I. <u>INTRODUCTION</u>

1

11

2 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS

3 A. My name is Heath J. Brooks. My business address is 1 Water Street, Camden, NJ 08102.

4 O. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

- 5 A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or "Service
- 6 Company") as a Principal Regulatory Analyst. Service Company is a wholly owned
- subsidiary of American Water Works Company, Inc. ("American Water") that provides
- 8 services to Tennessee-American Water Company, Inc. ("TAWC" or the "Company") and
- 9 its affiliates.

10 Q. PLEASE STATE YOUR PROFESSIONAL AND EDUCATIONAL

BACKGROUND?

- 12 A. I earned a Bachelor of Business Administration degree with a concentration in Finance
- from Georgia State University in 2015. I have been employed by Service Company since
- March of 2023 primarily focusing on revenues, class cost of service studies ("COSS"), and
- rate design. Prior to joining Service Company, I was employed by Southern Company, an
- energy company engaged in electric and natural gas businesses, for seven years where I
- supported rate case proceedings for its natural gas subsidiaries in Virginia, Tennessee,
- Georgia, Florida, New Jersey, and Maryland. My duties included revenue forecasting, rate
- design, and COSS support.

20 Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE THE

21 TENNESSEE PUBLIC UTILITY COMMISSION?

- 1 A. Yes, I have submitted testimony before the Tennessee Public Utility Commission on 2 behalf of Chattanooga Gas Company. 3 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY? 4 A. The purpose of my testimony on behalf of TAWC is to (1) support and describe the methods 5 used to forecast water billing determinants and revenues for the test period and attrition 6 year, (2) support and describe the methods used to develop the fully allocated COSS, and 7 (3) support and describe the Company's proposed rate design. 8 ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY? Q. 9 Yes, I am sponsoring the following exhibits, which have been filed with my testimony. A.
- Petitioner's Exhibit Rev 1: Revenue Summary HB
- Petitioner's Exhibit Rev 2: Revenue at Present and Proposed Rates HB
- Petitioner's Exhibit Rev 3: Revenue Forecast HB
- Petitioner's Exhibit Rev 4: Residential Bill Comparison HB
- Petitioner's Exhibit Rev 5: Commercial Bill Comparison HB
- Petitioner's Exhibit Rev 6: Industrial Bill Comparison HB
- Petitioner's Exhibit Cos 1: Class Cost of Service Study HB
- Petitioner's Exhibit Cos 2: Other Operating Revenue Fees Cost Study HB
- 18 Q. WERE EACH OF THESE EXHIBITS PREPARED BY YOU OR UNDER YOUR
- 19 **SUPERVISION?**
- 20 A. Yes.
- 21 Q. PLEASE DESCRIBE THE COMPANY'S CURRENT RATE ZONES AND
- 22 CLASSES OF SERVICE.

1 A. The Company serves a variety of customers, including residential, commercial, industrial, 2 private fire, public authorities ("OPA"), and sales for resale ("SFR") customers, in the 3 following seven (7) rate zones. 4 Chattanooga 5 Lookout Mountain 6 Lakeview 7 Suck Creek 8 Whitwell Inside City 9 Whitwell Outside City 10 Jasper Highlands 11 DOES THE COMPANY SERVE ANY CUSTOMERS SUBJECT TO A SPECIAL Q. 12 **CONTRACT?** 13 A. Yes. The Company has four (4) SFR customers subject to special contracts that designate 14 charges and minimum usage requirements. 15 II. **FORECASTED REVENUES** 16 Q. PLEASE DESCRIBE THE PROCESS OF FORECASTING THE COMPANY'S 17 TEST PERIOD AND ATTRITION YEAR REVENUES PRESENTED IN 18 PETITIONER'S EXHIBIT REV – 1: REVENUE SUMMARY - HB. 19 A. Petitioner's Exhibit Rev – 1: Revenue Summary - HB presents the Company's total test 20 period revenues calculated using actual test period billing determinants for the twelve 21 months ended December 2023 and normalized attrition year revenues based on current and 22 proposed rates using projected normalized billing determinants for the twelve months

