues, no adjustment to late fees is necessary.

3. Discussion and Findings. We find Petitioner's proposed water late fee ratio of 0.5108% for Step 1 and 0.5081% for Step 2 should be applied to the level of pro forma water operating revenues at present rates found in this Order.

10. Disputed Test Year Expenses. The tables below summarize Step 1 and Step 2 pro forma present rate adjustments. The adjustments in bold were disputed and are discussed below.

Attachment 7

Step 1	Water			Wastewater

A. Production Expenses.

1. INAWC Case-in-Chief. Mr. Cifuentes explained that production costs are expenses that vary according to the amount of water provided or wastewater processed. The costs include purchased water, fuel and power, chemicals, and waste disposal. System delivery

is the amount of treated water that Petitioner's treatment plants produce. Water sales and other factors impact the amount of water produced by the plants, which in turn impact expenses associated with treating and distributing that water. Mr. Rea proposed pro forma revenue adjustments related to declining usage and customer growth and calculated associated pro forma system delivery. INAWC used the same level of system delivery in its pro forma fuel and power and chemical production related expenses.

With respect to fuel and power expense, Petitioner proposed a total company Step 1 increase of $310,160 to base period fuel and power expense of $9,109,766 yielding Step 1 pro forma fuel and power expense of $9,419,926. Petitioner proposed a Step 2 decrease of $479 yielding Step 2 pro forma fuel and power expense of $9,419,447. Pet.'s Ex. 13, OPER Sch. OM2.

Regarding chemicals expense, Petitioner proposed, in its updated June 6, 2023 filing, a total company Step 1 increase of $2,981,484 to base period chemical expense of $3,719,112 yielding Step 1 pro forma chemical expense of $6,700,596. Petitioner proposed a Step 2 increase of $2,426,941 yielding Step 2 pro forma chemical expense of $9,127,537. Pet.'s Ex. 13, OPER Sch. OM3. Petitioner's update corrected a conversion error in the calculation of historic base period usage (quantity) and forecasted usage in light of a transition from gaseous chlorine to liquid chlorine (sodium hypochlorite) and the difference in the amount of chemical utilized in the treatment process. OUCC Ex. 4 at 23.

2. OUCC. The OUCC accepted Petitioner's pro forma adjustments for purchased water, fuel and power, chemicals, and waste disposal.

3. Discussion and Findings. No party disputed Petitioner's pro forma purchased water and waste disposal expenses. Because the Commission's determination on declining usage and customer growth revenue adjustments do not impact these two expenses, we find they should be approved.

While the OUCC recommended declining usage and customer growth revenue adjustments that would have increased INAWC's pro forma revenues, the OUCC did not propose a corresponding increase in production expense. However, with increased revenues, we find that an associated increase in fuel and power and chemical expense should be recognized. Therefore, in conjunction with the increase in system delivery associated with the Commission's pro forma declining usage and customer growth revenue adjustments determined herein, we approve the following pro forma production costs:

Attachment 7

Fuel and Power Expense

Line		Total Company	Water	Wastewater
1	Base Year Fuel and Power Expense as of 9/30/2022:	$9,109,766	$9,061,988	$47,778

B. Labor and Labor-Related Expenses.

1. INAWC Case-in-Chief. In its updated filing dated June 6, 2023, Petitioner proposed a Step 1 increase of $3,252,490 to base period salaries and wages expense of $17,844,494 yielding Step 1 pro forma salaries and wages expense of $21,096,984. Petitioner proposed a Step 2 increase of $1,223,089 to Step 1 pro forma salaries and wages expense of $21,096,984 yielding Step 2 pro forma salaries and wages expense of $22,320,073. In Step 1 Petitioner proposed a $709,640 increase for existing positions, an increase of $267,509 for its annual performance plan, an increase of $82,541 for its long-term performance plan, an increase of $598,117 for overtime expense, and an increase of $1,594,683 to add new positions. In Step 2 Petitioner proposed a $724,564 increase for existing positions, an increase of $91,878 for its annual performance plan, an increase of $7,636 for its long-term performance plan, an increase of $109,879 for overtime expense, and an increase of $289,132 to add new positions. As explained by INAWC witness Grisham, pro forma salaries and wages expense was calculated on a position-by-position basis, based on 408 full-time positions.

INAWC witness Britto explained that Petitioner is projecting an increase in staffing levels to support the increased investment and maintenance for aging infrastructure, systems added through acquisitions, and compliance with increasing water quality and wastewater regulations as well as to improve levels of service, quality, reliability, and efficiency for customers and the community. She stated Petitioner's operations are widely dispersed throughout the state and INAWC operates distinct public water systems providing service to approximately 78 communities. She explained Petitioner continues to look to improve efficiency, enhance compliance, and better serve customers by evaluating areas of operations and identifying the positions that fit best in a regional approach and can function optimally at a centralized location. She testified Petitioner has slowly added support staff to ensure it is adding the right positions in the right areas to support its customers and maintain compliance.

Ms. Britto provided a summary of the positions INAWC has added and plans to add from 2019 through the Test Year. She testified 13 positions were added as a result of the Sheridan and Lowell acquisitions. In 2021 and 2022, five positions were added to provide more effective oversight and operations support, including two Director of Operations positions, an Information Technology Specialist and two Business Operations Specialists. Ms. Britto stated Petitioner is adding four positions in 2023 to provide more effective oversight and support of operations throughout the state, including a state-wide water quality and environmental compliance supervisor, two staff engineers, and a state-wide training coordinator. She said Petitioner added three senior manager roles to operations in the East, Central, and West regions (for a total of six managers across the state, one per region) in 2022. Petitioner also added six new pipe mechanics to create two crews for replacing lead service lines that fall outside of Petitioner's scheduled engineering projects. Ms. Britto stated Petitioner plans to add three water treatment plant operators for the East, Central and South regions in 2023. Thus, by 2024, Petitioner will have added six water quality and environmental compliance positions to better support its regional structures and improve its focus on water quality and environmental compliance. Ms. Britto stated these additional employees will support compliance with more stringent regulations that require additional tracking, monitoring, and reporting and will enhance Petitioner's cross connection control program, which is a critical component to protect the distribution system and customer

health and safety. She further testified Petitioner plans to add four health and safety specialists: two in 2023 (one Northern region, one Southern region) and two more in 2024 (one Central region, one Western region) to align with and support Petitioner's regional structure and further strengthen Petitioner's commitment to safety.

Ms. Britto also explained how Petitioner proposes to address its current and future staffing needs given existing workforce demographics. She said Petitioner is no exception to the challenge faced by water utilities across the country with the loss of significant knowledge and expertise over the next five to ten years due to retirements. Ms. Britto testified that currently 28% of Indiana American's front-line employees are over the age of 55, and 16% are over 60 years of age. She explained these tenured employees have familiarity with Indiana American's operations and processes, along with the necessary licenses required by state and federal regulations, that cannot be easily supplemented with new employees. Ms. Britto testified Indiana American believes the most logical solution is to hire employees before the wave of retirements hit so the new hires can learn side-by-side with the soon to be retirees. She stated this approach will also provide the new hires with the on-the-job experience required for a license and provide ample time for the new hires to prepare for and pass applicable exams.

For water payroll taxes, Petitioner proposed a Step 1 increase adjustment of $267,597 yielding a Step 1 pro forma payroll taxes expense of $1,579,762 and a Step 2 increase adjustment of $116,192 yielding Step 2 pro forma payroll taxes expense of $1,695,954. For wastewater payroll taxes, Petitioner proposed a Step 1 decrease adjustment of $14,000 yielding a Step 1 pro forma payroll taxes expense of $673 and a Step 2 pro forma payroll taxes expense of $673.

For water group insurance, Petitioner proposed a Step 1 increase adjustment of $958,645 yielding a Step 1 pro forma group insurance expense of $4,719,018 and proposed a Step 2 increase adjustment of $312,265 yielding a Step 2 pro forma group insurance expense of $5,031,283. For wastewater group insurance, Petitioner proposed a Step 1decrease adjustment of $45,868 yielding a Step 1 pro forma group insurance expense of $3,069 and proposed a Step 2 pro forma group insurance expense of 3,069.

2. OUCC. Mr. Malan disagreed with Petitioner's increase to salaries and wages expense. He testified that INAWC made no adjustment for perpetual vacant positions and explained that, through the normal course of business, INAWC will continue to have vacancies. He noted that a level of positions has historically remained vacant, and Petitioner did not have full employment through the base period or the verifiable link period. Mr. Malan also asserted that customers should not have to bear the cost of an expense Petitioner is not likely to incur.

Mr. Malan testified that while the OUCC accepts Petitioner's adjustments to salaries and wages expense for Step 1 and Step 2 and the increase resulting from the addition of 46 new employees proposed in this Cause, the OUCC disagrees with Petitioner's proposed increase to salaries and wages expense due to historic vacancies. He testified that 100% staffing is not realistic and therefore it would be imprudent to include the full salaries and wages for all positions as INAWC requested.

To determine a rate for vacant positions based on INAWC historic vacancy levels, Mr. Malan used Petitioner's vacancies and number of full-time equivalents ("FTEs") on December 31 for the years 2013 through 2022. He then averaged the vacancy percentage for years 2013-2022 to arrive at an average vacancy rate of 3.66% and adjusted Step 1 downward by 1.23% to 2.43% to account for Petitioner's acknowledged five vacant positions less the historic vacancy rate. He adjusted Step 2 by the full 3.66% vacancy rate. He applied this historic vacancy rate in determining appropriate adjustments for salaries and wages expense, payroll taxes, group insurance, and other benefits.

Based on this historic vacancy rate, Mr. Malan recommends a Step 1 increase of $2,739,833 to base period salaries and wages expense of $17,844,494 yielding Step 1 pro forma salaries and wages expense of $20,584,327. Mr. Malan further recommends a Step 2 increase of $918,832 to Step 1 pro forma salaries and wages expense of $20,584,327 yielding Step 2 pro forma salaries and wages expense of $21,503,159.

For payroll taxes, Mr. Malan recommends a Step 1 increase of $214,379 to base period payroll taxes expense of $1,326,960 yielding Step 1 pro forma payroll taxes expense of $1,541,339. He further recommends a Step 2 increase of $92,917 to Step 1 pro forma payroll taxes expense of $1,541,339 yielding Step 2 pro forma payroll taxes expense of $1,634,256.

For group insurance, Mr. Malan testified that in conjunction with his proposed reduction to salaries and wages expense, a corresponding reduction to group insurance expense is also necessary to adjust for the historic vacant positions at the calculated rate. Mr. Malan testified OUCC recommends a Step 1 increase of $798,030 to base period group insurance expense of $3,809,308 yielding Step 1 pro forma group insurance expense of $4,607,338. He also states the OUCC recommends a Step 2 increase of $242,755 to Step 1 pro forma group insurance expense of $4,607,338 yielding Step 2 pro forma group insurance expense of $4,850,093.

3. Industrial Group. Mr. Gorman testified that INAWC has set its cost of service to include both the costs of new employees and employees who are expected to retire during the timeframe in which rates set in this proceeding are likely to be in effect. He testified that an adjustment should be made for employee attrition due to retirements, transfers, or other factors. Mr. Gorman stated employee attrition can offset increases in Petitioner's employee count and labor expense as a result of hiring employees for new positions, leaving the number of positions unchanged and potentially reducing wage expense as new hires start at lower wage rates than those employees who have left. He stated failing to make an adjustment for employee attrition, will result in customer rates that include excessive labor costs. Mr. Gorman further testified that it is unreasonable for Petitioner to include increases for new employees and increases in contractor expenses in addition to an increase in overtime expense instead of assuming that the new hires will alleviate overtime pressures on existing employees or that the cost of overtime for new hires might be less than that of existing employees. Mr. Gorman proposed an adjustment of 16% for employee attrition spread over the rate increase period. He did not make an adjustment to overtime expense ($1.9 million in the base period), stating these expenses (along with the proposed increases in overtime expense) can be used by Petitioner for any required overtime it may need as employees retire.

4. INAWC Rebuttal. Ms. Britto acknowledged it is reasonable to

assume that occasionally there will be vacant positions. She agreed that Mr. Malan's use of a historical average vacancy rate compared to budget could represent a reasonable estimate of vacancies at any point in time but contended that there are other reasonable representations as well. She explained that using the actual head count over the last ten years as compared to the head count assumed in rate cases (and thus built into rates), Indiana American averages 3.47% more employees than what was used to set rates.

With respect to Mr. Gorman's proposed reduction based upon a 16% attrition rate spread equally over Steps 1 and 2, Ms. Britto asserted such an adjustment is speculative and not grounded in any evidence. Ms. Britto further testified there is also no evidence that an employee who actually retires will leave a position open that will remain unfilled. Further, Ms. Britto stated that Mr. Gorman's position is unsupported by the fact that Indiana American has hired above the level of employees assumed in its rate cases during the last ten years.

As to Mr. Gorman's criticism that Petitioner did not propose an adjustment to overtime expense, Ms. Britto explained that because water utilities operate 24/7 to provide essential service to customers, overtime is often a business requirement to provide clean, reliable service. She stated a large part of overtime work includes emergency call out service work and W5 operators that need to be on site, which will continue to be performed and cannot be replaced by the FTEs proposed in this case.

5. Discussion and Findings. No party disputed Petitioner's proposed new positions. Instead, the parties took issue with INAWC's proposed FTEs due to the potential for vacancies and the possibility for new employees and the proposed increased use of contractors to offset the need for overtime. While the OUCC recommended approval of Petitioner's proposed FTEs, denial of the proposed increase to contractor expense and a new proposed vacancy rate adjustment (Step 1 – 2.43% and Step 2 – 3.66%), the Industrial Group recommended approval of Petitioner's proposed increase to contractor expense (with minor adjustments) and a reduction to the proposed FTEs.

The parties seem to agree that it is reasonable to assume a certain level of vacancies within Petitioner's forecasted headcount. The purpose of a future test year process is to forecast expenses a utility expects to incur during the year in which rates are in effect. Thus, it is reasonable to expect that vacancies will exist prior to the start of the test period.

Petitioner also provided testimony supporting its need to continue a certain level of overtime consistent with its forecast, particularly because the utility operates on a 24/7 basis. However, while we agree that a certain level of overtime will always be necessary due to emergencies and availability of qualified personnel, we also expect that Petitioner's proposed use of contractors will free up its staff for other projects. Accordingly, with our adjustment to the vacancy rate (Step 1 – 2.43% and Step 2 – 3.66%) and Petitioner's contract expense as discussed below, we find Petitioner's proposed overall labor expense level, including the overtime expense adjustment, to be reasonable. We find Petitioner's pro forma salaries and wages expense should be $20,584,328 for Step 1 and $21,503,160 for Step 2.

For payroll taxes, with our adjustment to the vacancy rate (Step 1 – 2.43% and Step 2 – 3.66%), we find Petitioner's Step 1 to be $1,541,217 and Step 2 to be $1,634,134 based on the pro forma level of salaries and wages approved herein.

For group insurance, with our adjustment to the vacancy rate (we find Petitioner's Step 1 – 2.43% and Step 2 – 3.66%), we find Petitioner's Step 1 to be $4,607,340 and Step 2 to be $4,850,095.

C. Other Benefits Expense.

1. INAWC Case-in-Chief. In Step 1 Petitioner proposed a $30,071 increase to 401(k) expense, a $270,441 increase to defined contribution plan expense, a reduction of $7,156 to employee stock purchase plan expense ("ESPP"), a $21,499 increase to Voluntary Employee Benefits Association expense, a $928 increase for additional miscellaneous benefits for existing positions, and a $136,665 increase for additional miscellaneous benefits for new positions. In Step 2 Petitioner proposes a $92,229 increase to 401(k) expense, a $97,197 increase to defined contribution plan expense, a $14,301 increase to ESPP expense, a $9,820 increase to Voluntary Employee Benefits Association expense, a $97 decrease to existing positions, and a $118,633 decrease to new positions.

2. OUCC. The OUCC did not accept Petitioner's Step 1 and Step 2 adjustments for new employee 401(k) and ESPP expense. Mr. Malan testified that Petitioner overstated its new employee 401(k) expense by assuming a 100% participation rate and that Petitioner's five-year average 401(k) participation rate is 86%. Accordingly, he recommended Step 1 new employee 401(k) expense of $81,826, which is $13,319 less than that requested by Petitioner. He proposed Step 2 new employee 401(k) expense of $16,131, which is $2,626 less than Petitioner's request. Mr. Malan further took exception with Petitioner's calculation of its proposed new employee ESPP expense, which also assumed 100% participation. He testified that Petitioner's five-year average ESPP participation rate is 37%. Thus, he recommended a $5,452 reduction to Petitioner's proposed Step 1 new employee ESPP expense and a $1,072 reduction to Petitioner's proposed Step 2 new employee ESPP.

3. INAWC Rebuttal. Ms. Grisham responded to OUCC witness Malan's arguments that Petitioner's 401(k) and ESPP programs are not fully enrolled, acknowledging they are not, but rejecting Mr. Malan's proposed five-year average participation rate. She explained that rather than assuming a participation rate, Petitioner's calculation to determine the average expense per employee is based on actual costs and includes $0 line items for the 41 and 226 employees that are not currently participating in the 401(k) and ESPP program, respectively. Ms. Grisham pointed out that Mr. Malan's use of the five-year average 401 (k) participation rate ignores the fact that participation rates over the past five years have been increasing as the number of pension-eligible employees decreases. She presented actual annual participation rates for Petitioner's 401(k) for the most recent three years, which is higher than the five-year average of 86%.

4. Discussion and Findings. With respect to the OUCC's proposed reductions to other benefits expense, we find that Petitioner's methodology already accounts for non-participating employees and therefore provides a more accurate and realistic preview of the

dollars Petitioner will spend on both 401(k) and ESPP expenses than the five-year average participation rate recommended by the OUCC. With respect to the 401(k) participation rate in particular, Petitioner's evidence shows the five-year average participation rate likely underestimates future participation rates. *See* Pet. Ex. 20 at 5, Table 1. Accordingly, we find that the evidence in this case supports Petitioner's forecasted level of other benefits expense with an adjustment for vacant positions, and we decline to make the OUCC's recommended new employee benefit adjustments. We find Petitioner's pro forma other benefits expense to be $1,700,884 for Step 1 and $1,771,145 for Step 2.

D. Support Services Expense.

1. INAWC Case-in-Chief. Petitioner proposed forecasted total support services expense of $27,411,536 in Step 1 and $28,657,034 in Step 2. Mr. Grisham testified the services provided by the Service Company include, among others, customer service, water quality testing, innovation and environmental stewardship, human resources, communications, information technology and cyber security, finance, accounting, payroll, tax, legal, engineering, accounts payable, supply chain, and risk management.

2. OUCC. Ms. Stull testified that Petitioner's proposed forecasted total support services expense is a 44.44% increase over the revenue requirement in the 2019 Rate Order. She accepted Indiana American's forecasted adjustments to support services expenses. However, she recommended removal of all business development department costs, which Petitioner forecasted to be $241,552 in Step 1 and $251,285 in Step 2. Ms. Stull testified she recommended removal of all business development department costs for the same reasons expressed by the Commission in Cause No. 44022, wherein it found no evidence that the business development activities provided a benefit to customers. Therefore, Ms. Stull proposed to eliminate all operating expenses included in service company expenses for the business development department.

3. INAWC Rebuttal. Ms. Grisham disagreed with Ms. Stull's recommended adjustment to remove business development costs from support services expense. She testified the evidentiary record in Cause No. 44022 does not control the Commission in this proceeding, and business development does more in communities than facilitate acquisitions. Ms. Grisham testified that American Water's business development activities help build relations with community businesses and leaders and benefit customers of Indiana American by mitigating the costs to be recovered per customer, enhancing purchasing power, and spurring activities that contribute to their local economies.

Ms. Grisham explained business development activities that grow Indiana American's customer base enable system investment costs and operating expenses to be spread across a larger customer group. She testified despite Petitioner's operating expenses increasing by approximately $9 million from 2013 through 2022, due in part to the customer base expanding by approximately 37,000 customers during that time period, operating expense per customer actually decreased slightly, from $255 per customer in 2013 to $253 per customer in 2022. Ms. Grisham further testified that business development activities also benefit many of the communities served by Petitioner. As an example, needed investment allowed a soft sewer ban to be lifted in Sheridan, allowing growth in a community that had been stifled by lack of treatment capacity.

Finally, Ms. Grisham testified that through operation improvements of acquired wastewater and water utilities, business development activities achieve public policy objectives of improving the quality of the water consumed by customers and of the public bodies of water into which wastewater effluent is discharged.

4. Discussion and Findings. The OUCC accepted Indiana American's forecasted adjustments to support services expenses but recommended removal of all business development department costs from the expense totals. Pub. Ex. 3 at 29. The OUCC recommended disallowance of these costs for the same reasons the Commission cited in *Indiana-American Water Co*., Cause No. 44022, 2012 WL 2154248, (IURC 6/6/2012), where the Commission found no evidence that Petitioner's business development activities provided a benefit to customers.

Petitioner asserts that its business development activities help build community relations, achieve public policy objectives, and benefit customers by enhancing purchasing power and spreading costs across a larger customer group from acquisitions and economic development. However, we agree with the OUCC that although Petitioner claims it has lowered customer operating expenses and other costs, Indiana American has not sufficiently tied those reductions to its business development activities. Although Petitioner may be achieving economies of scale and enhancing its purchase power, it is doing so in part through its acquisitions. Also, while acquisitions may facilitate economies of scale as measured by operating expense per customer, this metric does not consider the initial investment to acquire the customers or subsequent investments in the acquired utilities. And, as the OUCC pointed out, this may not necessarily be a benefit to Indiana American's customer base, particularly given the fact that Ind. Code § 8-1-30.3-5 provides for favorable ratemaking treatment on acquisitions. Thus, the Commission remains concerned that customers may be subsidizing INAWC's business development with limited offsetting customer benefits and Petitioner's evidence does nothing to alleviate those concerns.

As for improving community relations and achieving public policy objectives, we note that Petitioner has included approximately $593,312 in its forecasted expenses for "external affairs and public policy," which could cover those anticipated expenses. Therefore, we accept the OUCC's recommended adjustment to remove business development costs of $241,552 in Step 1 and $251,285 in Step 2. We find Petitioner's pro forma support services to be $27,169,983 for Step 1 and $28,405,746 for Step 2.

E. Contract Services – Line Locates.

1. INAWC Case-in-Chief. Ms. Britto testified that Petitioner continues to see a significant increase in Indiana 811 notices to locate and mark its facilities since Petitioner's last general rate case and projects this trend will continue through the test year in this Cause. She presented Petitioner's projected volume of notices to locate and mark its facilities based on the average increase in notices from 2020 to 2022. She explained that non-essential frontline service work was deferred from March 2020 through December 2021 to help protect the safety of employees and customers during the pandemic and, consequently, Petitioner did not contract out work such as locates during this time. Ms. Britto testified that with the continuing increases in the volume of notices to locate and mark facilities, as well as frontline service work no longer being deferred, Petitioner has frequently reassigned employees from completing customer service orders

and other crucial (although less time sensitive) tasks such as hydrant maintenance, valve maintenance, leak detection, fire service inspections, cross-connection inspections, contractor site inspection, cross training/development activities, and a variety of other water distribution tasks to stay current with the 811 work demands. She stated Petitioner proposes to address the continued increasing demand to locate and mark its facilities by utilizing contractors to do most of this work. The proposed increase in contract services expense (Pet. Ex. 13, OPER Schedule OM 11 in the file INAWC 2023 Rate Case – Contract Services) is based on the costs of bid responses received from contractors to complete the current and the projected level of notices requiring Petitioner to locate and mark its facilities. She said shifting to contractors for line locates will limit the number of new hires included in this case to address this work and repurpose employees back to maintenance activities.

INAWC witness Grisham explained that the level of contract services operating expense for the test year was determined beginning with the expense level from the base period and then adding a projected monthly level of work to locate and mark facilities as discussed by Ms. Britto. A monthly inflation factor of 0.23% was then applied through the end of the future test year.

2. OUCC. The OUCC recommended denial of Petitioner's proposed Step 1 and Step 2 adjustments for contracted line locates. Mr. Malan testified that Petitioner made no reduction to any other expense to offset the $4.2 million total increase to contract services expense for additional contracted services to perform line locates, including no adjustments to reduce overtime or wages that would not be needed for those line locates which would be performed through contract services. He testified that Petitioner did not incur any base period expense for contracted line locates nor any time since and has made no effort to outsource line locates since Petitioner's deferral of non-essential frontline service work had ended in December of 2021. He noted that in its last rate case, Petitioner had received approval for $507,528 for additional contracted line locates, yet no locates were performed by outside vendors. Mr. Malan contended that Petitioner has not sufficiently justified its failure to implement its prior proposal and request to use additional contract services for performance of line locates. He testified that Petitioner also failed to provide sufficient justification for its proposed adjustment. He stated it is also unclear to what extent line locates will be performed by contractors, instead of employees, or whether these costs have been double counted in Petitioner's proposals.

In addition, OUCC witness Seals testified that the number of Petitioner's service orders show a decreasing trend and that the transition to advanced metering infrastructure ("AMI") meters should further improve the efficiency of local field service employees. Because these AMI meters will be able to be read remotely by Indiana American staff without manual contact, meter-reading functions will be largely eliminated. He said the combination of decreased service orders and decreased meter reads would free employees to complete additional tasks, including line locates, that would foster a reduced need for contract services, which is not otherwise subject to adjustment.

3. Industrial Group. Mr. Gorman proposed to cap Petitioner's projected levels of contractor expenses at its Step 1 request because he said Petitioner has not proven the projected number of line locates it proposes to outsource is reasonable nor that it will actually incur its projected cost. Mr. Gorman took issue with Petitioner's forecasted increase in line locates in excess of the historical increase and said Petitioner did not offer evidence that the increase experienced in 2022 is representative of a sustained acceleration in the number of calls to

Indiana 811 rather than simply an outlier, nor has it shown the line locates are expected to increase at the same rate going forward. He noted that Petitioner did not use previously requested funds in its prior rate case on contractors for line locates. He recommended the contractor expense tied to outsourcing line locates be capped at the 2024 increase, which would allow Petitioner to increase contractor expense by $3.9 million for line locates. He said capping these costs achieves a balance of Petitioner's desire to outsource line locates to reduce the workload on internal employees while protecting customers from cost increases that he says Petitioner is unlikely to incur in the rate effective period.

4. INAWC Rebuttal. Regarding Petitioner's employment of outside vendors to perform line locates, Ms. Britto explained that the COVID pandemic commenced shortly after Petitioner's last rate case and as a result non-essential frontline service work was deferred. During the pandemic, Ms. Britto said existing staff could be redeployed from completing customer service orders and other maintenance activities to remain current with the locate work demands. She testified Petitioner is no longer operating in the same conditions, and conditions existing during the pandemic do not serve as a reasonable basis to doubt that Petitioner will use contract labor to complete the forecasted line locates. She noted that the OUCC did not dispute Petitioner's projection of locate requests or the cost per locate, nor did he propose any other method or cost for addressing locate requests. As to Mr. Gorman's dispute of the forecasted growth in locates, she said that Indiana American had actually reduced the projection from the 8% increase seen in 2021-2022 to project a 6% increase in line locates. Ms. Britto testified that Mr. Gorman's proposal to cap contractor expense for line locates at the 2024 increase of $3.9 million, while more reasonable than Mr. Malan's recommendation, would still leave Petitioner short of recovery for costs it expects to incur while rates are in effect. She stated Mr. Gorman's use of a seven-year average of forecasted growth is driven down by pandemic years and opined that the 6% growth rate is more reflective of what is expected for the future.

5. Discussion and Findings. INAWC requests a substantial increase to its contract services expense to perform line locates. Specifically, Petitioner requests a two-step adjustment, allowing it to increase its contractor expenses by approximately $3.9 million for the year ending December 31, 2023 and an additional $303,771 increase over Step 1 for the year ending April 31, 2025. Petitioner's forecasted expense is based on one of three bids it received for such contract services. Based on the evidence presented, we find Petitioner has failed to support its proposed increase in contractor expense.

INAWC has previously requested and received approval to outsource its line locates to contractors, as opposed to using internal employees, and not followed through with the approved outsourcing. In the 2019 Rate Order, Petitioner received approval of approximately $500,000 for additional contract service for line locates. However, the evidence shows no line locates have been performed by outside vendors and Petitioner instead has reassigned employees from completing customer service orders and a variety of other tasks to perform the line locates. We understand the impact from the COVID pandemic, but Petitioner has failed to sufficiently explain its delay since that impact was alleviated, particularly given Petitioner's assertion that the amount of line locates increased in 2022 and are expected to continue.

Despite Petitioner's purported intention to utilize contract labor for line locates, it has not done so, and this failure gives us reason to doubt the extent to which Petitioner will actually use

the requested increase to outsource labor for line locates going forward. This uncertainty is further heightened by the fact that INAWC has yet to execute a contract securing outside labor for line locates, is negotiating the use of outside contractors with its union employees, and thus, its proposed level of spend is based solely on bids it has received and not on a firm contract. We also note that the bid relied upon by Petitioner for its forecasted expense is significantly higher than the lowest bid and Petitioner offered no explanation for its choice to rely on that bid other than to indicate it was the middle bid.

Furthermore, INAWC has made no reduction to any other expense to offset its proposed increase to contract services expense for additional contracted services to perform line locates, including no adjustments to reduce overtime or wages for its own employees that would not be needed if those line locates would be performed under contract service agreements. Thus, it is unclear to what extent line locates will be performed by contractors, instead of employees, or whether these costs have been double counted in Petitioner's proposals.

Petitioner's proposed increase in contractor expense is also based on its assumption that line locates will increase by 6% in 2024 and 2025, despite the fact that since 2016, line locates have, on average, increased by just 4% each year. Pet. Ex. 4 at 31. INAWC attempts to justify this assumption by pointing to the 8% increase in line locates in 2022. However, it offered no evidence demonstrating that the increase in 2022 is representative of a sustained acceleration in the number of line locates requested rather than simply an outlier.

Petitioner is seeking a substantial increase in staff (both employee and contractor) in this case. As noted earlier, Petitioner is adding 46 new positions at a cost of $1,883,816 while also proposing to outsource all line locates at a cost of $4,194,530. These two increases result in an additional $6,078,346, a 34% increase in labor costs from Petitioner's base period salaries and wages of $17,884,494.

Based on the evidence presented, we find that Petitioner's contract services expense should be based on the lower bid received. However, given our finding above regarding Petitioner's proposed labor expense and in recognition that at least some outsourcing of its line locates will allow Petitioner to meet its goal of developing a pool of skilled workers, we find that Petitioner should be authorized to outsource half of its line locates, resulting in a contract services Step 1 water adjustment of $1,300,789, which includes the two undisputed adjustments for removal of lobbying expense and inflation. The total company Step 1 contract services adjustment is $1,302,045 after including the $1,256 wastewater adjustment. The contract services Step 2 water adjustment is $173,204, which includes the inflation adjustment of $69,147. The total company Step 2 contract services adjustment is $175,379 after including the $2,175 wastewater adjustment. We find contract service for Step 1 to be $3,247,720 and for Step 2 to be $3,423,099.

F. Inflation/Annualization.

1. INAWC Case-in-Chief. Mr. Cifuentes described Petitioner's methodology used to calculate its pro forma expense levels that are based on an inflation factor for the verifiable link period and then trended through the future test year. Petitioner used unique and specific inflation factors developed for each O&M category that aligns with the U.S. Bureau of Labor Statistics by specific measure category and type of cost to recognize the impact of inflation

on Petitioner's expenses for the verifiable link period and through the future test year. Petitioner also proposed to annualize or normalize the following expense accounts: building maintenance & supplies (OM12); telecommunications expense (OM13); postage, printing & stationery (OM14); office supplies and services (OM15); employee related expense (OM17); maintenance supplies & services (OM18); and miscellaneous expense (OM25). To calculate the annualization, Petitioner selected the last month of 2023 within each respective workpaper and multiplied the monthly expense by 12 to get the yearly expense.

2. OUCC. Mr. Compton recommended the adjustments to annualize these expense accounts be denied, because he disagreed with how Petitioner normalized (i.e., annualized) these expenses for inflation. Mr. Compton explained that Petitioner calculated the annualization of each expense by multiplying the expense in the last month of 2023 by twelve, essentially projecting each expense for inflation. Petitioner's pro forma adjustment was then calculated by subtracting each month's expense in 2023 (January through December) from the monthly annualization Petitioner had calculated. Mr. Compton testified that by adjusting for inflation and then annualizing the expense based on the year-end's inflationary adjusted expense, Petitioner double counted inflation in Step 1.

Mr. Compton explained that annualizing is appropriate and necessary when there is less than a full year of information, but because Petitioner's base year and future projections are based on a full year's worth of data, there was no need to annualize the expense accounts and doing so has the effect of double counting inflation.[24] Mr. Compton testified Petitioner's annualization adjustment should be removed from each Step 1 expense projection for each respective expense account.

3. Industrial Group. Mr. Gorman objected to Petitioner's use of the historical three-year average of inflation rather than economists' projected prospective inflation rate through the close of the forecasted test year (April 2025). He explained that relying on a historical three-year average that ends at the start of the base period (September 2022), as INAWC proposes, does not adjust historical O&M costs for the inflation outlook expected from the base period through the forecasted test year. He testified that the prospective inflation outlooks by independent economists from October 2022, through the end of the forecasted test year, April 2025, are significantly lower than the actual inflation rate that occurred for the three-year period ending in September 2022. In other words, inflation has decreased significantly from the level that is reflected in INAWC's historical average. Thus, Mr. Gorman explained that relying on escalation factors based on historical data is not a reasonable basis for projecting increases in O&M expenses over the link period and future test year and inaccurately inflates INAWC's actual O&M expense from the historical base year through the forecasted test year.

To account for the disparity between the historical rate of inflation leading up to the base period and the independent inflation outlook from the base period through the close of the test year, Mr. Gorman recommend adjusting the forecasted test year O&M expense to reflect inflation outlooks from the historical base period through the forecasted test year. Mr. Gorman testified that this effectively lowers the inflation rate used by Petitioner from 5.05% to 2.97%. Mr. Gorman

[24] Mr. Compton noted the only annualization he would consider acceptable by these standards would be an annualization of expenses for Lowell but considered annualizing expenses for all communities to be unreasonable.

testified that adopting his approach and adjusting the various inflation factors that INAWC uses to the consensus economists' forecasts for future inflation would lower the claimed revenue deficiency by approximately $698,000 for water and $30,000 for wastewater.

4. INAWC Rebuttal. Responding to Mr. Compton's recommendation to remove annualization for the identified O&M expenses, Mr. Cifuentes testified that the purpose of the annualization is to adjust the Step 1 expenses to a level predictive of what INAWC will experience going forward. Mr. Compton's recommendation, however, bases the Step 1 level of these expenses on the projected levels for calendar year 2023, which fails to reflect the inflation projected to occur during most of 2023 and understates the level projected to be occurring at the anticipated date of the order in this Cause.

Mr. Cifuentes explained there is no double counting of inflation in the adjustment. The monthly amount for December 2023 within each of the relevant expense accounts is multiplied by 12, which represents 12 months to arrive at the pro forma level of expense for 2023 on an annualized basis. The annualized amount (based on the last month in 2023) captures the inflation adjustment and does not compound, nor is it calculated in excess of its intended value.

In response to Mr. Gorman's proposed adjustment to use consensus analysts' reports to forecast inflation, Mr. Cifuentes responded that Mr. Gorman's recommendation is flawed in assuming that analysts' and/or economists' reports provide projected inflation rates that would consistently be useful and relevant to the expenses to which they are applied. He stated accuracy is enhanced when specific inflationary rates are applied to each category of expenses when available and Mr. Gorman's proposal would use one across-the-board rate of 2.97%, which is an average of the general consumer price index forecasted to occur from 2022 through 2024, or a general inflationary factor. Mr. Cifuentes stated this rate does not contemplate for, adjust, or target each expense category presented in this Cause.

5. Discussion and Findings. We find the evidence shows that Petitioner has not already adjusted for inflation the relevant expense accounts in developing its forecast for calendar year 2023 prior to annualizing such expenses. As a result, without the step of annualizing these amounts based on the last month in 2023, the full effect of inflation at the time this Order is issued would not be captured. We find that Petitioner's method of annualizing these expenses better matches the amount to be included in rates to the amount projected to be incurred at Step 1. We therefore reject the OUCC's proposed removal of annualization for these expense accounts.

INAWC witness Cifuentes chose specific inflationary factors for the applicable industry, which he used in his adjustment. We find that the use of more specifically tailored inflationary factors for each of the O&M categories as sourced from the U.S. Bureau of Labor Statistics provides a more reliable forecast of inflation with respect to each category of expense to which those inflationary factors were applied than the use of generic inflation economist outlooks. Accordingly, we reject the Industrial Group's recommended blanket inflationary factor.

G. Miscellaneous Expense.

1. INAWC Case-in-Chief. INAWC proposed an overall $57,089

decrease to base year miscellaneous expense of $2,491,856 yielding pro forma miscellaneous expense of $2,434,767 for Step 1 expenditures. In addition, Petitioner proposed an overall $20,435 increase to base year miscellaneous expense to yield a pro forma expense of $2,512,291 for Step 2 expenditures.

2. OUCC. Mr. Compton explained that Petitioner proposed eight adjustments to base year miscellaneous expense. Petitioner also proposed adjustments to remove $124,760 of charitable contributions, a total of $23,000 of lobbying expenses, and $42,000 of penalties from base year expenditures. In addition, Petitioner proposed to add in $300 of adjustments from OM16, $27,594 of adjustments from OM17, $65,767 of adjustments for inflation, and $39,010 of adjustments for annualization to base year expenditures for Step 1 expenditures. Mr. Compton explained that Petitioner proposes the same adjustments for Step 2 expenditures as it did in Step 1; however, Petitioner does not adjust for annualization and proposes an inflation adjustment for an increase of $179,255 to base year expenditures. All other adjustments remained the same.

Except for Petitioner's adjustments for the annualization of the expense account, Mr. Compton accepted Petitioner's proposed miscellaneous expense adjustments. However, Mr. Compton proposed other adjustments. Mr. Compton removed $38,023.12 from the Community Relations for a full season plan of courtside tickets for Pacer games at Gainbridge Fieldhouse, explaining this expense is of no benefit to customers and should not be included in rates. He also removed from the base year $8,900 from the 2022 Environmental Grant Program because its function is charitable and image-building. He noted Petitioner's pamphlet provides, "All grants will be funded either by the American Water Charitable Foundation upon the advice or recommendation of personnel from American Water and its state subsidiaries or directly by such American Water subsidiary." OUCC Ex. 5, Attachment JTC-5. Mr. Compton testified that as the program can be funded by the charitable foundation, it should be treated as such and therefore should not be treated as a recoverable expense. Lastly, rather than removing from the base year only a portion of the National Association of Water Companies ("NAWC") bill (13%), which Petitioner acknowledged is involved in lobbying on behalf of public utilities, Mr. Compton recommended the full amount for the NAWC invoice of $188,932.91 be removed from the base year as NAWC activities substantially benefit shareholders' interests rather than customers.

Based on the foregoing, Mr. Compton recommended a decrease of $309,001 to base year miscellaneous expense of $2,491,856, resulting in a pro forma miscellaneous expense of $2,182,855 for Step 1 expenditures. Additionally, he recommended a decrease of $192,468 to base year miscellaneous expense to resulting in a pro forma miscellaneous expense of $2,299,388 for Step 2 expenditures.

3. INAWC Rebuttal. Mr. Shimansky accepted removal of the Indiana Pacers expenses.

INAWC witness Cifuentes explained the Environmental Grant Program focuses on projects that address watershed and/or source water protection in INAWC's service areas and is therefore beneficial to customers. He stated the costs to administer the program include the cost of preparing, printing, and mailing of Environmental Grant Brochures plus associated costs, including time spent by staff to evaluate the applications and to choose recipients. Mr. Cifuentes

provided an example of an Environmental Grant Program project that benefited INAWC customers called the Riverview Park Bioswale & Prairie Planting Improvements project where the funds will be used to improve water quality by installing a vegetated bioswale to capture runoff at Riverview Park that currently discharges to Holt Ditch within 50 feet of convergence with the White River. He testified the project will reduce flooding and storm water runoff and associated pollution into the White River, a water source for INAWC. He stated the removal of invasive species and installation of native plants will help to filter pollutants and sediment from water exiting the site.

Mr. Cifuentes disagreed with the OUCC that all NAWC activities benefit the interest of shareholders rather than customers. The NAWC is a professional association that provides a forum for its members to collaborate, share best practices, and leverage their strengths to benefit the communities they serve. Indiana American's utilization of tools offered by its NAWC membership benefit customers through professional development for INAWC employees, which provides more efficient and effective service through knowledge of the latest trends and techniques.

4. Discussion and Findings. On rebuttal, Petitioner accepted the OUCC's position that Indiana Pacers tickets should be removed from miscellaneous expense and employee-related expense. We agree and find such expense should be removed.

As for the Environmental Grant Program, we agree with the OUCC and find that this program is primarily charitable in nature and for the purpose of building Petitioner's image in its communities. The evidence shows that the program can be funded by the American Water Works' charitable foundation or its state subsidiary, supporting the primarily charitable nature of the program. Expenses identified as charitable contributions are considered non-recoverable expenses and should not be included in the revenue requirement of the requesting utility. Therefore, we find this expense should be removed.

With respect to Petitioner's NAWC expense, Indiana American properly excluded the portion of the expense related to lobbying and we find the remainder of the expense to be properly included. As Mr. Cifuentes explained on rebuttal, NAWC is professional association that provides a forum for its members to collaborate and share best practices and grow through professional development, which benefits customers through more efficient and effective utility service.

Accordingly, we find Petitioner's forecasted miscellaneous expense for the total company is $2,387,843 for Step 1 and $2,465,367 for Step 2.

H. Transportation Expense.

1. OUCC. Mr. Compton accepted Petitioner's proposed pro forma level of transportation expense with one exception. He testified that the proposed level of transportation expense included a "salvage value reclass inflation" and that salvage value is not a transportation expense. Citing to the National Association of Regulatory Utility Commissions Uniform System of Accounts for Class A Water Utilities, Mr. Compton testified that salvage value should be accounted for through accumulated depreciation and not as a transportation expense. Mr. Compton recommended all salvage value reclass be removed from base year transportation expense, producing a reduction of $99,421.

2. **INAWC Rebuttal.** Mr. Cifuentes explained that the reclassification that Mr. Compton was referencing was a credit received from a vendor during the base period for vehicles that had been retired from plant records. As such, it was a credit against the bill (which was booked as transportation expense), and the credit needed to be reclassified to salvage value (which Mr. Cifuentes agreed is not an expense). As such, reclassifying the credit must be done to properly state the amount to be booked to expense.

3. **Discussion and Findings.** We find that Mr. Cifuentes has adequately explained why the credit must be reclassified so as to properly reflect transportation expense. As such, we reject Mr. Compton's recommendation.

I. Bad Debt Expense.

1. **INAWC Case-in-Chief.** Petitioner proposed pro forma bad debt expense of $3,295,142, which includes the incremental increases to bad debt expense associated with each step of Petitioner's pro forma present rate revenue increases, using a factor of 0.9062% and a factor of 0.8945% for each step's proposed revenue increase.

2. **OUCC.** Ms. Sullivan proposed bad debt expense adjustments to base year bad debt expense totaling $629,201 yielding pro forma bad debt expense of $2,734,586 utilizing the same factors used by Petitioner.

3. **Discussion and Findings.** We agree with the factors used by the parties to compute Petitioner's forecasted bad debt expense. We find, based on the methodology used by the parties and our pro forma operating revenues proposed in this case, Petitioner's bad debt expense is $3,141,034.

J. Customer Accounting - Credit Card Fees and Disconnection Process.

1. **INAWC Case-in-Chief.** Petitioner proposed to include $1,163,647 in the revenue requirement attributed specifically to its proposal to waive the credit card processing fees applied to individual customers and include those fees in the cost of service within Customer Accounting expense (OM22). Pet. Ex. 2 at 35-36. Mr. Shimansky testified that charging a credit card fee on top of the customer bill adds friction to the process of paying a bill. He stated that eliminating the direct payment of the fee will help more customers pay their bill on time and avoid late fees and potential disconnections and is also expected to improve timely collections.

2. **OUCC.** Mr. Compton recommended the Commission deny Petitioner's proposal because such costs should not be socialized but remain with the cost causer. He argued it should not be the burden of all customers to pay the costs being generated by a subset of customers. Mr. Compton disagreed with the suggestion that customers will be saving money. While he acknowledged that customers paying their bills with credit or debit cards will save money, the customers who don't pay their bill with a card will see an increase in their bills. He stated there is no evidence that Petitioner's proposal will generate any value in customer satisfaction, on-time payment, and disconnection avoidance. Mr. Compton suggested that any increase in timely collections that might result will accrue to Petitioner's benefit as it would make more money in the long run. Mr. Compton argued the net benefit to customers as a whole is neutral as some customers would be receiving assistance at the expense of other customers. He noted that

customers who have been paying through methods other than credit or debit card to avoid paying a fee will no longer be able to save that money because they will have to pay for the benefit whether they take advantage of it or not. He also indicated his recommendation is consistent with the Commission's Order in Cause No. 45253, wherein a similar request was denied.

3. CAC. Mr. Inskeep testified that the CAC supports INAWC's proposal and believes it is beneficial to consumers. He testified consumers should not be charged extra fees for paying their monthly bill in the manner most convenient to them, within reason. He noted that payment by credit card is a popular payment method among consumers in Indiana. Mr. Inskeep testified that the support given by Petitioner to stop assessing per-transaction charges for payment by credit card would also apply to other per-transaction fees for payment by phone, debit card, or other reasonable method. He recommended the Commission approve Indiana American's proposal to remove the $1.95-per-transaction charge on credit card transactions and also direct Indiana American to discontinue any other per-transaction charges assessed on residential customers for paying a water and/or wastewater bill, including, but not limited to, payment by phone or debit card. Mr. Inskeep also expressed concern with Petitioner's disconnection policies for customers with medical conditions, reconnection procedures, and its use of internal credit scores that are used to apply discriminatory treatment in its collection activities.

4. INAWC Rebuttal. Responding to the OUCC, Mr. Shimansky testified that when the cost to pay by credit and debit card is removed from the individual customer, those bills become easier to pay leading to more timely payments and lower uncollectible expenses. When this happens, all customers benefit as uncollectible expenses are a part of the revenue requirement. Mr. Shimansky demonstrated the impact on other rates is relatively minor (0.3% of total Operating Revenues) in comparison to making it easier to pay bills. With respect to customer satisfaction, Mr. Shimansky stated the use of a credit card may help customers avoid late payment fees and the discontinuation of water service for non-payment and associated reconnection fees, each of which contribute to customer satisfaction, as does avoiding the incurrence of additional costs associated with mailing in payments or traveling to make in person payments.

With respect to CAC's recommendation that all fees associated with any customer bill payments should be removed, Mr. Shimansky responded that Petitioner has not done the analysis or determined the increased revenue requirement associated with removing such other fees. He testified that Petitioner is not opposed to doing an analysis and corresponding proposal in the next rate case if the Commission finds it necessary. Ms. Britto denied the use of internal credit scores in Petitioner's collection process and testified that Petitioner applies its procedures and policies uniformly to all customers, which are consistent with Commission rules.

5. Discussion and Findings. The Commission addressed a similar proposal to socialize the cost of providing a fee-free payment option in *Duke Energy Indiana, Inc.* Cause No. 45253 at 105-106 (IURC June 29, 2020), wherein it found the proposal unreasonable because it had not been shown to provide value to non-participating customers. While Petitioner asserted in this case that all customers would benefit from more timely payments by those customers who use credit or debit cards for payments and the resulting lower uncollectible expense that results from more timely payments, Petitioner provided no evidence or cost/benefit analysis to support those assertions. Instead, the only analysis performed was to calculate the estimated

amount of fees that would be generated from a small subset of customers using a credit or debit card to pay their water bill that it proposed to allocate to all customers. Therefore, we reject Indiana American's proposal to shift its credit card processing fees to all customers.

We also find that Indiana American adequately explained the use of an internal credit metric, which is not used in its collection process. Additionally, Indiana American's disconnection, reconnection, and collection policies and procedures are consistent with the Commission's rules, and we decline to require any modifications based on the CAC's recommendations. However, we encourage Petitioner to continue discussions with CAC and others about additional options for decreasing the number of residential disconnections and improving the reconnection process, particularly for the more vulnerable residential customers.

K. Regulatory Expense - Rate Case.

1. INAWC Case-in-Chief. INAWC forecasted $1,404,295 for rate case expense to be amortized in rates over 3 years, or $468,098 per year. INAWC Financial Exhibits OPER Schedule OM23 within the INAWC 2023 Rate Case – Regulatory Expense file of Petitioner's Exhibit 13.

2. OUCC. Ms. Sullivan testified that the OUCC does not oppose the rate case costs forecasted by Petitioner but disagreed with the total costs to be amortized as well as the amortization period to be used. She stated Petitioner was authorized to recover $1,941,165 in the 2019 Rate Order amortized over three years but not removed from rates. Thus, Petitioner will have collected $647,055 per year for approximately 4.58 years by the time the rates in this case are implemented (July 2019 through approximately February 2024), or $2,965,669, resulting in what she described as an over-collection of at least $1,024,504. Ms. Sullivan testified that because the OUCC has agreed to include under recovered rate case costs in prior cases, it is only equitable that any over collection of rate case costs should be credited against rate case costs to be incurred in this case. She recommended the $1,404,295 of forecasted rate case costs be reduced by the "over collection" of rate case costs from Cause No. 45142, resulting in net rate case costs of $379,791. She recommended this amount be recovered during Step 2 and then removed from Step 3 rates to avoid any future over collection of rate case costs. She also recommended all rate case expense be removed from Step 1 resulting in no rate case expense recovery in Step 1, stating that Step 1 may be of indefinite length and therefore removing rate case expense from Step 1 removes the potential for additional over, or under, recovery of OUCC's recommended net rate case expense.

Ms. Sullivan also recommended a five-year amortization period should the Commission not accept her recommendation. She testified this period is more appropriate than Petitioner's proposed shorter three-year period because the time between rate case filings has been approximately five years for the last three rate case filings. She stated INAWC has been able to extend the period between rate case filings due to its use of DSIC and SEI trackers. Ms. Sullivan further recommended that if the Commission orders a three-year amortization of rate case expense, the Commission order rate case expense should be removed by a tariff filing at the completion of the amortization period.

3. INAWC Rebuttal. Mr. Shimansky disagreed that rate case expense

from Cause No. 45142 was over-collected. Citing to a term of the settlement in the prior rate case, he testified that the parties agreed to an annual regulatory expense amortization of $647,055, which included a $50,000 reduction to the annual forecast proposed by Petitioner, driven by reduced projected levels of expense associated with settling the case rather than fully litigating it. Mr. Shimansky testified there was no agreement as to the time over which to amortize the rate case expense. He also noted that there was no term in the settlement that required a filing of new tariffs following expiration of any amortization period. He testified there was no agreement to stop amortizing rate case expense and the balance in the regulatory account for those expenses was never fully amortized to a zero level.

4. Discussion and Findings. The Commission's Order in INAWC's prior rate case approved a settlement among the parties that authorized an annual regulatory expense amortization amount. *See* 2019 Rate Order at 14 and Appendix A of the approved settlement at 4. While the OUCC asserts that the settlement established a total rate case expense amount of $1,941,165 to be amortized over three years, there is no indication in the Commission's Order, or the settlement attached thereto, that anything other than an annual regulatory expense amortization amount was agreed upon or approved. Therefore, we decline to modify the settlement or our Order approving it through the OUCC's recommended offset.

Accordingly, we approve Petitioner's proposed rate case expense. However, we find that such expense should be amortized over four years based on Petitioner's historical average of time between rate cases.[25] Petitioner shall also file revised tariffs upon the end of the amortization period to remove the annual amortization expense from its rates if the four-year period adopted herein expires before new rates are approved.

L. Amortization - COVID Deferral.

1. INAWC Case-in-Chief. INAWC is seeking recovery of $383,817 of COVID related costs. Mr. Shimansky testified that the amortization amount includes balances from both the regulatory asset and the regulatory liability that was set up and charged since March 6, 2020 through December 31, 2021. INAWC proposed to amortize this net balance over three years. These costs include foregone late fees, disconnect/reconnect expenses, uncollectible/bad debt expense, other direct costs, debt carrying costs, and Service Company expenses, offset by savings realized by Petitioner on forgone Travel and Conference expenses.

2. OUCC. Ms. Stull accepted Petitioner's basic methodology for calculating COVD-19 costs but disagreed with Petitioner's "conclusions." She testified that the methodology should include recognition of the line locate costs not incurred during the pandemic but recovered through rates. She calculated an avoided cost of $916,667. As a result, she recommended a deferred COVID regulatory liability of $532,850 (Petitioner's net regulatory asset of $383,817 reduced by avoided line locate costs of $916,667). She also disagreed with INAWC's proposal to amortize deferred COVID costs over three years, positing that five years is a more appropriate amortization period as that is the time between rate case filings for INAWC's last three rate cases. Ms. Stull recommended a deferred COVID regulatory liability of $532,850 be

[25] Petitioner's prior rate case filings include Cause No. 44022 on May 2, 2011, Cause No. 44450 on January 24, 2014, Cause No. 45152 on September 14, 2018, and Cause No. 45870 on March 31, 2023.

amortized over a five-year period as a reduction of $106,570 to INAWC's annual total company operating expenses.

3. INAWC Rebuttal. Mr. Shimansky opposed Ms. Stull's recommendation, noting that Petitioner voluntarily deferred avoided travel and conference expense savings when it was not required to do so. He cited to the June 29, 2020 Order in the Commission's COVID investigation, Consolidated Cause Nos. 45377/45380 (at 9-10) ("45380 Order"), which provided: "All jurisdictional Indiana utilities are authorized to use regulatory accounting for COVID related impacts directly associated with any prohibition on utility disconnections, collection of certain utility fees (i.e., late fees, convenience fees, deposits, and reconnection fees), and the use of expanded payment arrangements, as well as COVID related uncollectible and incremental bad debt expense." Mr. Shimansky noted this was precisely the deferred accounting authority sought by the OUCC and, in fact, the OUCC actively opposed further deferred accounting authority. He stated there is no deferred accounting authority for the avoided line locate expense. He also acknowledged that there is no deferred accounting authority for the avoided transportation and conference expense, and Petitioner did not to have offset those savings against the deferred expenses that were specifically authorized.

With respect to Ms. Stull's proposal to lengthen the amortization period for the COVID deferred costs, Mr. Shimansky responded that the costs in this regulatory asset were paid for by Petitioner over a period of around 22 months and Petitioner is not asking to recover interest on these accounts. Mr. Shimansky testified that to recover these costs over five years means Petitioner will be waiting almost nine years (COVID expense began in June 2020 versus end of amortization period of January 2029) with no interest compensation.

4. Discussion and Findings. The 45380 Order authorized regulatory accounting for COVID impacts associated with prohibitions on utility disconnections, waiver or exclusion of certain utility fees (i.e., late fees, convenience fees, deposits, and reconnection fees), and the use of expanded payment arrangements. In that same order, we declined to approve a request for deferral of O&M costs but found utilities could seek cost recovery or other related rate relief through future filings, such as a base rate case. While we recognize that Petitioner deferred certain O&M savings as offsets to the costs authorized to be deferred, we decline the OUCC's invitation to require additional offsets simply because Petitioner voluntarily included some offsets. Consistent with our decision above concerning the amortization of rate case expense, we find these costs should also be amortized over the four-year expected life of Petitioner's approved rates. Therefore, we authorize Petitioner to amortize $383,817 over four years, a figure that includes COVID costs, bad debt expense, and an offset for travel and conference expenses not incurred. Additionally, if the four-year amortization period expires before new rates are approved, Petitioner shall file a new tariff to remove the amortization from rates upon expiration.

M. Amortization - LIPP Expense.

1. OUCC. OUCC witness Stull proposed to amortize deferred costs related to Petitioner's LIPP over five years instead of three. She proposed to amortize the deferred low-income program costs of $77,127 over five years, for a $10,279 decrease to Indiana American's proposed amortization expense of $25,704.

2. INAWC Rebuttal. Mr. Shimansky responded that based on the period over which the discounts for customers through the LIPP program were captured in the regulatory asset and the fact that Petitioner has not sought carrying charges with respect to the deferred amounts, Petitioner's proposed three-year amortization period is appropriate. He also pointed out that it is inconsistent for the OUCC to suggest that the over-collection of the URT repeal revenues be returned immediately with interest but the expenses for LIPP are to be returned over five years with no interest.

3. Discussion and Findings. For the reasons stated above with respect to the amortization period for the deferred COVID costs, we find a four-year amortization period should be adopted. We further find INAWC should file a new tariff to remove the amortization from rates upon expiration if the four-year period adopted herein expires before new rates are approved.

N. Property Tax Expense.

1. INAWC Case-in-Chief. Mr. Cifuentes presented pro forma property tax expense. To calculate the forecasted property tax, he calculated the five-year weighted average of assessed values for 2017-2021 adjusted for the granted personal property assessment obsolescence claims, divided by the UPIS basis amounts for 2016-2020. This quotient provided the ratio of assessment value to UPIS value for real and personal property. The tax rate was calculated by dividing property taxes paid in 2022 by the 2021 assessed values. While property taxes are expensed in the year of assessment, they are paid in arrears. The five-year weighted average ratio of assessed value to UPIS was then multiplied by the December 31, 2024 UPIS to determine 2025 property tax expense. The monthly 2025 property tax expense was then annualized to arrive at the test year pro forma property tax expense (water and wastewater).

2. OUCC. Ms. Stull accepted generally Petitioner's method for forecasting property tax expense. However, Ms. Stull disagreed with Indiana American's use of its estimated property tax assessment as of December 31, 2024 to establish Step 2 property tax expense. She testified that property taxes are based on an assessment conducted on December 31 each year, and the December 31, 2023 assessment will have been the latest assessment as of the beginning of Petitioner's forward-looking test year (Step 2 – May 1, 2024). Ms. Stull testified that Step 2 rates should be based on the assessed value of the property as of the beginning of the test year (the December 31, 2023 assessment). She explained further that only Step 3 rates should be based on the December 31, 2024 assessment.

Ms. Stull noted that Petitioner included utility plant that is not subject to property tax in its property tax expense calculation. She noted the main extension to the Montgomery County Development Zone will be exempt from property taxes and Petitioner only included its net investment of $2,777,506 rather than its total investment of $18,000,000. Ms. Stull explained that property taxes are based on what was constructed and taxing entities do not consider whether plant was contributed in establishing what value is to be taxed. Ms. Stull also noted that while Petitioner is allowed to recover a return on and of its investment in customer-owned lead service line replacements, it does not actually own these assets and therefore does not owe property taxes on this investment. Therefore, Ms. Stull excluded$18,000,000 for the Montgomery County main

extension and $22,565,208 for lead service line replacements from her recommended property tax expense.

Ms. Stull also made several recommendations for the computation of property tax expense in future SEI and DSIC cases. She stated Petitioner should use its rate case methodology for purposes of calculating property taxes in these trackers.

3. INAWC Rebuttal. Mr. Shimansky agreed with Ms. Stull that the Montgomery County surcharge assets and customer-owned lead service line replacements should be excluded. He disagreed, however, with her recommendation that Step 2 rates should be based upon the December 31, 2023 assessment. He explained that the test year is the 12 months ending April 30, 2025, and that basing the Step 2 rates on the 2023 assessment will understate the pro forma test year expense. He agreed to her recommendations regarding the calculation of property tax in future SEI and DSIC cases.

4. Discussion and Findings. The primary dispute between the parties is whether to include property tax expense on plant that will be assessed on December 31, 2024 in Step 2 rates as proposed by Petitioner or in Step 3 rates as proposed by the OUCC.

In *Indiana-American Water Co., Inc.,* Cause No. 44022 at 93-94 (IURC June 6, 2012), we addressed a similar issue and referenced our decision in *Ind. Cities Water Corp.*, Cause No. 39166 (IURC July 8, 1992) wherein the utility sought to include an adjustment for plant added between December 31,1990 and May 31,1991. The test year in that case ended June 30, 1990, with a one-year adjustment period and the new plant was assessed for tax purposes on March 1, 1991, even though the tax rate would not be set until 1992 and taxes would not be due until 1993. Because the utility's accrual accounting system recorded property taxes as a liability in the year of assessment (*i.e.*, during the adjustment period), the utility estimated the property tax expense based on the most current tax rate. The Commission included the utility's proposed expense for new plant, finding that estimating the property tax using the most-current tax rate and an assessment made during the adjustment period resulted in a sufficiently fixed, known, and measurable expense.

Although this case is not based on a historical test year and the fixed, known, and measurable standard does not apply, we find it appropriate to consider the tax assessment date and the timing of when the utility's accrual accounting system records the property taxes as a liability. We find it is reasonable to permit recovery of property taxes on assessed plant in the period when the utility accrues the tax in its accounting records. In response to the Commission's August 25, 2023 Docket Entry, Petitioner stated that it will record property tax expense on 2024 investments in January 2025. Because the cutoff date for Step 2 revenues and O&M expenses are through April 30, 2025, we find the amount of property tax expense should be based on plant that will be assessed on December 31, 2024. Accordingly, we find Petitioner's forecasted property tax expense adjustment is $3,749,006 for Step 1 and $2,464,196 for Step 2. Further, we find the OUCC's recommendations regarding the calculation of property tax in future SEI and DSIC cases should be approved.

O. IURC Fee and Gross Revenue Conversion Factor.

1. OUCC. Ms. Sullivan calculated an updated gross revenue

conversion factor to reflect the IURC fee that went into effect on July 1, 2023. She also proposed a $134,693 increase to base year IURC fee expense of $275,452 for a total pro forma IURC fee expense of $410,145 utilizing the current 2022-2023 IURC fee of 0.1467603% and applying the fee to the OUCC's proposed operating revenue.[26]

2. INAWC Rebuttal. Mr. Cifuentes testified that Petitioner agrees with application of the current IURC fee rate for 2022-2023, but that percentage should be applied to the level of revenue ultimately adopted in this Cause.

3. Discussion and Findings. There is no dispute between the parties as to the appropriate IURC fee to use in calculating the gross revenue conversion factor, only in the appropriate level of revenues to which the percentage representing the fee for 2023-2024 should be applied. We find that the IURC fee of 0.1467603% should be applied to the level of pro forma operating revenues at present rates found in this Order. Further, we find the gross revenue conversion factor of 134.5031%, which includes the IURC fee of 0.1467603%, should be applied to the net increase required before gross-up for each phase as found in this Order.

P. Income Tax Expense. There were only two disputed issues concerning federal and state income tax expense: (1) the regulatory treatment of the timing difference associated with the repairs deduction, and (2) the appropriate amortization period for EADIT.

1. Repairs Deduction.

a. OUCC. Ms. Stull recommended a reduction to income tax expense to include Petitioner's repairs deduction in the determination of income tax expense for ratemaking purposes. She explained the repairs deduction represents costs that have been capitalized and included in rate base for book and ratemaking purposes but expensed for tax purposes as allowed by the Internal Revenue Code. Ms. Stull further explained that the adjustment she proposes is only for determining income tax expense for ratemaking purposes and has no effect on the operating expense or rate base.

Ms. Stull testified the tax normalization rules do not prohibit the inclusion of a repairs deduction for purposes of determining income tax expense for ratemaking purposes. Rather, normalization rules pertain to differences in depreciation methodologies and depreciation rates used for book and tax purposes, which are "protected" under the normalization rules. However, she explained, the repairs deduction creates a basis difference which is not protected under the normalization rules. She concluded it is unnecessary for customers to pay rates that include income taxes related to the repair deduction. She did not split the repairs deduction between water and wastewater operations because the amount for wastewater was immaterial and Petitioner's proposed subsidy to wastewater operations is significant.

Ms. Stull stated the ADIT balance at September 30, 2022 includes an amount related to the additional repairs deduction included in American Water's federal income tax return. This historical balance should continue to be included in ADIT. However, Ms. Stull explained that because she proposes to flow through the repairs deduction in the determination of income tax

[26] We note the 0.1467603% is the IURC Fee for the fiscal year 2023-2024.

expense for ratemaking purposes, there will be no difference between book value and tax value (at least for ratemaking purposes) on a going forward basis. Therefore, no additional ADIT should be projected for Petitioner's capital structure in Steps 1, 2, or 3.

Finally, Ms. Stull acknowledged a reduction to the ADIT balance included in Indiana American's capital structure should result from her recommendation. She estimated the effect to ADIT by multiplying her repair deduction by 25% and reducing ADIT accordingly. The effect of her proposed adjustment is a $2,927,966 reduction to ADIT in the Step 2 capital structure and a $9,439,895 reduction to ADIT in the Step 3 capital structure.

b. INAWC Rebuttal. Ms. Ciullo explained the Internal Revenue Service ("IRS") allows an immediate deduction for certain expenditures as repairs which, for regulatory accounting purposes, are capitalized rather than expensed. This creates a timing difference, which Petitioner proposes to normalize over the life of the capitalized asset. The effect of that timing difference is reflected in lower customer rates through the recognition of ADIT, consistent with the Muncie Remand Method as outlined in *Muncie Water Works Co.*, Cause No. 34571, 44 PUR4th 331 (Ind. Pub. Serv. Comm'n Sept. 16, 1981). Ms. Ciullo explained that Ms. Stull's proposal is to instead flow through the tax impacts of the tax repairs deductions because the rates paid by customers include income taxes INAWC will not pay until some future period, which she says unnecessarily increases rates for customers today. Ms. Ciullo explained that Petitioner's current approach of continuing to normalize tax repairs provides stability in customer rates by not having large fluctuations in bills when taxes come due. For the utility, Ms. Ciullo explained, normalization allows the utility to recover costs more evenly over time. She testified that current and future customers benefit from normalization because the timing difference is reflected as a zero-cost source of capital over the life of the underlying asset, which results in a lower authorized net operating income. In contrast, Ms. Ciullo stated, flow-through captures 100% of the benefit of the tax deduction for current customers, leaving none of the benefit for future customers.

Ms. Ciullo testified it is still necessary due to a timing difference to compute ADIT on the tax repairs adjustment under Ms. Stull's approach, since the costs associated with the tax repairs deduction are capitalized for book purposes. Under Ms. Stull's approach, however, a regulatory asset for the ADIT (and gross-up) for income taxes to be paid in the future would be created. Ms. Ciullo testified that changing certain tax expenses from normalization to flow-through adds unnecessary complexity to an already complex tax calculation and could add complexities with other filings, such as the DSIC. Ms. Ciullo stated that, if the capital expenditure qualifies for tax repairs for tax purposes and is treated as a flow through, then as the capital expenditure is depreciated for book purposes, the corresponding book depreciation also needs to be treated as flow-through. Thus, Petitioner would need to separately track any book activity, including retirements associated with the underlying capital, to ensure the full reversal of the regulatory asset created as a result of the flow-through treatment. She also indicated that if the treatment to flow-through was to be changed retrospectively, other considerations would also need to be made.

c. Discussion and Findings. Even though the repairs deduction timing difference has existed for several years, this is the first case where a party has proposed that its effects should be flowed through to customer rates rather than be normalized. While we have not faced this specific proposal with respect to the repairs deduction, Indiana long

ago decided that temporary tax timing differences (like the repairs deduction) are to be normalized:

> It has been a long standing practice of this commission to permit utilities, subject to our jurisdiction for rate-making purposes, to utilize normalization accounting principles in regard to timing difference adjustments and investment tax credits.

Muncie Water Works Co., 44 PUR4th 331, 337-38 (quoting *Boone County REMC v. Ind. Pub. Serv. Comm'n,* 239 Ind. 525, 536, 29 PUR3d 409, 159 N.E.2d 121 (1959). The use of normalization accounting principles permits an entity to equalize the tax consequences resulting from timing difference adjustments, such as accelerated depreciation, to taxable income and investment tax credits associated with capital assets over the useful life of the asset. Consequently, when such normalization is utilized for rate-making purposes, the present and future utility customers share such tax consequences equally over the life of the assets that are used to provide the utility service.

Timing differences have been normalized as standard ratemaking practice, in part, because other timing differences in the tax calculation, such as depreciation, would violate IRS normalization rules if flowed through to the ratepayers. Even though the repairs deduction could be flowed through to ratepayers without violating those rules, the additional complexities do not warrant the change proposed by the OUCC. As Ms. Ciullo noted, the corresponding book depreciation would need to be treated as a flow-through if the capital expenditure qualifies for tax repairs and is treated as flow-through. For consistency, the DSIC and other filings would need to be modified as well. Also, while the current method requires ratepayers to pay more income taxes through rates than the utility is required to remit to the IRS immediately, these funds are available to invest in rate base. Thus, the funds represented by deferred income taxes are a source of capital, like debt or equity, for which the utility is not required to pay interest or dividends. Thus, the deferred income taxes are included in the capital structure at zero cost, providing a benefit to the ratepayers.

Normalization relating to timing differences of deductions in tax calculations is a long-standing ratemaking practice. We do not believe a change is warranted due to the additional complexities that will result and because ratepayers receive benefits from the normalization practice. Accordingly, we reject the OUCC's proposal.

2. EADIT.

a. INAWC Case-in-Chief. Mr. Shimansky testified that pursuant to the settlement agreement in Cause No. 45032 S4, EADIT from the Tax Cuts and Jobs Act of 2017 is being returned as an offset against income tax expense using ARAM. Mr. Shimansky explained that the Workpapers for Deferred Income Tax were compiled by the American Water's Tax Department using PowerTax.

b. OUCC. Ms. Stull disagreed with Indiana American's proposed EADIT amortization. She testified that the ARAM used at the time of settlement was approximately 41 years. She objected to INAWC's calculation of ARAM of approximately 74 years, 63 years, and 65 years for Steps 1, 2, and 3, respectively. She asserted that while ARAM will vary from one period to the next, an increase of this magnitude is not reasonable. She stated

that Petitioner's workpapers do not provide any useful support for its calculation of EDIT amortization or its calculation of ARAM. While she understands Petitioner used PowerTax to perform the detailed calculations, she said it is incumbent upon Petitioner to provide basic information about the calculation, such as the ARAM used, along with an explanation of why it differs significantly from that used in prior cases.

Ms. Stull stated that while Petitioner cannot amortize EADIT any faster than ARAM without violating normalization rules, she considered the ARAM calculated in this case to be an error. Due to the absence of support in Petitioner's case-in-chief regarding its calculation of ARAM, Ms. Stull based her recommended ARAM on the results of the OUCC's depreciation study, which calculated remaining lives for water plant of 48.99 years, wastewater plant of 28.15 years, and total plant of 48.70 years. Ms. Stull considered an amortization period of 41 years to be a reasonable basis on which to calculate the EDIT amortization.

c. Industrial Group. Mr. Gorman proposed that the amortization period to return Indiana EADIT to customers be reduced to three years; and that the full balance of the refund be credited to Petitioner's water customers. He stated that the Indiana General Assembly gradually lowered the Indiana corporate income tax rates beginning in 2012. The current tax rate is 4.90% and the tax rate used in Petitioner's last rate case, Cause No. 45142, was 5.5416%. Mr. Gorman testified this results in Indiana EADIT balances that represent over-collections of deferred tax payments from customers that will no longer be remitted to government taxing authorities due to the change in Indiana tax law. Mr. Gorman proposed the Indiana EADIT credit to customers should be accelerated. He stated the Indiana EADIT can be amortized in accordance with the Commission's discretion and is not required to be refunded using ARAM. He urged the refunding of these deferred tax over-collections to customers as quickly as possible. Mr. Gorman stated the faster the refund to customers means a greater reduction to cost of service that can offset a portion of Petitioner's current proposed rate increase. He also contended that a faster amortization period will result in a more balanced treatment to the current generation of customers, most of whom would have been paying rates that reflect the old tax rate, without creating any detriment to INAWC or its future customers who did not contribute to the EADIT balance. Mr. Gorman proposed a faster amortization of three years, consistent with the proposed three step rate increase. Accelerating the amortization to three years increases the Indiana EADIT amortization expense from $136,087 to $1,508,393, or an increase of $1,372,306.

d. INAWC Rebuttal. Regarding the OUCC's disagreement with the portion of Petitioner's EADIT calculation using ARAM, Ms. Ciullo explained that while ARAM is supposed to mimic the average remaining life, it is not intended to be a straight-line calculation. She also noted that the 41 years Ms. Stull uses is based on an estimated calculation that was utilized in the prior rate case, at a time when Petitioner had not completed the implementation of the PowerTax system. Ms. Ciullo explained that PowerTax is the industry software used to compute the full ARAM calculation using detailed records for a more accurate calculation than can be done in Excel. She stated the ARAM calculation is more complex than using a straight-line method and using that method is only appropriate if a utility does not have the appropriate books and records to calculate ARAM. Ms. Ciullo testified that Ms. Stull is comparing an estimate of ARAM calculated prior to PowerTax to the ARAM result produced by PowerTax and the fact that the number has grown materially does not make it unreasonable. It is instead likely the result of using a far more detailed and accurate calculation than was available to Petitioner at the time of the last

case. Ms. Ciullo further testified that Ms. Stull's proposal to flow back protected EADIT over a 41-year period even though ARAM is more than 20 years longer unnecessarily risks a normalization violation by giving back the EADIT quicker than under ARAM. This could result in Petitioner no longer being able to utilize accelerated tax depreciation, which would be a severe detriment to both Petitioner and customers.

Mr. Shimansky acknowledged that unlike federal EADIT, the amortization period for Indiana EADIT rests entirely within the Commission's discretion. However, he disagreed with the highly expedited proposal from Mr. Gorman. First, Mr. Shimansky stated the underlying assets that set up this EADIT will continue to depreciate over the life of the assets. In other words, if the EADIT is flowed back over three years but the underlying asset is depreciated over its remaining life, there is a mismatch that contradicts Mr. Gorman's desire to provide more balanced treatment to current customers. Mr. Shimansky urged that if the Commission decides to accept Mr. Gorman's three-year proposal or other expedited proposal, then the order should also include language to change the tariff rate at the end of the amortization. This should include not only the income tax expense but also the capital structure, as fully amortized state EADIT (reflected as zero-cost financing in the capital structure) will increase the overall WACC.

e. Discussion and Findings. We note at the outset that the amortization for both federal and state EADIT were established in the settlement approved by the Commission in its June 24, 2020 Order in Cause No. 45032 S4. The record in that Cause and in the current proceeding reflects that federal protected EADIT could not be amortized using any shorter period than that established using ARAM without risking a normalization violation for federal income taxation purposes. It was understood on a going forward basis that the estimated pass back to customers established in that Cause was always intended to be updated through PowerTax to arrive at the actual ARAM calculation. Any other result would risk a normalization violation for purposes of the Internal Revenue Code. That update has occurred, and the resulting calculation of Petitioner's federal EADIT follows the method established in Cause No. 45032 S4 to avoid a possible normalization violation. The OUCC has made no showing that the ARAM calculation produced by PowerTax is in error. Therefore, we decline to adjust the calculation based on the OUCC's recommendation.

With respect to Indiana EADIT, our conclusion is the same as for the repairs deduction. While the question is one for our discretion, we long ago exercised that discretion and determined that temporary timing differences would be normalized because any other approach would be "out of touch with reality." *Muncie Water Works,* 44 PUR4th at 338. Accordingly, we reject Mr. Gorman's proposal to accelerate the pass back of Indiana EADIT.

11. Net Operating Income at Present Rates. Based on the evidence and determinations made above, we find Petitioner's adjusted test year operating results under its present rates are:

Operating Revenues	$ 284,238,732
Less: Deductions	
Operating and Maintenance	102,213,733
Depreciation & Cost of Removal	81,372,636
Amortization	992,561
General Taxes	21,715,052
Federal Income Taxes	6,889,379
State Income Taxes	2,244,414
Total Deductions	215,427,775
Present Rate Net Operating Income	$ 68,810,957

We find that with appropriate adjustment for ratemaking purposes, Petitioner's annual net operating income under its present rates for water/wastewater service would be $68,810,957. We have previously found that Petitioner's net original cost rate base as of the end of the test year is forecasted to be $1,835,553,713, that Petitioner's WACC is 6.42%, which would produce a return on net original cost rate base of $117,842,548. To this return we add the fair value increment for the Indiana Cities Water Corporation acquisition adjustment of $250,077, calculated pursuant to the methodology that has been utilized in numerous rate cases over the course of the more than twenty years, producing a total fair return on fair value of $118,092,625. Petitioner's current return of $68,810,957 will be insufficient to represent a fair return on the fair value of its rate base. We therefore find that Petitioner's present rates are unreasonable and confiscatory.

12. Authorized Rate Increase and Rate Implementation.

A. INAWC Case-in-Chief. Mr. Shimansky described Petitioner's proposed rate implementation in three steps. INAWC has chosen a test year that will commence a few months after the date of this Order. The first step will take effect upon the issuance of this Order. It will incorporate rate base, capital structure, depreciation, and grossed up return as of a rate base cutoff of July 31, 2023. The first step will also incorporate the annualized level of revenues, uncollectible expense, operating and maintenance expense, amortizations and taxes projected in the link period through December 31, 2023. The second step will incorporate the level of revenues, uncollectible expense, operating and maintenance expenses, amortizations and taxes projected through the test year, combined with rate base, capital structure, depreciation expense, and grossed up return as of the beginning of the test year (April 30, 2024). The third and final step will adjust revenues, uncollectible expense, and certain taxes (IURC fee and state and federal income tax), based upon rate base, capital structure and depreciation as of the end of the test year (April 30, 2025). At each step, INAWC will submit a rate base and capital structure compliance filing to certify that all utility plant reflected in that submission is in service as of that date.

B. OUCC. The OUCC did not object to Petitioner's proposed three-step process. However, Ms. Stull testified that the parties should have an opportunity to review Indiana American's update filings, conduct any necessary discovery, and be afforded meaningful opportunity to respond to the update filings. She said for all steps, Petitioner should certify the

plant in service and verify construction costs paid. She also recommended a number of additional submissions be made as part of the rate implementation: (1) filings should compare actual amounts to authorized amounts, with an explanation of variances greater than 5%; (2) rate base should be capped at each step at the amount in the forecast; (3) INAWC should file detailed general ledger information with each step; (4) for Steps 1 and 2, detailed schedules showing comparisons between actuals and "approved" amounts, by account and project number, along with detailed general ledger transactions, which would be followed by a 30-day period for review; and (5) for Step 3, the same as Steps 1 and 2, except that information supporting UPIS as of December 31, 2024 would be submitted by February 1, 2025. The remainder of the test year additions would be submitted by May 31, 2025, with parties having until July 30, 2025 for review. She testified that rates should take effect for all steps upon filing on an interim subject to refund basis.

C. Industrial Group. Mr. Gorman did not oppose the three-step process; however, he testified that multi-step processes are not needed and recommended that rate base be capped at the level approved in this Order.

D. INAWC Rebuttal. Mr. Shimansky testified that the OUCC's recommendations that rate base be capped at the amount authorized in this Order, that rates be put in effect upon submission on an interim basis subject to refund, and that a hearing be scheduled to resolve any disputes are consistent with past practice and is acceptable. He also testified that the 30-day period to submit objections is also acceptable. He agreed to an earlier submission of calendar year end data but stated that with year-end close it would be difficult to meet the proposed February 1 date and March 1 would be more realistic. He otherwise objected to the new additional requirements proposed by Ms. Stull. He testified that the Commission should not impose any reporting obligations different than those imposed in any other future test year case. He testified that no compelling reason has been offered for the additional layers of reporting she has requested and that it would be inefficient.

E. Discussion and Findings. The Commission approves Petitioner's unopposed three-step increase, with Step 1 taking effect as soon as possible after the issuance of this Order for service rendered after approval of the tariffs by the Commission's Water/Wastewater Division and based upon actual rate base and capital structure as of July 31, 2023. Step 2 rates will take effect on or about the beginning of the test year, based upon the rate base and capital structure as of May 1, 2024. Step 3 rates will take effect on or about the end of the test year, April 30, 2025, and based upon the end of test year rate base and capital structure. Step 3 rate base will be capped at the net original cost rate base we have found herein to be appropriate, with any amounts in excess of the cap being eligible for inclusion in other rate or tracker proceedings. All three steps will take effect on an interim subject to refund basis upon submission of the compliance filing described herein. The parties to this proceeding will have 30 days to submit any objections to the compliance filings for Steps 1 or 2 and 60 days for Step 3.

The OUCC took issue with the date for submission of rate base update as of December 31, 2024, and recommended capping the Steps 1 and 2 rate base figures and including specific additional information with the compliance filing. We agree with INAWC witness Shimansky that year-end closing may pose problems for a February 1 submission, and so we find a March 1 submission to be satisfactory. As to the other information the OUCC requests be submitted with

its compliance filing, this case presented complex issues involving rates, cost of service, and rate design. Thus, to verify and ensure adherence to the Commission's findings herein, a technical conference may be convened as needed for Petitioner to explain its compliance filing.

Accordingly, we find that at each of the three steps, Indiana American shall submit a certification of its actual utility plant in service and actual capital structure as part of its compliance filing broken out between water, wastewater, and corporate. The compliance filing will calculate rates for the applicable step based upon these certifications for water and wastewater, subject to the approved rate base at the conclusion of the test year found herein. All supporting schedules should be provided in Excel format with formulas intact. The rates shall take effect upon submission subject to the rights of parties to submit an objection to the compliance filing as previously found herein. If necessary to resolve any objections, we will schedule a hearing. However, within a week of Petitioner's compliance filing, a technical conference may be held at the request of either a party or Commission staff to allow for further discussion in determining whether Petitioner's filing complies with this Order and to determine what additional information, if any, should be provided for Step 2 and Step 3's compliance filings. We find this process is reasonable and consistent with the process that has been used and worked well in our other future test year cases.

Based on the evidence presented and subject to the approved compliance filing process, we find that Petitioner should be authorized to increase its rates and charges in three steps, calculated to produce combined additional operating revenue of $66,285,371 at the conclusion of the test year, resulting in total operating revenue of $350,524,090. This revenue is reasonably estimated to afford Petitioner the opportunity to earn net operating income that is no more than the fair return of $118,092,625 that we have found to be appropriate, based upon projected test year end rate base and capital structure. The rate increase shall take place over the three steps we have described and, subject to the compliance filings, shall be calculated to produce total company operating revenues and net operating income at each step as follows:

Step 1		
Operating Revenues	$	306,800,457
Less: Deductions		
Operating and Maintenance		95,939,457
Depreciation & Cost of Removal		67,318,612
Amortization		354,326
General Taxes		19,188,815
Federal Income Taxes		16,957,543
State Income Taxes		4,716,632
Total Deductions		204,475,385
Net Operating Income	$	102,325,072

Attachment 7

Step 1	
Original Cost rate Base	$ 1,614,354,213
Times: Weighted Cost of Capital	6.32%
Net Operating Income Required for Return on Rate base	102,027,186
Add: Fair Value Increment - Indiana Cities	297,880
Net Operating Income Required	102,325,066
Less: Adjusted Net Operating income	83,782,736
Net Revenue Increase Required before Gross-up	18,542,330
Gross Revenue Conversion Factor	134.5031%
Recommended Revenue Increase	$ 24,940,009
Divided By: Revenues Subject to Increase	$ 278,883,818
Recommended Percentage Increase	8.94%

Step 2	
Operating Revenues	$ 326,266,908
Less: Deductions	
Operating and Maintenance	102,589,675
Depreciation & Cost of Removal	72,258,258
Amortization	992,561
General Taxes	21,776,181
Federal Income Taxes	17,663,414
State Income Taxes	4,888,792
Total Deductions	220,168,881
Net Operating Income	$ 106,098,026

Attachment 7

Step 2	
Original Cost rate Base	$ 1,679,732,875
Times: Weighted Cost of Capital	6.30%
Net Operating Income Required for Return on Rate base	105,823,171
Add: Fair Value Increment - Indiana Cities	274,851
Net Operating Income Required	106,098,022
Less: Adjusted Net Operating income	93,393,359
Net Revenue Increase Required before Gross-up	12,704,663
Gross Revenue Conversion Factor	134.5031%
Recommended Revenue Increase	$ 17,088,166
Divided By: Revenues Subject to Increase	$ 305,965,938
Recommended Percentage Increase	5.58%

Step 3	
Operating Revenues	$ 350,524,090
Less: Deductions	
Operating and Maintenance	102,806,656
Depreciation & Cost of Removal	81,372,636
Amortization	992,561
General Taxes	21,811,463
Federal Income Taxes	19,989,553
State Income Taxes	5,458,591
Total Deductions	232,431,459
Net Operating Income	$ 118,092,631

Step 3	
Original Cost rate Base	$ 1,835,553,714
Times: Weighted Cost of Capital	6.42%
Net Operating Income Required for Return on Rate base	117,842,548
Add: Fair Value Increment - Indiana Cities	250,077
Net Operating Income Required	118,092,625
Less: Adjusted Net Operating income	100,057,961
Net Revenue Increase Required before Gross-up	18,034,664
Gross Revenue Conversion Factor	134.5031%
Recommended Revenue Increase	$ 24,257,183
Divided By: Revenues Subject to Increase	$ 323,054,105
Recommended Percentage Increase	7.51%

13. Depreciation Study.

A. INAWC Case-in-Chief. Mr. Kennedy presented full and comprehensive depreciation studies of Petitioner's water and wastewater plant in service as of December 31, 2022. Pet. Ex. 12, Attachments LEK-2 and LEK-3. Mr. Kennedy concluded that INAWC's requested depreciation rates, resulting in a composite depreciation rate related to water of 2.88% and related to wastewater of 4.53%, reasonably reflect the annual consumption of the undepreciated service value of the utility plant in service. The new rates would take effect upon approval of Step 1 rates in this Cause and thus would affect net original cost rate base at Steps 2 and 3.

The water depreciation study results in a depreciation rate related to Structures and Improvements of 1.94%, Transmission and Distribution plant of 2.59%, and a depreciation rate related to General Plant of 9.34%. Mr. Kennedy compared these rates to the current rates for each functional group. He testified that one significant cause of the change in depreciation rates is the change in average service life of many of the accounts. The average service life was shortened for 13 accounts and lengthened for 16 accounts, based on the detailed analysis presented in Mr. Kenney's report. In addition, Concentric completed a review of the net salvage requirements related to the water assets. He presented a summary of the proposed net salvage estimates compared to the currently used estimates, demonstrating the more negative net salvage requirements in 7 accounts and the less negative net salvage requirements in 17 accounts.

The wastewater depreciation study results in a depreciation rate related to Structures and Improvements of 4.97% and Collecting, Treatment and General Plant of 4.43%. Again, he noted one of the significant causes of the change in wastewater depreciation rates was the change in average service life of many of the accounts, with the shortening of the average service life of 2 accounts and the lengthening of the average service lives in 5 accounts. A more negative net salvage requirement was estimated for 3 accounts.

Mr. Kennedy testified that the average service life of many asset classes is lengthening throughout North America due in part to the increased focus of utilities in maintaining and life extending the infrastructure. However, at the same time as there has been a trend toward lengthening average service lives for some asset classes, Mr. Kennedy stated it has become common for there to be a shortening in other asset class, due in part to the quickening pace of technological change. For example, the pace of technological change in metering assets has resulted in the life of metering classes to be shortened industry wide.

Mr. Kennedy explained that his study calculates the annual and accrued depreciation using the Straight-Line Method and Average Life Group Procedure for most accounts. For certain general plant accounts, the annual and accrued depreciation are based on amortization accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives. Mr. Kennedy testified that the depreciation rates calculated in this study were calculated in the same manner as used in the prior full depreciation study—however, the calculation of the composite remaining life for the account as a whole has been slightly modified in this depreciation study.

B. <u>OUCC</u>. Mr. Garrett recommended several adjustments to Petitioner's proposed depreciation rates based on different service life estimates for several of Petitioner's water transmission and distribution accounts. His proposed depreciation rate adjustments would result in a $6.9 million decrease to Petitioner's proposed total annual depreciation accrual of $69.3 million. Mr. Garrett described the processes he employed to determine his proposed adjustments to Petitioner's depreciation rates. He explained the "curve-fitting process" in which the best Iowa curve is selected to fit the observed life table curve through a combination of visual and mathematical curve-fitting techniques, as well as professional judgment. He testified that mathematical fitting is an important part of the curve-fitting process because it promotes objective, unbiased results, particularly when there is sufficient data available. Mr. Garrett stated that for each of the accounts to which he proposed adjustments, Petitioner's proposed average service life, as estimated through an Iowa curve, is too short to provide the most reasonable mortality characteristics of the account. He asserted his proposal is generally based on the objective approach of choosing an Iowa curve that provides a better mathematical fit to the observed historical retirement pattern derived from Petitioner's plant data, in addition to applying judgment to the analysis. The eight accounts to which Mr. Garrett proposed adjustments include: Account 306.000 – Lake, River, and Other Intakes; Account 320.200 – Water Treatment Equipment – Filter Media; Account 333.000 – Services; Account 334.100 – Meters; Account 334.110 – Meters – Bronze Case; Account 334.130 – Meters – Other; Account 334.131 – Meter Reading Units; and Account 334.200 – Meter Installations.

C. <u>INAWC Rebuttal</u>. Mr. Kennedy explained that in his study, he followed a process of estimating service lives which starts with compiling historical data for the plant accounts or depreciable groups and analyzing this history using a similar process to that used by Mr. Garrett. However, rather than stopping at that point, Mr. Kennedy further considered additional information, including that gained from operational staff interviews, which provides critical information related to the reasons for past retirements and the expected future causes of retirement. For example, in addition to the on-going retirement of plant due to physical forces, Mr. Kennedy testified that significant future retirements may be caused by obsolescence resulting from the introduction of increased technology into some asset accounts and due to changing economic

considerations. The combination of the historical experience and the estimated future considerations yield survivor curves from which Mr. Kennedy's average service lives were derived. His average service life estimates were then tested against the approved average service life estimates of similar water utilities.

Mr. Kennedy walked through the bases for his selection of the Iowa curve estimates for each of the eight accounts where he and OUCC witness Garrett disagreed on the average service life or Iowa curve dispersion estimate.

D. Discussion and Findings. Ind. Code § 8-1-2-19(b) and (c) provide that:

> (b) The Commission, from time to time, shall ascertain and determine the proper and adequate rates of depreciation of the several classes of property of each public utility. Depreciation rates under this subsection shall be calculated to recover a reasonable estimate of the future cost of removing retired assets of the public utility.
>
> (c) A public utility's rates, tolls and charges shall be such as will provide the amounts required over and above the reasonable and necessary operating expenses, to maintain such property in an operating state of efficiency corresponding to the progress of the industry. . . .

Both Petitioner's witness Kennedy and OUCC's witness Garrett cited the foundational text, *Depreciation Systems*, which cautions against removal of judgment from the fitting process and blind acceptance of mechanical fitting processes. The cited material goes on to state that "the results of the mathematical fitting should be checked visually and the final determination of the best fit determined by the analyst." Pet. Ex. 22 at 4 (internal citations omitted). Based on the evidence presented, we find the process used in Mr. Kennedy's average service life estimates was more rigorous and complete than that employed by the OUCC. Furthermore, of the eight accounts for which Mr. Garrett recommends a change, three are for meters: Account 334.100 – Meters, Account 334.110 – Meters – Bronze Case, Account 334.130 – Meters – Other. We agree with Mr. Kennedy that the pace of technological change in metering assets has resulted in the life of metering classes to be shortened. We find Petitioner's requested depreciation rates reasonably reflect the annual consumption of the undepreciated service value of the utility plant in service. We find the use of the depreciation rates as presented in INAWC witness Kennedy's report, by account, will provide for an appropriate amount of depreciation expense in Petitioner's revenue requirement. Therefore, we find that the proposed depreciation rates set forth in the Petitioner's depreciation study should be adopted by the Commission for regulatory purposes as well as by Petitioner for financial reporting purposes.

14. Affordability.

A. INAWC Case-in-Chief. Mr. Prine testified Petitioner's proposed rate increase is primarily driven by the need to make expenditures necessary to keep water and wastewater service safe and reliable. He stated such expenditures cannot be avoided indefinitely and are in the long-term best interests of customers to avoid the possibility of even more increased costs. Mr. Prine stated, as an example, where mains are not replaced in a timely fashion or

equipment is neglected, costs rise as unanticipated main breaks can create water quality issues, unexpected expenses, and disruption to the communities served. He testified that because of the importance for service to remain affordable, Petitioner evaluated the customer impact of the proposed rate increase and performed an affordability analysis under the proposed rates. Mr. Prine described ways in which INAWC maintains the affordability of its water service, including continuously seeking to improve business processes and making investments that improve operational efficiencies. He stated Petitioner leverages the power of its organization to share learning on best practices and purchase equipment and supplies at advantageous terms.

Mr. Prine identified two proposed changes to Petitioner's water service rate design for customers who might face affordability issues: (1) an allowance-based rate for all water service customers, and (2) a Universal Affordability Tariff to further address the affordability of water service for vulnerable customers. He explained that an allowance-based rate will enhance the affordability of Basic Water Service, especially for the more economically vulnerable customers, without the need for these customers to directly apply for assistance. He stated an allowance-based rate design improves the affordability by reducing monthly bills for lower monthly usage amounts (which tend to equate more to Basic Water Service) and increasing monthly bills for higher monthly usage amounts (which tend to equate more to discretionary seasonal water use). Even with an allowance-based rate design, Mr. Prine acknowledged that affordability of service may still be an issue for the most vulnerable customers. Therefore, Petitioner is proposing a Universal Affordability Tariff to help the estimated 54,000 residential water service customers with household incomes at or below 150% of the federal poverty level. He stated the discount offered under this tariff would reduce a typical Basic Water Service bill for a three-person household from $58 per month to $40 per month, which is a discount of 30% on the total bill and is less than what these customers would pay for Basic Water Service under current rates.