ending December 2025. The Company's forecasting process begins by quantifying test period revenues using actual billing determinants and comparing calculated test period revenues to booked revenue to validate that test period billing determinants produce billed revenues. Once test period billing determinants were established, customer growth or loss was applied to test period customer counts along with the application of normalized usage to arrive at normalized attrition year billing determinants. The normalized billing determinants were then multiplied by current rates to arrive at normalized attrition year revenues. The difference between projected normalized attrition year revenues and the Company's total revenue requirement is the basis for the requested increase in revenues of \$14,131,001.

A.

Q. PLEASE DESCRIBE HOW THE COMPANY CALCULATED CUSTOMER GROWTH OR LOSS PROJECTIONS.

Organic customer growth and loss projections were quantified using monthly historical customer counts from four service areas in the Company's billing system. The service areas include Chattanooga, Suck Creek, Sequatchie Valley, and Jasper Highlands. Chattanooga, Lookout Mountain, and Lakeview customers are included in the historical customer counts of the Chattanooga service area. Whitwell (Inside City) and Whitwell (Outside City) customer counts are included in the historical customer counts of the Sequatchie Valley service area.

Customer growth for most customer classes in each service area was calculated using a two-year average of month over month growth or loss and applying the average month over month growth or loss to the previous month's customer count with the starting point being December 2023. Classes with little to no change in historical customer counts were

left flat at the actual December 2023 customer counts with no growth or loss assumed through the end of the attrition year. Projected growth for Chattanooga and Sequatchie Valley was allocated to each rate zone included in the respective service area based on the number of bills in 2022 and 2023.

5 Q. WHAT CUSTOMER GROWTH OR LOSS RATES ARE INCLUDED IN THE

6 COMPANY'S REVENUE FORECAST.

Historical organic growth percentages for 2022 and 2023 along with projected organic growth percentages for 2024 and 2025 are displayed in the table below. Percentages are based on average annual customer counts. SFR customers have been projected to remain at current levels with four special contract customers and one SFR customer served under the Chattanooga SFR tariff throughout the attrition year.

TABLE 1: Customer Growth/Decline by Customer Class

| | Residential | Commercial | Industrial | OPA | Private Fire |
|------|-------------|------------|------------|--------|-----------------|
| 2022 | 1.60% | 0.82% | -1.99% | 0.53% | 12.01% |
| 2023 | 2.12% | 0.80% | 1.25% | -0.57% | 18.01% |
| 2024 | 1.92% | 0.66% | 1.23% | 0.43% | 12.92% |
| 2025 | 1.96% | 0.72% | 1.22% | -0.07% | 12.48% |

13

15

7

8

9

10

11

12

A.

14 Q. YOU MENTIONED BOTH "RATE ZONES" AND "SERVICE AREAS" ABOVE.

WHAT IS THE DIFFERENCE BETWEEN A RATE ZONE AND A SERVICE

16 AREA?

- A. "Service Area" refers to the four territories under which the Company tracks accounting
 and certain customer data information. The four service areas include Chattanooga, Suck
 Creek, Sequatchie Valley, and Jasper Highlands. "Rate Zone" refers to the seven areas that
 have separate tariff rates and are defined in the Company's current tariff. Two of the
 Company's service areas include multiple rate zones. The Chattanooga service area
 includes Chattanooga, Lookout Mountain, and Lakeview rate zones. The Sequatchie
 valley service area includes Whitwell Inside City and Whitwell Outside City rate zones.
- 8 Q. PLEASE DESCRIBE HOW WATER USAGE WAS PROJECTED FOR THE
- **ATTRITION YEAR.**

10 A. Projecting usage for each rate zone is a multi-step process and differs among rate classes.

Residential, Commercial, and OPA

Residential, commercial, and OPA usage projections were quantified by first determining normalized usage per customer at the consolidated Company level for each respective class. Econometric techniques relied upon to calculate normalized usage per customer have been described in detail in Company witness Charles B. Rea's Direct Testimony.