INAWC witness Rea stated Petitioner's affordability analyses shows that INAWC's investment practices and management of its water and wastewater systems are in the long-term best interest of its customers; and Petitioner's affordability analysis also is a direct measure of the benefits that customers gain from Petitioner's prudent management of the system. Mr. Rea explained that Petitioner assesses affordability of water and wastewater service by comparing annual bills for water and/or wastewater service to household income. He stated that for the broader residential customer base, the most commonly available household income measure is Median Household Income ("MHI"), which can be measured at a community level and is paired with a data set that provides the number of customers served in each community to arrive at a weighted number that represents MHI for Petitioner's entire service territory. At a more detailed level, individual household income is considered, and affordability can then be assessed across a range of households based on their income levels and bills for water and/or wastewater service. Mr. Rea explained that a variety of household income data is available from the U.S. Census Bureau through the American Community Survey ("ACS") at the state, county, and community levels. He presented Petitioner's affordability study for water service and the affordability study for wastewater service in Petitioner's Exhibit 5, Attachments CBR-1 and CBR-2, respectively. He explained that for water service, Petitioner performed an Enterprise-Level Analysis and a Community-Level Analysis. For wastewater, only a Community-Level Analysis was provided, as there is not enough historical data.

Mr. Rea described the Enterprise-Level Analysis, which is a historical comparison of average monthly bills to MHI for Petitioner's residential customers over the last ten years. The metric used to describe affordability is the Bill-to-Income ("BTI") Ratio, which is defined as annual water bills divided by estimated annual household income. The MHI for Petitioner's service territory is a weighted average of the number of customers Petitioner serves in each community in the service territory and the median household income in each of those communities for owner-occupied and single-unit renter occupied homes as reported by data in the ACS based on the most recent year's available data (2021). The relationship between this service territory specific figure and the MHI for the State of Indiana for 2021 (also provided at the community level through the ACS) was then applied to historical MHI data for the State of Indiana to arrive at historical MHI data for the INAWC service territory. Mr. Rea testified that a benchmark for affordability expressed as a total bill's percentage of MHI is a policy decision; however, bills less than 2.0% or 2.5% of MHI for water service and 4.0% to 4.5% of MHI for combined water/wastewater service are considered "affordable" by some. He said the overall BTI Ratios for water service have improved over the last decade and is expected to be 0.76% under Petitioner's proposed Step 3 rates in this case, which is below the thresholds considered to be the high-end limit of affordability for residential customers at the system wide level.

Mr. Rea described the Community-Level Analysis as a deeper dive into affordability at a local level across different customer demographics and proposed rates for each community that Petitioner serves. For purposes of the affordability analyses, Mr. Rea said Petitioner used the concept of Basic Water Service to represent a water usage level that reflects water consumption provided for basic human services (cooking, cleaning, sanitation, and general health requirements), which is then assumed to be constant from month-to-month and not subject to significant seasonality or weather condition. Mr. Rea stated Petitioner defined Basic Water Service for purposes of the affordability analysis to be 40 gallons of water per household member per day based upon relevant literature and a review of residential billing data in months with minimum levels of discretionary water usage. The Community-Level Analysis showed that 84% of residential customers can expect to see bills for Basic Water Service less than 2% of their household income. Petitioner estimated there are approximately 47,500 residential water customers that will see bills for Basic Water Service above 2% of their household income, which is approximately 16% of the total customer population.

Mr. Rea testified that affordability of service is not uniform across Petitioner's service territory because household income can vary significantly across its service territory. He said Indiana American has diverse service territories and serves customers in urban, suburban, and rural communities. He explained that assessing affordability information for the entire residential customer population can demonstrate whether customers in general are having or would have difficulty paying their water bills under Petitioner's current or proposed tariff structure and inform decision-makers about the size and scope of efforts that may be needed to help these vulnerable customers better afford water and wastewater service.

Mr. Rea concluded that Petitioner's water service has been, is, and is expected to continue to be affordable for the majority of its residential customers, including under the proposed rates, but also that there are groups of customers for whom affordability of water service may be challenging.

B. OUCC. Mr. Bell expressed concern about the immediate financial impacts of Indiana American's requested rate increase. Mr. Bell advised the Commission that state policy for investment in infrastructure also requires decision-makers to recognize how infrastructure projects affect the affordability of utility services for present and future generations of Indiana citizens. He noted that Indiana American seeks approval of water rates that are 55% higher overall than the rates approved in 2019 and the requested wastewater rates are 106% higher. Mr. Bell noted that through DSIC and SEI trackers Petitioner has already increased rates to water customers by approximately 17.69%. Mr. Bell recommended the Commission consider the affordability of Indiana American's existing and proposed rates.

Mr. Bell stated that safe and reliable water and wastewater systems are critical to basic human needs but noted customers are faced with increasing utility costs and other cost of living increases due to inflation. He suggested that in recognition of the importance of affordability, Indiana American could seek a lower and more reasonable ROE, lower the equity portion its capital structure to establish a more reasonable 50/50 debt to equity ratio, moderate the growing level of capital expenditures, and reduce the corporate overhead costs being allocated to Indiana American. He explained that these actions could lower the proposed rate increase and lessen the financial impact to customers.

Mr. Bell believed Indiana American's affordability analysis recognizes Petitioner's rates have risen to the point where a significant number of its customers can no longer be expected to afford its water services without financial assistance, which it proposes come from its own residential customer base. Mr. Bell compared Indiana American's rates with various other water utilities in the state and concluded that Indiana American has the most unaffordable rates when compared to those other water utilities.

Mr. Compton stated that the OUCC does not consider 2% of household income to be an appropriate threshold to measure affordability. He also disagreed that Indiana American's water customers have a higher MHI than the statewide MHI. Mr. Compton stated the inputs Petitioner chose to calculate its customers' MHI understate the number of customers that will have a higher BTI than 2%. He identified three reasons for his disagreement with Petitioner's methodology. First, Petitioner's disregard of the ACS data is based on the faulty premise that we should ignore the effect of rate increases on indirect customers (i.e., customers that receive and pay for water service but do not have a direct relationship with the utility, such as renters). Second, in the absence of reliable data, further assumptions that mutate the integrity of the data should not be made. And third, excluding indirect customers naturally skews the results of affordability making Petitioner's water appear more affordable because statistically, households who rent generally have lower income.

Mr. Compton testified that Petitioner did not appropriately calculate for the BTI ratios. Mr. Compton explained Petitioner calculated the average bill by taking each year's revenue amounts and dividing by each year's respective customer count. However, in its calculation of revenues, Petitioner only included revenue generated from metered and unmetered sales to calculate the average bill. Petitioner did not include revenues generated by public or private fire protection charges. Mr. Compton presented his own calculation of the MHI for water customers using

Petitioner's methodology but including indirect customers. Mr. Compton calculated an overall MHI of $62,650 as compared to Petitioner's calculation of $69,151.

Mr. Compton noted that Petitioner's analysis for the wastewater model is identical to the water model other than using different ACS data. Using the same methodology Mr. Compton used to calculate the MHI for Petitioner's water customers, he calculated a MHI for Petitioner's wastewater customers of $65,504 as compared to Petitioner's calculation of $70,323.

Mr. Compton criticized Petitioner's use of a five-year estimate of household income data from the ACS, stating that to evaluate future affordability, a historical affordability analysis is not appropriate and the comparative data, if possible, should be more current. Mr. Compton testified that since the ACS does not provide current estimates for some communities in which Petitioner serves, it calls into question the usefulness of performing this kind of affordability analysis.

C. Crown Point. Mr. Guerrettaz opposed the proposed rates for Crown Point and SFR customers in general, stating the proposed rates and charges would be excessive and unreasonable.

D. CAC. Mr. Inskeep testified that Petitioner's analysis shows that its proposed rates will not be affordable for customers. He challenged Petitioner's proposed definition of Basic Water Service at 40 gallons per household member per day, instead urging that it be replaced with the total average bill (4,050 gallons per month). He recommended that the Commission take note of the sizeable population of Hoosier families who will not be able to afford Petitioner's proposed rate increase. Mr. Inskeep recommended the Commission act to significantly reduce the overall requested revenue requirement and approve proposals that will increase the affordability of essential water and wastewater service, like the Universal Affordability Tariff.

E. INAWC Rebuttal. Mr. Rea testified that the question of affordability of service is not simply a yes or no question but a continuum, as shown by Petitioner's Community-Level analysis. He stated there will always be customers for whom water service is more affordable than for others depending on demographics and income levels. Petitioner's Community-Level analysis shows that for a large majority of customers, Basic Water Service is expected to be less than 2% of household income (the benchmark Petitioner is using at the individual customer level) at Petitioner's proposed rates, but there are customers for whom Basic Water Service is expected to be more than 2% of household income. This is the target population that Petitioner's Universal Affordability Tariff is intended to address.

Mr. Rea disagreed with OUCC witness Bell that INAWC rates have reached a tipping point where a significant number of its customers can no longer be expected to afford water services. He stated the percentage of household income taken up by Petitioner's average water bills over time has gone down, not up and the BTI Ratio measured at the MHI level under Petitioner's proposed rates is consistent with levels seen historically. Mr. Rea testified that under Petitioner's proposed rates, Basic Water Service is expected to take up less than 2% of household income for 84% of Petitioner's residential customers. Basic water service is expected to take up more than 3% of household income for approximately 9% of Petitioner's residential customers before applying any discounts associated with the proposed Universal Affordability Tariff.

Mr. Rea testified that the terms household income and median household income are not interchangeable. He explained that Petitioner's Enterprise-Level analysis used MHI as the income component of the affordability comparison because it is broad based, easily available, and is available for multiple years of history, which lends itself well to a consistent longer-term historical analysis. Mr. Rea stated Petitioner's Community-Level analysis is not based on MHI, but instead on household income measured at the individual household level, using 2% of household income (not median household income) as a benchmark to estimate the numbers of customers where Basic Water Service is expected to take up differing percentages of household income. Petitioner proposed the Universal Affordability Tariff to address those customers.

Responding to the OUCC's criticisms of his affordability analysis, Mr. Rea stated that it is appropriate for the analysis to concentrate on direct customers because: (1) the use of an MHI statistic, which best estimates household income for Petitioner's direct customers, is consistent with the calculation of the average bill, which is also based on direct customers; and (2) for Petitioner's indirect customers (e.g., renters in multi-family buildings) it is impossible to know what these households pay in rent for water service. He further stated that even if, as Mr. Compton asserts, calculations of MHI for the communities that Petitioner serves would be lower if all rental households were included, then water consumption and total bills for rental households would also be lower than the average bills and consumption for the residential class in total. He said this is true because (1) households that rent are smaller than households that own their home, meaning consumption is likely to be lower, and (2) where there are multiple households within a single building behind a single meter, each individual customer's share of the total meter charge would be less than it would be if they were in the home where water service was only serving them.

With respect to the average bill calculation not including revenues associated with public and private fire protection charges, Mr. Rea responded that private fire service charges are not charged to residential customers. As for public fire protection, Mr. Rea explained that it is only when the unit of local government so elects that the costs of public fire service are recovered directly from water customers through public fire surcharges. Mr. Rea also stated the charges are not large enough to fundamentally change the trend of improving affordability over time that Petitioner's Enterprise-Level analysis shows.

Mr. Rea agreed with Mr. Compton that there are differences between the ACS five-year data set and one-year data sets, but he rejected the suggestion that the five-year data is somehow biased because it is older. Mr. Rea presented a comparison of household income estimates from the ACS one-year and five-year data sets, which showed that there is no significant difference between the two data sets regarding estimates of household income. Mr. Rea testified that use of the ACS five-year data set is appropriate because it provides current estimates of household income and provides that information for all communities in Indiana, which is important in developing a comprehensive affordability analysis across the entire service territory.

Mr. Rea disagreed with Mr. Bell's bill comparison and conclusions. He testified the comparison is of little practical use due to fundamental differences in water utility structure, ownership, operations, and customer bases. He stated there are significant differences that can help to explain in part the differences between Indiana American's typical bills and typical bills for other service providers, such as the existence of natural subsidies for customer rates of municipal

utilities through tax and other policies. Mr. Rea also listed a number of operational differences between Indiana American and other service providers that can lead to significant differences in bills, including the nature of Petitioner's service territory, significant differences in investment levels and strategies, and rate structures.

F. Discussion and Findings. Affordability is always an important consideration for the Commission when establishing just and reasonable rates. Affordability is an ongoing concern for all consumers in the State of Indiana. However, our role in addressing this concern is not to reach a conclusion as to whether the rates approved herein are "affordable" for each and every customer, particularly given the difficulty in defining affordability in general and for the many diverse customers and communities Indiana American serves.

Pursuant to Ind. Code § 8-1-2-46(c), Petitioner has proposed rate design solutions utilizing an allowance-based rate and a proposed Universal Affordability Tariff to address the issue of affordability of utility service for customers. While the OUCC took issue with various data and assumptions in Petitioner's affordability analysis, such as the appropriate affordability benchmark and INAWC's consideration of indirect utility customers, Petitioner's analysis does provide us with information in considering its proposals (each of which is discussed in greater detail below). Additionally, we note that despite the parties' disagreement with Petitioner's affordability analysis, the evidence also shows general agreement among the parties that Indiana American provides water service to customers for whom affordability of service is an issue. *See* Pub. Ex. 5 at 12; CAC Ex. 1 at 18-20, 25.

We also recognize that the OUCC and several Intervenors expressed concern with the general affordability of Indiana American's proposed rates and offered alternatives for lowering rates for certain classes of customers, low-income customers, and all customers. To the extent those suggestions include aspects of Petitioner's proposed rates, such as rate design, cost of service, and ROE, those suggestions are addressed in other sections of this Order.

15. Cost of Service Study and Rate Design.

A. Cost of Service Study.

1. INAWC Case-in-Chief. Mr. Rea presented Petitioner's COSS for water service. He testified Petitioner used the Base/Extra Capacity method outlined in the AWWA M1 Manual titled "Principles of Water Rates, Fees, and Charges" to allocate production and distribution costs to customer classes. The revenue requirement for various cost categories was allocated to the following customer classes: residential, commercial, industrial, public authorities, sales for resale, private fire service, and public fire service. Different cost categories were allocated to customer classes using a class allocation factor that differs depending on the nature of the costs. The cost categories Petitioner used to group individual accounts were variable cost, capacity cost (including source of supply, water pumping, water treatment, transmission mains, distribution mains, and storage), metering cost, service line costs, customer service costs, and fire hydrants.

2. OUCC. Mr. Mierzwa addressed Petitioner's water COSS. While he generally agreed with Petitioner's use of the Base/Extra Capacity methodology, he recommended adjustments to the maximum hour extra capacity factors developed for the industrial and SFR

customer class. He also recommended modifications to Petitioner's assignment of main costs to the transmission and distribution functions. Mr. Mierzwa presented a revised COSS for water that reflects his recommended adjustments and modifications. Mr. Mierzwa testified the extra capacity factors proposed by Petitioner for the industrial and SFR classes unrealistically assume that the usage of each of these classes is exactly the same in every hour of every day of the maximum month of usage. He stated it is unclear why Petitioner is able to use its AMI system to determine maximum hour extra capacity factors for the residential, commercial, and public authority classes but not for the industrial or SFR classes. Mr. Mierzwa recommended application of the AWWA M1 Manual estimated hourly ratios to the maximum day capacity factor developed by Petitioner for the industrial and SFR customers. This would increase the maximum hour capacity factor for the industrial class from the 1.20 to 1.60 and would result in a SFR maximum hour capacity factor of 2.32.

Mr. Mierzwa testified it is unreasonable to assign mains costs to the transmission and distribution functions based on mileage as Petitioner has done because it fails to recognize that the costs of purchasing and installing mains generally increase as the main diameter increases. He recommended that mains be assigned to the transmission and distribution functions based on the weighted installed costs of those mains.

3. Industrial Group. Ms. York identified numerous issues regarding Petitioner's COSS model, which led her to conclude that the COSS model is inaccurate and should not be relied on to guide revenue apportionment. Ms. York stated that INAWC has not conducted a reasonable comparison of the results of its new, pared down COSS model to the more detailed model that has been used in prior rate cases. She testified the new COSS model includes significant changes regarding the functionalization, classification, and allocation of costs, relative to how those steps were taken in the prior model, and that these changes have not been adequately explained or justified by INAWC. Specifically, Ms. York stated that INAWC's new COSS model fails to demonstrate the details of how each cost is classified before it is allocated across customer classes. Furthermore, she stated that regulators in other jurisdictions, such as Illinois and Missouri, have criticized similar COSS models set forth by American Water affiliates in those jurisdictions. Ms. York identified certain adjustments to the proposed COSS in an attempt to improve the accuracy of Petitioner's measurement of each class's cost of service. However, Ms. York stated that given that INAWC's COSS model obscures important information, even with her adjustments, there may be other functionalization, classification, and allocation issues that are not readily identifiable and could alter the outcome of the COSS. Because the COSS model cannot be adequately validated, Ms. York recommended the use of an across-the-board rate increase.

Ms. York further testified that even if INAWC's COSS model were found to be reliable, she has other concerns with the bases used to functionalize certain costs. For example, Ms. York emphasized Petitioner's failure to accurately functionalize transmission and distribution costs. She testified there is no evidence to support Petitioner's projected test year split of length of mains between transmission and distribution, or the associated split of costs to those functions in its COSS. She cited a lack of accurate information about the actual level of investment since the last rate case in support of her proposal that the split in calendar year 2022 as being the most reliable historical data available. Even then, without determinative evidence that the length of main is an accurate proxy for the allocation of transmission and distribution costs between the transmission function and distribution function, Ms. York characterized this split is, at best, an approximation.

Ms. York also objected to the manner in which certain costs were allocated to customer classes within Mr. Rea's COSS. In particular, she disagreed with Petitioner's use of Factor 1 to allocate purchased power expenses associated with source of supply and water treatment. She stated that purchased power costs are incurred to pump water to meet both the base and extra capacity demands of the rate classes. Therefore, Ms. York stated, Factor 1 does not accurately allocate purchased power costs to the customer classes that drive the electric demands for pumping, which in turn causes Petitioner to incur the purchased power costs. She stated Factor 2 is a more appropriate allocator because it reflects both average flow and maximum-day demand requirements.

Ms. York objected to the distribution multiplier for the industrial class of 0.50, recommending that INAWC should consider the length of distribution mains serving the industrial customers (in addition to the usage served by distribution mains), as it may only represent a small fraction of the total length of distribution mains on the system. Thus, she recommended an adjustment to the distribution multiplier to reflect the actual portion of industrial class usage that is served by distribution mains based on Petitioner's evidence.

Ms. York objected to Petitioner's approach of not allocating any source of supply or water treatment costs to private fire or public fire classes, which differs from INAWC's approach in its prior rate case COSS model. She recommended that a portion of source of supply and water treatment costs be allocated to the public and private fire classes, consistent with the methodology used in the prior rate case, because production capacity is in part based on the need to maintain adequate fire protection. As noted in the AWWA M-1 Manual, a significant portion of extra capacity costs can be allocated to fire protection when distributing costs to customer classes. Ms. York explained the service provided is principally of a standby nature—that is, readiness to deliver relatively large quantities of water for short periods of time at any of a large number of points in the water distribution system. In the absence of better estimates of test year annual usage for private and public fire service, Ms. York recommended using the same usage data for fire classes as was used in the COSS model in Cause No. 45142.

4. Wholesale Customers. Mr. Callocchia recommended rejection of INAWC's COSS based on a lack of justification or explanation for the change in methodology from INAWC's previous rate case and the inadequacy of supporting data for certain cost allocations. Mr. Callocchia stated the two-step COSS approach was significantly different from the single-step COSS approach used in Petitioner's previous rate case and produces radically different results without justification or explanation. He referenced challenges to the two-step COSS approach in cases brought by INAWC affiliates Illinois American Water and Missouri American Water. He testified that an alternative approach to cost allocation in this case would be to implement any approved increase in revenue requirements across-the-board to each customer class.

Mr. Callocchia also contended that the COSS does not properly recognize the unique characteristics and service demands of the SFR class and inappropriately allocates costs to SFR customers that are not incurred in the provision of service to SFR customers. Specifically, it does not adjust for system wide water loss, lacks proper justification for the allocation of transmission costs to SFR customers, and assigns revenue requirements to SFR customers that are not caused by or provide any benefit to SFR customers. He contended that it costs INAWC significantly less

to serve SFR customers because service to SFR customers involves delivering treated water to master meters connected to INAWC's transmission main and INAWC is not involved with, or responsible for, costs related to the distribution systems of SFR customers.

He raised issues related to how Petitioner distinguished between transmission and distribution costs in the COSS, which included $858,906,753 of costs listed as "TD Mains Not Classified." He stated all costs related to transmission and distribution that cannot be properly identified as either transmission or distribution are allocated 26.2% to transmission and 73.8% to distribution. He said, shockingly, 98.8% of Petitioner's transmission and distribution revenue requirement and 98.3% of its transmission and distribution plant in service is assigned based on this allocator. Mr. Callocchia testified the methodology used by Mr. Rea does not properly identify Petitioner's investment in the system's transmission and distribution facilities because the proper identification of system investments in transmission and distribution would be the result of an analysis of actual investment by pipe diameter.

Mr. Callocchia objected to recovery of costs related to COVID, the low-income program and credit card fees through SFR rates, stating these costs were neither caused by, nor provide any benefits to, the SFR class. He stated COVID related costs include foregone late fees, disconnect/reconnect expenses, uncollectible/bad debt expense, other direct costs, debt carrying costs, and Service Company expenses, offset by savings realized by Petitioner on forgone travel and conference expenses. Mr. Callocchia asserted that none of these costs should be allocated to the SFR class. In addition, he testified that under the proposed COSS methodology the SFR class would be unfairly subsidizing Petitioner's low-income program without their own low-income customers receiving the benefits. He stated members of the SFR class have customer assistance programs of their own and should not pay for costs of INAWC's low-income program, from which they receive no benefit. Finally, he contended that because SFR customers do not pay by credit card, they should not share in any costs absorbed by Petitioner related to credit card fees.

Mr. Callocchia also took issue with the COSS as not correctly reflecting the SFR class's average demand, specifically in Class Allocation Factor 1 (based on each class's projected average day demand on the system), which then flows through to other allocation factors based on Factor 1. He said Petitioner did not properly recognize distribution-level water losses in its system when developing Factor 1. He disagreed with Petitioner treating metered data from different service levels the same in the allocation of costs. Mr. Callocchia stated that the majority of water loss occurs within Petitioner's distribution system; because almost 74% of all water mains are categorized as distribution and given the vast size of the distribution system and the number of valves and connections within this system, the chances of line breaks, water leaks, and unauthorized usage are much more substantial at this service level. If metering data at the smaller, distribution-level is used in the same manner as transmission-level metering data in the allocation of costs for SFR classes, Mr. Callocchia stated it inappropriately allocates more cost to the SFR class in favor of the non-SFR classes. He stated all customer data would need to be adjusted back to the same service level, namely the transmission level of service, prior to the allocation of costs. After making this adjustment, he calculated a level of loss to be recognized for non-SFR customers to correct for what he deemed an over-allocation of demand to SFR customers in Factor 1. He then calculated average day demand factors that he said would result in a properly calculated Class Allocation Factor 1.

5. Crown Point. Mr. Guerrettaz objected to Petitioner's use of a COSS method different from what it used in its prior rate case. As described in detail by Mr. Callocchia, the new INAWC COSS method has been disallowed in Illinois and avoided within a settlement in the Missouri American Water Works rate cases. He recommended INAWC's proposed COSS be disallowed and accordingly any increase approved be applied across-the-board.

6. Whiteland. Ms. Young testified that Petitioner did not adequately consider the lower cost of providing wholesale water to SFR customers like Whiteland. She stated that the cost to serve SFR customers is lower than the cost of serving direct retail customers because SFR customers bear the burden of all costs related to the distribution of the water downstream from Petitioner's point of delivery of its wholesale water to the SFR customers. She also stated that Petitioner does not account for SFR customers having their own low-income customers and that Whiteland's customers, including those that are low-income customers, will have to subsidize Indiana American's low-income customers but will not receive any of the benefits under Petitioner's low-income proposal.

7. INAWC Rebuttal. Mr. Rea testified that his cost of service analysis, even as modified for changes upon which Petitioner agrees with other parties, indicates that an increase for industrial and SFR customers that is a significant multiple above the overall system average increase is appropriate. He noted that when Indiana American was asked in discovery whether it did any benchmarking to compare the results of the study prepared in Cause No. 45142, Petitioner responded that it had compared the subsidy analysis from that Cause to the subsidy analysis in this Cause. Every class that was subsidizing in Cause No. 45142 is subsidizing in the current Cause, and every class that was being subsidized in Cause No. 45142 is still being subsidized today. Moreover, Mr. Rea testified the subsidies for industrial and SFR customers have grown. Mr. Rea testified that there have been five different COSS prepared by three different cost of service professionals over a 14-year period and every one of those studies show that rates for industrial and SFR customers are being significantly subsidized.

With respect to the two-step COSS model, Mr. Rea explained that this approach simplifies the cost of service analysis and makes the resulting allocation to customer class more intuitive by unbundling the revenue requirement into business functions and allowing stakeholders to see what the cost of service is for each customer class by business function. He testified he has used this approach successfully and without objection for Iowa-American Water Company, West Virginia-American Water Company, and New Jersey-American Water Company. Mr. Rea provided Attachment CBR-4R, a one-step version of the cost of service analysis that has previously been used in Indiana American rate cases, the purpose of which is to compare results against the two-step model. Mr. Rea explained the only difference between the two models is the functionalization approach. All other cost allocators to function and customer class are the same. Mr. Rea concluded that the two approaches yield virtually identical results assuming the same allocators and allocation methodologies. From a cost allocation perspective, he characterized the two modeling approaches as identical.

Mr. Rea testified that Petitioner's cost of service analysis recognizes the unique circumstances SFR customers face. For example, SFR customers are allocated no costs associated with distribution mains (mains with less than 10" diameters). In addition, the SFR class is allocated

only a minimal amount of customer service-related expenses. Mr. Rea presented the volumetric rates for each major customer class coming from Petitioner's cost of service analysis for cost categories that are typically charged volumetric rates (all costs except for metering costs, service line costs, and customer service expenses), which shows that the SFR class has the lowest volumetric rate for any major customer class in the cost of service analysis.

With respect to the split between transmission and distribution, Mr. Rea accepted OUCC witness Mierzwa's proposal that mains be assigned to the transmission and distribution functions based on the weighted installed costs of those mains. The split between transmission costs and distribution costs under his proposal is 32.4% and 67.6% respectively.

While Mr. Rea generally agreed with Mr. Callocchia that it would be reasonable to account for water losses differently for different customer classes depending on how much of the transmission and distribution system they use, he disagreed with Mr. Callocchia's calculation for how losses should be accounted for.

Mr. Rea accepted OUCC witness Mierzwa's approach with respect to hourly capacity factors for industrial and SFR classes.

Mr. Rea testified that Ms. York has not provided any evidence to suggest that cost per kilowatt-hour ("kWh") that Petitioner incurs is significantly higher during periods of high demand than during periods of low demand. If the cost per kWh is roughly the same regardless of when Petitioner uses electricity, then there is no reason to allocate costs disproportionately to certain customer classes. Mr. Rea testified that given there has been no demonstration that the cost per kWh is different during different times of the year, allocating purchase power costs based on total consumption (Factor 1) is appropriate.

Mr. Rea disagreed that the distribution multiplier for the industrial class should be a product of both the usage served at the distribution level and the mileage associated with those customers. According to Mr. Rea, it is plausible to say that the allocator should be based on one or the other, but not a combination of both. He stated it is reasonable to allocate the cost of mains to customers based on a usage-based allocator like the Base/Extra allocator. It would also be reasonable, in Mr. Rea's opinion, to allocate the cost of mains to customers based on a direct assignment of assets to customers assuming that can be done for all customer groups. He testified it would not be reasonable, however, to carve out a set of assets to be allocated to the industrial class based on exclusive use but then allocate a portion of that cost to other classes using a general usage-based allocator.

Mr. Rea agreed with Ms. York that an allocation of source of supply and water treatment costs to private and public fire classes is appropriate. He did not agree that an allocation of meter costs to fire protection services is appropriate because fire protection service is generally not metered.

Mr. Rea agreed with Mr. Callocchia that the SFR class should not be allocated the $6,889 related to the COVID-related and low-income costs included in Other Amortization Expense.

8. Discussion and Findings. Petitioner's COSS is a significant source of disagreement among the parties, particularly regarding the methodology used and the assumptions made by Indiana American. As an initial matter, it is important to note that Petitioner has not designed its rates based upon its COSS. Petitioner's COSS showed the industrial and SFR customers are being heavily subsidized by residential customers. However, because of the significant subsidization, INAWC witness Rea proposed the increases for these two classes be held at 150% of the overall system average. In contrast, witnesses for the industrial and SFR customers ask for Mr. Rea's study to be ignored and that rates be increased in an across-the-board fashion. Thus, to the extent Mr. Rea's study meaningfully presents the costs of serving different customer classes, the industrial and SFR customers' position would leave that subsidy in place.

The subsidy identified by Mr. Rea is not new. We find compelling Mr. Rea's summary on rebuttal of the COSS results presented in Petitioner's prior four general rate cases. Five different studies prepared by three different professionals all reach the same conclusion: that industrial and SFR customers are being significantly subsidized. We understand that simply because a prior COSS identified a subsidy, it does not mean that the subsidy continues to exist today. However, Petitioner's evidence on rebuttal demonstrates that there is no material difference between the results of the COSS under the prior one-step method or the two-step model used in this case. Further, none of the industrial or SFR intervenors presented their own study proving otherwise. Thus, we decline to find Indiana American's COSS model to be inappropriate simply because it has not been accepted by other state utility commissions.

Accordingly, we find that, while a departure from past COSS models utilized by Petitioner, the two-step COSS used in this case is appropriate and is not flawed in the various ways suggested by some Intervenors. We accept the COSS set forth by Petitioner, as modified on rebuttal and find Petitioner has adequately addressed the concerns raised by the parties, described in more detail below.

Sale for Resale. The Wholesale Customers suggested that it is cheaper to serve their class than any other customer class. This suggestion is supported by Petitioner's cost of service analysis.

Transmission and Distribution Costs. In the COSS, as agreed by Petitioner and the OUCC, the total net plant split for mains between the transmission and distribution function is 32.4% for transmission and 67.6% for distribution. Allocation of costs based on line length is not appropriate because investment varies with line size, potentially under-allocating costs to large users. Petitioner's and the OUCC's approach eliminates the need to normalize pipe length by allocating based on original cost. In this rate case, more of the costs associated with mains is assigned to the distribution function than in the previous rate case. The growth in the distribution allocation appears reasonable based on the nature of investments made since the last rate case, which has been reflected in the DSIC mechanism. As a result, a bigger share of the total main investments is allocated to residential and commercial customers and away from industrial and SFR customers.

Losses. INAWC's rebuttal cost of service analysis incorporates a calculation for water losses which accounts for both the amount of mains (by footage or mileage) at different capacities and the relative capacities associated with each type of main.

Capacity Factors. INAWC's rebuttal cost of service analysis incorporates hourly capacity factors determined using OUCC witness Mierzwa's recommended approach of applying the AWWA M1 Manual estimated hourly ratios to the maximum day capacity factor developed by Petitioner for the industrial and SFR classes. We agree with Mr. Rea that the use of actual AMI data for the industrial and SFR classes is inappropriate because the classes are not sufficiently homogenous to provide a reasonable reflection of actual customer usage. In addition, while we also understand, and generally agree, that using examples from the AWWA M1 Manual is not ideal, we find it to be the most reasonable surrogate for the lack of actual data for these classes in this instance.

Purchased Power Costs. While we agree Petitioner will incur more costs to pump water at times when demands are higher than at times when demands are lower, the record is devoid of evidence that the cost per kilowatt-hour that Petitioner incurs is significantly higher during periods of high demand than during periods of low demand. Accordingly, we find that no change to the allocation factor for purchased power is warranted.

Distribution Multiplier. INAWC's rebuttal cost of service analysis incorporates updated distribution multipliers based upon data provided in discovery. We decline to adopt the Industrial Group's recommendation to base the distribution multiplier on both the usage served at the distribution level and the mileage associated with those customers for the reasons stated in Mr. Rea's rebuttal.

Fire Protection Costs. An allocation of source of supply and water treatment costs to private fire and public fire classes was incorporated into INAWC's rebuttal cost of service analysis, which we find to be reasonable and appropriate.

Low-Income and COVID Costs. On rebuttal, INAWC removed the allocation of these expenses to the SFR class from its COSS analysis, which we find to be appropriate.

In sum, we find that Mr. Rea's COSS, as modified on rebuttal, is reasonable and useful for purposes of reviewing Petitioner's proposed rate increase allocation.

B. Rate Design.

1. INAWC Case-in-Chief. Mr. Rea also sponsored Petitioner's proposed rate design. He discussed a number of important guiding principles associated with sound rate design, including cost causation, revenue stability, efficiency of use, gradualism, avoidance of discrimination, simplicity and feasibility, and affordability. He explained that Petitioner's current rate design for general service and SFR water service is a two-area declining block rate design with the separate rate designs for Area 1 (Statewide) and Area 2 (Mooresville & Winchester) for general service customers. Volumetric rates for general service are differentiated for Area 1 and Area 2 and both are declining block rate structures. Mr. Rea testified that all customers regardless of customer class (residential, commercial, industrial, public authorities) take service on the same rate structure. Monthly meter charges are differentiated between general service and SFR. Meter charges are not differentiated between Area 1 and Area 2. Mr. Rea explained that DSIC and SEI charges, while not a part of base rates, are collected on a fixed charge basis by meter size and will be rolled into base rates in this proceeding. Volumetric rates for SFR

are separate from general service rates and are also on a declining block rate structure. Volumetric rates for SFR are not differentiated between Area 1 and Area 2. Mr. Rea explained that private fire rates are on a monthly charge basis based on meter size and are the same for Area 1 and Area 2. Public fire surcharges are on a monthly charge basis based on meter size and are the same for Area 1 and Area 2, but separate rates apply to West Lafayette, Seymour, Summitville, and Lowell. Additional tariffs are in place to provide service to two newly acquired service territories, River's Edge and Lowell.

Mr. Rea testified that Petitioner is proposing a change to its water service rate design to include an allowance-based rate for all customers in Area 1 and Area 2. In addition, Petitioner is proposing to consolidate volumetric rates for Area 1 and Area 2 customers. He explained that an allowance-based rate is a rate design that features a level of usage offered to all customers at no additional charge above the fixed monthly meter service charge. Under Petitioner's proposal, instead of a volumetric rate that applies to all usage, there would be a level of usage provided to all customers (1,500 gallons of usage per month) at no additional charge beyond the monthly meter service charge. Mr. Rea testified that Petitioner is proposing an allowance-based rate to enhance affordability of Basic Water Service, especially for Petitioner's more economically vulnerable customers, without the need for these customers to directly apply for assistance through a discount tariff or some other type of customer-assistance program. He stated an allowance-based rate design reduces monthly bills for lower monthly usage amounts and increasing monthly bills for higher monthly usage amounts. He presented data from the National U.S. Census Bureau on the average size of household by income level, which shows a correlation between household income and the size of the household, with higher income households tending to have more occupants than lower income households.

Mr. Rea presented a comparison of bills under proposed rates for Basic Water Service for different household sizes under Indiana American's proposed allowance-based rate versus the current rate design. This comparison showed that the majority of Petitioner's customer base that may have issues of affordability of service would do better under the allowance-based rate than under Petitioner's standard rate design. He testified that from a cost causation perspective, it is cheaper on a per unit basis to provide Basic Water Service than it is to provide peakier seasonal service, and therefore appropriate from a cost of service perspective that Basic Water Service should be priced at a lower rate than seasonal water service. In addition, he stated data across the American Water footprint shows that there is a positive correlation between household income and the seasonal use of water. Mr. Rea stated that if: (1) seasonal water service is more expensive on a per unit basis to serve than Basic Water Service from a cost of service and cost causation perspective, (2) higher income customers are more likely to have significantly higher seasonal water use than lower income customers, and (3) a single volumetric rate applies to all service for all customers, the result is that lower income customers are actually subsidizing higher income customers under Petitioner's current rate design. He testified the biggest impact of the allowance-based rate will be seen by lower use residential customers regardless of their household income. He stated that while bills for Basic Water Service will increase for households of three or more (3,600 gallons per month or more), bills for two-person households (2,400 gallons per month) will be almost exactly the same as under present rates and bills for one-person households (1,200 gallons per month) will drop by more than $10 per month under Petitioner's proposed rates.

Mr. Rea further testified that Petitioner proposes to consolidate Area 1 and Area 2 rates and to increase the base rate monthly meter charge. He also described the treatment of recently acquired systems within Petitioner's proposed rate design.

Mr. Rea testified that Petitioner used the following general guidelines in allocating the proposed Step 3 revenue increase to customer classes as follows: (1) increases to industrial and SFR classes will be capped at 1.5 times the overall water service revenue increase requested in this case for Step 3 rates, (2) no increases are assigned to private and public fire, as cost of service indicates that decreases are in order for these classes, and (3) the remainder of the increase is allocated to residential and commercial classes in proportion to present rate revenues. With respect to industrial and SFR customers, Mr. Rea again noted that cost of service continues to indicate significant increases for those customers. While he recommended these subsidies be reduced, he also noted the need to mitigate the impact to these customers. Therefore, Mr. Rea concluded, it is appropriate to cap increases for these classes at 1.5 times the system average to maintain a gradual approach.

Mr. Rea also presented Petitioner's proposal to consolidate wastewater rates for all of its customers into a single rate design as well as to collect 65% of the proposed wastewater revenue requirement (Step 3) from its wastewater customers and to move 35% of the proposed wastewater revenue requirement (Step 3) to water service customers to be collected through water service rates. He explained this proposal was intended to dampen the impact on wastewater service customers, consistent with what has occurred in several recent cases but is even more necessary now. Without some movement of wastewater revenue requirement to water service customers, Mr. Rea stated wastewater service customers would generally see rate increases of 100% or more. Petitioner's objective with this proposal is to assist with the affordability of its wastewater service and keep wastewater bills for typical residential customers at approximately $100 per month. He noted the impacts on water service customers of this proposal is minimal, representing approximately $0.07 per hundred gallons for Petitioner's residential water service customers or a bill impact of approximately $0.27 per month for a residential customer with average usage. He said without this proposal, the average wastewater service bill would be approximately $150 per month.

2. **OUCC**. Mr. Mierzwa recommended a separate schedule of volumetric charges be established for the public authority class that would result in a Step 1 increase comparable to 2.0 times the system average increase proposed by Petitioner for the industrial and SFR classes. He also recommended the additional revenues realized in Step 1 from increasing the rates of the public authority customer class should be utilized to reduce the rate block 2 volumetric rate.

For Steps 2 and 3, Mr. Mierzwa recommended SFR rates should be proportionately increased to provide for an increase that is 2.0 times the system average increase. For the industrial and public authority classes, he recommended that the volumetric rates for these customers be proportionally increased until the increase assigned to one of these classes reaches 2.0 times the system average increase. The additional revenues realized in Steps 2 and 3 from increasing the rates of the SFR, industrial, and public authority customer class should be utilized to reduce the rate block 2 volumetric rate. He also recommended that any reduction to Petitioner's requested

wastewater revenue requirement first be applied to reducing the wastewater revenue requirement to be recovered from water service customers.

Mr. Mierzwa testified that at the conclusion of Step 3, under Petitioner's proposed revenue distribution, the residential and commercial customer classes will be contributing revenues in excess of the indicated cost of service, and the industrial, public authority, and SFR classes will be contributing revenues less than the indicated cost of service. He recommended reducing these differences to the extent possible while maintaining gradualism.

In cross-answering testimony, Mr. Mierzwa disagreed with Industrial Group witness York's proposal to recover the DSIC and SEI revenue requirement through monthly customer charges. He said such proposal would eventually result in recovery of all fixed costs through fixed monthly charges and only the recovery of variable costs through usage charges. He noted Crown Point witness Guerrettaz proposed a similar recommendation, referred to as a straight fixed variable rate design, which he said is inconsistent with cost causation principles. He said such a rate design would increase Petitioner's cost of providing service and is not in the best interest of customers.

3. Industrial Group. Ms. York objected to the proposed non-cost-based wastewater subsidy that INAWC recommends be assigned to water customers. Ms. York testified that INAWC's proposal to shift nearly $1.63 million of the cost of providing wastewater service to water service customers, who are already facing a sizable rate increase, is at odds with sound cost-causation and rate design principles. Ms. York also noted that INAWC's proposed subsidy is nearly 500% greater than the wastewater subsidy identified in its prior case and will continue to grow unless INAWC takes steps to bring wastewater customers toward cost of service. Thus, Ms. York recommended that the proposed wastewater subsidy be reduced by the greater of either 25% of Petitioner's proposed subsidy of $1.6 million, or by the amount of reduction in wastewater revenue requirement Mr. Gorman recommends, plus $100,000. Under Ms. York's proposal, wastewater rates would be set equal to those proposed by Petitioner, with any reduction to the wastewater utility's revenue requirement being reflected as a reduction in the amount of wastewater revenue requirement Petitioner has proposed to collect from water customers.

Ms. York also recommended that the Commission direct INAWC to move toward class-specific rates, rather than continue to apply a single rate structure to all customer classes except the SFR class. This will make it easier to develop rates to recover individual classes' cost of service, as well as improve the accuracy of cost allocation within classes. She recommended Petitioner begin this process by implementing an industrial rate schedule at the conclusion of this case. She testified that a separate industrial rate would allow INAWC to more accurately allocate costs within the class to reflect the distinction in infrastructure used to provide service. She stated it would also allow INAWC to recover costs from industrial customers in a manner consistent with cost of service principles, without materially impacting other rate classes.

Ms. York also recommended that the revenue requirements that are being rolled to base rates associated with the DSIC and the SEI charge continue to be recovered from customers on a per meter basis.

4. Wholesale Customers. Mr. Callocchia objected to the recovery of

DSIC and SEI costs in part from volumetric charges, which he stated is inconsistent with the plain language of Ind. Code § 8-1-31-8, Petitioner's previous testimony, and cost causation principles. He stated Petitioner is proposing to collect DSIC 12, 13, and 14 and SEI revenue requirements as part of base rates through both meter charges and volumetric rates in a proportion of approximately 50% each. Mr. Callocchia recommended Petitioner collect DSIC and SEI revenue requirements related to the currently effective charges 100% via meter charges.

Mr. Callocchia also recommended that INAWC be directed to develop a transmission tariff so SFR customers have the option to secure alternative potable water supply and pay a transmission tariff to Petitioner to wheel water through Petitioner's system.

In cross-answering testimony, Mr. Callocchia agreed with Industrial Group witness York that DSIC and SEI revenue requirements should be recovered through fixed monthly meter charges because it is consistent with cost of service principles.

5. Crown Point. Mr. Guerrettaz testified that INAWC's rate design in this case attempts, in part, to charge Crown Point for the renovation costs of distant unrelated acquired utilities by "arbitrarily rolling 50% of DSIC and SEI charges into volumetric rates." He testified that applying DSIC and SEI charges to volumetric rates is contrary to statute and INAWC's testimony in prior cases. He advocated for a transportation rate as an alternative for Crown Point to obtain Lake Michigan water at a more affordable cost.

6. CAC. Mr. Inskeep agreed with Indiana American that the proposed allowance-based rate design can help enhance affordability and is consistent with the rate design principle of simplicity and feasibility. He testified that a key benefit of this proposal is that there is no need for customers to take any action to benefit from the rate design change, unlike a utility program that requires customer enrollment. He also agreed that this rate design will help better align rate design with cost causation. He stated that although this rate design change will tend to benefit lower-income residential customers, it is being applied uniformly to all customers in a non-discriminatory manner.

Mr. Inskeep disagreed, however, with Indiana American's proposal to increase the base rate monthly meter charge. He testified that high residential fixed charges reduce customer control, disproportionately impact low-usage customers and low-income customers, reduce the financial viability of deploying water efficiency measures, and result in higher water system costs. He also recommended Petitioner use the total average bill (4,050 gallons per month) for defining Basic Water Service.

7. INAWC Rebuttal. Mr. Rea opposed the CAC's recommendation to use a total average bill for the community-level or customer level analysis of affordability, explaining that total average bill is a static calculation that applies equally to everyone. He stated that the definition of Basic Water Service needs to be flexible enough to accommodate households of different sizes and recognize the high degree of correlation between household water usage and the number of persons in the household. In addition, Mr. Rea testified that approximately 10% of the water that Petitioner sells to residential customers (and therefore approximately 10% of total average use) is for discretionary summertime usage, which is not appropriate to use as a basis for an affordability analysis specifically targeted at individual customers or lower income customers.

Moreover, lower income households tend to have fewer people in them which means that, all other things considered, lower income households will tend to have lower levels of water consumption than the residential population in total. Using an average water bill, as Mr. Inskeep suggests, therefore overstates the amount of water that lower income customers will use and overstates, on average, the total bill for these customers.

Mr. Rea testified that the proposed $20.00 meter charge is supported by Petitioner's cost of service analysis and results from a standard method for calculating meter charges based on the revenue requirements associated with meters and meter reading, service lines, and customer service functions. The calculated meter rate for a 5/8" meter in the cost of service analysis is $20.17 per month. Petitioner's proposed $20.00 charge is just under that calculated value.

With respect to DSIC and SEI related costs, Mr. Rea explained that DSIC and SEI related investments are not accounted for separately in Petitioner's revenue requirements and cost of service analysis. They are allocated to customer class not based on how they used to be recovered through the DSIC and SEI recovery clauses, but instead on how they would normally be allocated to customer class in a COSS.

Mr. Rea was generally supportive of the concept of separate volumetric rates for each customer class but did not support the piecemeal implementation of this type of rate design or a transition to this rate design as suggested by Ms. York or implied in part by Mr. Mierzwa. If it is to be done, Mr. Rea advised it is most efficient and appropriate to all customers to move to this type of rate design in one complete step once all the impacts to customers are well understood. He did, however, point out disadvantages to this type of rate design, namely that the definition of what constitutes a residential, commercial, industrial, and public authorities customer becomes much more important and the ability to assign and track customers to each class becomes much more important. He stated there will always be winners and losers in the process of changing rate design and these impacts need to be well understood.

Mr. Rea opposed the Wholesale Customers' recommendation to develop a transmission-only rate, citing lack of evidence that it would be in the public interest and that it would not be detrimental to non-transmission customers. He cited various other considerations if such a rate were to be adopted, including the application of appropriate exit fees or other charges attributable to those sunk costs that would need to be calculated to avoid harming the non-transportation customers. Mr. Rea stated that if the transportation customers desired Petitioner to serve as a back-up source of supply, then an appropriate back-up rate would need to be calculated.

Mr. Rea opposed the recommendations by the Industrial Group and SFR customers to increase rates on an across-the-board basis for the same reason already addressed regarding cost of service—that these classes are being heavily subsidized and that has been true for some time. That said, he disagreed with Mr. Mierzwa that these classes should receive an increase of two times the system average on the grounds that it was too extreme. As to the wastewater reallocation to water, he disagreed with both Ms. York's and Mr. Mierzwa's alternative proposals. He indicated that, in the event of a reduction to the wastewater revenue requirement, wastewater customers should receive some benefit. He proposed that a reasonable compromise would be to reduce the reallocation amount by double the percentage of any wastewater revenue requirement reduction. He testified that Ms. York's proposal was unacceptable because it would, in many cases, result in

higher wastewater bills and run counter to Petitioner's goal of keeping the average residential wastewater bill below $100 per month.

8. Discussion and Findings. We find that Petitioner's rate design proposals, as modified on rebuttal, satisfy the guiding principles of cost causation, revenue stability, efficiency of use, gradualism, avoidance of discrimination, simplicity and feasibility, and affordability. As the Commission has authorized an increase in water rates that is less than the requested increase, Petitioner shall reduce water service volumetric rates on a pro rata basis until the difference between the authorized increase and the requested increase is met. We further find that Petitioner's proposals achieve a rate design that is consistent with statute for all customer groups and is just and reasonable. Additionally, we find Petitioner's proposed allowance-based rate to be a reasonable means to address affordability issues for all customers while adhering to the other guiding principles noted above.

Single Tariff Pricing. We note that no party opposed Petitioner's proposal to consolidate the volumetric charges for Areas 1 and 2 over the three steps of the increase in this Cause and so we find it should be approved.

Revenue Allocation. The only difference among the parties concerning allocation of the revenue increase relates to the allocation to the SFR and industrial classes. Petitioner proposes that these classes receive an allocation of 150% of the overall system average. The OUCC proposes that they receive an increase of 200% of the overall system average. The industrial and SFR customers propose an across-the-board increase. Based on our prior findings regarding cost of service and the subsidies currently being provided to industrial and SFR customers, we decline to impose an across-the-board increase. As to the OUCC's proposed 200% allocation, we find approving an increase for a class so high in relation to the overall system average would be too aggressive of a move towards cost of service. Accordingly, we find Mr. Rea's proposal that the allocation to these classes should be 150% of the overall system average strikes the appropriate balance of moving these classes closer to cost of service, consistent with the need for gradualism. With its tariff filing, Petitioner shall provide the revenue proofs demonstrating the adjusted revenue allocations will recover the adjusted cost of service.

Wastewater Reallocation. It is generally undisputed that subsidies are contrary to cost causation principles and that utility rates should reflect the costs incurred to provide service, as reflected in our decision above concerning the allocation of costs to the industrial and SFR customers. However, we also recognize the role that reasonable and temporary subsidies can provide when necessary to address issues that arise, such as avoiding rate shock for a particular class of customers.

No party disputed that, absent a reallocation of wastewater costs to be recovered through water rates, the increase in wastewater rates would be significant. Given the relative sizes of the water utility and the wastewater utility, a reallocation such as that proposed by Petitioner can produce significant relief for the wastewater customers while having a minor impact on the overall water rates. While we remain concerned with allocating costs caused by one set of Petitioner's customers to another set of customers that are not receiving the same utility service (i.e., allocating wastewater costs to customers that do not receive wastewater service), we also recognize the

Indiana General Assembly's recent directive in Ind. Code § 8-1-30.3-6.5 concerning similar allocations. Accordingly, we find that a reallocation in this instance should be approved. However, we agree with the Industrial Group that movement towards cost of service for Petitioner's wastewater customers is essential and we encourage Petitioner to increase its efforts to move in that direction.

The only dispute among the parties that we must resolve centers on how the reallocation should change based upon any changes by the Commission in this Order to Petitioner's proposed revenue requirement. We agree with Mr. Rea that Ms. York's proposed modification to the reallocation could produce wastewater rates that are higher than those proposed by Petitioner and should therefore be rejected. We also agree that the OUCC's proposal that any reduction in the wastewater revenue requirement first being applied to the reallocation would provide wastewater customers no benefit from such reduction. As such, we approve Mr. Rea's proposal on rebuttal that the reduction be applied by reducing the reallocation amount by doubling the percentage of wastewater revenue requirement reduction as shown in Petitioner's Exhibit 18 at 66-70.

Meter Charge/Allowance Rate. No party opposed Petitioner's proposed Allowance Rate, whereby there would be no additional volumetric charge for consumption below 1,500 gallons per month. We find persuasive Mr. Rea's presentation of the usage characteristics of customers with different income levels. We further find that the use of this allowance rate will provide cost stability that will ameliorate affordability concerns in a fashion that adheres to cost of service concepts. We therefore find it should be approved.

The Industrial Group and SFR customers proposed that costs previously being recovered through the DSIC and SEI continue to be recovered through a fixed charge. We disagree with the suggestion by these customers that the General Assembly intended these costs to be recovered through a fixed charge in perpetuity. The statute is clear that the DSIC and SEI charges are to be a fixed charge by meter size while being recovered in the tracker but that these charges are reset in the context of a general rate case. Neither the DSIC nor the SEI statute indicate or require that the costs must continue to be recovered through a fixed charge when approved in base rates. Recovery of the entire DSIC and SEI revenue requirement through a fixed charge would eliminate all risk to Petitioner of under-recovery and remove any incentive for customers to better manage their water use. We recognize that the change in meter charge results in what equates to an approximate 50% consolidation of DSIC and SEI revenue and is not the result of any specific allocation of DSIC and SEI costs within the rate design. Accordingly, we find the DSIC and SEI costs, which are being rolled into base rates and allocated to customer class based on how they would normally be allocated through a COSS, is reasonable.

With respect to the allocation of source of supply and water treatment cost to private fire and public fire classes, the Commission agrees that fire protection service is generally not metered. Thus, we agree that a portion of the source of supply and water treatment costs should be allocated to the public fire and private fire protection classes but reject any allocation of meter costs to fire protection services as explained by Petitioner on rebuttal.

The CAC also objected to increasing the base rate monthly meter charge for 5/8 inch meters from $15.25 to $20.00 per month because of the disproportionate impact it will have on low-usage

and low-income customers. Based on the evidence, we find that Petitioner's proposal is consistent with the results of the COSS and the resulting monthly meter charge represents the cost to serve those customers.

Separate Rate Structures By Class. We find Petitioner has expressed sufficient interest in examining the potential impacts of a change in rate design to develop separate volumetric rates by customer class that a study of these impacts is warranted, and we authorize the costs of such analysis to be deferred for recovery in Petitioner's next general rate case.

Transportation Rate. The SFR customers did not cite to any prior occasion when the Commission has approved a transportation rate for a water utility. Nor do we believe the SFR customers provided evidence demonstrating such a rate would be in the public interest or that it would not harm other customer classes. Unlike the natural gas industry, where a federal policy exists to unbundle the sales of natural gas, in the water industry, there can be a multitude of reasons for why water from different suppliers cannot be comingled in the manner urged by the SFR customers. We are not persuaded that a transportation or transmission-only rate such as that proposed by the Wholesale Customers would be in the public interest. Because we lack sufficient evidence concerning the Wholesale Customers' proposal as to the potential impacts on non-transportation customers, we decline to require Petitioner to develop a transportation rate.

C. Universal Affordability Tariff.

1. INAWC Case-in-Chief. INAWC proposed a Universal Affordability Tariff for water service that includes multiple tiers of discounts based on different levels of household income stated as multiples of the federal poverty level. The tariff offers discounts on both the basic 5/8" meter charge and the volumetric charges for water service. Mr. Rea explained that the driving principle behind Petitioner's proposed Universal Affordability Tariff is to provide all participating customers discounts such that the expected bill for Basic Water Service (40 gallons of water per household member per day) will be no more than 2% of their annual household income. The impetus behind the proposal was a recognition that there will always be groups of customers that will have issues with the affordability of water and wastewater service. Mr. Rea stated Petitioner's proposed tiered discounts are designed to provide customers at each interval of the federal poverty level the opportunity to have Basic Water Service bills in the 1% to 2% range of household income.

2. OUCC. Mr. Bell recommended the Commission reject the proposed Universal Affordability Tariff because it is not in the public interest. He asserted it does not protect the affordability of utility services for present and future generations of Indiana citizens as required by Ind. Code § 8-1-2-0.5. Mr. Bell explained that neither Indiana American nor its parent company proposes to contribute any funds to providing bill discounts through the proposed Tariff. Rather, the bill discounts are to be funded solely and involuntarily by captive ratepayers. Additionally, Mr. Bell testified Indiana American has not shown it is able to administer a program of its own design, noting the lack of success in its administration of bill discounts to qualifying low-income customers in the Terre Haute, Muncie, and Northwest/Gary districts.

Mr. Bell explained Indiana American proposes to roll back into base rates the estimated total amount of discounts provided through the Universal Affordability Tariff (i.e., $1,274,901 for

Step 2 rates and $1,371,677 for Step 3 rates). He said because Petitioner's program includes regulatory accounting treatment to address under-recovery, the cost of the program to captive ratepayers may be even higher than Petitioner's proposed recovery. Mr. Bell stated that Indiana American may benefit by receiving more timely payments, reducing bad debt expense, and increasing customer retention at no expense to shareholders, reducing Indiana American's overall risk.

Mr. Bell explained that Ind. Code § 8-1-2-46(c) allows utilities to establish programs to charge customers lower rates or provide discounts based on something other than customer usage characteristics. He stated that while a lower rate or discount for certain customers is no longer considered discriminatory, it remains unreasonable to make captive customers pay higher rates to fund a customer assistance program with no utility contribution. Mr. Bell noted that nothing in the statute prohibits Indiana American from establishing a program relying on voluntary contributions or sources other than a revenue requirement included in rates, such as soliciting voluntary customer contributions through an opt-in roundup program or from an opt-in contribution. He also indicated that Indiana American is a for-profit company and is a wholly owned subsidiary of American Water Works Company, Inc., which has a market capitalization of over $27 billion. He concluded that Indiana American has significant resources that it could draw from to fund the proposed low-income rate if it chooses.

Mr. Bell asserted that Petitioner's proposed 10% level of customer participation in the bill discounts is unsupported by the evidence. Mr. Bell testified that this level of customer participation is not consistent with the extremely low level of low-income customer participation in the current LIPP, which was only 0.5%. Mr. Bell also pointed out that in Cause No. 45142, Mr. Rea testified that one of the reasons Indiana American was proposing its LIPP was to gauge low-income customer interest in such a program.

Mr. Bell also testified that Indiana American has administered only $90,885 out of $1.2 million of available assistance in the current LIPP to qualifying low-income customers. He said, in total, Indiana American administered only 7.6% of the available funds, leaving $1,109,115 or 92.4% of the available funds undistributed to its customers who qualify for LIPP assistance.

Mr. Bell recommended the Commission reject Petitioner's proposed Universal Affordability Tariff and remove $1,274,901 from Step 2 rates and $1,371,677 from Step 3 rates, which amounts he said were embedded in the proposed rate design.

3. CAC. Mr. Inskeep urged the Commission to approve the proposed Universal Affordability Tariff and to expand the discounts to the total bill (inclusive of public fire protection surcharge and other separate surcharges) and expand proposed eligibility and discounts under the tariff.

4. INAWC Rebuttal. Mr. Rea testified that more households and families in Indiana will have access to affordable water and wastewater service with Petitioner's proposed Universal Affordability Tariff than without it. In his opinion, this meets the definition of protecting the affordability of utility service for present and future generations of Indiana citizens. Mr. Rea stated that even after implementation of INAWC's proposed allowance-based rate, lower income customers will still be subsidizing higher income customers (albeit to a lesser extent).

Given that, Mr. Rea opined it does not make sense to ask Petitioner's shareholders to forego recovery of its cost of providing service to fund discounts for lower income customers and leave higher income customers still being subsidized. Mr. Rea explained that the LIPP and Universal Affordability Tariff are designed differently. He also noted the LIPP launched just prior to the COVID emergency, and therefore, the challenges of the LIPP should not be used to deny the Universal Affordability Tariff proposed here.

Mr. Rea disagreed with the CAC's recommendation to expand eligibility for the Universal Affordability Tariff. While Mr. Rea recognized that many Indiana families live every day under financial hardships, he stated there does need to be a balance between reducing bills in order to make them more affordable and the costs of the discounts that must be borne by others.

5. Discussion and Findings. For a water or wastewater utility, there is specific statutory authorization for the Commission to approve assistance for income-qualified water or wastewater customers. Ind. Code § 8-1-2-46(c) provides:

Upon request by a water or wastewater utility in a general rate case, the [C]ommission may allow, but may not require, a water or wastewater utility to establish a customer assistance program that:

(1) uses state or federal infrastructure funds; or

(2) provides financial relief to residential customers who qualify for income related assistance.

A customer assistance program established under this subsection that affects rates and charges for service is not discriminatory for purposes of this chapter or any other law regulating rates and charges for service. In considering whether to approve a water or wastewater utility's proposed customer assistance program, the commission shall determine that a customer assistance program established under this subsection furthers the interests set forth in [Ind. Code § 8-1-2-0.5] and is in the public interest.

Ind. Code § 8-1-2-0.5 provides:

. . . it is the continuing policy of the state . . . to use all practicable means and measures . . . in a manner calculated to create and maintain conditions under which utilities plan for and invest in infrastructure necessary for operation and maintenance while protecting the affordability of utility services for present and future generations of Indiana citizens.

Ind. Code § 8-1-2-46(c) provides that the Commission *may* approve requests by water or wastewater utilities to establish customer assistance programs that provide rate relief, such as through reduced rates or rate discounts, for utility service. And while this statute provides that a lower rate or discount for certain customers is not considered discriminatory, it does not address the cost recovery associated with such programs.

The Commission has previously approved two low-income customer assistance programs, both were pilot programs and approved as part of settlements. In *CWA Authority, Inc.,* Cause No. 45151 (IURC July 29, 2019), the Commission approved a customer assistance program wherein the utility's residential wastewater customers that qualified for assistance through Indiana's Energy Assistance Program received varying degrees of bill discounts and infrastructure

investment assistance based on customer income level. The program was funded via a $0.45 monthly charge per residential customer and a $200,000 annual utility contribution. The second approved customer assistance program was for Indiana American in its last base rate case, Cause No. 45142, wherein the Commission approved the three-year LIPP, which provided bill discounts to residential customers that qualified for assistance through Indiana's Energy Assistance Program. The LIPP was funded through both customer rates and matched contributions from the utility.

Since the approval of both of these programs, the Commission has also declined approval of a water and wastewater customer assistance program in *Community Utilities of Indiana, Inc.*, Cause No. 45651 (IURC Feb. 1, 2023). In that case, the utility proposed to provide discounts of $2.80 (water) and $2.90 (wastewater) per month for certain qualifying low-income residential customers using 5,000 gallons of water or wastewater, which was to be funded 100% by other residential customers and without any utility contribution. The Commission declined approval of the program, finding the proposed discounts to be paid by the other residential customers to be more than "minimal" and expressing disagreement with the utility that it would be confiscatory for it or its shareholders to voluntarily fund a portion of Petitioner's low-income program. *Id.* at 81-82.

As a general matter, the programs approved by the Commission shared common features, such as utility contributions and eligibility requirements tied to qualifying for Indiana's Energy Assistance Program. The customer assistance program most recently rejected by the Commission included neither of these attributes and imposed more than minimal cost on the funding ratepayers.

The Universal Affordability Tariff before us today includes no utility contributions and requires customers to submit documentation that is largely duplicative of documentation required for other assistance programs, such as Indiana's Energy Assistance Program. Petitioner also seeks regulatory accounting deferral treatment, without carrying costs, for expenses related to the implementation of the Universal Affordability Tariff. The design of the program, as well as the failure of Petitioner's LIPP, lead us to agree with the OUCC that the Universal Affordability Tariff is not in the public interest. We also agree with CAC witness Inskeep that there are simpler and more efficient ways to determine eligibility for a program like the Universal Affordability Tariff. We disagree with Indiana American witness Rea's assertion that the challenges of the LIPP, which was implemented immediately prior to and during the COVID pandemic, should not be used to deny the Universal Affordability Tariff. Additionally, Indiana American argued that lower income customers are subsidizing higher income customers because higher income customers use water differently and cost more to serve. However, the Universal Affordability Tariff does not address the cause of the subsidization, i.e., lower volume customers subsidizing higher volume customers, because *all* residential customers are charged the same rate and would be allocated the costs of the low-income program.

For these reasons, and as discussed further below, we deny approval of the Universal Affordability Tariff and encourage Petitioner to return to the drawing board and design a new Universal Affordability Tariff based on the following framework. However, Petitioner is also encouraged to consider other additional options that build upon this identified framework.

First, Indiana American should base eligibility for the Universal Affordability Tariff on enrollment in or qualification for one or more of the following assistance programs:

- Indiana Energy Assistance Program
- Low Income Water Assistance Program
- Supplemental Nutrition Assistance Program
- Other assistance programs identified by Indiana American that base eligibility on a percentage of the federal income poverty level

A combination of two or more programs likely would yield a larger pool of applicants and potentially result in increased participation by Petitioner's customers.

Second, Indiana American should evaluate the cost-effectiveness of using a third-party administrator to implement the Universal Affordability Tariff in comparison to implementing the program using its existing resources. Petitioner's administration of the LIPP was abysmal in many respects. Given this underperformance, combined with the fact that other American Water affiliates appear to be using a consultant to administer similar types of low-income programs, we agree that Petitioner's consideration, at least initially, to use a third-party administrator may be reasonable. Should Indiana American determine it is cost-effective to use a third-party administrator, the Commission strongly encourages Petitioner to learn from that third-party administrator, as well as from its peer utilities in Indiana and throughout the American Water enterprise, in order to remove this cost from future iterations of its low-income programs. A company of the caliber of Indiana American, particularly with its access to the shared services of its parent company American Water, should be capable of administering a program of this limited scope and size.

Next, the application for the Universal Affordability Tariff should be designed to be completed to the greatest extent practicable on a mobile device. Petitioner should evaluate the costs and benefits of such an application design and select the application design that provides the greatest access and ease of use to applicants at the most reasonable cost.

In addition, Indiana American should market the Universal Affordability Tariff to its customers by all means practicable and cost effective, including on bill and other direct communications and through community action agencies and Indiana 211. The Commission encourages Indiana American to consult with the OUCC and CAC in identifying the means of communication that best reaches Indiana American's customers.

As a final matter, the Commission is aware that it cannot mandate utility shareholder contribution to a low-income program such as the Universal Affordability Tariff. Nevertheless, as Indiana American redesigns and resubmits it Universal Affordability Tariff, the Commission recommends that Indiana American identify and keep track of recurring expenses that are reduced over time through the successful implementation of the Universal Affordability Tariff, such as receiving more timely payments, reducing bad debt expense, and increasing customer retention. As noted by OUCC witness Bell, these benefits accrue to Indiana American at no expense to its shareholders and reduce Indiana American's overall risk. The Commission further notes that if, in its redesigned Universal Affordability Tariff, Indiana American again seeks regulatory deferred accounting treatment for expenses related to implementation of the Universal Affordability Tariff, any eventual review of those expenses will evaluate the prudence of those expenses, including

their direct and indirect maximization of positive impacts and mitigation of adverse impacts.[27]

Accordingly, after consideration of the evidence and for the foregoing reasons, we find that approval of Indiana American's proposed Universal Affordability Tariff is not in the public interest and is denied.

D. Montgomery County Surcharge.

1. INAWC Case-in-Chief. Petitioner proposed a new surcharge that would apply to operations in Montgomery County based upon an ordinance adopted by the Montgomery County Board of Commissioners establishing an "Infrastructure Zone" and requesting Petitioner extend water mains pursuant to Ind. Code § 8-1-2-46.2.

Mr. Shimansky described Petitioner's investment project in Montgomery County where Phase 1 consisted of installation of water main to extend service east towards I-74 and Phase 2 consisted of installation of main, a booster station, and a water tower. Mr. Shimansky testified that this project supports the economic development efforts of Montgomery County and provides service to an industrial park and its first manufacturer. He explained that after completion of final punch list items in spring 2023, the total cost of Phase 1 and 2 is expected to be approximately $18,000,000 (before netting the contribution), and the primary funding is being provided by Montgomery County.

Mr. Shimansky further testified that $2,777,506 is included in the rate base actuals through September 2022 for this project. He explained that these costs are to be recovered through a surcharge on Montgomery County customers in the Crawfordsville District only. He testified there are 6,339 customers, not counting private fire protection meters, and, in order for these customers to reimburse Petitioner for these costs in compliance with the ordinance, Petitioner proposes to charge $3.54 per meter per month on their regular water bill. Mr. Shimansky testified this number has been reduced for revenues received from a large customer in the area. Mr. Shimansky sponsored a copy of the Montgomery County Ordinance and a workpaper calculating the per-meter monthly charge. Pet. Ex. 2, Attachment GDS-3 and GDS-4.

Mr. Shimansky testified that the extension satisfies Ind. Code § 8-1-2-46.2(c). He testified, however, that if the request under subsections (d) and (e) of that statute were denied, without the surcharge, Indiana American would recover Petitioner's costs of its portion of the investment from all customers across the State.

2. OUCC. Ms. Stull opposed Indiana American's proposed Montgomery County surcharge because: (1) Petitioner did not request approval of the project before completing it; (2) application of the surcharge throughout Montgomery County is contrary to Petitioner's agreement with the County and the County Redevelopment Commission; and (3) concerns with the overall calculation of the surcharge. Ms. Stull proposed that Petitioner include project costs in its rate base with cost recovery through its cost of service allocation to the

[27] We also expect any future request for regulatory accounting deferral treatment would continue to not include a request for carrying costs.

appropriate customer classes.

3. INAWC Rebuttal. Mr. Shimansky noted that Ms. Stull did not oppose the project underlying the proposed surcharge; instead, she only opposes the surcharge and proposes that Petitioner include the costs of the project in rate base and recover those costs through its cost of service allocation to the appropriate customer classes. In response to Ms. Stull's contention that project preapproval is needed, Mr. Shimansky testified that the statute only requires approval of the project and there is no objection to the underlying project. Mr. Shimansky testified that the question is one of rate design, which he believes the Commission can approve with or without a statute specifically directing it. Mr. Shimansky further testified that the Montgomery County Board of Commissioners specifically requested a main extension to support an economic development project, and they did so with full understanding that it would result in a surcharge imposed on the constituents who are customers of Indiana American. Mr. Shimansky did not understand why the OUCC would oppose the surcharge and instead request that the costs of the project be rolled into the calculation of the rates of all customers.

In response to Ms. Stull's contention that imposition of the surcharge is contrary to the agreement between Petitioner and the County and its Redevelopment Commission by imposing surcharges throughout the County (rather than just in the infrastructure zone), Mr. Shimansky explained that the County Commissioners adopted an ordinance after the agreement, which clearly states that the surcharge would be payable "by customers located in the geographic area within the jurisdiction of the Commissioners, including the geographic area established as an Infrastructure Development Zone." Pet. Ex. 2, Attachment GDS-3. Mr. Shimansky testified that between signing the agreement and adopting the ordinance, the County concluded it would be better for the surcharge to apply throughout Montgomery County.

Mr. Shimansky also responded to the OUCC's concerns regarding how the surcharge was calculated to show that the surcharge was correctly calculated. Mr. Shimansky testified Petitioner is accepting the OUCC's position that Petitioner's investment is exempt from property tax, and, as such, he recalculated the surcharge to reflect this issue and the revised calculation is set forth on Petitioner's Exhibit 15, Attachment GDS-3R.

4. Discussion and Findings. Ind. Code § 8-1-2-46.2(d) and (e) provides, in summary, that upon a county executive or municipal legislative body (in this case, Montgomery County Board of Commissioners) establishing an infrastructure development zone and requesting a utility (in this case, Indiana American) to extend service, the utility (again, Indiana American) may file a petition with the Commission seeking approval of the requested extension. If such request is approved, the Commission shall approve rate schedules that include a surcharge payable only by customers located in the geographic area within the jurisdiction of the requesting governmental entity, including the geographic area established as an infrastructure development zone. In accordance with Ind. Code ch. 6-1.1-12.5, Montgomery County executives adopted an ordinance designating a geographic territory as an Infrastructure Development Zone.

As summarized above, OUCC witness Stull opposed Indiana American's proposed surcharge for three reasons. She also raised questions about the overall calculation. Ultimately, the OUCC recommended that Indiana American instead include the costs of the project in rate base and recover these costs through its cost of service allocation to the appropriate customer classes.

In response to Ms. Stull's first contention that request for approval of the project should have been made prior to installation for Ind. Code § 8-1-2-42.6 to apply, Mr. Shimansky testified that the statute only requires approval of the project. The plain language of Ind. Code § 8-1-2-42.6(e) does state that a utility that "receives a request" for extension of service "may file a petition with the [C]ommission seeking approval of the requested extension of service." However, the OUCC did not take issue with the underlying project or the extension of service; rather, the OUCC took issue with the surcharge and how it was to be applied to Montgomery County customers. Thus, we agree with Indiana American that this is not an issue regarding the reasonableness of the underlying project, but rather an issue of rate design that the Commission has authority to approve with or without a statute. Nonetheless, we do believe the intent of the statute is for utilities to come in and seek approval of the extension of service project prior to filing for approval of a surcharge in a general rate case, and we would encourage utilities to follow this process in future cases.

In response to Ms. Stull's second contention that the application of the surcharge throughout Montgomery County is contrary to Petitioner's agreement with the County and the County Redevelopment Commission, we agree with Indiana American that it is the Montgomery County Commissioners' ordinance—not the agreement—that should control in this situation. *See* Pet. Ex. 2, Attachment GDS-3. This ordinance provides that the surcharge would be payable "by customers located in the geographic area within the jurisdiction of the Commissioners, including the geographic area established as an Infrastructure Development Zone." *Id.* at 2. The Commissioners adopted this ordinance after signing the agreement and we believe this ordinance represents the Commissioners' final word on the subject and their ultimate decision for the surcharge to apply throughout Montgomery County, which is consistent with Petitioner's filing in this Cause.

Finally, we disagree with the OUCC's third contention that the costs of this project should be reflected in Petitioner's rate base and recovered through Petitioner's cost of service allocation to the appropriate customer classes. Petitioner's Exhibit 2, Attachment GDS-3 clearly demonstrates the Montgomery County Board of Commissioners' desire for this main extension to support an economic development project for Montgomery County. Further, the ordinance clearly demonstrates that the Commissioners intended for this extension to be payable only by customers located within the jurisdiction of the Commissioners, including the geographic area established as an Infrastructure Development Zone. This extension of service is an economic development project that will create economic benefits for the County and benefit the health, safety, and welfare of Montgomery County citizens. Thus, this project will only directly benefit Montgomery County and its citizens, and we disagree with the OUCC that it is appropriate for Indiana American to recover these costs from all customers. Further, we believe that recovering the costs of this project via the surcharge as Petitioner has proposed, is consistent with the Montgomery County Commissioners' ordinance and will benefit all of Indiana American's customers, because it will only be recovered from those Indiana American customers in Montgomery County that are positioned to directly benefit from the project. As such, we find that the Montgomery County extension of service and surcharge are appropriate and should be approved.

With respect to the issues Ms. Stull raised regarding Indiana American's calculation, we find Indiana American appropriately calculated the surcharge. We also agree that it is appropriate

for Petitioner to accept the OUCC's position that Petitioner's investment is exempt from property tax, and thus we find the revised calculation of the surcharge set forth on Petitioner's Exhibit 15, Attachment GDS-3R to be appropriate and should be approved.

16. URT Repeal.

A. INAWC Case-in-Chief. Mr. Shimansky explained the URT over-collection. He described the repeal of the URT through House Enrolled Act 1002 effective May 1, 2022 and Petitioner's 30-Day filing to remove the URT from its revenue requirement effective July 1, 2022. Mr. Shimansky stated the OUCC filed an objection to that 30-Day filing leading to a subdocket being created in Cause No. 45734 S1. Indiana American filed its revised tariff on October 20, 2022 and on November 23, 2022, the new tariff was approved removing the URT. Mr. Shimansky explained that during the period of time from July 1, 2022 through November 23, 2022, the URT remained in the revenue requirement and was collected in rates, producing an over-collection of $1,356,008 that needs to be returned to customers. INAWC proposed returning this over-collected balance to customers during the Step 1 rate change on a special tariff that expires after four months. Mr. Shimansky stated this would mean the balance would be returned over approximately the same time frame it was collected. He stated that because the over-collection was collected through both volumetric and fixed rates for both water and wastewater customers, the correction should happen the same way.

B. OUCC. Ms. Sullivan testified that the OUCC recommends a direct refund of all URT revenue collected after June 30, 2022, including carrying costs, as a separate line-item credit on the customer bill. Ms. Sullivan proposed that Petitioner should pay customers for the use of the over-collected funds at Petitioner's WACC. She stated there is no reason for Petitioner to wait to refund the over-collection. She contended that Petitioner's proposed revenue adjustment would only incorporate URT collected through September 30, 2022 despite URT being included in rates through November 23, 2022.

C. Industrial Group. Mr. Gorman expressed concern that under INAWC's proposal, Petitioner will not have fully refunded customers until June 2024, roughly two years after it should have ceased collecting the URT from customers. Mr. Gorman testified that throughout that period of time Petitioner has had access to, and been able to use, those funds for its benefit. He testified that customers should be compensated for the use of these customer funds by Petitioner. Accordingly, Mr. Gorman recommended the URT balance be adjusted to include a carrying charge on the funds INAWC collected from customers, which should be included as part of the refund to customers. In support of his recommendation that the Commission include simple interest at a rate of 8% as a component of the refund calculated in this proceeding, Mr. Gorman cited the Indiana Supreme Court's holding in *N. Ind. Pub. Serv. Co. v. Citizens Action Coalition of Ind., Inc.*, 548 N.E.2d 153 (Ind. 1989), that customers were entitled to simple interest at the statutory rate of 8% in the context of a utility refund. He stated that similar to a customer deposit, the utility has had the use of those funds since it began collecting them. Therefore, according to Mr. Gorman, just as customer deposits carry interest, these funds should carry interest to properly compensate customers for Petitioner's ability to utilize the over-collection of the URT. He proposed to include a carrying charge on the customer held funds from the time the excess tax was collected until the refunds are completed in June 2024. He calculated this would increase the URT refund amount by approximately $184,000.

D. CAC. Mr. Inskeep testified Petitioner failed to follow directives and suggests Petitioner has held onto ill-gotten revenues. He recommended the entire balance in the over-collection along with an 8% interest be returned at once to customers. He further suggested that the approved ROE be reduced as a penalty for Petitioner not following state law.

E. INAWC Rebuttal. Mr. Shimansky opposed the OUCC's and intervenors' proposal to include carrying costs on a simple over-collecting, stating it is inconsistent with the other regulatory accounts included in the case, including the recovery of deferred COVID costs, Comprehensive Planning Studies, and Universal Affordability Tariff costs. In addition, Mr. Shimansky contended that if this over-collection is to be treated as a loan from customers that are due an 8% interest, it should be included in the capital structure with an 8% cost of financing.

Mr. Shimansky testified that Mr. Gorman's calculation of the additional refund amount to account for interest was incorrect. He said Mr. Gorman's proposed adjustment assumes the entire over-collection that has the 8% interest applied to it occurred on July 1, 2022. Mr. Shimansky clarified that it did not. Instead, it was a build-up of rates collected over time from July 1, 2022 while the URT calculation was being contested, until late November 2022 when rates were finally approved and implemented. Mr. Shimansky further stated that if carrying charges were to be applied, they should be no higher than the WACC approved in this case, because there was no wrongdoing on the part of Petitioner.

In response to the OUCC, Mr. Shimansky explained that the point of a revenue adjustment to the September 2022 revenue number is to "normalize" the revenues in the base year. Adjusting the revenues to reflect the URT repeal is one such adjustment. He stated the amount of refund Petitioner will put in rates is the actual over-collection from July 1, 2022 through the time period when the URT repeal was actually put into rates, which is beyond September 30, 2022. Mr. Shimansky also opined that a separate line item on the bill would only create confusion as the URT is no longer in rates and add unnecessary complexity to the bill.

Mr. Shimansky disagreed that Petitioner somehow acted improperly and should be penalized through the ROE as a result. He relayed how Petitioner followed the statute and Commission procedure. He stated it is clear from the copies of Petitioner's URT repeal submissions that Petitioner did nothing incorrectly and followed the established regulatory process.

F. Discussion and Findings. As noted by Petitioner, House Enrolled Act 1002 repealed the collection of URT in rates effective July 1, 2022. *See* Ind. Code § 8-1-2-4.2. On June 20, 2022, the Commission opened Cause No. 45734 to address compliance by jurisdictional utilities who were to remove the URT from their rates through the Commission's 30-Day filing process. Further any utilities continuing to collect the utility receipts tax on July 1, 2022, was required to apply regulatory accounting treatment, such as the use of regulatory liabilities, to account for the unlawful collection of the URT. Indiana American was the only jurisdictional utility with fixed monthly and volumetric charges to file a 30-Day filing that did not include a proposal to reduce both charges to remove the URT, resulting in an objection and requiring a subdocket.

The disagreement among the parties now concerns how the URT overcollection should be

returned and whether interest should be included. We agree with the OUCC and Intervenors that customers are entitled to interest on the over-collected URT amount. Once removal of the URT from Petitioner's rates was approved, Petitioner could have made another 30-Day filing to refund the overcollection of the URT, but it chose not to do so. *See* 170 IAC 1-6-3(7). Thus, because Indiana American has had use of the entirety of the URT overcollection (funds which belong to the customer) since at least November 23, 2022, we find it appropriate that the refund of the over-collected URT include interest from that date until the over-collection is refunded. Contrary to the Petitioner's assertions, interest is not a penalty. As explained in *N. Ind. Public Serv. Co. v. Citizens Action Coalition*, 548 N.E.2d 153, 159 (Ind. 1989), in reversing a Commission order that did not apply interest to a customer refund, "denying interest on the sum [would amount] to a double wrong by depriving the person owed of the increase to which he was justly entitled and by allowing the one holding the funds to profit from the use of funds that did not rightly belong to him."

Having determined interest is appropriate from November 23, 2022 until the refund is completed, we must now determine the appropriate interest rate. Because Indiana American had the choice to refund the over-collected URT earlier and chose not to do so, we find the statutory interest rate of 8% to be reasonable. Petitioner may refund the URT over-collection at one time or may refund it over four months following implementation of Step 1 rates as proposed.

The OUCC also recommended that the refund occur as a separate line-item credit on the customer bill. While we decline to require Indiana American include the credit as a separate line-item, we do require Petitioner to provide notice to its customers that the bill reflects a credit due to the repeal of the URT, consistent with the requirements of Ind. Code § 8-1-2-4.2(e).

Within 30 days of the issuance of this Order, Petitioner shall make a compliance filing under this Cause with the supporting calculation of the URT refund amount and applicable interest to be computed from November 23, 2022 through the anticipated refund date of the URT over-collection. Included in the compliance filing should be the methodology used to compute the interest, the total amount to be refunded by class and Group, a draft customer notice, and the proposed billing cycle(s) the over-collection will be returned. The other parties in this Cause shall have five business days to file any objection to Petitioner's calculation.

17. Non-Recurring Charges.

A. INAWC Case-in-Chief. Mr. Shimansky presented the proposed tariffs as Attachments GDS-1 and GDS-2 to Petitioner's Exhibit 2. Indiana American did not propose any changes to its non-recurring fees, including its reconnection charge, insufficient funds charge, and after hours service charge. Mr. Rea explained how revenue projections for these fees were developed. He said revenue projections for returned check charges, reconnect fees, after hours charges, and miscellaneous service revenues are all based on a three-year average for the calendar years 2018, 2019, and 2021. He added that revenue projections for late payment fees are based on the actual ratio of late payment fees to total revenue for the 12 months ended September 2022 base year projected to forecast test year revenue amounts.

B. OUCC. Ms. Sullivan explained that reconnection fees were last updated in 30-Day filing #3097, approved by the Commission on July 17, 2013. She said insufficient funds and after-hours service charges were last updated in Cause No. 43680 (May 2010). She opined

that Petitioner's non-recurring charges are out-of-date. She said that the costs of these services have certainly increased over the past ten to 13 years. She explained that the OUCC recommends Indiana American include a proposal to adjust its non-recurring charges in its next general rate case or submit a 30-Day filing just prior to its next general rate case to prevent over collection.

C. CAC. Mr. Inskeep recommended denying the continuation of Indiana American's late fees, reconnection fees, after-hours charges, and insufficient funds charges, asserting that they disproportionately harm vulnerable customers and significantly exacerbate affordability concerns, running counter to Petitioner's stated goals underlying its Utility Affordability Tariff.

D. INAWC Rebuttal. Mr. Shimansky explained he did not agree that all late fees, reconnection fees, after-hour charges, and insufficient fund charges should be eliminated. He said these charges have been approved by the Commission as part of Petitioner's tariff and there was no forecast created in this case to change those fees. He said the miscellaneous revenues created by those fees were used in the revenue determination. Mr. Shimansky explained that eliminating those fees would create a need to reassess the expenses forecasted for these programs as well as the revenue allocation amongst all customers. He said a proper study would need to be done before they were to be changed. He explained that Petitioner is not opposed to updating these rates prior to the next rate case, but because these fees and charges recover costs incurred by Petitioner, he concluded outright elimination of the fees would not be appropriate.

E. Discussion and Findings. As evidenced by Petitioner's case-in-chief filing and explained by Indiana American witness Shimansky, Petitioner is not proposing to change the non-recurring fees established in 30-Day filing #3097 or Cause No. 43680. Pet. Ex. 2, Attachment GDS-1, at 30, and GDS-2 at 12, Pet. Ex. 15 at 62, and Pub. Ex. 2 at 27. It is the OUCC and CAC that seek a change to what the Commission has previously approved.

The Commission is not persuaded that elimination of these fees is reasonable or appropriate at this time. While the Commission has suspended the collection of these fees in extenuating circumstances, providing these services comes at a cost to Petitioner and as such, should be reflected in rates. Further, without a study, which no party put forth, we lack evidence showing whether costs to provide these services have increased or decreased and what the effect on Petitioner's expenses might be if there were an elimination of these fees. As Mr. Shimansky explained, eliminating all non-recurring fees would need to be considered in the expense forecast and could affect the revenue allocation among all customers. The Commission, in this instance, declines to make a change that affects cost allocation without further information. However, based on Mr. Shimansky's rebuttal, it appears Petitioner is not opposed to the OUCC's recommendation to update these fees prior to or in its next rate case. Accordingly, we encourage Petitioner to evaluate whether the costs of these services have changed and as appropriate, adjust its non-recurring fees.

18. Tariff Matters.

A. INAWC Case-in-Chief. Mr. Shimansky presented the proposed tariffs as Attachments GDS-1 and GDS-2 to Petitioner's Exhibit 2, inclusive of redlined changes.

B. OUCC. Ms. Sullivan claimed Petitioner's current tariff is difficult to understand. She said moving Area 2 and Area 3 customers to Area 1 will eliminate some confusion. She further stated that the OUCC urges Indiana American to publish a tariff that is easier for a customer to understand so they can quickly discern how their bills are calculated.

C. CAC. Mr. Inskeep requested Indiana American be required to publish its entire tariffs, rules, and regulations on its website in an accessible manner. Mr. Inskeep states the lack of text-search functionality on some pages makes finding information not only difficult, but an accessibility issue. He said the public and all of Indiana American's customers, including individuals with disabilities, should be able to access all of Petitioner's tariffs.

D. INAWC Rebuttal. Mr. Shimansky testified that Petitioner appreciates the feedback on its tariffs and has since ensured that the tariffs and rules on Petitioner's website are fully searchable. Mr. Shimansky explained that Petitioner hopes this helps provide customers easier access to its tariffs.

E. Discussion and Findings. The OUCC and CAC expressed concern with Indiana American's tariff language and accessibility of the tariffs but made no specific recommendations for change other than those concerning tariff publication on Petitioner's website. As Mr. Shimansky testified, Indiana American has taken action to ensure that the tariffs and rules on its website are fully searchable. We encourage Indiana American to periodically review and revise its tariffs to be clearer and more understandable and to continue to be responsive to customer and stakeholder feedback about improving the presentation of, and ability to understand, Petitioner's tariff.

19. Customer Service.

A. Lowell Service Area. OUCC witness Seals highlighted and discussed certain of the customer comments received by the OUCC, with emphasis on comments received regarding the Lowell system, which Indiana American acquired in 2021. Mr. Seals noted that, based upon IDEM records, for the first six months of 2023, the Lowell operation experienced 28 boil advisories, with 12 caused by main breaks. He compared this level of boil advisories to Petitioner's larger Wabash operation, which experienced three boil advisories during the same period. Mr. Seals recommended Indiana American be required to evaluate the repeated main failures and resultant boil water orders in the Lowell district and provide the Commission with a report as to proposed solutions within 90 days.

Indiana American witness Britto, responding to Mr. Seals' concerns, stated "[s]ince acquiring the Lowell System, we have encountered a number of broken valves. Undertaking system improvements in such an environment will at times cause pressures to drop throughout the system. Pursuant to IDEM guidance regarding Boil Water Procedures, Indiana-American issued boil water advisories for each of these instances as required." Pet. Ex. 17 at 19. Ms. Britto disagreed with Mr. Seals' recommendation, stating Petitioner "is already evaluating the system and making capital investment to address the aging infrastructure." *Id.* at 20. We find Mr. Seals raises an important concern about the Lowell system. As it appears from Ms. Britto's rebuttal testimony that Petitioner is aware of the problems and is already evaluating the system, we find Indiana American

should prepare a report outlining the issues seen in the Lowell system and its proposed solutions within 90 days of the issuance of this Order.

B. Gary/Northwest Indiana Service Area. At the public field hearing held in Gary, Indiana, we heard from many customers expressing frustration because of Indiana American's lack of local corporate presence, ever increasing rates, operations resulting in basement flooding from lines being cut, and the closure of Indiana American's in-person payment center, which has been a hardship. At the evidentiary hearing, the Presiding Officers asked INAWC witness Britto about locations where customers can make in-person payments or ask questions in the Gary area. Hrg. Tr. at B-22 to B-25. INAWC witness Shimansky was able to provide some information at the hearing about the 12 payment locations in and around the Gary area (around zip code 46401). Hrg. Tr. at E-17. Mr. Shimansky testified that "more than half are Speedy Check cashiers, and there is a City of Hobart location where bills can be paid." *Id*. He said the hours are different at each location, with some open until 11:00 p.m. and others closing at 4:30 p.m. *Id*. We find it is important for customers to have access to locations where they can make payments, preferably without additional fees, and get questions about their accounts answered. We approved almost 30 years ago INAWC's decision to consolidate to a central location all customer service activities, and we did so due in part to the resulting efficiencies and cost savings. *Indiana-American Water Co.*, Cause No. 39595 at 19-21 (IURC Feb. 2, 1994). However, consolidation should not result in the loss of important customer services, including access to Petitioner within the communities it serves. Accordingly, we encourage INAWC to review the feasibility of offering in-person customer service option in light of financial, operational, and customer convenience cost-benefits. We also encourage Petitioner to ensure that each of its payment locations are provided with INAWC customer service contact information that can be provided to customers who may have questions or need additional information about their bills.

20. Non-Revenue Water.

A. INAWC Case-in-Chief. Ms. Britto testified regarding the steps Petitioner is taking to improve water and wastewater efficiency. She testified that Petitioner's efforts include supply side practices, such as improved pump efficiency, meter reading, leak detection, and repair programs, as well as demand-side strategies, such as customer efficiency and public education programs. From an operations perspective, Ms. Britto explained that improving water and wastewater efficiency requires achieving a cost-effective mix of prudent investments and improved O&M management capabilities targeting safety, customer satisfaction, sustainability, and system efficiency. She further testified Petitioner is planning to expand its efforts in improving apparent losses through large meter testing and profiling, conducting fire service audits, and improving Petitioner's billing process.

B. OUCC. Mr. Seals discussed the impact of non-revenue water, pointing out that total company non-revenue water has risen during the past five years, from 18.5% in 2018 to 21.2% in 2022. He stated that four districts experienced greater than 30% non-revenue water during the five-year period, causing IDEM to identify a significant deficiency for these districts. While noting that Indiana American has begun some effective first steps towards reducing non-revenue water, Mr. Seals recommended Petitioner place increased emphasis and resources on addressing the issue through leak detection, fire service audits, and consideration of district metering.

Mr. Seals testified that only 36% of Indiana American's private fire services are metered, making this problematic for non-revenue water. He said unmetered water may pass through the private fire system due to usage for testing, potential leaks on the internal system, or unintentional connections by the customer for non-fire purposes. Mr. Seals testified this potential source of non-revenue water can be mitigated and recommended that Indiana American begin a program to meter all private fire services over the next five years and perform inspections of private fire services once every five years.

C. INAWC Rebuttal. Ms. Britto testified that Petitioner is continuously analyzing and evaluating the amount of non-revenue water in its system to determine what cost-effective steps can be taken to reduce the amount even further. With respect to Mr. Seals' recommendation that Indiana American: (1) increase the emphasis and resources utilized on addressing non-revenue water, especially on leak detection and on fire service audits; (2) investigate other means of measuring and reducing non-revenue water, such as establishing district-metered areas, especially as Petitioner transitions towards AMI; and (3) act on the recommendations contained within the water audits for improvements to be achieved, Ms. Britto testified that Indiana American is doing these things and others to help reduce non-revenue water. She testified that Petitioner is also addressing any metering issues and analyzing its accounted for water losses, as well as analyzing already installed meters to ensure the right size of meters are installed and are representative of current services. She testified these steps will allow Indiana American to capture the flows more accurately for these services. Ms. Britto noted, however, that these activities have costs associated with them, and Petitioner cannot do everything without the increased dollars/headcount to do so.

As to Mr. Seals' recommendations regarding private fire services, Ms. Britto testified that what Mr. Seals recommends will be an expensive investment. She testified that for many customers this cost could run as much as $200,000, since the customer frequently owns the vault. She further testified there would also be significant impact in larger meters being added to these vaults. Ms. Britto testified that should the Commission order Indiana American to make these investments, Petitioner would commence doing so and would include the costs in future DSIC cases.

D. Discussion and Findings. The record shows that Indiana American has taken numerous significant steps to address non-revenue water in its system. The record further shows that the OUCC agrees with the steps Indiana American has taken to reduce non-revenue water and acknowledges that these steps are effective first steps. However, the OUCC also recommends that Indiana American place an increased emphasis on, and dedicate more resources to, addressing non-revenue water, in particular on leak detection and fire service audits.

Ms. Britto testified that Indiana American is already engaging in each of the activities the OUCC recommended to help reduce non-revenue water. However, the OUCC presented evidence that Indiana American's total company non-revenue water increased slightly over the five-year period from 2018-2022, from 18.5% in 2018 to 21.2% in 2022. Additionally, four districts experienced greater than 30% non-revenue water during the five-year period, causing IDEM to identify a significant deficiency for these districts. We note that three of these four districts are recent acquisitions and hence raise concern with the sufficiency of O&M prior to acquisition.

We believe the evidence shows that Indiana American is taking adequate first steps to manage water loss and address non-revenue water within its system. Ms. Britto testified regarding all the steps Petitioner is taking to reduce non-revenue water, explaining Indiana American is continuously analyzing and evaluating the amount of non-revenue water in its system to determine what cost-effective steps can be taken to reduce the amount even further.

Accordingly, we find Indiana American is taking appropriate steps to address non-revenue water within its system and the evidence shows Indiana American will continue engaging in these activities moving forward. While we decline, at this time, to require additional steps or resources beyond those already identified by Petitioner, we encourage Petitioner to continue its efforts to identify and implement cost-effective solutions for addressing its rising non-revenue water.

21. Regulatory Accounting Treatment.

A. INAWC Case-in-Chief. Mr. Shimansky described three proposals for regulatory accounting treatment. The first relates to pension and OPEB expense, the second relates to production expenses and the third relates to the proposed Universal Affordability Tariff. As to pension and OPEB expense, INAWC requests authority to record as a regulatory asset or liability amounts above or below the amount reflected in rates. He described the pension/OPEB balancing account that was proposed by Petitioner in Cause No. 43680, which was denied, and how, if it had been approved, pension and OPEB costs that had gone down in the subsequent years would have been returned to customers.

The production cost regulatory accounting would capture changes in chemical cost, purchased fuel and power, waste disposal, and purchased water. Production costs above and below the amount used to set rates would similarly be deferred to a regulatory asset or liability.

As to the Universal Affordability Tariff, which will provide discounts to participating and qualified customers, INAWC proposes an assumption that 10% will participate, and projected the level of discounts that would be provided as $1.3 million for Step 2 and $1.4 million for Step 3. To the extent the actual discounts vary from these amounts, the difference would be deferred as a regulatory asset or liability.

B. OUCC. Ms. Stull responded to Indiana American's proposed regulatory accounting deferral treatment for production costs and costs related to the Universal Affordability Tariff. As to production costs, she testified the OUCC opposes the proposal because it would remove any incentive for Petitioner to efficiently manage and operate its utility operations and otherwise negates basic regulatory principles. She explained that when a utility's rates are set, the utility is given the opportunity to earn its authorized return, which is not a guarantee. She noted that neither is a utility prevented from exceeding its authorized return. She explained this system promotes efficiency because it incents utilities to hone their operations through good management so it may retain more of its earnings. She said allowing a utility to track costs and recover the difference between the amount included in rates and the actual expense discourages efficient management and negates a basic principle of ratemaking.

Ms. Stull testified that Indiana American intends to track any and all differences between actual and projected production costs included in its revenue requirement without differentiating

between production cost increases due to increased demand versus increases in price, which she viewed as problematic. She testified Indiana American has not allowed for the fact there could be offsetting changes to operating revenues that would already compensate Indiana American for certain types of changes in production costs, such as higher than projected customer growth or customer consumption, which can be caused by such things as a drought. She explained both of these factors would create increased production costs that would be recovered through increased operating revenues and would allow Petitioner to potentially over-recover these cost increases. Moreover, Ms. Stull testified Indiana American already has the ability to track increases to its purchased water expense, noting that if an unprojected cost increase occurs, Indiana American has the option of submitting a purchased water tracker under 170 IAC 1-6 to recover the increased expense. Thus, she concluded, there is no need to provide another mechanism for Indiana American to recover these cost increases.

As for the Universal Affordability Tariff, Ms. Stull stated the OUCC recommends Petitioner's proposed tariff be rejected and therefore, no deferred accounting treatment would be warranted on that basis.

C. Industrial Group. Mr. Gorman recommended the Commission reject INAWC's three proposals to defer in regulatory assets. He testified that the three deferral mechanisms place too much risk on customers and do not include significant protections to customers from paying rates that are no more than a just and reasonable level. He testified that Petitioner has not shown these expenses limit the ability to earn its authorized return under the revenues generated during rate-effective periods in the past or are largely outside its control or more variable than they have been in the past.

D. INAWC Rebuttal. Mr. Shimansky testified that these accounts are not being proposed to provide a rate of return but to protect both customers and Petitioner from volatility. He testified that the variances in these costs are almost entirely outside the INAWC's control. For instance, variations in pension expense are driven by market pressures. In response to Ms. Stull's testimony that regulatory accounting would remove incentives to manage production costs, he indicated that since the deferred amounts would not bear carrying charges, there is still an incentive for Petitioner to do all it can do to manage costs.

E. Discussion and Findings. Indiana American requests regulatory accounting deferral treatment for: (1) pension and OPEB expense, (2) production costs, and (3) Universal Affordability Tariff discounts. Based on our decision above, we need not address Petitioner's request for regulatory accounting deferral treatment for the Universal Affordability Tariff discounts.

When determining whether costs should be tracked, we have generally considered whether the expenses are "collectively or potentially significant, whether they are potentially variable or volatile, and whether they are largely outside the utility's control." *Indianapolis Power & Light Co.*, Cause No. 44602 at 79 (IURC March 16, 2016). We also consider the utility's request from a broader perspective by reviewing "the utility's risks related to its operating costs and the other tracking mechanisms it has in place." *S. Ind. Gas and Elec. Co.*, Cause No. 43839 at 94 (IURC Apr. 27, 2011). We have generally found that revenue or cost trackers tend to make utilities less accountable for their actions and thus, should remain limited to ensure the utility is properly

incented to manage its overall operating costs. *Id.* at 94-95. Because, if utilities can "recover the majority of their variable costs through trackers, they have no incentive to come before the Commission and account for other, non-tracked, decreasing costs or increasing revenues." *Id.*

In 2010, the Commission rejected a proposal by Petitioner to create a "Pension and OPEB Balancing Account" that would have allowed the utility to "defer under- or over-recovery in Pension/OPEB expense as a regulatory asset/liability for future recovery or refund to customers." *Indiana-American Water Co.*, Cause No. 43680 at 111-112 (IURC April 30, 2010). In that case, we rejected the requested relief determining that if we were to authorize the creation of the balancing account and related regulatory accounting treatment, we would be shifting risks inherent to the prudent operation of the utility to ratepayers, thereby lessening the utility's incentive to manage its business properly and effectively. Accordingly, we ultimately concluded that it was "not in the public interest to require ratepayers to bear this risk." *Id.*

In the present case, Indiana American again seeks approval of balancing accounts and regulatory accounting treatment. This time, however, it seeks that treatment not just for its pension and OPEB expense, but also for its production costs. These three separate regulatory accounts would operate in the same manner. Specifically, beginning with the effective date of new rates established in this case, Indiana American would begin comparing its actual expenses in each of these categories to the amount approved for recovery and embedded in base rates with the total difference being treated as a regulatory asset or liability in the next rate case.

Petitioner requests this extraordinary relief because it claims the relief will protect itself, and customers, from volatility in those expenses. The proposed deferred regulatory treatment differs little, if at all, from the relief we denied in Cause No. 43680, which was based on substantially the same justification offered in this proceeding. Seeing the same problems with Petitioner's current proposal as we saw with its past proposal, we see no reason to alter or deviate from our prior decision.

We agree with the OUCC and other Intervenors that what Petitioner requests is to be shielded from volatility inherent to the operation of a utility. Some risk of volatility or uncertainty as to the performance of the market or, for example, as to the actual cost of chemicals, is not justification to authorize deferred accounting. While Petitioner speculated about the potential impact of market fluctuations and price volatility, the evidence does not show that the variability in costs will expose Petitioner to the risk of not meeting its service obligations or shareholders to not earning a reasonable return, or that the requested relief will fundamentally benefit ratepayers.

Our ability to balance those interests is essential as it lies at the heart of the regulatory compact. As part of that compact, in exchange for the dedication of its plant and equipment to the service of the public, a utility is given the opportunity to earn its authorized return, recovering both its reasonable and prudent costs and a reasonable return on its investment. As Ms. Stull points out, however, the opportunity for Indiana American to earn its authorized return is not a guarantee. The opportunity to earn its authorized return provides the incentive for the utility to operate efficiently, an incentive which we have previously found to be put at risk through risk shifting proposals, such as balancing accounts proposed by Petitioner. We also note that Petitioner has access to, and uses, several tracking mechanisms to recover costs associated with a range of investments. There is also

an established rule and standard practice in place that allows utilities to quickly amend their rates to cover increases in purchased water costs—one of the costs INAWC seeks to include in the balancing account.

In conclusion, we find Indiana American has failed to show that the balance struck between the utility and its ratepayers as a result of its proposed balancing accounts is in the public interest. Accordingly, we decline to approve Petitioner's requested accounting deferral treatment.

22. Future DSIC and SEI Cases. The only remaining dispute regarding future DSIC and SEI cases relates to how cost of removal is accounted for in the DSIC and SEI calculations. OUCC witness Stull explained cost of removal is recovered from customers before these costs are actually incurred by Petitioner because the cost is built into Indiana American's authorized depreciation rates. Indiana American continues to recover these costs because (a) it is embedded in the depreciation rates used to calculate depreciation and (b) DSIC and SEI additions are not reduced by the increase in applicable accumulated depreciation since the last rate case. She argued this treatment results in a level of double recovery that inequitably benefits shareholders at the expense of ratepayers. While recovery of the cost of removal results in a reduction to rate base, Ms. Stull stated she does not believe that the quid pro quo of this arrangement is evenly balanced between ratepayers and shareholders because the reduction in rate base only occurs when Indiana American files a rate case. Between rate case filings, Indiana American recovers additional costs of removal but there is no corresponding reduction to rate base that benefits ratepayers until Indiana American receives its next rate order.

As Mr. Shimansky noted in rebuttal, the Commission previously addressed this issue in its February 22, 2023 Order (at p. 8) in Cause No. 45609 SEI 1, wherein the Commission authorized the inclusion of costs of removal in the SEI calculation because it was consistent with the approach used in DSIC cases.[28] Although, Ms. Stull is correct about the costs of removal being embedded in depreciation rates, in the context of a tracker, it is necessary to include the costs of removal in the pretax return because the accounting entries to retire the assets are recorded on the utility's books and records, but these entries are not reflected in the tracker amounts. Thus, the costs of removal associated with retired assets must be included in the pretax return calculation of a tracker case.

When assets in a tracker filing are retired, the accounting entries to retire the assets will be recorded on the utility's books and records, including a debit to accumulated depreciation for the associated cost to remove the retired asset. When a debit entry is recorded to accumulated depreciation to account for the cost of removal, the effect is to increase rate base by the same amount. However, the effect of these accounting entries will not be reflected in base rates until the utility's next base rate case. Until that time, the utility's rate base is understated by the amount of removal cost recovered through depreciation expense and reflected in the accumulated depreciation account. Essentially, accumulated depreciation is overstated by the cost of removal which has not yet been incurred reducing rate base until the cost of removal takes place. In a tracker filing, the base rates do not include the debit to accumulated depreciation until the next base rate case. Thus, it is reasonable to provide a return on the cost of removal in a tracker filing to offset

[28] *See also*, *Indiana American Water*, Cause No. 45609 SEI 1 S1 at 9 (IURC March 8, 2023).

the lower rate base generated by the cost of removal reflected in accumulated depreciation on the utility's books and records. This permits the utility to earn a return on cost of removal associated with retired assets in a tracker, which will end when new rates are established. The cost of removal will be reflected in base rates and the tracker will be reset to zero. This issue is a matter of timing.

23. Confidentiality. On March 31, 2023, August 4, 2023, and August 8, 2023, Indiana American filed Motions for Protection and Nondisclosure of Confidential and Proprietary Information in this Cause, which were supported by affidavits showing that certain information to be submitted to the Commission was trade secret information as defined in Ind. Code § 24-2-3-2 and should be treated as confidential in accordance with Ind. Code §§ 5-14-3-4 and 8-1-2-29. On July 21, 2023, and July 25, 2023, the Industrial Group also filed Motions for Protection and Nondisclosure of Confidential and Proprietary Information in this Cause. In Docket Entries dated April 13, 2023, August 8, 2023, and August 14, 2023, the Presiding Officers found the information should be held confidential on a preliminary basis. After review of the information and consideration of the affidavits, we find the information is trade secret information as defined in Ind. Code § 24-2-3-2, is exempt from public access and disclosure pursuant to Ind. Code §§ 5-14-3-4 and 8-1-2-29, and shall be held as confidential and protected from public access and disclosure by the Commission.

IT IS THEREFORE ORDERED BY THE INDIANA UTILITY REGULATORY COMMISSION that:

1. Petitioner is authorized to adjust and increase its rates and charges for water and wastewater service in three steps approved herein, ultimately calculated to produce total operating revenues of $350,524,090, which are calculated to provide the opportunity to earn net operating income of $118,092,625. Such rates and charges for each step shall take effect immediately upon submission, on an interim subject to refund basis subject to the process for review by the parties we have approved.

2. Petitioner shall file new schedules of rates and charges in three steps on the basis set forth in Finding Paragraph 12, which schedules shall be effective for water and wastewater service rendered upon submission on an interim subject to refund basis subject to the compliance filing process described in that same finding paragraph.

3. Within 30 days of the issuance of this Order, Petitioner shall make a compliance filing under this Cause concerning the URT refund consistent with Finding Paragraph 16.

4. Petitioner's proposed depreciation accrual rates are approved upon the submission of Step 1 rates.

5. Petitioner's requests for deferred accounting authority described in Finding Paragraph 21 are denied.

6. Petitioner's proposed Montgomery County surcharge is approved.

7. Petitioner's proposed Universal Affordability Tariff is denied.

8. Petitioner's plans to develop future water sources of supply are approved as set forth in Finding Paragraph 7.A.2.b.

9. The information filed by Petitioner, OUCC, and Intervenors in this Cause pursuant to the Motions for Protective Orders is deemed confidential pursuant to Ind. Code § 5-14-3-4, exempt from public access and disclosure by Indiana law, and shall be held confidential and protected from public access and disclosure by the Commission.

10. This Order shall be effective on and after the date of its approval.

BENNETT, FREEMAN, VELETA, AND ZIEGNER CONCUR; HUSTON ABSENT:

APPROVED: FEB 14 2024

I hereby certify that the above is a true and correct copy of the Order as approved.

STATE OF INDIANA

INDIANA UTILITY REGULATORY COMMISSION

PETITION OF INDIANA-AMERICAN WATER COMPANY, INC. FOR (1) AUTHORITY TO INCREASE ITS RATES AND CHARGES FOR WATER AND WASTEWATER UTILITY SERVICE THROUGH A THREE-STEP RATE IMPLEMENTATION, (2) APPROVAL OF NEW SCHEDULES OF RATES AND CHARGES APPLICABLE TO WATER AND WASTEWATER UTILITY SERVICE, INCLUDING A NEW UNIVERSAL AFFORDABILITY RATE, (3) APPROVAL OF REVISED DEPRECIATION RATES APPLICABLE TO WATER AND WASTEWATER PLANT IN SERVICE, (4) APPROVAL OF NECESSARY AND APPROPRIATE ACCOUNTING RELIEF, (5) APPROVAL OF THE EXTENSION OF SERVICE TO AN INFRASTRUCTURE DEVELOPMENT ZONE IN MONTGOMERY COUNTY, INDIANA AND AUTHORITY TO IMPLEMENT A SURCHARGE UNDER IND. CODE § 8-1-2-46.2, AND (6) APPROVAL OF PETITIONER'S PLANS TO DEVELOP FUTURE WATER SOURCES OF SUPPLY UNDER IND. CODE § 8-1-2-23.5.	**)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)** **)**	**CAUSE NO. 45870** **APPROVED: FEB 14 2024**

CONCURRING OPINION OF COMMISSIONER SARAH E. FREEMAN

I concur in today's order and write separately to emphasize three issues of importance.

First, by encouraging and providing guidance to Petitioner to submit a redesigned Universal Affordability Tariff — rather than ordering and dictating the contents of a redesigned tariff — we acknowledge the permissive language enacted by the Indiana General Assembly in its authorization of customer assistance programs under Ind. Code § 8-1-2-46(c). I firmly believe that Petitioner is invested in improving affordability for its ratepayers and will be beyond shocked if Petitioner, in cooperation with the OUCC and CAC, does not submit a redesigned Universal Affordability Tariff in short order, and I eagerly await the opportunity to review.

Next, I write to amplify the concerns underlying our decision in Section 19.B. related to the dwindling opportunities for Indiana American ratepayers to engage in face-to-face communications with Indiana American customer service representatives. The original authority to consolidate in-person service locations and instead rely on robust shared services was logical

and supported by evidence of efficiencies and cost savings. However, this particular end game — with no in-person interactions between utility and ratepayer — was not an inevitable outcome; it was a choice. Many communities, with Gary being a leading example, suffer disproportionately when the opportunity for in-person engagement is removed. Petitioner regularly asserts its desire to be a model corporate citizen, yet it repeatedly squanders its chances to do so. As a first step, perhaps Indiana American could access the shared services of American Water to identify and develop creative uses of existing technology to connect ratepayers paying in person in physical locations directly with Indiana American customer service representatives to respond to immediate questions and concerns. A solution need not be overly complicated or require excessive resources to succeed.

Finally, I commend the relevant and useful testimony presented at the July 6, 2023 field hearing in Gary, Indiana. This field hearing stands out because the witnesses conveyed the reality of their situations within the framework of the issues presented in this proceeding and because of the constructive and practical solutions they offered Petitioner to increase and improve its presence and reputation as a corporate citizen. Of note was testimony highlighting apprenticeships as a way for Petitioner to demonstrate its commitment to its individual ratepayers and the larger community as well as a particularly elegant suggestion that Petitioner provide rain barrels to interested customers, simultaneously promoting conservation and the Indiana American brand.

CONCURRING OPINION OF COMMISSIONER DAVID E. ZIEGNER

I concur in the Order but write to emphasize a concern I have regarding the absence of the availability for customers to have face to face communications with utility personnel. Indiana American should explore innovative ways to enhance direct communications with customers who have billing and service issues.

CONCURRING OPINION OF COMMISSIONER WESLEY R. BENNETT

I concur in today's Order and the Concurring Opinion of Commissioner Freeman. In addition, I write separately to express my concern with Indiana American's compliance with Ind. Code § 13-18-26-2. This statute requires a utility applying for a wastewater treatment plant permit to certify that it has prepared and completed a LCCBA. However, the evidence demonstrates that Petitioner did not complete a full life cycle cost benefit analysis, as that term is generally understood in the engineering world. Therefore, it appears to me that Indiana American has not complied with Indiana law.

BEFORE THE PUBLIC UTILITIES COMMISSION

OF THE STATE OF HAWAII

In the Matter of the Application of HAWAII-AMERICAN WATER COMPANY For Approval of Rate Increases and Revised Rate Schedules and Rules.	)	DOCKET NO. 2021-0063
	)	DECISION AND ORDER NO. 38424

DECISION AND ORDER

By this Order,[1] the Public Utilities Commission ("Commission" or "PUC") approves an increase of $1,710,920, or approximately 17.17% over revenues at present rates for HAWC, based on a total revenue requirement of $11,739,120 for the 2022 calendar test year ("Test Year"). In so doing, the Commission, in response to HAWC's Application, filed on August 18, 2021,[2] approves the Parties' Stipulation of Settlement Agreement, filed on May 6, 2022.[3]

---

[1]The Parties in this proceeding are HAWAII-AMERICAN WATER COMPANY ("HAWC," "Applicant," or "Company") and the DIVISION OF CONSUMER ADVOCACY ("Consumer Advocate"), an ex officio party, pursuant to Hawaii Revised Statutes ("HRS") § 269-51 and Hawaii Administrative Rules ("HAR") § 16-601-62(a).

[2]"Application; Exhibits 1 through 14; Attachments; Verification; and Certificate of Service," filed on August 18, 2021 ("Application").

[3]"Stipulation of Settlement Agreement; Exhibit A; Attachments HAWC S-1 to S-10; and Certificate of Service,"

The Commission, in approving the Stipulation: (1) authorizes an across-the-board, 17.17% increase in HAWC's monthly wastewater service charges, and (2) authorizes various changes to HAWC's tariff ("Tariff No. 1"), as described herein.

Accordingly, the Commission issues this Decision and Order in accordance with HRS § 269-16(d).

I.

BACKGROUND

A.

HAWC

HAWC is a Nevada corporation, operating as a public utility in the State, that provides wastewater collection, treatment, and disposal services "to the residences, condominiums, commercial and other establishments and facilities in the Hawaii Kai community on the island of Oahu[.]"[4] HAWC's sole shareholder is American Water Works Company, Inc. ("American Water"), a Delaware corporation.[5]

---

filed on May 6, 2022 ("Stipulation"). Throughout the Stipulation, the Parties round amounts to the nearest ten dollars.

[4]Application at 2-3. HAWC also provides wastewater services to residential and commercial customers in the Mauna Lani Resort and Waimea areas on Hawaii Island; however, only the Hawaii Kai services are the subject of the instant proceeding. Id. at 2.

[5]Application at 3.

As described by HAWC in its Application:

> On Oahu, [HAWC's] collection system consists of more than 65 miles of sewer lines and seven pump stations. The system serves the community of Hawaii Kai on Oahu, an area extending from the eastern ridge of Kuliouou Valley to the Mauka side of Kalanianaole highway at Sandy Beach, up to and including the Hawaii Kai Golf Course.
>
> [HAWC's] East Honolulu Water Treatment Plant provides tertiary treatment to an average daily wastewater flow of 4.5 million gallons. The wastewater received is primarily domestic with a small component of commercial waste, largely from restaurants. The treated effluent is disinfected before it is discharged through an ocean outfall which extends one quarter mile offshore at a depth of 55 feet.[6]

HAWC's existing rate design consists of monthly service charges for: (1) Single-Family Residential Unit and Multi-Family Residential Unit classes, at a flat rate; (2) Commercial Food Service Operation, Commercial Non-Food Service Operation, and Public Authority-Other classes, based on the amount of water usage; and (3) Public Authority-Dwelling class, based on the amount of wastewater treated.[7]

---

[6]Application, Exhibit No. 14-T-200, Attachment JL 202 at 14.

[7]As described in HAWC's existing rate schedule:

> The Public Authority—Other class refers to the sewerage services provided by HAWC to the City and County of Honolulu ("City"), the State of Hawaii and other facilities (including parks, schools, fire station, and Lunalilo Home). . . .
>
> The Public Authority—Dwelling class refers to the services provided by HAWC to the City for the

B.

Application

On August 18, 2021, HAWC timely filed its Application, seeking an increase in revenues of $2,111,230 or approximately 21.05% over total revenues at present rates.[8] Based on a net operating income of $1,790,970 and average rate base of $40,188,790, HAWC estimates a 4.460% rate of return.[9]

HAWC proposes to implement its requested increase in revenues by increasing its monthly service charge for: (1) the Single-Family Residential Unit and Multi-Family Residential Unit classes by approximately 21.18%; (2) the Commercial Food Service Operation class by approximately 21.21%; and (3) Commercial Non-Food Service Operation, the Public Authority-Other, and Public Authority-Dwelling classes by approximately 21.18%.[10] The requested increase is based on an

---

> City's residential customers in Hawaii Kai, including Kuliouou Valley, Portlock, Paiko, and other areas, which fall outside of HAWC's service territory, but which are served directly by the City's sewerage system and then connected to HAWC's wastewater system for distribution and processing.

Application at 5 n.8 and n.9.

[8]Application at 4.

[9]Application at 3-4.

[10]Application at 5.

estimated total revenue requirement of $12,139,430 for the January 1, 2022, to December 31, 2022 Test Year, and an 8.05% rate of return on HAWC's average Test Year rate base of $40,188,790.[11]

Additionally, pursuant to HRS § 269-16(b) and HAR § 16-601-86, HAWC is requesting approval of proposed revisions/modifications to its Rules and Regulations, set forth in HAWC Tariff No. 1, as described in the Application and the supporting testimonies and exhibits, as follows:[12]

> (a) Amend and replace Revised Sheet 1A to reflect updated definitions to the terms "Building sewer"/"building sewer" and "Service Connection"/"service connection" in light of the proposed changes to Rule V Connections and Cut-Offs.
>
> (b) Amend and replace Revised Sheets 5 and 6 to reflect changes to Rule V Connections and Cut-Offs to more clearly delineate the customer's responsibility for the building sewer (including to install and maintain a readily accessible sewer clean-out) and HAWC's responsibility for the service connection and its sewer lines (i.e., referred to in HAWC Tariff No. 1 as the "Company's sewer").
>
> (c) Insert a new Original Sheet 15C to add a new Rule XVII for an Automatic Power Cost Adjustment Clause to address power cost recovery.
>
> (d) Amend and replace Sheet 18 with a revised Schedule of Wastewater Rates for residential, commercial and public authority customers to reflect the rates and rate structure proposed by

[11]Application, Exhibit 7 at 1.

[12]Application at 8.

> Applicant in this proceeding (Exhibit 4) to reflect HAWC's requested revenue requirement.
>
> (e) Insert a new Original Exhibit A to include a service area map to clarify and depict Applicant's authorized service area.[13]

HAWC states that, while operating costs have increased, the customer base and operating revenues have remained constant.[14] Accordingly, HAWC requests a general rate increase "to provide Applicant with a reasonable opportunity to receive sufficient revenues to cover expenses and taxes, and provide a fair rate of return on utility property that are deemed used or useful for public utility purposes."[15]

C.

Public Hearing

On November 17, 2021, a virtual public hearing was held on the requests set forth in HAWC's Application, pursuant to HRS §§ 269-12(c) and 269-16(b). At the public hearing, HAWC's representative, the Consumer Advocate, and ratepayers appeared and testified.[16] The Commission also received written

[13]Application at 8-9 (citation omitted).

[14]Application at 3.

[15]Application at 3.

[16]See Public Hearing held on November 17, 2021, located at: https://www.youtube.com/watch?v=Q_l_7wU8xx8.

comments from ratepayers.[17] In general, the ratepayers who testified or submitted written comments objected to or expressed concerns with the proposed increases in HAWC's wastewater utility rates and charges.[18]

D.

Consumer Advocate's Written Testimonies and
the Parties' Stipulation of Settlement Agreement
In Lieu of Evidentiary Hearing and Post-Hearing Briefs

On January 28, 2022, the Consumer Advocate filed a Motion for Enlargement of Time to file its direct testimonies and exhibits,[19] which the Commission granted.[20] On February 16, 2022, the Consumer Advocate filed a Motion for Second Enlargement of Time to file its direct testimonies and exhibits,[21]

[17] See, e.g., Public Comment transmittals dated November 4, 5, 16, and 24, 2021, and December 3, 2021.

[18] See Public Hearing held on November 17, 2021, located at: https://www.youtube.com/watch?v=Q_l_7wU8xx8; see also Public Comment transmittals dated November 4, 5, 16, and 24, 2021, and December 3, 2021.

[19] "Division of Consumer Advocacy's Motion for Enlargement of Time," filed on January 31, 2022.

[20] Order No. 38205, "Granting the Division of Consumer Advocacy's Motion for Enlargement of Time," filed on February 2, 2022.

[21] "Division of Consumer Advocacy's Motion for Second Enlargement of Time," filed on February 16, 2022.

which the Commission granted on February 22, 2022.[22] Hence, on February 22, 2022, the Consumer Advocate filed its direct testimonies and exhibits.[23] Thereafter, the Parties commenced settlement negotiations. On March 28, 2022, HAWC filed a request to enlarge procedural deadline dates in order to facilitate a settlement with the Consumer Advocate, which the Commission granted.[24] Then, on April 11, 2022, the Parties advised the Commission that they had reached a global settlement and also requested to remove and/or revise the remaining procedural deadlines,[25] which the Commission granted on April 14, 2022.[26] On May 6, 2022, the Parties filed their Stipulation of

[22]Order No. 38234, "Granting the Division of Consumer Advocacy's Motion for Second Enlargement of Time," filed on February 22, 2022.

[23]"Division of Consumer Advocacy's Direct Testimonies and Exhibits," filed on February 22, 2022 ("Consumer Advocate Direct Testimonies").

[24]Order No. 38291, "Granting the Hawaii-American Water Company's Request to Amend and Enlarge Procedural Deadlines," filed on March 31, 2022 ("Order No. 38291").

[25]Joint Letter From: K. Morihara and Consumer Advocate To: Commission Re: Docket No. 2021-0063: In the Matter of the Application of Hawaii-American Water Company ("HAWC") For Approval of Rate Increases and Revised Rate Schedules and Rules: "Notice of Settlement and Joint Request to Remove and/or Revise Remaining Procedural Steps," filed on April 11, 2022.

[26]Order No. 38321, "Granting the Hawaii-American Water Company's and Division and Consumer Advocacy's Request to Remove and/or Revise Remaining Procedural Steps," filed on April 14, 2022.

Settlement Agreement, therein agreeing to waive rights to an evidentiary hearing and filing of any post-hearing briefs.[27]

E.

Issues

As set forth in the Stipulated Procedural Order, the issues in this proceeding are:

1. Is HAWC's proposed general rate increase reasonable for its Hawaii Kai operations?

    a. Are the revenue forecasts for Test Year ending December 31, 2022 ("Test Year") at present rates and proposed rates reasonable?

    b. Are the projected operating expenses for Test Year reasonable?

    c. Is the projected rate base for Test Year reasonable?

    d. Is the rate of return requested fair?

2. Are HAWC's proposed tariff changes reasonable?

3. Whether any other relief (e.g. interim relief) as may be just and reasonable should be granted under the circumstances?[28]

[27] See Stipulation at 2.

[28] Order No. 38111, "Approving, with Modification, the Parties' Proposed Procedural Order," filed on December 10, 2021, Exhibit A ("Stipulated Procedural Order") at 1-2.

II.

DISCUSSION

HRS § 269-16 states in relevant part:

> **Regulation of utility rates; ratemaking procedures.** (a) All rates, fares, charges, classifications, schedules, rules, and practices made, charged, or observed by any public utility or by two or more public utilities jointly shall be just and reasonable and shall be filed with the [P]ublic [U]tilities [C]ommission. The rates, fares, classifications, charges, and rules of every public utility shall be published by the public utility in such manner as the [P]ublic [U]tilities [C]ommission may require, and copies shall be furnished to any person on request.
>
> To the extent the contested case proceedings referred to in chapter 91 are required in any rate proceeding to ensure fairness and to provide due process to parties that may be affected by rates approved by the [C]ommission, the evidentiary hearings shall be conducted expeditiously and shall be conducted as a part of the ratemaking proceeding.
>
> (b) No rate, fare, charge, classification, schedule, rule, or practice, other than one established pursuant to an automatic rate adjustment clause previously approved by the [C]ommission, shall be established, abandoned, modified, or departed from by any public utility, except after thirty days' notice to the [C]ommission as prescribed in section 269-12(b), and prior approval by the [C]ommission for any increases in rates, fares, or charges. . . . A contested case hearing shall be held in connection with any increase in rates, and the hearing shall be preceded by a public hearing as prescribed in section 269-12(c), at which the consumers or patrons of the public utility may present testimony to the [C]ommission concerning the increase. The [C]ommission, upon notice to the public utility, may:

(1) Suspend the operation of all or any part of the proposed rate, fare, charge, classification, schedule, rule, or practice or any proposed abandonment or modification thereof or departure therefrom;

(2) After a hearing, by order:

(A) Regulate, fix, and change all such rates, fares, charges, classifications, schedules, rules, and practices so that the same shall be just and reasonable;

(B) Prohibit rebates and unreasonable discrimination between localities or between users or consumers under substantially similar conditions;

(C) Regulate the manner in which the property of every public utility is operated with reference to the safety and accommodation of the public;

(D) Prescribe its form and method of keeping accounts, books, and records, and its accounting system;

(E) Regulate the return upon its public utility property;

(F) Regulate the incurring of indebtedness relating to its public utility business; and

(G) Regulate its financial transactions; and

(3) Do all things that are necessary and in the exercise of the [C]ommission's power and jurisdiction, all of which as so ordered, regulated, fixed, and changed are just and reasonable, and provide a fair return on the property of the

utility used and useful for public utility purposes.

. . . .

(d) The [C]ommission shall make every effort to complete its deliberations and issue its decision as expeditiously as possible and before nine months from the date the public utility filed its completed application; provided that in carrying out this mandate, the [C]ommission shall require all parties to a proceeding to comply strictly with procedural time schedules that it establishes. If a decision is rendered after the nine-month period, the [C]ommission shall report in writing, on paper or electronically, the reasons therefor to the legislature within thirty days after rendering the decision.

Notwithstanding subsection (c), if the [C]ommission has not issued its final decision on a public utility's rate application within the nine-month period stated in this section, the [C]ommission, within one month after the expiration of the nine-month period, shall render an interim decision allowing the increase in rates, fares and charges, if any, to which the [C]ommission, based on the evidentiary record before it, believes the public utility is probably entitled. The [C]ommission may postpone its interim rate decision for thirty days if the [C]ommission considers the evidentiary hearings incomplete. In the event interim rates are made effective, the [C]ommission shall require by order the public utility to return, in the form of an adjustment to rates, fares, or charges to be billed in the future, any amounts with interest, at a rate equal to the rate of return on the public utility's rate base found to be reasonable by the [C]ommission, received under the interim rates that are in excess of the rates, fares, or charges finally determined to be just and reasonable by the [C]ommission. Interest on any excess shall commence as of the date that any rate, fare, or charge goes into effect that results in the

> excess and shall continue to accrue on the balance of the excess until returned.[29]
>
> . . . .
>
> The Commission timely issues this final Decision and Order.[30]

A.

Parties' Stipulation of Settlement Agreement

1.

Terms and Conditions

The Parties' Stipulation represents the Parties' global settlement of all issues. In reaching their global settlement:

> The Parties agree that the following provisions of this Stipulation are binding between them with respect to the specific issues and matters to be resolved in the subject docket. In all respects, it is understood and agreed that the agreements evidenced in this Stipulation

[29]HRS § 269-16 (emphasis added).

[30]HRS § 269-16(d) requires the Commission to make every effort to complete its deliberations and issue a decision before the nine-month deadline, or in this proceeding May 18, 2022, which is calculated from the date of the completed Application, or August 18, 2022. Because the Parties did not reach a Settlement Agreement until May 6, 2022, the Parties are seeking an interim decision and order or, in lieu thereof, a final decision and order by June 17, 2022, also pursuant to HRS § 269-16(d), thereby effectively waiving the statutorily prescribed nine-month deadline. Stipulation at 87-88; see also Stipulated Procedural Order at 2 n.6 (noting that the Parties state they "will make every effort to provide the Commission with a sufficient and complete evidentiary record to render an interim decision within the ten (10) month period." Id.).

> represent compromises by the Parties to fully and finally resolve all issues in the subject docket on which they had differences, for the purpose of simplifying and expediting this proceeding, and are not meant to be an admission by any of the Parties as to the acceptability or permissibility of matters stipulated to herein. The Parties reserve their respective rights to proffer, use and defend different positions, arguments, methodologies, or claims regarding the matters stipulated to herein in other dockets or proceedings. Furthermore, the Parties agree that nothing contained in this Stipulation shall be deemed to, nor be interpreted to, set any type of precedent, or be used as evidence of a Party's position in any future proceeding, except as necessary to enforce this Stipulation.[31]

Ultimately, the Parties acknowledge that the Stipulation is subject to the Commission's review and approval, and that the Commission is not bound by the Stipulation.[32] In this regard, it is well-settled that an "agreement between the parties in a rate case cannot bind the [Commission], as the [Commission] has an independent obligation to set fair and just rates and arrive at its own conclusions."[33] With this mandate, the Commission proceeds in reviewing whether the Parties' Stipulation is just and reasonable, taken as a whole.

---

[31]Stipulation at 10.

[32]Stipulation at 2.

[33]In re Hawaiian Elec. Co., Inc., 5 Haw. App. 445, 447, 698 P.2d 304, 307 (1985).

2.

Summary

The Parties first reached agreement on HAWC's Test Year Revenues and Expenses at present rates, Average Depreciated Rate Base, and Rate of Return.[34] As a result, the Parties stipulated to an increase of $1,710,920, or approximately 17.17% over revenues at present rates for HAWC, based on a Test Year revenue requirement of $11,739,120.[35]

Once the Parties reached agreement on HAWC's Test Year revenue requirement, they then agreed to implement the stipulated increase in revenues by an equal, across-the-board percentage increase in HAWC's monthly wastewater service charges.[36]

[34]Stipulation at 11.

[35]Stipulation at 11.

[36]Stipulation at 12.

B.

Revenues

The Parties stipulate to the following estimates of HAWC's revenues at present rates:[37]

Revenues	Present Rates
Residential (Domestic)	$8,581,480
Commercial	$670,840
Public Authority—Dwelling	$626,280
Public Authority—Other	$87,800
Miscellaneous	$39,820
Late Payment Fees	$21,980
Total:	$10,028,200

The Parties' stipulated amounts for revenues at present rates incorporate HAWC's estimates, which the Consumer Advocate accepts for settlement purposes.[38]

1.

Residential

For Single-Family Residential Units and Multi-Family Residential Units, HAWC assesses a monthly, flat rate charge for

[37]Stipulation at 12-20.

[38]Stipulation at 11; see Application, Exhibit 7-1; and Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

wastewater service.[39] The Parties stipulate to $8,581,480 in Residential revenues at present rates, calculated as follows:[40]

Description	Customer Count	Monthly Charge	Residential Revenues at Present Rates
Single-Family	6,972	$67.08	$5,612,181
Multi-Family	4,335	$57.08	$2,969,302
			$8,581,480 (rounded)

HAWC's customer count for Single-Family Residential Units reflects the average number of residential customer units that received wastewater utility service in 2022, which takes into account projections for customer growth during the Test Year period due to the addition of Accessory Dwelling Units in the Hawaii Kai service area.[41] HAWC's customer counts for the Multi-Family Residential Units are based on the year-end number of residential customer units that received wastewater utility service in 2021, as there are no projections for the addition of multi-family homes during the Test Year period, based on a permit review conducted by HAWC's consultant.[42]

---

[39] See Application at 5.

[40] See Stipulation at 13-14, and Exhibit 7-1. For the: (1) Single-Family Units: $67.08 monthly service charge x 12 months x 6,972 Single-Family Units = $5,612,121; and (2) Multi-Family Units: $57.08 monthly service charge x 12 months x 4,335 Multi-Family Units = $2,969,302.

[41] Stipulation, Exhibit A at 2 and 4; see Application, Exhibit No. 14-T-200 at 16; and Exhibit No. 14-T-400 at 62-64.

[42] Stipulation, Exhibit A at 2 and 4; see Application, Exhibit No. 14-T-400 at 62-63.

The Commission finds reasonable the Parties' stipulated amount of $8,851,480 (rounded) in Residential revenues at present rates.

2.

Commercial

For Commercial Food Service and Commercial Non-Food Service, HAWC assesses a monthly charge for wastewater service that is based on the customer's water volumetric rate per thousand gallons ("TG").[43] The Parties stipulate to $670,840 in Commercial revenues at present rates, calculated as follows:[44]

Description	Water Usage (gallons)	Water Volumetric Rate	Commercial Revenues at Present Rates
10 Food Service Operation	14,100,435	$16.08 per TG	$226,735
34 Non-Food Service Operation	44,995,370	$9.87 per TG	$444,104
			$670,840 (rounded)

HAWC's estimated water usage amounts for the Commercial classes (Food Service and Non-Food Service) are based on the

[43] See Application at 5.

[44] See Stipulation at 14-15 and Exhibit A at 2 and 4. For the: (1) food service operation class: 14,100,435 gallons x $16.08 per TG = $226,735; and (2) non-food service operation class: 44,995,370 gallons x $9.87 per TG = $444,104.

actual, historical water usage data for 2020.[45] HAWC utilized this 2020 water usage data, based on the assumption that the number of customers would not change from the number of customers served in 2020.[46] In addition, the Consumer Advocate, did not propose any adjustments to the present rates.[47]

The Commission finds reasonable the Parties' stipulated amount of $670,840 (rounded) in Commercial revenues at present rates.

3.

Public Authority

For the Public Authority classification, HAWC assesses a monthly charge for wastewater service that is based on the amount of water that is processed and treated by HAWC.[48] The Parties

[45]Application, Exhibit 14-T-200 at 16-17; see Stipulation at 15.

[46]See Application, Exhibit No. 14-T-100 at 16-17. In his testimony, Mr. Jeffrey T. Linam noted the difficulties in predicting the Test Year demand based on a decline in usage in 2021 due to restrictions imposed on restaurants resulting from an emergency declaration issued by Governor David Ige on March 4, 2020, in response to the COVID-19 pandemic. See generally Governor's Emergency Proclamation for COVID-19, issued on March 4, 2020, available at: https://governor.hawaii.gov/wp-content/uploads/2Q2Q/Q3/20Q302Q-GQV-Emergency-Proclamation COVID-19.pdf

[47]See Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

[48]See Application at 5.

stipulate to $714,080 (rounded) in Public Authority revenues at present rates, calculated as follows:[49]

	Description	Treated Water (gallons)	Wastewater Treatment Rate	Commercial Revenues at Present Rates
1	Public Authority-Dwelling Customer	167,904,713	$3.73 per TG	$626,281
7	Public Authority-Other Customer	8,895,167	$9.87 per TG	$87,795
				$714,080 (rounded)

a.

Public Authority—Dwelling

The Public Authority-Dwelling customer refers to the wastewater treatment services HAWC provides to the City and County of Honolulu ("City") for the City's residential customers in Hawaii Kai, including Kuliouou Valley, Portlock, Paiko, and other areas that fall outside of HAWC's service area, but which are served directly by the City's sewerage system and then connected to HAWC's wastewater system for distribution and processing.[50]

[49]See Stipulation at 16-18, and Exhibit A at 2 and 4. For the: (1) Public Authority-Dwelling class: 167,904,713 gallons x $3.73 per TG = $626,281; and (2) Public Authority—Other class: 8,895,167 gallons x $9.87 per TG = $87,795.

[50]Stipulation at 16; Application at 5 n.10.

HAWC's estimated wastewater amount for the Public Authority-Dwelling customer is based on the actual water usage data for 2020.[51] The Consumer Advocate, in its direct testimonies, did not propose any adjustments to HAWC's projected revenues at present rates for the Public Authority-Dwelling customer.[52]

The Commission finds reasonable the Parties' stipulated amount of $626,280 (rounded) in Public Authority-Dwelling revenues at present rates.

b.

Public Authority-Other

The Public Authority-Other customers refer to the sewerage services HAWC provides to certain City and State facilities, such as parks, schools, a fire station, and Lunalilo Home.[53] HAWC's estimated wastewater amount for the Public Authority-Other customers is based on the actual water usage data for 2020.[54] The Consumer Advocate, in its direct

[51]Stipulation at 16; see Application, Exhibit 14-T-200 at 17-18 and Exhibit 1.

[52]See Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

[53]Stipulation at 17; Application at 5 n.9.

[54]Stipulation at 18; Application, Exhibit 14-T-200 at 17-18.

testimonies, did not propose any adjustments to HAWC's projected revenues at present rates for Public Authority-Other customers.[55]

The Commission finds reasonable the Parties' stipulated amount of $87,800 (rounded) in Public Authority-Other revenues at present rates.

4.

Miscellaneous

Miscellaneous revenues represent revenues HAWC receives pursuant to a license agreement with Time Warner Entertainment Company, LP, dba Oceanic Cable, which was approved by the Commission in a Decision and Order dated December 9, 2010, in Docket No. 2010-0158.[56] The Parties stipulate to $39,820 in Miscellaneous revenues at present rates.[57]

The license fee agreement includes a four percent annual increase.[58] As such, HAWC forecasted the Test Year revenues by increasing the 2020 revenues by four percent.[59]

---

[55]See Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

[56]Stipulation at 18-19; see Application, Exhibit 14-T-200 at 13.

[57]Stipulation at 13 and Exhibit A at 4.

[58]Stipulation at 19.

[59]Stipulation at 19; see Application, Exhibit 14-T-200 at 13.

The Consumer Advocate, in its direct testimonies, did not propose any adjustments to HAWC's projected revenues at present rates for Miscellaneous revenues.[60]

The Commission finds reasonable the Parties' stipulated amount of $39,820 in revenues at present rates generated from Miscellaneous fees.

5.

Late Payment Fees

Late Payment Fees represent fees received by HAWC on delinquent account balances and revenues from insufficient funds charges assessed on returned checks rendered for payment of wastewater service provided to customers.[61] The Parties stipulate to $21,980 in Late Payment Fee revenues at present rates.[62]

HAWC used the two-year average historical amounts from 2018-2019, because in 2020, the Commission suspended termination or disconnection of regulated utility services, as well as the imposition of late payment fees, due to the impacts of the COVID-19 pandemic.[63] The Consumer Advocate, in its direct

[60]See Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

[61]Stipulation at 19; Application, Exhibit T-14-200 at 13.

[62]Stipulation at 13 and Exhibit A at 4.

[63]Stipulation at 19; Application, Exhibit 14-T-200 at 13-14.

testimonies, did not propose any adjustments to HAWC's projected revenues at present rates for Late Payment Fee revenues.[64]

The Commission finds reasonable the Parties' stipulated amount of $21,980 in revenues at present rates generated from Late Payment Fees.

6.

Total Revenues at Present Rates

The Commission finds reasonable the Parties' stipulated amount of $10,028,200 (rounded) in revenues at present rates.

C.

Expenses

HAWC's Test Year expenses consist of the following categories: (1) Operating and Maintenance; (2) Depreciation; (3) Amortization; (4) Taxes Other Than Income Taxes; and (5) Federal and State Income Taxes.

[64] See Consumer Advocate Direct Testimonies, CA-T-1 at 21 and Exhibit CA-104.

1.

Operating and Maintenance

The Parties stipulate to the following Operating and Maintenance ("O&M") expense amounts at present rates:[65]

Description	Present Rates
Labor	$1,198,800
Purchased Power (Electricity)	$569,110
Chemicals	$264,710
Operating Expense	$215,350
Maintenance	$346,560
Waste Disposal	$342,470
Customer Accounting	$2,840
Uncollectible Expense	$68,190
Insurance (Other Than Group)	$163,160
Pensions and Benefits	$271,860
Regulatory Expense	$190,940
Rents	$56,340
Other Accounting and General and General Office Expenses	$367,980
Support Services	$584,500
	$4,642,810

In general, HAWC's O&M expense amounts (excluding the Regulatory expense) represent the normalized level of funds it will expend during the Test Year to operate and maintain its wastewater treatment system to provide collection, treatment, and disposal services to its customers in the Hawaii Kai area on the island of Oahu.[66] Regulatory expense, meanwhile, represents the reasonable amount of expenses incurred by HAWC to

[65]Stipulation, Exhibit A at 3.

[66]See Stipulation at 20-55.

process this rate case, as agreed-upon by the Parties, amortized over a three-year period.[67]

a.

Labor

For the Test Year period, HAWC has a total of 14 employees for its Hawaii Kai operations, comprised of ten union employees and four non-union employees, of which three are salaried and one is hourly.[68]

HAWC's Labor costs are comprised of base salaries and wages, Annual Performance Plan Compensation ("APPC"), and overtime, holiday pay, swing shift, Sunday premium, and standby compensation.[69] HAWC's Labor-related expenses are also affected by two allocations, which reduce the level of expenses incurred by HAWC for its Hawaii Kai operations: (1) an allocation to HAWC's Hawaii Island operations; and (2) an allocation to capitalized labor.[70]

[67]See Stipulation at 49-51.

[68]Stipulation at 22; Application, Exhibit No. 14-T-200 at 20.

[69]Stipulation at 20.

[70]Stipulation at 20-21.

The Parties stipulate to $1,198,800 (rounded) in Labor expense at present rates, comprised as follows:[71]

Base Salaries and Wages	$1,234,390
APPC	$34,453
Overtime, Holiday Pay, Swing Shift, Sunday Premium, and Standby Compensation	$160,900
Total Gross Labor Cost	$1,395,733
Allocation to Hawaii Island Operations	($34,010)
Capitalized Ratio (14.11%)	($196,938)
Total Net Salaries and Wages expense	$1,198,795

Base Salaries and Wages. HAWC's union employees Test Year salaries and wages were calculated by using the wage rates as of June 2021, applying a 2.5% increase, effective July 1, 2021, pursuant to the terms of the current collective bargaining agreement, and then applying an estimated prospective increase of 3.0%, to be effective July 1, 2022.[72] For non-union employees, the current salaries and wages as of June 2021 were increased by 3.1%, effective March 1, 2022.[73] A total of 2080 hours was used to calculate base pay for both union and non-union hourly employees.[74] The Consumer Advocate did not

[71]Stipulation at 20-30 and Exhibit A at 5.

[72]Stipulation at 23; Application, Exhibit No. 14-T-200 at 20-21.

[73]Stipulation at 23; Application, Exhibit No. 14-T-200 at 21.

[74]Stipulation at 23; Application, Exhibit No. 14-T-200 at 21.

propose any adjustments to the base salaries and wages expense proposed by HAWC.[75]

The Commission finds reasonable the stipulated base salaries and wages amount of $1,234,390.

Annual Performance Plan Compensation. HAWC explains that performance-based compensation, provided under its Annual Performance Plan ("APP"), is an integral part of an employee's total compensation that is necessary to attract and retain qualified employees.[76]

HAWC indicates that "[e]mployee compensation is a necessary cost of providing utility service. Therefore, it should be assessed through the same lens as other necessary operating costs: if it is prudently incurred and reasonable in amount, relative to what the industry pays for the same services, it should be recoverable through rates."[77] HAWC calculated the APP cost by multiplying each employee's APP rate, according to position and ranging from 3.0% to 20.0%, by their base annual wages.[78] HAWC explains that eligibility for the APP is limited to certain

[75]Stipulation at 24; Consumer Advocate Direct Testimonies, CA-T-1 at Exhibit CA-110.

[76]Application, Exhibit No. 14-T-200 at 24 and Exhibit No. 14-T-100 at 15-16.

[77]Application, Exhibit No. 14-T-100 at 16.

[78]Application, Exhibit No. 14-T-200 at 23.

exempt employees; however, HAWC is also requesting to extend this benefit to its union employees for the Test Year at a rate of 3.0%.[79] As a result, HAWC proposed a total APPC of $491,003 for the Test Year.[80]

The Consumer Advocate, however, proposed to adjust HAWC's projected APPC, noting that such cost should not be passed on to ratepayers because "utility employees should be responsible for fulfilling their duties at the highest level possible and bonuses or incentive compensation should not be required and that, if the estimated incentive compensation is included in test year revenue requirements and the performance levels are not met in any given year, the amount included in revenue requirements would simply increase the profit for the utility that year."[81] Thus, the Consumer Advocate sought to cap or limit the APPC to ten percent for all employees under the APPC that exceed that limit and remove costs related to the APPC goals for Financial Growth, which accounts for 50% of HAWC's total goals.[82]

---

[79]Application, Exhibit No. 14-T-400 at 40 and Exhibit No. 14-T-200 at 23.

[80]Stipulation at 24; Application at Exhibit 7-2.

[81]Consumer Advocate Direct Testimonies, CA-T-1 at 26-28.

[82]Stipulation at 24; Consumer Advocate Direct Testimonies, CA-T-1 at 27-28.

For purposes of global settlement, the Parties stipulate to an APPC amount of $34,453 at present rates. The Commission finds reasonable the stipulated APPC amount of $34,453.

Overtime, Holiday Pay, Swing Shift, Sunday Premium, and Standby Compensation. The Parties' estimated overtime pay by using the three-year average number of overtime hours from 2018 to 2020 for each eligible overtime employee, multiplied by the applicable forecasted hourly Test Year overtime pay rate for each position.[83] The Parties estimate of $27,457.50 in standby pay for HAWC's union employees is calculated based on the same methodology, utilizing the average number of standby hours from 2018 to 2020, 6,656, plus an additional 666 hours, depending on the position, multiplied by the applicable standby rate of $3.75 per hour.[84] HAWC determined it to be prudent to include an additional 666 standby hours annually to cover situations where more than one staff member is assigned to such duty.[85] The Consumer Advocate proposed an adjustment to reduce the number of standby hours by 666 hours, which HAWC agreed to, for purposes of settlement.[86]

[83]Stipulation at 27; Application, Exhibit No. 14-T-200 at 22.

[84]Stipulation at 27-28; Application, Exhibit No. 14-T-200 at 22 and 14-T-400 at 37-38.

[85]Stipulation at 27-28; Application, Exhibit No. 14-T-200 at 22 and 14-T-400 at 37-38.

[86]Stipulation at 28; Consumer Advocate Direct Testimonies, CA-T-1 at 28-89.

The Parties stipulate to $160,900 for the Test Year for overtime, holiday pay, swing shift, Sunday premium, and standby compensation.[87] The Commission finds reasonable the stipulated Test Year overtime holiday pay, swing shift, Sunday premium, and standby compensation expense amount of $160,900.

Allocation to Hawaii Island Operations. Because two non-union employees, the Senior Manager of Operations and Operations Specialist, support HAWC's Hawaii Kai, Mauna Lani, and Waimea operations, an allocation is required to reflect the labor-related costs associated with the support these employees provide to HAWC's Hawaii Kai operations.[88] The Parties stipulate to a labor allocation of $34,010, based on the stipulated base salaries and wages and APPC for the Senior Manager of Operations and Operations Specialist.[89]

The Commission finds reasonable the Parties' stipulated amount for labor allocation for HAWC's Mauna Lani and Waimea operations.

Capitalized Ratio. The capitalization ratio represents the percentage of labor costs charged to capital improvement

[87]Stipulation at 28-29.

[88]Application, Exhibit No. 14-T-200 at 25-26; see Stipulation at 20-21 (noting HAWC's acquisition of Waimea Wastewater Company, Inc., in June 2020).

[89]Stipulation, at 26-27 and Exhibit A at 5.

projects in each year.[90] HAWC proposed use of the 2020 capitalization ratio of 14.11%, because it "provides a reasonable projection of the capitalized labor and related costs because the Company anticipates continued use of internal manpower to execute capital improvements consistent with capitalization in 2020."[91] The Consumer Advocate did not propose adjustments to HAWC's capitalization ratio.[92]

The Parties stipulate to normalized labor costs for the Test Year of $1,395,733 and a capitalization ratio of 14.11%, resulting in $196,938 being charged to capital in the Test Year.[93] The Commission finds the Parties' calculation of HAWC's labor capitalization allocation factor to be reasonable.

Total Net Labor. The Parties' estimate of gross Labor expense of $1,429,743, minus the amounts allocated to HAWC's Hawaii Island operations and capitalized labor, results in $1,198,800 (rounded) in net Labor expense at present rates.[94] Based on the overall settlement agreement, the Commission finds

---

[90]Stipulation at 29.

[91]Stipulation at 20 n.24 (noting the capitalization ratio is computed as 14.11%, but also shown as 14.1% in the Application); Application, Exhibit No. 14-T-200 at 24.

[92]Stipulation at 29; Consumer Advocate Direct Testimonies, CA-T-1 at 29.

[93]Stipulation at 30.

[94]Stipulation at 21-22 and 30.

reasonable the Parties estimate of $1,198,800 (rounded) in net Labor expense at present rates.

b.

Purchased Power

Purchased Power is comprised of expenses for electricity to operate its wastewater treatment plant and seven pump stations.[95] HAWC proposed a Purchased Power expense of $472,923 for the Test Year, based on the total kilowatt hour ("kWh") usage and cost per kWh through March 2021 for the wastewater treatment plant, pump station #3, and the remaining pump stations, which was then adjusted by a CPI-U Index of 2.3% for 2022.[96] The Consumer Advocate proposed the removal of the 2.3% CPI-U increase (a reduction of $10,633), because it finds that such inflation adjustments are not known and measurable and should not be used for ratemaking purposes.[97]

HAWC indicated that it has been able to reduce the level of power needed for its operations through the addition of a

[95]Stipulation at 32; Application, Exhibit No. 14-T-200 at 32.

[96]Stipulation at 32; Application, Exhibit 7-3 and Exhibit No. 14-T-200 at 33-34. HAWC indicates that the use of the CPI-U inflation factor is based on HECO historically initiating a new rate case every few years. See Application, Exhibit T-14-200 at 33.

[97]Consumer Advocate Direct Testimonies, CA-T-1 at 31-32.

photovoltaic system, implementation of ultraviolet disinfection, and the addition of a more efficient aeration system for its secondary treatment process.[98] However, HAWC subsequently highlighted the availability of actual 2022 data for electricity expenses, which demonstrated an increase in the cost per kWh of electricity, due to increases in oil prices resulting from the situation between Russia and Ukraine.[99]

The Parties stipulate to a Purchased Power expense of $569,110 (rounded) for the Test Year period, which reflects: (1) the average kWh usage for the plant and pump stations using data from the electric bills through February 2022; and (2) the average cost per kWh using data from the January and February 2022 electric bills.[100]

The Commission finds reasonable the stipulated amount of $569,110 in Purchased Power expense at present rates.

[98]Application, Exhibit No. 14-T-200 at 33 and Exhibit No. 14-T-400 at 5 and 8-9.

[99]Stipulation at 33-34.

[100]Stipulation at 34 and Exhibit A at 3. The Parties also advise that inadvertent errors in the historical data were corrected to be consistent with copies of electric bills provided in HAWC response to CA-IR-4. See Stipulation at 34.

c.

Chemicals

The Chemicals expense includes "the costs of chemicals that are used to process and treat the wastewater generated by HAWC's customers."[101] HAWC utilizes three main chemicals as part of its wastewater treatment and processing operations: hypochlorite, polymer, and ferric chloride.[102] HAWC utilized the 52-month historical average for January 2017 through August 2021 for forecasting the annual average usage of ferric chloride and the 21-month historical average from August 2019 through April 2021 for forecasting the average annual usage for hypochlorite and polymer.[103] The total cost was then calculated by multiplying the average annual usage by the forecasted chemical rate for each chemical.[104]

HAWC also sought to increase the forecasted chemical expenses by inflating the current invoice price for each chemical by a CPI-U inflation factor of 2.3%,[105] which the Consumer Advocate proposed removing, thereby reducing the projected amount

[101]Application at Exhibit No. 14-T-200 at 35.

[102]Application, Exhibit No. 14-T-200 at 35.

[103]Application, Exhibit No. 14-T-200 at 35; see Stipulation at 34.

[104]Application, Exhibit 14-T-200 at 35-36.

[105]Stipulation at 34.

by $5,506.[106] Subsequently, HAWC provided actual 2022 information for each chemical purchased through December 2021, which had increased due to various impacts resulting from, among other things, the COVID-19 pandemic and the current situation between Russia and Ukraine.[107]

The Parties stipulate to $264,710 (rounded) in Chemicals expense at present rates, calculated based on the average quantity of each chemical purchased using data from the chemical invoices through December 2021 and the actual per unit cost for each type of chemical based on actual 2022 invoices and agreements with vendors.[108]

The Commission finds reasonable the Parties' stipulated amount of $264,710 (rounded) in Chemicals expense at present rates.

d.

Operations

Operations expense includes contracted services and building maintenance costs.[109] Contracted services are comprised of legal expenses, lab testing costs associated with water

[106]Consumer Advocate Direct Testimonies, CA-T-1 at 34.

[107]Stipulation at 35-37.

[108]Stipulation at 36-37 and Exhibit A at 3.

[109]Application, Exhibit No. 14-T-200 at 38.

treatment, and other contracted services that support wastewater operations, and building maintenance costs are comprised of trash removal, janitorial, and related expenses.[110]

HAWC proposed an Operations expense of $228,587 for the Test Year, based on a three-year average that was inflated by a 2.3% CPI-U factor.[111] The Consumer Advocate proposed the removal of the 2.3% CPI-U adjustment, as well as $323 for a non-recurring expense going forward for Contract Services – Temp – WT, reflecting a $13,234 reduction to the Operations expense.[112]

The Parties stipulate to $215,350 (rounded) in Operations expense at present rates, reflecting HAWC's acceptance of the Consumer Advocate's suggested adjustments.[113]

The Commission finds reasonable the Parties' stipulated amount of $215,350 (rounded) in Operations expense at present rates.

---

[110]Application, Exhibit No. 14-T-200 at 38.

[111]Stipulation at 38; Application, Exhibit No. 14-T-200 at 38-39 (noting the following adjustments during the three-year period: (1) removal of employee costs for a one-time temporary employee in 2019, as that transaction was not expected to reoccur; (2) inclusion of higher water treatment costs from 2020 that were related to work on Hawaii Kai's permit renewal because such is expected to reoccur; and (3) removal of certain legal costs associated with non-Hawaii Kai operations).

[112]Stipulation at 38; Consumer Advocate Direct Testimonies, CA-T-1 at 35-36 and Exhibit CA-113.

[113]Stipulation at 39.

e.

Maintenance

The Maintenance expense includes costs for contract services and miscellaneous maintenance costs.[114] Contract services are comprised of water treatment and administrative and general costs, and miscellaneous maintenance costs are comprised of water treatment, administrative and general, transmission and distribution, and related services.[115]

HAWC proposed a Maintenance expense of $368,630 for the Test Year, which was calculated "by removing certain 2018 maintenance costs, taking a 3-year historical average of the resulting 2018 to 2020 costs, applying a 2.5% CPI-U to the average to determine the estimated 2021 expense and applying a 2.3% CPI-U to the estimated 2021 expense."[116] However, the Consumer Advocate proposed a reduction of $22,071, which reflects the normalized level of costs for each Maintenance expense after all CPI-U adjustments are removed and the costs are averaged out for the periods 2019-2020 and estimated for 2021.[117]

---

[114]Stipulation at 39.

[115]Stipulation at 39.

[116]Stipulation at 39; see also Application, Exhibit No. 14-T-200 at 31.

[117]Consumer Advocate Direct Testimonies, CA-T-1 at 35 and Exhibit CA-114; Stipulation at 39-40.

The Parties stipulate to $346,560 (rounded) in Maintenance expense at present rates.[118]

The Commission finds reasonable the Parties' stipulated amount of $356,560 (rounded) in Maintenance expense at present rates.

f.

Waste Disposal

The Waste Disposal expense includes the costs associated with disposal, hauling, and an excise tax for waste disposal from the wastewater treatment process.[119]

HAWC proposed a Waste Disposal expense of $318,240 for the Test Year.[120] HAWC calculated the average annual load for hauling charges and the quantity in wet tons for disposal charges based on a 22-month average ending May 2021.[121] Then the actual

[118]Stipulation at 39-40 and Exhibit A at 9. The Parties notes that the stipulated Test Year total for 63110023 Contract Svc-Eng Maint - Water Treatment does not reflect the same 2019-2020 average used for the other Maintenance expenses but provides no explanation as to the reason for this deviation. The Commission expense accepts the total amount provided for the purposes of settlement.

[119]See Stipulation at 40; see also Application at Exhibit No. 14-T-200 at 37.

[120]Stipulation at 40.

[121]Stipulation at 40; Application at Exhibit No. 14-T-200 at 37.

current disposal rate was used and a 2.3% CPI-U increase was applied to the forecasted rate for hauling.[122] Finally, an excise tax of 4.71% was applied to the total cost for hauling charges to calculate the total Waste Disposal costs for the Test Year.[123] The Consumer Advocate proposed reducing the Waste Disposal expense by $2,060, to reflect the exclusion of the 2.3% CPI-U adjustment.[124]

During settlement negotiations, based on updated information, the Parties agreed to utilize the most current disposal volumes and prices.[125] Thus, the Parties stipulate to $342,470 (rounded) in Waste Disposal expense at present rates, based on data available through November 30, 2021, for the average number of loads and quantity of wet tons to be disposed, the actual 2022 costs from HAWC's January 2022 bill for hauling costs for wet ton disposal, and the actual 2022 cost to dispose of the wet ton, as noted in HAWC's Response to CA-IR-10.[126]

---

[122]Stipulation at 40; Application at Exhibit No. 14-T-200 at 37.

[123]Stipulation at 40; Application at Exhibit No. 14-T-200 at 37.

[124]Stipulation at 41; Consumer Advocate Direct Testimonies, CA-T-1 at 36.

[125]Stipulation at 41.

[126]Stipulation at 41-42.

The Commission finds reasonable the Parties' stipulated amount of $342,470 (rounded) in Waste Disposal expense at present rates.

g.

Customer Accounting

HAWC's expenses for Customer Accounting includes the costs of customer education-bill inserts, collection agencies, forms, shipping, postage, and printing.[127] HAWC's Test Year estimate of $3,270 was based on: (1) the three-year historical average cost for 2018-2020, increased by a 2.5% CPI-U to estimate the 2021 costs, (2) a 2.3% CPI-U applied to the estimated 2021 expense to determine the Test Year expense, and (3) excluding the cost from collection agencies and forms and postage, as these components were moved to Support Services expense in 2020.[128]

The Consumer Advocate proposed reducing the Customer Accounting expense by $431, to reflect the exclusion of the 2.3% CPI-U adjustment. The Parties stipulate to removal of the CPI-U from HAWC's Test Year estimate for a Customer Accounting expense of $2,840 (rounded).

[127]Stipulation at 42.

[128]Stipulation at 42

The Commission finds reasonable the Parties' stipulated amount of $2,840 (rounded) in Customer Accounting expense at present rates.

h.

Uncollectible-Allowance for Bad Debt Expense

In determining the Test Year Bad Debt expense, HAWC multiplied the Test Year revenue requirement by an uncollectible factor of 1.00%.[129] The uncollectible rate is based on HAWC's 2020 Bad Debt expense divided by 2020 operating revenues, resulting in HAWC's estimated Bad Debt expense of $100,280 at present rates and $121,390 at proposed rates.[130]

However, the Consumer Advocate contended that 2020 expenses included $58,053 of COVID-19 pandemic related write-offs that should be considered non-recurring in nature and extraordinary.[131] As such, the Consumer Advocate removed the COVID-19 pandemic related write-offs and used a three-year average

[129]See Stipulation at 44; Application, Exhibit No. 14-T-200 at 30.

[130]Stipulation at 43; Application, Exhibit No. 14-T-200 at 30.

[131]Stipulation at 43.

of the uncollectible rate or 0.34%.[132] This results in the Consumer Advocate's Test Year estimate of $34,764.[133]

HAWC disagreed with the Consumer Advocate that its related write-offs of $75,797 are approximately $17,000 more than its 2020 write-offs and that it should be allowed to utilize the 1% rate.[134] For settlement purposes, the Parties agreed to the use of the full year 2021 Bad Debt expense percentage of 0.68%, resulting in a Test Year Bad Debt (i.e. Uncollectible) expense of $68,190 (rounded) at present rates and $79,820 (rounded) at proposed rates.[135]

The Commission finds the stipulated amounts for Test Year Bad Debt or Uncollectible expense of $68,190 (rounded) under present rates and $79,820 (rounded) under proposed rates reasonable.

[132]Stipulation at 44; Consumer Advocate Direct Testimonies, CA-T-1 at 38.

[133]Stipulation at 44; Consumer Advocate Direct Testimonies, CA-T-1 at 38.

[134]Stipulation at 44.

[135]Stipulation at 45.

i.

Insurance Other Than Group

Annual premiums for property, general liability, excess liability, auto liability, and workers' compensation comprises 96% of the Insurance Other Than Group ("IOTG") expense, with the remaining 4% comprised of other policy coverage for directors and officers, cybercrime, consult fee, employment practices, fiduciary, crime, travel, and special contingency risk policies.[136] HAWC proposed a Test Year IOTG expense of $153,630, calculated using premiums for 2021 inflated by the CPI-U factor of 2.3%.[137]

Consistent with adjustments made to other expenses, the Consumer Advocate proposed removal of the CPI-U factor from Test Year amount, thereby reducing HAWC's proposal by $2,719.[138] For settlement purposes, HAWC agreed to remove the 2.3% CPI-U factor for 2022 and the Parties stipulated to a Test Year amount of $163,160 (rounded).[139]

The Commission finds reasonable the Parties' stipulated amount of $163,160 (rounded) for IOTG expense at present rates.

---

[136]Stipulation at 45; Application, Exhibit No. 14-T-200 at 26.

[137]Stipulation at 45.

[138]Stipulation at 46; Consumer Advocate Direct Testimonies, CA-T-1 at 39.

[139]Stipulation at 46-47.

j.

Pensions and Benefits

HAWC indicates that it forecasted the Pension and Benefits expense based on its allocated portion of American Water's total actual 2021 costs according to ASC 715.[140] American Water determines the pension costs to be allocated to HAWC for each year.[141] Further, HAWC explains that a capitalization rate of 14.1% was applied to the service cost portion of the pension and benefits, which resulted in HAWC's proposed Test Year Pensions and Benefits expense of $269,650.[142]

The Consumer Advocate proposed a Test Year estimate of $271,545, based on adjustments to: (1) reduce HAWC's Defined Compensation Plan Expense and Cap Credits to correspond to adjustments made in labor expenses (i.e., standby compensation and allocated a portion of the adjustment to capital using the 14.11% capitalization ratio); (2) reduce HAWC's Employee Stock Purchase Plan expense by the composite payroll tax rate of 7.3339%; (3) remove the 2.3% CPI-U on Other Welfare – Natural Account; and (4) correct an error in the Post-Employment Benefits Other

[140]Stipulation at 47; Application, Exhibit No. 14-T-200 at 29.

[141]See Application, Exhibit 7-11 and Exhibit No. 14-T-200 at 29.

[142]See Stipulation at 47; and Application, Exhibit No. 14-T-200 at 24-25 and 29.

than Pensions ("PBOP") expense and PBOP capitalized expense portions.[143]

The Parties stipulated to a Test Year Pension and Benefits expense of $271,860 (rounded), after HAWC agreed not to oppose the 2.3% CPI-U for settlement purposes and explained that the Defined Compensation Plan is based on an employee's base compensation, which does not include Standby Pay, and the Employee Stock Purchase Plan is not subject to payroll tax but is based on an employee's base compensation, which was not adjusted by the Consumer Advocate.[144]

The Commission finds reasonable the Parties' stipulated amount of $271,860 (rounded) for the Pension and Benefits expense at present rates.

k.

Regulatory Expense

The Regulatory expense represents the amortized Test Year costs associated with consultant and legal services, as well as labor costs for American Water personnel assisting with this rate case.[145] HAWC proposed a Regulatory expense of $765,705,

[143]Stipulation at 47-48; Consumer Advocate Direct Testimonies, CA-T-1 at 41-42.

[144]Stipulation at 48.

[145]Stipulation at 49.

amortized over a three-year period, or $255,240 (rounded) for the Test Year.[146] HAWC stated that the proposed three-year amortization period reflects the expected period before filing of its next rate case, as it anticipates more regular and frequent filings in the future.[147] HAWC's Regulatory expense is comprised of the following:[148]

Preparation and Filing	$275,772
Discovery and Settlement	$331,148
Hearings and Briefing	$158,785
Total Rate Case Expense	$765,705

The Consumer Advocate proposed to reduce consultant fees by $100,000, claiming American Water personnel could provide such services instead, and to amortize the expense over a five-year period.[149] HAWC initially disagreed with the Consumer Advocate's adjustments; however, the Parties ultimately agreed to (1) utilize a three-year amortization period; (2) a surrogate amount of $168,250 for work to be performed by consultants and

[146]Stipulation at 49; Application, Exhibit No. 14-T-100 at 19-20.

[147]Stipulation at 49; Application, Exhibit No. 14-T-100 at 22-23.

[148]Stipulation at 49; Application, Exhibit No. 14-T-100 at 19-20.

[149]Stipulation at 49; Consumer Advocate Direct Testimonies, Exhibit CA-T-1 at 41-42.

American Water personnel; and (3) a total of $153,785 for Hearings and Briefings.[150]

The Parties stipulate to a total Regulatory expense of $572,817 amortized over a three-year period, resulting in a Test Year expense of $190,940 (rounded).[151] The Commission finds reasonable the Parties' stipulated amount of $190,940 (rounded) for the Test Year period, based on a total Regulatory expense amount of $572,817, amortized over a three-year period.[152]

l.

Rents

The Rents expense includes a base rate for office lease, electricity charges, and various taxes.[153] HAWC proposed a Rents expense of $57,860, based on the actual recorded expense for 2018-2020, year-to-date through June 30, 2021, and the projection for 2021 and the Test Year, which utilized actual contract costs for its lease with the Hawaii Kai Town Center, and actual 2021 tax rates to calculate various taxes.[154] HAWC also used the

[150]Stipulation at 49-51.

[151]Stipulation at 51.

[152]Stipulation at 51 and Exhibit A at 3 and 15.

[153]Application, Exhibit No. 14-T-200 at 31.

[154]Stipulation at 51; Application, Exhibit No. 14-T-200 at 31.

12-month average of actual costs ending December 31, 2020, to forecast electricity charges.[155]

HAWC subsequently adjusted the Rent expense to correct an error in previous calculations regarding tax for electricity.[156] The Consumer Advocate accepted HAWC's revised position, which reflected the total amount of $56,432, and the Parties stipulate to a Rents expense of $56,340 (rounded), which accurately reflected the additional reduction of $90 associated with an electricity tax calculation error.[157]

The Commission finds reasonable the Parties' stipulated amount of $56,340 (rounded) in Rents expense at present rates.

m.

Other Accounting and General and General Office Expenses

The Other Accounting and General ("A&G") and General Office expenses consist generally of telephone and cell phone costs, employee expenses, software licenses, lab supplies, transportation, contract services, and other A&G expenses.[158]

[155]Stipulation at 51; Application, Exhibit No. 14-T-200 at 31-32.

[156]Stipulation at 51; HAWC Response to CA-IR-15(b) and Attachment CA-IR-15(b) (Part 3).

[157]Stipulation at 52; see also HAWC Response to CA-IR-15(b) and Attachment CA-IR-15(b) (Part 3).

[158]Stipulation at 52; Application, Exhibit No. 14-T-200 at 39.

HAWC proposed a Test Year A&G and General Office expense of $381,270, which was based on a three-year average for 2018 to 2020, adjusted for inflation using the CPI data for most of the expense items.[159]

The Consumer Advocate proposed to adjust HAWC's request by $13,291, using a three-year (actual 2019 and 2020 and estimated 2021) and two-year (actual 2020 and estimated 2021) average, varying based on the type of expense, as well as reductions relating to Community Relations and Company Dues.[160] HAWC did not oppose the Consumer Advocate's adjustments for the purposes of settlement.[161]

The Parties stipulate to $367,980 (rounded) in A&G and General Office expense at present rates.[162] In support thereto, the Parties explain that the respective amounts for each of the general office accounts are based on HAWC's 2010 historical, actual costs, as adjusted by the Honolulu CPI-U inflationary factor of 2.3%.

---

[159]Application, Exhibit No. 14-T-200 at 39; see Stipulation at 52.

[160]Stipulation at 52-53; Consumer Advocate Direct Testimonies at 44-45.

[161]Stipulation at 53.

[162]Stipulation at 53.

The Commission finds reasonable the Parties stipulated amount of $367,980 (rounded) in A&G and General Office expense.

n.

Support Services

The Support Services expense is comprised of costs:

> [A]llocated to HAWC by American Water for services that are provided to the State related to general operational functions such as finance, technology and innovation, customer service, human resources, engineering, supply chain and regulatory services, and include certain specific functions such as environmental compliance, communications, accounting, internal audits, treasury, legal and governance, health and safety, and risk management services. Access to these services allows HAWC to achieve efficiencies and economies of scale that would not otherwise be available. HAWC has access to the full range of Service Company resources but, as discussed below, HAWC is allocated only 0.31% of Service Company's allocated costs.[163]

HAWC proposed a Support Services expense of $595,070 for the Test Year.[164] The Consumer Advocate proposed a reduction of $10,567, recommending the removal of CPI-U inflation costs of 2.40% for certain expenses and utilization of a three-year average for all other expenses.[165]

---

[163]Application, Exhibit No. 14-T-100 at 23; Stipulation at 54.

[164]Stipulation at 54.

[165]Consumer Advocate Direct Testimonies, CA-T-1 at 47 and Exhibit CA-123; Stipulation at 55.

While the Parties stipulate to a Test Year Support Services expense amount of $584,500 (rounded) at present rates, HAWC maintains that its non-opposition to the Consumer Advocate's position "is not to be construed as HAWC agreeing to the justification for the Consumer Advocate's proposed disallowance or calculations."[166]

Noting HAWC's representations, the Commission finds reasonable the Parties' stipulated amount of $584,500 (rounded) for the Support Services expense at present rates.

2.

Depreciation

> Test year depreciation expense represents the annual depreciation of Utility Plant-In-Service ("UPIS") less the annual amortization of the contributions in aid of construction ("CIAC") received to fund the cost of certain utility plant. Applicant's depreciation expense is comprised of district general depreciation, corporate general depreciation less allocation of corporate depreciation to the Hawaii [I]sland operations and the amortization related to the CIAC.[167]

HAWC proposed a Test Year Depreciation expense of $2,685,740 (rounded).[168] In determining this amount, HAWC hired Alliance Consulting Group to review a prior depreciation study and

[166]Stipulation at 55.

[167]Stipulation at 55-56.

[168]Stipulation at 56.

determine if, based on the plant addition activity, retirement activity, the cost of removal, net of salvage activity, and any other considerations occurring since the prior study was completed, any depreciation rates required adjustment.[169] The Consumer Advocate recommended reducing the Depreciation expense total by $23,351, which represents the adjusted UPIS total of $709,753 multiplied by the composite depreciation rate of 3.29%.[170]

The Parties stipulate to a Test Year Depreciation expense amount of $2,644,430 (rounded) at present rates.[171] Based on the Parties' agreed-upon average Net Plant-in-Service balance for the Test Year (see Section II.D.1, Net Plant-in-Service), the Commission finds reasonable the Parties' estimate for the Depreciation expense.

[169]Stipulation at 56; Application, Exhibit No. 14-T-200 at 42-43.

[170]Consumer Advocate Direct Testimonies, CA-T-1 at 12 and 49.

[171]See Stipulation at 57 and Exhibit A at 19. The Commission notes an error in the amount stated in the Stipulation at page 57 ($2,664,430), which does not accurately reflect the calculated total of $2,644,430 (rounded), in Stipulation, Exhibit A at page 19.

3.

Amortization

HAWC's proposed Amortization expense of $70,000 (rounded) includes amortization of the costs of: (1) the Zone of Mixing ("ZOM") Dilution Analysis Study ($58,417 annually) and the Allowance of Funds Used During Construction ("AFUDC") Equity Gross-up ($11,582 annually).[172] In Decision and Order No. 37522, in Docket No. 2020-0188, the Commission approved HAWC's request to amortize the cost of the ZOM Dilution Analysis Study, which was required by the State of Hawaii Department of Health in order to renew its National Pollutant Discharge Elimination System ("NPDES") permit, over a five-year period, from 2020 to 2025, while the current NPDES permit is effective.[173] Regarding the AFUDC Equity Gross-up, HAWC explains:

> When the Financial Accounting Standards Board (FASB) adopted FAS 109 to [implement a] new reporting standard for the effects of income taxes, HAWC established a regulatory asset on its balance sheet to amortize the tax gross up associated with AFUDC equity. The amortization of the regulatory asset represents the amount of income taxes that used to result from the permanent difference before the adoption of FAS 109. FAS 109 required AFUDC Equity to be a temporary difference for tax purposes. Prior to FAS 109, there was no tax impact associated with AFUDC equity. However,

[172]Stipulation at 57; Application, Exhibit No. 14-T-200 at 43.

[173]Stipulation at 57-58 (citing Decision and Order No. 37522, Docket No. 2020-0188, filed on December 31, 2020 ("D&O No. 37522")); Application, Exhibit 14-T-200 at 43.

> with FAS 109, HAWC requests recovery of the amortization in rates, which results in the same net utility operating income that would have occurred before the adoption of FAS 109. This is a new component of the revenue requirement because HAWC failed to request it in the last general rate case.[174]

The Consumer Advocate did not propose any adjustments to HAWC's proposed Amortization expense.[175]

Based on the Commission's approval in D&O No. 37522 to amortize the costs of the ZOM Dilution Analysis Study and the record provided regarding the AFUDC Gross-Up, the Commission approves as reasonable the Amortization expense of $70,000 (rounded).

4.

Taxes Other Than Income Taxes

HAWC's Taxes Other Than Income Taxes consist of the following categories: (1) Hawaii PUC fee of 0.5% that is applied to present and proposed revenues, excluding uncollectible expenses; (2) payroll taxes, calculated based on the forecasted payroll cost; and (3) Public Service Company Tax ("PSCT") that is calculated by multiplying present and proposed revenues by the

[174]Application, Exhibit No. 14-T-200 at 43-44; see also Stipulation at 58.

[175]Consumer Advocate Direct Testimonies, CA-T-1 at 50.

current rate of 5.885%.[176] HAWC proposed a total of $856,950 (rounded) for Test Year Taxes Other Than Income Taxes at present rates.[177]

The Consumer Advocate's adjustment included use of the same PUC fee and PSCT rates as HAWC, but applied its own calculation for revenues at present and proposed rates and the composite payroll tax rate of 5.6823%, applied to the Consumer Advocate's projected APPC and standby compensation calculations.[178] Based on the settlement reached on the APPC and standby compensation, as well as other revenue requirement differences, the Parties stipulate to the Taxes Other Than Income Taxes under present rates of $720,640 (rounded) and $829,820 (rounded) under proposed rates.[179]

[176]Stipulation at 58-59; Application, Exhibit No. 14-T-200 at 44-45.

[177]Stipulation at 58; Application at Exhibit 7-18.

[178]Stipulation at 59; Consumer Advocate Direct Testimonies, CA-T-1 at 51.

[179]Stipulation at 59.

The Commission finds reasonable the Parties' stipulated amounts for the PSCT and the PUC Fee, calculated as follows:[180]

Present Rates

PSCT:	5.885% x $10,028,200	= $590,160
PUC Fee:	0.50% x $9,960,010*	= $49,800
		$639,960

*Excludes the Allowance For Bad Debt.

Proposed Rates

PSCT:	5.885% x $11,739,120	= $690,847
PUC Fee:	0.500% x $11,659,300*	= $58,297
		$749,144

*Excludes the Allowance For Bad Debt.

The Parties also stipulate to payroll taxes in the total amount of $80,683.[181] The Commission finds reasonable the Parties estimate for payroll taxes.

In sum, the total amounts for Taxes Other Than Income Taxes are as follows:[182]

Present Rates		Proposed Rates	
PSCT:	$590,160	PSCT:	$690,847
PUC Fee:	$49,800	PUC Fee:	$58,297
Payroll taxes:	$80,683	Payroll taxes:	$80,683
	$720,640 (rounded)		$829,820 (rounded)

[180]Stipulation, Exhibit A at 21.

[181]Stipulation, Exhibit A at 21.

[182]Stipulation, Exhibit A at 21.

5.

Income Taxes

The Parties calculated Income Taxes using the current statutory corporate income tax for Federal of 21.00% and State of 6.40%, respectively.[183] To that amount, the Parties included Deferred Income Taxes and HAWC's Amortization of the Excess Accumulated Deferred Income Taxes ("ADIT") for the Stub Period and the On-Going balances, which were the result of the Tax Cuts and Jobs Act of 2017 ("TCJA") and the corresponding reduction to the Federal income tax rate.[184]

While the Parties agreed on the tax rates and methodology used to compute income taxes, different outcomes were the result of differing revenue and expense projections.[185] Pursuant to the agreement reached on revenue requirements, there are no differences in the projected Income Taxes at present and proposed rates for the Test Year, and the Parties stipulate to a Test Year Income Tax expense of $103,210 (rounded) under present rates and $517,530 (rounded) under proposed rates.[186]

---

[183]Stipulation at 60.

[184]Stipulation at 60-61 and Exhibit A at 22-23; see Application, Exhibit No. 14-T-500 at 6-10.

[185]Stipulation at 62.

[186]Stipulation at 62.

The Commission finds reasonable the Parties' stipulated amounts for Income Taxes at present and proposed rates.

6.

Total Expenses

The Commission finds reasonable the Parties' total estimates of $8,077,880 in expenses at present rates, and $8,198,690 in expenses at proposed rates.

D.

Rate Base

The Parties stipulate to the use of an average Test Year rate base, which is consistent with the Commission's past practice.[187] The Parties set forth the agreed-upon calculations for HAWC's Average Depreciated Rate Base of $38,409,740 (rounded), comprised of the following:[188]

[187]See, e.g., Docket No. 2010-0313, Decision and Order, filed on November 21, 2011 (the use of an average test year rate base is consistent with the Commission's past practice).

[188]Stipulation at 64 and Exhibit A at 24.

Description	Amount
Plant-in-Service	$83,120,114
Accumulated Depreciation	($40,577,501)
Net Plant-in-Service	$42,542,613
Net CIAC	($174,818)
Accumulated Deferred Income Taxes: Federal	($3,822,303)
Accumulated Deferred Income Taxes: State	($380,548)
Unamortized Hawaii General Excise Tax Credit	($107,136)
Working Capital	$351,930
Average Depreciated Rate Base	$38,409,738

1.

Net Plant-in-Service

In general, HAWC's net Plant-in-Service (i.e., HAWC's UPIS less accumulated depreciation) comprises its share of investments in its wastewater treatment, processing, and disposal operations.[189]

The Parties' agreement on HAWC's average net Plant-in-Service balance of $42,542,613, in effect, reflects the net investment in utility property utilized by HAWC in providing wastewater utility service during the Test Year.[190] In determining HAWC's average net Plant-in-Service balance, the Parties began with the amount of HAWC's Plant-in-Service balance as of

[189]See Application, Exhibits 8 and 81 and Exhibit No. 14-T-200 at 8.

[190]See Stipulation at 69 and Exhibit A at 24.

December 31, 2020.[191] Then, as a result of settlement discussions, the Parties included the amounts for utility plant that were added by HAWC for 2021, as well as those projects HAWC anticipates will be completed by the end of the Test Year, which included the following adjustments:

(1) Using the actual 2021 plant additions for Corporate and Hawaii Kai divisions (excluding the Consumer Advocate's adjustment of $574,752 for 2021 plant additions);[192]

(2) Removing Project No. I30-020033-02 HI-Hawaii Kai Pump Station 2 Rehabilitation ($2,922,000) and Project No. I30-020039 for the Second Clarifier 1 and 2 ($135,000), as such will not be completed in 2022;[193]

(3) Increasing the cost of Project No. I30-020038-01 Hawaii Kai SCADA Improvements to $474,000 and Project No. I30-020033-02 to $2,009,000, based on updated cost information;[194] and

[191]Stipulation at 64-66; see Application, Exhibit No. 14-T-200 at 9.

[192]Stipulation at 66-67.

[193]Stipulation at 68; Consumer Advocate Direct Testimonies, CA-T-1 at 11 (citing HAWC Response to CA-IR-8).

[194]Stipulation at 68-69; HAWC Response to CA-IR-8 and CA-IR-22(c).

(4) Applying the total 2022 plant addition adjustment to the average Plant-in-Service balance instead of applying it to the end of year Plant-in-Service balance.[195]

The Commission also inquired as to the status of the pending Test Year plant additions and HAWC provided updated information to support the anticipated completion dates of the projects, while also noting some changes to pricing and schedules that occurred since the date of the Stipulation.[196] Notwithstanding the modifications noted by HAWC, the Commission notes the Parties' global settlement of all matters in this proceeding and, based on the totality of circumstances, finds the Test Year plant additions to be reasonable.

Lastly, the Parties have stipulated to an end of year 2021 accumulated depreciation reserve amount of $38,315,349 and an end of year 2022 accumulated depreciation reserve amount of $41,830,654.[197] Accordingly, the Parties stipulate to a Test Year average accumulated depreciation balance of $40,577,501,

---

[195]Stipulation at 69 (noting that "for average plant in service balance purposes . . . only 50% of the 2022 plant adjustment balance should have been included. As a result, the Consumer Advocate should decrease its average plant in service balance by one-half (1/2) of the cost of the 2022 plant additions that will not be in service by December 31, 2022." Id.).

[196]See "Hawaii-American Water Company's Response to the Public Utilities Commission's Information Request (PUC-HAWC-IR-03); and Certificate of Service," filed on May 23, 2022.

[197]See Stipulation at 70 and Exhibit A at 24.

and deducted this amount from HAWC's Plant-in-Service balance of $83,120,114, to derive HAWC's average net Plant-in-Service balance of $42,542,613.[198]

The Commission, based on its review of the Parties' methodology and corresponding calculations, in this specific instance, finds reasonable HAWC's average net Plant-in-Service balance of $42,542,613, as agreed-upon by the Parties.

2.

Net CIAC

The Parties' agreed on HAWC's proposed Test Year average CIAC of $174,818, which the Consumer Advocate accepted.[199] In support thereto, HAWC explains:

> The balances in this category represent cost-free capital that was contributed by others to fund capital projects as shown on Exhibit 8-3. Because these capital projects are not funded by investors, these amounts are being deducted from rate base, so the Company's customers do not pay through rates a return on the assets funded by others. The calculation for CIAC started with the actual recorded balance at the end of December 2020 and then the annual amortization of CIAC was deducted from it to forecast CIAC balances for 2021 through 2022.[200]

[198]Stipulation at 69-70 and Exhibit A at 24.

[199]Stipulation at 71 and Exhibit A at 24.

[200]Application, Exhibit No. 14-T-200 at 50.

The Commission finds reasonable the Parties' estimate of $174,818 in average net CIAC balance.

3.

Accumulated Deferred Income Taxes

In Order No. 23714, in Docket No. 2006-0396, the Commission noted:

> ADIT represents the difference between the amount of income tax expense reported for book (i.e., ratemaking) and for tax purposes. In general, a regulated entity calculates and reports book depreciation expenses on a straight-line basis (i.e., straight-line depreciation), but for tax purposes, the regulated entity may write-off the same asset on an accelerated basis, i.e., accelerated depreciation. The difference in tax liabilities calculated for book and tax purposes, respectively, generates deferred income taxes. Thus, the regulated entity must pass onto its ratepayers the tax benefits received as a result of the accelerated tax depreciation practices. For ratemaking purposes, the ADIT is reflected as a reduction to rate base.[201]

The Parties calculated HAWC's Federal and State ADIT balance using the actual balance of deferred taxes as of December 31, 2020, and estimated deferred tax activity in 2021 and 2022.[202] The Consumer Advocate proposed adjustments to the ADIT

[201]Docket No. 2006-0396, Decision and Order No. 23714, filed on October 12, 2007, at 50.

[202]Stipulation at 71.

balance, based on the removal of certain 2021 and 2022 projects, as noted above.[203]

The Parties stipulated to a Test Year average ADIT of $4,202,851.[204] The Commission finds reasonable the stipulated average balances of $3,822,303 and $380,548 for Federal and State ADIT, respectively, for a total average ADIT of $4,202,851.[205]

4.

Hawaii Capital Goods Excise Tax Credit

The Parties state that the amortization of the Hawaii Capital Goods Excise Tax Credit ("HCGETC") "reflects actual credits taken by Applicant and estimated credits for the tax years 2020 through 2022, based on the plant additions for each year."[206] HAWC proposed an unamortized HCGETC of $135,982, which the Consumer Advocate accepted.[207]

Based on adjustments to stipulated plant additions for 2021 and 2022, the Parties stipulate to a Test Year average HCGETC

---

[203]Stipulation at 71; Consumer Advocate Direct Testimonies, CA-T-1 at 14.

[204]Stipulation at 71 and Exhibit A at 24.

[205]See Stipulation, Exhibit A at 31.

[206]Stipulation at 71; see also Application, Exhibit No. 14-T-500 at 4.

[207]Stipulation at 71; Consumer Advocate Direct Testimonies, CA-T-1 at 15.

of $107,136.[208] The Commission finds reasonable the stipulated average balance of $107,136 for the unamortized HCGETC.

5.

Working Capital

As explained by HAWC, "[w]orking capital allowance is a component of rate base. Its inclusion in rate base is to compensate investors for the funds invested by them[,] which are used in the business to pay expenses prior to receipt of customer revenues to offset them."[209] To determine the Test Year Working Capital balance, HAWC performed a Lead Lag Study for 12 months ending September 30, 2020, to develop the Working Capital balance that is comprised of 31 expense categories.[210] HAWC further explains:

> If the difference between the average revenue lag and the average expense lag is positive, then investors have funded the working cash allowance which increases rate base. If the difference between the average revenue lag and the average expense lag is negative, then customers have funded the working cash allowance which results in a decrease to rate base.[211]

[208]Stipulation at 71-72.

[209]Application, Exhibit No. 14-T-200 at 51.

[210]Stipulation at 72; Application, Exhibit No. 14-T-200 at 51-52.

[211]Application, Exhibit 14-T-200 at 52.

HAWC calculated the proposed balance for Working Capital of $616,800, based on the sum of the following components:[212]

HAWC's average daily operating costs for each expense account	x	Corresponding net lead or lag day for each account
HAWC's average daily amounts incurred for taxes	x	Corresponding net lead or lag day for each account

The Consumer Advocate proposed to exclude Depreciation expense and Deferred Federal and State Income Taxes in the Working Capital computation, as well adjustments made to O&M expenses for a total reduction of $305,050.[213]

The Parties stipulated to the removal of Depreciation and Deferred Income Taxes expenses from the Working Capital computation.[214] As a result of this Stipulation as well as the aforementioned adjustments to O&M expenses, Taxes Other Than Income Taxes, and Income Taxes, the Parties agreed to an average Working Capital 2022 Test Year amount of $351,930 (rounded).[215] The Commission agrees with the Parties' methodology and finds reasonable the stipulated average Test Year amount of $351,930 (rounded) for Working Capital.

---

[212]Stipulation at 72.

[213]Stipulation at 72; Consumer Advocate Direct Testimonies, CA-T-1 at 16-19.

[214]Stipulation at 73.

[215]Stipulation at 73.

6.

Average Depreciated Rate Base

The Commission finds reasonable the Parties' Average Depreciated Rate Base estimate of $38,409,740 (rounded).

E.

Rate of Return

As discussed by the Hawaii Supreme Court ("Court") in In re Hawaii Elec. Light Co., Inc., 60 Haw. 625, 594 P.2d 612 (1979):

> A fair return earnings on the rate making provision depreciation, taxes is the percentage rate of base allowed a utility after for operating expenses, and other direct operating costs. Out of such allowance the utility must pay interest and other fixed dividends on preferred and common stock. In determining a rate of return, the Commission must protect the interests of a utility's investors so as to induce them to provide the funds needed to purchase plant and equipment, and protect the interests of the utility's consumers so that they pay no more than is reasonable.
>
> To calculate the rate of return, the costs of each component of capital - debt, preferred equity and common equity - are weighted according to the ratio each bears to the total capital structure of the company and the resultant figures are added together to yield a sum which is the rate of return.
>
> The proper return to be accorded common equity is the most difficult and least exact calculation in the whole rate of return procedure since there is no contractual cost as in the case of debt or preferred stock[:]

> Equity capital does not always pay dividends; all profits after fixed charges accrue to it and it must withstand all losses. The cost of such capital cannot be read or computed directly from the company's books. Its determination involves a judgment of what return on equity is necessary to enable the utility to attract enough equity capital to satisfy its service obligations.
>
> . . . .
>
> Questions concerning a fair rate of return are particularly vexing as the reasonableness of rates is not determined by a fixed formula but is a fact question requiring the exercise of sound discretion by the Commission. It is often recognized that the ratemaking function involves the making of "pragmatic" adjustments and there is no single correct rate of return but that there is a "zone of reasonableness" within which the [C]ommission may exercise its judgment.[216]

The Parties agree that a Rate of Return of 7.87% is fair and reasonable, based on the following capital structure and cost rates:[217]

Capital Component	Amount	Ratio	Effective Rate	Weighted Average Cost
Long-Term Debt	$19,204,870	50.00%	5.81%	2.910%
Common Equity	$19,204,870	50.00%	9.92%	4.960%
	$38,409,740	**100.0%**		**7.87%**

[216] In Re HELCO, 60 Haw. at 632-33 and 636, 592 P.2d at 618-20 (citations omitted) (emphasis added).

[217] Stipulation at 74-75 and Exhibit A at 24.

HAWC's proposed capital structure of 50.00% debt and 50.00% equity is based on HAWC's capital structure for the year ending December 31, 2020, which was 50.22% long-term debt and 49.78% equity.[218] HAWC targeted the 50.00% long-term debt and 50.00% equity capital structure because it is significantly similar to the recorded capital structure.[219] HAWC's embedded cost of long-term debt of 5.81%, inclusive of debt issuance costs, is likewise based on HAWC's long-term debt rate for the year ending December 31, 2020.[220] While the Consumer Advocate accepted HAWC's proposed capital structure and cost of long-term debt, it recommended a lower return on equity ("ROE") of 9.65%, as opposed to HAWC's proposed ROE of 10.30%.[221]

HAWC argued that "the Consumer Advocate's ROE recommendation did not sufficiently take into consideration certain HAWC specific risks," and that after considering environmental compliance that HAWC faces as a wastewater utility operating in Hawaii, the challenges of increasing interest rates, and its lower-than-average equity percentage in comparison to the

[218]Application, Exhibit No. 14-T-100 at 9-10 and Attachment SWO-101.

[219]Application, Exhibit No. 14-T-100 at 9-10.

[220]Application, Exhibit No. 14-T-100 at 12 and Attachment SWO-103.

[221]Consumer Advocate Direct Testimonies, CA-T-2 at 56-57; Stipulation at 72-73.

average provided by the Consumer Advocate in its Testimony, "an ROE of at least 9.94% would be appropriate for HAWC."[222] Therefore, HAWC's return on common equity of 9.92% represents a compromise of the Parties, pursuant to their overall settlement negotiations.[223]

On balance, the Commission finds that the stipulated Rate of Return is within the range of reasonableness described by the Court in In re HELCO. Moreover, the stipulated Rate of Return, is 23 basis points less than HAWC's current authorized Rate of Return of 8.10%.[224] The Commission approves as fair the Parties' stipulated Rate of Return of 7.87%.

F.

Rate Design

HAWC, by its Application, initially proposed an across-the-board, approximately 21.05% increase in its monthly service charges for the Residential classes (Single-Family and Multi-Family), Commercial classes (Food Service and Non-Food Service Operations), and Public Authority classes (Other and

[222]Stipulation at 74.

[223]Stipulation at 74.

[224]See Docket No. 2010-0313, Decision and Order, filed on November 21, 2011 (authorizing an 8.10% rate of return for final relief purposes).

Dwelling).[225] The Consumer Advocate, in its direct testimonies, disagreed with HAWC's proposal, and proposed an increase of approximately 14.31% to be phased-in over a two-year period (reasoning that Miscellaneous Revenues of $39,820 and Late Payment Fees of $21,980 should be subtracted from present rate revenues.)[226]

Based on their agreed-upon Test Year revenue requirement of $10,028,200 (rounded) for HAWC,[227] the Parties stipulate to the following rate design:[228]

Monthly Service Charge

Customer Class	Present Rate	Stipulated Rate	Increase
Residential			
Single-Family Unit	$67.08	$78.60	17.17%
Multi-Family Unit	$57.08	$66.88	17.17%
Commercial			
Food Service Operation	$16.08 per TG	$18.83 per TG	17.17%
Non-Food Service Operation	$9.87 per TG	$11.56 per TG	17.17%
Public Authority			
Dwelling	$3.73 per TG	$4.37 per TG	17.17%
Other	$9.87 per TG	$11.56 per TG	17.17%

[225]Application at 4-5; Exhibit 4; Exhibit 14-T-100 at 5 and 60.

[226]Consumer Advocate Direct Testimonies, CA-T-1 at 6-7.

[227]Stipulation at 20.

[228]See Stipulation at 75-76 and Exhibit A at 2.

The Parties, in essence, stipulate to an across-the-board, approximately 17.17% increase in all of HAWC's monthly wastewater service charges.[229]

Regarding timing of the stipulated increase, the Consumer Advocate noted that, while in the past it has only recommended a phased-in approach for increases of greater than 25%, a two-year phased approach was recommended to diminish negative impacts of rate shock, particularly in light of the ongoing COVID-19 pandemic.[230] However, HAWC argued that the stipulated increase is below 25%, thereby not triggering the Consumer Advocate's threshold percentage amount, and that HAWC has already provided various options and services to assist customers who have been adversely impacted by the COVID-19 pandemic.[231] Consequently, the Consumer Advocate agreed to discontinue its pursuit of the phased approach, provided that:

> (1) starting upon the receipt of final rates in the subject proceeding, HAWC would provide a refund over a 3-year period of the additional revenues received as a result of the TCJA reduction in the corporate income tax rate; (2) HAWC would extend the availability of its existing payment plan arrangements for at least twelve (12) months to

[229] See Stipulation at 75-76.

[230] Stipulation at 76-77; Consumer Advocate Direct Testimonies, CA-T-1 at 7.

[231] Stipulation at 77. Additionally, HAWC argued that the Commission may also establish a program to assist customers who are experiencing difficulty in making payments using COVID-19 pandemic relief funds. Id.

> continue to assist its customers with difficulty in paying their sewer bills; and (3) the TCJA refund, to be provided in the manner further detailed below, would assist HAWC's customers during the on-going pandemic by providing a 3-year offset to the rate increase as stipulated to herein.[232]

Although HAWC initially pushed back on any requirement that it provide refunds for TCJA revenues, the Parties reached an agreement, as stated above.[233] Correspondingly, the Parties have agreed that HAWC will provide a refund over a three-year period of additional revenues resulting from the TCJA reduction in the income tax rate, commencing with the first billing period following receipt of final rates in this proceeding.[234] Hence, a total of $889,129 shall be refunded to HAWC's Hawaii Kai-area customers over a three-year period ($296,376 per year or $24,698 per month).[235] The Parties further detail the manner by which the refunds will be handled:

> This monthly amount will be equally divided amongst the number of total active and billed customers at that time and will be reflected as a separate line item on the customer bills as a "Surcredit" or such other term to be agreed upon by the Parties prior

---

[232]Stipulation at 77-78.

[233]Stipulation at 78; see also "Hawaii-American Water Company's Responses to the Division of Consumer Advocacy's Second Submission of Information Requests (CA-IR-13 through CA-IR-36); Exhibit 1; and Certificate of Service," filed on January 24, 2022, ("HAWC Response to CA-IR-__"), at Attachment 7, HAWC Response to CA-IR-29(c).

[234]Stipulation at 79.

[235]Stipulation at 79.

> to the issuance of the first customer bill. HAWC will keep track of the amounts returned to customers and if at the end of the 3-year period there is any remaining balance due, the remaining balance will be distributed as a final credit on the customers' bills consistent with the above allocation methodology.[236]

The Commission finds this process to be reasonable and shall also require HAWC to submit a report to the Commission and Consumer Advocate when the overcollection from customers related to the TCJA has been fully refunded.

Additionally, the Consumer Advocate proposed that the Company continue investigating "the possibility of implementing rates that reflect both fixed and usage charges, especially for its residential customers."[237] The Consumer Advocate further explained that "[s]uch efforts could consider establishing a limited program if a customer is willing to provide 12 months of water usage, a fixed and usage rate could be developed based on that information."[238] HAWC concurred with this recommendation and clarified that the Consumer Advocate's inquiry into this matter and subsequent recommendation were presumably not intended to

[236]Stipulation at 79.

[237]Stipulation at 80; Consumer Advocate Direct Testimonies, CA-T-1 at 8.

[238]Stipulation at 80; Consumer Advocate Direct Testimonies, CA-T-1 at 8.

apply to the current proceeding.[239] Instead, the Parties agreed to HAWC's proposal that HAWC will:

> [F]urther investigate and consider whether developing a rate structure that reflects both fixed and usage charges, especially for HAWC's residential customers, is reasonable and feasible, and that HAWC will submit a report of the results of this analysis, including any technical, financial and operational challenges, as part of HAWC's next general rate case proceeding.[240]

The Commission notes the Consumer Advocate had inquired as to whether HAWC has conducted a study or analysis regarding establishing volumetric rates for wastewater consumption for residential customers, to which HAWC confirmed that it has not because HAWC lacks access to the water use data for its residential customers.[241] Thus, although the Stipulation did not specifically address any issues related to the absence of a Cost-of-Service Study ("COSS"), the Parties did discuss the recommendation of conducting an analysis to implement fixed and usage charges in the

[239]Stipulation at 80; "Hawaii-American Water Company's Responses to the Public Utilities Commission's Information Requests (PUC-HAWC-IR-01 and PUC-HAWC-IR-02)," filed on April 4, 2022 ("HAWC Response to PUC-HAWC-IR_"), at HAWC Response to PUC-HAWC-IR-2(a).

[240]Stipulation at 80.

[241]"Hawaii-American Water Company's Responses to the Division of Consumer Advocacy's Third Submission of Information Requests (CA-IR-37 through CA-IR-65); Exhibit 1; and Certificate of Service," filed on January 24, 2022 ("HAWC Response to CA-IR-__"), Attachment 12 at HAWC Response to CA-IR-64.

next rate case proceeding, as indicated above.[242] While the Stipulation maintains an across-the-board increase for all rate classes, which is consistent with past approved rate increases, the Commission recognizes that it would be difficult to justify a non-uniform increase across rate classes in the absence of a COSS. The Commission acknowledges that implementing usage charges may require new metering infrastructure or access to the Honolulu Board of Water Supply's potable water usage data, but at the same time finds that a COSS would help in multiple areas of approving the next general rate case. Consequently, the Commission shall require HAWC to submit a COSS in its next general rate case proceeding, as was provided in previous rate case applications.

Based on the Parties' representations, the Commission, in this specific instance, approves as just and reasonable the Parties' stipulated, across-the-board rate design, which includes a 17.17% rate increase for all rate classes, as well as the following conditions:

1. HAWC's rate increase shall not be subject to a two-year phase-in period;

2. HAWC shall refund additional revenues collected pursuant to the TCJA to customers over a three-year period or until such has been fully refunded and shall submit a report to the

[242]Stipulation at 79-80.

Commission and Consumer Advocate within 30 days after such overcollection has been fully refunded;

3. HAWC shall extend the availability of its existing payment plan arrangements for at least 12 months to continue to assist its customers with difficulty in paying their sewer bills;

4. HAWC shall continue to investigate the possibility of implementing rates that reflect both fixed and usage charges, particularly for residential customers and a submit a report on the results of its analysis as part of its next general rate case proceeding. Such efforts could consider establishing a limited program to develop fixed and rate usage charges for customers willing to provide 12 months of water usage data, utilizing such information; and

5. HAWC shall be required to submit a COSS in its next general rate case proceeding.

G.

Proposed Tariff Revisions

HAWC proposed to revise Tariff No. 1 as follows:

(a) Amend and replace Revised Sheet 1A to reflect updated definitions to the terms "Building sewer"/"building sewer" and "Service Connection"/"service connection" in light of the proposed changes to Rule V Connections and Cut-Offs.

(b) Amend and replace Revised Sheets 5 and 6 to reflect changes to Rule V Connections and

> Cut-Offs to more clearly delineate the customer's responsibility for the building sewer (including to install and maintain a readily accessible sewer clean-out) and HAWC's responsibility for the service connection and its sewer lines (i.e., referred to in HAWC Tariff No. 1 as the "Company's sewer").
>
> (c) Insert a new Original Sheet 15C to add a new Rule XVII for an Automatic Power Cost Adjustment Clause to address power cost recovery.
>
> (d) Amend and replace Sheet 18 with a revised Schedule of Wastewater Rates for residential, commercial and public authority customers to reflect the rates and rate structure proposed by Applicant in this proceeding (Exhibit 4) to reflect HAWC's requested revenue requirement.
>
> (e) Insert a new Original Exhibit A to include a service area map to clarify and depict Applicant's authorized service area.[243]

In its Direct Testimonies, the Consumer Advocate did not specifically address the proposed tariff revisions.[244] However, when discussing the Purchased Power expense, the Consumer Advocate did note that it "does not object to the establishment of the Company's [Automatic Power Cost Adjustment Clause ("APCAC")] at this time, with conditions that the Consumer Advocate's other proposed adjustments (e.g., disallowance of the inflation factor applied to electricity costs, a five-year amortization period for

[243]Application at 8-9.

[244]See Consumer Advocate Direct Testimonies.

regulatory expenses) are accepted."[245] During settlement negotiations, the Consumer Advocate confirmed that "it does not object to the other proposed rule changes."[246]

HAWC explains that it is seeking approval of an APCAC "due to the impacts that changes in the electricity expense resulting from changes in the kWh cost or use can have on the Company's ability to recover its operating expenses under the rates that are authorized in this proceeding."[247] HAWC highlights the current increases in electricity costs being imposed by Hawaiian Electric, as authorized under its Energy and Purchased Power Adjustor Clause, resulting from the current situation in Russian and Ukraine.[248] As electricity costs represent a significant portion of HAWC's total cost of operations, any changes made thereto could have a significant impact on HAWC's ability to recover operating costs under rates that are authorized in this proceeding.[249] HAWC contends that the APCAC would provide the Company "a reasonable opportunity to recover changes in the cost of electricity subsequent to the test year, without a need to file

[245]Consumer Advocate Direct Testimonies, CA-T-1 at 32-33; Stipulation at 82.

[246]Stipulation at 82.

[247]Stipulation at 82; Application, Exhibit No. 14-T-100 at 44.

[248]Stipulation at 82-83.

[249]Stipulation at 82; Application, Exhibit No. 14-T-100 at 44.

a rate application."[250] Furthermore, HAWC notes, and the Consumer Advocate acknowledges, that other utilities have established such mechanisms to capture adjustments to monthly electricity costs.[251]

Based on settlement discussion, the Parties stipulated to all revisions to HAWC's Rules and Regulations, without conditions, as reflected in Stipulation, Exhibit A, Attachment HAWC S-10.[252]

Based on its review of the entire record, including the Stipulation, the Commission approves as just and reasonable the Parties' stipulated revisions to HAWC's Tariff No. 1.

H.

Commission's Approval

On balance, the stipulated increase in revenue of $14,710,920, or approximately 17.17% over revenues at present rates, provides HAWC with the opportunity to recover its normalized, reasonable utility expenses and to earn a fair return on its average depreciated rate base, consistent with the ratepayers' attendant benefits of continuing to receive wastewater

[250]Application, Exhibit No. 14-T-100 at 44; Stipulation at 83.

[251]Stipulation at 83; Consumer Advocate Direct Testimonies, CA-1 at 32.

[252]Stipulation at 83.

utility service without interruption, at just and reasonable rates.[253]

The Commission finds that the Parties' Stipulation, taken as a whole, appears just and reasonable. For purposes of this proceeding, the Commission approves the Parties' Stipulation, consistent with the terms of this Decision and Order. That being said, the Commission's approval of the Parties' Stipulation, or of the methodologies used herein, may not be cited as precedent by the Parties in any future Commission proceeding.

III.

SUMMARY OF FINDINGS AND CONCLUSIONS

The Commission finds and concludes:

1. HAWC's Test Year Revenues, Expenses, and Average Depreciated Rate Base, as set forth in the attached schedules, are reasonable.

2. The stipulated Rate of Return of 7.87% is fair.

3. HAWC is entitled to an increase in revenues of $1,710,920, or approximately 17.17% over revenues at present

[253] See Stipulation at 11-12 (the results of the Stipulation provide HAWC with the opportunity to recover its projected normalized expenses and realize its projected net operating income for the Test Year).

rates, based on a total revenue requirement of $11,739,120, and a Rate of Return of 7.87%.

4. The stipulated rate design is just and reasonable and shall include the following conditions:

A. HAWC's rate increase shall not be subject to a two-year phase-in period;

B. HAWC shall refund additional revenues collected pursuant to the TCJA to customers over a three-year period or until such has been fully refunded and shall submit a report to the Commission and Consumer Advocate within 30 days after such overcollection has been fully refunded, as provided in Section II.F;

C. HAWC shall extend the availability of its existing payment plan arrangements for at least 12 months to continue to assist its customers with difficulty in paying their sewer bills;

D. HAWC shall continue to investigate the possibility of implementing rates that reflect both fixed and usage charges, particularly for residential customers, and submit a report on the results of its analysis as part of its next general rate case proceeding. Such efforts could consider establishing a limited program to develop fixed and rate usage charges for customers

willing to provide 12 months of water usage data, utilizing such information; and

E. HAWC shall be required to submit a COSS in its next general rate case proceeding.

5. The Parties' agreed-upon revisions to Tariff No. 1 are just and reasonable and are, therefore, approved. HAWC shall promptly file its revised tariff sheets and rate schedules that implement the increases in rates and charges, as well as tariff revisions, authorized by this Decision and Order for the Commission's review and with copies served upon the Consumer Advocate.

6. The nine-month deadline for the Commission to make every effort to issue its Decision and Order was May 17, 2022. Pursuant to agreement of the Parties and HRS § 269-16(d), the Commission issued a timely Decision and Order by June 17, 2022.

IV.

ORDERS

THE COMMISSION ORDERS:

1. The Parties Stipulation, filed on May 6, 2022, is approved, consistent with the terms of this Decision and Order.

2. HAWC may increase its wastewater service charges to produce an increase in revenues of $1,710,920, or approximately

17.17%, as reflected in the attached schedules, representing an increase in HAWC's total revenue requirement to $11,739,120.

3. HAWC shall promptly file its revised tariff sheets and rates schedules for the Commission's review and approval, consistent with the terms of this Decision and Order, with copies served on the Consumer Advocate. HAWC's shall file its revised tariff sheets in black-lined and clean formats.

4. HAWC's revised tariff sheets and rates schedules shall not take effect until affirmatively approved by the Commission.

5. The failure to comply with the requirement set forth in Ordering Paragraph No. 3, above, may constitute cause to void this Decision and Order, and may result in further regulatory action as authorized by State law.

APPROVING HAWAII-AMERICAN WATER COMPANY'S REVISED TARIFF SHEETS

By this Order,[1] the Public Utilities Commission ("Commission") approves the revised tariff sheets and rates schedules filed by HAWC on June 17, 2022, to implement the tariff changes approved by the Commission in this proceeding.

I.

HAWC'S REVISED TARIFF SHEETS AND RATES SCHEDULES

On June 16, 2022, the Commission issued Decision and Order No. 38424, approving: (1) an approximately 17.17 percent increase in revenues over present rates for HAWC, based on a

[1]The Parties in this proceeding are HAWAII-AMERICAN WATER COMPANY ("HAWC") and the DIVISION OF CONSUMER ADVOCACY ("Consumer Advocate"), an ex officio party, pursuant to Hawaii Revised Statutes § 269-51 and Hawaii Administrative Rules ("HAR") § 16-601-62(a).

2022 calendar test year; and (2) various changes to HAWC's tariff.[2] The Commission instructed HAWC to file its revised tariff sheets and rates schedules for the Commission's review and approval, consistent with the terms of D&O No. 38424.[3]

On June 17, 2022, HAWC filed its revised tariff sheets and rates schedules.

The deadline for the filing of any motions seeking to reconsider or clarify D&O No. 38424 expired on June 27, 2022, pursuant to HAR §§ 16-601-22 and 16-601-137. No such motions were filed.

Upon review, HAWC's revised tariff sheets and rates schedules reflect the changes approved by the Commission in D&O No. 38424. The Commission, therefore, approves HAWC's revised tariff sheets and rates schedules.

---

[2]Decision and Order No. 38424, filed on June 16, 2022 ("D&O No. 38424"), at 1-2.

[3]Letter From: K. Morihara To: Commission Re: Docket No. 2021-0063: In the Matter of the Application of Hawaii-American Water Company For Approval of Rate Increases and Revised Rate Schedules and Rules: "Revised Tariff Sheets and Rate Schedules for Commission Review and Approval Consistent With Decision and Order No. 38424," filed on June 17, 2022.

II.

ORDERS

THE COMMISSION ORDERS:

1. HAWC's revised tariff sheets and rates schedules, filed on June 17, 2022, are approved, and shall take effect on July 1, 2022. HAWC shall promptly file its Commission-approved tariff sheets with the applicable issued and effective dates. HAWC shall also notify customers of the tariff change, and include a copy of its current, approved tariff on its website.

2. The failure to comply with the requirements set forth in Ordering Paragraph No. 1, above, may constitute cause to void this Order, and may result in further regulatory action as authorized by State law.

3. This docket is closed, unless ordered otherwise by the Commission.

DECISION APPROVING AND ADOPTING SETTLEMENT AGREEMENTS, RESOLVING THE REMAINDER OF DISPUTED ISSUES AND AUTHORIZING CALIFORNIA-AMERICAN WATER COMPANY'S GENERAL RATE INCREASES FOR 2021, 2022, AND 2023

Summary

This decision approves and adopts three settlement agreements, resolves the remaining disputed issues raised by California-American Water Company's General Rate Case Application 19-07-004, and authorizes the utility's general rate increases for 2021, 2022, and 2023. The Commission adopts a revenue requirement of $271,997,800 for Test Year 2021.[1] The table below illustrates the revenue requirement authorized for the 12 months beginning January 1, 2021, for each of California-American Water Company's Districts:

Ratemaking District	Adopted Revenue Requirement	Percent Change in Revenue Requirement
Northern	$72,718,400	8.74%
Central	$72,739,300	5.99%
Southern	$122,990,800	15.58%
Monterey Wastewater	$3,549,300	6.79%

This proceeding is closed.

1. Background

On July 1, 2019, California-American Water Company (Cal-Am) filed Application (A.) 19-07-004 to increase revenues in each of its service areas for water and wastewater service for the years 2021 through 2023.[2] In total,

---

[1] The revenue requirement approved by this Decision is based on the results generated by Cal-Am's Results of Operations model.

[2] Cal-Am's divisions and/or districts are currently the Northern Division, Central Division, Monterey Wastewater, Los Angeles County, San Diego County and Ventura County. The

Footnote continued on next page.

A.19-07-004 sought approval to increase Cal-Am's revenue requirements as follows:

- $25,999,900 or 10.6% in 2021
- $9,752,500 or 3.59 % in 2022
- $10,754,500 or 3.82% in 2023

The Public Advocates' Office at the California Public Utilities Commission (Cal Advocates), the City of Duarte, the Central Coast Coalition of Communities for Wastewater Equity, and the Monterey Peninsula Water Management District (MPWMD) filed timely protests.[3]

The City of Thousand Oaks, the Coalition of Peninsula Businesses, the City of San Marino, the Butterfield-Riviera East Community Association (BRECA), the Pacific Institute for Studies in Development, Environment, and Security, the Las Palmas Wastewater Committee (Las Palmas), and Environment Now were subsequently granted party status.

On August 15, 2019, Cal-Am filed a consolidated reply to all protests. Cal-Am filed its Rule 3.2 Compliance filing on September 2, 2019.

A prehearing conference was held on September 19, 2019, to discuss the issues of law and fact and determine the need for hearing and schedule for resolving the matter. Assigned Commissioner Genevieve Shiroma issued the scoping memo and ruling (Scoping Memo) on November 8, 2019.

Application was filed pursuant to §454 of the Public Utilities Code, Rule 3.2 of the Commission's Rules of Practice and Procedure (Rules), and the Rate Case Plan for Class A Water Companies adopted by the Commission in Decision (D.) 07-05-062. All references to Code in this decision refer to Public Utilities Code unless otherwise noted.

[3] On July 29, 2019, Central Coast Coalition of Communities for Wastewater Equality filed a protest. On July 30, 2019, the City of Duarte filed a protest. On August 2, 2019, Monterey Peninsula Water Management District filed a protest. On August 5, 2019, the Public Advocates Office of the Commission filed a protest.

Numerous public participation hearings were held throughout Cal-Am's service territory from December 2019 through February 2020.

On April 6, 2020, Cal-Am filed a motion for interim rate relief, which was granted by an assigned Administrative Law Judge (ALJ) ruling on September 10, 2020.

From September to November of 2020, the parties actively engaged in the Commission's ADR process.[4] By Decision (D.) 20-12-046, the Commission extended the statutory deadline in this proceeding to September 30, 2021, largely due to COVID-19 related procedural delays.[5]

On December 16, 2020, MPWMD requested that evidentiary hearings in this proceeding be off-calendared, adding that any outstanding disputed issues between it and Cal-Am could be addressed through briefs. On December 21, 2020, the assigned ALJ issued a ruling off-calendaring the previously set evidentiary hearings and setting the schedule for the remainder of the proceeding.

Between January and February of 2021, the parties filed three separate motions for adoption of three separate partial settlements.

> ***Partial Settlement 1***: The joint settlement between Cal-Am, Cal Advocates, and the Cities of Duarte, San Marino, and Thousand Oaks (the Settlement);
>
> ***Partial Settlement 2***: The settlement between Cal-Am and MPWMD (Cal-Am-MPWMD Settlement); and
>
> ***Partial Settlement 3***: The settlement between Cal-Am and Las Palmas Wastewater Committee (Cal-Am-Las Palmas Settlement).

[4] Cal-Am Status Conference Statement dated November 16, 2020, at 1-2.

[5] D.20-12-046 at 2-3.

The *Partial Settlement 1* noted above, including the tariffs and rates provided in it, will collectively be referred to in this decision as the Settlement henceforth. The Settlement incorporates the terms of the other two settlements, *Partial Settlements 2 and 3* above.[6] The Settlement was updated on February 24, 2021, after the governing bodies for the Cities of Duarte and Thousand Oaks signed it.[7]

On February 18, 2021, MPWMD filed an opening brief as well as comments on the Settlement. Cal-Am filed a reply brief, followed by reply comments to MPWMD's opening comments.

On March 25, 2021, the assigned ALJ issued a ruling seeking additional information on the three settlements and directing Cal-Am to work with the parties to develop a set of joint exhibits and acronym list for the purpose of this proceeding. On April 7, 2021, MPWMD filed a response to the ALJ's ruling, as did the parties to the Settlement.[8] On April 16, 2021, Cal-Am filed reply comments to MPWMD's response to the ALJ's ruling, along with joint proposed acronym and exhibit lists.

---

[6] The parties to the Settlement and Las Palmas clarified this on page 3 of the response to the March 25, 2021, email ruling, which was filed on April 7, 2021. "The schedules included in attachments to the [Settlement] reflect agreements included in the standalone settlement agreements with Las Palmas and Monterey Peninsula Water Management District (MPWMD). Specifically, impacts on revenue requirement and rate design from these standalone settlements are reflected in the summary of earnings comparisons provided in Attachments E-1 and F-1 of the Comprehensive Settlement. Additionally, rates reflecting these settlements are reflected in the exemplary tariffs provided in Attachment G-1 of the Comprehensive Settlement."

[7] The parties to the Settlement provided an updated signature page and refiled the same settlement terms on February 24, 2021, after the Cities of Duarte and Thousand Oaks formally signed on to the agreement.

[8] Las Palmas joined the response filed by the parties to the Settlement.

D.21-09-038 extended the statutory deadline in this proceeding to December 31, 2021, to provide additional time for the Commission to fully evaluate the three settlements.

2. Issues Before the Commission

The issues in this proceeding, as identified in the Scoping Memo, are:

1. Whether the Commission should authorize Cal-Am's request for a general rate increase for water and/or wastewater service in its consolidated divisions and/or individual districts;[9]
2. Whether the Commission should approve the 17 Special Requests in the Application;[10]
3. Whether the Commission should approve the Advanced Metering Infrastructure (AMI) for Ventura County and Central Division service areas with an estimated cost of $3.7 million;
4. Evaluate the adequacy of Cal-Am's Customer Service;
5. Evaluate whether Cal-Am follows all statutory and regulatory requirements;
6. Evaluate what impact these rate increases will have on low-income residents and how to best address the impact; and
7. Whether there are any safety issues which the Commission needs to address.

3. Standard of Review

There are three settlements being proposed for approval and adoption in this proceeding. They collectively, however, do not fully resolve all disputed issues in this proceeding. The two outstanding disputed issues are:

---

[9] Included in this issue is the analysis of the reasonableness of Cal-Am's proposed rates and revenue requirements, capital investments, and whether the evidence supports these requests.

[10] Specific discussion of these special requests is provided in Section 14, *infra*.

1. The statewide-recovery of the Larkfield District wildfire recovery and future catastrophic event costs; and
2. The allocation of the utility plant acquisition adjustment (UPAA) for Cal-Am's acquisitions of Fruitridge Vista, Rio Plaza, and Hillview.

3.1. Standard of Review for Settlements

Pursuant to Rule 12.1(d), the Commission will only approve settlements that are reasonable in light of the whole record, consistent with the law, and in the public interest. Proponents of a settlement agreement have the burden of proof of demonstrating that the proposed settlement meets the requirements of Rule 12.1 and should be adopted by the Commission.[11]

3.2. Standard of Review for Two Outstanding Disputed Issues

As for the two outstanding disputed issues, Cal-Am bears the burden of proof to show that the regulatory relief it requests is just and reasonable and the related ratemaking mechanisms are fair.[12] The applicant, likewise, "has the burden of affirmatively establishing the reasonableness of all aspects of its application. Intervenors do not have the burden of proving the unreasonableness of [the utility's] showing."[13]

4. Discussion Overview

The following sections of this decision examine each of the settled and disputed issues in the scope of this proceeding. Our discussion concerning the

---

[11] D.12-10-019 at 14-15; D.09-11-008 at 6.

[12] In the Rate Case Plan for Class A Water Utilities (D.04-06-018), the Commission stated that: "A utility's application for a rate increase must identify, explain, and justify the proposed increase." (D.04-06-018, Appendix at 5.) The application must be supported by testimony, with supporting analysis and documentation, describing the components of the utility's proposed increase. All significant changes from the last adopted and recorded amounts must be explained, and all forecasted amounts must include an explanation of the forecasting method.

[13] D.06-05-016 at 7.

two disputed issues can be found in Section 14.2, regarding the normalization of the Larkfield District wildfire recovery and related catastrophic event costs; and Section 14.12, regarding the allocation of the utility plant acquisition adjustment (UPAA) for Cal-Am's acquisitions of Fruitridge Vista, Rio Plaza, and Hillview.

5. Customers and Sales

Cal-Am made various requests in its application as it relates to forecasted customers and sales.[14] Cal Advocates reviewed Cal-Am's requests and proposed several recommended adjustments.[15] The Settlement ultimately reached compromises on these issues, as discussed below.

5.1. Forecasted Number of Customer Meters

Cal-Am's customer count forecast took into consideration that portions of Monterey County District have been and remain under a growth moratorium. Therefore, Cal-Am held customer counts for these areas flat to 2018 for this GRC. Additionally, Cal-Am included the acquisition of Rio Plaza, Fruitridge, Hillview and Bellflower in these forecasts, which created a one-time customer increase associated with its three recently-acquired service areas and its proposed acquisition of the Bellflower district.[16]

---

[14] For specific details on customer meters see, *Cal-Am's Update to General Rate Case Application*, filed October 14, 2019 (Application 100-Day Update), Attachment 1, Ch. 3, at 1, Tables 3.1 – 3.6 at 86-93, 208-215, 312-319, 427-434, 564-571, 686-693, 799-806. For specific details on consumption see, Application 100-Day Update, Attachment 1, Ch. 3, at 1, Tables 3.1 – 3.6 at 86-93, 208-215, 312-319, 427-434, 564-571, 686-693, 799-806; also for specific details regarding forecasted number of customer meters *see* Exhibit CAW-2 at 4-15; Exhibit CAW-5 at 5-6; Exhibit CAW-7 at 2-3, Exhibit CAW-11 at 9-11, and Exhibit CAW-24 at 10-12. For forecasted consumption per connection see Exhibit CAW-6 at 101-109, Exhibit CAW-7 at 2-3, Exhibit CAW-11 at 11-12, Exhibit CAW-20 at 40-41, Exhibit CAW-21 at 1-4, Exhibit CAW-24 at 10-12, and Exhibit CAW-25 at 32-41.

[15] Exhibit CalPA-10 2-2 to 2-11, 2-11 to 2-22, and 3-12.

[16] Exhibit CAW-11 at 9-10.

Cal Advocates made several recommended changes,[17] to which Cal-Am did not agree.[18]

Rather than further litigating this issue, the Settlement provides as follows:

A. For the projected meter count, Cal-Am and Cal Advocates agree to utilize the meter count as of December 31, 2018, for the basis and Cal-Am's methodology in the Results of Operations Model (RO Model) to calculate total projected meter counts;

B. All residential meter growth will be in 5/8x3/4 to 1-inch residential fire protection services (RFPS) and non-residential meter growth will be allocated based on December 31, 2018, recorded meter allocation;

C. Residential Fire Protection Services (RFPS) will be projected by adding the average five years growth to the existing number of meters;[19]

D. Consistent with efforts to accurately reflect meter distribution in acquisition systems as identified in Cal-Am's rebuttal, and to incorporate impacts of flat-rate to metered-rate conversion efforts and length of service (LOS) meter changeouts in the newly acquired Fruitridge service territory, Cal-Am shall incorporate actual meter counts in step rate advice letter filings for escalation years 2022 and 2023; and

E. Cal-Am will incorporate meter counts for its Fruitridge Vista service territory based on actual number of meters by meter size as of September 30th of the filing year (*i.e.*, September 30th, 2021, for 2022 step filing and September 30th, 2022, for 2023 step filing). Pursuant to the standard escalation methodology adopted in the Rate Case Plan, incorporation of Fruitridge meter count will not impact

[17] Exhibit CalPA-2 at 6-10.

[18] Exhibit CAW-24 at 10-12.

[19] The projected number of customer meters by size are set forth in Attachment A-2 of the Settlement.

authorized revenue requirement in the step rate filings, but only allocation of that authorized revenue requirement.[20]

5.2. Forecasted Consumption per Connection

Cal-Am set forth its forecasted consumption per connection in its testimony and forecasted the number of customer meters by using the average of recorded meter counts for December 31, 2017, and December 31, 2018, then applying a 50% weighting factor to the annual meter growth in year 2019, and then adding the total annual projected growth to forecast years 2020 and 2021.[21]

Cal Advocates asserted that Cal-Am over-forecasted water consumption per connection for TY 2021, which resulted in over-forecasted revenue from variable charges. Cal Advocates noted this will result in Cal-Am collecting more of its revenue from surcharges, while providing notice of only a fraction of the bill impacts customers will likely experience during this GRC cycle.[22]

Cal Advocates stated that, in D.04-06-018, the Commission provided specific guidance for forecasting water consumption for the test year. For most districts, Cal Advocates asserts that Cal-Am utilizes a consultant-developed consumption forecast by customer class.[23] For Meadowbrook, Garrapata, Dunnigan, and the four acquired systems, however, Cal Advocates notes the consultant did not have enough historic data for its econometric model, so Cal-Am used other assumptions detailed in Exhibit CAW-11.

---

[20] Per the transitional rate design for Fruitridge Vista, as included in the general rate case (GRC) filing, the pre-acquisition rate design will be maintained, and rates will be increased by 9% annually from 2019 through 2023. The transitional rate design was not opposed by Cal Advocates in the GRC proceeding.

[21] Exhibits CAW-6 at 108-109; Exhibit CAW-11 at 11-12.

[22] Exhibit CalPA-10 at 2-11 to 2-12.

[23] Exhibit CalPA-10 at 2-12 to 2-13.

Further, Cal Advocates stated that Cal-Am's sales forecast for TY 2021 generally utilizes an econometric model that takes into consideration numerous factors known to influence consumption.[24] Cal-Am contested the assertions made by Cal Advocates.[25]

The Settlement provides a compromise for Cal-Am's forecasted consumption per connections, as described below:

A. Cal-Am shall use a lower rebound percentage consistent with the direct testimony of Cal Advocates and rebuttal testimony of Cal-Am;

B. For all districts, the rebound percentages initially proposed by Cal-Am in forecasting 2021 consumption will be reduced by two percentage points. For example, the 9% rebound percentage for the Northern Districts will be reduced to 7% consistent with Cal Advocates' testimony. The rebound percentage in the Central District of 4% will be reduced to 2%, and the rebound percentage in the Southern Districts of 7% will be reduced to 5% consistent with Cal-Am's Rebuttal Testimony; and

C. Cal-Am and Cal Advocates agree to this approach for all districts and customer classes except for the residential customer class in the Duarte, Ventura, and Central Satellite districts, where demand will be set at the 50% drought rebound forecast provided in the rebuttal testimony of David Mitchell, and the Monterey district where residential demand will be set based on 2019 actual.[26]

For the Monterey District, Cal-Am reached a partial settlement with MPWMD related to sales forecasting. In that settlement, the two parties agreed

---

[24] Exhibit CalPA-10 at 2-15 to 2-22.

[25] Exhibit CAW-20 at 40-41; Exhibit CAW-21 at 1-14; Exhibit CAW-24 at 10-12; and Exhibit CAW-25 at 32-41.

[26] Attachments A-3 and A-4 in the Settlement Agreement presents the consumption per connection and total consumption respectively for each service area.

the 2019 actual consumption should be used to determine the sales per connection forecast, and that the 2019 residential consumption by tier and non-residential consumption by division should be used to establish tariff rates in the final decision. Cal-Am and MPWMD further agreed that the utility's GRC implementation advice letter (AL) and tariff rates shall reflect consumption from the approved 2021 Annual Consumption Adjustment Mechanism (ACAM) advice letter.[27]

5.3. Discussion on Settled Issues Related to Customers and Sales

We have reviewed the record of this proceeding concerning forecasting number of customer meters and consumption per connection in each of Cal-Am's divisions and find that the Settlement reaches compromises on these issues that are reasonable in light of the whole record, consistent with law, and in the public interest. The agreements reached in the partial Cal-Am-MPWMD Settlement are incorporated in the Settlement's terms, and Cal-Am shall reflect the agreed-upon forecasts for number of customer meters and consumption per connection in its implementation AL for this GRC.[28] Cal-Am shall not recover any costs associated with its proposed acquisition of the Bellflower Municipal Water System until or unless that application is approved by the Commission.[29]

---

[27] Cal-Am-MPWMD Settlement at 13.

[28] Parties to the Settlement response to March 25, 2021 ALJ Ruling, filed on April 6, 2021, at 3. The parties that filed this response were the same as those that signed on to the Settlement agreement, and they collectively stated that the schedules included in the Settlement Agreement reflect the agreements reached in the Cal-Am-MPWMD and Cal-Am-Las Palmas settlements.

[29] Cal-Am's A.18-09-013 requests approval to purchase the Bellflower Municipal Water System and is still under Commission review.

6. Revenues and Rate Design

Rate design translates a company's approved revenue requirement into rates paid by customers. There are four main variables which determine commodity rates for each ratemaking area. They are 1) Usage; 2) Tier Breakpoints; 3) Number of Tiers; and 4) Step-Ups in Commodity Charges.[30] To determine how much revenue Cal-Am will collect at each tier, it is necessary to determine the percent of total water consumption for each district that is projected to happen at each tier. Cal-Am made various requests in its application as it relates to revenues and rate design,[31] and Cal Advocates proposed several changes to Cal-Am's proposed rate designs. The Settlement provides compromises on each of these issues, as discussed below.

6.1. Service Charge

Cal-Am proposed to eliminate the separate Residential Fire Protection Service (RFPS) meter charges and add a meter-based sur-credit to simplify its tariffs and charge an appropriate rate for customers that upsize due to fire code regulations.[32] Cal-Am also noted that RFPS rates have not been increased through rate design as its regular rates have been. In Special Request Number 15, Cal-Am requested to charge RFPS customers based on actual meter size and provide them with a meter-based sur-credit to simplify the bills. This issue is addressed in Section 14.15, *infra*.

---

[30] Step-ups in commodity rates are the difference between the rates at each tier in the tiered-rate system.

[31] For specific details on Cal-Am's requests related to revenues and rate design, *see* its Application 100-Day Update Chapter 3 and Attachment 1, Chapter 10.

[32] Exhibit CAW-5 at 118-120; Exhibit CAW-7 at 5-13; Exhibit CAW-11 at 46-55; and Exhibit CAW-24 at 24-36.

Cal Advocates argued that Cal-Am failed to justify its proposed shift in the fixed/commodity revenue collection ratio and suggested several changes but agreed to Cal-Am's request to increase revenue collection from meter charges.[33]

Cal-Am disagreed with Cal Advocates recommendations, but instead of litigating these issues, the Settlement provides as follows:

A. Cal-Am will collect 30% of its revenue requirement from meter charges in the Northern and Central Divisions;

B. Cal-Am will collect 20% of its revenue requirement from meter charges in the Southern Division (San Diego and Ventura);

C. Cal-Am's proposed meter ratios for Monterey County, as set forth in the tables depicted in the Settlement Agreement, are agreed to by the settling parties;[34] and

D. Cal-Am's proposal to include RFPS in the meter charge calculation using the midpoint meter ratios is agreed to by the settling parties.[35]

D.16-12-026 provides guidance for rate design regarding the ratio of meters (fixed) to commodity (quantity-based, variable) charges. As the Commission noted in that decision, water utility fixed costs comprise about 70% of total costs, and that an increase in fixed charges could (1) reduce water utilities' reliance on quantity charges to collect authorized revenues; and (2) consequently decrease the amounts necessarily recovered from their Water Revenue Adjustment Mechanism (WRAM) or surcharges.[36] D.16-12-026

[33] Exhibit CalPA-10 at 1.3 to 1.4; 4.1 to 4.8; and 5.37.

[34] Settlement at 8.

[35] Settlement at 7-9.

[36] D.16-12-026 at 55-57.

directed all Class A and Class B water utilities to consider shifting up to 50% of their water rate collection to fixed charges.[37]

We have reviewed the record of this proceeding concerning meter charges and RFPS and find that the parties have made a fair and reasonable compromise on these issues. The Settlement's provisions related to the meter charges in Cal-Am's service territories align with a broader effort to gradually adjust service charges to recover an increased amount through fixed charges, which could reduce WRAM balances, result in cost-based rates, and improve bill predictability. We therefore find these terms reasonable in light of the whole record, consistent with law, and in the public interest.

6.2. Tier Breakpoints and SQR Rates

Cal-Am requested specific tier break points and Standard Quantity Rate (SQR) Ratios in the Northern, Southern, and Central Divisions based on parameters from a settlement with Cal Advocates in another proceeding, A.10-07-007.[38]

Cal Advocates proposed three different options for determining percentage of water use by tier across Cal-Am's service territory, by analyzing data from the following timeframes: 2015-2018; 2017-2018; and 2018 alone. Cal Advocates recommended a general methodology for setting tier breakpoints, with some different considerations for the Monterey, Duarte, and Central Satellite districts, and suggested a five-tiered rate structure for Monterey County and a four-tiered rate structure for all other districts.[39]

---

[37] *Ibid.* at 8-9.

[38] Exhibits CAW-7 at 6-11, CAW-11 at 39-53 and Attachment 5 and CAW 21 at 25-27.

[39] Exhibit CalPA-10 at 4.12.

Cal-Am noted that a delay in a prior GRC decision prevented implementation of a new rate design for Sacramento customers until May 2019.[40] Cal-Am found the current rate design, as approved in D.18-12-021, is having the intended effect of reducing consumption and argued that the existing rate design for Northern Division is effective, based on customer feedback, and should remain in place for this GRC cycle.

Instead of litigating these issues further, the Settlement provides a compromise that reflects the rate design proposed in Cal-Am's Direct and Rebuttal Testimony with adjustments so that median usage customers (and below) experience no more than the average system wide increase in rates. The tables in the Settlement, Section 4.2, illustrate the agreed-upon tier break points and SQR Ratios for the Northern, Southern, and Central Divisions.[41]

We have reviewed the record of this proceeding concerning Cal-Am's SQR ratios and tier break points and find that the Settlement's terms are reasonable in light of the whole record, consistent with law, and in the public interest. Cal-Am shall provide information regarding the new rate design on its website and provide bill inserts explaining the new rate design for high-usage customers that may experience higher rates under the new tier structures.

6.3. Monterey Rate Design

MPWMD supported Cal-Am's proposed removal of the 5th tier of rates and asserted that water usage in the upper tiers has dropped by nearly 70% over the past 10 years, thereby attaining the goal of reducing consumption from the highest users. The Settlement proposes no changes to the non-residential rate

[40] Exhibit CAW-24 Section 6 at Attachment 5.

[41] Settlement at 11-12.

design in the Monterey District but provides the following agreements on residential rate design:

A. Elimination of the fifth tier for residential single- and multi-family tariffs;

B. Maintenance of the existing single-family block widths for both Tier 1 and Tier 2 at 4.0 centum cubic feet (ccf) or 29.9 100-gallon increments (CGLs);

C. Maintenance of the existing multi-family block widths for both Tier 1 and Tier 2 at 2.5 ccf or 18.7 CGLs;

D. The Tier 4 break point for single and multi-family tariffs shall be set to ensure approximately 5% of the consumption for the respective rate classes;

E. The Tier 3 break point aligns with keeping 5% of the consumption in Tier 4;

F. Tier rate ratios for Tiers 1 through 4 shall be set at 1.0, 1.5, 4.0, and 6.0, respectively;

G. The gap between the current ratio used to develop the meter rates and the standard meter ratios shall be closed by 50%; and

H. The meter charge shall recover 30% of Cal-Am's revenue requirement in the Monterey District.

We have reviewed the record of this proceeding concerning the tier break points and SQR ratios for the Monterey District and find that the parties have made fair and reasonable compromises on this issue. We further find these terms reasonable in light of the whole record, consistent with law, and in the public interest. Cal-Am shall provide information on its website and outreach through billing inserts that explain the new rate design to high-usage customers in the Monterey District that may experience higher rates under the new tier structures.

6.4. Southern Division Purchased Water Cost Consolidation

Cal-Am testified that it is time to move away from considering water as a local issue and view it from a higher, more consolidated level to better provide its customers water for basic needs at a reasonable price. Cal-Am also stated that it must be able to signal the need to conserve to those that use large quantities of water for non-essential uses. Cal-Am argued that creating a larger Southern tariff area will help provide reasonable pricing for all customers while encouraging conservation.[42]

In conjunction with the broader Southern Division tariff area consolidation proposal outlined in Special Request #1, which is discussed in detail in Section 14.1, *infra*, Cal-Am proposed to consolidate purchased water costs of the Southern Division with any non-consolidated purchased water costs remaining in the identified district.

Cal Advocates outlined various scenarios including consolidating more than 50% of purchased water into the Southern Division's revenue requirement for Baldwin Hills and/or San Diego.[43] Cal-Am offered no rebuttal on Cal Advocates' proposals.

The Settlement adopts Cal-Am's request for partial purchased water cost consolidation in the Southern Division with minor adjustments and recommends that the same methodology should be used in filing any purchased water offsets for the Southern Division.[44]

---

[42] Exhibit CAW-6 at 13-38 and Attachment 4 and Exhibit CAW-20 at 42-56. Further discussion of Special Request #1 is included in Section 13.1 below.

[43] Exhibit CalPA-10 at 5.3-5.20 and Attachments 2 and 6.

[44] Settlement at 12-13.

We have reviewed the record in this proceeding and find that the parties have made compromises on this issue that are reasonable in light of the whole record, consistent with law, and in the public interest. Cal-Am is authorized to partially consolidate purchased water costs in its Southern Division, as agreed to in Section 4.3 of the Settlement.

6.5. Low Income Ratepayer Assistance Program

Cal-Am's Low Income Ratepayer Assistance (LIRA) Program provides a 20% discount on the service charge as well as the quantity rate for Tier 1 and Tier 2 in all service areas except for Monterey.[45] For Monterey, the discount is 30% and is applicable to Tiers 1 through 2.[46] Cal Advocates recommends that the Commission authorize Cal-Am to continue its LIRA, or Customer Assistance Program (CAP).[47]

Under the Settlement, Cal-Am would be authorized to continue its existing CAP program, which provides a 20% discount on the meter charge and tier 1 and 2 volumetric charges for all districts except the Monterey District. For the Monterey District, a discount of 30% would be applied on the meter charge and volumetric charges for customers in tiers 1, 2, and 3. Previously, the Monterey District's CAP discount applied to the meter charge and the volumetric charges for tiers 1 through 4. The Settlement provides that, with the recommended elimination of the 5th tier, it is appropriate to apply the discount to the first three tiers, because consumption in the 4th tier under the proposed rate

---

[45] The Commission directed Cal-Am to change the name of the LIRA program to Customer Assistance Program, or CAP, to align with the United States Environmental Protection Agency nomenclature. (D.20-08-047 at 79-80 and Ordering Paragraph 4.)

[46] Exhibit CAW-10 at 20.

[47] Exhibit CalPA-10 at 4.27 and 4.29.

design would be similar to the to-be-eliminated 5th tier. Thus, it would be appropriate to apply the CAP discount only to the first three Monterey District tiers in this GRC cycle.

The Cal-Am-Las Palmas Settlement provided that the low-income discount for Monterey active wastewater customers should be increased to 35% of a customer's monthly bill, and that Cal-Am should provide informational letters and CAP application materials to all active and passive wastewater customers.[48] The Cal-Am-MPWMD Settlement and MPWMD's comments on the Settlement were silent on the issues related to the CAP.

The Settlement separately addresses the Hardship Assistance Program, which Cal-Am has administered in the Monterey District at no cost to ratepayers in the past.[49] Cal-Am proposed to expand its Hardship Assistance Program, which has been administered with shareholder funds in cooperation with a local United Way office in Monterey, to a statewide program. Cal-Am proposed to expand the Hardship Assistance Program to other service territories, working with other local United Way offices and to recover 50% of the statewide program's cost. The Settlement adopts this proposal as described further in Exhibit CAW-10.[50]

MPWMD argued that it is opposed to subsidies between customers and service regions, in general, and suggested the impacts of Cal-Am's proposed CAP expansion cannot be evaluated with the information Cal-Am provided in

---

[48] *See* Appendix C to the instant decision, at 7.

[49] Monterey's Hardship Assistance Program was initially grant-funded with $50,000 and provides up to $1,000 per customer if they face a water service shut-off due to non-payment, based largely on income related criteria. The program costs have not previously been recovered from ratepayers.

[50] Exhibit CAW-10 at 21-22.

testimony.[51] MPWMD raised concerns about the potential rate impacts to customers in the Monterey District if Cal-Am is authorized to recover up to 50% of the costs of the statewide Hardship Assistance Program from ratepayers. MPWMD stated that while it does not oppose the program in concept, Cal-Am's proposal would be a new burden to ratepayers, because the program has historically been provided through grants and shareholder funding. MPWMD requested relief from any increased ratepayer impacts associated with offering the Hardship Assistance Program in its district and/or other Cal-Am California service districts.[52]

Cal-Am clarified that the total ratepayer-funded portion of the Hardship Assistance Program for this GRC cycle is $37,300 per year for the Central Division.[53]

The costs the Central Division will see in 2021-2023, related to the Hardship Assistance Program, are reflected in the Settlement Agreement in the Operation Expense line item under Operation & Maintenance Expense as provided in the Comparative Summary of Earnings tables provided in Attachments E-1 (for statewide) and F-1 (by division).[54]

We are not persuaded by MPWMD's request to exclude customers in the Monterey District from contributing to the CAP and Hardship Assistance Program, because Monterey District customers receive benefits from the availability of Cal-Am's customer assistance programs.

---

[51] Exhibit MPWMD-3 at 14-15.

[52] MPWMD response to March 25, 2021, ALJ Ruling at 10.

[53] Cal-Am response to MPWMD comments on the March 25, 2021, ALJ Ruling at 4.

[54] *Ibid*.

We have reviewed the record of this proceeding as it relates to these issues and find that the compromise reached in the Settlement related to the statewide expansion of the CAP, the extension and expansion of the Hardship Assistance Program, and the associated cost recovery are fair. The Settlement prudently considered the rate impacts and financial burdens the proposal would have on each of Cal-Am's service territories, including the Monterey Service District. We agree with Cal-Am that spreading the costs of the statewide program across a broader customer base will minimize the impact to each ratepayer, and that Monterey District customers can benefit from this cost-sharing effort if there is a catastrophic disaster or other unexpected service impacts to customers in that District.[55] We therefore find the Settlement's terms on Cal-Am's customer assistance programs reasonable in light of the whole record, consistent with law, and in the public interest. We further find that the agreement reached in the Cal-Am-Las Palmas Settlement related to increasing the CAP discount and providing additional outreach to active and passive wastewater customers is reasonable in light of the whole record, consistent with law, and in the public interest.

Accordingly, Cal-Am should expand its Hardship Assistance Program to its service territories across California, may recover up to 50% of the costs associated with it from ratepayers, and shall modify its Hardship Assistance Program to align with the terms of the Settlement. Cal-Am should also ensure its expanded Hardship Assistance Program aligns with the criteria set forth in D.11-05-020, as modified by D.21-07-029.[56] D.21-07-029 requires Class A water

---

[55] *Ibid.*

[56] D.11-05-020 permitted but did not require sharing low-income customer information among regulated water and municipal energy utilities; took notice of existing data sharing programs between Commission-regulated energy utilities and municipal irrigation and water districts;

Footnote continued on next page.

utilities to participate in a series of data reporting working sessions sponsored by the Commission's Water Division, to review and collaborate toward reconciling, refining and devising a consistent and clear set of requirements for reporting billing and collections data, which are being required pursuant to the decision and the ongoing evaluation of water affordability in Rulemaking (R.) 17-06-024.[57]

Further, D.21-06-015 directed the regulated energy utilities to identify whether "new water-related measures and technologies can be added to the [Energy Savings Assistance] program" and to "conduct no-cost/low-cost campaigns to include information about low income water programs in their existing ME&O efforts."[58] Similarly, D.21-07-029 requires Commission-regulated energy utilities to expand their exchange of low-income consumer data with water systems statewide in an effort to increase water affordability and move toward a unified statewide low-income water rate assistance program.[59]

Likewise, Cal-Am shall continue its collaboration with Commission-regulated energy utilities to ensure customers that have enrolled in low-income energy programs are aware of the CAP program, the Hardship Assistance Program, and any other assistance programs Cal-Am offers to support low- and moderate-income customers to reduce water consumption and otherwise lower their water bills.[60]

---

and addressed data transfer methods, obtaining customer authorization, and methods to ensure the security and privacy of customer information. (At 10-11; Finding of Fact 7 and 8; and Attachment #1.)

[57] D.21-07-029 at 68-70.

[58] D.21-06-015 at 441.

[59] D.21-07-029 at 31-32.

[60] D.20-08-047 directs all Class A water utilities to share data with electric investor-owned utilities related to customer enrollment in low-income programs. In its Advice Letter 1333, filed on April 1, 2021, CAW proposed to conduct this data sharing effort quarterly starting in 2022.

6.6. Other Revenue

Other Revenue sources include, but are not limited to Method 5 Revenues, Contract Revenues, Miscellaneous Revenues, Rents, and Private Fire Protection Services.[61]

Cal Advocates asserted that Cal-Am should have used a five-year average of recorded data for Other Revenues, suggested that this miscellaneous revenue should be forecasted by increasing the 2018 recorded amount by the same percentage as Cal-Am's requested revenue requirement, and stated that Cal-Am failed to provide justification for its calculated Other Revenues.[62]

Cal-Am argued that it is inappropriate to use escalation factors intended for use on expenses to forecast revenue categories and an increase in revenue requirement does not necessarily lead to an increase in miscellaneous revenues.[63] Cal-Am agreed that the revenues from the unmetered Sacramento customer should be included in Other Revenues, but that the contract provides for a set monthly amount that will not increase over the life of the contract.

The Settlement proposes to forecast Other Revenues (excluding Method 5 revenues) based on recorded 2018 revenue for antenna leases, a three-year recorded average (2016-2018) for Miscellaneous Revenue, and inclusion of $62,771 per year to account for Cal-Am's contractual agreement with the Sacramento unmetered customer.[64]

---

[61] D.87-09-026 requires Class A water utilities to use what is called Method 5 to account for the applicable tax on contributions and advances; Application 100-Day Update, Ch. 3, Tables 3.16 - 3.22, (PDF) pp. 12, 14, 16, 18, 20, 22, 24, 86-87, 103-128, 208-209, 225-239, 312-313, 329-353, 427-428, 446-468, 564-565, 581-604, 686-687, 706-729, 799-800, 817-841 and also CAW Exhibit 11 at 16 and 24 at 15-20.

[62] Exhibit CalPA-10 at 3.9.

[63] Exhibit CAW-24 at 15-20.

[64] Settlement at 14.

We have reviewed the record of this proceeding concerning Cal-Am's Other Revenues forecasts and find that the parties reached compromises on these issues that are reasonable in light of the whole record, consistent with law, and in the public interest. Cal-Am shall forecast its other revenues based on recorded revenues pursuant to the agreements reached in the Settlement. Method 5 revenues associated with new developments shall be forecasted as described in Section 14.11, *infra*.

7. Expenses

Cal-Am estimated TY 2021 Operations and Maintenance (O&M) and Administrative and General (A&G) expenses at $109,451,588.[65] In the last five years (2014-2018), Cal-Am recorded an average increase of 1.36% annually in total O&M and A&G expenses.[66] Cal-Am's proposed budget of $109,451,588 results in an average increase of approximately 5.45% annually from the last recorded year (2018).[67] Cal Advocates proposed several changes to Cal-Am's proposed expenses to be recovered in this GRC cycle. The Settlement provides compromises on these issues, as discussed below.

7.1. Purchased Water (Acct 704)

Cal-Am's purchased water forecast for 2021 and 2022 is based on estimated total water production, district operations, assessments of sources and uses of produced and purchase water, the current prices and assessments from

---

[65] CAW workpaper "ALL_CH04_O&M_RO" under sheet titled "Summary of Costs – NARUC WS11" in row: 103.

[66] CAW workpaper ALL_CH04_O&M_RO" sheet titled "Summary of Costs - NARUC WS11" in row 103. Average of percentage increase each year from 2014 to 2018.

[67] CAW workpaper "ALL_CH04_O&M_RO" under sheet titled "Summary of Costs - NARUCWS11" in row: 103, where year 2018 is $94,068,954 and TY 2021 is $109,451,588. Percentage increase is ($109,451,588-$94,068,954)/ $94,068,954 which is 16.35% for three years (2018-2021). Forecasted percentage increase per year is 16.35%/3 years= 5.45%.

water provider agencies, except for the Central Division, for which Cal-Am has historically recorded Seaside Basin Wastewater costs in the purchased water account.[68] The costs projected for TY 2021 were calculated by multiplying either 2018 or 2019 water rates with total forecasted water production for each water wholesaler in all districts except Monterey, which utilizes a recorded five-year inflated adjusted average. [69]

Cal Advocates suggested Cal-Am's TY 2021 purchased water forecast is unreasonable, because it does not account for increases in water rates during the period between the time the initial Application was filed and the TY, which under-forecasts purchased water rates. Cal Advocates suggested this methodology may result in the illusion of a smaller increase in rates in the GRC, while customers ultimately experience surcharges which increase their bills.[70]

To provide a more accurate forecast of purchased water costs, Cal Advocates recommended the Commission raise Cal-Am water rates by the average annual

---

[68] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.3 (PDF) at 32-33, 137-138, 249-250, 362-363, 478-479, 614-615, 739-740, and 852-853; Exhibit CAW-11 at 17-18; and Exhibit CAW-22 at 7-12.

[69] Water rates refers to purchased water rate Cal Am pays to its water wholesalers. This is identified in CAW's workpaper "ALL_CH04_O&M_WP_Purchased Water" for TY 2021; *see also* Attachment 02: Cal-Am's response to Data Request ("DR") ANU 001 Q005b, Cal Am provides corrected numbers for total purchased water for Monterey/central division. Cal-Am changed forecast from $1,159,958 to $1,147,505 (decrease of $12,453) in TY 2021 in workpaper "Cal PA ANU 01 Sec 01 Q005 Attachment 1. The forecasted costs also reflect the Marina Coastal Wheeler fee, the five-year average of Watermaster assessment costs, and the purchased water contains costs related to the Sand City Desalination plant, as described in Exhibit CAW-11 at 17 and CAW Workpapers at Chapter 4.

[70] Exhibit CalPA-6E (Public) at 4. Cal Advocates noted that in 2014-2018, CAW customers have seen an average annual rate increase of 3.69%.

percentage increase in purchased water rates experienced over the past five years (2014-2018).[71]

Cal-Am argued that Cal Advocates' proposed methodology is not consistent with the Revised Rate Case Plan for Class A Water Utilities.[72]

Rather than litigating this issue, the Settlement provides as follows:

A. Cal-Am will adopt Cal Advocates' methodology to include projected wholesale purchased water rate increases in the estimated TY 2021 Purchased Water expense, with the exclusion of purchased water expenses related to the Pure Water Monterey Purchased Water Agreement;

B. Future purchased water offsets related to Pure Water Monterey Purchased Water Agreement in the Monterey Main service area will be implemented via purchased water offset with a separately identified surcharge;

C. No additional escalation shall be included for escalation years 2022 and 2023; and

D. Wholesale water offsets for 2022 and 2023 will be implemented via offset advice letters as authorized by Pub. Util. Code § 792.5 and General Order (GO) 96-B.

7.2. Purchased Power (Acct 726)

Cal-Am calculated its purchased power expenses forecast using an estimate of total kilowatt hour (kwh) usage multiplied by the cost per kwh for each district by the 2018 kwh usage data, divided by 2018 production to determine a kwh per ccf metric for each district. Cal-Am's calculated metric was then applied against the estimated water production quantities in 2021 and 2022

[71] Exhibit CalPA-6E (Public) at 5. Any year-on-year water rate increase of 100% and higher are excluded from the calculated five-year average. as being unlikely to be recurring and are considered as one-time increase.

[72] Exhibit CAW-22 at 7-12.

to develop total kwh usage in those years and costs were escalated for each year of the rate case cycle.[73]

Cal Advocates suggested that Cal-Am under-forecasted purchased power expenses, resulting in higher than necessary surcharges, and that the Commission should require Cal-Am to provide a more accurate and reasonable forecast.[74]

Cal-Am disagreed, arguing that Cal Advocates made a calculation error in its year-over-year percentage increases to the power rates.[75]

Rather than to litigate this dispute, the Settlement provides as follows:

A. Cal-Am will adopt Cal Advocates' forecasting methodology of escalating the 2018 power rates by the average annual percentage increase in power rates experienced over the past five years (2014 - 2018);

B. Cal-Am will incorporate the correction identified in Cal-Am's rebuttal testimony regarding the calculation of the year-over-year percentage increases to the power rates; and

C. The final Purchased Power expense forecast will be based on authorized production.[76]

---

[73] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.3 (PDF) pp. 32-33, 137-138, 249-250, 362-363, 478-479, 614-615, 739-740, 852-853; Exhibit CAW-11 at 18-19. 2018 data was used because it contained the most up to date pricing from power providers when CAW's exhibits were filed.

[74] Exhibit CalPA-6E (Public) at 2, 5-7, and Attachment 1.

[75] Exhibit CAW-22 at 12-13.

[76] Settlement at 16-17.

7.3. Outside Services (Acct 798)

Cal-Am calculated the forecasted Outside Services expense using a five-year (2014 - 2018) inflation adjusted average of recorded data.[77] Cal Advocates suggested that some of the historical expenses Cal-Am used to build its forecast are either no longer required, unlikely to be incurred in this GRC cycle, or were miscategorized, and should therefore be removed from Cal-Am's forecast.[78]

Cal-Am disagreed with each of Cal Advocates' assertions, except for the recommended removal of miscategorized recorded regulatory expense items, an adjustment for which was already reflected in Cal-Am's 100-Day Update.[79]

The Settlement provides as follows:

A. Cal-Am shall adopt Cal Advocates' recommendation to remove recorded costs for the Los Padres Dam Long Term Study;

B. Cal-Am shall retain the costs for arc-flash studies in the recorded expenses as originally proposed by Cal-Am;

C. Cal-Am shall remove the miscategorized recorded regulatory expense agreed to in Cal-Am's rebuttal testimony and incorporated into its 100-Day Update submittal; and

D. Cal-Am shall adopt a Temporary Employee expense forecast of $88,250 based on increased headcount, which represents a compromise between Cal-Am's forecast of $98,940 and Cal Advocates' forecast of $77,570.[80]

---

[77] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.5 (PDF) at 36-37, 141-142, 253-254, 366-367, 482-483, 618-619, 743-744, 856-857; Exhibit CAW-9 at 29-30; Exhibit CAW-22 at 14-15.

[79] CAW Exhibit 22 at 14-15.

[80] Settlement at 18-19. A table detailing the differences between CAW and Cal Advocates' positions and the compromises reached is included in Section 5.3 of Appendix B.)

7.4. Rents (Acct 811)

Cal-Am used a five-year inflation adjusted average (2014-2018) to estimate the rents in all of its districts, with exceptions for actual lease costs associated with (1) the corporate office in San Diego, (2) the legal office in San Francisco, and (3) the operations center in Imperial Beach. Lease agreements for the corporate office and Imperial Beach operations center are consistent with expenses included in the last GRC. The lease agreement for the legal office in San Francisco includes an expansion of 571 square feet, which Cal-Am contends is necessary to facilitate the increased workload for the legal department.[81] Rent expenses requested for Account 811 also include an adjustment of $231,000 related to Cal-Am's corporate headquarters interim transition plan and a forecasted rent expense of $48,000 for the administration and operations office building for Hillview Water Company.[82]

For TY 2021, Cal-Am's forecasted rents consist of office leases, equipment leases, and headquarter relocation costs that may not be incurred in 2021, and Cal-Am requested a total relocation budget of $553,600 in this GRC cycle although the current lease for its headquarters does not expire until 2024.[83]

Cal Advocates argued the Commission should deny this request because if Cal-Am's relocation budget is approved in this GRC cycle, ratepayers may fund rent for a redundant facility for four years. Cal Advocates proposed a rents

---

[81] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.5 (PDF) at 36-37, 141-142, 253-254, 366-367, 482-483, 618-619, 743-744, 856-857; Exhibit CAW-3 at 243-245; Exhibit CAW-9 at 31-32, Exhibit CAW-14 at 11; Exhibit CAW-17 at 34; and Exhibit CAW-22 at 15-16.

[82] Cal-Am desires to conduct a study on relocation of its corporate headquarters from San Diego to Sacramento (Exhibit CAW-14 at 11 and CAW-17 at 34 include additional information on the headquarter move proposal.)

[83] Exhibit CalPA-6E (Public) at 2 and 11-15.

account forecast of $1,942,108 in TY 2021, which removes Cal-Am's proposed headquarters relocation costs of $411,600 and one-time equipment leases from recorded years, which would reduce the TY 2021 forecast by $7,494.[84]

Cal-Am described progress on the proposed corporate headquarters relocation and described the need for relocation of employees in the Sacramento Beloit facility.[85] Cal-Am further disagreed with the removal of single-entry equipment leases.[86]

The Settlement provides several compromises regarding the Rents Account 811, as follows:

A. Cal-Am will not include lease expenses and capitalized tenant improvements relating to the proposed corporate headquarters relocation plan in the forecasted Rents expense for TY 2021, but instead will include such expenses, if such are incurred, in a future GRC;

B. Cal-Am shall retain recorded single-entry lease expenses in the recorded expenses used for the forecast; and

C. Cal-Am shall remove the miscategorized recorded regulatory expense agreed to in Cal-Am's rebuttal testimony and incorporated into Cal-Am's 100-Day Update submittal.[87]

7.5. Regulatory Commission Expenses (Acct 797)

Account 797 includes all expenses incurred by Cal-Am for formal cases before regulatory commissions, other regulatory bodies, or cases where Cal-Am

---

[84] Exhibit CalPA-6E (Public) at 11-15

[85] Exhibit CAW-17 at 34.

[86] Exhibit CAW-22 at 15-16.

[87] Settlement at 19-20. A table detailing Cal-Am's request, Cal Advocates' initial recommendations, and the settlement amounts for Rents is included in Section 5.4 of the Appendix B.

is a party.[88] In this GRC, Cal-Am initially sought a total Account 797 expense budget of $5,192,979 for three years (2021-2023), or $1,730,993 per year if amortized equally, based on an evaluation of historical proceedings, rates for outside counsel and consultants, and costs associated with printing and mailing customer notices.[89]

Cal Advocates noted that Cal-Am's request would amortize its proposed budget over 27 months rather than the standard 36 months, that Cal-Am's recorded five-year average of similar expenses in 2014-2018 is 40% lower than its TY 2021 forecast, and that Cal-Am's forecast is approximately three times higher than other Class A water utilities.

Cal-Am disagreed with Cal Advocates.[90] However, rather than litigate these issues, the Settlement provides the following compromises:

A. Cal-Am shall use the three-year recorded inflation adjusted average from the last completed GRC cycle (2015-2017) as the baseline for the forecasted TY Regulatory Commission expense;

B. From this baseline figure, Cal-Am will add an additional incremental expense for consulting expenses incurred in the current GRC cycle (2018-2020) that were not incurred in the last completed GRC cycle; and

C. Based on this methodology, Cal-Am and Cal Advocates agree to adopt a total forecasted Test Year 2021 Regulatory Commission expense of $1,500,060.[91]

---

[88] Cal-Am noted that some of the proceedings it is involved in include many intervenors such as environmental groups, governmental agencies, and other groups, and that outside counsel and regulatory consultants are sometimes hired by Cal-Am.

[89] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.5 (PDF) at 36-37, 141-142, 253-254, 366-367, 482-483, 618-619, 743-744, 856-857; Exhibit CAW-9 at 24-29; Exhibit CAW-22 at 16-27.

[90] Exhibit CAW-22 at 16-27.

[91] Settlement at 20-22.

7.6. CA Uncollectible Accounts (Acct 775) [Excluding Leak Adjustments]

Cal-Am forecasted the uncollectible expenses to be tracked in Account 775 by using a five-year (2014 - 2018) average of the annual uncollectible rate and multiplying the calculated historical uncollectible rate by forecasted revenues. Further modifications to this calculation were made to account for the removal of leak adjustments as part of Special Request #4, which is discussed in detail in Section 14.4, *infra*.[92]

Cal Advocates argued that the calculations in Cal-Am's RO Model did not match the methodology identified by Cal-Am in its direct testimony, and instead recommended an uncollectible rate of 0.5117%.[93]

The Settlement adopts Cal Advocates' proposed uncollectible rate of 0.5117%.[94]

7.7. Other Administrative & General (A&G) (Accts 792-805)

To develop its forecasted costs for Other Administrative & General (A&G) Accounts (Accts 792-805), Cal-Am used an inflation adjusted five-year average (2014 - 2018), adjusted for costs relating to sampling and monitoring system (SAMS) modules, transportation leases, and incremental expenses related to acquisitions of the Rio Plaza, Fruitridge Vista, Hillview Water, and Bellflower Municipal Water systems.[95]

---

[92] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.3 (PDF) at 32-33, 137-138, 249-250, 362-363, 478-479, 614-615, 739-740, 852-853 and CAW Exhibits 9 at 12-13 and 22 at 27; Exhibit CAW-9 at 13.

[93] Cal Advocates Exhibit 6E at 3, 21 and Attachment 1.

[94] Exhibit CAW-9 at 13; Settlement at 22-23.

[95] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.5 (PDF) at 36-37, 141-142, 253-254, 366-367, 482-483, 618-619, 743-744, 856-857; Exhibit CAW-9 at 12-13 and 29-30; and Exhibit CAW-22 at 27.

Cal Advocates recommended certain reductions to the A&G Miscellaneous General expenses relating to: (1) transportation leases based on new annual leases; (2) certain recorded SAMS costs to avoid double recovery of those costs; and (3) removal of customer satisfaction radio expenses from the recorded costs including a reduction of the recorded California Public Radio expenses by 50%. Finally, Cal Advocates suggested certain State Water Resources Control Board (SWRCB) drinking water fees should have been recorded at Account 766 and should therefore be removed from this A&G request for Accounts 792-805.[96]

Cal-Am largely disagreed with Cal Advocates' contentions but agreed to remove the identified SAMS costs and to re-categorize the recorded SWRCB drinking water fees expenses.[97] Instead of litigating these issues, the Settlement provides as follows:

A. $2,623,000 for transportation leases, based approximately on a sum of (1) anticipated future 2021 commitments of $2,375,000 related to leases effective as of December 31, 2018, and (2) 2.5 years (2019, 2020, and half of 2021) of new commitments at a rate of $99,387 per year;

B. Recorded SAMS expenses identified above should be removed from recorded costs and the recorded SWRCB fees should be re-categorized to Account 766;

C. 50% of customer satisfaction radio expenses and 50% of recorded California Public Radio expenses should be removed from Cal-Am's request; and

D. Incremental expenses related to the Bellflower acquisition should only be included if that acquisition is ultimately approved by the Commission.[98]

---

[96] Exhibit CalPA-6E at 3, 21, 22-23, and Attachment 1.

[97] Exhibit CAW-22 at 27-34, 37, and Confidential Attachments 1 and 2.

[98] Settlement at 23-24.

7.8. Transmission and Distribution (Accts 752-766)

Cal-Am forecasted Transmission and Distribution expenses using a recorded five-year (2014 - 2018) inflation-adjusted average with deviations from this methodology for estimated SWRCB drinking water fees.[99] Deviations from the five-year average methodology for SWRCB expenses were based on new fee schedules adopted in September of 2017.[100]

Cal Advocates testified that the methodology used in Cal-Am's RO Model to forecast SWRCB drinking water fees does not match Cal-Am's testimony and that the modeling results disproportionately increase the forecast. Cal Advocates suggested that certain recorded costs for global positioning system (GPS) equipment should be removed as an expense and instead capitalized, and that any recorded expenses beyond one standard deviation should be fully removed from the requested costs. Additionally, Cal Advocates alleged that some SWRCB drinking water fees were wrongly recorded and should be reclassified to Account 766.[101]

Cal-Am argued that Cal Advocates' five-year average methodology for the SWRCB drinking water fees would diminish the impact of the fee structure change that occurred in late 2017. Cal-Am also disagreed with Cal Advocates' methodology to exclude expense outliers that lie outside one standard deviation. However, Cal-Am agreed with Cal Advocates that certain GPS expenses should

---

[99] Excludes Planning Studies and System Maps expense, Planning Studies expense and Tank Maintenance expense, each of which are addressed in separate sections below.

[100] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.4 (PDF) at 34-35, 139-140, 251-252, 364-365, 480-481, 616-617, 741-742, 854-855, Exhibit CAW-3 at 240-261 and Attachment 3, Exhibit CAW-9 at 10-12, 22 at 35-36, and Exhibit CAW-9 at 11-12.

[101] Exhibit CalPA-6E at 2, 28-29, 37-38, and Attachment 1.

have been capitalized and that certain wrongly-recorded SWRCB drinking water fees should be reclassified.[102]

The Settlement proposes to adopt Cal-Am's methodology for Transmission and Distribution expenses with respect to SWRCB drinking water fees and standard escalation for all other miscellaneous items included in this account. The Settlement also proposes to capitalize the GPS expenses identified by Cal Advocates and to reclassify the wrongly-recorded SWRCB drinking water fees identified by Cal Advocates.[103]

7.9. CA Miscellaneous Customer Accounts Expenses (Acct 774)

Cal-Am presented specific requests for CA Miscellaneous Customer Accounts expenses using a five-year recorded average, based on expenses in 2014 - 2018.[104]

Cal Advocates asserted that Cal-Am's methodology did not account for declining postal expenses and suggested a reduction from Cal-Am's initial request.[105]

Cal-Am agreed that the original estimate of postage expense of $890,499 is not justified by recent recorded expenses but disagreed with Cal Advocates' argument that the declining trend will continue.[106] Cal-Am recommended a revised postal expense forecast of $750,000, based on Cal-Am's approximate two-year recorded expenses from 2018 ($753,500) to 2019 ($745,400).

---

[102] Exhibit CAW-22 at 35-36.

[103] Settlement at 24-25.

[104] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.3 (PDF) at 32-33, 137-138, 249-250, 362-363, 478-479, 614-615, 739-740, 852-853; Exhibit CAW-9 at 12-13 and Attachment 3.

[105] Exhibit CalPA-6E at 3, 30-31, Attachment 1, and 39.

[106] Exhibit CAW-22 at 36-37.

Rather than litigating this issue, the Settlement adopts a TY 2021 postal expense of $750,000 based on Cal-Am's approximate two-year recorded expenses from 2018 - 2019.[107]

7.10. Operating Expenses for Acquired Systems

Cal-Am's Application included a deviation in its forecast to account for additional operating expenses related to the authorized or pending acquisitions of Rio Plaza, Fruitridge Vista, Hillview, and Bellflower water systems.[108]

Cal-Am found that Cal Advocates excluded certain forecasted costs related to acquired systems' operating expenses in its RO Model and eliminated all Bellflower-related operating expenses. Cal-Am disagreed with Cal Advocates' RO Model and identified the deviations with each of the adjustments.[109]

Rather than litigating these issues, the Settlement provides as follows:

A. Adopt Cal-Am's forecasted incremental operating expenses for Fruitridge Vista, Rio Plaza, and Hillview acquisitions as reflected in Cal-Am's 100 Day Update; and

B. Remove incremental operating expenses for the Bellflower system to reflect the Proposed Decision in Cal-Am's Bellflower acquisition proceeding A.18-09-013 issued on March 30, 2020. However, if the final decision in proceeding A.18-09-013 instead authorizes Cal-Am to acquire the Bellflower system, then the final decision in this GRC shall include the incremental operating expenses for the Bellflower system.[110]

[109] Exhibit CAW-22 at 41-45.

[110] Settlement at 28.

7.11. Conservation

Cal-Am requested $5,950,305 as a three-year conservation budget for all districts but suggested that amount could be reduced to $4,957,453, if the Commission approves Special Request #13 of this GRC, which seeks to consolidate the conservation budgets on a statewide basis.[111] Cal-Am detailed its current conservation efforts, proposed cost recovery for conservation efforts, and the anticipated impacts of California's New Conservation Framework (Senate Bill 606 and Assembly Bill 1668).[112]

Cal Advocates argued Cal-Am should include its conservation budget and associated revenue requirements in base rates and the associated revenue requirements; certain staff positions should be removed from the conservation budget to avoid double counting; and the three-year conservation budget should be $1,315,524 per year to incorporate those proposed adjustments.[113]

MPWMD suggested that it (1) has broad authority to define conservation regulations in its service territory and (2) should continue to have a separate conservation budget, particularly because the proposed Monterey Peninsula Water Supply Project is unlikely to be operational by TY 2021.[114] Similarly, San Marino noted its significant efforts to achieve conservation and concerns that funding a statewide conservation budget could adversely impact customer rates in the San Marino district.[115]

---

[111] Application 100-Day Update, Attachment 1, (PDF) at 179-187, 190-196, 293-304, 521-549, 656-676, 783-787, 898-901.

[112] CAW Exhibit 10 at 2-15.

[113] Exhibit CalPA-6E at 2, 32-33, and 90-91.

[114] Exhibit MPWMD-2 at 3-17 and Attachment 1.

[115] Exhibit San Marino-1 at 3-5.

Cal-Am noted Cal Advocates' recommendation to include conservation budget in base rates would conflict with its Special Request #13, which would authorize Cal-Am to shift funding across years and districts.[116] Cal-Am addressed the staff double-counting issue in its 100-Day Update submittal by removing the conservation labor from its labor forecast, leaving these expenses as part of the conservation budget.[117]

Again, rather than litigating this issue, the Settlement provides that:

A. Cal-Am shall include conservation positions in the labor forecast and remove them from the conservation budget;

B. Cal-Am shall include the conservation budget in base rates at the General Office level with allocation to the District level based on non-contested conservation budgets;

C. Cal-Am will have flexibility and discretion to utilize its authorized conservation budget where needed, and within the three-year rate case cycle, similar to other forecasted capital or expense budgets. The Monterey District is the sole district where the approved conservation funding will need to be spent within that district only;

D. Cal-Am shall eliminate the conservation funding surcharge and close the California American Water Conservation Surcharge Balancing Account effective December 31, 2020;

E. Any trailing interest charges associated with the Conservation Surcharge Balancing Accounts up to approval of the GRC implementation advice letter filing will be transferred to the Consolidated Expense Balancing Account (CEBA); and

[116] *See*, CAW Exhibit 23 at 2-9.

[117] *Ibid.* at 3.

F. The issue of whether conservation budgets can be used to pay for such penalties and fines will be deferred to a future GRC or a separate industry-wide proceeding.[118]

MPWMD opposed Cal-Am's proposal, and the agreements reached in the Settlement related to conservation expenses, based on concerns that the settlement may result in cost shifting to customers in the Monterey District.

7.12. Leak Adjustments

If a Cal-Am customer experiences a leak on the customer side of the meter, its water usage could be charged at the highest tier rate without the customer's knowledge, which could result in an unexpectedly high monthly bill.[119] Leak adjustments are issued by Cal-Am to individual customers at the discretion of Cal-Am staff.[120] Cal-Am forecasted TY 2021 leak adjustment expenses based on recorded 2018 data and estimated approximately $2.7 million in TY 2021 leak adjustments, if its request to implement Advanced Metering Infrastructure (AMI) is adopted, or $3.25 million in TY 2021 leak adjustments if its request to implement AMI is denied.[121]

Cal Advocates recommended reducing Cal-Am's forecast of TY 2021 leak adjustment expenses and suggested that, because leak adjustments can elevate Cal-Am's corporate image, shareholders should cover 50% of the forecasted leak adjustment costs.[122]

---

[118] Settlement at 29-30.

[119] Exhibit CAW-2 at 11.

[120] Exhibit CalPA-10 at 5-20.

[121] Application 100-Day Update, Attachment 1, (PDF) at 104, 107, 110; Exhibit CAW-2 at 10-14 and Attachment 1; Exhibit CAW-9 at 35-48 and Attachments 7 and 9; Exhibit CAW-16 at 4-7; Exhibit 20 at 70-72; and Exhibit CAW-22 at 67-68.

[122] Exhibit CalPA-6E at 34-36 and Attachments 42 and 43; Exhibit CalPA-10 at 5.20 to 5.23.

MPWMD suggested the recovery of leak adjustments through the WRAM would not provide sufficient disclosure of how leak adjustment costs impact ratepayers' bills and that the Commission should, where appropriate, move cost recovery into base rates rather than bill adders.[123]

Cal-Am argued that the company follows a clear set of criteria in compliance with a Commission approved leak adjustment policy and argued that leaks and the associated adjustments can lead to negative press. Cal-Am also suggested that, if the Commission wants to require recovery of leak adjustments to be reviewed within its GRC, the costs should be evaluated and forecasted as part of Cal-Am's revenue requirements.[124]

Rather than litigating this issue, the Settlement provides as follows:

A. Cal-Am's proposed $2.7 million leak adjustment forecast, based on 2018 adjustments, is consistent with revised leak adjustment policy and therefore a 7% reduction is unnecessary at this time;

B. A statewide leak adjustment forecast of $2.7 million is consistent with Cal Advocates not opposing AMI implementation and removal of the 5th tier in the Monterey District;

C. The $2.7 million statewide leak adjustment forecast should be included in base rates for test year 2021 and any leak adjustments provided to customers that are inconsistent with Cal-Am's established policy will not be recovered in rates;

D. The utility's leak adjustment policy is appropriate and should be continued given the ongoing water supply constraints and steeply inclining tier block rate design for the Monterey District;

---

[123] Exhibit MPWMD-2 at 3-9; Exhibit MPWMD-3 at 6-7.

[124] Exhibit CAW-22 at 67-68.

E. The leak adjustment costs for the Monterey District should be included in base rates at an amount of $2.70 million if the rate design and AMI requests are adopted as proposed by Cal-Am, or $3.25 million if those proposals are rejected; and

F. If the actual leak adjustments costs in 2021-2023 are lower than the amount authorized in base rate, the difference should be tracked in the Consolidated Expense Balancing Account (CEBA) and returned to customers.

Cal-Am's request to recover leak adjustment expenses should be recorded in the Water Revenue Adjustment Mechanism/Modified Cost Balancing Account (WRAM/MCBA) and Cal Advocates' response are addressed separately in the discussion of Special Request #4 in Section 14.4, *infra.*

7.13. Planning Studies and System Mapping Expenses

Cal-Am's application included forecasted Planning Studies expenses relating to Urban Water Management Plans (UWMP), Water Infrastructure Act (WIA) – Risk Assessments and Emergency Response Plans, the Wildfire Risk Assessment and Emergency Plan, the Corporate Headquarters Transition and Relocation Study, the Ventura Water Storage Tank Seismic Study, the Ventura Supervisory Control and Data Acquisition (SCADA) Master Plan, the Ventura Integrated Water Supply Master Plan, the Ventura Solar Power Study for Tank Sites, the Ventura Calleguas Municipal Water District Peak Study, the Ventura Turnout Pressure Regulating Valves Hydropower Study, the Monterey SCADA Master Plan, the Los Angeles Water Storage Tank Seismic Study, the Los Angeles

Well Master Plan, the San Diego Alternative Source of Supply Study, and system mapping activities.[125]

Cal Advocates recommended Cal-Am prepare a Portable Generator Planning Study to consider alternatives other than installing stationary generators using internal Cal-Am resources and should not require additional planning study expenses.[126]

Cal-Am initially disagreed with Cal Advocates' recommendations, but as discussed in Section 10, *infra,* the Settlement provides for Cal-Am to prepare a Portable Generator Planning Study to consider alternatives other than installing stationary generators at an estimated cost of $50,000 per Division, or $150,000 total.[127] The costs would be included as a planning study expense in TY 2021.

7.14. Tank Maintenance Expenses

Cal-Am proposed a tank maintenance and improvement program that included painting expenses and inspections by outside consultants.[128]

Although Cal Advocates did not take a position on the prudency or reasonableness of the projects Cal-Am proposes to complete in 2023, Cal Advocates recommended adjustments to the tank maintenance budgets for Lower Wikiup Tank #1 and North Wikiup Tank #2 to account for overlap with capital improvements already included in the Tank Rehabilitation and Seismic Upgrades

---

[125] Application 100-Day Update, Attachment 1, (PDF) at 132, 244, 473, 609, 734, and 847; Exhibit CAW-3 at 240-257 and Attachment 3.

[126] Exhibit CalPA-9C at 20-25.

[127] Settlement Sections 8.1.10, 8.3.2, 8.4.6, and 8.7.4. Planning Studies and System Mapping budgets are provided in Attachment B-6 of the Settlement.

[128] Application 100-Day Update, Attachment 1, (PDF) at 132, 244, 473, 609, 734, and 847; Exhibit CAW-3 at 258-261, and CAW Exhibit 17 at 1-3. The consultants would compile studies that provide details on the integrity and condition of the tank inspected, when they should be inspected next, and estimates of project costs.

capital project in Larkfield. Cal Advocates further stated the tank maintenance expense for the Upper Wikiup Tank #1 should be disallowed, as this tank was destroyed in the Tubbs fire, and Cal-Am's proposed Industrial Tank #2 budget is unnecessary because the most recent inspection showed no improvements were needed.[129]

The Settlement proposes to adopt Cal Advocates' recommended Tank Maintenance Expense adjustments and disallowances.[130]

7.15. Insurance Other Than Group (Acct 793)

Cal-Am developed its proposed Insurance Other Than Group (IOTG) forecasts based on historical incurred costs, increased by standard escalation factors. The exception to this was its forecasted property insurance, which was increased by escalation factors provided by the company's insurance broker.[131] Cal-Am proposed additional funding of $4.225 million for the instant GRC period, 2021-2023, to procure earthquake insurance coverage for underground assets that do not reside on fee simple parcels or properties. The proposed earthquake policy would pay out based on the magnitude earthquake and the size of the loss sustained.[132]

Cal Advocates opposed the requested earthquake insurance policy as unreasonable for the following reasons: (1) Cal-Am's Northern and Central Divisions have lower risks of significant earthquakes; (2) the proposed

---

[129] Exhibit CalPA-5 at 5-8.

[130] Exhibit CAW-17 at 1-3 for specific reductions and increases in budget as recommended by Cal Advocates. Adjusted tank maintenance projects and budgets are provided in the Settlement at 32-33 and Attachment B-5.

[131] Exhibit CAW-9 at 20-22 and Exhibit 22 at 37-40 and Attachment 3.

[132] Exhibit CAW-9 at 21.

insurance policy would not cover most earthquakes; and (3) the policy will not adequately mitigate the potential financial risks associated with significant earthquakes in Cal-Am 's Southern Districts. Cal Advocates recommended the Commission deny funding for the earthquake insurance policy premium.[133]

Cal-Am argued that Cal Advocates' analysis is solely based on historical earthquakes and argued that the Commission should also consider other factors such as distance of the site(s) from the earthquake and other seismological information to project potential maximum expected ground motions.[134]

The Settlement removes Cal-Am's request for recovery of earthquake insurance premiums in this GRC but reserves Cal-Am's ability to make a similar request in a subsequent proceeding.[135]

We have reviewed the record of this proceeding concerning Cal-Am's IOTG Account 793 forecasts and find that the Settlement reached compromises on these issues that are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am shall not recover the requested costs of earthquake insurance during this GRC cycle but may make similar requests in future GRC applications.

7.16. Discussion on Settled Expense Issues

We find the Settlement provides compromises on the expense related issues detailed above that are reasonable in light of the whole record, consistent with law, and in the public interest.

Purchased water expenses related to the Pure Water Monterey Purchased Water Agreement are not reflected in the summary of earnings comparisons, as

---

[133] Exhibit CalPA-9C at 9-20.

[134] Exhibit CAW-22 at 37-40 and Attachment 3.

[135] Settlement at 33-34.

these costs are collected through a separately identified surcharge and not through base rates.[136] However, the current effective purchased water surcharge for the Pure Water Monterey Purchased Water Agreement is reflected in the exemplary tariffs provided in Attachment G-1 of the Settlement, and Cal-Am shall keep this surcharge in place with the new rates that will take effect after this decision.[137]

Cal-Am shall implement the purchased power forecasts and terms related to its Outside Service Account 798, Regulatory Commission Expenses Account, CA Uncollectible Accounts (excluding leak adjustments), Transmission and Distribution Accounts, Operating Expenses for Acquired Systems, CA Miscellaneous Customer Accounts, Tank Maintenance Expenses, and Insurance Other Than Group Account 793 as provided in the Settlement. Cal-Am shall use an uncollectible rate of 0.5117% for this GRC cycle.

Regarding Cal-Am's Rents Account 811, Cal-Am shall not recover any costs associated with its corporate headquarters relocation during this GRC cycle, as agreed upon in the Settlement. Regarding Cal-Am's A&G Accounts 792-805 and Operating Expenses for Acquired Systems, we reiterate that The Commission's review of Cal-Am's proposed Bellflower acquisition is ongoing and no incremental operating expenses related to that system are authorized at this time.

Further, we find MPWMD's continued concerns related to the Settlement's conservation budget to be unfounded, because the Settlement terms explicitly include a provision to ensure the Monterey District budget is solely utilized

[136] Joint response to the ALJ's March 25, 2021 Ruling at 2.

[137] *Ibid.*

within the Monterey service area. Therefore, Cal-Am shall ensure that the conservation budget allocated for the Monterey District is only expended on projects in that district and may maintain flexibility to shift its line item budgets within the Monterey District budget. The three-year budget for Cal-Am's other districts may be shifted across line items budget and other districts as necessary, pursuant to the agreements reached in the Settlement.

Cal-Am shall close its Leak Adjustment Balancing Account and continue tracking its leak adjustment costs and revenues through its CEBA, as discussed further in Section 14.4, *infra,* and more details regarding Cal-Am's recovery of costs related to SAMS is included in Section 15.3, *infra.*

We have reviewed the record of this proceeding concerning Cal-Am's planning studies and find that the Settlement's compromises are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am will fully evaluate the alternatives to installing costly stationary generators at many of Cal-Am's facilities throughout its service territories, with the goal of reducing the cost of providing back-up power to critical infrastructure. We find this agreement related to a preliminary study across all options for back-up generation resources to be reasonable prior to authorizing a large expenditure of ratepayer funds for stationary, gas-fired generators to be installed in multiple locations. Cal-Am is not precluded from seeking additional funding for back-up generation resources in a future GRC should the study identify the need for higher-cost back-up power generators at one or more locations.

8. General Office Allocation

For ratemaking purposes, each of Cal-Am's districts receive an allocation of General Office (GO) office costs related to Cal-Am's corporate offices and American Water Works Service Company (AWWSC). AWWSC is an affiliate of

Cal-Am that provides administrative and technical services to both regulated and market-based enterprises.

Cal-Am allocated a portion of GO costs and labor to its affiliate Hawaii American Water Company (HAWC).[138] Cal-Am's workpapers indicate the hours worked in Hawaii are treated as capitalized hours and the projected costs associated with HAWC labor were removed from the forecasted Cal-Am revenue requirement because the capitalization percentage was applied to labor and labor-related expenses.

Cal Advocates recommended several specific adjustments to Cal-Am's proposed allocation of GO expenses to account for services being provided to Cal-Am's affiliate HAWC and suggested that Cal-Am's GO 2021 and 2022 utility plant in service balance for ratemaking purposes should be reduced by $2.9 million and $3.2 million, respectively.[139]

Cal-Am argued that the appropriate allocation of labor expenses is incorporated in its RO Model.[140]

The Settlement sets forth compromises on this issue, including a requirement for Cal-Am to provide (1) all employees information and expanded training pertaining to the process and importance of accurately recording time for cost allocation purposes and (2) the following specific details about its GO expenses in its next GRC:

A. A copy of the information provided to all employees pertaining to recording time and cost allocation;

---

[138] CAW's GRC Application Minimum Data Requirement (MDR) II.I.1 at 3.

[139] Exhibit CalPA-8 at 7.

[140] Exhibit CAW-22 at 48-51.

B. A summary of employee time recorded to operations outside of California-regulated operations for the period 2019-2021; and

C. A detailed summary of the specific GO expenses and assets that are appropriately allocated to operations outside of California-regulated operations.[141]

We have reviewed the record of this proceeding concerning Cal-Am's GO Allocation and find that the parties have reached compromises on this issue that are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am shall track and report more details regarding its employees' time and cost allocation, include information about its employee time budgeting education materials, and summarize the GO allocation of employee time, company assets, and other expenses, when filing its next GRC.

9. Labor

For TY 2021, Cal-Am estimated total labor expenses at $27,711,722.[142] For ratemaking purposes, Cal-Am forecasts labor expenses to increase more than 20% by TY 2021 and its number of employees will increase by about 9%.[143] Cal Advocates proposed several changes to Cal-Am's proposed labor expenses

---

[141] Settlement at 34-35.

[142] This was described in Cal-Am's workpaper "ALL_CH04_O&M_RO_Labor" under sheet titled "Labor Costs W-Spec Adj WS7" under row: 503. Cal-Am's workpaper "ALL_CH04_O&M_RO_Labor" under sheet titled "Sum of Costs - District WS10" under row: 78: An average percentage increase in labor expenses from years 2014 to 2018 is 0.876%; *see also* Cal Am's workpaper "ALL_CH04_O&M_WP_Labor" under sheet titled "Employee Count WS-A-11" under row: 77. An average percentage increase in recorded employees from 2014 to 2018 is 1.956%.

[143] Cal-Am's workpaper "ALL_CH04_O&M_RO_Labor" under sheet titled "Labor Costs W-Spec Adj WS7" under row: 503. Increase from year 2020 ($26,986,188) to TY 2021 ($27,711,722) is 3%. Increase from year 2018 ($26,3030,823) to TY 2021 ($27,711,722) is 22%; Cal-Am's workpaper "ALL_CH04_O&M_WP_Labor" under sheet titled "Employee Count WS-A-11" under row: 77. Increase from year 2018 (296) to TY 2021 (322.4) is about 9% which is 3% annually (from 2018 to 2021).

and forecasts. The Settlement provides compromises on each of these issues, as discussed below.

9.1. Wage Escalation

For TY 2021, Cal-Am estimated total payroll and wages by escalating 2020 hourly wages using union or non-union annual increases of 2.50% or 3.00% respectively.[144] Cal-Am forecasted employee payroll for 2021 by indexing the 2019 payroll by the union contract agreement rate of 2.5% for per year for union employees.

Cal Advocates recommended using the same wage escalation rates for both union and non-union employees of 2.25% in 2020 and 2.50% in 2021 which would reduce Cal-Am's TY 2021 payroll and wages budget by approximately $186,688.[145]

Cal-Am argued that Cal Advocates' recommendation would disregard the wage escalation factors utilized in separately negotiated labor agreements and any additional premiums included in union agreements that are not available to non-union employees.[146]

The Settlement provides the following compromises on the above issues:

A. Cal-Am shall utilize an escalation factor for union employees based on the negotiated agreements as

---

[144] Cal Am's workpaper "ALL_CH04_O&M_WP_Labor" under sheet titled "INP -Labor Benefits." Non-union employees include: Hourly Non-Union Employees and Basic Salaried Employees. Also, CAW Exhibit 9 at 17 and Application 100-Day Update, Attachment 1, Ch. 4, (PDF) at 28, 36-37, 44-45, 131, 141-142, 149-150, 243, 253-254, 263-264, 357, 366-367, 376-377, 472, 482-483, 492-493, 608, 618-619, 626-627, 733, 743-744, 753-754, 846, 856-857, 868-869; CAW Exhibit 5 at 61-64 and Attachments A and B; CAW Exhibit 9 at 14-23, and Exhibit 19 at 3-5 and Attachments 1-4.

[145] Exhibit CalPA-6E at 41-42.

[146] Exhibit CAW-19 at 3-5.

provided in Cal-Am's 100-Day Update submittal and the Rebuttal Testimony of Garry Hofer in Exhibit CAW-19;

B. Cal-Am shall apply the union escalation factors (both escalation increases and timing of increases) similarly to union-equivalent employees based in non-union service areas;

C. For purposes of determining authorized revenue requirement, and for ratemaking purposes, Cal-Am shall exclude non-union salary increase of 3% annually effective with the date of this Settlement Agreement through December 31, 2021, in response to the COVID-19 pandemic and the associated economic challenges; and

D. Cal-Am shall continue salary escalation for both union and non-union employees in its 2022 and 2023 step filings.[147]

9.2. Salaries and Wages – Capitalization Rate

Cal-Am used estimated capitalization rates for salaries and wages, based upon a three-year historical average from 2016-2018, to allocate total compensation between expensed and capitalized salaries and payroll costs.[148]

Cal Advocates asserted that the 14% capitalization rate that was hardcoded in Cal-Am's RO Model did not match the three-year average (10%) stated in Cal-Am's testimony.[149] Cal-Am argued that Cal Advocates' application of the methodology was erroneous.[150]

Rather than litigating this issue, the Settlement adopts Cal-Am's proposed methodology for the capitalization rate for salaries and wages based on the three-year historical average from 2016-2018.

---

[147] Settlement at 35-36.

[148] Exhibit CAW-9 at 19-20.

[149] Exhibit CalPA-6E at 45.

[150] Exhibit CAW-22 at 53-55.

9.3. Salaries and Wages – New Employees

Cal-Am anticipated a total of 26 additional positions. This includes 10 positions hired after 2015, nine positions related to acquisition of the Fruitridge and Hillview systems, and seven positions that are currently vacant but necessary for operational needs.[151]

Cal Advocates argued that Cal-Am's forecast double-counted a Financial Analyst (FA) II B position and recommended removing the duplicate position from rates and ten of the new employee positions that Cal Advocates believes were not requested in Cal-Am's testimony.[152]

Cal-Am argued that the "duplicate" FA IIB position identified by Cal Advocates was a separate FA IIB position that had been converted to an Operations Specialist position and had been filled. Cal-Am further asserted that there were nine vacant positions included in forecasted labor and not ten as stated by Cal Advocates.[153] The Settlement results in the following compromises:

A. The Financial Analyst II B identified by Cal Advocates was not a "duplicate" position as this position has been filled and should be allowed in this GRC; and

B. Cal-Am shall remove recovery for the nine positions that were vacant at the time of the GRC filing.

9.4. Supervisor Pay Differential

Cal-Am's application included a forecast of increased pay for supervisor positions to incentivize union employees to take those positions. Cal Advocates did not expressly address this issue in its testimony but did remove the related

---

[151] Application 100-Day Update, Attachment 1, Ch. 4, (PDF) at 29, 44-45, 132, 149-150, 244, 263-264, 358, 376-377, 473, 492-493, 609, 626-627, 734, 753-754, 847, 868-869; Exhibit CAW-5 at 61-63; Exhibit CAW-9 at 19-23; Exhibit CAW-22 at 53-56.

[152] Exhibit CalPA-6E at 45-47.

[153] Exhibit CAW-19 at 6-8.

increased forecasted supervisor pay expense from rates in the RO Model. Cal-Am emphasized the challenges involved in enticing union employees to accept supervisor roles.[154]

The Settlement results in Cal-Am's agreement to withdraw its request and monitor the employment and economic impacts associated with the COVID-19 pandemic and any associated economic challenges. Cal-Am reserved its ability to propose appropriate measures, including potential a salary differential for supervisor positions, as needed in a future GRC.

9.5. Labor Overtime

Cal-Am multiplied its forecasted wage rates by 1.5 to 2 and applied those rates to the historical three-year average of the recorded overtime hours by eligible employee positions from 2016-2018 in each district.[155] Cal Advocates recommended that the forecast for the TY 2021 labor overtime expense should be decreased by 5.39% to account for increasing headcount.[156] Cal-Am rebutted that there is no direct correlation between total employee count and the overtime expense that Cal Advocates used to make its recommendation.[157] To resolve the matter, the Settlement adopts Cal-Am's forecast of labor overtime expense.

9.6. Performance Based Compensation

Cal-Am requested recovery of its forecasted expenses for its Annual Performance Plan (APP) short-term incentive program and its Long-Term

---

[154] Exhibit CAW-19 at 10-11.

[155] Application 100-Day Update, Attachment 1, Ch. 4, Table 4.8, (PDF) at 29, 44-45, 132, 149-150, 244, 263-264, 358, 376-377, 473, 492-493, 609, 626-627, 734, 753-754, 847, 868-869; CAW Exhibit 19 at 9.

[156] Exhibit CalPA-6E at 48-49 and Attachment 51.

[157] Exhibit CAW-19 at 9.

Performance Plan (LTPP) long-term incentive program for its employees.[158] Cal Advocates recommended disallowing 50% of APP expenses and all of Cal-Am's requested LTPP expenses.[159] Cal-Am rebutted that performance-based compensation is an important component of total compensation and should be authorized for cost recovery.[160]

The Settlement provides the following compromises:

A. Cal-Am shall split APP expenses related to Employee Bonuses and Incentives Programs equally between shareholder and ratepayers, particularly in consideration of the current COVID-19 pandemic and the associated economic challenges; and

B. Cal-Am shall recover LTPP expenses as authorized in Cal-Am's prior GRC in D.18-12-021.

9.7. Discussion on Settled Labor Related Issues

We have reviewed the record of this proceeding concerning issues related to wage escalation, capitalization rate, anticipated number of new employees, supervisor pay differential, labor overtime, and performance-based compensation and find that the Settlement reaches compromises on these issues that are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am shall utilize an escalation factor for union employees based on the negotiated agreements as provided in Cal-Am's 100-Day Update submittal and Exhibit CAW-19. Cal-Am shall not seek recovery of the nine positions that were vacant at the time of the filing of this GRC and shall implement the forecasted wage rates provided in A.19-07-004. Rather than

[158] Exhibit CAW-5 at 65-66.

[159] Exhibit CalPA-6E at 50-53.

[160] Exhibit CAW-19 at 12-24.

recovering costs associated with increased supervisor pay in this GRC cycle Cal-AM shall monitor the employment and economic impacts associated with the ongoing public health crisis. Cal-Am's APP expenses related to employee bonuses and incentives should be split equally between shareholders and ratepayers, and Cal-Am should continue recovering LTPP expenses as authorized in D.18-12-021.

10. Plant Issues

Cal-Am requested capital expenditure costs associated with numerous projects throughout its service territory. Cal Advocates, the Cities of Duarte and San Marino, and MPWMD each proposed several changes to Cal-Am's proposed capital expenditures and projects. The Settlement provides compromises on each of these issues, as discussed below and adopts Cal-Am's proposals that were undisputed by parties. We discuss each proposal separately, district by district and issue by issue, below.

10.1. Los Angeles County District Projects

10.1.1. Los Angeles County District Undisputed Projects

Section 8.1.1 of the Settlement identifies projects in the Los Angeles County District which were not disputed by any parties in this proceeding.[161]

We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's Los Angeles County District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is

[161] Settlement at 39-40.

reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.1.2. Los Angeles County District Disputed Projects

The following projects were disputed by Cal Advocates in testimony, but agreements were later reached in the Settlement, as described below:

A. ***Project I15-500009 (Previously IP-0550-118) –*** *LA Santa Fe Well Replacement. This carry-over project to replace the Santa Fe Well was approved in A.10-07-007 and Cal-Am has initiated work, but due to external delays, this project was not completed on schedule.*[162]

Cal Advocates did not dispute the need for this capital project but has concerns about the feasibility of Cal-Am's forecasted project completion schedule and the potential for alternatives.[163]

The Settlement includes a proposed agreement on the treatment of the LA Santa Fe Well Replacement project costs:

1. For the purposes of determining the rate base in question for this GRC (2021-2023), the spend for this proposed project will not be included in the rate base or revenue requirement calculations;
2. Cal-Am will be able to capitalize the carrying cost (AFUDC) of the project's reasonable and prudent costs into the project's overall cost from January 1, 2021, up until the time the project is completed and placed into service; and
3. Once the project is in service, Cal-Am will capture the costs separately in an off-book

[162] A.19-07-004, Capital Projects Workpapers, Tab 12; Application 100-Day Update, Attachment 3, at 914 and 935; and Exhibit CAW-3 (Crooks Direct) at 29-30, Attachment 1.

[163] Exhibit Cal PA-5, Menda Public Testimony at 95-96.

> regulatory account along with the carrying cost of the project from the time it is complete until it goes into rate base for recovery.[164]

B. ***Project I15-500032*** *– Winston Well Redrill and Treatment. The project to redrill the Winston Well was approved in A.10-07-007 with a cost of $2,520,000 for the drilling of a replacement well and potential installation of new treatment system, depending on water quality analysis results. Work has been initiated but completion has been delayed, so Cal-Am is seeking to carry the project over into this GRC cycle.*[165]

Cal Advocates did not dispute the need for this proposed project but expressed concerns about the proposed forecast Cal-Am provided in its testimony.[166] The Settlement presents the same compromises for the Winston Well carry-over project as proposed in the Santa Fe Well project described above.

C. ***Project I15-500036*** *– Longden Well Redrill and Rehabilitation. The redrilling and rehabilitation of the Longden Well was approved in A.13-07-002 to address the deficit in supply for the San Marino water system. The well is currently inoperable due to ongoing water contamination issues. The previously-approved budget is $3,565,113, and Cal-Am states that the project is in the design phase with a target completion date of the end of 2022.*[167]

Cal Advocates did not dispute the need for the Longden Well Redrill and Rehabilitation project but recommended the project's funding should be suspended until Cal-Am can demonstrate the project is complete and providing

---

[164] During project construction, AFUDC will be calculated based on the weighted average authorized cost of debt in effect for the relevant time period. Once the project is in service but not yet in rates, AFUDC will be calculated based on the authorized average cost of debt in effect for the relevant time period.

[165] A.19-07-004, Capital Projects Workpapers, Tab 17; Application 100-Day Update, Attachment 3, at 913 and 941; and Exhibit CAW-3 (Crooks Direct) at 33-34, Attachment 1.

[166] Exhibit Cal PA-5, Menda Public Testimony, at 95-96.

[167] A.19-07-004, Capital Projects Workpapers, Tab 18; Application 100-Day Update at 7, Attachment 3 at 915 and 936; Exhibit CAW-3 (Crooks Direct) at 34-36, Attachment 1.

service to ratepayers, and the cost should be removed from the forecasted rate base for this GRC.[168] The Settlement presents the same compromises for the Longden Well carry-over project as the two described above.

D. ***Project I15-500030 (Previously IP-0550-38)*** *– Oswego Well Replacement and Treatment. This project, which is intended to provide a reliable source of supply and reduce the LA district's dependence on purchased water, was also approved in A.10-07-007. Work has been initiated but it has not been completed due to external delays. Cal-Am states the project is in the design phase and is expected to be completed in 2021 with a budget of $1,482,308.*[169]

Cal Advocates recommended the Commission should temporarily suspend funding of the Oswego Well Project until Cal-Am can demonstrate the project has been completed and is providing service to ratepayers and remove the cost from the forecasted rate base in this GRC.[170]

The Settlement presents the same compromises for the Oswego Well Replacement and Treatment project as the other three carry-over projects described above in this section.

E. ***Project I15-500006*** *– Lamanda Well Redrill Project. In its testimony, Cal-Am states that the original site for the Lamanda well redrill project had to be abandoned due to unforeseen delays and construction challenges as well as permitting delays and incremental permitting requirements. Cal-Am has already incurred $975,413 for the initial drilling and abandonment of the site. Cal-Am states that the redrilling project is still necessary*

---

[168] Exhibit Cal PA-4 (Goldberg) Public Version, Attachment 5, and Exhibit Cal PA-5 at 95-96.

[169] A.19-07-004, Capital Projects Workpapers, Tab 16; Application 100-Day Update, Attachment 3 at 913 and 935; Exhibit CAW-3 (Crooks Direct) at 39-40, Attachment 1.

[170] Exhibit Cal PA-4 (Goldberg Public Testimony), Attachment 7; Exhibit Cal PA-5 (Menda Public Testimony) at 95-96.

because the wells in San Marino are declining in capacity and the service area has a lack of firm supply.[171]

Cal Advocates argued that Cal-Am made poor business decisions when designing and launching the Lamanda Well Re-drill Project and that ratepayers should not bear the costs associated with the technical risks and permitting delays that occurred during the project.[172]

Cal-Am stated that costs for the project should be recovered in the future when a new location and new well, which is necessary to maintain reliable water supply in the territory, has been completed and is serving ratepayers.[173]

The Settlement provides the following compromises:

1. $92,000 of design costs incurred during the initial well redrilling effort should be amortized over this GRC cycle (2021-2023);
2. The design effort for the Lamanda project led to common project specification and economies of scale that benefited other designs completed under the same project;
3. $68,000 of costs incurred for demolition of the existing well should be authorized in this GRC because this work was not associated with the well redrill project, but was instead necessary to abandon the existing well; and
4. The $810,800 in remaining project costs will neither be included in rate base nor recovered from ratepayers.

F. ***Project I15-500066*** – *Main Replacement Program. Nearly 30 miles of mains in Cal-Am's Los Angeles County District have been identified as in need of replacement through the Condition Based Assessment (CBA) or through hydraulic analysis of the*

---

[171] Exhibit CAW-3, Crooks Direct at 42-44.

[172] Exhibit Cal PA-5 at 91-92, 95.

[173] Exhibit CAW-17, Crooks Errata Rebuttal, at 22.

> *systems. Out of those miles, 23 must be upgraded to meet fire protection standards and forecasted future customer demand. The other seven miles must be upgraded due to a high likelihood of failure. Cal-Am requested a projected budget for this project of $10,800,000 for 2021-2023.*[174]

Cal Advocates argued that because Cal-Am has prior experience with similar types of projects and is replacing existing mains, its contingency for this project should be 15%.[175] The Settlement provides that Cal-Am will use a 15% contingency and implement a total capital expenditure for this project of $9,140,256.[176]

> G. ***Project I15-500071*** *– Tank Rehabilitation and Seismic Upgrades Program (2022-2026). Cal-Am stated that through a series of tank assessments conducted over the past decade by third-party consultants, it has developed a maintenance and replacement program that includes all of its tanks. It also plans seismic upgrades in 2022-2023 at a projected cost of $800,000.*[177]

Cal Advocates argued that the proposed seismic upgrades to the existing tanks should not be allowed, because Cal-Am has not completed a seismic study to understand what seismic upgrades are necessary. Cal-Am noted that the costs related to five-year anniversary tank maintenance should be classified as deferred tank improvement costs rather than capital costs, and that it will

---

[174] A.19-07-004, Capital Projects Workpapers, Tab 29; Exhibit CAW-3 at 162-165, Attachment 1; Exhibit CAW-5 at 29-31 and 33-34; Exhibit CAW-9 at 71-72.

[175] Exhibit Cal PA-5C at 2, 27-28, and 90-91.

[176] Attachment C-4 of the Settlement shows the agreed-upon total capital expenditure to be $9,140,256.

[177] A.19-07-004, Capital Projects Workpapers, Tab 34; Exhibit CAW-3 at 103, 162, and 167-169, Attachment 1; Exhibit CAW-5 at 28-29. The City of Duarte also discussed the potential impacts of seismic events on its water supply in Exhibit Duarte-1 at 2-5, and Attachments 1 and 9.

complete its seismic study in 2021, providing sufficient time to perform seismic upgrades in 2022.[178]

The Settlement presents a compromise that Cal-Am shall complete a full seismic study on the tanks in the Los Angeles County District prior to starting any upgrades to the tanks, and this proposed project and any associated cost recovery will be deferred until the next GRC.

H. ***Project I15-500067*** *– Annual Well Installation and Replacement Program (2022-2026). Cal-Am states that new well installation and/or replacement of existing wells is necessary throughout the Los Angeles County District to meet existing customer demand as well as accommodate forecasted demand growth. This proposed project is intended to (1) increase system reliability; (2) maintain system capacity; (3) avoid catastrophic failures; (4) minimize potential violations; (5) extend the useful life of well facilities; (6) improve operability; (7) improve site aesthetics; (8) improve site safety; (9) increase customer satisfaction; and (10) decrease future unanticipated costs. Cal-Am requested a projected budget for $4,000,000 through 2023 for this project.*[179]

Cal Advocates argued that the projects included in this proposal are already included in previously-approved carryover projects.[180]

Cal-Am rebutted that this project is necessary because additional costs are expected to meet the maximum day demands (MDD) in two of the

---

[180] Exhibit Cal PA-4C at 19-20 and 54; Exhibit Cal PA-5 at 91-92 and 95-96.

Los Angeles Systems that include Duarte and San Marino.[181] The Settlement presents a compromise by Cal-Am to remove the 2022 forecasted budget for Project I15-500067 from the cost forecast in this GRC cycle, with the agreement and understanding that Cal-Am may request this capital project in its next GRC.[182]

I. ***Project I15-500065*** – *Standby Generator Improvement Program (2021-2026). Cal-Am proposes to install generators at sites in the Los Angeles County District to serve as backup power supply during the increasing number of Public Safety Power Shutoff (PSPS) events and other power outages. Cal-Am states that this project would be a continuation of the previous Tier 4 Compliance Standby Power Project (I15-500058).*[183]

Cal Advocates argued that stationary back-up generators should not be installed at this time, and that Cal-Am should instead conduct a portable generator and power shutoff study.[184] The City of Duarte supported Cal Advocates' request for Cal-Am to conduct a study regarding the feasibility for portable back-up generators.[185]

Cal-Am reiterated that this project should be deemed necessary to address emergency power to critical infrastructure.[186]

The Settlement provides a compromise that incorporates Cal Advocates' proposed scope and provides that Cal-Am shall conduct a Portable Generator

---

[181] Exhibit CAW-17 at 22-23 and 25-28; Exhibit CAW-22 at 64. This issue was also addressed in Exhibit Duarte-1, in Attachment 9.

[182] Settlement at 48.

[184] Exhibit Cal PA-5C, Menda at 2, 26, 90-91, 94, and 96; Exhibit Cal PA-9C Reed at 3-4, 20-26.

[185] Exhibit Duarte-1at 4-5.

[186] Exhibit CAW-17, Crooks Errata Rebuttal at 27-28; Exhibit CAW-19, Hofer Rebuttal at 34-37.

Planning Study to consider alternatives to installing stationary generators at its sites, as discussed in Section 7.13 above.[187]

10.1.3. Discussion on Los Angeles County District Disputed Projects

We find the Settlement, as it relates to the disputed projects in Cal-Am's Los Angeles County District, reaches compromises on these projects and the issues related to them that are reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. Cal-Am shall complete studies to identify alternatives to stationary back-up generators and prioritize tank maintenance expenditures prior to beginning capital projects in the Los Angeles County District to develop back-up power resources or implementing tank maintenance. Further, Cal-Am shall not recover any costs associated with a new annual well installation and replacement program for the Los Angeles County District in this GRC cycle.

10.1.4. Los Angeles County District Recurring Projects

Cal-Am requested a total estimated direct capital expenditure cost associated with Los Angeles County District Recurring Projects (RPs) of $4,427,083 in 2021 and $4,629,874 in 2022.[188] Cal Advocates recommended reducing the proposed budget to remove any forecasted RP costs associated with the Bellflower system, which has not yet been acquired by Cal-Am.[189]

---

[187] Settlement at 48.

[188] Exhibit CAW-3 at 19-28, Attachment 2.

[189] Exhibit Cal PA-5 at 2, 8-9, 89-91, and 96-97.

Cal-Am argued its requested budget for Los Angeles area RPs is reasonable based on anticipated increases in on-going routine and potential emergency capital maintenance costs.[190]

Rather than litigating this issue, the Settlement presents the following:

A. Cal-Am's Los Angeles County District RP budget shall be $4,212,875 in 2021 and $4,410,929 in 2022;

B. The agreed upon amounts shall be reflected in each year's Utility Plant In Service (UPIS);

C. Cal-Am's authority to spend the budgets requested for RP associated with the Bellflower system (approximately $137,593 in 2021 and $139,822 in 2022) is contingent upon the Commission's approval of Cal-Am's request to acquire the Bellflower Municipal Water System;[191] and

D. Cal-Am management has the flexibility to reallocate the agreed-upon spending levels across the Los Angeles District RP line items as necessary consistent with D.18-12-021.[192]

We have reviewed the record of this proceeding concerning the recurring projects in Cal-Am's Los Angeles County District and find that the parties have reached compromises on these issues that are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am shall limit its RP budget for the Los Angeles County District to the amounts agreed upon in the Settlement and shall not request any cost recovery associated with its outstanding request to acquire the Bellflower System until/unless the Commission authorizes the acquisition. While we authorize the Cal-Am to recover the Settlement's requested budget for RP in the Los Angeles County

---

[190] Exhibit CAW-17 at 3-5 and 8-10.

[191] A.19-07-004 18-09-013.

[192] Settlement at 49.

District, Cal-Am shall not expend any of this authorized recurring project budget on recurring projects related to the Bellflower system during this GRC cycle. Cal-Am maintains flexibility to manage the overall RP budget in the Los Angeles County District to allocate different spending levels to specific line items as necessary, consistent with the authority granted in D.18-12-021.[193] The Commission will determine whether Cal-Am can recover costs associated with the Bellflower system when it issues a decision on the proposed acquisition.

10.2. San Diego County District

10.2.1. San Diego County District Undisputed Projects

Section 8.2.1 of the Settlement identifies projects Cal-Am proposed in the San Diego County District that were not disputed by any party.[194] We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's San Diego County District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.2.2. San Diego County District Disputed Project

The following project was disputed in party testimony, but agreements were later reached in the Settlement, as described below:

A. ***Project I15-300010*** *– Replace 16' Transmission Main along the Silver Strand – Project A-X. In this GRC, Cal-Am is proposing additional design and permitting expenditures for this entire*

[193] D.18-12-021 at 149.

[194] Settlement at 49-50.

> *carry-over project, increasing the total estimated cost to approximately $26,500,000. Its testimony provided the estimated annual capital expenditures by year for 2018-2024, and Cal-Am now expects the project to be complete in 2024.*[195]

Cal Advocates asserted that the Commission should account for funding already approved in rates and the amount Cal-Am planned to spend in 2018-2019 for the project.[196] Cal-Am rebutted that the project is moving along more quickly than before; there have been recent main breaks along the more than 100-year-old pipeline; and therefore, Cal-Am asked the Commission to approve the requested budget for this project based on its progress so far and the heightened need to replace the main in the San Diego County district.[197]

Rather than litigating this issue, the Settlement provides that the approved project budget should include the additional funding requested in this GRC, as supported by the additional information detailed in Cal-Am's rebuttal testimony.

We have reviewed the record of this proceeding concerning the San Diego County District Silver Strand main replacement and find that the Settlement's compromises on these issues are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am's implementation advice letter for this GRC shall reflect the agreed-upon capital expenditures for this capital project as included in Attachment C-4 of the Settlement.[198]

---

[195] A.19-07-004, Capital Projects Workpapers, Tab 102; Application 100-Day Update at 7 and Attachment 3 at 921, 936; Exhibit CAW-3 at 111-116, Attachment 1.

[196] Exhibit Cal PA-5 at 100-102.

[197] Exhibit CAW-17 at 30-32.

[198] Settlement at 219, Attachment C-4.

10.3. Ventura County District

10.3.1. Ventura County District Undisputed Projects

Section 8.3.1 of the Settlement identifies projects in the Ventura County District were that were not disputed by parties in this proceeding.[199] We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's Ventura County District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.3.2. Ventura County District Disputed Projects

The following projects were disputed in Cal Advocate's testimony. The Settlement provides compromises on each, which we evaluate below:

A. ***Project I15-510055*** – *Standby Generator Improvements. Cal-Am proposed to install back-up generators at sites within the Ventura District to provide uninterrupted water service during PSPS events and other power outages.*[200]

Cal Advocates opposed this request and recommended the Commission deny this request and require Cal-Am to conduct a portable generator and power shutoff study.[201]

---

[199] Settlement at 51-52.

[200] A.19-07-004, Capital Projects Workpapers, Tab 128; Exhibit CAW-3 at 183, 186-188, Attachment 1.

[201] Exhibit Cal PA-5C at 2, 24-26, 80, 86-88; Exhibit Cal PA-9C at 3-4, 20-26.

Cal-Am argued that fixed generators with automatic transfer switches will drastically reduce power loss at sites, ensuring water service can continue even during power outages and provide support for fire department and other essential water infrastructure needs.[202]

The Settlement presents a compromise that incorporates Cal Advocates' proposed scope and provides that Cal-Am will conduct a Portable Generator Planning Study to consider alternatives to installing stationary generators at its sites, as discussed in Sections 7.13 and 10.1.2 above.

B. ***Project I15-510049*** *– Academy Turnout Rehabilitation. Cal-Am proposes to provide resiliency to the Ventura District system by creating an additional interconnection with the Calleguas Municipal Water District. It is projected to cost $450,000. According to Cal-Am, the turnout is currently out of service, and the project would provide the upgrades necessary to allow conveyance of water from the Municipal Water District to the Ventura Water District Thousand Oaks service area.*[203]

Cal Advocates stated that this project is unnecessary because the current system capacity is adequate to meet Cal-Am's existing and forecasted demand.[204]

Cal-Am argued the Academy Turnout could provide better redundancy and increased resiliency to the system and reiterated the need for the proposed project.[205] In the Settlement, Cal-Am agreed to Cal Advocates' recommendation to not include this project in this GRC.

C. ***Project I15-510041*** *– Pump Station Replacement and Rehabilitation Project (2021-2026). Cal-Am has identified the most critical booster pump stations in the Ventura County District that*

---

[202] Exhibit CAW-17 at 20-21.

[203] A.19-07-004, Capital Projects Workpapers, Tab 125; Exhibit CAW-3 at 183, 189-190, Attachment 1; Exhibit CAW-5 at 8.

[204] Exhibit Cal PA-5C at 80, 85-86, 88.

[205] Exhibit CAW-17 at 21.

are due for replacement. It requested $3,900,000 for 2021 through 2023 to complete the proposed replacements.[206]

Cal Advocates argued the Commission should only authorize a budget of $1,882,342 for 2021-2022 and reduce the approved budget to remove installation of permanent generators from the project scope.[207] In the Settlement, Cal-Am agreed to Cal Advocates' position on the above issue.[208]

D. ***Project I15-510054*** *– Tank Rehabilitation and Seismic Upgrades Program (2022-2026). Cal-Am developed a maintenance and replacement program that includes seismic upgrades to steel and concrete tanks located throughout the Ventura District service area. The actual seismic upgrades will be identified through a separate study that will be completed in 2021. Cal-Am requested $2,400,000 during 2022-2023 to conduct some of the projects identified through its studies in the Ventura District.*[209]

Cal Advocates argued that funding for seismic improvements should only be authorized after the studies have been completed.[210]

Cal-Am agreed to Cal Advocates' recommended scope and budget reductions.[211] In the Settlement, Cal-Am agreed to (1) adopt Cal Advocates' recommended scope and budget reductions so the total 2022 budget to be authorized in this GRC will be $306,633, and (2) complete the seismic study before work begins on this project.[212]

[211] Exhibit CAW-17 Crooks Errata Rebuttal at 3.

[212] *Ibid.*

10.3.3. Discussion on Ventura County Disputed Projects

We have reviewed the record of this proceeding as it relates to the disputed projects Cal-Am proposed for its Ventura County District and find the Settlement reaches compromises that are reasonable in light of the whole record, consistent with the law, and in the public interest. Consistent with our finding in Section 7.13, the Settlement provides a compromise on the Ventura County disputed projects that limit Cal-Am's recovery of costs related to additional stationary back-up generators until a full study on alternative options can be completed. Cal-Am shall not recover any costs associated with its proposed Academy Turnout rehabilitation project during this GRC cycle because the proposed project is not yet necessary to support Cal-Am's forecasted demand. Further, Cal-Am shall complete a seismic study before starting work on any seismic improvements on tanks in its Ventura County District.

10.3.4. Ventura County Recurring Projects

Cal-Am requested an estimated budget for Ventura County District RP, which Cal Advocates recommended reducing. Cal Advocates noted that the forecasted RP costs requested in Cal-Am's application were significantly higher than the utility's historic expenditures, especially for the process plant category.[213]

Cal-Am argued that its requested RP budget for the Ventura County District was justified based on anticipated increases in on-going routine and unpredicted capital maintenance costs.

[213] Exhibit Cal PA-5 at 2, 8-9, 12-17, 78-80, and 87-88.

In the Settlement, Cal-Am agreed to use Cal Advocates' adjusted budgets for this issue.[214]

We have reviewed the record of this proceeding find that the parties have made compromises on the Ventura County RP budget that are reasonable in light of the whole record, consistent with the law, and in the public interest because the adjusted budgets reflect recent expenditures for similar projects. Cal-Am shall recover the costs associated with the Ventura County RP budget as reflected in Attachment C-4 of the Settlement and maintain flexibility to manage the overall RP budget in the Ventura County District to allocate different spending levels to specific line items as necessary, consistent with the authority granted in D.18-12-021.

10.4. Central Division District

10.4.1. Central Division District Non-Disputed Projects

The Settlement's Section 8.4.1 identifies projects in Cal-Am's Central Division District that were not disputed by parties to this proceeding.[215] We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's Central Division District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

---

[214] Exhibit CAW-17 at 3-5 and 7-10; Settlement at 55-56 and Attachment C-4.

[215] Settlement at 56-57.

10.4.2. Central Division Disputed Projects

The Settlement provides compromises on the issues associated with Central Division Projects that were disputed by Cal Advocates and MPWMD in testimony, as detailed below:

A. *Project I15-400131 – Well Rehabilitation Program (2021-2026). Cal-Am requested $3,000,000 in 2021-2023 to rehabilitate, replace, and add new wells, as a continuation of the program approved in Cal-Am's 2013 and 2016 GRCs. This proposal has an added scope of replacing wells if the initial evaluation finds that rehabilitation is not viable and adding wells if production is not sufficient to meet system demand.*[216]

Cal Advocates argued the sum of project costs proposed for 2021-2022 is lower than Cal-Am's budget request and one of the project candidates in this proposed program is not necessary at this time.[217]

MPWMD, in contrast, argued that Cal-Am's request for the well rehabilitation program is too low and "may not represent a serious commitment to maximizing [aquifer storage and recovery (ASR)] yields."[218]

Cal-Am argued that the identified wells are only a partial representation of the projects necessary to provide adequate service to the Monterey system, especially in the Carmel Valley, but that the budget it requests in this GRC is appropriate for 2021-2023.[219]

The Settlement adopts Cal Advocates' recommended budget for the Well Rehabilitation program in the Monterey District.[220] MPWMD continues to

---

[216] A.19-07-004, Capital Projects Workpapers, Tab 62; Exhibit CAW-2 Cook Direct at 9; Exhibit CAW-3 at 193,197-199, Attachment 1.

[217] Exhibit Cal PA-5C at 55-60 and 69.

[218] MPWMD-1 at 7, 10-11.

[219] Exhibit CAW-16 at 2; Exhibit CAW-17 Crooks Errata Rebuttal at 14-15.

[220] Settlement at 58 and Attachment C-4.

view the compromise reached in the Settlement on this project as "an underfunding of critical Monterey infrastructure needs."[221] Cal-Am argued that the budget compromise reached in the Settlement, through "hard-wrought negotiations," balances the financial needs of completing well rehabilitation and replacement against the potential for increased customer rates.[222]

B. *Project I15-400128 – Supervisory Control and Data Acquisition (SCADA) Maintenance and Improvements Program (2021-2026). Cal-Am requested $1,800,000 for new equipment and SCADA system upgrades in the Central Division in 2021-2023, as a continuation of a project approved in prior GRCs.*[223]

Cal Advocates noted the amount Cal-Am is seeking to recover in the current GRC (2021-2023) represents most of the total cost of the projects identified through 2026.[224]

Cal-Am argued that its proposed SCADA Maintenance and Improvements Program for the Central District not only includes the costs of the projects listed in the workpapers, but also estimated annual costs to ensure its SCADA system remains up-to-date and reliable.[225]

The Settlement adopts Cal-Am's forecasted budget for this project, consistent with the additional details provided in Cal-Am's rebuttal testimony.

---

[221] MPWMD Comments on the Settlement at 4, 14, and 16.

[222] CAW Reply Brief at 11; CAW Reply Comments on Settlement Agreements at 5.

[223] A.19-07-004, Capital Projects Workpapers, Tab 59; Exhibit CAW-3 at 193, 199-200 and Attachment 1.

[224] Exhibit Cal PA-5C at 55-56, 61-63, and 70.

[225] Exhibit CAW-17 at 12-13.

C. *Project I15-400129 – Tank Rehabilitation Program (2021-2026). Cal-Am requested $2,515,728 for 2021-2022 to provide regular maintenance to the 120 storage tank facilities in the Monterey District.*[226]

Cal Advocates testified that the total direct costs for the projects in Cal-Am's Tank Rehabilitation Program exceeds the total proposed 2021-2026 budget for this project. Cal Advocates also stated the costs for the five-year anniversary tank maintenance should be considered deferred tank improvement costs, rather than capital costs, and that Cal-Am requested duplicate cost recovery of tank painting projects.[227]

In the Settlement, Cal-Am agreed to Cal Advocates' budget modifications as detailed in Attachment C-4 of the Settlement.[228]

D. *Project I15-400140 – Standby Generator Improvement Program (2021-2026). Similar to its requests in the Los Angeles and Ventura County Districts, Cal-Am sought to recover up to $1,050,000 in 2021-2023 to install and upgrade backup power generators at its pump stations and water treatment facilities in its Central Division.*[229]

Cal Advocates argued that Cal-Am should only be authorized to use a significantly reduced budget to procure portable generators and reiterated its argument that Cal-Am should be directed to conduct a portable generator and power shutoff study before installing additional generators.[230]

---

[226] A.19-07-004, Capital Projects Workpapers, Tab 60; Exhibit CAW-3 at 193, 200-201, and Attachment 1; Exhibit CAW-5 at 28-29.

[227] Exhibit Cal PA-5C at 55-56, 64-70; Exhibit Cal PA-9 at 39-41.

[228] Exhibit CAW-17 at 2-3; Settlement at 59-60 and Attachment C-4.

[229] A.19-07-004, Capital Projects Workpapers, Tab 69; Exhibit CAW-3 at 193, 201-202, and Attachment 1.

[230] Exhibit Cal PA-5C at 55-56, 63-64; Exhibit Cal PA-9C at 3-4, 20-26.

Cal-Am argued that the project and proposed budget are necessary to provide reliable service to the Central Division. Cal-Am also argued that reliance on portable generators is labor intensive and could be inefficient.[231]

In the Settlement, Cal-Am agreed to Cal Advocates' proposed budget modifications for the Central District's standby generator improvement program and to prepare a Portable Generator Planning Study to consider alternatives to installing stationary generators, as described in Section 7.13 above.[232]

MPWMD argued that the compromise reached in the Settlement "is completely at odds with the vivid, descriptive testimony of Cal-Am's own engineer and is not in the public interest of the Monterey Service Area customers."[233] MPWMD stated that the Central District has many customers that would lose water service in the event of a power shutoff, and that Cal-Am's initial request for this project should be authorized.[234]

E. *Project I15-400130 – Carmel Woods #1 and #1 Tank Replacement. Cal-Am requested $421,657 in 2022 to replace two 50,000-gallon concrete storage tanks which are leaking and at the end of their useful life.*[235]

Cal Advocates asserted that the total storage volume for the two existing tanks is not necessary to meet the current storage demands for the specified

---

[231] Exhibit CAW-17 at 15-17.

[232] Settlement at 60 and Attachment C-4 at 220.

[233] MPWMD comments on the Settlement at 4, footnote to Exhibit CAW-17 at 15-17 omitted.

pressure zone.[236] In the Settlement, the parties agreed to defer this project to a future GRC.[237]

F. *Project I15-400124 – Huckleberry Hydropneumatic Tank Replacement. Cal-Am requested $1,322,856 to replace an existing hydropneumatic tank that is showing signs of rust and decay.*[238]

Cal Advocates argued that Cal-Am's cost estimate was based on construction of a storage tank, rather than the installation of a hydropneumatic tank, and that the approved budget should be reduced to $399,000 in 2020.[239] In the Settlement, Cal-Am agreed to adopt Cal Advocates' budget recommendation.

G. *Project I15-400123 – Annual Program – Well Rehabilitation and Replacement (2018-2020). Cal-Am requested $3,000,000 in 2021-2023 to continue a well rehabilitation program that was approved in its 2013 and 2016 GRCs. Cal-Am proposed to expand the scope of the program to allow for well replacement when a well cannot be rehabilitated or to develop new wells, if necessary, to meet system demands.*[240]

Cal Advocates argued that the actual sum of project costs for the specific wells identified in Cal-Am's application is significantly lower than the $3,000,000 requested, and that one of the project candidates proposed in this program should be denied because it is not needed at this time.

MPWMD argued the budget proposed by Cal-Am is low and may not represent a serious effort to maximize ASR yields. MPWMD also recommended

---

[236] Exhibit Cal PA-5C at 56, 60-61, and 69-70.

[237] Exhibit CAW-17 at 13-14; Settlement at 61 and 220.

[238] A.19-07-004, Capital Projects Workpapers, Tab 54; Application 100-Day Update at 9 and Attachment 3, at 924 and 940; Exhibit CAW-3 at 143 and Attachment 1; Exhibit CAW-9 at Attachment 1.

[239] Exhibit Cal PA-4 at Attachment 7; Exhibit Cal PA-5 at 69-70.

[240] A.19-07-004, Capital Projects Workpapers, Tab 62; Exhibit CAW-2 at 9; Exhibit CAW-3 at 125-26, 145-46, 197-99, 209-12

the Commission separate and reject the costs requested by Cal-Am to drill new wells for the Sand City Desalination Plant.[241]

MPWMD noted that the Commission's approval of costs to support the Sand City Desalination Plant was to support customer growth in the Monterey service district, and the cost recovery approved in D.13-04-015 is solely associated with Cal-Am's production and delivery of water from Sand City, not the drilling of new wells. MPWMD therefore recommended the Commission deny Cal-Am's request to use ratepayer funds to drill new wells to support the Sand City plant's ongoing operation. However, MPWMD since withdrew its opposition to Cal-Am's request to drill a new well at the Sand City plant.[242] MPWMD noted that it "has been informed that the proposed intake well for the Sand City plant could be completed in eleven months at a cost of approximately $1.2 million." It further noted that Cal-Am's authorization to withdraw from the Carmel River will drop by 50% in January 2022, and that "every available source of supply must be optimized while awaiting the expansion of the Pure Water Monterey Project."

Cal-Am argued that it has determined that the existing wells at the Sand City plant are "significantly impacted by water quality and will require the addition of a [new] well to replace lost capacity."[243] Cal-Am also argued that nothing in the prior proceeding preempts it from recovering the costs of drilling a new well to support its own facilities.[244] Cal Am further argued that the

---

[241] MPWMD-1 at 3-13.

[242] MPWMD comments on the Proposed Decision at 7-8.

[243] Exhibit CAW-3 at 125.

[244] Cal-Am reply comments to MPWMD comments on the Settlement and the Cal-Am-Las Palmas Settlement.

circumstances that D.13-04-015 intended to prevent have been resolved. Cal-Am stated that 99% of the output from the Sand City plant serves the Monterey Main system, not Sand City residents; therefore, "… the additional water produced by the Sand City Desalination Plant continues to serve Monterey District customers and reduce the reliance on Carmel River water."[245]

The Settlement provides a compromise to incorporate Cal Advocates' proposed budget modifications for Project I15-400123 as reflected in Attachment C-4 of the Settlement, reflecting a total of $1,258,518 for this project during this GRC cycle.

H. *Project I15-400141 – New Carmel Valley Well. Several of the existing wells in the Lower Carmel Valley have declining production and must be replaced to fully implement Cal-Am's maximum Carmel River water rights and the ASR program. Cal-Am requested $1,897,303 to construct one new well on the Rancho Canada Golf Course that will be 120-150 feet deep and have a production capacity of 1,200 to 2,500 gallons per minute.*[246]

MPWMD asserted that Cal-Am should construct more than one well – and preferably three to five new wells – to support the ASR program adopted in D.18-09-017.[247] In the Cal-Am-MPWMD Settlement, MPWMD agreed to Cal-Am's request for this project.[248]

I. *Project I15-400143 – Forest Lake Pump Station. Cal-Am proposes to construct a new pump station to raise the pressure in the transmission line between Forest Lake and Carmel Valley, which has four high spots in Carmel where the pressure can sometimes drop below the normal lower operating limit. This proposed pump station would likely be located at or near the*

---

[245] Cal-Am comments on the Proposed Decision at 3-4.

[246] Exhibit CAW-3 at 125-26, 145-46, 197-99, 209-12

[247] Exhibit MPWMD-1 at 3-13.

[248] Cal-Am-MPWMD Settlement at 16.

Forest Lake Tanks site and could raise the pressure to within the normal operating limit throughout the pipeline.[249]

MPWMD strongly encouraged the Commission to approve Cal-Am's request for this project, stating that this new pump station will also provide "immense benefits to the system's ability to take water from the new source supplies in the north to customers in the south, traditionally served by the Carmel River, upon which production must be reduced by regulatory order."[250]

The Settlement adopts Cal-Am's proposal and budget.

J. *Project I15-400122 – Los Padres Dam NMFS MOA Requirements. Cal-Am operates the Los Padres Dam (LPD) along the Carmel River. In 2017, Cal-Am entered into two memoranda of agreements (MOA) with the National Marine Fisheries Service (NMFS) to evaluate the potential impacts of removing LPD, which was constructed in 1949, and other alternatives to the dam's removal. Cal-Am requested $12,417,500 to conduct additional studies to evaluate alternatives to the LPD removal and complete this project.*[251]

MPWMD requested the Commission continue to fund this project. As a project manager, MPWMD stated that it is working with Cal-Am to contain the costs related to the NMFS studies.[252] The Settlement adopts Cal-Am's proposal and budget for this project.

10.4.3. Discussion on Central Division Disputed Projects

We find the Settlement provisions relating to the budgets for the above summarized issues ((1) the Central Division Well Rehabilitation Program; (2) the Tank Rehabilitation Program budget for this GRC cycle; (3) the cost of the

[249] Exhibit CAW-3 at 125-126, 145-146, 197-199, and 209-212; Exhibit CAW-17 at 14-16 and 18-19.

[250] Cal-Am-MPWMD Settlement at 16.

[251] Exhibit CAW-3 at 125-126, 145-146, 197-199, and 209-212; Exhibit CAW-17 at 14-16 and 18-19.

[252] Cal-Am-MPWMD Settlement at 15.

Huckleberry hydropneumatic tank replacement project; (4) deferral of the Carmel Woods tank replacement project; (5) the SCADA system maintenance and equipment upgrade costs for the Central District; (6) the New Carmel Valley Well Project; (7) the Forest Lake Pump Station, and (8) the Los Padres Dam studies and project) to be reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. While MPWMD highlights the need for additional investment in Cal-Am's Monterey Service District, we find the Settlement strikes a reasonable balance between the capital expenditures necessary in the near term and the potential customer bill impacts from the major well upgrade programs, supports the necessary SCADA system maintenance and equipment upgrades, and funds the ongoing studies necessary to evaluate the removal of the Los Padres Dam.

Further, consistent with our discussion in Section 7.13 above, Cal-Am is provided with initial funding to support portable generator deployment to alleviate near-term concerns about potential power shut-offs at facilities in the Central District and authorized to recover costs associated with conducting and completing a study on alternatives to stationary generators at facilities in the Central District as well as the rest of its service territory. We find it reasonable for this broader study to occur before authorizing Cal-Am to expend significant capital to install additional, stationary back-up power resources that may not be necessary. This issue may be considered further in a future GRC once the Portable Generator Planning Study is complete.

The Settlement did not address the Sand City well issues raised by MPWMD. D.13-04-015 authorized Cal-Am to purchase water from the Sand City

Desalination Plant under specific terms, with cost recovery to be evaluated through an advice letter process.[253]

Cal-Am is authorized to recover the costs of water it produces and delivers from the existing Sand City plant. The cost allocation method adopted by D.13-04-015 specifically intended to "leave the operational cost risk with shareholders, and to protect ratepayers from assuming Cal-Am's guarantee of production regardless of cost."[254] This provision was adopted on the concern that the Sand City plant's production would largely support growth within Sand City, while any expansion or incremental operational costs might be borne by Cal-Am's broader Central Division rate base. However, we find that the concerns that provision intended to address have been resolved, given that the majority of the Sand City plant's production is serving Monterey Main service territory customers and is not supporting any rapid growth in the Sand City area.[255] As noted in Cal-Am's testimony, "the majority of water produced from the Sand City Desalination plant is used to offset pumping from the Seaside Basin and Carmel River." Upon review of MPWMD's withdrawal of its opposition to the proposed new Sand City well, and the additional arguments Cal-Am provided in comments on the PD highlighting the critical need to identify incremental resources to provide service to the Monterey Peninsula, we

---

[253] D.13-04-015 denied Cal-Am's request to enter a 31-year lease for the Sand City Desalination Plant because Cal-Am failed to show that the water produced by the plant is the most reasonable and prudent resource to supply water to customers – both new and existing – in its Monterey District. However, Cal-Am was authorized to include the costs of water it produces and delivers to Monterey District customers from the Sand City plant in its Monterey District revenue requirement. (*See* D.13-04-015 at 22-33.)

[254] D.13-04-015 at 32.

[255] D.18-12-012 found that "there have been a total of three new customers in Sand City since 2009 and 99% of the production serves the Monterey Main system" (at 234).

find Cal-Am's proposal and the terms of the Settlement related to the Sand City Desalination plant to be reasonable in light of the whole record, consistent with the law, and in the public interest.

10.5. Monterey County Wastewater District

10.5.1. Monterey County Wastewater District Non-Disputed Projects

The following projects in the Monterey County Wastewater District were not disputed.

a. Project I15-420004 – Spreckles Boulevard Main Replacement (proposed); and

b. Recuring Projects R15-42B through R15-42R.[256]

We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's Monterey County Wastewater District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.5.2. Monterey County Wastewater District Disputed Project

The Settlement provides compromises reached to address the issues associated with one of Cal-Am's proposed Monterey County Wastewater District projects that was disputed by parties in testimony, as detailed below:

A. *Project I15-420003 – Las Palmas Moving Bed Bioreactor (MBBR) Installation. Cal-Am requested $248,033 in 2022 for a retrofit of the Las Palmas Ranch Wastewater Treatment Plant that would remove the existing trickling filter towers, convert the secondary clarifiers 1 and 2 into process tanks that house a*

[256] Settlement at 62.

> *MBBR, install coarse and medium bubble aeration and blowers, and install retention screens at the outlet of each secondary clarifier. Cal-Am states this project is necessary because the Plant 1 trickling filter tanks are not structurally sound, that Cal-Am has already sought a third-party evaluation of alternatives to improve the operations at the Las Palmas Ranch treatment plant, and that the MBBR proposal offered in its testimony was found to be the best alternative.*[257]

Cal Advocates argued that the requested budget should be reduced to eliminate redundant contingency project costs included in Cal-Am's request.[258] Cal-Am agreed to Cal Advocates' proposed budget reduction.[259]

No other parties filed comments on this project.

The Settlement provides a budget that excludes redundant contingency costs but allows for the MBBR project to move forward as proposed.

We have reviewed the record of this proceeding concerning the Las Palmas MBBR project and find that the compromise reached on this issue is reasonable in light of the whole record, consistent with law, and in the public interest.[260] Cal-Am shall continue the project with the budget reductions proposed by Cal Advocates, as agreed to in the Settlement.

10.6. Sacramento County District

10.6.1. Sacramento County District Undisputed Projects

Section 8.6.1 of the Settlement identifies projects in the Sacramento County District that were not disputed by parties.[261] We have reviewed the record of this

---

[257] A.19-07-004, Capital Projects Workpapers, Tab 72; Exhibit CAW-3 at 213-215 and Attachment 1; Exhibit CAW-2 at 15-17; Exhibit CAW-6 at 91.

[258] Exhibit CalPA-5C at 72 and 75-77.

[259] Exhibit CAW-16 at 7-8; Exhibit CAW-17 at 2-3.

[260] Settlement at 221.

[261] Settlement at 63-64.

proceeding concerning these undisputed projects in Cal-Am's Monterey County Wastewater District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.6.2. Sacramento County District Disputed Projects

The Settlement provides compromises reached to address the issues associated with Cal-Am's proposed Sacramento County District projects that were disputed by parties in testimony, as detailed below:

A. *Project I15-600094 – Nut Plains Well PFOA Treatment. This previously-approved investment project, which was completed in Fall 2017 at a total cost of $1,292,899, was necessary to lower the levels of Perfluorooctanoic acid (PFOA) and other contaminants in drinking water served in Cal-Am's Suburban-Rosemont service area to comply with a May 25, 2016 federal health advisory.*[262]

Cal Advocates opposed authorizing the full cost recovery because Cal-Am is seeking repayment from the U.S. Air Force (Air Force) for part of the treatment upgrades costs.[263]

Cal-Am argued that, despite the Air Force being potentially responsible for the underlying contamination driving remediation project, there is no guarantee what cost recovery is feasible from the Air Force. Cal-Am further argued that, due to the indeterminate amount of time it may take for the lawsuit to be

---

[262] Application 100-Day Update, Attachment 3 at 912; Exhibit CAW-3 at 89-90; Exhibit CAW-5 at 3-4.

[263] Exhibit CalPA-4 at 9, 23-24.

resolved, the Commission should approve the full cost recovery for this project requested in this GRC.[264]

The Settlement provides that Cal-Am's requested costs related to the Nut Plains Well PFOA Treatment should be included in rate base in this GRC. Cal-Am also agreed that, in the event that it obtains any monetary recovery through litigation for this project, it will seek Commission approval to allocate any net proceeds consistent with D.10-10-018.[265]

B. *Project I15-600072- Sacramento District Main Replacement. Cal-Am completed a main replacement program across the nine, geographically distinct service areas in the Sacramento County District with the intent of improving water pressure, quality, and overall system reliability.*[266]

Cal Advocates argued that Cal-Am's contingency on this item should be limited to 15%.[267]

In the Settlement, Cal-Am agreed to use a 15% contingency for Project I15-600072 as recommended by Cal Advocates.[268]

---

[264] Exhibit CAW-17 at 12; Exhibit CAW-22 at 57-58.

[265] D.10-10-018 found that "After the contaminated plant is replaced, remediation has occurred, and all recoverable costs have been determined, the remaining amount of contamination proceeds arising from damage awards, settlements, government order and insurance proceeds may be shared between ratepayers and shareholders on a case-by-case basis under a framework for analysis provided in [Table 2 and Appendix D] of this decision." (at 3.)
Ordering Paragraph 3 of D.10-10-018 directed all investor-owned water utilities to account for local or federal grants, government loans, damage awards, settlements, government ordered funds and insurance proceeds used to replace contaminated water supplies as Contributions in Aid of Construction (CIAC).

[266] A.19-07-004, Capital Projects Workpapers Tab 82; Application 100-Day Update, Attachment 3 at 910, 912, and 934; Exhibit CAW-3 at 90-91, 133-134, 216-217, and Attachment 1; and Exhibit CAW-5 at 29-30 and 33-34.

[267] Exhibit CalPA-5C at 2 and 27-28.

[268] Settlement at 66 and Attachment C-4.

C. *Project I15-600101 – Standby Generator Improvements Program (2021-2026). Cal-Am claims that with the increasing number of PSPS events, additional systems in the Sacramento County District have been added to those identified in 2016 as in need of redundant power resources, and that the costs and needs of the proposed incremental systems were based on the 2016 report's findings.*[269]

Cal Advocates argued that only three of the 11 proposed generator project candidates in the Sacramento District should be constructed, and two generators should be relocated as described in the 2016 report. Cal Advocates further argued that any additional generators should be contingent upon Cal-Am's completion of a portable generator and power shutoff study.[270]

Cal-Am opposed Cal Advocates' proposed budget reduction and argued that its proposed Sacramento District generator program was necessary to ensure reliable water service during emergencies and power interruptions.

D. *Project I15-600032 – Walerga Road Bridge Pipeline. Cal-Am is seeking authority to file an advice letter to get approval for cost recovery of up to $1.5 million associated with installing a new pipeline within the box girder of the new bridge, while abandoning the existing water pipeline at this location.*[271]

Cal Advocates argued that Cal-Am is accounting for the costs of this project elsewhere in its workpapers in this GRC request, so it should not be authorized to file a separate advice letter seeking further recovery of these costs.[272] Cal-Am agreed these costs are already included in the projected revenue

---

[269] A.19-07-004, Capital Projects Workpapers, Tab 92; Exhibit CAW-3 at 215, 222-223, and Attachment 1.

[270] Exhibit CalPA-5C at 33-38, 42, and Attachment 2; Exhibit CalPA-9C at 3-4 and 20-26.

[271] A.19-07-004, Capital Projects Workpapers, Tab 78; Application 100-Day Update Attachment 3 at 921 and 938; Exhibit CAW-3 at 151-152 and Attachment 1.

[272] Exhibit CalPA-4 Attachment 7; Exhibit CalPA-5 at 2,4, and 2-30.

requirement in Cal-Am's RO Model; and the Settlement reflects this acknowledgement by Cal-Am.[273]

E. *Project I15-600102 – Service Saddle Replacement Program (2021-2026). Cal-Am proposed a $4.5 million project over 2021-2023, or $1.5 million per year, to replace the single strap saddles in this district to minimize the ongoing repair work and the potential for future leaks.*[274]

Cal Advocates recommended that Cal-Am's requested 2021-2022 budget for saddle service replacement be reduced to align with historic costs for similar replacements in the service territory.[275] Cal-Am agreed to Cal Advocates' proposed scope and budget modifications, as reflected in Attachment C-4 of the Settlement.[276]

F. *Project I15-600103 – Suburban Rosemont Hydraulic Improvement. Cal-Am proposes to spend $3,450,000 in 2021-2023 for a project to construct a booster pump station and pressure sustaining valves with new vaults that would physically separate the area in the eastern portion of the Sacramento system and address the water supply constraints that currently exist in the suburban Rosemont area.*[277]

Cal Advocates recommended reducing Cal-Am's proposed direct cost to $1,469,377 in the 2021-2022 period to address redundant contingency costs in the project proposal.[278]

---

[273] Exhibit CAW-22 at 66; Settlement at 67.

[274] A.19-07-004, Capital Projects Workpapers, Tab 93; Exhibit CAW-3 at 215, 224, and Attachment 1.

[275] Exhibit CalPA-5C at 33-34 and 40-42.

[276] Exhibit CAW-17 at 11; Settlement at 68 and Attachment C-4.

[277] A.19-07-004, Capital Projects Workpapers, Tab 94; Exhibit CAW-3 at 215, 225-226, and Attachment 1; Exhibit CAW-5 at 3-4.

[278] Exhibit CalPA-5C at 33-34, 38-39, and 42.

In the Settlement, Cal-Am agreed to Cal Advocates recommended total capital expenditure for this project.[279]

> G. *Project I15-600099 – Well Rehabilitation Program (2021-2026). Cal-Am proposes to spend $4.5 million in 2021-2023, or $1.5 million per year, to fund well rehabilitation projects that will, among other benefits, increase the Sacramento District's system reliability; avoid catastrophic failures; extend the useful life of the existing well facilities; and improve operability, site safety, and customer satisfaction.*[280]

Cal Advocates noted that six of the well rehabilitation projects proposed by Cal-Am for this project have already been completed and recommended a reduction of the 2021-2022 budget to account for those already-completed projects.[281]

In the Settlement, Cal-Am agreed to Cal Advocates' recommended budget and scope modifications, including the reduced 2021-2022 budget.[282]

10.6.3. Discussion on Sacramento County Disputed Projects

We find the Settlement reaches compromises on the Sacramento County disputed projects described above that are reasonable in light of the whole record, consistent with the law, and in the public interest. Regarding the outstanding costs associated with the Nut Plains Well PFOA Treatment, Cal-Am shall file a Tier 2 Advice Letter if and when it seeks approval of its proposed

---

[279] Exhibit CAW-17 at 2; Settlement at 69 and Attachment C-4.

[280] A.19-07-004, Capital Projects Workpapers, Tab 90; Exhibit CAW-3 at 215, 220-221, and Attachment 1.

[281] Exhibit CalPA-5C at 33-34 and 41-42.

[282] Exhibit CAW-17 at 2 and Settlement at 69 and Attachment C-4 at 224.

recovered cost allocation within 90 days of receiving any proceeds from its ongoing lawsuit with the Air Force, as provided in the Settlement.[283]

Cal-Am has experience completing main replacement programs across its various service areas in California and Sacramento County. Therefore, Cal-Am shall implement the 15% contingency for the Sacramento District Main Replacement program agreed upon in the Settlement.

As previously discussed in Sections 7.13, 10.1.2, 10.3.2, and 10.4.2 above, the Settlement adopts Cal Advocates' proposal to require Cal-Am to prepare a Portable Generator Planning Study to identify alternatives to stationary generators where feasible. Cal-Am shall conduct and complete a study on alternatives to stationary generators at facilities across its California service territory before recovering costs for non-portable generators. Recovery of stationary and/or portable generator costs in the Sacramento County District may be considered further in a future GRC once the Portable Generator Planning Study is complete.[284] Cal-Am shall not file a Tier 2 Advice Letter seeking to recover additional costs related to its Walegra Road Bridge Pipeline project and shall adopt the budget for service saddle replacement provided in the Settlement, which aligns with recent costs for similar projects in the Sacramento County District.

Further, Cal-Am shall limit its total capital expenditure for the Sacramento County Disputed Projects to those provided in Attachment C-4 of the Settlement, which remove redundant contingency costs related to the

[283] Settlement at 65.

[284] Settlement at 66-67 and Attachment B-6.

Suburban Rosemont Hydraulic Improvement project and costs associated with already completed well rehabilitation projects.

10.6.4. Sacramento County Recurring Projects

Cal-Am requested an estimated direct cost for Sacramento County District Recurring Projects (RP) of $4,393,166 in 2021, and $4,499,442 in 2022.

Cal Advocates did not dispute any of the proposed RPs in the Sacramento County District but recommended a lower total direct cost of $3,421,639 in 2021, and $3,503,514 in 2022.

Cal-Am argued that its requested RP budget is justified because it anticipates increased ongoing, routine, and emergency capital maintenance costs.[285]

The Settlement adopts Cal Advocates' lower recommended budgets and requires Cal-Am to reflect its annual RP budget amounts for the Sacramento County District in its UPIS for each year.[286]

We have reviewed the record of this proceeding concerning the Sacramento County District recurring projects and find the compromises provided in the Settlement are reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am's speculated increases in ongoing, routine, and emergency capital maintenance costs were not supported by its testimony. Cal Advocates' proposed budgets are more in line with historic RP costs in the Sacramento County District, and Cal-Am shall adopt them as provided in the Settlement. Cal-Am maintains flexibility to manage the overall

[285] Exhibit CAW-17 at 3-7 and 35.

[286] Settlement at 70.

RP budget in Sacramento County to allocate different spending levels to specific line items as necessary, consistent with the authority granted in D.18-12-021.

10.7. Larkfield District

10.7.1. Larkfield District Non-Disputed Projects

Section 8.7.1 identified projects in the Larkfield District that were not disputed by parties in this proceeding.[287] We have reviewed the record of this proceeding concerning these undisputed projects in Cal-Am's Monterey County Wastewater District and find these undisputed projects are reasonable in light of the whole record, consistent with the law, and necessary to improve service to Cal-Am's customers and to maintain and reinforce the utility's existing water service infrastructure. It is reasonable to allow Cal-Am to include them in rate base and recover the costs from ratepayers, as detailed in the application and the related testimony.

10.7.2. Larkfield District Disputed Projects

The Settlement provides compromises reached to address the issues associated with Cal-Am's proposed Larkfield District projects that were disputed by parties in testimony, as detailed below.

A. *Project I15-610015 – Larkfield Main Replacement Program. Cal-Am requested $2,046,000 in 2021-2022 for this proposed project to replace mains that were identified in the 2019 Sonoma County District Comprehensive Planning Study and Buried Infrastructure Condition Based Assessment.*[288]

Cal Advocates argued that the 2021-2022 Main Replacement Program budget should be $1,110,797, and that Cal-Am should prioritize the main

[287] *Ibid* at 70-71.

[288] A.19-07-004, Capital Projects Workpapers, Tab 44; Exhibit CAW-3 at 231-232, Attachment 1.

replacement projects identified in Cal-Am's 2018 Conditional Based Assessment report.[289]

In the Settlement, Cal-Am agreed to Cal Advocates' proposed budget and scope for this project.[290]

B. *Project I15-610018 – Larkfield Tank Rehabilitation and Seismic Upgrades. Cal-Am requested $818,400 in 2021-2022 for a tank rehabilitation and seismic upgrade project that will include the preparation of an evaluation of the structural integrity of the tanks in the Larkfield District and the identification and design of seismic upgrades for each specific tank. Cal-Am intends to implement the upgrades during the scheduled maintenance cycles for the tanks in the Larkfield District.*[291]

Cal Advocates argued that some of Cal-Am's requested costs are duplicative and should be included in the deferred tank maintenance budget.

In the Settlement, Cal-Am agreed to Cal Advocates' proposed modifications to this project's budget and scope.[292]

C. *Project I15-610002 – Faught Road Well. Cal-Am sought approval to submit an advice letter to recover $2,504,133 to construct a 150 gpm production well and install 1,500 feet of 6-inch raw water main from the new well to the Larkfield water treatment plant.*[293]

---

[289] Exhibit CalPA-5C at 2, 27-28, 44-46, and 53.

[290] Exhibit CAW-17 at 2, Settlement at 71 and Attachment C-4.

[291] A.19-07-004, Capital Projects Workpapers, Tab 7; Exhibit CAW-3 at 231, 235, and Attachment 1.

[292] Exhibit CAW-17 at 2; Settlement at 72 and Attachment C-4.

[293] Application 100-Day Update, Attachment 3 at 912 and 938; Exhibit CAW-3 at 152-153 and Attachment 1; Exhibit CAW-9 Attachment 1.

Cal Advocates argued that this project is not necessary at this time, and if Cal-Am decides this project is necessary in the future, it should request recovery of the completed project costs in a subsequent GRC.[294]

Cal-Am agreed that the 2017 Tubbs Fire resulted in a decrease in demand in the Larkfield District. Accordingly, in the Settlement, Cal-Am agreed to exclude these project costs from this GRC but reserves Cal-Am's ability to request recovery of this project in a subsequent GRC.[295]

D. *Project I15-610014 – Larkfield Wildfire Recovery (Facilities) and Project I15-610023 – Larkfield Wildfire Recovery (Meters and Services). Cal-Am requested $7.5 million to rebuild infrastructure for the nearly 25% of the Larkfield water system customers that had their homes, businesses, and other utilities destroyed by the 2017 Tubbs Fire. The estimated cost includes Cal-Am's expenditures on this project through December 2018 totaling $4.05 million.*[296]

Cal Advocates argued that the Commission should not allow the $7.5 million requested in 2020 until the insurance claims are complete.[297]

Cal-Am provided updated information regarding its Larkfield Wildfire insurance claims in rebuttal, illustrating that the final claim for its Larkfield Wildfire insurance provided a total of $1,206,275.92 related to lost or damaged assets and $70,433.00 related to lost revenues. Cal-Am stated that no further

---

[294] Exhibit CalPA-4 at 11, 14, 37-40, and 48.

[295] Settlement at 73 and Attachment C-4.

[296] A.19-07-004, Capital Projects Workpapers, Tab 3; Application 100-Day Update, Attachment 3 at 925 and 940; Exhibit CAW-3 at 160-161 and Attachment 1; Exhibit CAW-6 at 39-40; Exhibit CAW-14 at 16-18.

[297] Exhibit CalPA-4 at 10, 12, 28-30, 47, and 59; Exhibit CalPA-5C at 76, 83-86, and Attachment 69.

reimbursement is forthcoming because the March 20, 2020, agreement was the final sign-off on this insurance claim.[298]

The Settlement provides that the portion of the insurance claim related to lost or damaged assets should be netted against the total project cost, and the net forecasted capital spend should be allowed for inclusion in rate base, with the total capital expenditure for this project set forth in Attachment C-4 of the Settlement.[299]

10.7.3. Discussion on Larkfield Disputed Projects

We find the Settlement provides compromises on the Larkfield District disputed projects that are reasonable in light of the whole record, consistent with the law, and in the public interest.

The Settlement reduces Cal-Am's proposed budget for the Larkfield District disputed projects to (1) prioritize main replacement projects already identified by Cal-Am's Conditional Base Assessment report; (2) remove duplicative tank maintenance costs; (3) exclude costs that are not necessary due to system impacts related to the 2017 Tubbs Fire; and (4) reflect wildfire insurance claims Cal-Am has received to recoup lost assets and revenues.

Cal-Am shall recover the costs for the projects described in Section 10.7.2 above, as provided in Attachment C-4 of the Settlement.

10.8. Recurring Projects – Corporate General Office

Cal-Am requested a total estimated direct cost for Corporate General Office (GO) RPs of $5,494,844 in 2021 and $5,632,153 in 2022.[300]

---

[298] Exhibit CAW-17 at 38-40; Exhibit CAW-22 at 59-60; Exhibit CAW-25 at 60-64.

[299] Settlement at 73-74 and Attachment C-4.

[300] Exhibit CAW-3 at 19-28 and Attachment 2.

Cal Advocates recommended that Cal-Am should be required to separate all costs for unique software application projects into individually identifiable investment projects in future GRC filings.[301]

The Settlement sets forth a compromise to adopt Cal-Am's proposed direct capital expenditures for Corporate GO RPs identified above, with the annual amounts reflected in each respective year's UPIS.

We have reviewed the record of this proceeding concerning the corporate GO RPs and find the compromises on these issues provided in the Settlement are reasonable in light of the whole record, consistent with the law, and in the public interest. We also share the concern noted by Cal Advocates; thus, Cal-Am shall separately identify costs for unique software application projects in its future GRC filings to allow for better review of the costs associated with individually identifiable investment projects. Cal-Am is authorized to recover the budgets associated with its GO RPs as provided in Attachment C-4 of the Settlement and has the flexibility to re-allocate the approved RP budget for different line-items, if necessary, pursuant to D.18-12-021.

10.9. Used and Useful Assets

10.9.1. Facilities Addressed in D.18-12-021

In D.18-12-021, the Commission found that certain plant facilities and associated parcels of land should be removed from rate base because they no longer provide used and useful service. Cal-Am requested to include some of those identified facilities and parcels in this GRC because (1) the facilities were required by other regulatory agencies; (2) the land houses other facilities that are still used and useful; or (3) there is a plan in place to bring the facilities back into

[301] Exhibit CalPA-5 at 17-23.

service in this GRC cycle.[302] Cal-Am further stated that some of the facilities identified by D.18-12-021 would be retired and are reflected as such in the RO Model.[303]

Cal Advocates opposed Cal-Am's request to include the Roanoke and Fish Canyon facilities in rate base, because it is unclear whether they will be returned to service in this GRC cycle. Cal Advocates also identified the Scotland Well, Wittkop Well, and Sutter Gold Well as having been disconnected or destroyed in 2019 and suggested they should be removed from rate base.[304]

Cal-Am agreed with Cal Advocates' recommended removal of the Scotland Well, Wittkop Well, and Sutter Gold Well but argued that the Fish Passage and Roanoke facilities will return to service during this GRC cycle and should remain in the rate base.[305]

In the Settlement, Cal-Am agreed not to include the Fish Passage and Roanoke Well, and the associated land parcels, for this GRC cycle, given the uncertain timeline for the two facilities to return to used and useful service. Because there is a definite plan for returning the two facilities to use, the Settlement would move the assets to Cal-Am's Uniform System of Accounts (USOA) Account #100-4: Utility Plant Held for Future Use for this GRC cycle.[306]

---

[302] Application 100-Day Update at 6 and Attachment 1 at 50-54, 161-165, 275-279, 388-392, 502-506, 638-642, 765-769, and 880-884.

[303] Exhibit CAW-9 at 69-79.

[304] Exhibit CalPA-4C at 6-23.

[305] Exhibit CAW-17 at 23, 27, and 29; Exhibit CAW-22 at 56-57. Cal-Am noted that the retirement of the Scotland Well, Wittkop Well, and Sutter Gold Well facilities was reflected in its 100-Day Update.

[306] Settlement at 75 and Attachment C-5.

10.9.2. "TBD" Land Identified in D.18-12-021

The Commission in D.18-12-021 found that Cal-Am failed to demonstrate the used and useful status of certain land and excluded those parcels, valued at up to $1,135,370, from Cal-Am's Plant and Rate Base. In A.19-07-004, Cal-Am grouped the same land, termed "TBD" in D.18-12-021, into the following five categories:

1. Used and Useful ($803,165)
2. Vacant Property – Future Well Site ($264,811)
3. Vacant Property – Well Abandoned ($16,922)
4. Vacant Property – Well Inactive ($47,412)
5. Not Used and Useful ($3,060)

Cal-Am requested to include the land in the first two categories referenced above in the rate base and excluded from the rate base the land in last three categories.[307]

Cal Advocates argued that land in the second category, "Vacant Property – Future Well Site" should not be included in the rate base because it is not currently providing used and useful service.[308]

Cal-Am argued that the land needed for future well sites should be included, and if the Commission excluded that land for future sites from rate base in this GRC, it should be brought back into rate base at fair market value at the time it becomes used and useful.[309]

As a compromise, the Settlement provides that $803,165 be categorized as "Used and Useful" in rate base for this GRC cycle. The Settlement also

---

[307] Exhibit CAW-9 at 69-79.

[308] Exhibit CalPA-4C at 6-23.

[309] Exhibit CAW-17 at 23 and 29; Exhibit CAW-22 at 56-57.

recognizes the potential future need for the land categorized as "Vacant Property – Future Well Site," but does not include it in the rate base in this GRC because the timing for it becoming used and useful is uncertain. Instead, the Settlement provides that the parcels, totaling $264,811, will be moved to USOA Account #100-4: Utility Plant Held for Future Use for this GRC cycle. The Settlement also provides that the remaining "TBD" property, totaling $67,394, be excluded from the rate base.[310]

10.9.3. Discussion on Facilities and "TBD" land identified in D.18-12-021

We have reviewed the record of this proceeding as it relates to the facilities and properties addressed in D.18-12-021 and find the compromises reached in Settlement in reasonable in light of the whole record, consistent with the law, including D.18-12-021, and in the public interest. Only the land parcels that have been identified as "Used and Useful" by Cal-Am and the Settlement shall be included in the rate base.

Cal-Am shall move the Fish Passage and Roanoke facilities and the associated land categorized as "Vacant Property – Future Well Site" into USOA Account #100-4: Utility Plant Held for Future Use for this GRC cycle. Cal-Am shall not recover any costs associated with the Fish Passage and Roanoke Well, and the associated land parcels in this GRC. The costs associated with Cal-Am's Fish Passage and Roanoke Well shall be evaluated in a future GRC after the two facilities and associated land parcels return to used and useful service.

10.10. Construction Work in Progress

Cal-Am requested to recover Construction Work in Progress (CWIP) costs for utility plant assets that are already included in the rate base and the

[310] Settlement at 76 and Attachment C-5.

forecasted future CWIP expenses based on the latest year-end amount for capital projects, minus the total amount of expenditures on projects that have or will be moved to plant-in-service status in the forecasted year of completion.[311]

Cal Advocates recommended the CWIP balance should be adjusted to remove any projects that (1) have not been in progress since 2017; (2) are abandoned projects; and/or (3) are tracked in a memorandum account already earning a return on costs incurred.[312]

Cal-Am agreed that projects tracked in a memorandum account earning a return should be excluded from CWIP, but disputed Cal Advocates' proposed exclusion of the specific projects categorized as "not in progress since 2017" and addressed the status of each project. Cal-Am also disputed the exclusion of the Lamanda Redrill project, which Cal Advocates categorized as "abandoned."[313]

The Settlement provides a compromised CWIP budget with the following reductions from the budget initially proposed by Cal-Am:

A. $409,000 associated with Recurring Project Budgets, because the work has been completed and the projects are used and useful;

B. $975,000 related to the Lamanda Well Redrill project;

C. $349,250 related to carryover projects in the Los Angeles County District that will be removed from rate base in this GRC;[314] and

---

[311] Application 100-Day Update at 1, 6, Attachment 1 at 51-52, 162-163, 276-277, 389-390, 503-504. 639-640, 766-767, 811-882 and Attachment 2; Exhibit CAW-9 at 55-58; CAW-11 at 20-22, 27-28.

[312] Exhibit CalPA-4 at 50-60.

[313] Exhibit CAW-17 at 35-40; Exhibit CAW-22 at 3 and 61-66.

[314] The Los Angeles County District carryover projects are Los Angeles Santa Fe Well, Winston Well, Longden Well, and Oswego Well. These projects will be excluded from CWIP as it accrues AFDUC effective January 1, 2021.

D. $3,041,783 related to the Larkfield Wildfire Recovery Project, because CWIP accrues AFUDC so this project should be excluded from that account.[315]

We have reviewed the record of this proceeding concerning CWIP and find the Settlement's compromises on these issues are reasonable based on the whole record of this proceeding, consistent with the law, and in the public interest. The Settlement's terms concerning the CWIP budget ensure Cal-Am does not double-account for projects that have already been completed or are accruing AFUDC, and exclude projects that have already been, or will be, removed from rate base in this GRC. Cal-Am shall adopt its proposed CWIP budget less the four exclusions detailed above.

11. Taxes

Cal-Am made numerous requests related to its taxes and related deductions and depreciation rates. Cal Advocates recommended several changes to Cal-Am's requests, and the Settlement provides compromises on the disputed issues as described below.

11.1. Income Taxes

Cal-Am included a deduction for its 2021 federal income tax (FIT) as an expense, based on the amount of its 2020 California Corporate Franchise Tax (CCFT).[316]

---

[315] Settlement at 77.

[316] Application 100-Day Update, Attachment 1, Chapter 6, Tables 6.1 and 6.2, and pages 13, 15, 17, 19, 21, 23, 25, 85, 155-160, 207, 269-274, 382-387, 426, 498-501, 563, 632-627, 685, 759-764, 798 and 874-879; Exhibit CAW-15 at 2-18 and Attachment 1.

Cal Advocates recommended a CCFT deduction based on the actual amount customers will fund in authorized 2020 rates to estimate the 2021 FIT expense.[317]

Cal-Am argued that its proposed use of forecasted CCFT deduction is more accurate and is also supported by Commission precedent.[318]

In the Settlement, Cal-Am agreed to Cal Advocates' recommended use of the 2020 Commission-authorized CCFT amount for TY 2021.[319]

11.2. Income Taxes – Excess Accumulated Deferred Income Tax

According to Cal-Am, the 2017 Tax Cuts and Jobs Act (TCJA) substantially modified the Internal Revenue Code and changed the calculation of income taxes. Cal-Am requested to amortize the components of the Excess Accumulated Deferred Income Tax (EADIT) related to the TCJA and to use EADIT related assets to calculate the Annual Rate Adjustment Method (ARAM) amortization rate.[320]

The Settlement adopts Cal-Am's proposal to amortize specific components of the EADIT related to the TCJA.[321]

11.3. Income Taxes – Deferred Taxes in Rate Base – Repairs

Cal-Am calculated a deduction related to taxable repairs applicable to certain replacement property by multiplying Cal-Am's projected replacement plant additions for years 2019-2023 by the 10-year average (2008-2017) of the

---

[317] Exhibit CalPA-1 at 1-3.

[318] Exhibit CAW-26 at 1-3.

[319] Settlement at 78.

[320] Exhibit CAW-15 at 7-8.

[321] Settlement at 79.

actual tax repairs deduction to replacement plant additions as taken on Cal-Am's filed tax returns.[322]

Cal-Am noted that the federal Internal Revenue Service (IRS) has not indicated it intends to change its normalization rules for accounting for deferred income taxes, including any excess deferred income taxes in this proceeding.[323]

The Settlement adopts the deduction calculation methodology proposed by Cal-Am.[324]

11.4. Taxes Other Than Income

Cal-Am estimated its payroll tax expenses using the same tax rates and cap used in its last GRC and proposed to include an $84 per employee penalty for the California Unemployment Insurance Fund to account for a previous state deficit to the Federal fund. Cal-Am also requested to recover forecasted expenses related to franchise fees and ad valorem taxes.[325]

Cal Advocates opposed the proposed $84 per employee penalty because Cal-Am, in its opening testimony, initially projected a positive balance for the California Unemployment Insurance Fund at the end of 2020.[326]

The Settlement sets forth an agreement to adopt Cal-Am's requested penalties for the California Unemployment Insurance Fund, after considering the current COVID-19 pandemic and the associated ongoing economic challenges.[327]

---

[322] Exhibit CAW-15 at 3.

[323] Exhibit CAW-26 at 4.

[324] Settlement at 79-80.

[325] Application 100-Day Update, Attachment 1, Chapter 5, Table 5.1 and at 13, 15, 17, 19, 21, 23, 25, 26, 46-49, 151-154, 265-368, 378-381, 494-497, 628-631, 755-758, and 870-873.

[326] Exhibit CalPA-1 at 4-6.

[327] Exhibit CAW-26 at 3-4 and Settlement at 80.

11.5. Discussion on Settled Tax Issues

We find the Settlement's compromises on the tax related issues described above to be reasonable in light of the whole record, consistent with state and federal law, in the public interest. We find Cal-Am's argument that D.89-11-058 did not consider the more sophisticated technology and computation tools available today has merit. We therefore direct Cal-Am to propose a clear forecast for its TY FIT and CCFT deductions and provide a detailed methodology for the relevant calculations, in its next GRC.

However, we do not modify the Settlement's term on the FIT issue for this GRC. Instead, we direct Cal-Am to base its TY 2021 CCFT deduction on the actual expense amount Cal-Am recovered from ratepayers to cover the utility's 2020 FIT, as agreed to in the Settlement. Cal-Am shall amortize the components of the EADIT related to the TCJA and may use EADIT related assets to calculate the ARAM amortization rate. Note, Cal-Am is not authorized to recover costs associated with PowerTax software implementation, pursuant to D.18-12-021.[328] The methodology related to deferred income taxes agreed upon in the Settlement reflects the current IRS rules, and Cal-Am shall calculate a deduction for taxable repairs based on its projected replacement plant additions in years 2019-2023 and the 10-year average of actual tax repairs deductions over the years 2008-2017.

Further, Cal-Am is authorized to include an $84 per employee penalty for the California Unemployment Insurance Fund in light of the ongoing challenges associated with the COVID-19 pandemic.

---

[328] D.18-12-021 found that Cal-Am failed to provide forecasts for TCJA implementation costs and did not prove the expected costs could be substantial, and denied CAW's requests to track TCJA implementation costs, including any related implementation of PowerTax software, in a memorandum account for future recover. (D.18-12-021 at 128-129.)

12. Rate Base

12.1. Inclusion of Meadowbrook Utility Plan Acquisition Adjustment

Cal-Am requested to amortize $1,869,520 over a 40-year period, starting January 1, 2018, for a Utility Plan Acquisition Adjustment (UPAA) associated with its Meadowbrook acquisition, adjusted for taxes. Cal-Am stated that it did not include this UPAA in its Utility Plant in Service accounting, so this separate addition is necessary and that this treatment is consistent with D.16-12-014 and D.18-12-021.[329]

Cal Advocates did not directly address this issue in its testimony, and the Settlement adopts Cal-Am's request to include the Meadowbrook UPAA in rate base.[330]

We have reviewed the record of this proceeding and find the Settlement, as it relates to the Meadowbrook UPAA and Cal-Am's proposed amortization rate, is reasonable in the light of the whole record on this issue, consistent with the law, and in the public interest. The treatment Cal-Am proposed, which is adopted in the Settlement, aligns with Commission directives in D.16-12-014 and D.18-12-021. Cal-Am shall amortize the costs related to its UPAA associated with the Meadowbrook acquisition over 40 years, starting January 1, 2018.

12.2. Depreciation

Cal-Am used the straight-line, average remaining life depreciation system to calculate the annual and accrued depreciation proposed in its application. [331]

---

[329] Exhibit CAW-4 Dana Errata Direct at 31-32 and Attachment 3.

[330] Settlement at 81.

[331] Application 100-Day Update, Attachment 1, Chapter 8, Tables 8.1-8.2, and at 13, 15, 17, 19, 21, 23, 25, 26, 57-61, 168-172, 282-286, 395-399, 509-513, 645-649, 722-776, and 887-891; Exhibit CAW-11 Pourtaherian Direct at 19. The Commission's "Standard Practice for

Footnote continued on next page.

The Settlement adopts Cal-Am's proposed depreciation rate, and notes that any difference between Cal-Am's and Cal Advocates' previously proposed depreciation expense were due to differences in forecasted depreciable plant in service, which depends on recommended plant additions.

We find the Settlement reached a compromise on depreciation rates that is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. The straight-line, average remaining life depreciation system is an appropriate methodology to calculate the annual and accrued depreciation for this GRC, and we adopt the depreciation rates illustrated in Attachment C-1 of the Settlement.[332] We also adopt Cal Advocates' recommendation regarding compliance with requirements established in D.18-12-021 related to future depreciation rates. Cal-Am shall provide all of the future depreciation study information identified in D.18-12-021 when it files its next GRC, including analyses and explanations of causes for any increases in the depreciation rate; (2) comparison and analysis of current and proposed depreciation rates, net salvage rates, and service lives of each asset group; and (3) the proposed methodology for computation of the annual depreciation rate.[333]

Determination of Straight-Line Remaining Life Depreciation Accruals" (Standard Practice U4W) provides average ranges of equipment service life for different types of utilities, including water systems.

[332] Settlement at 81 and Attachment C-1.

[333] D.18-12-021 found that Cal-Am did not justify its requested increase in depreciation expense, and found that Cal-Am "must provide additional information, including but not limited to: (1) analyses and explanations of the drivers and causes for the increases, which possibly would also include the percentage increase attributed to each driver; (2) comparison and analysis of current and proposed depreciation rates, net salvage rates, and service lives of each asset group, and (3) computation of the annual depreciation rate." (D.18-12-021 at 201.)

12.3. Allowance for Working Cash

Cal-Am calculated its proposed allowance for working cash made up of two categories, operational working cash and lead lag, using the methodologies identified in Standard Practice U-16-W. Cal-Am also proposed to include specific regulatory assets, net of any regulatory liabilities, in operational working cash.[334]

Cal Advocates recommended that the Commission exclude surcharge accounts and miscellaneous receivables for operational working capital. Cal Advocates also recommended that non-expense and non-cash items be removed, including Commission fees, franchise tax, estimated depreciation expense, and estimated deferred income taxes.[335]

Cal-Am disagreed with Cal Advocates' proposal to exclude non-cash and non-expense items and recommended including certain regulatory assets in the calculation of the allowance for operational working cash and the allowance for working cash related to lead-lag. Cal-Am did not oppose Cal Advocates' recommendation to remove two non-expense items – franchise fees and Commission fees – from calculating the allowance for working cash related to lead-lag.[336]

---

[334] Application 100-Day Update, Attachment 1, Chapter 9, Table 9.1 and at 63-64, 174-175, 288-289, 401-402, 515-516, 651-652, 778-779, and 893-894; Exhibit CAW-11 Section VIII at 28, 33-41 and Attachment 1.

[335] Exhibit CalPA-2 at 2-9 and Attachments 1 and 2.

[336] Exhibit CAW-24 Pourtaherian Rebuttal Section III at 1-10 and Attachment 1.

The Settlement sets forth an agreement to:

A. Remove several specific regulatory assets, net of regulatory liabilities and deferred income taxes, from the calculation of the allowance for operational working cash;[337] and

B. Use the same methodology the Commission prescribed for this issue in D.20-12-007, which allows for the inclusion of non-expense and non-cash items in the calculation of allowance for working cash.[338]

We have reviewed the record of this proceeding as it relates to the calculation of allowance for working cash and find the compromise provided in the Settlement is reasonable in light of the whole record, consistent with the law, and in the public interest. Cal-Am shall exclude the agreed-upon expenses when calculating the allowance for operational working cash for this GRC cycle and shall use the methodology approved in D.20-12-007 as it relates to the inclusion of deferred income taxes, depreciation expenses, and uncollectible expenses in the calculation of the allowance for working cash.

13. Memorandum and Balancing Accounts

13.1. Consolidated Expense Balancing Account (CEBA)

Cal-Am's CEBA is intended to consolidate the amortization of Commission-approved balancing and memorandum accounts where appropriate. Cal-Am requested to be allowed to continue the existing CEBA as authorized in D.18-12-021 and to recover any additional incremental balances or to refund any over collections separately, as addressed further in Section 12.7 of

[337] Settlement at 82-83 and Exhibit CAW-11 at 28.

[338] Settlement at 82-83 and D.20-12-007 Section 4.5 at 35-38, Conclusions of Law 21-23, and Ordering Paragraphs 20-21.

the Settlement. Cal-Am stated that it agreed with Cal Advocates to consolidate its CEBA accounts to align with its consolidated tariff areas.[339]

Cal Advocates argued that Cal-Am failed to calculate the CEBA surcharge net of refundable amounts and that it failed to exclude amounts that were previously authorized or pending in other open proceedings.

Cal-Am suggested that Cal Advocates erred in calculating its CEBA balance and adjusted its request as it relates to specific balancing and memorandum accounts in rebuttal testimony.

Under the terms of the Settlement:

A. The CEBA account remains open;
B. The final balance, once it is determined, should be amortized;
C. The final balance to be amortized will depend on the disposition of all other balancing and memorandum accounts to be transferred into the CEBA in this GRC; and
D. Cal-Am will transfer $12,639,314 to the CEBA for recovery from multiple balancing and memorandum accounts, as discussed in detail below.[340]

Further discussion concerning the individual accounts and balance amounts to be transferred follows.

13.2. NOAA/ESA Memorandum Account

Cal-Am tracks compliance payments it makes to the National Oceanic and Atmospheric Association (NOAA) or its designated payee for Endangered Species Act (ESA) mitigation. In this GRC, Cal-Am did not seek recovery of the

---

[339] Exhibit CAW-4 Direct at 3-30 and Attachments 1 and 2. CAW's proposed consolidated tariff areas are Southern Division, Northern Division, Monterey Service Area, and the Central Satellite Service Area.

[340] Settlement at 83-85. Disposition of the specific balancing and memorandum accounts is included *infra.*

account balance but requested to keep this account open to seek future recovery of the annual payments through a Tier 2 Advice Letter process.[341]

Cal Advocates recommended this memorandum account be closed, effective December 31, 2021, based on the compliance deadline established in the State Water Resources Control Board's revised cease and desist order and the completion of Project I15-400049 – Los Padres Dam Fish Passage Project.[342]

Cal-Am argued that a full water supply solution will not be complete by the end of 2021, due to circumstances beyond its control, and therefore the account should stay open to track compliance payments beyond December 31, 2021.[343]

The Settlement adopts Cal-Am's initial request to keep the NOAA/ESA memorandum account open and to recover future annual payments through a Tier 2 Advice Letter, consistent with D.18-12-021.[344]

In the Cal-Am-MPWMD Settlement, MPWMD also agreed this account should remain open during this GRC cycle.[345]

13.3. San Clemente Dam Balancing Account

Cal-Am uses its San Clemente Dam Balancing Account to track authorized costs related to the Carmel River Reroute and San Clemente Dam Removal Project, which was approved in D.12-06-040. Cal-Am requested to recover the

---

[341] Application 100-Day Update at 5; Exhibit CAW-3 Crooks Direct at 153-157; Exhibit CAW-4 Dana Errata Direct at 3-4 and Attachment 1.

[342] Exhibit CalPA-4 Goldberg Testimony at 41-43 and Attachments 2 and 3; Exhibit CalPA-6E Nagesh Errata Public Testimony at 54-59, 70-71, and Attachments 55, 56, and 69.

[343] Exhibit CAW-18 at 20; Exhibit CAW-22, at 61.

[345] MPWMD – Cal-Am partial settlement at 17-18.

balance in this account consistent with the directives adopted by the Commission in D.18-12-021.[346] No party opposed this request. The Settlement sets forth an agreement to keep this account open for this GRC cycle.

13.4. WRAM/MCBA

Cal-Am's WRAM balancing account tracks the difference between the fixed costs authorized by the Commission, which are recovered through the quantity charge revenues, and the total fixed cost revenues recovered through the quantity charge based on actual sales. Cal-Am's MCBA account tracks the difference between the total variable cost quantity charge revenues received from customers and the actual payments made to service provided for purchased water, power, and pump taxes. Cal-Am requested to (1) continue these accounts; (2) recover the quantity rate revenues not billed due to the October 2017 Larkfield District wildfires; (3) consolidate the WRAM/MCBA accounts to align with consolidated service areas as requested in Special Request #7; and (4) recover leak adjustments through the WRAM as requested in Special Request #4.[347]

Cal Advocates recommended the Commission postpone Cal-Am's request to recover costs and lost revenue related to the Larkfield District Wildfires until all insurance claims are settled.[348] Cal Advocates also argued that a portion of the balance of costs and lost revenue related to the wildfires in the Larkfield District were already authorized in the disposition of Cal-Am's Advice Letter 1198 in 2018.[349]

---

[346] Exhibit CAW-4 at 4-7 and Attachments 1-2; Exhibit CAW-15 at 5 and 6.

[347] Exhibit CAW-4 at 7-8 and Attachment 1.

[348] Exhibit CalPA-6E Nagesh Errata Public at 54-59, 75-76, and Attachments 55, 56, and 69.

[349] Cal-Am Advice Letter 1198 was approved in June 2018 with an effective date of 3/31/2018. It authorized Cal-Am to recover under collection of revenues associated with prior balances in

Footnote continued on next page.

Cal-Am clarified that it has signed off and received approval of the final insurance proceeds related to the Larkfield District wildfires, and all insurance proceeds reflected in its GRC request are final. Further, Cal-Am noted that its request in this GRC application is to transfer the balance approved for recovery in Advice Letter 1198 to the CEBA for recovery statewide, instead of solely from Larkfield District customers.[350]

Rather than litigating this issue, the Settlement adopts Cal-Am's requested disposition and recovery of the 2017 Larkfield Wildfire related account through the CEBA on a statewide basis and to recover the account's $633,317 under-collected balance as of May 31, 2019, to the CEBA for recovery on a statewide basis. Further, the Settlement provides that additional quantity revenues associated with customers impacted by the 2017 Larkfield wildfires be transferred to the CEBA for review in Cal-Am's next GRC.

MPWMD objected to the statewide recovery of costs associated with the 2017 Larkfield District wildfires and requested that Cal-Am customers in the Monterey District be exempt from any rate increases associated with this and other similar requests in the future.[351]

13.5. ESA Memorandum Account

Cal-Am's ESA Memorandum Account tracks costs associated with ESA requirement compliance beyond those tracked in the San Clemente Dam Balancing Account discussed in Section 13.3 above. Cal-Am requested to

---

the WRAM/MCAB account in Larkfield District, along with additional under-collections associated with load reduction related to the 2017 wildfires in the Larkfield District.

[350] Exhibit CAW-18 Dana Errata Rebuttal at 5, 13, and Attachment 4.

[351] MPWMD Opening Brief at 9.

continue the account and transfer the current balance to the Monterey District CEBA.[352]

Cal Advocates recommended removing some costs related to the Los Padres Fish Passage Project and the balance authorized for recovery in Cal-Am's most recent GRC and suggested the account should be closed with the approval of this GRC.[353]

Cal-Am agreed to remove $615,755 in costs associated with the Los Padres Dam Fish Passage Project and include them in utility plant in service, while reiterating its position that this account should remain open.[354]

Rather than litigating this issue, the Settlement sets forth an agreement to keep the ESA memorandum account open, and adopts an offset credit identified in Cal Advocates testimony that reduces the amount to be transferred to the CEBA for recovery.[355]

13.6. School Lead Testing Memorandum Account

Cal-Am's School Lead Testing Memorandum Account tracks its incremental expenses associated with lead monitoring and testing at kindergarten through 12th grade schools throughout its service territory, as required by the SWRCB Division of Drinking Water. Cal-Am requested to keep this account open and to transfer the existing account balance of $(9,101) to the CEBA for recovery.[356] No party objected to Cal-Am's request.

---

[352] Exhibit CAW-4 at 8-9 and Attachment 1.

[353] Exhibit CalPA-6E at 54-59, 71-72, and Attachments 55 and 56.

[354] Exhibit CAW-18 at 5, 9-11, and Attachment 2.

[355] Settlement at 89; MPWMD-Cal-Am partial settlement at 17-18.

[356] Exhibit CAW-4 at 9 and Attachment 1.

The Settlement adopts Cal-Am's request to transfer $(9,101) to the CEBA for cost recovery and to keep this account open.[357]

13.7. Two-Way Tax Memorandum Account

Ordering Paragraph 18 of D.18-12-021 established Cal-Am's two-way tax memo account (TMA) intended to track (1) changes in permanent tax items and rate effects; (2) differences between tax expenses authorized and tax expenses incurred from mandatory and elective tax law changes, or other tax accounting, procedural, or policy changes; (3) the excess protected ADIT through the end of 2018; and (4) bonus depreciation associated with assets where eligibility for bonus depreciation is uncertain because construction started before the contract was signed. Cal-Am requested to close this account and transfer the remaining balance of $(104,563) to the CEBA for recovery.

Cal-Am stated that this TMA is no longer necessary, but that if the Commission believes a TMA is necessary for this GRC cycle, this decision should reaffirm that a TMA is not intended to be a true-up mechanism for taxes. Cal-Am states that such reaffirmation is necessary to remain consistent with the Commission's existing policy and would ensure the differences between forecasted and actual tax expenses would continue to flow to Cal-Am's bottom line for each taxable year.[358] No party opposed this request.

The Settlement provides that:

A. Cal-Am should continue the components of the TMA related to excess ADIT pay-back;

---

[357] Exhibit CalPA-6E at 54-59, 78, and Attachments 55, 56, and 69; Settlement at 90.

[358] Exhibit CAW-4 at 9-10 and Attachment 1; Exhibit CAW-15 at 10-15; Exhibit CAW-18 at 5-6. CAW directly referenced Commission decisions in D.85-05-036 and D.17-05-013 as indication of what it refers to as "the Commission's longstanding policy" related to tax accounting true-ups.

B. Cal-Am should close the bonus depreciation and other tax changes portions of this account as of December 31, 2020; and

C. Cal-Am should recover the existing account balance associated with those portions of the account through the CEBA.

13.8. LIRA Balancing Account

Cal-Am's Low-Income Ratepayer Assistance Program (LIRA) Balancing Account was adopted in D.15-04-007 and continued in D.18-12-021, to track revenues and recoveries associates with the LIRA, or CAP, offered in each service district. Cal-Am requested to continue the LIRA Balancing Account as previously approved, which allows for annual adjustments to the surcharge to ensure Cal-Am is fully recovering or refunding any over- or under-collected balances.[359] No party opposed this request.

The Settlement sets forth an agreement to continue this account using the previously-authorized adjustment process for establishing surcharges.[360]

13.9. California American Water Conservation Surcharge Balancing Account

The California American Water Conservation Surcharge (CAWCS) One-Way Balancing Account is currently in effect for all districts to track conservation-related expenses and surcharges related to Cal-Am's conservation programs. Cal-Am requested to continue the account and transfer the current under-collected account balance of $874,755 to the CEBA for recovery from all customers statewide.[361]

[360] Exhibit CalPA-6E at 54-59, 77, and Attachments 55 and 56; Settlement at 91.

[361] Exhibit CAW-4 at 10-11 and Attachment 1.

Cal Advocates recommended this account be closed and that the Commission should instead direct Cal-Am to include its conservation budget in base rates.[362]

Cal-Am agreed that it could close this account if it could include the conservation budget through base rates but argued that previously-authorized amounts must to be transferred to the CEBA for recovery.

To align with requirements adopted in D.18-12-021, Cal-Am filed Tier 2 Advice Letter 1322 (AL 1322) on February 16, 2021, which provided a full accounting of conservation funds spent, with supporting documentation, and a proposal to refund any unspent funds to customers through the CEBA.[363] Water Division approved AL 1322 on March 17, 2021, with an effective date of March 18, 2021.

The Settlement sets forth an agreement for Cal-Am to:

A. Close the CAWCS account, effective December 31, 2020;
B. Transfer the under-collected balance with interest to the CEBA; and
C. Transfer and recover through the CEBA any trailing interest charges associated with the CAWCS between December 31, 2020, and the date its GRC implementation advice letter is approved pursuant to this decision.

---

[362] Exhibit CalPA-6E at 54-59, 72-73, and Attachments 55, 56, and 69. Cal Advocates also asserted the balance to be transferred should only be ($388,209).

[363] AL 1322 was a second compliance filing related to Ordering Paragraph of D.18-12-021. Cal-Am requested, and was approved, to return over-collected conservation balances to be returned to customers through a meter-based refund over a twelve-month period, except for customers in its Central Division where the over-collected balances would be netted against the existing CEBA balances.

13.10. Coastal Water Project Memorandum Account

Cal-Am's Coastal Water Project (CWP) memorandum account was authorized by the Commission in Ordering Paragraph 6 of D.03-09-022 to track costs associated with the development of a new water supply in the Monterey County District. According to Cal-Am, D.10-08-008 requires this account to remain open until all legal issues are resolved. Further, Cal-Am requested recover the current under-collected balance through June 6, 2019.[364]

Cal Advocates recommended closing the CWP account after transferring the remaining account balances for recovery.[365]

Cal-Am acknowledged that no AFUDC will need to be addressed in the next GRC and agreed that Cal Advocates' deferred depreciation recommendation is appropriate, if May 31, 2019, is used, rather than its proposed date of June 6, 2019.[366]

Rather than litigating this issue, the Settlement sets forth an agreement for Cal-Am to:

A. Recover $492,509 of AFUDC and $128,676 of deferred depreciation, from May 1, 2019, to June 6, 2019.
B. Include interest through the transfer date for all transfers to the CEBA from the CWP;
C. Close each component of the CWP account once the balance transfer plus interest has occurred; and

[364] Exhibit CAW-4 at 11 and Attachment 1.

[365] Exhibit CalPA-6E (Public)at 54-59, 74-75, and Attachments 55, 56, and 69.

[366] Exhibit CAW-18 at 5 and 15-16.

D. Keep the CWP account open to track Regional Desalination Plant costs.[367]

13.11. Credit Card Memorandum Account

Cal-Am's Credit Card Memorandum Account, as established in D.18-12-021, tracks the credit card fees that have been waived for customers and any offsetting cost savings that may result with the use of a credit card. In this GRC, Cal-Am requested to keep this account open and transfer the current account balance of $(22,390) to the CEBA for recovery.[368]

Cal Advocates recommended closing this account.[369] Rather than litigating this issue, the Settlement adopts Cal-Am's proposal to keep the account open.[370]

13.12. Water Contamination Litigation Expense Memorandum Account

The Water Contamination Litigation Expense (WCLE) Memorandum Account, which was authorized in March 1998 by Resolution W-4084, tracks costs associated with litigating water contamination issues for all of Cal-Am's districts.[371] Cal-Am requested to keep this account open.[372] No party opposed this request.

---

[367] Settlement at 92-93; Cal-Am-MPWMD Settlement at 17-18. MPWMD did not provide testimony on the CWP but agreed in a partial settlement that Cal-Am should be authorized to keep this account open.

[368] Exhibit CAW-4 at 12 and Attachment 1; Exhibit CAW-18 at 6.

[369] Exhibit CalPA-6E (Public) at 54-59, 75, and Attachments 55,56, and 69.

[370] Settlement at 93.

[371] Resolution W-4084 authorized all water utilities to establish a memo account to track water contamination litigation expenses and recover reasonable expenses in a subsequent GRC proceeding.

[372] Exhibit CAW-4 at 12-13 and Attachment 1.

The Settlement adopts Cal-Am's request to keep the account open and shows that there is no current amount to recover in this GRC.[373]

13.13. Catastrophic Event Memorandum Account

Cal-Am uses its Catastrophic Event Memorandum Account (CEMA) to track costs associated with restoring service and reconstructing or replacing facilities that are affected by officially-declared national or state disasters or states of emergency. These catastrophic events can include drought related costs that are not otherwise covered by the drought Memorandum Account. Cal-Am's CEMA was authorized in 1991, and D.18-12-021 authorized its continuance. Cal-Am requested to transfer the full balance of the account to the CEBA for recovery and to keep this account open.[374]

Cal Advocates did not object to keeping this account open but recommended the current CEMA account balance should not be transferred for recovery until all pending insurance claims have been settled.[375]

Cal-Am in its rebuttal testimony indicated the final insurance reimbursements have occurred and agreed to account for them prior to transferring the CEMA balance.[376]

The Settlement sets forth an agreement to keep the CEMA account open and transfer an under-collected balance of $235,392 to the CEBA for recovery.

---

[373] Settlement at 93-94.

[374] Exhibit CAW-4 at 13-15 and Attachment 1.

[375] Exhibit CalPA-6E (Public) at 54-59, 76, and Attachments 55, 56, and 69.

[376] Exhibit CAW-18 at 6 and 22.

13.14. Seaside Basin Adjudication Balancing Account

Cal-Am's Seaside Basin Adjudication Balancing Account (SABA) tracks the amortization of costs and related interest on the unamortized balance of litigation costs incurred to secure Seaside Basin water rights in the Monterey County District. As authorized in Advice Letter W-778, effective July 19, 2009, a meter surcharge is assessed on all Cal-Am customers in the Monterey Main, Hidden Hills, Ryan Ranch, and Bishop areas to recover $2,755,960 in costs over a 10-year period. Cal-Am initially requested to keep this account open to continue tracking the interest and surcharge collections.[377]

Cal Advocates recommended closing the SABA and transferring any remaining balance to the CEBA.

The Settlement sets forth an agreement to close Cal-Am's SABA because the balance has been fully recovered through a separate surcharge.

13.15. Seaside Groundwater Basin Memorandum Account

Cal-Am requested continued authorization to file a Tier 2 advice letter to reestablish the Seaside Groundwater Basin Memorandum Account (SGBMA), in which it historically tracked payments to the Seaside Basin Water Master for replenishment water. The SGBMA is currently closed, but Cal-Am stated it may need to reopen this account if it incurs future replenishment water costs.[378]

Cal Advocates recommended keeping the account closed and highlighted that D.18-12-021 denied Cal-Am's request to keep it open.[379] While Cal-Am

---

[377] Exhibit CAW-4 at 15 and Attachment 1. The SABA accrues interest at the 90-day commercial rate.

[378] Exhibit CAW-4 at 15-16 and Attachment 1.

[379] Exhibit CalPA-6E (Public) at 54-60 and Attachments 55 and 56; D.18-12-021 at 212-213.

acknowledged the account is currently closed, it reiterated its request for authorization to re-open the SGBMA by filing a Tier 2 Advice letter.[380]

Rather than litigating this issue, the Settlement adopts Cal-Am's request to file a Tier 2 Advice Letter to reestablish the account if it expects to incur costs from the Seaside Basin Water Master for replenishment water.[381]

13.16. Seaside Groundwater Basin Balancing Account

Cal-Am uses the Seaside Groundwater Basin Balancing Account (SGBBA) to track annual administrative and other payments made to the Seaside Basin Water Master, as authorized in D.09-07-021. Cal-Am requested to keep this account open and to transfer the account's outstanding balances to the CEBA for refund or recovery from customers in the Monterey County District.[382]

Cal Advocates recommended authorizing an over-collected balance be transferred to the CEBA to account for prior cost recovery allowed in Resolution W-5197.[383]

The Settlement adopts Cal Advocate's recommended over-collected balance transfer and keeps the SGBBA open for this GRC cycle.[384]

---

[380] Exhibit CAW-18 at 6 and 17.

[381] Settlement at 95-96; MPWMD-Cal-Am Settlement at 17-18.

[382] Exhibit CAW-4 at 16 and Attachment 1.

[383] Exhibit CalPA-6E (Public) at 54-59, 76, and Attachments 55, 56, and 69. Resolution W-5197 authorized Cal-Am to transfer the overcollection balance of $878,665, or 1.5% of authorized revenues, from the SGBBA to the Monterey CEBA, and to amortize the remaining balance of $4,162,023, or 7% of authorized revenues, using a 24-month $0.0686 surcharge in the Monterey County – Main Service Area and through a 12- month $0.0558 surcharge in the Central Division – Satellite Service Area.

[384] Settlement at 96.

13.17. Group Insurance Balancing Account

Cal-Am's Group Insurance Balancing Account was first authorized as a two-way balancing account in D.18-12-021 and captures the difference between authorized recovery of insurance costs and actual costs.[385] Cal-Am requested to keep the account open and transfer the current balance to the CEBA for recovery.[386] No party opposed this request. The Settlement sets forth an agreement to keep the account open and transfer the current balance of $(962,078) to the CEBA for recovery.[387]

13.18. Pension Balancing Account

Cal-Am uses its Pension Balancing Account to track the difference between Commission-authorized pensions and actual pension payments. Cal-Am requested to continue the account and transfer the current over-collected balance of $1,788,719 to the CEBA.[388] No party opposed this request.

The Settlement adopts Cal-Am's request.[389]

13.19. OPEB Balancing Account

The Other Post-Employment Benefits (OPEB) Balancing Account tracks the difference between Commission-authorized OPEB costs and the actual payments made in all Cal-Am districts. Cal-Am requested to continue the account and transfer the over-collected balance of $1,553,996 to the CEBA for refunding to ratepayers.[390] No party opposed this request.

---

[385] D.18-12-021 at 228-231.

[386] Exhibit CAW-4 at 17 and Attachment 1; Exhibit CAW-18 at 6.

[387] Settlement at 96-97.

[388] Exhibit CAW-4 at 17 and Attachment 1.

[389] Settlement at 97 and Section 11.1.

[390] Exhibit CAW-4 at 17-18 and Attachment 1.

The Settlement adopts Cal-Am's request.[391]

13.20. Old Monterey-Style WRAM Balancing Account

The Old Monterey-Style WRAM Balancing Account was authorized in D.96-12-005 and tracks the difference that would have been collected under the Commission-approved standard rate design and the tiered conservation rate design implemented in the Monterey District in 1996. Cal-Am requested to close this account and transfer the existing under-collected balance of $33,835 to the CEBA for recovery.[392]

Cal Advocates agreed with Cal-Am's request to close the account but argued the balance to be transferred should be reduced because Cal-Am should not be allowed to recover interest charges tracked in this account following the adoption of D.18-12-021.[393]

Cal-Am disagreed with Cal Advocates and argued that D.18-12-021 only approved recovery of balances and interest through May 31, 2016, which left additional unrecovered interest in the account.[394]

Rather than litigating this issue, the Settlement sets forth an agreement to close this account and transfer the existing under-collected balance of $33,835 to the CEBA for recovery consistent with Cal-Am's initial request.[395]

---

[391] Settlement at 97-98 and Section 11.1.

[392] Exhibit CAW-4 at 18 and Attachment 1.

[393] Exhibit CalPA-6E (Public) at 54-61 and Attachments 55, 56, and 69.

[394] Exhibit CAW-18 at 6 and 17-18.

[395] Settlement at 98 and Section 11.1.

13.21. Emergency Rationing Costs Memorandum Account

Cal-Am uses its Emergency Rationing Costs Memorandum Account to track potential expenses related to rationing requirements associated with local regulations in its Monterey County District. This account was initially established as Special Condition #9 in D.06-11-050 and continued in the partial settlements adopted in D.15-04-007 and D.18-12-021. Although no costs have been incurred as of the filing of A.19-07-004, Cal-Am requested to continue it in this GRC.[396] No party opposed this request.

The Settlement adopts Cal-Am's initial request to continue its Emergency Rationing Costs Memorandum Account.[397]

13.22. Purchased Water, Purchased Power and Pump Tax Balancing Accounts

Cal-Am tracks certain production-based expense related items that could prevent utilities from achieving their authorized earnings in its Purchased Water, Purchased Power and Pump Tax Balancing Accounts. Cal-Am requested to continue these accounts, and no party opposed this request.[398]

The Settlement adopts Cal-Am's request to keep this account open for this GRC cycle. [399]

---

[396] Exhibit CAW-4 at 18-19 and Attachment 1.

[397] Settlement at 99; MPWMD did not address this account in testimony but agreed in its partial settlement with Cal-Am that the utility should be authorized to maintain the Emergency Rationing Costs Memorandum Account (Cal-Am-MPWMD Settlement at 17-18).

[398] Exhibit CAW-4 at 19-20 and Attachment 1; Exhibit CalPA-6E at 54-59, 80, and Attachments 55 and 56.

[399] Settlement at 99.

13.23. Monterey Wastewater Purchased Power Expense Balancing Account

Cal-Am uses this Purchased Power Expense Balancing Account to track unavoidable changes in power costs in the Monterey Wastewater District. Cal-Am requested to continue this account and transfer the current under-collected balance to the CEBA for recovery.[400] No parties opposed this request.

The Settlement sets forth an agreement to continue this account and transfer the current under-collected balance of $172,642 to the CEBA for recovery, consistent with Cal-Am's initial request.[401]

13.24. Monterey Cease and Desist Order Memorandum Account

Pursuant to Resolution W-4824, Cal-Am established the Monterey Cease and Desist Order (CDO) Memorandum Account to track costs associated with the SWRCB cease and desist order. Cal-Am requested to continue the CDO account and transfer the existing under-collected account balance of $6,084,320 to the CEBA for recovery.[402]

Cal Advocates argued $613,507 of Cal-Am's requested recovery amount was previously authorized for recovery in D.18-12-021. Cal Advocates further recommended closing this account because there is deadline of December 31, 2021, for addressing these costs established in the revised SWRCB cease and desist order.[403]

---

[400] Exhibit CAW-4 at 20 and Attachment 1; Exhibit CalPA-6E at 54-59, 78, and Attachments 55, 56, and 69; Exhibit CAW-18 at 6.

[401] Settlement at 99-100 and Section 11.1.

[402] Exhibit CAW-4 at 20-21 and Attachment 1.

[403] Exhibit CalPA-6E at 54-59, 61-62, and Attachments 55, 56, and 69.

Cal-Am argued that the requested cost recovery amounts reflect the amounts previously authorized by D.18-12-021 and that it is likely to continue incurring costs related to the SWRCB cease and desist order beyond December 31, 2021.[404]

The Settlement sets forth an agreement that Cal-Am's requested under-collected balance be transferred to the CEBA and that the CDO account should remain open.[405]

13.25. Affiliate Transaction Memorandum Account

Cal-Am's Affiliate Transaction Memorandum Account was established in D.10-10-019 to track fees paid to Cal-Am for the transfer, assignment, or employment of an employee by an affiliate. Cal-Am requested to keep the account open and transfer the over-collected balance of $91,413 to the CEBA to be refunded to ratepayers.[406]

Cal Advocates argued the correct over-collected amount to transfer is $739,037. [407]

Cal-Am in rebuttal argued it seeks recovery entries tracked in this account that tie directly to the requested $91,413 over-collected balance representing the 15% fee for five employees that transferred from Cal-Am to an affiliate.[408]

---

[404] Exhibit CAW-18 at 5, 7-8, and Attachment 1.

[405] Settlement at 100 and Section 11.1; In the Cal-Am-MPWMD Settlement a similar agreement was reached: both parties agreed the CDO account should remain open for this GRC cycle (at 17-18).

[406] Exhibit CAW-4 at 21-22 and Attachment 1.

[407] Exhibit CalPA-6E at 54-59, 81-82, and Attachments 55, 56, and 69.

[408] Exhibit CAW-18 at 22. D.10-10-019, Appendix A Section IV.D.2 states "When an employee of a utility is transferred, assigned, or otherwise employed by the affiliate, the affiliate shall make a one-time payment to the utility in an amount equivalent to 15% of the employee's base

Footnote continued on next page.

The Settlement sets forth an agreement to keep the account open and transfer the over-collected balance of $91,413 to the CEBA to be refunded to ratepayers, consistent with Cal-Am's initial request.[409]

13.26. GRC Interim Rate True-Up Memorandum Account

The GRC Interim Rate True-Up account was created to track the difference between what was billed by Cal-Am in 2018 and 2019 and what should have been billed based on D.18-12-021 and the authorized step-up for 2019 rates. Cal-Am will file an Advice Letter to refund or bill customers for the amount outstanding in this account, once the final calculation is complete. Cal-Am also requested to continue this account to allow time for the final calculation associated with the difference described above, as well as any true-ups necessary for future GRCs.[410]

Cal Advocates did not object to this request, but in rebuttal testimony Cal-Am identified this account as one that should be closed.[411]

The Settlement provides that this account be closed.[412]

Cal-Am was authorized to establish a separate memorandum account to track interim rates for this GRC and any associated balance(s) with the approval of its Advice Letter 1318, effective January 1, 2021.

---

annual compensation. All such fees paid to the utility shall be accounted for in a separate memorandum account to track them for future ratemaking treatment on an annual basis, or as otherwise necessary to ensure that the utility's ratepayers receive the fees."

[409] Settlement at 101 and Section 11.1.

[410] Exhibit CAW-4 at 22 and Attachment 1.

[411] Exhibit CalPA-6E at 69-70 and Attachments 55 and 56; Exhibit CAW-18 at 24.

[412] Settlement at 102.

13.27. Cost of Capital Interim Rate Memorandum Account

D.18-12-021 adopted a lower cost of capital and the Cost of Capital Interim Rate Memorandum Account tracked the over-collection associated with bills in 2018 related to the authorized rates adopted in the last GRC. Cal-Am requested to continue this account but stated that the amounts tracked in this account have been already transferred to the GRC Interim Rate True-Up Memorandum Account, so no balance transfer is necessary.[413]

Cal Advocates recommended closing this account because the balance has already been transferred.[414]

The Settlement sets forth an agreement to close this account.

13.28. Statewide Non-Revenue Water Action Plan Memorandum Account

Cal-Am requested to close its Statewide Non-Revenue Water Action Plan Memorandum Account and transfer the under-collected balance of $2,718 for recovery.[415] This account has been used to track costs associated with engineering, final evaluation, and studies of measures that would reduce non-revenue water in each district, as approved in Cal-Am's Advice Letter 969. No party opposed this request.

The Settlement sets forth an agreement that this account be closed, as requested by Cal-Am.[416]

---

[413] Exhibit CAW-4 at 22-23 and Attachment 1.

[414] Exhibit CalPA-6E at 54-59, 69-70, and Attachments 55-56.

[415] Exhibit CAW-4 at 23 and Attachment 1; Exhibit CAW-18 at 6 and 23.

[416] Settlement at 102-103 and Section 11.1.

13.29. Monterey Leak Adjustments Memorandum Account

Cal-Am requested to close its Leak Adjustment Memorandum Account (LAMA) in this GRC after transferring the under-collected balance of $3,412,468 to the CEBA for recovery. The LAMA, as approved in Resolution W-4951, was used to track leak adjustments in the Monterey District from February 26, 2013, through December 31, 2014, when leak adjustments started being included in base rates.[417]

Cal Advocates recommended we should account for an error rate of 5.24% and deny recovery of any interest tracked in the LAMA after December 31, 2014.[418] Cal Advocates also argued the appropriate balance to transfer is $(3,165,698).[419]

Cal-Am disagreed with Cal Advocates' recommended error rate calculation but identified a cumulative miscalculation in the LAMA of $3,758. Cal-Am further stated that its requested LAMA balance does not include interest accrued after December 31, 2014.[420]

The Settlement sets forth an agreement adopting Cal-Am's adjusted request to transfer an under-collected balance of $3,408,710 to the CEBA for recovery.[421]

---

[417] Exhibit CAW-4 at 23-24 and Attachment 1.

[418] The proposed error rate was calculated based on a data request response and is described in Exhibit CalPA-6EC at 62-63. In essence, Cal Advocates sought specific leak adjustment transactions and audited them to identify calculation errors and suggested that 5.24% of the balance of the selected transactions was an overcalculation.

[419] Exhibit CalPA-6E at 54-59, 62-63, and Attachments 55, 56, and 69.

[420] Exhibit CAW-18 at 6 and 18; Exhibit CAW-22 at 67-68.

[421] Exhibit CAW-22 at 68, Settlement at 103.

13.30. Conservation / Rationing Memorandum Account

Cal-Am was authorized to establish its Conservation/Rationing Memorandum Account in Resolution W-4976 to track expenses associated with implementing Rule 14.1 and/or Schedule 14.1 that have not been considered in a GRC or other proceeding.[422] Cal-Am requested to close this account and transfer the under-collected balance of $48,252 for recovery.[423]

Cal Advocates did not oppose this request but recommended denying recovery of all costs because the Governor lifted the emergency drought declaration on April 7, 2017.[424] Cal-Am rebutted that denying all cost recovery would prevent Cal-Am's recovery of interest accrued from March through December 2018.

The Settlement proposes to adopt Cal-Am's initial request.[425]

13.31. Sand City Desalination Plant Purchased Water Balancing Account

Cal-Am requested to close its Sand City Desalination Plant Purchased Water Balancing Account, which was established by D.13-04-015. D.18-12-021 added Sand City costs to Monterey District purchased water costs, effective January 1, 2018.[426] However, Cal-Am stated that the last GRC did not cover the activity or interest in the account after May 31, 2016, and requested to transfer the under-collected balance of $441,128 accrued from May 31, 2016, through

---

[422] Rule and Schedule 14.1 include mandatory water rationing requirements and associated enforcement provisions.

[423] Exhibit CAW-4 at 24-25 and Attachment 1.

[424] Exhibit CalPA-6E at 54-59, 64-65, and Attachments 55, 56, and 69.

[425] Settlement at 104-105.

[426] D.18-12-021 at 232-234.

December 31, 2017, and any accrued interest through the date the balance is transferred to the CEBA.[427]

Cal Advocates agreed with Cal-Am's request to close the account but recommended transferring an over-collected balance of $238,929, which it calculated based on Attachment 1 of Exhibit CAW-4.[428] Cal-Am argued Cal Advocates' calculation did not account for activity that occurred after May 31, 2019.[429]

The Settlement adopts Cal-Am's request to transfer an under-collected balance of $441,128 to the CEBA for recovery, and to close the account after the balance, including any accrued interest through the date the balance is transferred to the CEBA.[430] The Settlement reflects the provisions adopted in D.18-12-012 but allows Cal-Am to fully recover the outstanding under-collected balance before closing this account.

13.32. Chromium 6 Memorandum Account

Cal-Am requested to continue its Los Angeles and Sacramento District Chromium 6 Memorandum Account and to transfer the current account balance to the CEBA for recovery.[431] According to Cal-Am, the current balance in this account relates to depreciation, ad valorem taxes and Allowance for Funds Used During Construction (AFUDC) from the January 1, 2018 (date of the project completion) to May 31, 2019, for Sacramento and Dunnigan Districts.[432]

---

[427] Application 100-Day Update at 5; Exhibit CAW-4 at 24 and Attachment 1.

[428] Exhibit CalPA-6E at 54-59 and Attachments 55, 56, and 69.

[429] Exhibit CAW-18 at 5, 16, and Attachment 6.

[430] Settlement at 104; this amount reflects that $680,057 was credited back to customers through the 2019 interim rate process.

[431] Exhibit CAW-4 at 25 and Attachment 1.

[432] Exhibit CAW-18 at 13.

Cal Advocates recommended adjusting the requested account balance to account for costs Cal-Am was authorized to recover in Resolution W-5212. Cal Advocates argued that any AFUDC included in the forecasted plant costs for the Dunnigan and Sacramento Districts should be removed for TY 2021 and that the depreciation amounts recovered through surcharges should be deducted from rate base. Cal Advocates also suggested the account should be closed as the related projects have all been completed or will be completed in this GRC cycle.[433]

Cal-Am agreed that the account balance should be adjusted to account for Resolution W-5212 but argued that AFUDC should not be removed from the Dunnigan District and that depreciation amounts should only be deducted in certain circumstances. Cal-Am also reasserted that the account should remain open for this GRC.[434]

Rather than litigating these issues, the Settlement adopts Cal-Am's initial request to keep the account open and transfer the under-collected account balance to the CEBA. The Settlement recognizes that:

A. Incremental costs beyond trailing interest have not been added to the account since the Sacramento/Dunnigan Chromium 6 projects have been included in rate base since January 1, 2020;
B. The AFUDC should not be reduced from the Dunnigan District's forecasted plant; and
C. Depreciation expenses from the period January 1 and May 31, 2019, could be added to the depreciation reserve

[433] Exhibit CalPA-6E at 54-59, 66, and Attachments 55, 56, and 69. Cal Advocates identified the related projects that have already or will be complete by 2023 as I15-500054 in the Los Angeles District and I15-600081 and I15-630001, both in the Sacramento District.

[434] Exhibit CAW-18 at 5, 13-15, and Attachment 5; Exhibit CAW-22 at 59.

once they are collected, if the reserve has not already forecasted it in.[435]

13.33. Garrapata Service Area Memorandum and Balancing Accounts

Cal-Am requested to maintain three memorandum accounts and eight balancing accounts designed to recover costs in the Garrapata Service Area that are used to track and recover costs not anticipated in rates.[436] No party objected to this request. In its rebuttal testimony, Cal-Am stated that the 11 Garrapata Service Area accounts could be closed.[437]

The Settlement adopts Cal-Am's adjusted request to close the 11 Garrapata Service Area accounts.[438]

13.34. Garrapata SDWSRF Loan Repayment Balancing Account

The Garrapata Safe Drinking Water State Revolving Fund (SDWSRF) account tracks recovery of the balance provided to Cal-Am under the American Recovery and Reinvestment Act for projects authorized by Resolution W-4788.[439] No party objected to this request.

---

[435] Settlement at 105-106.

[436] Exhibit CAW-4 at 26-27 and Attachment 1.

[437] Exhibit CalPA-6E at 54-59, 79, and Attachments 55 and 56; Exhibit CAW-18 at 24.

[438] Settlement at 106-107. The 11 accounts are Cal-Am's (1) Unanticipated Repair Cost Memorandum Account, (2) Infrastructure Act Memorandum Account, (3) Water Contamination Litigation Expense Memorandum Account, (4) Purchase Power Balancing Account, (5) Purchase Water Balancing Account, (6) Pump Tax Balancing Account, (7) Payroll Balancing Account, (8) Payroll Taxes Balancing Account, (9) Contract Labor Balancing Account, (10) Water Quality Balancing Account, and (11) California Department of Public Health User Fees Balancing Account.

[439] Resolution W-4788 authorized then-Garrapata Water Company to borrow $114,813 under the American Recovery and Reinvestment Act and enter into a secured loan contract with the California Department of Public Health.

The Settlement adopts Cal-Am's request to keep this account open.[440]

13.35. Monterey One-Way Leak Adjustment Balancing Account

Cal-Am stated that its Monterey One-Way Leak Adjustment Balancing Account, which tracks balances related to Monterey District leak adjustments, has no outstanding balance and requested to close this account.[441]

Cal Advocates recommended that leak adjustments be recovered through base rates which would eliminate the need for this balancing account.[442]

The Settlement adopts Cal-Am's initial request to close this account, starting January 1, 2021.[443]

13.36. West Placer Memorandum Account

Cal-Am requested to keep its West Placer Memorandum Account open to continue tracking the construction costs, including post-construction carrying costs, and the special facilities fee collected from developers in the West Placer County service area of the Sacramento District.[444] No party objected to this request.

The Settlement adopts Cal-Am's request to maintain this account in this GRC cycle.[445]

---

[440] Exhibit CAW-4 at 27 and Attachment 1; Exhibit CalPA-6E at 54-59, 79-80, and Attachments 55 and 56.

[441] Exhibit CAW-4 at 27-28 and Attachment 1; Exhibit CAW-18 at 24.

[442] Exhibit CalPA-6E Attachments 55 and 56.

[443] Settlement at 107.

[444] Exhibit CAW-4 at 28 and Attachment 1; Cal-Am was authorized to maintain this memorandum account in D.13-10-003.

[445] Exhibit CalPA-6E at 54-59, 80, and Attachments 55 and 56; Settlement at 108.

13.37. SGMA Memorandum Account

Cal-Am requested to keep its Sustainable Groundwater Management Act (SGMA) memorandum account open to continue recording costs of complying with new regulations that were not able to be forecasted in its last GRC and to transfer the current under-collected balance to the CEBA for recovery.[446]

Cal Advocates did not object to continuing this account but argued the account balance to be transferred is $(316,456).[447] Cal-Am argued Cal Advocates' proposed balance was higher than the under-collected balance in the account as of May 31, 2019, likely due to a difference in interest calculations.[448]

The Settlement adopts Cal-Am's initial request to recover the outstanding under-collected balance in this account and keep the SGMA account open for this GRC.[449]

13.38. The Memorandum Account for Environmental Improvement and Compliance Issues for Acquisitions

This account was originally opened to track costs associated with system improvements required to comply with environmental and other regulations in the Dunnigan service territory. Cal-Am requested to keep this account open in this GRC cycle.[450]

---

[446] Exhibit CAW-4 at 28-29 and Attachment 1. The SGMA sets a comprehensive framework to regulate groundwater and requires the designation of groundwater sustainability agencies and the adoption of groundwater sustainability plans for basins that the Department of Water Resources designates as medium- or high- priority.

[447] Exhibit CalPA-6E at 54-59, 81, and Attachments 55, 56, and 69.

[448] Exhibit CAW-18 at 6 and 23-24.

[449] Settlement at 108-109.

[450] Exhibit CAW-4 at 29 and Attachment 1.

Cal Advocates argued that, because Cal-Am has operated the Dunnigan system for several years and should understand the system requirements, this account should be closed.[451] Cal-Am explained the account is no longer specific to costs associated with the Dunnigan acquisition.[452]

The Settlement provides an agreement to adopt Cal-Am's initial request to keep the account open.[453]

13.39. Dunnigan Consulting Memorandum Account

The Dunnigan Consulting memo account tracks Cal-Am's consulting costs associated with a settlement authorized in D.15-11-012, which included a six-year, monthly compensation amount of $12,500. Cal-Am requested to keep this account open and to transfer the current under-collected balance of $465,336 to the CEBA for recovery.[454]

Cal Advocates argued that the requested balance does not account for the balance that was authorized for recovery in D.18-12-021 and should be reduced further because the consultant costs exceeded what was authorized in the 2015 Decision. Cal Advocates also recommended that this account should be closed effective November 5, 2021, which would represent six years after the close of Cal-Am's transaction to acquire the Dunnigan system.[455]

Cal-Am argued its proposed closure date aligns with the decision that authorized the acquisition, rather than the actual close of the acquisition.[456]

---

[451] Exhibit CalPA-6E at 54-59, 67, and Attachments 55 and 56.

[452] Exhibit CAW-18 at 19.

[453] Settlement at 109.

[454] Exhibit CAW-4 at 30 and Attachment 1.

[455] Exhibit CalPA-6E at 54-59, 67-68, and Attachments 55, 56, and 69.

[456] Exhibit CAW-18 at 5, 11-12 and Attachment 3.

Rather than litigating this issue, the Settlement provides an agreement to adopt Cal-Am's initial request.[457]

13.40. Water-Energy Nexus Program Memorandum Account

Cal-Am uses the Water-Energy Nexus Program memorandum account to track expenses related to water-energy nexus projects and requested to keep this account open and to transfer an under-collected balance of $286,962 to the CEBA for recovery.[458] Cal Advocates recommended this account be closed and that the appropriate balance to be transferred is $(277,633).[459]

The Settlement adopts Cal-Am's initial request.[460]

13.41. Discussion on Memo and Balancing Accounts and CEBA Transfers

We find the Settlement reached compromises on the memorandum and balancing accounts described and discussed above, including the associated balance transfers to Cal-Am's CEBA account, to be reasonable in light of the whole record, consistent with the law, and in the public interest.

Cal-Am shall transfer $12,639,314 to the CEBA for recovery, based on the details discussed related to specific accounts in Sections 13.2 through 13.40 above, and keep its CEBA account open for this GRC cycle. We note that D.19-07-015, found, in part, that "[c]osts for emergency customer protection activities should be recovered across each utility's entire customer base."[461]

---

[457] Settlement at 109-110.

[458] Exhibit CAW-4 at 30 and Attachment 1.

[459] Exhibit CalPA-6E at 54-59, 68-69, and Attachments 55, 56, and 69.

[460] Exhibit CAW-18 at 6, 19-20, and Attachment 7; Settlement at 110 and Section 11.1.

[461] D.19-07-015 at 67 and Ordering Paragraph 10.

Additional issues related to Cal-Am's Special Requests #2, # 4, and #7 described above related to the WRAM/MCBA are addressed in Section 12 of the Settlement and Section 14 of this Decision.

We also note that D.18-12-021 established specific cost accounting procedures for the SGMA Memorandum Account.[462] Therefore, Cal-Am shall continue its SGMA memorandum account for this GRC cycle, including the cost accounting procedures established in D.18-12-021.

Further, the CEMA amount agreed upon in the Settlement and authorized in this decision to be transferred to the CEBA for recovery does not account for customer arrearages associated with loss of income or other economic distress caused by the COVID-19 pandemic. The costs associated with those customer arrearages are still under consideration in Phase 2 of R.17-06-024.

13.42. Request to Close Memo and Balancing Accounts Before Next GRC

Cal Advocates argued that Cal-Am has too many regulatory accounts open.[463] Cal-Am stated that it has requested to close a number of these regulatory accounts in this GRC and requested to be allowed to file a Tier 2 Advice Letter to request account closure after transferring the balance(s) to the CEBA for recovery.[464]

---

[462] D.18-12-021 requires Cal-Am to document and identify each cost incurred, the purpose of each cost, and provide an explanation why the costs are necessary to comply with SGMA. The Decision at 252-253 also established requirements for tracking and recording employees' time associated with SGMA compliance.

[463] Exhibit CAW-6EC at 58-75 and Attachments 55, 57, 60, and 61-65.

[464] Exhibit CAW-18 at 7-21 and Attachments 2, 6, and 7; Exhibit CAW-20 at 30-32.

The Settlement identifies twelve surcharge accounts that should be closed after any trailing interest charges are transferred to the CEBA for recovery.[465]

The Settlement also includes terms authorizing Cal-Am to file a Tier 2 Advice Letter, if necessary, prior to the filing of its next GRC, to close regulatory accounts that are no longer necessary.[466]

We find the Settlement, as it relates to the closure of these 12 accounts, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest because it ensures Cal-Am to continue to evaluate and fully close regulatory accounts when the balance has been fully recovered from ratepayers. Cal-Am shall close the 12 accounts identified in the Settlement and may file a Tier 2 Advice Letter seeking to close additional accounts, if necessary, ahead of the filing of its next GRC.

We separately note that the terms set forth in Section 11.9 of the Settlement requires closure of the Conservation Surcharge Balancing Account as of December 31, 2020, and that conservation expenses should be recovered through base rates for this GRC cycle. The Settlement provides that any trailing interest charges associated with the Conservation Surcharge Balancing Account up to the

---

[465] Settlement at 85 identifies the following accounts to be closed: Two-Way Tax Memo Account – Bonus Depreciation and Tax Change Components; Seaside Basin Adjudication Balancing Account; Seaside Groundwater Basin Memorandum Account; Old Monterey Style WRAM Balancing Account; GRC Interim Rate True Up Memorandum Account; Cost of Capital Interim Rate Memorandum Account; Statewide Non-Revenue Water Action Plan Memorandum Account; Monterey Leak Adjustments Memorandum Account; Sand City Desalination Plant Purchased Water Balancing Account; Conservation/Rationing Memorandum Account; Garrapata Service Area Memorandum and Balancing Accounts; and Monterey One-Way Leak Adjustment Balancing Account.

[466] Settlement at 110-112.

December 29, 2020, approval of the Tier 2 Advice Letter shall be transferred to the CEBA for recovery.[467]

We find the Settlement, as it relates to the Conservation Surcharge Balancing Account, is reasonable in light of the whole record, consistent with the law, and in the public interest because it aligns with Commission precedence on this issue. Pursuant to Ordering Paragraph 41 of D.18-12-021, Cal-Am filed a Tier 2 Advice Letter on November 23, 2020, providing an accounting of conservation funds spent with supporting documentation.[468] Advice Letter (AL) 1316 included a proposal to refund customers for any unspent funds or to collect any authorized revenues that are not yet billed through the CEBA. The Commission's Water Division approved AL 1316 on December 29, 2020. Therefore, Cal-Am is directed to close its Conservation Surcharge Balancing Account after any trailing interest charges are transferred to the CEBA for recovery. For this GRC, Cal-Am shall recover costs associated with its conservation expenses through base rates.

---

[467] Settlement at 86.

[468] Ordering Paragraph 41 of D.18-12-021 provided "California-American Water Company (Cal-Am) is authorized to shift authorized conservation budget amounts between best management practice rate categories within a service area. Cal-Am shall continue to track conservation expenses in the one-way California American Water Conservation Surcharge Balancing Accounts with any unspent funds refunded to ratepayers on an annual basis after the end of each year of the General Rate Case cycle. Cal-Am shall file a Tier 2 advice letter no later than 45 days after the end of each year providing an accounting of conservation funds spent with supporting documentation, as well as a proposal to refund to customers any unspent budgeted funds."

14. Special Requests

14.1. Southern Division Tariff Area Consolidation

As Special Request #1, Cal-Am sought to consolidate its Los Angeles County, Ventura County, and San Diego County Districts to create one Southern California Division tariff area.[469] Cal Advocates argued:

A. The Commission should only authorize consolidation of the proposed revenue requirements and tariff pricing;

B. The tier breakpoints should be based on specific consumption data from the current five, separate districts;[470]

C. The Commission should ensure the proposed rate design does not significantly increase bills for median water use in any of the five districts; and

D. Any new rate should maintain a strong conservation signal in each district.

Duarte suggested Cal-Am's requested consolidation would reduce average residential water rates.[471] However, San Marino argued its customers would see a 16.64% increase in rates in 2021 if Cal-Am's proposal were approved.[472]

Cal-Am stated Cal Advocates' suggestion to impute savings of at least 0.761% on the proposed consolidated Southern District revenue requirement would be retroactive ratemaking and conflict with the Water Action Plan.[473]

Rather than litigating this Special Request, the Settlement provides an agreement that adopts Cal-Am's request to consolidate its Southern District but

---

[469] A.19-07-004 at 10; Exhibit CAW-6 at 13-38 and Attachment 4.

[470] Exhibit CalPA-10 at 5-1 to 5-20 and Attachments 2 and 6.

[471] Exhibit Duarte-1 at 7 and Attachment 7.

[472] Exhibit San Marino-1 at 2-3.

[473] Exhibit CAW-20 at 41-56

makes significant adjustments to ensure median usage customers (and below) will see no more than the average system-wide rate increase.[474]

We find the Settlement, as it relates to Cal-Am's request to consolidate its Los Angeles County, Ventura County, and San Diego County Districts to create one Southern California Division tariff area, is reasonable in light of the whole record, consistent with the law, and in the public interest. As provided in the Settlement, Cal-Am shall ensure its Southern District consolidation does not cause any customers with median to below-median usage to face a rate increase above the system-wide average. Details on the authorized Southern Division purchased water cost consolidation design are discussed in Section 4.4 above.

14.2. Catastrophic Event Cost Impact Normalization

In Special Request #2, Cal-Am sought to normalize all cost recovery associated with recent and future catastrophic event costs on a statewide basis, including specific costs associated with the October 2017 wildfires in the Larkfield District.[475]

Cal Advocates argued that the Commission should not pre-determine recovery of unknown future costs and that Cal-Am's recovery of any 2017 Larkfield wildfire-related costs should be postponed until the insurance claims are fully settled.[476]

Cal-Am argued that D.19-07-015 approved recovery of costs recorded to the CEMA "across each utility's entire customer base,"[477] and that the costs it

---

[474] Settlement at 112-113.

[475] A.19-07-004 at 10; Exhibit CAW-6 at 38-46 and Attachment 3.

[476] Exhibit CalPA-6E Chapter 4 at 83-91 and Attachments 70-72.

[477] D.19-07-015 at 44-45.

requested associated with the 2017 Larkfield wildfire events are appropriate because no further insurance reimbursement for that event should be expected.[478]

Rather than litigating Special Request #2, the Settlement provides an agreement that Cal-Am's request related to the 2017 Larkfield Wildfires, as described in Exhibit CAW-20, should be authorized, and that wildfire-related costs recorded in Cal-Am's CEMA after May 31, 2019, should be reviewed in the next GRC for recovery on a statewide basis, pursuant to D.19-07-015.[479] The Settlement also provides that any 2018-2020 lost-quantity revenues should be reviewed in Cal-Am's next GRC.

MPWMD's opening brief requested relief from any recovery related to catastrophic wildfire related events that are not directly connected to Cal-Am's Monterey District. It argued there are no distribution or transmission systems that link the areas impacted by the Larkfield Fires, for example, to the rest of Cal-Am's service districts, and that cost recovery should be limited to those areas impacted by the catastrophic event.[480]

We find the Settlement, as it relates to Cal-Am's request to normalize its catastrophic event cost recovery, is reasonable in light of the whole record on this on this issue, consistent with the law, and in the public interest. Although MPWMD continues to oppose the statewide recovery of CEMA costs, we find that the agreements reached in the Settlement related to the "normalization" of

---

[478] Exhibit CAW-20 at 56-61.

[479] Settlement at 113; CAW-20 at 31 "Approval of [Special Request] #2 will allow the catastrophic event costs related to the Sonoma County wildfires that impacted our Larkfield district to be recovered properly. These are the costs incurred to bring our customers back on-line."

[480] MPWMD opening brief at 9.

CEMA costs align with the provisions adopted in D.19-07-015.[481] Cal-Am shall recover the 2017 Larkfield Wildfire related costs, net of received insurance claims, as identified in Exhibit CAW-20, and shall seek recovery of any wildfire-related costs after May 31, 2019, through its next GRC on a statewide basis.

14.3. Acquisition Contingency Memorandum Account

According to Cal-Am, SWRCB and Commission policy directives encourage the acquisition of small and/or troubled water systems; and it is therefore reasonable to create a mechanism to track the potentially lost revenues associated with the incremental customer base between each three-year GRC cycle.[482] In this GRC, Cal-Am included Special Request #3, to establish a new Acquisition Contingency Memorandum Account (ACMA) to record the difference between rates established based on pre-acquisition rate base for customers of water systems acquired by Cal-Am and the revenues Cal-Am would recover if customers in acquired water systems were billed on post-acquisition rates, based on the post-acquisition revenue requirement. This memo account would be used for any acquisition after a decision is adopted in this GRC, and Cal-Am requested authorization to file a Tier 2 Advice Letter to recover any annual balance in the ACMA.

Cal Advocates argued that acquisitions and their timing are typically fully within Cal-Am's control, and that the Commission should not continue its proliferation of surcharge accounts for Cal-Am.[483]

---

[481] Ordering Paragraph 10 of D.19-07-015 states that all Class A water utilities shall recover costs for emergency customer protection activities done in response to any federal- or state-declared state of emergency, across their entire customer base.

[482] A.19-07-004 at 10; Exhibit CAW-6 at 46-51.

[483] Exhibit CalPA-6E Chapter 5 at 87-89.

Cal-Am stated that although it can manage some timing related to acquisitions, the negotiations and costs cannot be as detailed as necessary to include forecasted costs in GRC filings, particularly because the utility must await Commission approval for the acquisition(s). Therefore, Cal-Am argued (1) it is not possible to time its acquisitions to correspond to rate case cycles and (2) delaying acquisitions to align with GRC cycles could potentially cause harm to ratepayers.[484]

The Settlement provides an agreement that withdraws Cal-Am's request to establish an ACMA but affirms Cal-Am the ability to revisit the issue to request a similar account within specific acquisition-related proceedings.[485]

We find the Settlement, as it relates to the withdrawal of Cal-Am's request to establish a new ACMA, is reasonable in light of the whole record of this proceeding because it aligns with Cal Advocates' testimony encouraging a reduced number of surcharge accounts for Cal-Am's customers. Further, it is consistent with the law and in the public interest because it provides Cal-Am the opportunity to request a similar account when filing applications for specific acquisitions. Cal-Am provided no persuasive rationale to establish any form of ACMA prior to Cal-Am needing it in conjunction with a new proposed acquisition. Cal-Am shall not establish an ACMA for this GRC cycle but may request a similar account within specific acquisition-related proceedings, if appropriate.

---

[484] Exhibit CAW-20 at 61-70 and Attachment 4.

[485] Settlement at 113-114.

14.4. Leak Adjustment Policy and Recovery

As Special Request #4, Cal-Am sought to continue implementing its authorized leak adjustment policy but to move recovery of leak adjustments from base rates, as adjusted by the one-way Leak Adjustment Balancing Account (LABA), into the WRAM and to close the existing LABA.[486]

Cal Advocates recommended this request be denied and suggested the Commission should maintain oversight of the LABA through the GRC process.[487] Cal-Am stated that if the Commission prefers to continue evaluation of leak adjustments through the GRC process, the costs should be evaluated and forecasted as part of Cal-Am's revenue requirement.[488]

The Settlement provides an agreement to (1) include leak adjustments as an operating expense in base rates and (2) close Cal-Am's LABA.[489] We find the Settlement, as it relates to Cal-Am's LABA and leak adjustment policy, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. As noted by MPWMD, "even small leaks can result in extraordinary bills. This policy affords some relief to customers."[490] Cal-Am shall close its LABA and recover leak adjustments going forward as an operating expense in its base rates, returning any overcollection to its customers if necessary. Pursuant to the Cal-Am-MPWMD Settlement, the leak adjustment costs for the Monterey District should be included in base rates at an amount of $2.70 million for TY 2021. Further, if the actual leak adjustment costs are less

---

[486] A.19-07-004 at 10-11; Exhibit CAW-6 at 51-59.

[487] Exhibit CalPA-10 Rose testimony at 5-2 and 5-20.

[488] Exhibit CAW-20 at 70-72.

[489] Settlement at 115 and Section 11.1.

[490] MPWMD opening brief at 5.

than the amount authorized to be reflected in base rates in this decision during this GRC cycle, Cal-Am shall track and return the different to customers through its CEBA.[491]

14.5. WRAM/MCBA Cap

D.18-12-021 temporarily authorized a 15% cap on annual amortization of Cal-Am's WRAM/MCBA. As Special Request #5, Cal-Am sought to increase this cap to 25%, effective January 1, 2021, to better collect existing WRAM/MCBA balances in 2021-2023 and limit future surcharges.[492]

Cal Advocates argued this request should be denied because the current cap does not inhibit conservation, and the requested increase in the cap would not solve the current or potential future equity problems.[493] MPWMD further argued that Cal-Am should close surcharge accounts when possible and include additional transparency about how these charges will impact customers' rates.[494]

Although Cal-Am disagreed with Cal Advocates' recommendation, in its rebuttal, Cal-Am modified this request to largely maintain the 15% cap temporarily authorized in the last GRC and requested to increase the cap on the WRAM/MCBA in the Central Satellite, Ventura, and Baldwin Hills Districts from 15% to 20%.[495]

Rather than litigating this issue, the Settlement provides that Cal-Am will maintain the current 15% cap of the authorized revenue requirement for recovery

---

[491] *See* Appendix D of this instant decision at 4-5 and Cal-Am Comments on the PD at 10.

[492] A.19-07-004 at 11; Exhibit CAW_6 at 59-67 and Attachments 5 and 6.

[493] Exhibit CalPA-10 at 5-23 to 5-26.

[494] Exhibit MPWMD-3 at 16.

[495] Exhibit CAW-18 at 72-79.

of the under-collected WRAM/MCBA balances adopted in D.18-12-021, until 2023 when the WRAM/MCBA mechanism comes to an end for Cal-Am.

We find the Settlement, as it relates to Cal-Am's WRAM/MCBA balances and the authorized cap established in D.18-12-021, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, pursuant to the Commission's approval of the temporary 15% cap in Cal-Am's prior GRC proceeding. Cal-Am shall maintain the 15% cap related to its WRAM/MCBA balances as authorized in D.18-12-021 through this GRC cycle. This approach balances Cal-Am's need for accelerated cost recovery with mitigating the rate impacts to customers.[496]

14.6. Incentivizing Taxable Grants, Contributions, and Advances

In Special Request #6, Cal-Am requested recovery of the federal tax imposed on all contributions-in-aid-of-construction (contributions) and any advances for construction, pursuant to the TCJA. Further, Cal-Am requested that, to the extent any grants received are taxable, the tax portion be included in rate base.[497]

Cal Advocates objected to this request, arguing it is contrary to the long-standing principle that the person/entity that causes the tax should pay the tax.[498] Currently, contributors and ratepayers share taxes on contributions, but ratepayers take on a much smaller share of the tax burden.[499] Cal Advocates

---

[496] MPWMD opening brief at 5.

[497] A.19-07-004 at 11; Exhibit CAW-6 at 67-70.

[498] Exhibit CalPA-2 Dawadi Chapter 2 at 10-16 and Attachment 3.

[499] Exhibit CalPA-2 Chapter 2 at 10. "The Commission allows utilities to utilize Method 5 to calculate federal taxes on taxable contribution and advances. Method 5 places the major portion of the tax burden on the contributor (*Re Methods for Establishing the Proper Level of Expense Resulting from 1986 Tax Reform Act*, D.87-09-026, at 114 [1987 Cal. PUC LEXIS 195])."

argued that Cal-Am is seeking to collect the full taxes associated with contributions from ratepayers, which would be contrary to D.87-09-026.[500]

Cal-Am disagreed with Cal Advocates and proposed a modification to its initial request specific to the treatment of contributions and advances for the Placer Vineyards and Riolo Vineyards developments.[501] Cal-Am stated that it would use Method 5 gross up treatment for the service connection components of those developments but would seek to recover any tax on non-service connection related components of the developments from ratepayers, but that expanding Method 5 to all contributions would have "a multi-million dollar impact to the project budgets" which could delay the projects as well as the development of new housing during a statewide housing crisis. Cal-Am further argued that including projected grant funds in the GRC could increase risk for both Cal-Am and its ratepayers because grant funds are not always available as forecasted.[502]

Rather than continuing to litigate this issue, the Settlement sets forth and agreement to continue use of Method 5 for new development and further provides as follows:[503]

> A. The tax gross up associated with federal and state government grants should be recovered through a Tier 2 Rate Base Offset Advice Letter. This will ensure that recovery only begins when the project is complete and/or the grant funding is received;

---

[500] Exhibit CalPA-2 at 11-12. D.87-09-026 found Method 5 to be reasonable because it splits the tax burden between the contributor and ratepayers and provides the least risk to the utility.

[501] Exhibit CAW-22 at 68-74 and Attachment 5.

[502] Exhibit Cal-Am-22 at 71-74.

[503] Settlement at 117.

B. The tax gross up in the Tier 2 Advice Letter filing shall be addressed as an adjustment to deferred taxes;

C. Effective January 1, 2021, through completion of the Placer and Riolo Vineyards developments, Cal-Am shall apply Method 5 treatment for the service connection component of contributions and advances as reflected in the agreement reached between Cal-Am and the Placer Vineyards Development Group;[504] and

D. Cal-Am shall withdraw its requested change to Method 3 for all other developments.

We find the Settlement, as it relates to taxable grants and contributions is reasonable in light of the whole record, consistent with the law, and in the public interest, because it protects ratepayers from paying taxes on contributions. Cal-Am shall address taxes related to federal and state grants through a Tier 2 rate base offset advice letter filing and continue the use of Method 5 to determine the gross up for service connection component of contributions and advances in the Placer Vineyards and Riolo Vineyards development and shall apply Method 3 for all non-service connection advances and contributions. Method 5 will continue to be applied for all other contributions and advances.

14.7. Alignment and Simplification of District Specific Tariffs

Cal-Am's Special Request #7 requested to align its WRAM and MCBAs with its current and proposed tariffs, and to consolidate its CEBA for the Southern and Northern Divisions.[505]

---

[504] Exhibit CAW-22 Attachment 5 (Public) describes the agreement between Cal-Am and Placer Vineyards Development Group, which was executed more than two years prior to the TCJA. The agreement includes a Method 5 gross-up for all service connection related contributions and advances, and a Method 3 treatment for all non-service components of the Placer and Riolo Vineyard developments.

[505] A.19-07-004 at 12; Exhibit CAW-6 at 80-81.

Cal Advocates did not dispute Cal-Am's request to align the WRAM/MCBA related to the Northern Division and Central Satellite District but recommended that, for the Southern Division, Cal-Am should only be authorized to consolidate the accounts if the Commission approves consolidation of the associated revenue requirements.[506]

The Settlement adopts Special Request #7 and reflects the agreements related to Cal-Am's Southern Division consolidation as discussed in Section 14.1.[507]

We find the Settlement, as it relates to Cal-Am's request to align its WRAM and MCBAs with its current and proposed tariffs, and to consolidate its CEBA for the Southern and Northern Divisions, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it aligns Cal-Am's WRAM/MCBA accounts to its tariff structures. Within 30 days of the adoption of this decision, Cal-Am shall:

A. Establish (1) a single WRAM/MCBA, (2) a single WRAM/MCBA surcharge, (3) a single CEBA, and (4) a single CEBA surcharge for its Southern Division;

B. Establish (1) a single WRAM/MCBA, (2) a single WRAM/MCBA surcharge, (3) a single CEBA, and (4) a single CEBA surcharge for its Northern Division. These accounts should include customers in the Hillview and Meadowbrook service territories; and

C. Fold its Toro and Ambler pre-2018 WRAM/MCBA balances into the existing Central Satellite WRAM/MCBA.

---

[506] Exhibit CalPA-10 Rose testimony at 5-27.

[507] Settlement at 118.

14.8. Meadowbrook Rate Deign Consolidation Deferral

Cal-Am's Special Request #8 sought to defer rate design consolidation in its Meadowbrook service district. D.16-12-014 authorized Cal-Am to move its Meadowbrook customers onto the Sacramento District Rates, but in this GRC, Cal-Am proposed a separate, stand-alone rate design for Meadowbrook customers that has three tiers, with costs based on specific consumption profiles in the Meadowbrook District.[508]

Cal Advocates argued that consumption in the Meadowbrook District "far exceeds" consumption in the Sacramento District and that Cal-Am's proposed rate design could mute conservation signals in districts that have lower usage and result in "unexpectedly large bills" for customers that have usage just above average especially in higher-use district. Cal Advocates proposed an alternate rate design for the Meadowbrook District based on a four-tiered rate structure that has step-ups in commodity rates and tier breakpoints.[509]

Cal-Am argued its proposed rate design would accelerate the adjustment of Meadowbrook customers' usage to the more typical usage rates of customers throughout its Sacramento District.[510]

The Settlement adopts Cal-Am's Special Request #8 using the rate design agreed to regarding the Sacramento District in Sections 4.1 and 4.2 of the Settlement and described in Section 6 above. We find the Settlement, as it relates

---

[508] Exhibit CAW-6 at 76-83. Cal-Am states that the proposed Meadowbrook rate design mirrors the Sacramento District's three-tier rate design but is based on usage profiles of customers in the Meadowbrook District.

[509] Exhibit CalPA-10 at 4-15 to 4-17, 5-5 to 5-6, and 5-27 to 5-28.

[510] Exhibit CAW-20 at 77-78. Cal-Am argues that adding a third tier for Meadowbrook customers should drive the overall consumption down without adversely affecting customer rates overall.

to Cal-Am's proposed deferral of a consolidated Meadowbrook rate design, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest.

The agreed-upon rates and tier breakpoints for Meadowbrook customers will not hinder conservation signals and will better align customer rates in the recently-acquired service territory with those in the rest of Cal-Am's Sacramento District. Cal-Am shall align its Meadowbrook customer rates with the rate design agreed upon for the Sacramento District in Settlement Sections 4.1 and 4.2.

14.9. Rate Case Expense Recovery

Cal-Am's Special Request #9 sought to amortize rate case expenses over 27 months. Cal Advocates suggested this request would violate the Commission's Revised Rate Case Plan and should only be considered through an industry-wide rulemaking.[511] Cal-Am agreed to withdraw this request, and the Settlement reflects Cal-Am's withdrawal of Special Request #9.

We find the Settlement, with respect to Cal-Am's Special Request #9, to be reasonable in light of the whole record, consistent with the law, and in the public interest. The Settlement moots this request for our consideration and ensures Cal-Am shall continue to amortize its authorized level of rate case expense over 36 months, as adopted in D.07-05-062.

14.10. Subsequent Rate Changes

As Special Request #10, Cal-Am sought authority to fully incorporate any rate changes that occurred between its filing of A.19-07-004 and the issuance of

[511] Exhibit CalPA-8 Chapter 1 at 1-7, D.07-05-062 Attachment A, and Settlement at 119. Cal-Am disagreed with Cal Advocates' position in Exhibit CAW-20 at 78-80, but ultimately agreed to withdraw Special Request #9.

this Decision.[512] Cal Advocates agreed with this request.[513] The Settlement sets forth an agreement to adopt Cal-Am's Special Request #10.[514]

We find the Settlement, as it relates to Cal-Am's request to incorporate all rate changes that have occurred when implementing this Decision, is reasonable in light of the whole record, consistent with the law, and in the public interest, because it ensures and incremental rate changes that occurred between the filing of A.19-07-004 and the issuance of this Decision are included in Cal-Am's implementation of this GRC. Cal-Am's implementation Advice Letter for this Decision should describe and reflect all rate changes that have occurred in the time since A.19-07-004 was filed.

14.11. Acquisition Revenue Requirement Normalization

As Special Request #11, Cal-Am requested to normalize the UPAA across its rate base entirely for its approved Rio Plaza, Fruitridge, and Hillview acquisitions and partially for its proposed Bellflower acquisition.[515]

Cal Advocates recommended the UPAA should be spread across all ratemaking areas to achieve what Cal Advocates proposed would be the largest socialization of excess acquisition costs possible.[516] Cal Advocates also stated that the Commission should reduce the UPAA associated with the Bellflower

---

[512] A.19-07-004 at 12; Exhibit CAW-6 at 81-86.

[513] Exhibit CalPA-2 at 17-22.

[514] Settlement at 119.

[515] A.19-07-004 at 12; Exhibit CAW-6 at 83-84; Exhibit CAW-9 at 55-63.

[516] Exhibit CalPA-8 at 5 references Senate Bill 1268 (Kelley, 1997), which enacted the Public Water System Investment and Consolidation Act that requires the Commission to utilize "fair market value" to develop the rate base for acquired systems and describes how the acquired systems' accounting value may be lower than the calculated "fair market" value.

acquisition by $8 million to account for what Cal Advocates argued is an unreasonable acquisition cost.[517]

Duarte raised concerns that, without spreading the UPAA associated with the Bellflower acquisition, its residents could see up to a 28% monthly rate increase.[518]

In rebuttal, Cal-Am agreed with Cal Advocates that the UPAA should be spread across all ratemaking areas to achieve greater socialization of excess acquisition costs but disagreed that its Bellflower acquisition costs were inflated.[519] Cal-Am also provided additional information about its Hillview water system acquisition as approved in D.19-11-003.

Rather than litigating this issue, the Settlement provides an agreement to allocate the UPAA associated with Cal-Am's acquisitions of Fruitridge Vista, Rio Plaza, and Hillview across all ratemaking areas and to remove any UPAA costs associated with the Bellflower acquisition, which has not yet been approved by the Commission.[520]

MPWMD argued that this request and the agreements reached in the Settlement regarding UPAA are not in the interest of Monterey County customers because the compromises fail to consider the existing financial burdens Monterey County customers already face or how the incremental costs associated with Cal-Am's system acquisitions would adversely affect customers in the Monterey Service Area.[521] MPWMD recognizes that the statewide

---

[517] Exhibit CalPA-8 Chapter 2 at 4-6.

[518] Exhibit Duarte-1 at 7-8.

[519] Exhibit CAW-22 at 75-77.

[520] Settlement at 120.

[521] MPWMD opening brief at 10.

allocation of UPAA is a standard policy, as defined in Pub. Util. Code Section 2720 but still requests relief from any rate increases associated with Special Request #11 and any UPAA related rate impacts associated with future Cal-Am acquisitions.[522]

We find the Settlement as it relates to this Special Request #11 is reasonable in light of the whole record of this proceeding, consistent with the law and Commission precedent related to UPAA and acquisitions, and in the public interest, because it ensures no costs associated with the pending Bellflower acquisition are recovered without Commission approval of that acquisition. While Cal-Am's cost recovery associated with buying and maintaining the smaller systems creates diseconomies of scale, the statewide UPAA allocation provided in the Settlement provides the largest socialization of cost increases possible.

We agree with Cal Advocates that "[i]f the initial acquisition price is unreasonable, any ensuing UPAA and ratepayer impact is also unreasonable, regardless of how small the impact might be on a per customer basis."[523] It is the Commission's purview to fully review each acquisition filing on the merits of a utility's application, and that evaluation process occurred prior to Commission approval of the Fruitridge Vista, Rio Plaza, and Hillview systems. Therefore, for the purposes of this GRC, the UPAA associated with the acquisitions of Fruitridge Vista, Rio Plaza, and Hillview water systems should be allocated across all ratemaking areas as discussed in Settlement Section 5.11 and 12.11 and detailed in the Settlement Attachments E-1 and F-1.

---

[522] *Ibid.*

[523] Exhibit CalPA-8 at 6.

However, the Commission's review of Cal-Am's proposed Bellflower acquisition is still ongoing.[524] If the Bellflower acquisition is approved after this GRC is decided, Cal-Am may incorporate the authorized acquisition costs into rates pursuant to the final decision in that proceeding.

14.12. Annual Consumption Adjustment Mechanism

Cal-Am was authorized to create a pilot Annual Consumption Adjustment Mechanism (ACAM) in the Monterey County District in D.18-05-027.[525] In this GRC, as Special Request #12, Cal-Am requested to make its pilot ACAM permanent in the Monterey County District and to establish a similar ACAM pilot program for Cal-Am's Northern Division.[526] MPWMD, Cal-Am, and Cal Advocates reached a settlement creating the ACAM pilot program in the Monterey District in A.15-07-019.[527]

Cal Advocates argued that the Commission is currently evaluating the concept of Sales Reconciliation Mechanisms such as the ACAM in a water-industry-wide proceeding, R.17-06-024, and that using the advice letter process for rate changes could result in more frequent rate changes that are less rigorously considered than a GRC.[528]

---

[524] A.18-09-013.

[525] D.18-05-027 adopted a Settlement between Cal-Am, Cal Advocates, and MPWMD and authorized Cal-Am to establish a pilot "annual consumption true-up pilot program (ACPP)" to track and account for the costs of acquiring replacement water to replace the court-ordered ramp-down of withdrawals from the Seaside Groundwater Basin, and a Consumption Adjustment Mechanism to update water demand in the Monterey District.

[526] A.19-07-004 at 13; Exhibit CAW-6 at 81-91 and Attachments 7 and 8.

[527] *See* Presiding Officer's Decision Adopting Phase 3B Settlement Agreement in A.15-07-019, Attachment 2, and D.18-07-010 adopting the Phase 3B Settlement Agreement.

[528] Exhibit CalPA-10 at 5-29 to 5-35.

MPWMD supported Cal-Am's request, because it believes the ACAM "has provided an alternative to poor revenue forecasting and was sorely needed in the Monterey District where WRAM balancing once exceeded $39 million."[529]

Cal-Am argued that three-year sales forecasts are difficult to predict, and the Commission has previously found that reconciliation mechanisms such as the ACAM are appropriate tools for updating water demand and could also address WRAM/MCBA balances.[530]

Rather than litigating the ACAM issue, the Settlement provides that Cal-Am should incorporate the existing ACAM mechanism permanently in the Monterey County District and incorporate the adjustment mechanism approved in D.18-05-027, as part of the step and attrition filings for all districts, excluding (1) the Fruitridge sub-system in the Northern Division for 2022 and 2023; and (2) setting test year rates for the Monterey District.

We find the Settlement, as it relates to Special Request #12, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, pursuant to the directives adopted the Presiding Officer's Decision Adopting the Phase 3B Settlement Agreement in A.15-07-019, Attachment 2, and D.18-07-010 adopting the Phase 3B Settlement Agreement. The Monterey District ACAM shall be made permanent effective in 2021. The new pilot ACAM across other districts, excluding the Fruitridge sub-system, shall begin in 2021 with an adjustment mechanism that aligns with D.18-07-010. The pilot ACAM shall include the Fruitridge sub-system starting in 2024.

[529] Exhibit MPWMD-3 at 17.

[530] Exhibit CAW-20 at 80-88.

14.13. Consolidating Conservation Program Statewide

As Special Request #13, Cal-Am proposed to consolidate its conservation program, which is currently funded district-by-district, into a statewide program in which up to 50% of individually-authorized conservation budget funds can be shifted between different service areas.[531]

Cal Advocates recommended that the granting of Special Request #13 should be contingent on the following parameters:

A. Conservation costs should be placed in base rates;

B. Surcharge accounts associated with conservation costs should be closed; and

C. Cal-Am should be prohibited from using conservation funds to pay any penalties or fines.[532]

The Settlement provides for a withdrawal of Special Request #13.[533]

We find the Settlement term on withdrawal of Special Request #13 is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. Withdrawal of this request aligns with MPWMD's request to maintain a separate, specific conservation budget for the Monterey District.[534] Further, we agree with MPWMD that "outreach is an important component of each conservation and efficiency program proposed in this GRC. Outreach keeps customers aware of changing conditions and communicates information about programs that are available to the

[531] A.19-07-004 at 13; Exhibit CAW-10 at 23-25 and Attachment 1.

[532] Exhibit CalPA-6E at 90-96 and Attachment 73.

[533] Exhibit CAW-23 at 4-11; Settlement at 121.

[534] Exhibit MPWMD-2 at 11-13.

community."[535] Cal-Am shall continue partnering with local organizations to conduct customer outreach related to its conservation programs to ensure customers in each of its service districts are aware of the programs it offers.

14.14. Elimination of Duplicative or Unnecessary Reporting

As Special Request #14, Cal-Am requested to eliminate the following reports that it considered duplicative or unnecessary:

A. The Monterey District rebate and audit reports required by D.09-05-029;[536] and

B. The customer complaint reports required by D.06-11-050.[537]

Cal-Am stated that it already reports on rebate water savings figures and customer service performance metrics annually in its GO-103A filings to the Commission and that it has demonstrated its successful reduction of the number of formal and informal complaints received through the Commission's Consumer Affairs Branch.[538]

---

[535] Exhibit MPWMD-2 at 15.

[536] D.09-05-029 adopted specific reporting requirements regarding the Monterey District that were agreed upon in a Joint Settlement between Cal-Am, Cal Advocates, and MPWMD. Specifically, Cal-Am agreed to provide an annual conservation report for the Monterey District that includes estimated water saving calculations for each device offered through its customer-facing conservation programs; a summary of conservation plans for the following year; budgets for each planned conservation program; and an evaluation of the effectiveness of its outreach program(s). (*See* D.09-05-029 at Section 3.2.3 and Appendix A at 12-13.)

[537] D.06-11-050 adopted quarterly reporting requirements regarding California-specific statistics, by district, of all calls and final disposition of complaints and all complaints received at district and regional levels and their final disposition. It also directed Cal-Am to enter into a formal agreement with MPWMD related to conservation funding and programs. (*See* D.06-11-050 at 36 and 27-28.)

[538] GO 103-A governs water service and provides minimum standards for operation, maintenance, design and construction along with specific reporting requirements for water utilities.

MPWMD did not oppose the proposed elimination of the rebate reports required in D.09-05-029. However, MPWMD argued that the number of customer complaints reported in the Monterey District is still disproportionately high; as such, the data required under D.06-11-050 should remain available to the public.[539]

Cal-Am noted the Consumer Affairs Branch of the Commission has consistent and regular contact with all regulated utilities, and the customer complaint reporting requirements adopted in D.06-11-050 are duplicative of its annual customer service reporting required as part of GO 103-A.[540]

The Settlement adopts Special Request #14 to eliminate the two reporting requirements.

In comments on the Settlement, MPWMD stated that the steeply-tiered rate design in the Monterey District results in frequent customer contact related to bills, leaks, and water pressure, and that waiting a full year to see the customer complaint statistics in Cal-Am's GO-103A reports would be a disservice to Monterey customers. MPWMD suggested that Cal-Am could sort the customer complaints and only provide quarterly reports for the Monterey District.[541]

We find the Settlement, as it relates to Special Request #14, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest because it eliminates duplicative reporting and administrative requirements. MPWMD has not adequately illustrated how a quarterly report of customer service requests and disposition would provide greater benefit to Cal-Am's Monterey District customers than the already-required annual

---

[539] Exhibit CalPA-4 at 61-65; Exhibit MPWMD-2 at 16.

[540] Exhibit CAW-23 at 13-14.

[541] MPWMD response to the Settlement at 5.

GO 103-A compliance reporting. Further, MPWMD and/or the Commission can request specific customer complaint data from Cal-Am when necessary. Cal-Am is authorized to eliminate the Monterey District rebate and audit reports and the customer complaint reports, as requested in Special Request #14.

14.15. Proposed Operational Tariff Modifications

As Special Request #15, Cal-Am requested to modify several of its tariffs to better clarify the responsibilities of its customers and reduce inequities between customers. Specifically, Cal-Am requested operational modifications related to the following tariffs:

A. The AMR/AMI Opt-Out Program;
B. The Residential Fire Protection Service Multi-Use Customer Discount;
C. Tariff Rule 10, as it regards billing errors;
D. Tariff Rule 18, as it regards meter errors;
E. Schedule CA-4 and CA-4H, as they regard Private Fire Services;
F. Tariff CA-FEES to eliminate the connection fee; and
G. A new statewide metered construction service meter tariff.[542]

Cal Advocates argued that the Commission should require Cal-Am to report any revenues resulting from the tariff modifications in its steps filings, GRCs, and any other reports of recorded revenue, and that the requested Rule 10 and Rule 18 modifications should be denied because those changes could limit customers' ability to be refunded for billing errors. Cal Advocates also recommended the Commission deny any changes to the construction service meter tariff that would require customers to pay any outstanding balances in full

[542] A.19-07-004 at 13; Exhibit CAW-5 at 115-125; Exhibit CAW-9 Attachment 5.

before any deposit is returned. Cal Advocates recommended that customers should instead be allowed to deduct outstanding balances from their deposits.[543]

Cal-Am argued that incentivizing contractors to return construction meters is challenging, and that its proposed modification to the construction service meter tariff would allow Cal-Am to replace the meter if it is not returned. Cal-Am further disagreed with Cal Advocates' proposed recommendations related to the operational tariff modifications, arguing that if connection fees are reported as revenues, Cal-Am's rate base would increase to recover them. Cal-Am stated that its treatment of service connection fees as contributions-in-aid-of-construction (contributions) offsets the addition to existing utility plant-in-service and creates no impact on customers' bills.[544]

Rather than litigating Special Request #15, the Settlement provides the following agreements:

1. For the AMI/AMR opt-out tariff revisions, Cal-Am will:
    a. Offer customers the option to opt-out of the AMI before any new AMI meters are installed. Customers that opt-out will be charged a $13.00 monthly charge once AMI billing is fulling implemented but will not face the $70.00 initial fee that is provided on Schedule CA-OUT.
    b. File a Tier 1 Advice Letter to make Schedule CA-OUT effective no more than 90 days prior to the start of billing utilizing AMI meters.
    c. Treat revenues generated through the monthly charges provided in Schedule CA-OUT as Other Revenue. However, because revenues received through the opt-out tariff will be minimal in this GRC cycle, they

[543] Exhibit CalPA-10 at 5-36 to 5-40 and Attachments 7-9.

[544] Exhibit CAW-19 at 31-34; Exhibit CAW-22 at 77-79.

cannot be accurately forecasted for inclusion in the authorized revenue requirement.

2. For new service connection fees, connection charges paid by new customers should be considered contributions and should offset the costs of the new connection.
3. For construction meter tariffs, Cal-Am should use construction meter deposits to offset the cost of a replacement meter, rather than offsetting any unpaid bill(s).
4. Cal-Am will withdraw its requests to modify Rules 10 and 18 related to meter and billing errors.[545]

We find the Settlement, as it relates to Special Request #15, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it ensures Cal-Am does not overcharge customers for replacement meters or new service connections and allows customers to opt-out of the AMI/AMR tariff.

Cal-Am shall file a Tier 1 Advice Letter making Schedule CA-OUT effective for customers seeking to opt-out of AMR/AMI 90 days prior to the date it anticipates using AMI meters for billing, so that customers that choose not to enroll in AMI can begin paying the $13.00 monthly fee to cover meter-reader related labor costs. The fees collected through Schedule CA-OUT, which are expected to be minimal in 2021-2023, shall be treated as revenues during this GRC cycle. New service connection fees shall be treated as contributions and used to offset the cost of the new connections; construction meter deposits shall be used to offset the cost of replacement meters, if necessary; and Cal-Am's Rules 10 and 18 shall remain unchanged for this GRC cycle.

[545] Settlement at 123-124.

14.16. Lead Service Line Replacement Program

As Special Request #16, Cal-Am requested authorization to create a new Lead Service Line Replacement Program to expand its existing, ongoing main replacement program to replace all lead portions of its service lines, including Cal-Am- and customer-owned sections.[546]

Cal Advocates recommended the Commission require Cal-Am to maintain detailed records regarding all lead service line replacements including the location, length, and cost of each customer-owned service line replaced. Further, Cal Advocates argued the rate treatment of the costs associated with this Special Request should be considered in the next GRC, once Cal-Am has improved information about the program's costs.[547]

The Settlement adopts Special Request #16 as requested, with the caveat that Cal-Am be required to maintain detailed records about all lead service line replacements.[548]

We find the Settlement, as it relates to Special Request #16, to be reasonable in light of the whole record, consistent with the law, and in the public interest, because it will allow Cal-Am to continue replacing its lead service lines and improve data about the cost and location of service line replacements.

Cal-Am shall (1) create a new Lead Service Line Replacement Program as part of its existing, ongoing main replacement program; (2) track cost information about the utility- and customer-side costs associated with each lead service line replacement that occurs; and (3) provide that detailed information

---

[546] Exhibit CAW-5 at 29-34 and Attachment D; Exhibit CAW-9 at 45-47.

[547] Exhibit CalPA-5 at 103-109 and Attachment 11.

[548] Settlement at 124.

related to lead service line replacements when seeking recovery of these costs in its next GRC.

14.17. High-Cost Fund for Active Wastewater Customers

As Special Request #17, Cal-Am requested authorization to create a new high-cost fund for its Central Division active wastewater service customers. Specifically, Cal-Am proposed to implement a flat surcharge of $0.29/month for all of its non-low-income customers, both water and wastewater, that are not located in the proposed high-cost area to offset the costs for customers in the high-cost area. Cal-Am stated that rates for customers in the proposed high-cost area are significantly higher than those for passive wastewater customers in the same Division and are expected increase over time, because the related facilities require significant investments for maintenance or replacement.[549]

Cal Advocates argued this request is substantially the same as one the Commission declined to adopt in a settlement reached between Cal-Am, LPWC, and MPWMD in A.16-07-002.[550] Las Palmas supported Cal-Am's Special Request #17, arguing that it would offset the rate increases in its service territory.[551]

Cal-Am disagreed with Cal Advocates and provided an examination of adjustments to the wastewater LIRA program and possible re-allocations that could be implemented to reduce the impacts of the high-cost fund on Cal-Am's active wastewater customers.[552]

---

[549] A.19-07-004 at 14; Exhibit CAW-6 at 91-94 and Attachment 9; Exhibit CAW-2 at 17.

[550] Exhibit CalPA-10 at 5-40 to 5-41.

[551] Exhibit LPWC-1 at 2-3.

[552] Exhibit CAW-16 at 7-11 and Attachment 1; Exhibit CAW-20 at 88-94 and Attachment 6.

The Settlement provides an agreement that Cal-Am will withdraw this request for this GRC.[553]

We find the Settlement's provision to withdraw Special Request #17 is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it prevents the implementation of a flat surcharge on customers' bills that may not be necessary to provide reliable service.

Cal-Am shall not create a new high-cost fund or implement a new surcharge to offset the costs of its active wastewater customers in the Central Division. Additionally, we agree that the cost allocation between passive and active wastewater customers in Monterey County should be updated to better reflect current system costs. Cal-Am shall implement the new factors agreed upon in Section 3.2 of the Cal-Am-Las Palmas Settlement as follows:

A. General Office and Service Company allocated costs shall be reduced to 50% of the previously-established level;

B. Costs associated with waste disposal, power, and chemicals shall be tracked and reported separately between the passive and active systems; and

C. Labor cost allocation shall be 80% to active and 20% to passive, to acknowledge the additional labor necessary to support treatment facilities.[554]

15. Other Miscellaneous Issues

There are several outstanding issues in the scope of this proceeding, and they are addressed below.

---

[553] Settlement at 124-125; Cal-Am-Las Palmas Settlement at 5-6.

[554] *Ibid*.

15.1. AMI for Ventura and Central Division Customers

Cal-Am estimated that the cost to deploy AMI in its Ventura County and Central Divisions would be $3.7 million through 2022. Issue 3 of the Scoping Memo concerns whether the $3.7 million in costs requested by Cal-Am is reasonable. Provisions in the Settlement suggest different outcomes for this GRC dependent on the Commission's resolution of Issue 3 of the Scoping Memo.

There was little testimony on this issue, beyond Cal-Am's request and discussion of the tariff opt-out provisions, described in Section 14.15 above. Cal-Am sought to install AMI for approximately 62,000 water customers spanning the residential, industrial, and commercial classes, to better understand whether a two-way AMI system could better inform the utility and customers of leakages and other potential sources of water waste.[555]

Cal-Am described recent, smaller-scale pilot AMI projects it has conducted to evaluate the technology, which have occurred in the same service territories as this proposed program.[556] The utility estimated that over 20 years, it could see up to $130.5 million in cost savings compared to a more standard, individual meter-reading technology.[557]

Cal-Am further suggested that "many of the meters being replaced as part of the AMI program would have been replaced due to [loss of service] within the next 2-10 years."[558]

We have reviewed the record of this proceeding as it relates to Cal-Am's proposed AMI deployment in its Ventura and Central Divisions and find its

---

[555] Exhibit CAW-5C at 77-115.

[556] *Ibid* at 99-106.

[557] Exhibit CAW-5C at 204-209.

[558] *Ibid* at 116.

proposal is reasonable and in the interest of ratepayers. Cal-Am's provided testimony and evaluation of its AMI pilots suggest the potential for improved ratepayer experience and lower overall costs should the AMI proposal be implemented.

Cal-Am shall allocate the costs associated with this program as set forth in the Settlement and provide the option for Ventura and Central Division customers to opt-out of AMI as discussed in Section 14.15 above.[559]

15.2. Safety

Issue 7 of the Scoping Memo concerns whether the Commission should address any safety issues within this GRC proceeding. Cal Advocates argued Cal-Am should update its Emergency Response Plans (ERPs), resume conducting and documenting annual emergency evacuation drills, and implement a comprehensive portable generator program.[560]

Cal-Am argued that it has already updated its ERPs and will continue conducting evacuation drills.[561]

The Settlement provides that issues related to Cal-Am's ERPs and its annual emergency evacuation drills were adequately addressed in the utility's rebuttal testimony.[562]

We find the Settlement, as it relates to safety and Cal-Am's ERPs, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it provides for continued evacuation

[559] Settlement at 30-31 and Attachment G-2.

[560] Exhibit CalPA-9C, Chapter 1 at 1-26. Cal-Am's ERPs were described in Exhibit CAW-5 at 34-52.

[561] Exhibit CAW-19 at 23-27.

[562] Settlement at 125-126.

drills and updates to Cal-Am's ERPs and supports a comprehensive evaluation of alternatives for stationary back-up generation units. Details about the scope and budget for the Standby Generator Improvement Program and the associated Portable Generator Planning Study are described in Sections 8.1.10, 8.3.2, 8.4.6, and 8.7.4 of the Settlement and Section 10 of this Proposed Decision.

15.3. Water Quality

Issue 5 of the Scoping Memo requires an evaluation of whether Cal-Am is complying with all statutory and regulatory requirements. Under an August 15, 2018 U.S. Environmental Protection Agency compliance order, Cal-Am is required to inspect all of its tanks on a semi-annual basis. Cal-Am stated that it has been implementing enhancements to its sampling and monitoring system (SAMS) and is designing smartphone applications that would allow water system operators to enter real-time data, so it is immediately accessible to Cal-Am and others. Cal-Am also stated its system automatically creates monthly and quarterly reports that streamline its water sample testing and reporting processes.[563]

Cal Advocates noted some inconsistencies with Cal-Am's Consumer Confidence Reports and suggested some steps that may ensure sampling and monitoring standards are fully incorporated and reported through Cal-Am's automated SAMS.[564]

Cal-Am agreed with Cal Advocates' recommendations regarding its SAMS program and corrected a typo related to prior Consumer Confidence Reports.

[563] Exhibit CAW-5 at 16-29 and Attachment A.

[564] Exhibit CalPA-9 Chapter 2 at 27-35.

Cal-Am also suggested the use of drones for biannual tank inspections can sometimes be unfeasible or unreliable.[565]

The Settlement provides an agreement that (1) adopts Cal-Am's requested cost recovery for biannual tank inspections, which will continue to incorporate unmanned drone inspections where feasible, and (2) requires Cal-Am to incorporate a notification system for water quality sampling and reporting throughout its SAMS programs and the company-wide Horizon Laboratory Information Management System.[566]

We find the Settlement, as it relates to Issue 5 of the Scoping Memo and Cal-Am's water quality sampling and testing and associated costs, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. Cal-Am shall continue to conduct biannual tank inspections, utilize unmanned drones where feasible and implement a notification system to improve water quality sampling and reporting as proposed in Exhibit CAW-5.

15.4. Customer Service

Issue 4 of the Scoping Memo concerns Cal-Am's adequacy in responding to customer concerns. Cal-Am provided an overview of its customer service team, a summary of customer inquiries and complaints received in 2016-2018, and a description of changes the utility implemented to improve customer satisfaction.[567] Cal Advocates noted that while Cal-Am has a generally reasonable rate of customer complaints and inquiries, it should still be required

[565] Exhibit CAW-19 at 27-31.

[566] Settlement at 126-127.

[567] Exhibit CAW-5 at 16-29 and Attachment A.

to reduce its abandoned call rate and increase the percentage of bills rendered in seven days to meet the standards established in GO 103-A.[568]

Cal-Am described extensive technology upgrades it conducted in 2018 which could have contributed to the lagging customer service metrics it reported that year but argued there were improved customer service metrics in 2019.[569]

The Settlement reached an agreement that notes Cal-Am's improved customer service metrics and requires Cal-Am to continue reporting the same customer service metrics in its next GRC application.[570]

We find the Settlement, as it relates to Issue 4 of the Scoping Memo and Cal-Am's customer service metrics and reporting, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest. While Cal-Am's customer service metrics have improved from the levels reported in 2018, it is reasonable to require continued tracking and reporting of the same metrics to track further improvement or new issues that arise related to its customer service. Therefore, Cal-Am shall continue to track and annually report its customer service performance metrics as required under GO-103A, and those annual metrics shall be reviewed in its next GRC application.

15.5. Regulatory and Statutory Compliance

Issue 5 of the Scoping Memo concerns whether Cal-Am has complied with all regulatory and statutory requirements. Cal-Am noted that it has complied with the requirements established in Ordering Paragraphs 21 and 22 of D.18-12-021 by rehabilitating the following tanks:

---

[568] Exhibit CalPA-9 Reed Public Chapter 2 at 27-35.

[569] Exhibit CAW-23 at 9-11.

[570] Settlement at 127.

A. Lower Pasadera Tank
B. Upper Pasadera Tank #1
C. Upper Pasadera Tank #2
D. Huckleberry Tank #2
E. Boots Tank
F. Forest Lake Tank #2
G. High Meadows Tank #1[571]

Cal Advocates agreed that Cal-Am has complied with Ordering Paragraphs 21 and 22 of D.18-12-021, and the Settlement provides that Cal-Am is in compliance with Ordering Paragraphs 21 and 22 of D.18-12-021.[572]

Cal-Am also stated that it has performed a comprehensive review of all compliance items, documented the actions it has taken to ensure all historic compliance items were addressed, and that it is in full regulatory compliance.[573] No party directly addressed this issue in testimony.

The Settlement provides an agreement that Cal-Am's documentation fully demonstrates compliance, and that the process Cal-Am has defined to track and ensure compliance is reasonable.[574]

We find the Settlement, as it relates to Issue 5 of the Scoping Memo, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it aligns with the requirements established in D.18-12-021. No further action is necessary for Cal-Am to comply with Ordering Paragraphs 21 and 22 of D.18-12-021. Cal-Am shall remove the

[571] Exhibit CAW-9 at 69-79.

[572] Exhibit CalPA-9 at 39-41; Settlement at 127-128.

[573] Exhibit CAW-9 at 32-35 and Attachment 1.

[574] Settlement at 128-129.

items listed as "complete" in Exhibit CAW-9 from the list of compliance items to be provided in its next GRC.

15.6. 100-Day Update for Workpapers

Cal-Am requested that its 100-Day Update be used as the base template for the workpapers adopted in this decision.[575] No party objected to this request and the Settlement adopts Cal-Am's 100-Day Update as the baseline to develop forecasted rates and revenue requirements in this GRC.[576]

We find the Settlement term, as it relates to the use of Cal-Am's 100-Day Update for workpapers, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because the tables in Cal-Am's 100-Day update are more accurate and correct errors identified after the filing of A.19-07-004. The tables describing forecasted rates and revenue requirements, as included in the Settlement, are based off the 100-Day Update filed by Cal-Am and are adopted in this decision.

15.7. Cap on Surcharges

Cal Advocates recommended that the Commission should limit the amount of surcharges Cal-Am can collect on residential customers' bill to 20% of the total bill amount.[577] Cal-Am argued that the revenue required for authorized costs is often recovered through surcharges, based on longstanding Commission policy associated with uncertain costs.[578]

The Settlement provides for capping surcharges to 20% of residential customers' total bills for the 2021 test year, with the following exceptions:

---

[575] Exhibit CAW-22 at 2-7.

[576] Settlement at 128.

[577] Exhibit CalPA-7 at 9-11

[578] Exhibit CAW-25 at 9-25.

A. For the Monterey District, the 20% cap applies but with adjustments made to exclude water supply-related surcharges;

B. For the Hillview District, the impact of the existing SRF surcharge is excluded;

C. Interim rates are excluded from the forecast of surcharges; and

D. Any surcharge that would go above the 20% cap would be deferred for future recovery through rates.

We find the Settlement, as it relates to the cap on surcharges, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest, because it limits the amount of uncertain costs Cal-Am can recover from customers and puts higher precedence on appropriate rate design across Cal-Am's service districts. Cal-Am shall cap the surcharge costs on residential customers' bills at 20% of the total bill, with the four exceptions described above.

We agree with BRECA that this cap on surcharges "should not be normalized as the automatic 'ask,' and all surcharges should be taken into account."[579] Cal-Am shall include details on the surcharges in each district, the customer bill impacts related to the surcharges, and the improvements and efficiencies each surcharge is intended to fund, for review in its next GRC.

15.8. Earnings Test for Surcharges

Cal Advocates suggested that Cal-Am should be required to implement an earnings test to ensure that recovery of surcharge account balances will not produce a rate of return higher than authorized.[580]

---

[579] Exhibit BRECA-1 at 2-3.

[580] Exhibit CalPA-7 at 11-13.

Cal-Am argued that the requirement for an earnings test was eliminated by D.06-04-037 and that there have been no circumstantial changes that warrant revisiting the applicability of the earnings test.[581] In the Settlement, Cal Advocates agreed to withdraw its requested earnings test for surcharges.[582]

We find the Settlement term, wherein Cal Advocates withdrew its request concerning the earnings test, is reasonable in light of the whole record of this proceeding, consistent with the law, and in the public interest.

15.9. San Marino Joint Conservation Program

San Marino argued that Cal-Am's estimate of rate increases in San Marino exceeds those that would occur in other Cal-Am California Districts.[583] Cal-Am stated that San Marino and Duarte customers currently have the lowest rates because their purchased water costs are consolidated, and the only reason customers in San Marino have higher bills is that they have the highest usage statewide.[584]

The Settlement provides a consolidated Southern Division rate design that will create service charges that are consistent and quantity rates that vary based on allocation of purchased water costs.[585] Only a subset of districts – San Diego, Ventura, and LA-Baldwin Hills, will receive an additional purchased water charge, and San Marino and Duarte customers will have the lowest forecasted rates based on the consolidated purchased water allocation methodology and

---

[581] Exhibit CAW-25 at 25-32.

[582] Settlement at 129-130. Also *see* Cal Advocates comments on the Proposed Decision at 1-3.

[583] Exhibit San Marino-1 at 1-5.

[584] Exhibit CAW-24 at 36.

[585] Settlement at 130-131.

rate design described in Sections 4.2, 4.3, and 12.1 of the Settlement and Section 14.1 above.

Because San Marino customers see higher bills associated with higher consumption, Cal-Am and San Marino reached an agreement to provide a joint conservation program with the following provisions:

A. The Metropolitan Water District of Southern California (MWD) provides a member-funded, agency-administered incentive program for commercial and residential rebates, based on contract terms reached by the agencies or up to the project costs, whichever is lower. All projects are intended to enhance water savings;

B. Through the MWD's program described in (A) above, San Marino has a total allocation of $22,000 for fiscal years 2020/21 and 2021/22;

C. Cal-Am shall match, dollar-for-dollar, any funds San Marino receives from the MWD program and assist San Marino City staff with applying for and reporting program(s) to MWD;[586]

D. Cal-Am shall work with San Marino to implement a community outreach program using a variety of media and communication types to educate and inform residents on the programs and classes they can participate in to lower indoor and outdoor water use to reduce their monthly water bills; and

E. Cal-Am and San Marino will meet prior to Cal-Am's next GRC filing in July 2022 to discuss potential new projects or infrastructure improvements that would further benefit the San Marino water system.

We find the San Marino Joint Conservation Program as provided in the Settlement is reasonable in light of the whole record, consistent with the law, and in the public interest because it will support efforts to help San Marino District

[586] Cal-Am intends to match the MWD funds with funding from its conservation budget.

customers reduce water usage. Cal-Am shall work with San Marino to encourage customers in that District to implement water conservation measures, and Cal-Am shall use part of its conservation budget, as discussed in Section 7.11 above, to match the funds San Marino receives from the MWD's incentive program during this GRC cycle. Further, Cal-Am and San Marino shall meet and confer before Cal-Am's next GRC is filed to discuss potential upgrades that could benefit the San Marino system.

15.10. MPWMD User Fee

This issue was not directly addressed in the Settlement but in its opening brief, MPWMD requested clarification as to whether the 8.325% user fee is a water utility revenue source calculated as part of Cal-Am's annual gross receipts as opposed to a pass through.[587]

Cal-Am explained that the MPWMD user fee is applied by MPWMD, and that while Cal-Am collects the fee through customer bills, the amount collected is remitted to MPWMD to conduct the environmental mitigation projects, conservation activities, and other water-related services, as authorized in D.17-01-013.[588] Cal-Am stated the surcharge collected to support the authorized MPWMD environmental mitigation projects is computed based on water utility revenues, and the calculation does not include any pass-throughs, as required in Resolution M-4841.[589]

---

[587] MPWMD opening brief at 12.

[588] Cal-Am reply brief at 14-15.

[589] Resolution M-4841, adopted July 16, 2020, established user fees based on the projected revenue base for water utilities. Also *see* MPWMD's comments on the Proposed Decision explaining that user fees in the Monterey service territory can be used to support environmental mitigation, conservation, and other water-related services.

We have reviewed the record of this proceeding and find Cal-Am's explanation of the MPWMD user fee calculation is appropriate. Cal-Am's collection of the 8.325% user fee, which does not include any pass-throughs and is remitted to MPWMD to support authorized environmental mitigation projects in the Monterey District, is reasonable to continue for this GRC cycle.

16. Conclusion

As detailed above, the Settlement addresses majority of the issues identified in the Scoping Memo and incorporates the other agreements reached with Las Palmas and MPWMD related to issues in their specific regions of Cal-Am's service territory. The parties to the Settlement have demonstrated that the terms align with the requirements of Rule 12.1, through information provided in the Settlement itself, the Settlement's references to the whole record of this proceeding, and the documents filed in response to the ALJ's March 25, 2021 Ruling seeking additional information. Pursuant to Rule 12.1(d), this decision approves and adopts the three settlements, which collectively, resolve the majority of the issues in this proceeding and find that they are reasonable in light of the whole record, consistent with the law, and in the public interest.

This decision also resolves the remaining disputed issues, adopts a revenue requirement of $271,997,800 for Test Year 2021 and authorizes the utility's general rate increases for 2021, 2022, and 2023 as summarized in the table below for the 2021-2023 GRC Cycle:

Ratemaking District	Adopted Revenue Requirement		
	TY 2021	Escalation Year 2022	Escalation Year 2023
Northern	$72,718,400	$75,966,500	$78,740,800
Central	$72,739,300	$75,633,200	$77,590,900
Southern	$122,990,800	$124,875,700	$127,741,400
Monterey Wastewater	$3,549,300	$3,649,700	$3,747,000
Total	$271,997,880	$280,125,100	$287,820,100

This Decision, including the Settlement it approves and adopts, authorizes Cal-Am to recover a revenue requirement that exceeds its initial request in A.19-07-004 by approximately $756,000. The increased costs are related to the Settlement's terms on Cal-Am's purchased water, purchased power, and additional operating expenses in Other Administrative and General accounts due to the acquisition of Rio Plaza, Fruitridge Vista, and Hillview systems. In the future, parties seeking adoption of a settlement agreement should provide an explanation as to why the Settlement would result in a higher revenue requirement than initially requested by a utility.

Further, as noted throughout this proceeding, Cal-Am is not authorized to recover any costs associated with the Bellflower system until or unless its application to acquire Bellflower is approved by the Commission.

We also note, pursuant to Rule 12.5, our approval and adoption of the Settlement's terms does not bind or otherwise impose a precedent in this or any future proceeding. Neither Cal-Am nor any party to any of the three settlements may presume in any subsequent applications that the Commission would deem the outcome adopted herein to be presumed reasonable and it must, therefore, fully justify every request and ratemaking proposal without reference to, or reliance on, the adoption of these settlements.

17. Comments on Proposed Decision

The proposed decision of ALJ Carolyn Sisto in this matter was mailed to the parties in accordance with Section 311 and comments were allowed under Rule 14.3 of the Commission's Rules of Practice and Procedure. Comments were filed on November 8, 2021, by Cal-Am, Cal Advocates, and MPWMD, and reply comments were filed on November 15, 2021, by Cal-Am.

18. Assignment of Proceeding

Genevieve Shiroma is the assigned Commissioner and Carolyn Sisto is the assigned ALJ in this proceeding.

Findings of Fact

1. On July 1, 2019, Cal-Am filed A.19-07-004 to increase revenues for water and wastewater service in each of its districts statewide for the years 2021 through 2023.

2. Cal Advocates, the City of Duarte, the Central Coast Coalition of Communities for Wastewater Equity, and MPWMD filed timely protests to A.19-07-004.

3. Cal-Am noticed customers of its proposed revenue requirement increase and the associated bill impacts on September 4, 2019.

4. Numerous public participation hearings were held throughout Cal-Am's service territory from December 2019 through February 2020.

5. From September to November of 2020, the parties to A.19-07-004 actively engaged in the Commission's ADR process.

6. Between January and February of 2021, the parties filed three separate motions for adoption of three separate partial settlements as follows:

Partial Settlement 1: The joint settlement between Cal-Am, Cal Advocates, and the Cities of Duarte,

San Marino, and Thousand Oaks (the Settlement);

Partial Settlement 2: The settlement between Cal-Am and MPWMD (Cal-Am-MPWMD Settlement); and

Partial Settlement 3: The settlement between Cal-Am and Las Palmas Wastewater Committee (LPWC or Las Palmas) (Cal-Am-Las Palmas Settlement).

7. *Partial Settlement 1* is referred to in this decision as the Settlement, and the tariffs and rates proposed in it, incorporate the terms of the other two settlements, *Partial Settlements 2 and 3*.

8. The Settlement resolves all but two outstanding disputed issues:

   (a) Normalization of the Larkfield District wildfire recovery and future catastrophic event costs; and

   (b) Allocation of the UPAA for Cal-Am's acquisitions of Fruitridge Vista, Rio Plaza, and Hillview.

9. The Settlement results in the following public interest benefits:

   (a) The Parties represent both sides of this case: the utility and the ratepayers and the Settlement balances those interests at stake;

   (b) The Settlement serves the public interest by resolving competing concerns in a collaborative and cooperative manner;

   (c) The Settlement avoids the costs of evidentiary hearings and resources of the Commission, thus saving public and ratepayer funds to litigate the dispute;

   (d) The Settlement will provide efficient resolution of the majority of the contested issues, thus saving unnecessary litigation expenses and Commission resources;

   (e) The Settlement is consistent with the Commission's long-standing policy favoring the settlements of disputes to avoid costly and protracted litigation; and

(f) The Settlement ensures that customers have continued access to an affordable, safe, and reliable water supply system.

10. There are no terms within the Settlement that would bind the Commission in the future or that would violate existing law.

11. Cal-Am's Hardship Assistance Program, which was initially grant-funded for customers in Monterey County, can provide ratepayers in other Cal-Am service territories relief from the potential of water service shut-offs.

12. Cal-Am will evaluate alternatives to installing stationary generators to supply essential power at its facilities, and treat any costs associated with its portable generator planning study as an expense in TY 2021.

13. D.89-11-058 did not consider the more sophisticated technology and computation tools available today to calculate forecasted CCFT and TY FIT.

14. D.21-06-015 requires Cal-Am to share customer information with electric investor-owned utilities to provide customers with increased access to and education about various hardship assistance programs.

15. The Commission is currently considering whether to further modify the current requirements for water and energy utilities to share low-income customer data in Phase II of R.17-06-024.

16. D.13-04-015 granted Cal-Am authority to recover the costs of water produced and delivered from the Sand City Desalination Plant from customers in its Monterey Service District.

17. Cal-Am's ability to utilize the Sand City Desalination Plant may decline without a new well being drilled.

18. Cal-Am's request to drill a new well at its Sand City Desalination Plant is not consistent with the authority granted in D.13-04-015.

19. The evidence in this proceeding supports a new well at Sand City Desalination Plant as a reasonable, prudent expense to be recovered from ratepayers.

20. D.19-07-015 authorized all Class A water utilities to recover any approved costs associated with any incident(s) declared by the federal or state government to be a state of emergency through rates across their entire customer base.

21. MPWMD did not demonstrate how a quarterly report of customer service requests and disposition would provide greater benefit to Cal-Am's Monterey District customers than the already-required annual GO 103-A compliance reporting.

22. The customer complaint reporting requirements adopted in D.06-11-050 are duplicative of Cal-Am's annual customer service reporting required as part of GO 103-A.

23. Cal-Am has improved customer service metrics since 2018 and will continue tracking and reporting metrics associated with customer service.

24. Incremental surcharges have an impact on customer bills that is not easily forecasted for future GRC evaluation.

25. The MPWMD user fee is collected by Cal-Am on customer bills based on water utility revenues and remitted to MPWMD to conduct the environmental mitigation projects, conservation activities, and other water-related services.

26. The calculation of the MPWMD user fee does not include any pass-throughs, as required in Resolution M-4841.

Conclusions of Law

1. Cal-Am should be authorized to increase its rates to recover the revenue requirements for 2021, 2022, and 2023, as follows: $271,997,880 in 2021; $280,125,100 in 2022; and $287,820,100 in 2023.

2. The Settlement is reasonable in light of the whole record, consistent with law and in the public interest, and should be adopted, as modified in this Decision.

3. The Parties complied with the provisions of Rule 12.

4. Pursuant to Rule 12.5, the Settlement does not bind or otherwise impose a precedent in this or any future proceeding.

5. It is reasonable to require Cal-Am to complete a comprehensive study considering alternative back-up power resources in its service territories before authorizing any request to deploy and recover costs for new stationary generators at its facilities.

6. Cal-Am should include its conservation budgets in base rates at the General Office level, with allocation to its Districts, and should have flexibility to utilize its authorized conservation budget where needed, and within the three-year rate case cycle, as authorized for other forecasted capital or expense budgets. However, Cal-Am should only allocate the conservation budget authorized for its Monterey District to costs incurred within the Monterey District in 2021-2023.

7. It is reasonable to require Cal-Am to develop a methodology to calculate forecasted CCFT and TY FIT deductions for its next GRC filing.

8. Cal-Am's request to use ratepayer funds to drill a new well at the Sand City Desalination Plant is consistent with the authorization regarding Cal-Am's production and delivery of water from the facility adopted in D.13-04-015.

9. If Cal-Am receives any monetary compensation from the U.S. Air Force through its ongoing litigation, Cal-Am should file a Tier 2 Advice Letter seeking

approval of a proposed recovered cost allocation to its ratepayers in the Sacramento District.

10. Cal-Am should provide the depreciation study information required by D.18-12-021 when it files its next GRC.

11. It is reasonable to require Cal-Am to include details on its surcharges in each district, the customer bill impacts related to the surcharges, and the improvements and efficiencies each surcharge is intended to fund, for review in its next GRC.

12. It is reasonable to require Cal-Am to regularly share data with electric IOUs to identify customers that may be eligible to enroll in its low-income assistance programs, pursuant to D.21-06-015.

13. Cal-Am should consolidate its Southern Division with the provisions and adjustments identified in the Settlement that ensure that no customer with usage rates that are equal or lower to the system-average will not pay more than the average system-wide rate increase, as detailed in Section 13.1 above.

14. Cal-Am should recover costs associated with the 2017 Larkfield District fires, net of any received insurance claim payouts, on a statewide basis, pursuant to D.19-07-015.

15. Additional wildfire related costs and potential 2018-2020 lost-quantity revenues associated with state-of-emergency events should be tracked and reviewed in Cal-Am's next GRC application for recovery on a statewide basis.

16. Costs associated with Cal-Am's proposed acquisitions should be requested through specific acquisition applications.

17. Cal-Am should not recover any costs associated with its proposed Bellflower acquisition until or unless the Commission approves the proposed Bellflower acquisition.

18. It is reasonable for Cal-Am to eliminate its annual and quarterly reports that are duplicative of the reporting requirements in GO 103-A.

19. It is reasonable for Cal-Am to provide further details about the surcharges applied to customers' bills in each district, including the customer bill impacts related to the surcharges and the improvements and efficiencies each surcharge is intended to fund, for review in its next GRC.

20. Cal-Am should use its conservation budget to match any funds San Marino receives from the MWD program, assist San Marino City staff with applying for and reporting program(s) to MWD, work with San Marino to implement a community outreach program to educate and inform residents on the programs and classes they can participate in to lower indoor and outdoor water use to reduce their monthly water bills and meet with the City of San Marino prior to Cal-Am's next GRC filing to discuss potential new projects or infrastructure improvements that would further benefit the San Marino water system.

21. Cal-Am should continue collecting the MPWMD user fee in this GRC cycle, and remit the amount collected to MPWMD to fund environmental mitigation projects, conservation activities, and other water-related services.

22. This proceeding should be closed.

O R D E R

IT IS ORDERED that:

1. California America Water Company is authorized to increase its rates to recover the revenue requirements, as follows: $271,997,880 in 2021; $280,125,100 in 2022; and $287,820,100 in 2023.

2. The Settlement reached between California American Water Company (Cal-Am), the Public Advocates Office of the California Public Utilities Commission, and the Cities of Duarte, San Marino, and Thousand Oaks, which

incorporates the two partial settlements reached between Cal-Am and Las Palmas Wastewater Committee and Cal-Am and the Monterey Peninsula Water Management District, is attached and incorporated hereto as Appendix B, and is approved and adopted, as modified in this Decision.

3. No later than 30 days following the issuance of this Decision, California American Water Company (Cal-Am) shall file its Tier 1 General Rate Case implementation advice letter, including updated tariffs as necessary to reflect all of the agreements related to capital expenditures and projects in the Los Angeles County, San Diego County, Ventura County, Central Division, Monterey County Wastewater, Sacramento County, and Larkfield Districts reached between the Public Advocates Office of the California Public Utilities Commission; the Cities of Duarte, San Marino, and Thousand Oaks; the Las Palmas Wastewater Committee; the Monterey Peninsula Water Management District; and Cal-Am. Given the timing of the issuance of the decision, the 2021 authorized rates and tariff changes shall be implemented concurrently with California American Water's escalation filing for attrition year 2022.

4. California-American Water Company (Cal-Am) is authorized to revise tariff schedules and to concurrently cancel its present schedules for such service upon the effective date of its 2022 escalation filing. The revision of tariff schedules for authorized rates in 2021 shall be included and subsumed in Cal-Am's escalation filing for attrition year 2022.

5. Decision 07-05-062 requires escalation filings to be filed no later than 45 days prior to the start of the escalation year. In light of the effective date of this decision, California-American Water Company shall submit its 2022 escalation advice letters within 60 days from the effective date of this decision. The 2022 escalation advice letters shall be effective 45 days from the date of filing.

6. California-American Water Company shall submit its 2023 escalation advice letters no later than 45 days prior to their effective date on January 1, 2023.

7. The Annual Consumption Adjustment Mechanism (ACAM) filings for 2022 shall be filed concurrently with the 2022 Escalation filings via Tier 2 advice letters as approved in Settlement 1. The ACAM filings shall be submitted 60 days from the effective date of this decision. Upon approval of the Tier 2 advice letter, California American Water will file a Tier 1 advice letter to implement new rates effective 45 days after the Tier 2 filing.

8. The Annual Consumption Adjustment Mechanism (ACAM) filings for 2022 shall be filed concurrently with the 2022 Escalation filings via Tier 2 advice letters as approved in Settlement 1. The ACAM filings shall be submitted 60 days from the effective date of this decision. Upon approval of the Tier 2 advice letter, California American Water will file a Tier 1 advice letter to implement new rates effective 45 days after the Tier 2 filing.

9. California American Water Company shall not recover any costs associated with its proposed Bellflower acquisition until or unless it is ultimately approved by the Commission.

10. California American Water Company shall continue to regularly share data with electric investor-owned utilities to identify customers that may be

eligible to enroll in its low-income assistance programs, pursuant to Decision 21-06-015.

11. California American Water Company shall prepare a Portable Generator Planning Study to consider alternatives to installing stationary generators at its facilities and budget $150,000 or $50,000 per Division, as a planning study expense in Test Year 2021 to complete this portable generator planning study.

12. California American Water Company shall not seek recovery of costs associated with drilling a new well at the Sand City Desalination Plant.

13. California American Water Company shall coordinate with Monterey Peninsula Water Management District to identify and prioritize projects to improve service and lower costs in the Monterey District prior to filing its next General Rate Case application.

14. California American Water Company shall consolidate its Southern Division as agreed to in Section 12.1 of the Settlement and shall design its Southern Division rates so customers with median and below-median consumption will not see more than the average system-wide increase in monthly bills.

15. California American Water Company shall recover the 2017 Larkfield Wildfire related costs, net of received insurance claims, on a statewide basis.

16. California American Water Company shall seek recovery of any wildfire-related costs incurred after May 31, 2019, on a statewide basis, pursuant to the provisions adopted in Decision 19-07-015.

17. In its next General Rate Case application, California American Water Company shall report details on the surcharges in each district, the customer bill impacts related to the surcharges, and the improvements and efficiencies each surcharge is intended to fund.

18. California American Water Company (Cal-Am) shall use conservation budget funds to match any funds San Marino receives from the Metropolitan Water District of Southern California (MWD) incentive program, assist San Marino City staff with applying for and reporting program(s) to MWD, work with San Marino to implement a community outreach program to educate and inform residents on the programs and classes they can participate in to lower indoor and outdoor water use to reduce their monthly water bills, and meet with the City of San Marino prior to Cal-Am's next General Rate Case filing to discuss potential new projects or infrastructure improvements that would benefit the San Marino water system.

19. California American Water Company shall continue collecting the Monterey Peninsula Water Management District user fee during this General Rate Case cycle to support environmental mitigation, water conservation, and other water service-related programs that were authorized in Decision 17-01-013.

20. Application 19-07-004 is closed.

This order is effective today.

Decision 22-01-020 January 14, 2022

BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA

Application of California-American Water Company (U210W) for Authorization to Increase its Revenues for Water Service by $25,999,900 or 10.60% in the year 2021, by $9,752,500 or 3.59% in the year 2022, and by $10,754,500 or 3.82% in the year 2023.	Application 19-07-004

EXECUTIVE DIRECTOR'S ORDER CORRECTING ERROR

It has come to the Commission's attention that Decision (D.) 21-11-018 dated November 23, 2021, included an error in Ordering Paragraph 12 and attached a version of Appendix E containing several inadvertent errors that were likely caused by text being corrupted during file formatting.

The discussion in D.21-11-018 was revised to reflect a consensus reached in comments on the proposed decision related to recovery of costs associated with California American Water's planned project to drill a new well at the Sand City Desalination Plant. Consistent therewith, the language in Ordering Paragraph 12 also should have been revised but was not.[1] Further, the correct version of Appendix E (Corrected Pages to Attachment E-1 and Attachment G-1 of the Settlement Agreement) is attached to this order and supersedes and replaces in

[1] *See* D.21-11-018 at 80-82 and Ordering Paragraph 12.

whole the version of Appendix E (Corrected Pages to Attachment E-1 and Attachment G-1 of the Settlement Agreement) attached to D.21-11-018.

Therefore, pursuant to Resolution A-4661 and Rule 16.5 of the Commission's Rules of Practice and Procedure, which provides for the correction of obvious errors or omissions in a Commission decision:

IT IS ORDERED that:

1. Ordering Paragraph 12 of Decision 21-11-018 is corrected to state: "California American Water may recover costs associated with drilling a new well at the Sand City Desalination Plant."
2. Decision 21-11-018 is modified to replace Appendix E (Corrected Pages to Attachment E-1 and Attachment G-1 of the Settlement Agreement), in its entirety, with the version of Appendix E (Corrected Pages to Attachment E-1 and Attachment G-1) attached to this Order.
3. Application 19-07-004 is closed.

This order is effective today.

Dated January 14, 2022, at San Francisco, California.

APPENDIX E

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF KENTUCKY-AMERICAN WATER COMPANY FOR AN ADJUSTMENT OF RATES, A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR INSTALLATION OF ADVANCED METERING INFRASTRUCTURE, APPROVAL OF REGULATORY AND ACCOUNTING TREATMENTS, AND TARIFF REVISIONS	))))))))	CASE NO. 2023-00191

O R D E R

On May 3, 2023, the Commission issued a final Order addressing Kentucky-American Water Company's (Kentucky-American) application for an adjustment of water rates, a Certificate of Public Convenience and Necessity (CPCN) for Advanced Metering Infrastructure (AMI) meters, modifications to its Qualified Infrastructure Program (QIP), establishment of regulatory assets and liabilities, establishment of an alternative level of unaccounted for water loss, a universal affordability tariff, and revised tariffs.[1] On May 16, 2024, Kentucky-American filed a petition, pursuant to KRS 278.400, requesting a rehearing to correct five different material calculations of the final Order entered May 3, 2024. Two of the issues were resolved by Orders issued on May 17, 2024,[2] and May 28, 2024.[3] On May 16, 2024, Kentucky-American also filed a motion for an informal conference (IC) pursuant to 807 KAR 5:001, Section 9(4). On May 21, 2024, the Attorney

General of the Commonwealth of Kentucky, by and through the Office of Rate Intervention (Attorney General), and Lexington-Fayette Urban County Government (LFUCG) filed a joint petition for rehearing (Joint Petition for Rehearing).[4] On May 23, 2024, LFUCG filed a response to Kentucky-American's petition for rehearing with no objections.[5] On May 23, 2024, Kentucky-American filed a response to the Attorney General and LFUCG's Joint Petition for Rehearing.[6]

The Commission addressed both petitions for rehearing in an Order issued May 28, 2024. In the May 28, 2024 Order, the Commission granted, in part, and denied, in part, Kentucky-American's petition. The Commission granted the Attorney General and LFUCG's Joint Petition for Rehearing.[7] The Commission also issued a procedural schedule for the rehearing portion of the proceeding.[8] On May 29, 2024, an IC was held.[9] On May 31, 2024, Kentucky-American filed a motion to suspend the refund process until after the rehearing process is complete.[10] Kentucky-American also requested to suspend consideration of the revised tariff that it submitted until the conclusion of the rehearing process.[11] On June 27, 2024, the Commission issued an Order denying Kentucky-

American's requests citing that KRS 278.190(4) requires a utility to issue refunds within 60 days after a final determination of the proceeding.

Kentucky-American responded to two additional requests for information from Commission Staff.[12] On July 15, 2024, Kentucky-American filed a request to submit the rehearing matter on the record. On July 25, 2024, the Attorney General and LFUCG filed a joint request to submit the rehearing matter on the record. The matter now stands for a decision on the record.

DISCUSSION AND FINDINGS

Kentucky-American's Petition

1. Effective Date for Amended Rates

Kentucky-American requested that any new rates approved through rehearing be effective for service rendered on and after February 6, 2024.[13] Kentucky-American argued that the Commission has consistently held that such relief is appropriate.[14] Kentucky-American cited two cases to support its argument: Case No. 2023-00154[15] and Case No. 2011-00036.[16] In Case No. 2023-00154, Kentucky-American stated that the Commission issued an order correcting errors and ordered the utility to collect any under collection or issue any refunds for differences between the rates placed into effect in the

[12] Kentucky-American's Response to Commission Staff's First Rehearing Request for Information (Staff's First Rehearing Request) (filed June 14, 2024); Kentucky-American's Response to Commission Staff's Second Rehearing Request for Information (Staff's Second Rehearing Request) (filed July 1, 2024).

[13] Kentucky-American's Petition for Rehearing (Petition for Rehearing) (filed May 16, 2024) at 2.

[14] Petition for Rehearing at 3.

[15] Case No. 2023-00154, *Electronic Application of Harrison County Water Association, Inc. for an Alternative Rate Adjustment* (Ky. PSC Mar. 25, 2024).

[16] Case No. 2011-00036, *Application of Big Rivers Electric Corporation for a General Adjustment in Rates* (Ky. PSC Jan. 29, 2013).

original order and the rates placed into effect in the subsequent order.[17] Kentucky-American stated that in Case No. 2011-00036, the Commission held that two clerical errors (error of omission and mathematical error) were plainly shown in the record and rates should be adjusted retroactively to correct those errors.[18]

LFUCG stated that the issue appeared to be straightforward and did not object to a substantive determination by the Commission.[19]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request that new rates approved through this rehearing Order be effective for service on and after February 6, 2024, should be denied. The Commission distinguishes the cases cited by Kentucky-American and the present case. In Case No. 2023-00154,[20] the adjustment related to typographical errors in a rate appendix that were corrected through a *nunc pro tunc*, and in Case No. 2011-00036,[21] the adjustment pertained to clerical errors—specifically, an error of omission and a simple mathematical mistake.[22] Both cases involved clerical errors that were plainly shown in the record, which justified the correction of rates retroactively.

---

[17] Case No. 2023-00154, *Electronic Application of Harrison County Water Association, Inc. for an Alternative Rate Adjustment* (Ky. PSC Mar. 25, 2024).

[18] Case No. 2011-00036, Feb. 21, 2013 Order at 15.

[19] LFUCG's Response at 2.

[20] Case No. 2023-00154, Mar. 25, 2024 Order at 1.

[21] Case No. 2011-00036, Jan. 29, 2013 Order at 14–15.

[22] The error of omission was the failure to update rate case expense when updates had been filed. The simple mathematical error was a typographical error in the difference between the test-period and pro forma depreciation expense, which correctly cited the expense numbers but understated the adjustment by $450,000.

However, in the present case, Kentucky-American provided incorrect data in response to a data request, specifically related to its QIP.[23] The distinction is critical. If the utility supplies erroneous figures, any subsequent calculations or conclusions drawn by the Commission based on that data cannot be viewed as a clerical or mathematical error on the part of the Commission. Instead, the errors stem from the utility's own incorrect information.

Kentucky-American's incorrect information affected the overall revenue requirement calculation. In this case, Kentucky-American was responsible for the mistake that led to these errors. The Commission cannot subsequently be expected to extrapolate the individual items this incorrect information impacted in order to allow retroactive recovery of the difference in rates on a piecemeal basis. There was no requirement in this case for Kentucky-American to implement rates prior to a final Order.

Therefore, Kentucky-American's request to relate the effective date back to the suspension date is not analogous to the circumstances in the cited cases. In this instance, the utility's inclusion of incorrect data means the Commission's conclusions were not the result of an error on its part. The Commission did not make a clerical or typographical error. Kentucky-American recognized as much when it did not request a *nunc pro tunc* and in response to a request for information from Commission Staff, claimed the error resulted in a punitive mismatch which would deprive Kentucky-American of the opportunity to earn the return on equity established in the May 3, 2024 Order.[24] A typographical or clerical error is not punitive in nature. As such, the effective date of any

[23] Kentucky-American's Response to Commission Staff's Third Request for Information (filed Sept. 21, 223), Item 1.

[24] Kentucky-American's Response to Staff's First Rehearing Request, Item 1.

new rates approved through rehearing should not be retroactive back to February 6, 2024, and Kentucky-American's request should be denied. The rates set out in Appendix B are found to be fair, just and reasonable and have an effective date of the issuance date of this Order. The Commission notes that no further refunds are required apart from those ordered by the Commission on May 3, 2024, as modified on May 17, 2024.

2. Annual Qualified Infrastructure Program (QIP) In Present Rate Revenues

In its application, Kentucky-American requested that the Commission incorporate the rate base, expenses, and revenues associated with the QIP mechanism into base rates.[25] In the May 3, 2024 final Order, the Commission denied Kentucky-American's request to roll the QIP into base rates.[26] Kentucky-American argued that while the final Order removed the roll-in of QIP items in the revenue requirement to account for the reduction in rate base and for the reduction in operating expenses, it failed to reduce Kentucky-American's annual revenues related to QIP that Kentucky-American included within its present rate revenues.[27] Kentucky-American stated that, because of the inclusion of annual revenues related to QIP, the final Order understated Kentucky-American's required revenue increase.[28] Kentucky-American argued that the effect of failing to remove the annual QIP revenues from base rates materially overstated its present rate revenues by $9,851,113 and understated its annual revenue increase in base rates by $1,489,822.[29] Kentucky-American argued that this error created a punitive

[27] Petition for Rehearing at 4.

[28] Petition for Rehearing at 4.

[29] Petition for Rehearing at 4.

mismatch, whereby the revenues received from the QIP are counted as base rates, but the expenses and rate base have been removed thereby depriving it of an opportunity to earn the 9.70 percent return on equity (ROE) awarded by the Commission.[30]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that, although the May 3, 2024 final Order made the $8,361,292 adjustment that Kentucky-American provided in discovery, the $9,851,113 proposed revenue adjustment is reasonable and should be made. However, the Commission finds that the effect on the revenue requirement increase is not the $1,489,822 difference in the revenue and expense adjustments because the expense reductions were already included in the May 3, 2024 final Order revenue requirement increase. The Commission finds the test-year revenues should be reduced by $9,851,113, as shown in Appendix A.

3. Income Tax Expense

In its petition for rehearing, Kentucky-American argued that the final Order materially understated its income tax expense, and the Commission's adjustments result in an increase of Kentucky-American's taxable income at present rate revenues, through decreases to operating expenses, depreciation expense, and general taxes.[31] Kentucky-American stated that, despite utilizing a taxable income amount greater than that proposed, the Commission decreased Kentucky-American's state income tax expense by $565,343 and federal income tax expense by $2,255,717.[32] Kentucky-American stated

[30] Petition for Rehearing at 4–5.

[31] Petition for Rehearing at 5.

[32] Petition for Rehearing at 5.

there was no explanation in the final Order regarding the adjustments to tax expense.[33] Kentucky-American argued that, given its state statutory tax rate is 5 percent of taxable income and its federal statutory tax rate is 21 percent, the Commission's increase in Kentucky-American's taxable income should result in a corresponding increase in Kentucky-American's tax expense.[34] Kentucky-American further argued that the Commission's calculation of Kentucky-American's income tax expense results in an effective tax rate of only 9 percent- far below its actual statutory tax rate of 24.95 percent,[35] resulting in an understatement in the necessary income tax expenses within rates.[36]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American is correct that the income tax expense was miscalculated in the May 3, 2024 final Order and it should be corrected. However, the adjustments to QIP revenues, operating expenses, and the capital structure discussed herein will alter the income tax expense. The Commission, therefore, has included all revenue requirement items approved by this Order in the revised calculation, as shown in Appendix A, which uses the statutory rates for income taxes.

[33] Petition for Rehearing at 5.

[34] Petition for Rehearing at 5.

[35] Application, Exhibit 37, Schedule H. Excluding the Bad Debt Rate and Utility Regulatory Assessment Fee, the composite statutory rate is 24.95 percent.

[36] Petition for Rehearing at 6.

4. Capital Structure

Kentucky-American proposed a 13-month average capital structure at January 31, 2025, of 0.96 percent short-term debt, 46.21 percent long-term debt, 0.38 percent preferred stock, and 52.45 percent common equity in its application.[37] During the pendency of the case, Kentucky-American revised its proposed capital structure to include 1.54 percent short-term debt, 45.87 percent long-term debt, 0.38 percent preferred stock, and 52.22 percent common equity.[38] Kentucky-American stated these revisions were proposed due to a timing shift in the issuance of long-term debt.[39] In the final Order, the Commission noted that Kentucky-American revised its capital structure as part of its base period update and rebuttal testimony, and found that Kentucky-American's revised capital structure accurately projected the test-year capitalization requirements.[40] The final Order also found that Kentucky-American's pre-tax rate of return was 9.07 percent.[41]

In its petition for rehearing, Kentucky-American stated that it appeared the Commission utilized the as-filed capital structure in calculating the pre-tax rate of return instead of the revised capital structure. Kentucky-American argued that the revised capital structure would result in a pre-tax rate of return of 9.01 percent.

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American is correct that the

[37] Direct Testimony of Nicholas Furia at 4. Petition for Rehearing at 6.

[38] Rebuttal Testimony of Nicholas Furia at 6–7.

[39] Rebuttal Testimony of Nicholas Furia at 4–5.

[40] May 3, 2024 final Order at 28.

[41] May 3, 2024 final Order at 40.

capital structure and rate of return were incorrect in the May 3, 2024 final Order revenue requirement calculation and they should be corrected to use a pre-tax rate of return of 9.01 percent. The Commission has included all revenue requirement items approved by this Order in the revised calculation, as shown in Appendix A, which uses the rate of return proposed in Kentucky-American's rebuttal testimony and approved in the May 3, 2024 final Order.

Attorney General and LFUCG's Petition

1. Capital Structure

In the Joint Petition for Rehearing, the Attorney General and LFUCG stated that the Commission used a rate of return of 9.07 percent to calculate Kentucky-American's awarded revenue requirement increase.[42] The Attorney General and LFUCG argued that based upon their calculations the correct rate of return should have been 9.007 percent.[43] The Attorney General and LFUCG argued that if the Commission had used the correct 9.007 percent rate of return to calculate Kentucky-American's awarded revenue requirement increase the rate increase would have been reduced by approximately $308,339.[44] The Attorney General and LFUCG requested that the Commission correct the rate of return from 9.07 percent to 9.007 percent.[45]

In its response, Kentucky-American agreed that the math in the Joint Petition for Rehearing was correct.[46] However, Kentucky-American stated that the calculation

[42] May 3, 2024 final Order at 40.

[43] Joint Petition for Rehearing at 2.

[44] Joint Petition for Rehearing at 3.

[45] Joint Petition for Rehearing at 3.

[46] Kentucky-American's Response at 2.

provided by the Attorney General and LFUCG relied on a revenue conversion factor of 1.342559 or 134.2559 percent.[47] Kentucky-American argued that the correct revenue conversion factor is 1.342300 or 134.2300 percent.[48] Kentucky-American further argued that using the revenue conversion factor of 1.342300 or 134.2300 percent would make the Attorney General and LFUCG's suggested rate of return 9.006[49] percent or 9.01 percent, if rounded.[50]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that the rate of return was incorrect in the May 3, 2024 final Order revenue requirement calculation and should be corrected. However, the Commission disagrees with the Attorney General and LFUCG's suggested rate of return of 9.007 because the revenue conversion factor was not updated; although with rounding, both calculations result in a rate of return of 9.01 percent. As discussed above, the Commission finds that the correct rate of return is 9.01 percent, and it is included in the revised revenue requirement calculation shown in Appendix A.

2. Revenue Requirement Calculation

In their Joint Petition for Rehearing, the Attorney General and LFUCG noted that Kentucky-American requested a $26,051,990 revenue requirement increase in its application that was revised downward to $25,563,294.[51] The Attorney General and LFUCG stated that the Commission approved and utilized Kentucky-American's revised

[47] Kentucky-American's response at 2.

[48] Kentucky-American's Response at 2.

[49] The Attorney General and LFUCG requested a 9.007 rate of return.

[50] Kentucky-American's Response at 2.

[51] Joint Petition for Rehearing at 3.

capital structure and noted the reduced, revised rate increase request,[52] however the original requested rate increase was utilized to determine the awarded revenue requirement increase.[53] The Attorney General and LFUCG requested clarification as to whether the Commission incorporated the $503,644 reduction to set the awarded revenue requirement.[54] The Attorney General and LFUCG argued if the updated reduction of $503,644 was not incorporated to set the awarded revenue requirement, that Kentucky-American's awarded revenue requirement increase should be recalculated utilizing the revised requested revenue requirement increase of $25,563,644 instead of the original requested revenue requirement increase of $26,051,990.[55]

Kentucky-American agreed with the Attorney General and LFUCG that the as-filed revenue requirement increase was $26,051,990 and that it was revised to $25,563,294 during the case.[56] Kentucky-American further asserted that it had demonstrated that its corrected total base rate revenue requirement was $123,140,707, which accounted for both issues raised by the Attorney General and LFUCG's Petition.

Kentucky-American made discrete adjustments to its original revenue requirement increase in its rebuttal testimony and base period update.[57] These adjustments were to miscellaneous expenses, customer account expenses, Board of Director expenses, and

[52] May 3, 2024 final Order at 28.

[53] Joint Petition for Rehearing at 3.

[54] Joint Petition for Rehearing at 5.

[57] Base Period Update (filed Nov. 8, 2023), unnumbered page 1 and Rebuttal Testimony of Jeffery Newcomb (filed Nov. 8, 2023) at 2.

the capital structure. The adjustments to miscellaneous expenses were already included in the May 3, 2024, final Order[58] and the revised capital structure is addressed above. Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that the adjustments to customer account expenses and Board of Director expenses should be made, as both Kentucky-American and Joint Intervenors support these adjustments for known errors and changes in estimates. Therefore, the Commission finds that the Board of Directors expenses should be reduced by $149,023[59] and increase customer accounting expenses for e-checks by $73,359,[60] for a net expense reduction of $75,664.

Total Revenue Requirement

The effect of the Commission's adjustments is a total revenue requirement increase of $17,335,374, as shown in Appendix A, which includes all items discussed above. This is an increase of $6,728,857 from the final Order increase of $10,606,517. This reflects a $8,716,616 decrease of Kentucky-American's requested revenue increase of $26,051,990.

IT IS THEREFORE ORDERED that:

1. Kentucky-American's request that any new rates through the rehearing period be effective for service rendered on and after February 6, 2024 is denied.

2. Kentucky's petition for rehearing as it relates to annual QIP revenue in present rate revenues, income tax expense, and capital structure is granted.

[59] Kentucky-American's Response to the Attorney General's First Request for Information, Item 6.

[60] Kentucky-American's Response to the Attorney General's Second Request for Information, Item 27.

3. The Attorney General and LFUCG's petition for a rehearing requesting a rate of return of 9.007 is denied.

4. The Attorney General and LFUCG's petition for a rehearing is granted as it relates to the revenue requirement calculation, as discussed herein.

5. The Commission's May 3, 2024 final Order, as modified by the May 17, 2024 Order, is amended to reflect the modifications discussed in this Order.

6. All other provisions of the May 3, 2024 final Order, as modified by the May 17, 2024 Order; May 28, 2024 Order, and June 27, 2024 Order not in conflict with this Order shall remain in full force and effect.

7. Within 20 days of the date of service of this Order, Kentucky-American shall file with the Commission, using the Commission's electronic Tariff Filing System, revised tariff sheets setting out the rates approved herein and reflecting that they were approved pursuant to this Order.

8. This case is closed and removed from the Commission's docket.

APPENDIX B

APPENDIX TO AN ORDER OF THE KENTUCKY PUBLIC SERVICE COMMISSION IN CASE NO. 2023-00191 DATED NOV 06 2024

The following rates and charges are prescribed for the customers in the area served by Kentucky-American Water Company. All other rates and charges not specifically mentioned herein shall remain the same as those in effect under the authority of the Commission prior to the effective date of this Order.

Monthly Service Charge

Meter Size		
5/8" – Meter	$17.55	Minimum Bill
3/4" - Meter	26.20	Minimum Bill
1" – Meter	43.60	Minimum Bill
1 1/2" – Meter	87.30	Minimum Bill
2" – Meter	139.70	Minimum Bill
3" – Meter	261.90	Minimum Bill
4" – Meter	436.60	Minimum Bill
6" – Meter	873.00	Minimum Bill
8" – Meter	1,396.80	Minimum Bill

Volumetric Charge

Service Type		
Residential	$0.0067291	Per Gallon
Commercial	0.0060875	Per Gallon
Industrial	0.0050324	Per Gallon
Other Public Authority	0.0056070	Per Gallon
Sales for Resale	0.0049527	Per Gallon
Judy Water	0.0049527	Per Gallon

Monthly Public or Private Fire Connections

2" Diameter	$10.25	Per Month
4" Diameter	41.25	Per Month
6" Diameter	92.80	Per Month
8" Diameter	165.00	Per Month
10" Diameter	257.85	Per Month
12" Diameter	385.90	Per Month
14" Diameter	371.80	Per Month
16" Diameter	660.20	Per Month

Hydrant Charge

Public Hydrant	$56.94	Per Month
Private Hydrant	89.53	Per Month

Bulk Sales (Through Loading Stations)

Rate per 50 Gal	$0.20000
Rate per 100 Gal	0.40000

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF KENTUCKY-AMERICAN WATER COMPANY FOR AN ADJUSTMENT OF RATES, A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR INSTALLATION OF ADVANCED METERING INFRASTRUCTURE, APPROVAL OF REGULATORY AND ACCOUNTING TREATMENTS, AND TARIFF REVISIONS	)	CASE NO. 2023-00191

O R D E R

On July 7, 2023,[1] Kentucky-American Water Company (Kentucky-American), pursuant to KRS 278.180, KRS 278.190, and 807 KAR 5:001, Section 16(1)(b)(1), filed an application requesting (1) an increase to its rates; (2) approval of a Certificate of Public Convenience and Necessity (CPCN) for Advanced Metering Infrastructure (AMI) meters pursuant to KRS 278.020(1) and 807 KAR 5:001, Section 15(2); (3) approval of a proposed modification to its Qualified Infrastructure Program (QIP); (4) approval to establish regulatory assets or liabilities; (5) establishment of an alternative level of unaccounted for water loss; (6) approval of a universal affordability tariff; (7) and approval of its revised tariffs.

[1] Kentucky-American tendered its application on June 30, 2023. By letter dated July 7, 2023, the Commission rejected the application for filing deficiencies. The deficiencies were subsequently cured, and the application is deemed filed on July 7, 2023. On July 14, 2023, Kentucky-American filed a motion for a ruling from the Commission regarding sufficiency of the June 30, 2023 application. On July 25, 2023, the Commission entered an order denying Kentucky-American's motion and finding the application deemed filed on July 7, 2023.

BACKGROUND

Kentucky-American, a wholly owned subsidiary of American Water Works Company, Inc. (American Water), is a jurisdictional utility that distributes and sells water across three divisions, including its Central Division, which consists of Bourbon, Clark, Fayette, Harrison, Jessamine, Nicholas, Scott, and Woodford counties; its Northern Division, which consists of Gallatin, Owen, Grant, and Franklin counties; and its Southern Division, which consists of Rockcastle and Jackson counties.[2] Kentucky-American provides water service to more than 138,000 customers throughout its three divisions.[3] Kentucky-American last applied for a general rate adjustment in 2018.[4]

In its application, Kentucky-American requested an increase in water revenues of $26,051,990 for the forecasted test period,[5] compared to the operating revenues for the forecasted test period under existing water rates. This would result in a 22.7% increase in water service revenues, net of QIP revenues.[6] On November 8, 2023, Kentucky-American filed a base period update (Base Period Update) that the requested annual increase was revised to $25,563,294.[7]

PROCEDURE

By Order entered July 21, 2023, the Commission suspended the proposed rates up to and including February 5, 2024. Following discovery, the Commission held an evidentiary hearing on December 11, 2023, and December 13, 2023, in Frankfort, Kentucky. All parties filed simultaneous post-hearing briefs on January 5, 2024. Kentucky-American and Lexington-Fayette Urban County Government (LFUCG) filed response briefs on January 12, 2024. On February 5, 2024, Kentucky-American filed a notice of intent to implement proposed rates on or after February 6, 2024.[8] The Commission issued an Order on February 9, 2024, requiring Kentucky-American to maintain its records in such a manner as to allow it, the Commission, or any customer to determine the amounts to be refunded, and to whom, in the event a refund is ordered.[9] The Commission denied Kentucky-American's request for approval of a CPCN for AMI meters in its April 9, 2024 Order. All other matters now stand submitted to the Commission for a decision.

There are two intervenors in this matter: the Attorney General of the Commonwealth of Kentucky, by and through the Office of Rate Intervention (Attorney General), and LFUCG. The Attorney General and LFUCG entered into a joint participation agreement and co-sponsored one witness (jointly Attorney General/LFUCG).

[8] Kentucky-American's Notice of Intent to Implement Proposed Rates (filed Feb. 5, 2024) at 1.

[9] Order (Ky. PSC Feb. 9, 2024) at 3.

LEGAL STANDARD

Kentucky-American filed its application pursuant to KRS 278.180, KRS 278.190, and 807 KAR 5:001, Section 16(1)(b)(1). The Commission's standard of review for a utility's request for a rate increase is whether the proposed rates are "fair, just and reasonable."[10] Kentucky-American bears the burden of proof to show that the proposed rates are just and reasonable under the requirements of KRS 278.190(3).

Kentucky-American additionally requested approval for a new tariff identified as a Universal Affordability Tariff. KRS 278.170(1) provides that no utility shall, as to rates or service, give any unreasonable preference or advantage to any person or subject any person to any unreasonable prejudice or disadvantage, or establish or maintain any unreasonable difference between localities or between classes of service for doing a like and contemporaneous service under the same or substantially the same conditions.

Kentucky-American further requested approval for a deviation from an unaccounted-for water loss level of 15 percent for ratemaking purposes. Commission regulation 807 KAR 5:066, Section 6(3) provides that for ratemaking purposes, a utility's unaccounted-for water loss shall not exceed 15 percent of total water produced and purchased, excluding water used by a utility in its own operations.

Kentucky-American also requested approval to establish regulatory assets or liabilities for various expenses that have not previously been provided such accounting treatment. KRS 278.220 sets out that the Commission may establish a uniform system of accounts (USoA) for utilities and, in Kentucky-American's case, that system of accounts shall conform as nearly as practicable to the system adopted or approved by

[10] KRS 278.300; *Pub. Serv. Comm'n v. Com. Ex rel. Conway*, 324 S.W.3d 373, 377 (Ky.2010).

the National Association of Regulatory Utility Commissioners (NARUC). The NARUC USoA provides for regulatory assets, or the capitalization of costs that would otherwise be expensed but for the actions of a rate regulator. It must be probable that the utility will recover approximately equal revenue through the inclusion of these costs for ratemaking purposes, with the intent to recover the previously incurred cost not a similar future cost.[11] The Commission has historically approved regulatory assets where a utility has incurred: (1) an extraordinary, nonrecurring expense, which could not have reasonably been anticipated or included in the utility's planning; (2) an expense resulting from a statutory or administrative directive; (3) an expense in relation to an industry sponsored initiative;

[11] The Financial Accounting Standards Board's Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulation, which was codified as Accounting Standards Codification (ASC) 980, Regulated Operations, provides the criteria for recognition of a regulatory asset. ASC 980-340-25-1 provides, in full, as follows:

> **25-1** Rate actions of a regulator can provide reasonable assurance of the existence of an asset. An entity shall capitalize all or part of an incurred cost that would otherwise be charged to expense if both of the following criteria are met:
>
> a. It is probable (as defined in Topic 450) that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes.
>
> b. Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.
>
> A cost that does not meet these asset recognition criteria at the date the cost is incurred shall be recognized as a regulatory asset when it does meet those criteria at a later date.

or (4) an extraordinary or nonrecurring expense that over time will result in a saving that fully offsets the cost.[12]

TEST PERIOD

Kentucky-American used as its forecasted test period the 12-month period ending January 31, 2025.[13] Its base period is the 12-month period ending September 30, 2023.[14] The base period and test year period meet the requirements in KRS 278.192 and KAR 5:001, Sections 16(6), (7), and (8) and the Commission finds that it is reasonable to use the 12-month period ending January 31, 2025, as the test period in this case.

VALUATION

Pursuant to KRS 278.290(1), the Commission is empowered to "ascertain and fix the value of the whole or any part of the property of any utility," and in doing so is given guidance by the legislature "in establishing value of utility property in connection with rates," and the Commission must "give due consideration" to a number of factors, including capital structure, original cost and "other elements of value recognized by law" in order to ascertain the value of any property under KRS 278.290 "for rate-making purposes."[15]

Rate Base

[12] Case No. 2008-00436, *The Application of East Kentucky Power Cooperative, Inc. for an Order Approving Accounting Practices to Establish a Regulatory Asset Related to Certain Replacement Power Costs Resulting from Generation Forced Outages* (Ky. PSC Dec. 23, 2008), Order at 4.

[13] Application at 2-3, paragraph 5.

[14] Application at 3, paragraph 6.

[15] *National Southwire Aluminum Co. v. Big Rivers Elec.*, 785 S.W.2d 503, 512 (Ky. App. 1990).

In its application, Kentucky-American proposed to use the rate base method to calculate its revenue requirement and required increase rather than the capitalization method.[16] Kentucky-American proposed a rate base of $588,397,566.[17] However, on November 9, Kentucky-American filed a Base Period update of a proposed rate base of $588,437,566.[18] The Attorney General/LFUCG proposed an appropriate rate base of $580,294,681.[19] As explained below, the Commission has weighed the evidence filed in the case and finds that Kentucky-American's base rates should be based on a rate base of $489,426,491.

REVENUE REQUIREMENT

Rate Base Adjustments

Cash Working Capital – Cash Working Capital recognizes that cash supplied by shareholders, on behalf of the utility's customers, may be needed to finance operating costs incurred between when a utility disburses cash to vendors in its accounts payable and when revenues are collected from customers for accounts receivable. If shareholders supply that capital, they should be compensated for their investment. A positive Cash Working Capital amount indicates shareholders supplied the working capital, whereas a negative Cash Working Capital amount means that the utility has excess cash available to pay bills. Assuming a higher Cash Working Capital than actually exists results in rates that overstate a utility's costs.

[16] Application, Exhibit 37, Schedule A at 2.

[17] Application, Exhibit 37, Schedule A at 2.

[18] Base Period Update, Exhibit 37, Schedule B-1 at 2.

[19] As discussed below, the Attorney General/LFUGC proposed one adjustment to rate base, a revised cash working capital amount. $588,397,566 – 8,102,885 = $580,294,681.

Kentucky-American based its cash working capital on a lead/lag study and included $3,141,000 in rate base.[20] This lead/lag study was based on historical data from the 12-month period ending September 30, 2023.[21] Kentucky-American provided updated cash working capital in the base period update of $3,181,000.[22] The Attorney General/LFUCG argued two items were inappropriate in the calculation of working capital. First, that Kentucky-American included non-cash items in the lead/lag study and recommended removing regulatory expense, amortization, uncollectibles, depreciation and amortization, deferred income taxes, and net income.[23] The Attorney General/LFUCG also argued that Kentucky-American is proposing that its service company charges be treated as a prepayment and recommended that the service company charges receive the same expense lead as the contracted services charges.[24] The Attorney General/LFUCG recommended a final cash working capital of ($4,961,885).[25]

Kentucky-American argued that its methodology for calculating the cash working capital has been approved since its 1992 rate case and while the expenses are non-cash items, they are still expenses to Kentucky-American.[26] Additionally, Kentucky-American argued that the service company lead days are based on the actual payment schedule

[20] Application, Exhibit 37, Schedule B-1 at 2.

[21] Application, Exhibit 37, Schedule B-5, 2 at 4.

[22] Base Period Update, Exhibit 37, Schedule B-5, 2 at 4.

[23] Direct Testimony of Greg Meyer (Meyer Direct Testimony) (filed Sept. 29, 2023) at 32.

[25] Meyer Direct Testimony, Exhibit GRM-2.

[26] Kentucky-American's Post-Hearing Brief at 22–25.

and should not be adjusted because the charges are made at cost and do not include a mark-up.[27]

The Commission finds no reason to depart from recent precedent to remove non-cash items from cash working capital.[28] Although the Commission recognizes that Kentucky-American used a methodology that had been previously approved in their rate cases, the Commission has given weight in other rate applications to removing the items that are not cash expenditures to the utility, and agrees that the non-cash items should be removed.

Additionally, the Commission finds that Kentucky-American has not provided any reasoning for service company expenses to be collected in revenues from customers and paid before the actual service is performed. The Commission finds that the Attorney General/LFUCG's adjustment to cash working capital included in rate base is reasonable and should be accepted. This adjustment will reduce the rate base amount by $8,102,885. This adjustment, at Kentucky-American's proposed weighted average cost of capital of 7.87 percent, will reduce the revenue requirement by $637,697.[29]

---

[27] Kentucky-American's Post-Hearing Brief at 21.

[28] Case No. 2021-00183, *Electronic Application of Columbia Gas of Kentucky, Inc. for an Adjustment of Rates; Approval of Depreciation Study; Approval of Tariff Revisions; Issuance of a Certificate of Public Convenience and Necessity; and Other Relief* (Ky. PSC Dec. 28, 2021), Order at 14; Case No. 2021-00214, *Electronic Application of Atmos Energy Corporation for an Adjustment of Rates* (Ky. PSC May 19, 2022), Order at 20; Case No. 2022-00372, *Electronic Application of Duke Energy Kentucky, Inc. for (1) An Adjustment of Electric Rates; (2) Approval of New Tariffs; (3) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; and (4) All Other Required Approvals and Relief* (filed Oct. 12, 2023), Direct Testimony of Paul Norman at 6 and Attachment PMN-1 at 1; Case No. 2023-00159, *Electronic Application of Kentucky Power Company for (1) a General Adjustment of ITS Rates for Electric Service; (2) Approval of Tariffs and Riders; (3) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; (4) a Securitization Financing Order; and (5) All Other Required Approvals and Relief* (filed June 29, 2023), Application, Section V, Exhibit 1 at 89.

[29] $3,141,000 – ($4,961,885) = ($8,102,885). ($8,102,885) x 7.87% = ($637,697).

Slippage – Beginning with Kentucky-American's first forecasted test year in 1992, the Commission has applied a "slippage" factor to Kentucky-American's construction expenditures based on a ten-year average of actual to budget expenditures. The purpose of the slippage factor "is to produce a more accurate, reasonable, and reliable level of forecasted construction."[30] As early as 2012, Kentucky-American included a "reverse slippage" in its calculations with slippage factors for recurring projects above 100 percent. The Commission notes that in this case, Kentucky-American calculated a slippage factor of 119.48 percent[31], while consistently underestimating construction spending in all of the last ten years. The Commission is concerned that the applied slippage factor has not produced a more accurate, reasonable, and reliable level of forecasted construction for Kentucky-American and it is appropriate in this case to eliminate the slippage factor. The Commission puts Kentucky-American on notice that producing accurate, reasonable and reliable levels of forecasted construction is necessary.

CWIP/AFUDC – Construction work in progress (CWIP) is a plant account for capital projects that have not yet been completed and cleared to utility plant in service. While a construction project is classified as CWIP, it accrues an allowance for funds used during construction (AFUDC) to account for the use of cash for construction expenditures rather than for other purposes during the construction phase. Once the project is completed and placed in service, the AFUDC is included in the total account balance of the project. When CWIP is included in rate base, the utility earns a return on the CWIP balance that compensates the utility for financing costs during the construction period.

---

[30] Case No. 2010-00036, *Application of Kentucky-American Water Company for an Adjustment of Rates Supported by a Fully Forecasted Test Year* (Ky. PSC Dec. 14, 2010), Order at 7.

[31] Kentucky-American's Response to Staff's First Request for Information, Item 14(b), Attachment.

Kentucky-American has previously used a hybrid approach to CWIP in its rates and included that approach in its application. Kentucky-American included $21,980,639 of CWIP in rate base, which included projected AFUDC.[32] In this hybrid approach, Kentucky-American made an adjustment to increase revenues by $1,672,091 to account for AFUDC included in CWIP during the forecasted period.[33] However, the adjustment does not include AFUDC from before the forecasted test period. Kentucky-American stated that it has used this approach for over a decade and the Commission has expressly approved it in Kentucky-American's 2010 rate case.[34]

Solely from its 2018 rate case, Kentucky-American's AFUDC for projects previously recovered in CWIP is $840,908, which is included in rate base for this proceeding.[35] Kentucky-American did not provide the amount of AFUDC from previous rate cases and stated it does not have the information to do so.[36] Kentucky-American argued that AFUDC for plant previously included in CWIP is an appropriate component of rate base because the AFUDC is rolled into plant in service. Kentucky-American also argued that the previously capitalized AFUDC is not included in the "return on" component of its revenue requirement, and rather only the "return of" component through depreciation.[37]

[33] Application, Exhibit 37, Schedule C-2, unnumbered page 59.

[34] Kentucky-American's Response to Commission Staff's Third Request for Information (Staff's Third Request) (filed Sept. 21, 2023), Item 3(a).

[35] Kentucky-American's Response to Staff's Third Request, Item 2(a), Attachment.

[36] Kentucky-American's Response to Commission Staff's Post-Hearing Request for Information (Staff's Post-Hearing Request) (filed Dec. 22, 2023), Item 6(d).

[37] Kentucky-American's Post-Hearing Brief at 55.

The Commission finds that CWIP should be removed from Kentucky-American's rate base. The benefit of including CWIP in rate base is that financing costs are concurrently recovered, negating the need to recognize AFUDC for ratemaking purposes, which reduces financing costs and rate base. Kentucky-American is not removing the previous AFUDC amounts for projects included in rate base as CWIP. This means that customers are prepaying for the construction financing through including CWIP in rate base and then Kentucky-American is including those same financing costs through AFUDC in rate base in subsequent rate cases. Kentucky-American's adjustment to revenues only serves to not include the financing costs in both the CWIP balance and the "return on" component on base rates for the forecasted period. The "return on" component of base rates, i.e., the full rate base multiplied by the weighted average cost of capital, includes the previously removed AFUDC in subsequent rate cases. In other words, although Kentucky-American removes the AFUDC in the current rate case, it includes that same AFUDC in rate base in later rate cases. The Commission notes that Kentucky-American's proposed treatment of AFUDC and CWIP is inequitable. Removing CWIP from rate base will reduce the revenue requirement by $1,729,876[38] to account for the reduction in rate base and increase the revenue requirement by $1,672,091 to remove the AFUDC offset revenues, for a net revenue requirement reduction of $57,785.

AMI Meters – The Commission denied Kentucky-American's request for a CPCN for AMI meters in the April 9, 2024 Order. Removing the differential between the AMI meters and Kentucky-American's current meters will result in revenue requirement

[38] $21,980,639 x 7.87% = $1,729,876.

reductions of $113,196[39] to account for the reduced rate base and $375,051 to account for decreased depreciation expenses.[40] .

QIP Roll-In – As discussed below, the Commission denies the roll-in of the QIP into base rates. Removing the roll-in of QIP results in revenue requirement reductions of $5,308,254 to account for the reduction in rate base and $3,053,037 to account for the reduction in operating expenses.[41]

The total adjustments to rate base are as follows:

Total Rate Base as Filed	588,397,566
Adjustments:	
Reduce Cash Working Capital	(8,102,885)
Remove CWIP	(21,980,639)
Remove AMI Meters	(1,438,321)
Reject QIP Roll-In	(67,449,230)
Final Rate Base	489,426,491

Operating Income Adjustments

For the base period, Kentucky-American reported operating revenues and expenses of $112,476,773 and $78,174,006, respectively.[42] Kentucky-American proposed several adjustments to revenues and expenses to reflect the anticipated operating conditions during the forecasted period, resulting in forecasted operating revenues and expenses of $116,213,137 and $89,310,982, respectively.[43] The Attorney General/LFUCG proposed adjustments to Kentucky-American's revenue requirement

[39] $1,438,321 x 7.87% = $113,196.

[40] Kentucky-American's Response to Staff's Third Request, Item 6.

[41] Kentucky-American's Response to Staff's Third Request, Item 1, Attachment.

[42] Application, Exhibit 37, Schedule C-1.

[43] Application, Exhibit 37, Schedule C-1.

totaling $12,856,999. After weighing the evidence submitted in the case, the Commission accepts Kentucky-American's forecasted operating revenues and expenses, with several additional adjustments as discussed in further detail below.

Water Revenues – The Attorney General/LFUCG argued that, while Kentucky-American's forecasted customer count is reasonable, it's forecasted usage per customer is lower than the last five years and is unreasonably low.[44] The Attorney General/LFUCG recommended an adjustment to increase the forecasted usage to use a three-year average, net of variable expenses related to increased water sales. The Attorney General/LFUCG's net adjustment is a revenue requirement reduction of $1,875,547.[45]

Kentucky-American argued that the Attorney General/LFUCG's average usage assumption created unreasonable results compared to the actual usage from 2013 to 2022, which it used to populate a linear regression model that accounted for weather normalization, declining usage trends, and the impact of COVID-19.[46]

The Commission is not persuaded by the Attorney General/LFUCG's proposed reduction, which does not appear to address declining usage trends. However, the Commission finds that Kentucky-American's regression model slightly understates the residential customer usage and that the appropriate residential usage should be based on the linear trend line from 2013 to 2022, or approximately 5,810,000 thousand gallons,

[44] Meyer Direct Testimony at 20–22.

[45] Meyer Direct Testimony at 22.

[46] Rebuttal Testimony of Charles Rea at 5.

which is 61,551 thousand gallons above Kentucky-American's proposed residential customer usage. The resulting revenue requirement impact is a reduction of $308,297.[47]

Labor Adjustments – The Attorney General/LFUCG recommended not including the labor cost of unfilled positions in the revenue requirement, for a revenue requirement reduction of $347,956.[48] The Attorney General/LFUCG also recommended adopting a three-year average of the expensed/capitalized payroll ratio from 2020-2022 which decreases payroll expense by $1,830,785.[49] The Attorney General/LFUCG's capitalization ratio adjustment was based on an incomplete subset of capitalization ratios and the Attorney General/LFUCG rescinded the proposed adjustment. The Attorney General/LFUCG proposed an adjustment related to payroll taxes and other labor related overhead expenses related to the proposed reduction in payroll expenses but was unable to provide the amount of the adjustment.[50] Kentucky-American stated that it could not provide a general overhead factor for a reduction to payroll expense because it "forecasted each employee in the rate case based on their employee benefits and payroll information."[51]

The Commission finds both portions of the adjustment are unreasonable and should be denied. Precedent suggests that unfilled positions be included as Kentucky-American is actively seeking to fill those positions, the vacancies are not an unreasonable amount, and the Attorney General/LFUCG's adjustment does not account for an increase

[47] 61,551 x 5.0088 = 308,297.

[48] Meyer Direct Testimony at 13, Table GRM-5.

[49] Meyer Direct Testimony at 13, Table GRM-5.

[50] Meyer Direct Testimony at 16.

[51] Kentucky-American's Response to Staff's Post-Hearing Request, Item 7.

in overtime or contractor labor to offset unfilled positions.[52] The capitalization adjustment was based on incomplete data. The actual capitalization ratios have been fairly consistent since 2018, although they have been trending upwards for the last decade. The Commission puts Kentucky-American on notice that the Commission will monitor Kentucky-American's capitalization ratios going forward because increased capitalization ratios primarily benefit shareholders through lower expenses and higher rate base amounts. The significant increases of capitalization ratios between rate cases is a cause for concern when they are not reviewed over a longer trend and supported with specific reasoning for the increases.

Incentive Compensation – Kentucky-American included $712,961 in incentive compensation in the test year.[53] The Attorney General/LFUCG recommended removing 50 percent of Kentucky-American's Annual Performance Plan (APP) that is driven by earnings per share and proposes to remove the entirety of Kentucky-American's Long-Term Performance Plan (LTPP).[54] The Attorney General/LFUCG proposed that shareholders, who are the beneficiaries of the incentive compensation, bear the responsibility, resulting in a revenue requirement reduction of $373,598.

Kentucky-American argued that the APP and LTPP benefit customers because it allows Kentucky-American to lower other forms of compensation and still provide market

[52] See Case No. 95-554, *Application of Kentucky-American Water Company to Increase Its Rates* (Ky. PSC Sept. 11, 1996); Case No. 2004-00103, *Adjustment of the Rates of Kentucky-American Water Company* (Ky. PSC Feb. 28, 2005); Case No. 2010-00036, Dec. 14, 2010 Order; and Case No. 2018-00358, Aug. 8, 2019 Order.

[53] Kentucky-American's Response to Commission Staff's First Request, Item 33.

[54] Meyer Direct Testimony at 16.

competitive compensation and attract competent employees.[55] Kentucky-American also argued that the APP and LTPP encourage employees to perform more efficiently.[56] Kentucky-American also argued that the Attorney General/LFUCG proposed to remove an arbitrary amount of the APP.[57] Finally, Kentucky-American asked that the Commission revisit the precedent to remove incentive compensation tied to financial performance metrics.[58]

While Kentucky-American contended that the total compensation is market competitive, the Commission finds that the adjustment to remove incentive compensation based on financial performance metrics should be approved, consistent with precedent. The Commission disallowed recovery of the cost of employee incentive compensation plans tied to fiscal measurements in Case No. 2018-00358 and explained that the decision is based on the performance measures that result in incentive compensation payouts.[59] Incentive compensation tied to financial performance measures overwhelmingly benefit shareholders over customers, and customers should not bear the expense of those plans. The resulting revenue requirement impact is a reduction of $373,598.

Inflation Factors – Kentucky-American applied an inflation adjustment to 10 of its expenses based on the Consumer Price Index (CPI) from the Bureau of Labor Statistics

[55] Kentucky-American's Post-Hearing Brief at 14.

[56] Kentucky-American's Post-Hearing Brief at 14.

[57] Kentucky-American's Post-Hearing Brief at 14.

[58] Kentucky-American's Post-Hearing Brief at 16.

[59] Case No. 2018-00358, June 27, 2019 Order.

(BLS).[60] The inflation indexes are granular to each cost component for seven expenses and a broad general CPI for three expenses. Kentucky-American stated that it incorporated an inflation factor in its prior rate case but used more specific inflation factors in the instant case.[61]

The Commission finds that the inflation factors should be removed from the forecasted test year. Kentucky-American stated in its application that its expenses have increased below inflation.[62] Kentucky-American stated that removing the inflation factors would reduce the revenue requirement by $970,674 but did not provide a calculation.[63] The Commission has previously held a general CPI inflation factor is not an appropriate forecasting method and even the granular inflation factors are not specific to Kentucky-American's experience.[64] Use of general inflation factors fails to satisfy Kentucky-American's burden that its proposed rates are just and reasonable, as they are not, in and of themselves, reflective of Kentucky-American's costs. The Commission expects a utility such as Kentucky-American, with the shared resources of American Water, to develop and implement more robust forecasting methodologies for expenses than general CPI inflation factors with a review of specific factors impacting costs. For example, Kentucky-American applied an inflation factor to its fuel and power costs

[60] Kentucky-American's Response to Staff's Post-Hearing Request, Item 10, Attachment.

[64] Case No. 2013-00148, *Application of Atmos Energy Corp. for an Adjustment of Rates & Tariff Modifications*, (Ky. PSC Apr. 22, 2014), Order at 16-17.

through the end of the test period, although its largest power provider, Kentucky Utilities Company, has a commitment for a base-rate "stay-out" for any base rate increases to not take effect until after July 1, 2025, beyond the end of the test period.[65] Removing the inflation factors from the individual worksheets in which they were applied provided an overall revenue requirement reduction of $1,009,889.[66]

Water Loss – As discussed below, the Commission denies Kentucky-American's request to increase the allowable water loss percentage. Kentucky-American proposed an allowable water loss percentage of 20 percent,[67] but did not make any adjustments in the forecasted test period for expenses even when projected non-revenue water was 20.96 percent[68]. Kentucky-American did not meet its burden of proof in requesting a

[67] Direct Testimony of William A. Lewis (Lewis Direct Testimony) at 39.

[68] KYAW Revenue tab, KAWC 2023 Rate Case – Exhibits (25, 26, 37) Revenue WP Support.xls. 3,163,096 gallons non-revenue/15,089,470 gallons system delivery = 20.96%,

deviation and did not offer an alternative water loss amount to the proposed non-revenue water amount. However, as described in the testimony of Kentucky-American witness, William A. Lewis, Kentucky-American has not achieved water loss levels of less than 20 percent in the last four years.[69] The total impact of reducing the unaccounted-for water percentage from 20.96 percent to 15 percent is an expense reduction of $660,193. The impact of these reductions will be addressed in each expense component.

Fuel & Power – In addition to removing the inflation factor, the Commission has reduced Fuel & Power expenses due to water loss. Fuel & Power expenses once the inflation factor is removed is $5,166,090 or a reduction of $498,524. The Commission increased the forecasted residential water sales as described above, which will increase Fuel & Power expenses. Assuming a per thousand gallon Fuel & Power expense of $0.3424,[70] Fuel & Power would increase by $21,075.[71] Removing 5.96 percent of expense for water loss reduces the Fuel & Power expense another $309,155.[72] The total net adjustment to Kentucky-American's Fuel & Power expense is a reduction of $786,604.

Chemical Expense – Kentucky-American proposed a forecasted Chemical expense of $5,624,592. The Commission increased the forecasted residential water sales as described above, which will increase Chemical expenses. Assuming a per thousand gallon Chemical expense of $0.3727,[73] Chemical expenses would increase by

[69] Lewis Direct Testimony at 38-39.

[70] Fuel & Power expense: $5,166,090/15,089,470 thousand gallons = $0.3424/thousand gallons.

[71] Fuel & Power expense: $0.3424 x 61,551 = $21,075.

[72] Fuel & Power expense: ($5,166,090 + $21,075) x 5.96% = $309,155.

[73] Chemical expense: $5,624,592/15,089,470 thousand gallons = $0.3727/thousand gallons.

$22,940.[74] The Commission further finds that a reduction for water loss of 5.96 percent above the 15 percent allowed for ratemaking purposes reduces the expense by $335,226.[75] The total net adjustment to Kentucky-American's Chemical expense is a reduction of $312,286.

Purchased Water – Kentucky-American proposed a forecasted test year expense of [redacted]. The Commission increased the forecasted residential water sales as described above, which will increase Purchased Water expenses. Assuming a per thousand gallon Purchased Water expense of [redacted],[76] Purchased Water expenses would increase by [redacted][77] The Commission finds that a reduction for water loss of 5.96 percent above the 15 percent allowed for ratemaking purposes reduces the expense by [redacted].[78] The total net adjustment to Kentucky-American's Purchased Water expense is a reduction of [redacted].

Waste Disposal – Kentucky-American proposed in the forecasted test year an expense of $679,404. The Commission increased the forecasted residential water sales as described above, which will increase Waste Disposal expenses. Assuming a per thousand gallon Waste Disposal expense of $0.0450[79], Waste Disposal expenses would increase by $2,770.[80] The Commission further finds that a reduction for water loss of

---

[74] Chemical expense: $0.3727 x 61,551 = $22,940.

[75] Chemical expense: ($5,624,592 + $22,940) x 5.96% = $313,653.

[76] Purchased Water expense: $[redacted]/15,089,470 thousand gallons = $[redacted]/thousand gallons.

[77] Purchased Water expense: $[redacted] x 61,551 = $[redacted].

[78] Purchased Water expense: ($[redacted] + $[redacted]) x 5.96% = $[redacted]

[79] Waste Disposal expense: $679,404/15,089,470 thousand gallons = $0.0450/thousand gallons.

[80] Waste Disposal expense: $0.0450 x 61,551 = $$2,770.

5.96 percent above the 15 percent allowed for ratemaking purposes reduces the expense by $40,658.[81] The total net adjustment to Kentucky-American's proposed Waste Disposal expense is a reduction of $37,888.

Miscellaneous Expenses – The Attorney General/LFUCG recommended removing miscellaneous expenses of $121,116, which includes food, gifts, charitable donations, and membership dues.[82] The bulk of the adjustment, $106,069, is shared services business development expenses that were not specifically justified.

Kentucky-American argued that only $9,348 should be removed, for $6,799 of promotional gifts and $2,549 of membership dues.[83] Kentucky-American argued that the $5,699 of food expenses are de minimis and similar expenses have been allowed recovery for electric cooperatives' annual meetings.[84] Kentucky-American also argued that allocated business development expenses benefit customers.[85]

The Commission finds that the Attorney General/LFUCG's adjustment is reasonable and should be approved. Providing employees with food is not analogous to an electric cooperative annual meeting and allocated business development expenses are not specific to Kentucky-American's development efforts.

Rate Case Expense – Kentucky-American proposed a two-year amortization period for rate case expense of $1,321,037, for a test-year expense of $660,519.[86]

---

[81] Waste Disposal expense: ($679,404 + $2,770) x 5.96% = $40,658.

[82] Meyer Direct Testimony at 27–29.

[83] Rebuttal Testimony of Jeffrey Newcomb (Newcomb Rebuttal Testimony) at 4.

[84] Kentucky-American's Post-Hearing Brief at 31.

[85] Kentucky-American's Post-Hearing Brief at 33.

[86] Application, Exhibit 37, Schedule D-2 at 5.

The Commission finds that rate case expenses should be based on the actual expenses of $1,059,527, less witness preparation expenses of $62,787, and amortized over three years.[87] The Commission has found that witness preparation expenses should not be recovered from ratepayers as they receive no benefit from these expenses.[88] Additionally, a three-year amortization period is standard and Kentucky-American has stated that the QIP will delay rate cases, such that a two-year amortization period is unreasonable. The net impact of these adjustments is a revenue requirement reduction of $328,272.[89]

Credit Card Fees – Kentucky-American proposed to remove payment processing fees as a separate charge that is paid directly by the customer and include those costs in base rates.[90] Kentucky-American stated that it proposed to include these fees in base rates to make it more convenient for customers to pay their bills.[91]

The Attorney General/LFUCG recommended removing credit card fees from base rates, which results in a revenue requirement reduction of $348,284.[92] The Attorney

[87] Kentucky-American's Supplemental Response to Staff's Post-Hearing Request, Item 12 (filed Jan. 12, 2024).

[88] Case No. 2020-00174, *Electronic Application of Kentucky Power Company for (1) A General Adjustment of Its Rates for Electric Service; (2) Approval of Tariffs and Riders; (3) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; (4) Approval of a Certificate of Public Convenience and Necessity; and (5) All Other Required Approvals and Relief* (Ky. PSC Jan. 13, 2021), Order at 19–20.

[89] 1,059,527 - 62,787 = 996,740 / 3 = 332,247. 660,519 – 332,247 = 328,272.

[90] Newcomb Direct Testimony at 13.

[91] Newcomb Direct Testimony at 13.

[92] Meyer Direct Testimony at 10.

General/LFUCG argued that including these fees in base rates would require all customers to subsidize the cost of these transactions.[93]

The Commission agrees that the credit card fees should be removed from base rates. Neither the Attorney General/LFUCG nor Kentucky American provided persuasive evidence regarding their position. In light of that, the Commission denies the inclusion of credit card fees in base rates because Kentucky-American did not propose any offsetting adjustments to late payments or uncollectible accounts. Additionally, Kentucky-American did not provide evidence that there would be a decrease in transaction costs, an overall benefit to customers, or increased revenues if Kentucky-American pays the processing fee and there is no convenience fee.

Legal Fees for Investigation – Kentucky-American forecasted its contracted services legal fees based on 2022 expenses and an inflation factor. As discussed above, the Commission will remove the inflation factor. Included in the 2022 expenses are also $28,928 of legal expenses incurred for the Commission investigation in Case No. 2022-00299.[94] The Commission finds that these expenses should be removed from the legal fees included in the forecasted period, resulting in a revenue requirement reduction of $28,928.

Employee Stock Purchase Program – Kentucky-American employees can participate in the American Water Employee Stock Purchase Program (ESPP), in which they are able to purchase American Water stock at 85 percent of the market value of the

[93] Meyer Direct Testimony at 10.

[94] Case No. 2022-00299, *Electronic Investigation of Kentucky-American Water Company's Alleged Violation of a Tariff and Commission Regulations Regarding Meters and Monitoring Customer Usage* (Ky. PSC Sept. 27, 2022). Kentucky-American's Response to Commission Staff's Post-Hearing Request (filed July 10, 2023), Item 15, Attachment 1.

share on the purchase date with certain limits on timing and contributions to the plan. The differential between the market price and the price paid by the employee through the ESPP is included in the proposed revenue requirement in this case in the amount of $30,039.[95]

The Commission finds that Kentucky-American's ESPP discounts should be removed from the test year because it is not reasonable to recover from ratepayers as they do not benefit from the program.

Depreciation – Kentucky-American proposed new depreciation rates in this proceeding, supported by a depreciation study based on Kentucky-American's water plant in service as of December 31, 2022.[96] Kentucky-American proposed to increase the composite depreciation rate from 2.61 percent to 3.29 percent.[97]

LFUCG recommended that meter depreciation expense be reduced from $2,243,128 to $326,595, a reduction of $1,916,533 to reflect a more reasonable approach to Kentucky-American's routine meter replacement schedule.[98] Additionally, the Attorney General stated that Kentucky-American proposed to "drastically increase and accelerate the depreciation rates for the existing meters" in order to reduce the stranded assets associated with the proposed AMI meter project.[99]

LFUCG appears to interchange the meter testing period, replacement cycle, and depreciation rates. Kentucky-American's proposed depreciation rates are based on

[95] Kentucky-American's Response to Staff's Post-Hearing Request, Item 5.

[96] Application, Direct Testimony of Larry Kennedy (Kennedy Direct Testimony) at 2–3.

[97] Kennedy Direct Testimony at 6.

[98] LFUCG's Post-Hearing Brief (filed Jan. 5, 2024) at 5.

[99] Attorney General's Post-Hearing Brief at 27.

actual retirements and additions as of December 31, 2022, and the proposed depreciation rate for meters do not include the proposed AMI meters. The depreciation rates for Kentucky-American's meters are increasing because the last depreciation rates were set significantly lower than the actual useful life of the current meters.[100] The Commission finds that Kentucky-American's proposed depreciation rates are reasonable and should be approved.

RATE OF RETURN

Capital Structure

Kentucky-American's proposed capital structure, based on the projected 13-month average balances for the forecasted test period and the costs assigned to each capital component, is shown in the table below:[101]

Class of Capital	13-Month Average Net Carrying Amount	Ratio	JDITC	Adjusted Capital	Cost Rate	13-Month Average Weighted Cost
Short-Term Debt	$5,752,848	0.96%	-	$5,752,848	3.818%	0.040%
Long-Term Debt	$275,967,192	46.21%	$0.30	$275,967,193	4.681%	2.160%
Preferred Stock	$2,245,236	0.38%	-	$2,245,236	8.510%	0.030%
Common Equity	$313,228,976	52.45%	$0.34	$313,228,976	10.75%	5.640%
Total	$597,194,252		$0.64	$597,194,252		7.870%

When submitting its Base Period Updates, Kentucky-American proposed the following revisions to its forecasted capital structure to reflect (1) an updated projected long-term debt of $28 million in May of 2024 divided evenly between 10-year and 30-year taxable bonds with coupons of 5.904 percent and 6.201 percent; (2) an increase in projected retained earnings from $12,912,433 to $15,155,445; and (3) an increase in

[100] Case No. 2015-00418, *Application of Kentucky-American Water Company for an Adjustment of Rates* (Ky. PSC Aug. 23, 2016), Application, Direct Testimony of John Spanos, Exhibit JJS-1 at unnumbered page 310. Meter accounts had an average composite remaining life of 35.9 years.

[101] Application, Exhibit 37, Schedule J-1.

projected short-term debt balance of $4,263,202 due to the timing shift of the long-term debt issuance.[102] Kentucky-American's revised forecasted capital structure and assigned cost rates are shown in the table below.[103]

Class of Capital	13-Month Average Net Carrying Amount	Ratio	JDITC	Adjusted Capital	Cost Rate	13-Month Average Weighted Cost
Short-Term Debt	$9,168,090	1.54%	-	$9,168,090	5.354%	0.080%
Long-Term Debt	$273,581,929	45.87%	$0.29	$273,581,929	4.544%	2.080%
Preferred Stock	$2,245,236	0.38%	-	$2,245,236	8.510%	0.030%
Common Equity	$311,462,178	52.22%	$0.33	$311,462,178	10.75%	5.610%
Total	$596,457,432		$0.64	$596,457,432		7.800%

The Attorney General agreed with Kentucky-American regarding its proposed costs of short-term debt, long-term debt, and preferred stock.[104] However, the Attorney General argued that Kentucky-American's proposed common equity ratio of 52.45 percent is excessively high when compared to recent historical equity percentages and recommended a common equity ratio of 50.00 percent and rebalance the long-term debt ratio to 48.66 percent.[105] Additionally, the Attorney General accepted the proposed short-term debt and preferred stock ratios.[106]

The Attorney General argued that Kentucky-American's average common equity ratios ranged from 46.90 percent in 2019 to 49.30 percent in 2022 and that its proposed common equity ratio of 52.45 percent represents a sharp increase from its historical

[105] Baudino Direct Testimony at 34.

[106] Baudino Direct Testimony at 34.

capitalization ratios and a significant increase over 2022.[107] The Attorney General noted that a common equity ratio of 52.45 percent would inflate the revenue requirement for Kentucky-American's ratepayers and should therefore be reduced.[108]

Kentucky-American argued that the Attorney General only cited to historical information and provided no credible basis for utilizing a common equity ratio of 50.00 percent for the forecasted test-year ending January 31, 2025.[109] Kentucky-American also argued that the Attorney General did not consider how it has been financed in recent periods or how it is projected to be financed for the forecasted test year.[110]

Upon review of the record and being otherwise sufficiently advised, the Commission finds that Kentucky-American's revised capital structure accurately projects the test-year capitalization requirements. However, the Commission has an expectation that utilities in Kentucky should have a capital structure that is reasonably balanced between equity and debt such that it does not over burden its ratepayers to the benefit of shareholders.[111] Also, the Commission notes that Kentucky-American has control over its capital structure and financing such that it chooses the amounts of debt and equity to be issued. The Commission agrees with the Attorney General that Kentucky-American's common equity ratio has increased almost every year since 2019.[112] The Commission

[112] Baudino Direct Testimony at 34.

puts Kentucky-American on notice that Kentucky-American is expected to exercise prudent control over the amount of equity that is issued so that it maintains a more balanced capital structure and places less of a burden on its ratepayers.

Return on Equity

In its application, Kentucky-American proposed an ROE using the discounted cash flow model (DCF), the capital asset pricing model (CAPM), and the empirical CAPM (ECAPM). The modeling utilized a Combined Utility Proxy Group, which included water, natural gas distribution utilities, and combination electric and gas utilities. Kentucky-American noted that both proxy group model results exclude American Water.[113] Kentucky-American is requesting an ROE of 10.75 percent based upon a range from 10.00 percent to 11.00 percent.[114]

Kentucky-American stated that it based its decision upon multiple factors including its capital expenditure program relative to proxy groups, flotation costs associated with American Water, environmental risks, regulatory risks, and its proposed capital structure as compared to the proxy groups.[115] Additionally, Kentucky-American noted that the analyses rely on forward-looking inputs and assumptions.[116] The table below summarizes the range of Kentucky-American's ROE estimates:[117]

Method	Low Growth Rate	Average Growth Rate	High Growth Rate

The Attorney General provided an ROE analysis that employed the DCF and the CAPM while utilizing Kentucky-American's proposed proxy group.[118] The Attorney General's DCF analyses are based on the standard constant growth form that employs four different growth rate forecasts from the Value Line Investment Survey, Yahoo! Finance, and Zacks.[119] Additionally, the Attorney General employed the CAPM analyses

[118] Baudino Direct Testimony at 15.

[119] Baudino Direct Testimony, at 15.

using both historical and forward-looking data.[120] The Attorney General recommended an ROE of 9.40 percent and the range of reasonableness of 8.70 percent to 10.00 with giving more emphasis to the DCF results but still supported by the CAPM analysis.

For the DCF model, the Attorney General employed the average dividend yield and earnings growth rates, and calculated DCF estimates using two methods.[121] The first applied average growth rates and the second, median growth rates.[122] Average growth rates ROE estimates range from 8.67 to 9.94 percent and median growth rates ROE estimates range from 8.41 to 9.52 percent, with the average of the two methods being 9.04 percent.[123] The Attorney General noted that given the persistently high rate of inflation and the increasing long-term bond yields so far this year, that the 8.41 percent for the median growth rate is too conservative and that the lower DCF result should be 8.70 percent and the highest DCF result should be 10.00 percent.[124]

For the CAPM model, the Attorney General employed three approaches. The first approach used the forward-looking expected return on the market, the second approach used historical market risk premiums (MRP) based on actual stock and bond returns, and the third approach used public sources that estimate current investor required MRP.[125] When determining the risk-free rate, the Attorney General utilized two different rates. The first measure was a six-month average of the 30-year Treasury bond yields from March

[120] Baudino Direct Testimony at 15.

[121] Baudino Direct Testimony at 21.

[124] Baudino Direct Testimony at 22.

[125] Baudino Direct Testimony at 25.

through August 2023 resulting in a 3.90 percent bond yield.[126] The second measure was a three-month average from July to August 2023. The 31-basis point increase in the 30-Year Treasury yield resulted in a 4.30 percent risk-free rate.[127] The following table summarizes the Attorney General's results:[128]

Method	Average
DCF	
Average Growth Rates	
High	9.94%
Low	8.67%
Average	9.07%
Median Growth Rates	
High	9.52%
Low	8.41%
Average	9.04%
CAPM	
Forward-looking Market Return	12.77%
Historical Risk Premium	
Arithmetic Mean	10.04%
Supply side MRP	9.44%
Supply side less WWII Bias[129]	8.64%
Kroll MRP	8.75%
Damodaran MRP	8.20%

The Attorney General argued that the Commission should adopt an ROE range of 8.70 percent to 10.00 percent for Kentucky-American considering the range is formed mainly by the DCF results but supported by the CAPM analyses.[130] Additionally, the Attorney General took issue with multiple assumptions used in the ROE calculations by Kentucky-American and still concluded that based on the DCF analysis, excluding the

[126] Baudino Direct Testimony at 30.

[127] Baudino Direct Testimony at 30.

[128] Baudino Direct Testimony at 32.

[129] *See* Baudino Direct Testimony at 31.

[130] Baudino Direct Testimony at 32.

12.77 percent CAPM ROE as a viable ROE result, and consideration of current financial market conditions, an ROE for Kentucky-American of 9.40 percent is appropriate and near the midpoint of the recommended range.[131]

Regarding Kentucky-American's DCF calculation, the Attorney General argued that both approaches were very similar in that the same proxy group was used, six-month or 180-day averages of stock prices were used, the same three sources for the growth rates were utilized, and the same method to calculate the expected dividend yield were used.[132] However, the Attorney General's witness, Baudino, noted that the reason why his DCF calculation was lower was due to the decline in Yahoo! Finance earnings growth rates.[133]

Regarding the CAPM and ECAPM calculations, the Attorney General argued that Kentucky-American used only one source to estimate the recommended MRP and that the MRP range is overstated, which leads to an overestimation of the CAPM ROE.[134] Also, the Attorney General argued that the main issue with Kentucky-American's CAPM analysis is the sole reliance on a forward-looking market return for the S&P 500.[135] The Attorney General noted that the projected market return of 12.00 percent is overstated due to Kentucky-American's reliance on an average Value Line long-term projected growth rate of 10.19 percent, which is simply unsustainable in the long run.[136] The

[131] Baudino Direct Testimony at 32-33.

[132] Baudino Direct Testimony at 37.

[133] Baudino Direct Testimony at 38.

[134] Baudino Direct Testimony at 39.

[135] Baudino Direct Testimony at 39.

[136] Baudino Direct Testimony at 39.

Attorney General argued that Kentucky-American's unsustainable earnings growth forecast is not supportable when further consideration is given to both historical and forecasted Gross Domestic Product (GDP) growth for the United States.[137] The Attorney General argued that the ECAPM is designed to account for the possibility that the CAPM understates the ROE for companies with betas less than 1.0 and that the argument that an adjustment factor is needed to "correct" the CAPM results for companies with betas less than 1.0 is further evidence of the lack of accuracy inherent in the CAPM itself and with beta measures in particular.[138] Therefore, the Attorney General recommended that due to the constant growth DCF requiring a sustainable long-run growth rate, Kentucky-American's projected market return and MRP estimate are overstated and should be rejected.[139]

The Attorney General noted that Kentucky-American presented risks and other considerations when setting the ROE such as floatation costs, its capital expenditure program, environmental risks, and regulatory risks. The Attorney General argued that the Commission should reject the use of floatation costs based on past precedent[140] and that Kentucky-American did not provide any new evidence to warrant the Commission changing its historical stance on this issue.[141] In addition, the Attorney General argued that it is up to Kentucky-American to prudently manage the timing and amount of its capital

[137] Baudino Direct Testimony at 39.

[138] Baudino Direct Testimony at 42.

[139] Baudino Direct Testimony at 41.

[140] Baudino Direct Testimony at 43. *See* Case No. 2021-00214, *Electronic Application of Atmos Energy Corporation for an Adjustment of Rates* (Ky. PSC May 19, 2022), Order at 48.

[141] Baudino Direct Testimony at 43.

expenditures in conjunction with the timing of its rate cases to ensure that it collects its prudent costs of providing service to its ratepayers while maintaining a competitive return on its investments. Therefore, the Attorney General argued, the Commission should not consider Kentucky-American's capital expenditure program.[142] Lastly, the Attorney General argued that it did not believe the additional risks articulated by Kentucky-American significantly affected its risk as compared to the proxy group and is not a basis for the Commission to give it a higher return.[143]

In rebuttal testimony, Kentucky-American disputed the Attorney General's analyses for the following reasons: (1) the use of dividend growth rates in the constant growth DCF model; (2) the application of the constant growth DCF model to the proxy group; (3) reliance on the constant growth DCF results without consideration of how current market conditions are affecting the constant growth DCF model; (4) the market risk premium relied upon to estimate the CAPM analysis; (5) the relevance of the ECAPM analysis; (6) the effect of company-specific risks on the cost of equity for KAWC; and (7) the appropriate equity ratio for Kentucky-American.[144]

Kentucky-American noted overall that even with updating the cost of equity estimation models, the results continue to support the recommended ROE of 10.75 percent and that capital market conditions that have contributed to an increase in the cost

[142] Baudino Direct Testimony at 44.

[143] Baudino Direct Testimony at 44.

[144] Rebuttal Testimony of Ann E. Bulkley (Bulkley Rebuttal Testimony) at 16.

of equity are expected to remain during the period in which Kentucky-American's rates will be in effect.[145]

In its post-hearing brief, Kentucky-American argued that its proposed 10.75 percent ROE creates a reasonable opportunity for capital investors to earn a risk-comparable return, allows Kentucky-American to maintain its financial integrity, and enables it to attract necessary capital investment for the benefit of its customers.[146] Additionally, Kentucky-American noted that its proposed ROE recognizes the increase in interest rates that has occurred since its previous rate case and reflects the changes in modeling results as the utility sector underperformed the market and the dividend yields increased throughout this case.[147]

In its post-hearing reply brief, the Attorney General argued that if the Commission were to approve Kentucky American's inflated ROE proposal of 10.75 percent, it would cause rates to increase to an unreasonable level and harm ratepayers.[148] Therefore, the Attorney General requested that the Commission adopt its recommendation of a 9.40 percent ROE for Kentucky-American and, if the Commission accepts its proposed ROE, it would reduce Kentucky-American's requested rate increase by approximately $5,608,705 million.[149]

In evaluating the ROE for Kentucky-American, the Commission must evaluate and review each model and all parties' positions and balance the financial integrity of the utility

[145] Bulkley Rebuttal Testimony at 4.

[149] Attorney General's Post-Hearing Brief at 24.

with the interests of the consumer and the statutory obligation that rates be fair, just and reasonable. The Commission notes that in recent cases including Case Nos. 2020-00349/2020-00350,[150] 2022-00147,[151] 2022-00222,[152] and 2022-00372,[153] the Commission has discussed that it is appropriate for utilities to present, and for the Commission to evaluate, multiple methodologies to estimate ROEs, and each approach has its own strengths. As demonstrated in the respective ROE testimonies in this proceeding, there is considerable variation in both data and application within each modeling approach, which can lead to different results. The Commission's role is to conduct a balanced analysis of all presented models, while giving weight to current economic conditions and trends.

The Commission notes that Kentucky-American supported a forward-looking model with relatively high forecasted interest rates and bond yields.[154] Whereas, the

[150] *See generally* Case No. 2020-00349, *Electronic Application of Kentucky Utilities Company for an Adjustment of its Electric Rates, A Certificate of Public Convenience and Necessity to Deploy Advanced Metering Infrastructure, Approval of Certain Regulatory and Accounting Treatments, and Establishment of a One-Year Surcredit* (Ky. PSC Dec. 14, 2022).

[154] Bulkley Rebuttal Testimony at 5-6.

Attorney General argued that the forecasted rates are projected to decline.[155] The Commission found in Case No. 2018-00281, that forecasted interest rates were not reliable and that the most current interest rates which embody investors' expectations of the future are the best estimate when discussing capital markets.[156] Additionally, in Kentucky-American's previous rate case, the Commission found that it continues to view forecasted interest rates as unreliable and frequently inaccurate.[157] While the Commission acknowledges the arguments that Kentucky-American raised in regard to expected capital market conditions, the Commission agrees with the Attorney General's arguments regarding interest rates and still agrees with its previous findings and will support models that utilize current interest rates and data.

The Commission is not persuaded by Kentucky-American's argument that a 10.75 percent ROE is reasonable. The Commission notes that Kentucky-American's argument regarding its capital expenditure program, environmental risks, and regulatory risks are factors that should be considered when determining a fair ROE is not persuasive. Kentucky-American has control over the amount and timing of its capital expenditures program and many of the other factors are mitigated through the use of a forecasted test year and Kentucky-American's QIP rider program, which is approved in this Order with modifications. Both mechanisms lower regulatory lag and allow for a timelier recovery of capital investments. Additionally, the Commission further reiterates that it continues to reject the use of flotation cost adjustments, financial risk adjustments, and explicit size

[155] Baudino Direct Testimony at 10-11.

[156] Case No. 2018-00281, *Electronic Application of Atmos Energy Corporation for an Adjustment of Rates* (Ky. PSC May 7, 2019), Order at 43-44.

[157] Case No. 2018-00358, June 27, 2019 Order at 64.

adjustments in the ROE analyses considering a business risk or size adjustment has not been approved previously.

The Commission notes that while it has previously allowed Kentucky-American's proxy group to utilize different types of utilities, including natural gas and electric, in previous rate cases, the argument that when determining the proxy group, the utilities possess similar operating and financial risk to that of Kentucky-American is flawed. The Commission acknowledges Kentucky-American's argument that the sample size for water utilities is relatively small, however, the Commission notes that gas and electric utilities assume and absorb far more financial, environmental, and regulatory risk than a water utility. While the distribution and operational characteristics of the natural gas utilities may be similar to that of a water, the market volatility and procurement process for energy resources of electric and gas utilities are far more unpredictable and pronounced. For example, when calculating the DCF and CAPM in this case, the dividend yields, betas, and CAPM ROE for electric and gas utilities are drastically higher when compared to the dividend yields, betas, and CAPM ROE for water utilities.[158] The Commission notes that the inclusion of gas and electric utilities in the proxy group tends to inflate the resulting ROE analyses over the results from a water utility only proxy group. In addition, gas and electric capital structure equity ratios are drastically higher than water utilities. The Commission finds that Kentucky-American should provide sufficient justification for continuing to include gas and electric utilities in its proxy group in its next base rate case. Kentucky-American's proposed 10.75 percent ROE is far above the industry average, the proxy group average of 9.51 percent, and is far greater than recent

[158] Bulkley Direct Testimony, Exhibit AEB-3 at 1 and Exhibit AEB-4 at 1-2.

returns awarded by this Commission and not in line with the Commission's objective to balance the needs of the utility and the customer.

For the reasons set forth above, the Commission finds that a ROE of 9.70 percent, which appropriately balances the needs of Kentucky-American and its customers and addresses the current economic state of the capital markets. Furthermore, this ROE is within the mean and median results of Kentucky-American's DCF models, is supported by Kentucky-American's revised DCF and CAPM models and is within the range of the DCF models presented by the Attorney General.

Total Revenue Requirement

The effect of the Commission's adjustments is a total revenue requirement increase of $10,606,517, as shown in Appendix A, which includes the return on equity (ROE) discussed above. This reflects a $15,445,482 decrease of Kentucky-American's requested revenue increase of $26,051,999.

Operating Revenues at Present Rates	114,849,344
Less Total Expenses	81,064,878
Present Rate Operating Income	33,784,465
Net Rate Base	489,426,491
Rate of Return	9.07%
Operating Income Required	44,390,983
Less: Present Rate Operating Income	33,784,465
Required Revenue Increase	10,606,517

COST-OF-SERVICE STUDY

Kentucky-American filed a cost-of-service study (COSS) using the base-extra capacity method as outlined in the American Water Works Association (AWWA), "Principles of Water Rates, Fees and Charges," (AWWA M1 Manual). The methodology

discussed in the AWWA M1 Manual is widely recognized within the water industry as an acceptable methodology for allocating costs.[159] The Commission notes that it previously accepted the use of this methodology for cost allocation and development of water service rates in Kentucky-American's previous rate case.[160] Therefore, the Commission finds the COSS to be acceptable for use as a guide in allocating the revenue increase granted herein.

However, the Commission notes that it has some concern in regard to the allocation of the Public Fire service. With Kentucky-American's proposed revenue increase, it reduced the Public Fire service revenue increase by $8,695,502 and allocated that amount between the other classes. The majority of the increase was allocated mostly between residential with an additional allocation amount of $6,669,926 and commercial with $1,668,650, overall increasing the residential and commercial's overall increase and the amount allocated to each class.[161] The COSS supported an approximate 200 percent increase to the Public Fire service.[162] Therefore, due to the changed allocation of the Public Fire service, the total revenue allocation of residential class is now 53.51 percent with a proposed 19.1 percent increase.[163]

In Case No. 2010-00036, the Commission found that allocating public fire hydrant service costs to general service rates also increases the likelihood that pricing signals will

[159] Application, Direct Testimony of Wesley E. Selinger (Selinger Direct Testimony) at 11-12.

[160] Case No. 2018-00358, June 27, 2019 Order at 67-68.

[161] Application, Exhibit 36 at 4. From the COSS the initial residential allocation was 48.68% and commercial allocation was 24.17%. However, the updated allocation with subsidizing the Public Fire service is 53.51% for residential and 25.38% for commercial.

[162] Application, Exhibit 36 at 4.

[163] Application, Exhibit 36 at 4. $73,793,458 / $137,898,823 = $53.51%.

be distorted, and public accountability will be lessened.[164] Additionally, the Commission also found that allocating public fire hydrant service costs to general service users effectively hides these costs from the public view and discussion and renders informed public decisions on the availability and appropriateness of such service more difficult.[165] Finally, the Commission determined in Case No. 2010-00036 that with a unified rate structure serves areas outside of Fayette County for which no fire protection service is provided, the potential exists that Kentucky-American customers who reside outside of Fayette County will be subsidizing through their rates fire protection services for Fayette County residents.[166] Kentucky-American provided no evidence to refute these previous findings.

While the Commission acknowledges that the COSS is used as a guide, it notes that Kentucky-American only stated that it has proposed a revenue increase to public fire consistent with the overall revenue increase requested in this case and that any additional revenue requirement for fire hydrants that is over and above the requested increase has been allocated back to other customer classes on the same basis as the revenue requirement for the metering cost category.[167] The Commission acknowledges that an approximate 200 percentage increase to one class is extremely high and unreasonable and would potentially create rate shock. However, the Commission disagrees with subsidizing the Public Fire service by such a substantial amount and allocating a large

[164] Case No. 2010-00036, Dec. 14, 2010 Order at 79.

[165] Case No. 2010-00036, Dec. 14, 2010 Order at 79.

[167] Selinger Direct Testimony at 23.

amount of the revenue to the residential class without sufficient evidence as to why it is reasonable to do so. Lack of any evidence otherwise, the Commission also still agrees with its concerns and findings in Kentucky-American's 2010 rate case regarding free/reduced public hydrant fees as discussed above. Therefore, the Commission will address the allocation of its approved revenue below.

RATE DESIGN

For all general water service, Kentucky-American separates customers by classification. Kentucky-American currently charges a monthly service charge and a flat volumetric fee that is varies only by meter size. Kentucky-American distinguishes the amount of the service charges only between residential users, and all other customers. The monthly meter charge is intended to recover the cost of customer facilities such as meters and services, and the cost of customer accounting, including billing and collecting and meter reading.[168] Each customer class then has a different volumetric charge for water per 100 gallons. The volumetric fee is intended to recover the cost of producing, transporting, and distributing the water.[169]

In developing its proposed rates, Kentucky-American used the COSS as the basis to propose an increase in the customer charge.[170] As seen in the table below, the COSS is less in most meter customer charges than those being proposed by Kentucky-American.

[168] Selinger Direct Testimony at 15.

[169] Selinger Direct Testimony at 15.

[170] Selinger Direct Testimony at 17.

Monthly Service Charge

Meter Size	Current Rate	COSS Rate	Proposed Rate
5/8”	$15.00	$18.00	$20.00
3/4”	$22.40	$23.46	$29.80
1”	$37.30	$37.27	$49.60
1 1/2”	$74.70	$65.14	$99.40
2”	$119.50	$100.79	$158.90
3”	$224.00	$188.12	$297.90
4”	$373.00	$287.24	$496.60
6”	$746.70	$561.61	$993.10
8”	$1,194.70	$892.29	$1,589.00
10”		$1,285.38	
12”		$2,378.79	

LFUCG raised the objection to the higher customer charges and argued that Kentucky-American has compounded the customer charges for the residential customers but also for the customers that use a meter larger than 1” meter.[171] As illustrated above, for meters 1” and larger the differences between the COSS and the proposed rates are even more pronounced. Additionally, LFUCG argues that the calculated monthly service charge is based upon the expenses allocated to the service charge from meter expenses, service expenses and customer service expenses.[172]

The Attorney General raised an objection to the increase being proposed by Kentucky-American to the residential monthly customer charge.[173] The Attorney General believes the increase will be a financial hardship to customers who are finding it difficult to pay their current utility bills.[174] Additionally, the Attorney General discussed the

[174] Attorney General’s Post-Hearing Brief at 37-38.

Commission's previous acceptance of gradualism, and this is a prime example where an increase of 33 percent should be such a time for the Commission to limit the increase to the COSS rate of $18.00.[175]

In its reply brief, Kentucky-American, argued that its forecasted revenue deficiencies indicate that an increase in both the volumetric charge and its monthly service charge is necessary so that it can gradually move its rate design towards a Straight Fixed Variable design.[176] Additionally, Kentucky-American noted that a change to one of the components will necessitate that the other component would need to be adjusted to offset the change.[177]

The Commission acknowledges LFUCG's argument that the proposed rates are out of line with the COSS. The Commission also acknowledges that the inherent fallacy in Kentucky-American's argument, that if one component is increased at a lower level than proposed, then the other component would need to be increased at a higher level than proposed.[178] Additionally, the Commission agrees with the Attorney General that the increase to the residential customer service charge is high for an increase to this customer classification. The Commission notes that while Kentucky-American argues that the proposed rates are within the range of reasonableness, the effect of the percentage increase over current charges are remarkably higher than the rates compared to the COSS rates, as illustrated above.

[175] Attorney General's Post-Hearing Brief at 38.

[176] Kentucky-American's Reply Brief at 14.

[177] Kentucky-American's Reply Brief at 14.

[178] Kentucky-American's Post-Hearing Brief at 14.

The Commission acknowledges that any alterations in the amount of the customer charge rates would necessitate a change in the volumetric rates and therefore the delicacy this represents to Kentucky-American and its customer's monthly bill. The Commission finds that the argument raised by LFUCG, and the Attorney General has some merit and should be considered. The Commission notes that the residential water sales from the test year should be increased from 5,748,449 to 5,810,000. Additionally, the Commission finds that with the reduction in the revenue requirement and the decrease to the water sales revenues from the base period to the test year, Kentucky-American's proposed allocation is reasonable with certain modifications.

With the Commission's approved revenue increase of $10,606,517 or 9.44 percent, the Commission will allocate an across-the-board percentage of its approved increase to all customer/service charges with the exception of the Fire service class. The Commission will then apply an approximate 10.75 percent to all volumetric charges including the Fire service class to offset the remaining revenue increase. Additionally, the Commission expects Kentucky-American in its next base rate case to provide sufficient evidence for subsidizing the Public Fire service by a substantial amount. The Commission also expects Kentucky-American to utilize the COSS as intended and attempt to move each class to its cost-to-serve in a reasonable and cost-effective manner.

The changes in the rates and in the revenue requirement found to be reasonable in this case results in the average bill for a residential customer using 3,800 gallons per month increasing by $4.45, from $40.77 to $45.08, or 10.94 percent with the inclusion of the QIP rate.

MODIFICATIONS TO QIP

In Case No. 2018-00358, the Commission approved the QIP and found that Kentucky-American established the need for an infrastructure replacement tariff due to its infrastructure deteriorating at a faster rate than the replacement rate.[179] In that proceeding, Kentucky-American stated that it would prioritize the replacement of cast iron and galvanized steel mains, which represented 15 percent of the distribution system but accounted for 64.2 percent of annual main breaks.[180]

In its application, Kentucky-American requested to expand the QIP from the current annual replacement of 10-13 miles of cast iron main to 27-34 miles of any type of main.[181] Kentucky-American asserted that while the existing scope of the QIP has allowed it to accelerate some replacement of its aging infrastructure, it is not sufficient to address the pace at which the aging infrastructure should be replaced to best serve the long-term interest of its customers.[182] Additionally, Kentucky-American explained that it currently replaces approximately 0.5 percent of its system annually through the QIP, which at that accelerated replacement rate would take nearly 204.5 years to replace the entire distribution system.[183] Kentucky-American explained that in order to replace the entirety of the system while keeping up with the pipe's life expectancy, the recommended rate is to replace 29 miles of main annually would be a replacement rate of 1.1 percent to 1.4 percent annually.[184]

[179] Case No. 2018-00358, June 27, 2019 Order at 83-84.

[180] Case No. 2018-00358, June 27, 2019 Order at 76.

[181] Application, Direct Testimony of Krista E. Citron (Citron Direct Testimony) at 2.

[182] Citron Direct Testimony at 5.

[183] Citron Direct Testimony at 9.

[184] Citron Direct Testimony at 7.

Kentucky-American explained that it utilizes a pipeline prioritization model (PPM) to help determine which mains should be replaced each year and that the criteria for consideration is low pressure, number of breaks/leaks, fire flow, age, material type, size of main, water quality, and customer impact.[185] Kentucky-American stated that it has continued grouping projects in geographical proximity to control the cost-per-foot and to assist with design and construction efficiency.[186]

In addition, Kentucky-American proposed that the first post-case QIP test period be the full eleven months following the forecasted test year, February 2025 to December 2025.[187] Kentucky-American also proposed to make its first Annual Filing at least 120 days prior to the commencement of this first QIP Period, by October 4, 2024, and that subsequent filings would be the first full 12 months.[188]

Kentucky-American explained that currently the return on net QIP-eligible plant in-service, at the overall rate of return on capital authorized in its previous base water rate case, is only grossed up for federal and state income taxes, and is therefore proposing that the return on net-QIP eligible plant in-service, at the overall rate of return on capital, be grossed up by applying the gross revenue conversion factor based on the previous rate case.[189] Kentucky-American asserted that by applying the gross revenue conversion factor to the return on component of the QIP revenue requirement is appropriate because

[185] Citron Direct Testimony at 10.

[188] Newcomb Direct Testimony at 20.

[189] Newcomb Direct Testimony at 21.

it accounts for the additional uncollectible and PSC fee expense it can expect to experience as a result of incremental QIP revenues.[190]

Kentucky-American proposed that the QIP percentage be calculated by dividing the QIP revenue requirement by the total authorized water revenue, then multiplied by number of days the QIP percentage will be in effect, and then divided by 365 days.[191] Kentucky-American explained that the total authorized water would continue to include meter fees, volumetric water sales, fire service fees, and public/private fire hydrants. Kentucky-American stated that this percentage calculation will yield a rate that is designed to recover from customers the QIP revenue requirement over the rate effective period but that the QIP Rider Surcharge would continue to be cumulative and remain in place until reset to zero on the effective date of new base rates.[192]

Kentucky-American explained that currently the Balancing Adjustment filings are made annually within 90 days after the conclusion of each completed QIP Period and is therefore proposing that the Balancing Adjustment Filings be filed contemporaneously with the annual filing for each completed QIP period with the intention of establishing a Balancing Adjustment after each QIP period.[193] Kentucky-American stated that it would continue to include a detailed listing of each qualifying QIP project completed and placed in service during the immediately preceding QIP period, including any project modifications resulting from changing priorities.[194]

[191] Newcomb Direct Testimony at 21.

[192] Newcomb Direct Testimony at 22.

[193] Newcomb Direct Testimony at 22.

[194] Newcomb Direct Testimony at 22.

The Attorney General/LFUCG does not support the continuation of the QIP.[195] The Attorney General/LFUCG argued that: Kentucky-American did not give thought to rate affordability; there is not a provision for the decline of the previous QIP investments rolled into rate based on what is established as base rates in the previous rate case; there is no consumer-protection mechanism; and Kentucky-American profits are enhanced.[196] The Attorney General/LFUCG noted that in the alternative, if the Commission does continue the QIP, it recommends including a depreciation offset to capture the decline in value associated with QIP rolled into rate base.[197]

Kentucky-American disagreed with the Attorney General/LFUCG stating the need for pipeline replacement is significant and the QIP is a well-suited mechanism for the cost recovery of that replacement.[198] Additionally, Kentucky-American argued that it has the advantages of faster but more gradual cost recovery which smooths out rate impacts for customers and the approval of the QIP in its 2018 rate case is one of the reasons it was able to avoid filing a rate case for over five years.[199]

In its post-hearing brief, Kentucky-American reiterated that while the existing scope of the QIP has allowed it to accelerate some replacement of its aging infrastructure, it is not sufficient to address the pace at which the aging infrastructure should be replaced to best serve the long-term interest of its customers.[200] Kentucky-American explained that

[199] Citron Rebuttal Testimony at 2.

[200] Kentucky-American's Post-Hearing Brief at 66.

expanding the QIP will smooth out rate impacts for customers and avoid rate shock, allow for a faster but more gradual cost recovery, enable Kentucky-American to avoid rate cases frequently, and allow the Commission a greater opportunity to examine pipeline replacement projects with more detail than would typically occur in a general rate case.[201]

In its post-hearing brief, the Attorney General argued that the Commission should deny Kentucky-American's request to expand the QIP because the proposed expansion will cost approximately $177 million from 2025 to 2028 which would be over-bearing to customers and that the cost per mile to replace the infrastructure flowing through the QIP has drastically increased.[202] The Attorney General reiterated that if the Commission allows for the continuation of the QIP, the Attorney General recommends implementing a depreciation offset to capture the decline in value of those QIP investments rolled into base rates, rather than only recognizing the effect of the accumulated depreciation for investments currently being recovered through the QIP.[203]

In its post-hearing brief, LFUCG stated that Kentucky-American has not demonstrated that the implementation of the QIP has improved Kentucky-American's non-revenue water percentages and questions if the QIP is necessary in order to continue to replace, maintain, and upgrade its infrastructure to ensure that Kentucky-American continues to provide safe and reliable service.[204] LFUCG asserted that if the QIP is necessary for Kentucky-American to replace the mains in order to maintain safe and

[201] Kentucky-American's Post-Hearing Brief at 70-71.

[202] Attorney General's Post-Hearing Brief at 29-30.

[203] Attorney General's Post-Hearing Brief at 32.

[204] LFUCG's Post-Hearing Brief at 8.

reliable service, it should have been annually replacing more than 2.5 miles of main from 2013 to 2017 even without the QIP. Rather, Kentucky-American did not accelerate main replacement under "traditional" ratemaking mechanisms and only did so upon implementation of the QIP.[205] Therefore, LFUCG recommended that the Commission deny the expansion of the QIP.[206]

It is well established that KRS 278.030 and KRS 278.040 expressly grant the Commission plenary ratemaking authority to regulate and investigate utilities and to establish fair, just and reasonable rates.[207] In the absence of any statute that requires a particular procedure to determine whether rates are fair, just and reasonable, the Commission has the authority to consider and decide ratemaking issues such as the QIP and any expansions or modifications proposed by Kentucky-American and that the same statutory authority that permits the Commission to authorize a QIP also grants the authority to terminate or limit the QIP.[208]

The Commission acknowledges Kentucky-American's argument that aging water system infrastructure is an issue with utilities, customers, and regulators across the nation. Specifically, as noted in the case record, the Kentucky Section of the American Society of Civil Engineers issued a 2019 Report Card for Kentucky's Infrastructure that explains that Kentucky has an estimated funding need of $8.2 billion to address drinking

[205] LFUCG's Post-Hearing Brief at 9.

[206] LFUCG's Post-Hearing Brief at 10.

[207] *Public Serv. Comm'n v. Commonwealth ex. Rel. Jack Conway*, 324 S.W .3d 373, 383 (Ky. 2010).

[208] *Public Serv. Comm'n v. Commonwealth ex. Rel. Jack Conway*, 324 S.W .3d 373, 383 (Ky. 2010). *See* Case No. 2018-00358, June 27, 2019 Order at 80.

water infrastructure.[209] This Commission is cognizant of the need to prudently and timely replace aging infrastructure to provide adequate, efficient, and reasonable water service to customers. The Commission notes that it also has a statutory duty to protect ratepayers from excessive rates.

Therefore, based upon the case record and being otherwise sufficiently advised, the Commission is not persuaded by Kentucky-American's arguments regarding expanding the QIP and finds that it should be denied. In Case No. 2021-00090 the Commission stated, "[a]ny future deviations from the QIP approved by the Commission, such as an accelerated replacement cycle, accelerated spending totals, or including standalone non-main plant replacement projects, will be looked upon with extreme disfavor".[210] Additionally, in that same case, the Commission stated that, "[a]ny future requests to include replacement of non-main plant other than plant replaced incidental to the replacement of aging main will be looked upon with extreme disfavor."[211] The Commission expressed its concern and skepticism about the QIP in Case No 2021-00090 and Kentucky-American failed to recognize the import of the Commission's language. The Commission is concerned that Kentucky-American's disregarded previous Commission findings and therefore questions Kentucky-Americans long-term plans and intentions for the QIP. The QIP has appeared to compound Kentucky-American's lack of ability to accurately forecast construction expenditures year-over-year. The Commission

[209] Citron Direct Testimony at 2.

[210] Case No. 2021-00090, *Electronic Application of Kentucky-American Water Company to Amend Tariff to Revise Qualified Infrastructure Program Charge* (Ky. PSC June 21, 2021), Order at 12.

[211] Case No. 2021-00090, *Electronic Application of Kentucky-American Water Company to Amend Tariff to Revise Qualified Infrastructure Program Charge* (Ky. PSC June 21, 2021), Order at 14.

is concerned that the QIP has not produced a reduction in water loss in the first four years of implementation. To the extent that the pipeline eligible for recovery poses a safety risk to the utility's customers, service areas, and employees, the Commission has allowed accelerated replacement and would carefully consider any proposals by Kentucky-American. Additionally, the Commission notes that Kentucky-American has the burden to provide sufficient evidence and testimony that pipeline acceleration is reasonable. Kentucky-American failed to provide sufficient evidence that expanding the QIP is reasonable, and the potential future costs associated with the expansion are fair, just and reasonable and would not cause rate shock to its customers.

The Commission notes that the QIP was designed to address high-failure pipes within the system, not to replace the traditional approach of replacing infrastructure through the normal course of business. The Commission reiterates that the QIP is designed to operate within specific parameters as described above and the Commission has no interest, at this time, for any deviation from the QIPs parameters established in the 2018 rate case and subsequent QIP proceedings. The Commission cautions Kentucky-American that proposing multiple modifications to the QIP causes unnecessary changes and potential confusion to the mechanism and is not consistent with the Commission's intentions in approving the QIP. The QIP is an infrastructure program which allows the Commission to balance Kentucky-American's need to make prudent infrastructure replacement investments and to ensure that ratepayers receive adequate, efficient, and reasonable water service, and the mandate that rates be fair, just and reasonable. The Commission has an expectation for Kentucky-American to operate the QIP within the parameters that were set in the 2018 rate case and that should any future

modifications arise, Kentucky-American should defer those proposals to its QIP Rider Surcharge true-ups rather than the rate case. The Commission reiterates that any future deviations from the QIP will be looked upon with extreme disfavor.

The Commission acknowledges that there are some modifications that could make the QIP easier to calculate and allow for a more thorough Commission review. The Commission agrees with Kentucky-American's proposal that the return on net-QIP eligible plant in-service, at the overall rate of return on capital be grossed up by applying the gross revenue conversion factor based on the previous rate case and should be approved. The Commission notes that the return on net-QIP eligible plant in-service should be utilizing the gross WACC rather than the ROE component for the overall rate of return. The Commission also agrees with Kentucky-American's proposal that the QIP percentage be calculated by dividing the QIP revenue requirement by the total authorized water revenue then multiplied by number of days the QIP percentage will be in effect and then divided by 365 days (366 days in a leap year) and should be approved. Lastly, the Commission agrees that the Balancing Adjustment Filings be filed contemporaneously with the annual filing for each completed QIP period with the intention of establishing a Balancing Adjustment after each QIP period and should be approved. The Commission notes that Kentucky-American's proposal that the first post-case QIP test period be the full eleven months following the forecasted test year in this case, and the subsequent annual filings would follow a similar schedule, is moot considering the Commission is denying rolling the QIP in rate base.

ALTERNATIVE LEVEL OF UNACCOUNTED FOR WATER LOSS

Kentucky-American requested that the Commission establish an alternative level of reasonable unaccounted-for water loss of 20 percent for rate-making purposes. Kentucky-American stated that its current extensive water loss control interventions and limited ability to manage and influence Special Connections' water loss provide a justifiable showing as to why an alternate level should be approved pursuant to 807 KAR 5:066, Section 6(3).[212]

Kentucky-American argued that a deviation of 20 percent is reasonable because it would satisfy the regulatory policy goal of incentivizing Kentucky-American to continue promoting efficient management as demonstrated by Kentucky-American's robust water loss control programs and it is more appropriately tailored to the system specific challenges.[213] Kentucky-American also stated that it has taken the following steps to mitigate and reduce water loss: pressure management; accelerated infrastructure replacement; active leak detection; rapid response to breaks; fire service and water loss audits; large metering testing; and profiling.[214] Kentucky-American further argued that other water utilities across the state utilize a water loss surcharge mechanism as an alternative approach to recover water loss expenses in excess of fifteen percent.[215] Additionally, Kentucky-American recently reached an agreement to outsource water line location requests which results in Kentucky-American being able to re-dedicate four employees to specialize in addressing non-revenue water (NRW) loss beginning in

[212] Lewis Direct Testimony at 38-39.

[213] Kentucky-American's Post-Hearing Brief at 37.

[214] Lewis Direct Testimony 31-34.

[215] Kentucky-American's Response Brief at 13.

January 2024.[216] Kentucky-American's primary reason for the requested deviation is because many of special connections, which make up 4 percent of the distribution system, have multiple valve connections with Kentucky-American mains.[217] Kentucky-American further argued that it is unable to repair or replace mains if leaks occur in Special Connections as it does not have legal access to the property and argued that it is unable to accurately track and prevent unauthorized use of privately owned fire hydrants and unauthorized connections to be metered between the connection to Kentucky-American's water distribution system and the downstream individual unit meters.[218] Kentucky-American argued that there is no uniform approach to combating water loss, that it should not be held to unrealistic standards for unaccounted-for water loss for rate making purposes, and that it has met its burden of proving the current threshold for unaccounted-for water loss of 15 percent is unreasonable in as applied to their circumstance and that 20 percent is a reasonable deviation.[219] However, Kentucky-American noted that there is no formal plan for addressing water loss for the special connections.[220]

The Attorney General stated that it is unaware of any water utility in the state that has received a deviation for unaccounted-for water loss and Kentucky-American was unable to provide one.[221] Additionally, the Attorney General argued that it would be

[219] Kentucky-American's Post-Hearing Brief at 41.

[220] Kentucky-American's Response to Attorney General's Second Request for Information, Item 21.

[221] Attorney General's Post-Hearing Brief at 13.

unreasonable for a large, sophisticated, investor-owned company to be allowed a 20 percent unaccounted-for water loss while smaller, less sophisticated water districts and water associations are held to the established 15 percent unaccounted-for water loss standard.[222] The Attorney General argued that Kentucky-American performed limited surveys on the special connections water loss issue and that Kentucky-American admitted to not having implemented any formal plan to address this issue.[223] The Attorney General further asserted that it would be unfair to require the customer base to pay increased water rates when Kentucky-American alone has the ability to rectify the significant unaccounted-for water loss associated with the special connection customers.[224]

LFUCG argued that Kentucky-American has not produced sufficient evidence to support a special exemption for Kentucky-American that would separate Kentucky-American from other water utilities, many of which provide service in mountainous territory that presents unique challenges.[225] LFUCG further argued that, regardless of the source of its water loss, it is prudent for Kentucky-American to investigate water loss while still considering the cost benefit analysis in its decision making.

Pursuant to 807 KAR 5:066, Section 6(3), Kentucky-American has the burden of proof to establish that an alternative threshold for unaccounted-for water loss is more reasonable than the regulatory standard of 15 percent. Kentucky-American has not

[222] Attorney General's Post-Hearing Brief at 13.

[223] Attorney General's Post-Hearing Brief at 14.

[224] Attorney General's Post-Hearing Brief at 14.

[225] LFUCG's Post-Hearing Brief at 10.

shown good cause to explain why their water loss has continually increased, nor has it shown strong evidence that the special connections are as significant of a contributor to the water loss issue as it has claimed. Despite continuous increases in water loss percentages in the last seven years, the Commission notes that Kentucky-American has not developed a formal plan for identifying the source of increasing water loss or reducing water loss. Kentucky-American brought no request for additional resources into this case either through additional personnel or equipment. This signals to the Commission that Kentucky-American does not appear to take the increasing water loss as a serious matter. This is a cause for serious concern. In 2019, the Commission established Case No. 2019-00041 to investigate jurisdictional water utilities that recorded water loss of more than 35% in their most recent annual reports. The Commission found in 2019 that "[a] water utilities inability to reduce excessive water loss over time is a symptom of other significant problems plaguing the utility, such as poor financial management and operational practices."[226] The Commission previously denied a similar request in Kentucky-American's last general rate case, Case No. 2018-00358.[227] Additionally, the Commission notes that Kentucky-American's unaccounted-for water loss has been nearly 20 percent since 2018. Specifically, the unaccounted-for water loss percentage historically has been as follows:[228]

Kentucky-American's Water Loss Percentage

[226] Case No. 2019-00041, *Electronic Investigation into Excessive Water Loss by Kentucky's Jurisdictional Water Utilities* (Ky. PSC Nov. 22, 2019), final Order, Appendix L, An Investigative Report by the Kentucky Public Service Commission, November 2019, at ii.

[227] Case No. 2018-00358, June 27, 2019 Order.

[228] Lewis Direct Testimony at 36-37.

Year	Unaccounted-for-Water Loss Percentage
2018	19.95%
2019	21.10%
2020	20.47%
2021	21.09%
2022	21.59%

The Commission further notes that the last time Kentucky-American was in compliance with 807 KAR 5:066, Section 6(3) was in 2015, when Kentucky-American had unaccounted for water loss of 14.4283 percent.[229]

While Kentucky-American is now dedicating four employees to address NRW loss as of January 2024, the Commission notes that there does not appear to have been any prior effort to address water loss issues until the beginning of 2024, after this case was established.[230] The Commission agrees with the Attorney General that it would be unreasonable for a large, sophisticated, investor-owned company to be allowed a 20 percent unaccounted-for water loss while smaller, less sophisticated water districts and water associations are held to the established 15 percent unaccounted-for water loss standard and is dismayed that Kentucky-American requested this deviation in consecutive cases without any effort to address water loss. While Kentucky-American pointed out that the Commission has authorized water loss surcharge mechanisms, the purpose of those mechanisms is to provide water utilities adequate financial resources to address excessive water loss. Those surcharge mechanisms require specific plans to address water loss and all expenditures from those revenues must be individually

[229] *Annual Report of Kentucky-American to the Public Service Commission for the Calendar Year Ended December 31, 2015* (2015 Annual Report) at 61.

[230] Kentucky-American's Post-Hearing Brief at 37.

approved by the Commission – the mechanisms are not simply an alternative approach to recover water loss revenues in excess of 15 percent. The Commission also agrees with the Attorney General and LFUCG that Kentucky-American has failed to meet its burden of proof, and therefore finds that Kentucky-American's proposed alternative 20 percent threshold should be denied. Additionally, as discussed above, the Commission will make an adjustment related to the unaccounted-for water loss above 15 percent and remove it from the revenue requirement.

ACCOUNTING DEFERRAL

Kentucky-American is requesting authority to defer the amount above or below base rates for production expenses, pension, and other post-employment benefits (OPEB) expenses, taxes other than income (excluding sales tax), and income taxes.[231] Kentucky-American proposed to recover the regulatory deferrals in its next base rate case and stated that it is not asking for carrying charges.[232]

As the Commission noted in Case No. 2008-00436:

> A regulatory asset is created when a rate-regulated business is authorized by its regulatory authority to capitalize an expenditure that under traditional accounting rules would be recorded as a current expense. The reclassification of an expense to a capital item allows the regulated business the opportunity to request recovery in future rates of the amount capitalized. The authority for establishing regulatory assets arises under the Commission's plenary authority to regulate utilities under KRS 278.040 and the Commission's authority to establish a system of accounts under KRS 278.220. Historically, the Commission has exercised its discretion to approve regulatory assets where a utility has incurred: (1) an extraordinary, nonrecurring expense which could not have reasonably been anticipated or included in the utility's

[231] Newcomb Direct Testimony at 24.

[232] Newcomb Direct Testimony at 24–25.

> planning; (2) an expense resulting from a statutory or administrative directive; (3) an expense in relation to an industry sponsored initiative; or (4) an extraordinary or nonrecurring expense that over time will result in a saving that fully offsets the cost.[233]

By definition, a regulatory liability works in reverse of a regulatory asset, creating a capitalized liability to be returned to customers in future rates in the amount capitalized. Kentucky-American requested authority to establish a regulatory asset/liability for production expenses to defer the difference from base rates for fuel and power, chemicals, waste disposal, and purchased water.[234] Kentucky-American argued that these expenses are volatile and outside of Kentucky-American's control and that water utilities that purchase water are afforded similar protections.[235] For pension and OPEB expenses, Kentucky-American explained that the level of fluctuation in these expenses from year to year can change drastically based on market fluctuations and the factors used to calculate the expenses.[236] Kentucky-American argued that taxes other than income are incurred resulting from statutory or administrative directive.[237] Kentucky-American also explained that it appeals its property tax assessments to lower its property tax bill on a regular basis and that its customers should benefit from appeals that are successful.[238] Finally, Kentucky-American requested preemptive authority to defer any

[233] Case No. 2008-00436, *The Application of East Kentucky Power Cooperative, Inc. for an Order Approving Accounting Practices to Establish a Regulatory Asset Related to Certain Replacement Power Costs Resulting from Generation Forced Outages* (Ky. PSC Dec. 23, 2008), Order at 3–4.

[238] Newcomb Direct Testimony at 33.

changes to income taxes or accumulated deferred income taxes resulting from federal or state tax rate changes, which Kentucky-American classified as from a statutory or administrative directive.[239]

The Attorney General argued that the Commission should deny Kentucky-American's request to grant regulatory accounting treatment for specific expenses, namely, production expenses, pension and OPEB expenses, and expenses related to taxes other than income (excluding sales tax) and income taxes because it would not lead to fair, just and reasonable rates for the customers.[240] The Attorney General argued that the tracking mechanisms that Kentucky-American requests should be denied first, because the production expense, OPEB expense, and various tax expenses are normal and regular expenses that every large water utility company will incur, and therefore should be included in the rates as normal.[241] The Attorney General stated that if Kentucky-American experiences a specific extraordinary level of expenses associated with any of these specific expenses then it has the ability to file a general rate case or file a separate regulatory asset case.[242]

The Attorney General argued that Kentucky-American's request to establish the regulatory assets are not in compliance with Commission precedent.[243] The Attorney

[239] Newcomb Direct Testimony at 35.

[240] Attorney General's Post-Hearing Brief (filed Jan. 5, 2024) at 37.

[241] Attorney General's Post Hearing Brief at 35.

[242] Attorney General's Post Hearing Brief at 36.

[243] Attorney General's Post Hearing Brief at 36; *See* Case No. 2008-00436, *The Application of East Kentucky Power Cooperative, Inc. for an Order Approving Accounting Practices to Establish a Regulatory Asset Related to Certain Replacement Power Costs Resulting from Generation Forced Outages* (Ky. PSC Dec. 23, 2008), Order at 4.

General argued that production expenses, OPEB expenses, and expenses related to taxes other than income (excluding sales tax) and income taxes are recurring, normal expenses, there are no specified new statutory or administrative policies dictating increases to these costs, the request is not the result of industry-sponsored initiatives, and the costs will not eventually be offset by a specific stream of cost savings.[244]

The Attorney General asserted that Kentucky American's request for deferral accounting of production expenses, OPEB expense, and expenses related to taxes other than income (excluding sales tax) and income taxes would be reviewing these expense line items in isolation, and fails to consider that there may be cost offsets in other areas that should be applied, or that there may be offsetting revenues resulting from customer growth, improved efficiencies, etc.[245] The Attorney General also argued that if regulatory asset deferral were allowed for these specific expenses then it could disincentivize cost controls.[246]

Having reviewed the record and being otherwise sufficiently advised, the Commission finds that the proposed deferrals should be denied because the variance in these expenses are immaterial to Kentucky-American's financial position and are outside the categories previously approved for regulatory asset treatment. Specifically, production, pension, and OPEB expenses are recurring expenses that can be included in Kentucky-American's planning. Furthermore, an expense resulting from a statutory or administrative directive is incurred in pursuit of complying with those directives. If a tax

[244] Attorney General's Post Hearing Brief at 36.

[246] Attorney-General's Post Hearing Brief at 37.

code were a statutory or administrative directive that justified the treatment of that expense as a regulatory asset, then any utility's tax expenses could fit within that standard, which would be unreasonable.

UNIVERSAL AFFORDABILITY TARIFF

Kentucky-American proposed a Universal Affordability Tariff which would provide basic service at two percent or less of annual household income based on the Federal Poverty Level.[247] The Universal Affordability Tariff includes multiple tiers of discounts based on different levels of household income stated as multiples of the Federal Poverty Level (FPL).[248] A 60 percent discount would be available for customers with income up to 50 percent of the FPL and a 20 percent discount would be available for customers with income between 50 percent and 100 percent of the FPL.[249] Discounts would be available on both the 5/8-inch meter charge and the volumetric charges for water service.[250] Kentucky-American anticipated a 10 percent participation level which would result in an approximately $116,000 discount that will be rolled directly into base rates.[251] Residential customers would pay for the cost of the expected discounts, which is approximately $0.02 per thousand gallons.[252]

Kentucky-American argued the Universal Affordability Tariff meets KRS 278.170 because the statue allows for reasonable preferences and advantages and reasonable

differences between classes.[253] Kentucky-American conducted an analysis under its current rate design and concluded that usage data and customer demographics data show there is a positive correlation between household income and the seasonal use of water i.e., communities with higher household incomes and customers in those communities have more discretionary seasonal use of water than communities with lower household incomes.[254] Kentucky-American also stated that lower income customers generally only use Basic Water Service and do not use water for discretionary purposes in the summertime to the extent that of higher income customers.[255] The analysis concluded that under the current rate design that lower income customers are subsidizing higher income customers.[256] Kentucky-American argued that the affordability assessment, rate design analysis, and cost-of-service analysis provides all factual support necessary to target bills for all residential customers at two percent of household income or less without unduly discriminating against any customer group.[257]

The Attorney General argued that the Universal Affordability Tariff is a violation of law and leads to inequitable results for residential customers.[258] The Attorney General pointed out that Kentucky-American will utilize a third party vendor to conduct income verification and to manage the proposed Universal Affordability Tariff program.[259] This

[259] Attorney General's Post-Hearing Brief at 32.

would include administrative costs of the program in future revenue requirements to be paid for by customers and that neither shareholders nor American Water will be subsidizing the proposed Universal Affordability Tariff.[260] The Attorney General stated this will result in all discounts being exclusively paid for by the rest of Kentucky-American's residential customers through higher water rates.[261] The Attorney General argued that discounted rates should be denied as a matter of law and that KRS 278.030 does not explicitly permit the establishment of a customer classification based upon income level, thus the Commission is not authorized to create a separate rate class for low-income residential customers apart from the general residential customer class.[262] The Attorney General was concerned that the Universal Affordability Tariff will produce an unreasonable preference or advantage for customers who are entitled to the discounted water rates because they make $1 less than another customer.[263]

LFUCG supports Kentucky-American's proposed Universal Affordability Tariff and raised no objections.[264]

The Commission finds that there is insufficient evidence in support of the Universal Affordability Tariff to establish a new customer class based solely on income and doing so would be a violation of KRS 278.170. Kentucky-American argued that discounts based on different levels of household income stated as multiples of the Federal Poverty Level is a reasonable difference which the Commission can permit because the tariff discount

would be based on federal guidelines that determine eligibility for many federal and other assistance programs and the cost impact of the program is minimal.[265] KRS 278.170(1) does not grant the Commission authority to distinguish between a customer class based on income regardless of whether the Federal Poverty Level is used or some other arbitrary income level. Kentucky-American has provided no authority that would allow for such a distinction.

The Commission acknowledges Kentucky-American's attempt to distinguish residential customers based on usage but the findings from the study are not convincing. The analysis conducted by Kentucky-American involved customer data from an American Water subsidiary in St. Louis.[266] However, none of the information used involved Kentucky-American customers. Additionally, no other factors were considered in the analysis, only the average income level of an area and the usage of that area. Kentucky-American did not consider any additional factors that could influence usage. The study did not provide any significant empirical data to justify creating a new residential customer class.

The Commission notes that while Kentucky-American claimed there would be a minimal cost impact to customers,[267] it failed to provide any shareholder contribution. The Commission has previously held that "if a proposed assistance program is to be more than merely a transfer of income from one customer group to another, the utility must also

[265] Kentucky-American's Response to Staff's Second Request, Item 69.

[266] Hearing Video Transcript of December 11, 2023 Hearing, Testimony of Charles Rea 11:55:56-11:56:44.

[267] Rea Direct Testimony at 24.

make significant contributions."[268] The Commission is not persuaded that Kentucky-American's proposed Universal Affordability Tariff is anything more than a transfer of income from one customer group to another. The Commission also notes that Kentucky-American has the H2O Program that carried a balance of $163,000 as of October 1, 2023, and can be utilized by customers if needed.[269] For the reasons stated above, the Commission finds that Kentucky-American's Universal Affordability Tariff should be denied.[270]

ADDITIONAL TARIFF CHANGES

Cross-Connection Revisions

Kentucky-American proposed to revise the section of its tariff pertaining to cross-connections. Kentucky-American's current tariff prohibits cross-connections unless an acceptable form of protection against contamination by backflow into the water distribution system is provided by a testable backflow prevention assembly.[271] The tariff

[268] *See*, e.g., Case No. 2001-00323, *Joint Application of Louisville Gas and Electric Company, Metro Human Needs Alliance, People Organized and Workers for Energy Reform, Kentucky Association for Community Action, and Jefferson County Government for the Establishment of a Home Energy Assistance Program* (Ky. PSC Dec. 27, 2001) *and* Case No. 2004-00103*, Adjustment of the Rates of Kentucky-American Water Company* (Ky. PSC Feb. 28, 2005).

[269] Kentucky-American's Response to Commission Staff's Third Request for Information (Staff's Third Request) (filed Sept. 21, 2023), Item 20c.

[270] The PSC has routinely found that it cannot establish different residential rates based upon a customer's income level. *See, e.g.,* 2000 WL 309957, Case No. 1998-00474, *The Application of Kentucky Utilities Company for Approval of an Alternative Method of Regulation of Its Rates and Service*, (Ky. PSC Jan 7, 2000), q*uoting* Case No. 1991-00066, *Application for Adjustment of Electric Rates of Kentucky Power Company*, (Ky. PSC Oct. 31, 1991) at 7. ("If income alone were to be recognized as a reasonable consideration for establishing customer classifications and rates, not only low income, but also middle and high incomes would need to be recognized. If it is appropriate to provide utility service to low income customers at reduced rates, service to high income customers should be at premium rates.") *See also* Case No. 1991-00066, *citing Gainesville Utilities Dept. v. Florida Power Corp.,* 402 U.S. 515, 528 (1971). ("But focus on the willingness or ability of the purchaser to pay for a service is the concern of the monopolist, not of a governmental agency charged both with assuring the industry a fair return and with assuring the public reliable and efficient service, at a reasonable price.").

[271] P.S.C. Ky. No. 9 First Sheet No. 14 (issued Nov. 28, 2018), effective June 29, 2019.

stated that acceptable forms of protection must comply with all applicable state and local requirements and be approved by Kentucky-American, that the protective device be installed and maintained in good working condition at the expense of the customer, and that the protective device be subject to testing and approval of Kentucky-American prior to being placed into service, and at such times thereafter as may be deemed necessary by Kentucky-American.[272] Any cross-connection, which is in violation of the rules, is required to be removed or corrected and failure of a customer to do so could result in termination of water service.[273]

Kentucky-American proposed adding language that "the customer shall be responsible for the entire expense of such testing, including, but not limited to, expenses and fees a third party may charge for performing the testing and submitting the test results in the Company electronically or otherwise."[274] Kentucky-American stated that it has considered using a third-party contractor, Backflow Solutions, Inc. (BSI) to facilitate the administration of cross-connection backflow certification program, including managing tester certification, test kit calibration, and allowing a switch to online portals, which will reduce the mailing of physical letters.[275] Kentucky-American stated that these tasks are currently handled by its cross-connection team, and that hiring a third-party contractor would allow Kentucky-American's employees to focus on other important tasks.[276] Kentucky-American argued that customers are already responsible for expenses

[272] P.S.C. Ky. No. 9 First Sheet No. 14 and No. 15 (issued Nov. 28, 2018), effective June 28, 2019.

[274] Application, Exhibit 2 at 16-17.

[275] Kentucky-American's Post-Hearing Brief at 58.

[276] Kentucky-American's Post-Hearing Brief at 59.

associated with "providing, installing, and maintaining BFAs (backflow assemblies)" and that the language is being added to clarify to customers that they are responsible for those expenses, including third party expenses.[277]

Neither the Attorney General nor the LFUCG submitted testimony or made arguments addressing the changes to the cross-connection portion of Kentucky-American's tariff.

Based upon a review of the tariff filing and being otherwise sufficiently advised, the Commission finds that Kentucky-American's proposed revisions are not fair, just or reasonable, and should be denied for the following reasons. The proposed revisions appear to move the testing and approval from Kentucky-American, to a scheme required by Kentucky-American. Customers would then be subject to costs and expenses charged by a third party, with such charges not subject to Commission jurisdiction. Such concern is amplified by the fact that Kentucky-American has indicated that a customer's service would be terminated if they did not follow the proposed procedure. The current tariff language allows customers to choose their own third party for testing. While customers still may be able to do so under the proposed tariff, another layer has been added which could subject customers to additional fees. Additionally, Kentucky-American provided no support for benefit to customers as a result of the change. The Commission has not been persuaded by the evidence in this application and holds its previous position that these changes to Kentucky-American's cross-connection policy should be denied.[278]

Other Tariff Changes

[277] Kentucky-American's Post-Hearing Brief at 59.

[278] Case No. 2022-00425, *Electronic Tariff Filing of Kentucky-American Water Company to Revise Its Cross-Connection Policy* (Ky. PSC Dec. 22, 2022), Order.

Kentucky-American proposed several textual revisions to its tariff. Neither the Attorney General nor LFUCG submitted testimony or argued against these textual changes. The first text change is within Service Classification No. 6. changing the classification title from Hidden Leak Adjustment Rate to Service Line Adjustment Rate and expanding the availability of service from residential and commercial customers to residential, commercial, and OPA customers.[279] Within the terms and conditions, the first two sentences are changed from "a hidden underground leak is defined as a leak in the customer service line between the meter and the premises. Hidden underground leak adjustments will be granted to residential and commercial customers"[280] to "a service line leak is defined as a leak in the customer service line between the meter and the premises. Service line leak adjustments will be granted to residential, commercial, and OPA customers."[281]

The next change is a text revision to Rule 3.3(c), changing the bills for private fire hydrants from quarterly to monthly.[282] The updated language proposed was "Bills for private fire hydrants shall be payable *monthly* in advance, except for the changes for private fire hydrant service shall be payable as set forth in Rule 11."[283]

[279] Application, Exhibit 2 at 46.

[280] P.S.C. Ky. No. 9 First Sheet No. 44 (issued Nov. 28, 2018), effective June 28, 2019.

[281] Application, Exhibit 2 at 46.

[282] P.S.C. Ky. No. 9 First Sheet No. 8 (issued Nov. 28, 2018), effective June 28, 2019, and Application, Exhibit 2 at 10.

[283] Application, Exhibit 2 at 10.

Kentucky-American also proposed a text change to Rule 6.1(b), adding the wording private detector devices and private service line Meters.[284] The proposed update was:

> All Meters, except *private* detector devices and/or *private* service line Meters, will be installed, maintained, and replaced by; and at the expense of the Company, but in the case of damage to such Meters by reason of any act, neglect, or omission on the part of the Customer (such as damages occasioned by accident or misuse or purposeful actions) the Customer shall pay to the Company the cost of is repair on presentation of bill therefore.[285]

Kentucky American's proposed text revisions and deletions to Rule 10.3(a)(v) for the term "current estimated cost" that the estimated cost of installing each type of appurtenant related facility will be based upon current materials costs, bids received, and other current project data.[286] Specifically, the updated tariff removes the following language:

> During the first quarter of each year, Company will determine from its records its actual average cost per foot, during the preceding calendar year, of construction and installation of all sizes and grades of water mains for which the construction projects have been completed during such calendar year, together with its average cost during such calendar year of installing each type and size of related facility for which construction has been completed during such year. [287]

Kentucky-American proposed the following updated language:

> The term "current estimated cost" as used herein shall mean that sum determined by Company as the estimated cost of installing one foot of water main, together with that sum

[284] Application, Exhibit 2 at 14.

[285] Application, Exhibit 2 at 14.

[286] Application, Exhibit 2 at 14.

[287] P.S.C. Ky. No. 9 First Sheet No. 21 (issued Nov. 28, 2018), effective June 28, 2019.

> determined by Company as the estimated cost of installing each type of appurtenant related facility *based upon current materials costs, bids received, and other current project data*. Such average cost per foot and such average cost per appurtenant facility shall be deemed to be the "current estimated cost" for such mains and facilities during the twelve-month period immediately following such determinations, it being contemplated that the current estimated cost will be revised annually in order to keep same as current as practicable.[288]

Additionally, Kentucky-American proposed to clarify text revisions to Rule 11.1(g) that meter or detector device refers to private fire meter or private detector device.[289] Specifically, Kentucky-American proposed to change the last sentence of Rule 11.1(g) to "The *private* fire meter or *private* detector device will be maintained by the Company, but at the expense of the Customer."[290]

Lastly, Kentucky-American proposed to move Judy Water Association as a standalone customer in its tariff into the general Sale for Resale customer class.[291]

The Commission has reviewed the requested changes and language revisions and finds that they are reasonable and should be approved.

IT IS THEREFORE ORDERED that:

1. The rates and charges proposed by Kentucky-American are denied.

2. The rates and charges, as set forth in Appendix B to this Order, are approved as fair, just and reasonable rates for Kentucky-American, and these rates and charges are approved for service rendered on and after February 6, 2024.

---

[288] Application, Exhibit 2 at 14 of 65.

[289] P.S.C. Ky. No. 9 Original Sheet No. 26 (issued June 30, 2023), effective July 30, 2023.

[290] P.S.C. Ky. No. 9 Original Sheet No. 26 (issued June 30, 2023), effective July 30, 2023.

[291] P.S.C. Ky. No. 10 Original Sheet No. 30 (issued June 30, 2023), effective July 30, 2023.

3. Within 60 days of the date of service of this Order, Kentucky-American shall refund to each customer all amounts collected from that customer in excess of the rates approved in this Order for service rendered on or after February 6,2024, through the date of entry of this Order.

4. Kentucky-American shall pay interest on the refunded amounts at the average of the Three-Month Commercial Paper Rate as reported in the Federal Reserve Bulletin and the Federal Reserve Statistical Release on the date of this Order. Refunds shall be based on each customer's usage while the proposed rates were in effect and shall be made as a one-time credit to the bills of current customers and by check to customers that have discontinued service since February 6, 2024.

5. Within 75 days of the date of this Order, Kentucky-American shall submit a written report to the Commission in which it describes its efforts to refund all monies collected in excess of the rates that are set forth in Appendix B to this Order.

6. Any documents filed with the Commission pursuant to Ordering Paragraph 5 shall be filed in the post-case documents in this case.

7. Kentucky-American's proposed depreciation rates are approved.

8. Kentucky-American's proposed deferrals are denied.

9. Kentucky-American's proposed expansion of its QIP is denied.

10. Kentucky-American's proposed reset of the QIP to a zero balance with current QIP expenditures rolled into base rates is denied.

11. Kentucky-American's proposed changes to its QIP calculations are approved.

12. Kentucky-American's request for an alternative level of unaccounted-for water loss of 20 percent is denied.

13. Kentucky-American's proposed Universal Affordability Tariff is denied.

14. Kentucky-American's proposed tariff revisions to its cross-connection policy are denied.

15. Except for the tariffs that have been modified or denied, Kentucky-American's proposed tariffs are approved as filed.

16. Within 20 days of the date of this Order, Kentucky-American shall, using the Commission's electronic Tariff Filing System, file its revised tariffs setting out the rates authorized in this Order and reflecting that they were approved pursuant to this Order.

17. Absent a request for rehearing, this case will be closed and removed from the Commission's docket upon expiration of the statutory time period to request rehearing.

APPENDIX B

APPENDIX TO AN ORDER OF THE KENTUCKY PUBLIC SERVICE COMMISSION IN CASE NO. 2023-00191 DATED MAY 03 2024

The following rates and charges are prescribed for the customers in the area served by Kentucky American Water Company. All other rates and charges not specifically mentioned herein shall remain the same as those in effect under the authority of the Commission prior to the effective date of this Order.

Monthly Service Charge

Meter Size		
5/8” – Meter	$16.40	Minimum Bill
3/4" - Meter	24.50	Minimum Bill
1” – Meter	40.80	Minimum Bill
1 1/2” – Meter	81.80	Minimum Bill
2” – Meter	130.80	Minimum Bill
3” – Meter	245.10	Minimum Bill
4” – Meter	408.60	Minimum Bill
6” – Meter	817.20	Minimum Bill
8” – Meter	1,307.50	Minimum Bill

Volumetric Charge

Service Type		
Residential	$0.0063757	Per Gallon
Commercial	0.0057661	Per Gallon
Industrial	0.0047676	Per Gallon
Other Public Authority	0.0053114	Per Gallon
Sales for Resale	0.0046912	Per Gallon

Water Sold to Judy Water Association

First 70,000 Gal/day	$0.0050057	Per Gallon

Over 70,000 Gal/day	0.0051165	Per Gallon

Monthly Public or Private Fire Connections

2" Diameter	$9.60	Per Month
4" Diameter	38.60	Per Month
6" Diameter	86.90	Per Month
8" Diameter	154.40	Per Month
10" Diameter	241.30	Per Month
12" Diameter	361.20	Per Month
14" Diameter	348.00	Per Month
16" Diameter	617.90	Per Month

Hydrant Charge

Public Hydrant	$53.95	Per Month
Private Hydrant	84.80	Per Month

Bulk Sales (Through Loading Stations)

Rate per 50 Gal	$1.85400
Rate per 100 Gal	3.70800

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF KENTUCKY-AMERICAN WATER COMPANY FOR AN ADJUSTMENT OF RATES, A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR INSTALLATION OF ADVANCED METERING INFRASTRUCTURE, APPROVAL OF REGULATORY AND ACCOUNTING TREATMENTS, AND TARIFF REVISIONS	)	CASE NO. 2023-00191

O R D E R

On July 7, 2023,[1] Kentucky-American Water Company (Kentucky-American), pursuant to KRS 278.180, KRS 278.190, and 807 KAR 5:001, Section 16(1)(b)(1), filed an application requesting (1) an increase to its rates; (2) approval of a Certificate of Public Convenience and Necessity (CPCN) for Advanced Metering Infrastructure (AMI) meters pursuant to KRS 278.020(1) and 807 KAR 5:001, Section 15(2); (3) approval of a proposed modification to its Qualified Infrastructure Program (QIP); (4) approval to establish regulatory assets or liabilities; (5) establishment of an alternative level of unaccounted for water loss; (6) approval of a universal affordability tariff; and (7) approval of its revised tariffs. This Order will only address the request for approval of a CPCN for

[1] Kentucky-American tendered its application on June 30, 2023. By letter dated July 7, 2023, the Commission rejected the application for filing deficiencies. The deficiencies were subsequently cured, and the application was deemed filed on July 7, 2023. On July 14, 2023, Kentucky-American filed a motion for a ruling from the Commission regarding sufficiency of the June 30, 2023 application. On July 25, 2023, the Commission entered an Order denying Kentucky-American's motion and finding the application deemed filed on July 7, 2023.

AMI meters pursuant to KRS 278.020(1) and 807 KAR 5:001, Section 15(2). All other requests will be addressed in a separate Order.

BACKGROUND

Kentucky-American, a wholly owned subsidiary of American Water Works Company, Inc. (American Water), is a jurisdictional utility that distributes and sells water across three divisions, including its Central Division, which consists of Bourbon, Clark, Fayette, Harrison, Jessamine, Nicholas, Scott, and Woodford counties; its Northern Division, which consists of Gallatin, Owen, Grant, and Franklin counties; and its Southern Division, which consists of Rockcastle and Jackson counties.[2] Kentucky-American provides water service to more than 138,000 customers throughout its three divisions.[3]

PROCEDURE

By Order entered July 21, 2023, the Commission suspended the proposed rates up to and including February 5, 2024. There are two intervenors in this matter: the Attorney General of the Commonwealth of Kentucky, by and through the Office of Rate Intervention (Attorney General), and Lexington Fayette Urban County Government (LFUCG). The Attorney General and LFUCG (jointly, Attorney General/LFUCG) entered into a joint participation agreement and co-sponsored testimony from one witness. Kentucky-American responded to three requests for information.[4] Following discovery, the Commission held an evidentiary hearing on December 11, 2023, and December 13,

[2] Application at 2.

[3] Direct Testimony of Jeffrey Newcomb (Newcomb Direct Testimony) (filed June 30, 2023) at 4.

[4] Kentucky-American's Response to Commission Staff's First Request for Information (Staff's First Request) (filed July 18, 2023); Kentucky-American's Response to Commission Staff's Second Request for Information (Staff's Second Request) (filed Aug. 18, 2023); Kentucky-American's Response to Commission Staff's Third Request for Information (Staff's Third Request) (filed Sept. 21, 2023).

2023, in Frankfort, Kentucky. All parties filed simultaneous post-hearing briefs on January 5, 2024. Kentucky-American and LFUCG filed response briefs on January 12, 2024. On February 5, 2024, Kentucky-American filed a notice of intent to implement proposed rates on or after February 6, 2024.[5] The Commission issued an Order on February 9, 2024, requiring Kentucky-American to maintain its records in such a manner as to allow it, the Commission, or any customer to determine the amounts to be refunded, and to whom, in the event a refund is ordered.[6]

LEGAL STANDARD

The Commission's standard of review regarding a CPCN is well settled. Under KRS 278.020(1), no utility may construct or acquire any facility to be used in providing utility service to the public until it has obtained a CPCN from this Commission. To obtain a CPCN, the utility must demonstrate a need for such facilities and an absence of wasteful duplication.[7]

"Need" requires:

> [A] showing of a substantial inadequacy of existing service, involving a consumer market sufficiently large to make it economically feasible for the new system or facility to be constructed or operated.
>
> [T]he inadequacy must be due either to a substantial deficiency of service facilities, beyond what could be supplied by normal improvements in the ordinary course of business; or to indifference, poor management or disregard of the rights of consumers, persisting over such a period of time as to

[5] Kentucky-American's Notice of Intent to Implement Proposed Rates (filed Feb. 5, 2024), unnumbered page 1.

[6] Order (Ky. PSC Feb. 9, 2024) at 3.

[7] *Kentucky Utilities Co. v. Pub. Serv. Comm'n*, 252 S.W.2d 885 (KY. 1952).

> establish an inability or unwillingness to render adequate service.[8]

"Wasteful duplication" is defined as "an excess of capacity over need" and "an excessive investment in relation to productivity or efficiency, and an unnecessary multiplicity of physical properties."[9] To demonstrate that a proposed facility does not result in wasteful duplication, the Commission has held that the applicant must demonstrate that a thorough review of all reasonable alternatives has been performed.[10] Selection of a proposal that ultimately costs more than an alternative does not necessarily result in wasteful duplication.[11] All relevant factors must be balanced.[12]

CPCN FOR AMI METERS

In its application, Kentucky-American requested a CPCN for cellular AMI meters. At the time of filing this application, Kentucky-American explained that its current system consisted of approximately 142,000 meters and almost all are installed with AMR endpoints with the exception of 248 meters that are equipped with Badger cellular AMI endpoints.[13] Kentucky-American explained that it follows a periodic meter replacement

[13] Application, Exhibit A at 8.

program to renew aging meters and endpoints.[14] The Commission granted Kentucky-American a deviation of 807 KAR 5:066, Section 16(1) in Case No. 2009-00253 permitting Kentucky-American to keep its 5/8-inch meters in service for 15 years without testing for accuracy.[15] However, Kentucky-American stated that it has had an increase in meter reading challenges and an increase in corresponding unscheduled meter and endpoint replacements, and therefore plans to revert back to a ten-year target for 5/8-inch meter and endpoint replacement.[16] Kentucky-American noted that as of May 2023, it assessed that more than 71,000 of its 5/8-inch meters or approximately half of its meters are now at, or past, the ten-year target.[17] Additionally, Kentucky-American explained that almost all of its meters, endpoints, and other necessary equipment will need replacing over the next decade as it meets or exceeds its useful life.[18]

Kentucky-American explained that after evaluating a variety of metering technologies in terms of functionality and costs, cellular AMI would be the preferred technology due to the fact that cellular networks are regularly updated to keep up with the latest technologies and provide greater coverage, reliability and security than fixed-network systems.[19] Additionally, Kentucky-American argued that a fixed-network system requires that a utility maintain and periodically update the system, leading to increased

and ongoing capital costs.[20] Kentucky-American noted that the benefits of AMI include improving the effectiveness of its operations and customer service, meeting customers' expectations, as well as increased water conservation.[21]

Kentucky-American claimed that it has demonstrated a need for the AMI system in view of the long-range planning necessary in the public utility field.[22] Kentucky-American argued that a "'substantial inadequacy of existing service' is not required to be a currently existing deficiency, but may be a deficiency expected a number of years into the future 'in view of the long range planning necessary in the public utility field.'"[23] Kentucky-American explained that it is not planning to accelerate the installation of AMI meters and that it would be deployed over a ten-year schedule as it completes normal, scheduled, periodic replacement of its existing AMR meters at the end of their service lives.[24] Kentucky-American claimed that a transition to AMI meters over the next decade will result in savings for meter reading labor, field service representative labor, associated vehicle costs, and will improve employee safety, enhance customer service, operational efficiencies, and environmental benefits.[25] Additionally, Kentucky-American claimed that AMI meters will allow it to respond more quickly to potential issues, allow customers to have better access to information related to water usage, improve how customers

[25] Application, Exhibit A at 3.

understand their water usage, empower customers to make changes in their habits and behaviors to increase water conservation, and increase billing accuracy.[26]

Kentucky-American claimed it has demonstrated that the AMI system will not result in wasteful duplication. Kentucky-American stated it considered the following alternatives: (1) continue with AMR Technology; (2) deploy Cellular AMI Technology; (3) deploy Hybrid AMI Technology; and (4) deploy Fixed-Network AMI Technology.[27] Kentucky-American stated that Cellular AMI was selected as the preferred approach because it provided the best cost net of benefit proposition for long-term, more reliability, constant availability of meter reading and customer usage data, safety, customer service, operation efficiency, and environmental benefits.[28] Kentucky-American stated that it considered all reasonable alternatives and that while there was an alternative that had a marginally lower cost, it selected Badger AMI system because the widespread benefits of AMI made it the best long-term option and least cost option.[29] Additionally, Kentucky-American selected Badger from two preapproved vendors (Neptune and Badger) selected by American Water from a 2016 request for proposal (RFP).[30]

Kentucky-American stated it evaluates the performance and renegotiates pricing terms with its vendors every two to three years.[31] Kentucky-American estimated that the total capital expenditures of the AMI project would be $114,011,620 and that deployment

[31] Kentucky-American's Response to Staff's Second Request, Item 11.

would begin in 2024.[32] Kentucky-American also proposed a tariff provision to allow customers to opt out of an AMI meter for a $28 monthly fee.

In the cost-benefit analysis, Kentucky-American reflected depreciation, property taxes, pre-tax rate of return, and specifically for Neptune Hybrid alternative, the expense associated with the fixed network as capital-related cost assumptions.[33] Additionally, Kentucky-American utilized a net present value (NPV) of 20 years for the AMI system, which resulted in a 20-year annual cost net of benefits of $3.1 million.[34] Kentucky-American explained that it utilized an NPV of 20 years because the lids that must be purchased during the first replacement cycle are not planned for routine replacement within the measured period and that neither field service labor benefits, meter reading benefits, nor vehicle benefits are fully reflected for investments made in the first ten years.[35] Therefore, due to those factors, 20 years was the minimum amount of time that seemed reasonable for the cost benefit analysis and associated NPVs in order to create a reasonable match between costs and benefits.[36] Kentucky-American further stated that the improvement associated with AMI justifies the slight difference in cost.[37]

[32] Kentucky-American's Response to Attorney General's First Request for Information (filed Aug. 18, 2023), Item 39(c). Kentucky-American noted that the capital expenditures include both the removal and installation costs.

[33] Application, Exhibit A at 17 and Figure 9.

[34] Application, Exhibit A at 19.

[35] Kentucky-American's Response to Staff's Second Request, Item 17.

[36] Kentucky-American's Response to Staff's Second Request, Item 17.

[37] Kentucky-American's Post-Hearing Brief at 79.

The Attorney General argued that Kentucky-American failed to meet its burden of proof under KRS 278.020(1) and has failed to satisfy the need component.[38] The Attorney General stated that none of the alleged benefits demonstrate there is an inadequacy of existing service, let alone a substantial inadequacy of existing service as required by the statute, and there has been no evidence in the record to indicate that current meters are overall not providing reliable service to customers.[39] Additionally, the Attorney General noted that the proposed AMI plan will result in the replacement of approximately 58.55 percent of all of Kentucky-American's 5/8-inch meters from 2024-2026.[40] The Attorney General argued that a replacement of almost 60 percent of meters over three years constitutes an accelerated pace, despite Kentucky-American stating it would not be replacing meters at an accelerated pace.[41] The Attorney General asserted that if Kentucky-American is allowed to revert back to a ten-year replacement cycle for 5/8-inch meters instead of the 15-year replacement cycle currently in place, customers will be required to pay for the substantial amounts still owed on existing meters and the accelerated replacement of the new meters.[42] The Attorney General argued that while Kentucky-American claims there are no stranded investments, that is only accurate if the Commission grants Kentucky-American's proposal to drastically increase and accelerate the depreciation rates for existing meters.[43]

---

[39] Attorney General's Post-Hearing Brief at 26.

[40] Attorney General's Post-Hearing Brief at 27.

[41] Attorney General's Post-Hearing Brief at 27.

[42] Attorney General's Post-Hearing Brief at 27.

[43] Attorney General's Post-Hearing Brief at 27.

The Attorney General further argued that Kentucky-American has not met the wasteful duplication requirement because it limited its review to Badger and Neptune, the cost benefit analysis demonstrates that the existing AMR technology has the least cost net value, and that Kentucky-American did not include any potential savings attributable to the proposed AMI project in the proposed revenue requirement in the pending case.[44]

LFUCG recommended that meter depreciation expense be reduced from $2,243,128 to $326,595, a reduction of $1,916,533 to reflect a more reasonable approach to Kentucky-American's routine meter replacement schedule.[45] It also stated that the monthly service charge should not be increased because meter expenses are primarily allocated to the monthly service charge.[46]

Kentucky-American argued that it is no longer experiencing a reliable 15-year life for its meters and that the reliable life has been closer to ten years.[47] Additionally, Kentucky-American argued that it would be imprudent and irresponsible for it to keep meters in the field beyond their observed useful life and therefore, the Commission should not be persuaded by the arguments of the Attorney General and LFUCG and adopting the intervenor's arguments would penalize Kentucky-American and its customers.[48] Kentucky-American noted that it is not accelerating meter replacements and is only proposing to replace meters in a timely fashion to preserve and support reliability of

[44] Attorney General's Post-Hearing Brief at 28-29.

[45] LFUCG's Post-Hearing Brief (filed Jan. 5, 2024) at 5.

[48] Kentucky-American's Reply Brief at 3.

service which will be done without regard for whether new meters use AMI or AMR communication technology.[49]

Based upon the case record and being otherwise sufficiently advised, the Commissions finds that Kentucky-American failed to demonstrate a need for AMI meters for the following reasons. The Commission notes that it cannot approve a CPCN until both the "need" and "absence of wasteful duplication" prongs are satisfied. While Kentucky-American provided evidence that roughly 42,000 meters of approximately 142,000 total meters will need replacing in 2024,[50] it has failed to provide sufficient evidence that there is a substantial inadequacy of existing service. Instead, the only evidence Kentucky-American provided was that a large number of current meters are nearing the end of their useful lives and would need replacing. Kentucky-American also stated that there is currently no inadequacy of existing service, and its current meters are accurate.[51]

In previous cases, the Commission found that the existing meters used by the electric cooperatives were either discontinued or in the near future would no longer be manufactured or supported, and thus, the utilities established a need to upgrade the metering system in order to provide adequate, reliable service, and that the proposed AMI

[49] Kentucky-American's Reply Brief at 4.

[50] Kentucky-American's Post-Hearing Brief at 76.

[51] Melissa Schwarzell Hearing Video Transcript (HVT) of the Dec. 11, 2023 Hearing at 09:50:08-09:51:08.

systems were the least-cost alternative to address the utilities' metering needs.[52] The Commission acknowledges there is an operational difference between AMI meters used in water and electric utilities, but the requirements of KRS 278.020(1) remain the same regardless of the type of utility. Kentucky-American failed to provide any evidence its current meters will no longer be manufactured or supported in the near future or provided sufficient evidence of any inadequacy of existing service. Rather, Kentucky-American presented evidence that the current AMR model of meters are still available and not obsolete.[53]

Additionally, the Commission is not persuaded by Kentucky-American's argument that 20 years was the minimum amount of time for the cost benefit analysis and associated NPVs in order to create a reasonable match between costs and benefits. The Commission disagrees with the use of an NPV of 20 years because Kentucky-American's only argument for utilizing it was because benefits were not expected to be reflected until year 11. The Commission notes that Kentucky-American's cost-benefit analysis accurately and realistically reflected AMI benefits within the first ten years. The AMI meters only had a ten-year useful life, and therefore, the Commission evaluated the benefits of the meters within the useful life.

[52] Case No. 2017-00419, *Application of Grayson Rural Electric Cooperative Corporation of Grayson, Kentucky, for Commission Approval Pursuant to 807 KAR 5:001 and KRS 278.020 for a Certificate of Public Convenience and Necessity to Install an Advanced Metering Infrastructure (AMI) System* (Ky. PSC July 16, 2018), Order at 7-8; Case No. 2018-00056, *Application of Cumberland Valley Electric, Inc. for Commission Approval for a Certificate of Public Convenience and Necessity to Install an Advanced Metering Infrastructure (AMI) System Pursuant to 807 KAR 5:001 and KRS 278.020* (Ky. PSC July 9, 2018), Order at 11 ; Case No. 2016-00077, *Application of Licking Valley Rural Electric Cooperative Corporation for an Order Issuing a Certificate of Public Convenience and Necessity* (Ky. PSC Jan. 10, 2017) Order at 5-6.

[53] Melissa Schwarzell HVT of the Dec. 11, 2023 Hearing at 09:50:15-09:50:45.

The Commission also disagrees with Kentucky-American's arguments that AMI benefits are not expected to fully begin until years 11 through 20. The Commission notes that a ten-year NPV would not understate the benefits because Kentucky-American decided not to accelerate AMI deployment and attempt to reflect those benefits any earlier. The Commission agrees with the Attorney General and is skeptical that replacing almost 60 percent of the existing meters in three years is not considered accelerated replacement. The Commission notes that Kentucky-American stated that it could theoretically install AMI meters throughout its entire service territory by 2027, presuming adequate availability of labor and material resources and adequate allocation of capital.[54] The Commission notes that it is apparent that Kentucky-American could complete AMI installation within a shorter time, other than ten years, and still accurately reflect the AMI benefits if it requested and budgeted the appropriate resources to do so. Additionally, if Kentucky-American were to replace meters in a timely fashion, then it should have considered an accelerated replacement so that the meters could be installed in a reasonable and timely manner and provide maximum benefits for the duration of their useful lives. Therefore, the Commission finds that a 20-year NPV potentially significantly overstates the benefits of the cellular AMI meters within the cost-benefit analysis. Additionally, the Commission agrees with the Attorney General's argument that there would be potential stranded costs associated with AMI because Kentucky-American failed to provide sufficient evidence otherwise. The Commission notes that Kentucky-American only stated that it does not anticipate stranded assets rather than providing sufficient evidence that there would be no stranded assets associated with AMI.

[54] Kentucky-American's Response to Staff's First Request, Item 16(b).

The Commission also finds that Kentucky-American failed to prove an absence of wasteful duplication. Pursuant to KRS 278.020(1), a utility must, among other things, prove an absence of wasteful duplication, and demonstrate a thorough review of all reasonable alternatives has been performed.[55] While Kentucky-American considered the four different meter technology options mentioned above, it only reviewed pricing information from two vendors that its parent company, American Water, selected from a 2016 Request for Proposals (RFP).[56] The Commission has serious concern that a thorough review of all reasonable alternatives was not conducted and that Kentucky-American only considered two vendors which were selected by its parent company approximately eight years ago. The Commission expects Kentucky-American to review all viable meter options when considering AMI and cautions Kentucky-American on how it selects it vendors during the RFP process.

For the reasons stated above, the Commission finds that the CPCN for AMI meters should be denied. Additionally, the Commission finds that Kentucky-American's proposed tariff provision that would allow customers to opt-out of an AMI meter for a $28 monthly fee is moot and therefore should be denied.

IT IS THEREFORE ORDERED that:

1. Kentucky-American's request for a CPCN for AMI meters is denied.

2. Kentucky-American's proposed $28 monthly fee to opt-out of an AMI meter is moot and therefore denied.

---

[55] Case No. 2005-00142, *Joint Application of Louisville Gas and Electric Company and Kentucky Utilities Company for the Construction of Transmission Facilities in Jefferson, Bullitt, Meade, and Hardin Counties, Kentucky* (Ky. PSC Sept. 8, 2005).

[56] Kentucky American's Response to Staff's Second Request, Item 11.

3. Nothing in this Order shall be construed as prohibiting the Commission from issuing further Orders in this matter.

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF KENTUCKY-AMERICAN WATER COMPANY FOR AN ADJUSTMENT OF RATES, A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR INSTALLATION OF ADVANCED METERING INFRASTRUCTURE, APPROVAL OF REGULATORY AND ACCOUNTING TREATMENTS, AND TARIFF REVISIONS	)	CASE NO. 2023-00191

O R D E R

On May 16, 2024, Kentucky-American Water Company (Kentucky-American) filed a petition, pursuant to KRS 278.400, requesting a rehearing to correct five different material calculations of the Order entered May 3, 2024. On May 16, 2024, Kentucky-American also filed a motion for an informal conference (IC) pursuant to 807 KAR 5:001, Section 9(4). On May 21, 2024, the Attorney General, through his Office of Rate Intervention (Attorney General), and Lexington-Fayette Urban County Government (LFUCG) filed a joint petition for rehearing.[1] On May 23, 2024, LFUGC filed a response to Kentucky-American's petition for rehearing with no objections.[2] On May 23, 2024, Kentucky-American filed a response to the Attorney General and LFUCG's joint petition for rehearing (Joint Petition).[3] The Commission will address Kentucky-American's

[2] LFUCG's Response to Kentucky-American's Petition for a Rehearing (LFUCG's Response) (filed May 23, 2024).

[3] Kentucky-American's Response to Attorney General and LFUCG's Joint Petition for Rehearing (Kentucky-American's Response) (filed May 23, 2024).

petition for rehearing and motion for an IC as well as the joint petition for rehearing filed by the Attorney General and LFUCG in this Order.

LEGAL STANDARD

KRS 278.400, which establishes the standard of review for motions for rehearing, limits rehearing to new evidence not readily discoverable at the time of the original hearings, to correct any material errors or omissions, or to correct findings that are unreasonable or unlawful. A Commission Order is deemed unreasonable only when "the evidence presented leaves no room for difference of opinion among reasonable minds."[4] An order can only be unlawful if it violates a state or federal statute or constitutional provision.[5]

By limiting rehearing to correct material errors or omissions, and findings that are unreasonable or unlawful, or to weigh new evidence not readily discoverable at the time of the original hearings, KRS 278.400 is intended to provide closure to Commission proceedings. Rehearing does not present parties with the opportunity to relitigate a matter fully addressed in the original Order.

DISCUSSION AND FINDINGS

Kentucky-American's Motion

1. Effective Date for Amended Rates

Kentucky-American stated that any new rates approved through rehearing be effective for service rendered on and after February 6, 2024, which is the effective date

[4] *Energy Regulatory Comm'n v. Kentucky Power Co.*, 605 S.W.2d 46 (Ky. App. 1980).

[5] *Public Service Comm'n v. Conway*, 324 S.W.3d 373, 377 (Ky. 2010); *Public Service Comm'n v. Jackson County Rural Elec. Coop. Corp.*, 50 S.W.3d 764, 766 (Ky. App. 2000); *National Southwire Aluminum Co. v. Big Rivers Elec. Corp.*, 785 S.W.2d 503, 509 (Ky. App. 1990).

set forth in the Order.[6] Kentucky-American argued that the Commission has consistently held that such relief is appropriate.[7]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request for rehearing for any amended rates to be effective for service rendered on or after February 6, 2024, should be granted in order to obtain additional information before rendering a decision on this issue.

Annual Qualified Infrastructure Program (QIP) In Present Rate Revenues

Kentucky-American argued that in removing the Qualified Infrastructure Program (QIP) expenses from the base rates, the Order failed to remove annual QIP revenues of $9,851,113 from Kentucky-American's present rate revenues, thereby understating Kentucky-American's annual revenue increase in base rates by $1,489,822.[8] Kentucky-American stated because of this inclusion, the Order resulted in an impact to and ultimately understates Kentucky-American's required revenue increase, which deviated from Kentucky-American's proposed revenue requirement.[9] Kentucky-American argued that the error creates a punitive mismatch, whereby the revenues received from the QIP are counted in base rates, but the expenses and rate base have been removed – thereby depriving Kentucky-American of an opportunity to earn the 9.70 percent return on equity (ROE) awarded by the Commission.[10] Kentucky-American also stated that this punitive

[6] Kentucky-American's Petition for Rehearing (Petition for Rehearing) (filed May 16, 2024) at 2.

[7] Petition for Rehearing at 2.

[8] Petition for Rehearing at 4.

[9] Petition for Rehearing at 4.

[10] Petition for Rehearing at 4-5.

mismatch can be further shown by applying the rates and charges reflected in Appendix B of the Order to Kentucky-American's billing determinants.[11] Kentucky-American stated that this results in base water and other revenues of $115,604,748, which would provide a ROE of 9.25 percent or an overall rate of return of 7.02 percent, on the $489,426,491 of rate base.[12]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request for rehearing on the alleged failure by the Commission to remove QIP revenues from Kentucky-American's present rate revenues should be granted in order to obtain additional information before rendering a decision on this issue.

2. Income Tax Expense

Kentucky-American argued that the adjustments reflected in the Order increase Kentucky-American's taxable income through the removal of proposed expenses, but those adjustments also include a reduction to Kentucky-American's income tax expense, thereby understating the revenue increase.[13] Kentucky-American stated that despite utilizing a taxable income amount greater than that proposed by Kentucky-American, the Order nevertheless decreases Kentucky-American's state income tax expense by $565,343 and federal income tax expense by $2,255,717, as reflected in Appendix A to the Order.[14] Kentucky-American stated that there is no explanation in the Order regarding

[11] Petition for Rehearing at 5.

[12] Petition for Rehearing at 5.

[13] Petition for Rehearing at 2.

[14] Petition for Rehearing at 5.

the adjustments to tax expense.[15] Kentucky-American stated that given that Kentucky-American's state statutory tax rate is 5 percent of taxable income and its federal statutory tax rate is 21 percent, the Commission's increase in Kentucky-American's taxable income must result in a corresponding increase in Kentucky-American's tax expense.[16] Kentucky-American argued that instead, the Order decreases both amounts without justification.[17] Kentucky-American stated that the Commission's calculation of Kentucky-American's income tax expense results in an effective tax rate of only 9 percent – far below the Company's actual statutory tax rate of 24.95 percent.[18]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request for rehearing as to the income tax expense should be granted in order to obtain additional information before issuing a decision on this issue.

3. Capital Structure

Kentucky-American argued that the Order states it utilized Kentucky-American's revised capital structure but appears to calculate the rate of return based upon Kentucky-American's initially-filed capital structure.[19] Kentucky-American stated that the revised capital structure would result in a pre-tax rate of return of 9.01 percent.[20] Kentucky-American stated that the total effect of the corrections identified in its rehearing request

[15] Petition for Rehearing at 5.

[16] Petition for Rehearing at 5.

[17] Petition for Rehearing at 5.

[18] Petition for Rehearing at 6.

[19] Petition for Rehearing at 2.

[20] Petition for Rehearing at 6.

results in a total revenue increase of $18,142,476, or a total base rate revenue requirement of $123,140,707.[21]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request for rehearing as it relates to capital restructure should be granted. The Commission fully intended to utilize Kentucky-American's revised capital structure rather than its initially filed capital structure.

4. Bulk Sales Rate

Kentucky-American's rehearing petition stated that the Order entered May 3, 2024, contains two typographical errors related to bulk sales rates.[22] Kentucky-American stated that increasing the current bulk sales rate by 10.75 percent results in a rate of $0.1854 per 50 gallons.[23] Kentucky-American stated that Appendix B of the Order, however, contains a rate of $1.854 per 50 gallons and $3.7080 for 100 gallons, both of which appear to contain a decimal error.[24] Kentucky-American stated that it believes, absent other changes, that the correct bulk sales rates are $0.1854 per 50 gallons and $0.37080 for 100 gallons.[25]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that the rehearing request as it relates to the

[21] Petition for Rehearing at 7.

[22] Petition for Rehearing at 7.

[23] Petition for Rehearing at 7.

[24] Petition for Rehearing at 7.

[25] Petition for Rehearing at 7-8.

bulk sales rate is denied as moot. The Commission addressed this issue by *nunc pro tunc* on May 17, 2024.[26]

5. Transition of Judy Water Association to the Sale for Resale Rate

Kentucky-American stated that although the Order approved the transition of the Judy Water Association to the Sale for Resale rate, the Order set forth a separate (and higher) rate for the Judy Water Association: (1) $0.0050057 for the first 70,000 gallons per day and (2) $0.0051165 for over 70,000 gallons per day.[27]

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that Kentucky-American's request for rehearing as to the issue of the transition of Judy Water Association to the Sale for Resale Rate should be granted. The Commission agrees that the rate should have the Sale for Resale rate rather than increasing its current tariff rate. The Commission finds that the Judy Water Association rate found in Appendix B of the May 3, 2023 Order should be stricken and replaced with the Sale for Resale rate of $0.0046912 per gallon. Additionally, the Commission acknowledges that transitioning the Judy Water Association to a lower rate class will create a revenue discrepancy between revenue rates and the Commission approved revenue increase. Therefore, the Commission notes that it will address any additional revenue requirement changes and rate impacts during discovery and in further Orders during this proceeding due to the potential for the overall revenue requirement to be modified which, therefore, has an impact on rates.

[26] Order (Ky. PSC. May 17, 2024) at 1.

[27] Petition for Rehearing at 8.

6. Request for Informal Conference

Kentucky-American also requested an informal conference as it stated that it may assist Commission Staff in the efficient review and evaluation of the Petition for Rehearing, and more particularly, the exhibits outlining the impacts of the errors. Kentucky-American stated that it is willing to appear in person or remotely by video.[28]

Based upon the motion, the Commission finds that Kentucky-American established good cause to schedule an IC, and therefore the motion should be granted. The Commission notes that the purpose of the IC is to address the issues granted for rehearing as laid out in this Order. An IC is scheduled on May 29, 2024, at 1:30 PM Eastern Daylight Time, at the Commission's offices at 211 Sower Boulevard, Frankfort, Kentucky.

Attorney General and LFUCG's Joint Petition

1. Capital Structure

The Attorney General and LFUCG stated that the Final Order erroneously utilized 9.07 percent instead of 9.007 percent for the rate of return.[29] The intervenors argue that the error inflates the awarded revenue requirement increase by approximately $308,339.[30]

In its response the Joint Petition, Kentucky-American agrees that the math is correct, however, it states that the calculation relied on a revenue conversion factor of 1.342559 or 134.259 percent instead of 1.342300 or 134.2300 percent as stated in

[28] Kentucky-American's Motion for Information Conference (filed May 16, 2024) at 1.

[29] Joint Petition for Rehearing at 2.

[30] Joint Petition for Rehearing at 3.

Kentucky-American's Petition for Rehearing.[31] Kentucky-American states that the rate of return would result in 9.006 percent, or 9.01 percent if rounded.[32] Kentucky-American did not object to the request for a rehearing on the matter.

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that the Attorney General and LFUCG's request for rehearing as it relates to capital structure should be granted. A rehearing was granted to Kentucky-American on this same issue.

2. Revenue Requirement Calculation

The Attorney General and LFUCG stated that it is unclear whether Kentucky-American's rate increase in the May 3, 2024 Order was properly calculated utilizing Kentucky-American's revised revenue requirement increase of $25,563,294, or erroneously calculated based upon the original requested revenue requirement increase of $26,051,999.[33] The Attorney General and LFUCG point out that Kentucky-American revised its requested rate increase downward to $25,563,294, partially in response to the Attorney General's discovery, but that a higher, original requested rate increase was utilized to determine the awarded revenue requirement increase in Appendix A of the May 3, 2023 Order and that it is unclear whether the Commission incorporated the updated $503,644 reduction in rate increase.[34] The Attorney General and LFUCG request

[31] Kentucky-American's Response at 2.

[32] Kentucky-American's Response at 2.

[33] Joint Petition for Rehearing at 3.

[34] Joint Petition for Rehearing at 3.

clarification on this issue and further requested that if the $503,644 reduction was not included that it constitutes a material error that should be corrected.[35]

In Kentucky-American's response to the Joint Petition, it agreed that the as-filed revenue requirement requested increase was $26,051,990 and that Kentucky-American revised it to $25,563,294.[36] Kentucky-American stated that the Commission has everything needed to correct those errors and authorize revised and correct rates.[37] Kentucky-American did not object to the request for rehearing on this issue.

Having reviewed the relevant record, the rehearing pleadings, and being otherwise sufficiently advised, the Commission finds that the Attorney General and LFUCG's request for a rehearing should be granted to further investigate whether all items were included in the revenue requirement.

The Commission, on its own motion, finds that a procedural schedule should be established for the orderly processing of matters addressed in this Order. The procedural schedule is attached as an Appendix to this Order.

IT IS THEREFORE ORDERED that:

1. Kentucky-American's petition for rehearing is granted, in part, and denied, in part.

2. Kentucky-American's request that any amended rates amended by rehearing will be effective for service rendered on or after February 6, 2024, is granted

[35] Joint Petition for Rehearing at 5.

[36] Kentucky-American's Response at 2.

[37] Kentucky-American's Response at 2.

for the sole purpose of obtaining additional information before rendering a decision on this issue.

3. Kentucky's petition for rehearing as it relates to annual QIP revenue in present rate revenues, income tax expense, capital structure, and transition of Judy Water Association to the Sale for Resale rate is granted.

4. The Judy Water Association rate found in Appendix B of the May 3, 2023 Order should be stricken and replaced with the Sale for Resale rate of $0.0046912 per gallon.

5. Kentucky-American's petition for rehearing as it relates to the current bulk system sales is denied.

6. Kentucky-American's request for informal conference is granted.

7. An IC is scheduled on May 29, 2024, at 1:30 p.m. Eastern Daylight Time at the Commission's offices at 211 Sower Boulevard, Frankfort, Kentucky.

8. The Attorney General and LFUCG's petition for a rehearing is granted as to both issues.

9. The procedural schedule set forth in the Appendix to this Order shall be followed.

10. Kentucky-American shall respond to all requests for information propounded by Commission Staff, whether identified on the procedural schedule or otherwise, as provided in those requests.

11. The remainder of the May 3, 2024 Order, as amended *nunc pro tunc by May 17, 2024 Order*, not in conflict with this Order remains in effect.

Attachment 10

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF KENTUCKY-AMERICAN WATER COMPANY FOR AN ADJUSTMENT OF RATES, A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR INSTALLATION OF ADVANCED METERING INFRASTRUCTURE, APPROVAL OF REGULATORY AND ACCOUNTING TREATMENTS, AND TARIFF REVISIONS	))))))))	CASE NO. 2023-00191

O R D E R

On May 3, 2024, the Commission issued a final Order in this matter approving a rate adjustment for Kentucky-American Water Company (Kentucky-American). The final Order erroneously listed the rate for Kentucky-American's bulk water sales through loading stations in Appendix B.

Finding that the May 3, 2024 Order should be amended, the Commission HEREBY ORDERS, *nunc pro tunc*, that:

1. Appendix B, page 2, Bulk Sales (Through Loading Stations) is stricken and is replaced with the following language:

Bulk Sales (Through Loading Stations)

Rate per 50 Gal	$0.185400
Rate per 100 Gal	$0.370800

2. All other provisions of the Commission's May 3, 2024 Order that are not in conflict with the terms of this Order shall remain in effect.

3. Nothing in this Order shall prevent the Commission from issuing additional orders on this issue if raised in subsequent pleadings.

TENNESSEE AMERICAN WATER COMPANY
TENNESSEE PUBLIC UTILITY COMMISSION
DOCKET NO. 24-00032
SECOND DISCOVERY REQUEST OF THE TPUC STAFF

Responsible Witness: Nicholas Furia

Question 4:

Provide the projected capital structure for American Water Works Company for the attrition year ended December 31, 2025. Provide that projected cost rate associated with each element of the capital structure except common equity. Provide the cost rates for all elements of the capital structure except common equity of American Water Works Company as identified in the response to MFG 66 as of December 31, 2023.

Response:

The projected capital structure and cost rate of long-term debt and preferred stock of American Water Works Company for the attrition year ended December 31, 2025, are not available.

For the embedded cost of long-term debt and preferred stock as of December 31, 2023, please refer to the response provided in MFG 73 in CONFIDENTIAL Attachments 1 (pages 7-8) and 2 (page 4).

TENNESSEE AMERICAN WATER COMPANY
TENNESSEE PUBLIC UTILITY COMMISSION
DOCKET NO. 24-00032
SECOND DISCOVERY REQUEST OF THE TPUC STAFF

Responsible Witness: Nicholas Furia

Question 5:

Referring to the Direct Testimony of Nicholas Furia, Schedule CS-1.3, identify the lender associated with the 7.84% Series General Mortgage Bond. Is the lender affiliated with Tennessee American Water Company or American Water Works Company? What percentage of TAWC's projected attrition year total capitalization does the carrying value of the 7.84% Series General Mortgage Bond comprise? Upon maturity of the 7.84% Series General Mortgage Bond in 2026, does the Company intend to replace the indebtedness with funding from AWCC?

Response:

The current holder of the 7.84% Series General Mortgage Bond is not affiliated with Tennessee American Water Company or American Water Works Company. The carrying value of the 7.84% Series General Mortgage Bond of $5,697,333 is approximately 1.8% of TAWC's projected attrition year total capitalization of $318,918,691. The Company has not made a final determination as to how the indebtedness will be replaced. We will evaluate alternatives as the maturity date of the debt approaches.

TENNESSEE AMERICAN WATER COMPANY
TENNESSEE PUBLIC UTILITY COMMISSION
DOCKET NO. 24-00032
SECOND DISCOVERY REQUEST OF THE TPUC STAFF

Responsible Witness: Ann Bulkley

Question 6:

Provide measures of the BETA statistic for American Water Works Company to allow calculation of equity return for each variant of the Capital Asset Pricing Model found in Exhibit AEB-5 of the Direct Testimony of Anne Bulkley and Exhibit AEB-3 of the Rebuttal Testimony of Anne Bulkley. Provide all necessary data for American Water Works Company to allow calculation of the Discounted Cash Flow equity return estimates as found in Exhibit AEB-4 of the Direct Testimony of Anne Bulkley and her Rebuttal Exhibit AEB-2.

Response:

Please see Confidential Attachment 6-1 through Attachment 6-6 for the requested information. A table has been provided below for your reference.

Exhibit	Data	Attachment Number