The projected annual normalized usage per customer was multiplied by the projected average 2025 customer count to quantify total usage for each respective class. Once total usage for the 2025 attrition year was determined for each class, usage was allocated to each month of the attrition year based on historical total system delivery volume. Monthly usage was then allocated to each service area based on historical 2022 and 2023 usage totals.

| 1 | | For the Chattanooga and Sequatchie Valley service areas, which include more than one rate |
|----|----|---|
| 2 | | zone, monthly usage for each class was allocated to each rate zone based on 2022 and 2023 |
| 3 | | historical usage totals. |
| 4 | | <u>Industrial</u> |
| 5 | | All TAWC industrial customers are in the Chattanooga rate zone. Industrial usage has |
| 6 | | been normalized for the attrition year by using a two-year average based on 2022 and |
| 7 | | 2023 usage. |
| 8 | | SFR Customers |
| 9 | | The Company's four special contract SFR customers have designated contracted |
| 10 | | minimum usage amounts. The Company has used the contracted minimum annual usage |
| 11 | | amounts for each customer to project total SFR usage for the attrition year. |
| 12 | | The Company also has one additional SFR customer served under the Chattanooga "Sale |
| 13 | | For Resale" tariff. This customer does not have a designated minimum usage amount and |
| 14 | | takes service for emergency use only. Given the emergency use nature of the service |
| 15 | | provided, there is no forecasted usage for this customer in the Company's attrition year. |
| 16 | Q. | WHAT IS THE NORMALIZED USAGE PER CUSTOMER FOR RESIDENTIAL, |
| 17 | | COMMERCIAL, AND OPA CUSTOMERS THAT'S BEING UTILIZED TO |
| 18 | | FORECAST USAGE REVENUES IN THE COMPANY'S REVENUE |
| 19 | | FORECAST? |
| 20 | A. | The table below displays the annual usage per customer that's being used to forecast |
| 21 | | normalized revenue for residential, commercial and OPA customers. |

| Period | Residential | Commercial | OPA |
|--------|-------------|------------|---------|
| 2024 | 45.80 | 336.39 | 1003.86 |
| 2025 | 45.61 | 334.03 | 989.78 |

2

3

15

16

17

Q. PLEASE DESCRIBE HOW PROJECTED USAGE WAS ASSIGNED TO EACH

4 RATE BLOCK.

- 5 A. Projected usage was allocated to each rate block based on 2022 and 2023 actual usage 6 totals by block for each customer class in each rate zone.
- 7 O. PLEASE DESCRIBE HOW OTHER OPERATING REVENUES WERE

8 **DEVELOPED FOR THE ATTRITION YEAR.**

- A. Revenue projections for Activity Fees, New Service Fees, Disconnection Reconnection

 Charges, Returned Check Charges, and Usage Data Charges were quantified by using a

 two-year average utilizing 2022 and 2023 to determine a normalized level of occurrences.

 Normalized billing determinants for each fee were multiplied by each respective rate to

 quantify the total revenue for each fee or charge. As described later in my testimony, the

 Company is proposing changes to certain fees.
 - Late payment revenues were quantified by calculating a ratio, based on a two year average, of late payments to total revenue. The ratio was applied to revenue projections in the Company's forecast to determine attrition year late payment revenues.
- Revenue projections for Rents were projected using contractual revenue amounts.

 Revenues projections for miscellaneous service fees were based on a two-year average using 2022 and 2023 actuals.

III. CLASS COST OF SERVICE STUDY

- 2 Q. WHAT IS THE PURPOSE OF A CLASS COST OF SERVICE STUDY ("COSS")?
- 3 A. Generally, the Company's expenses and rate base are not directly assigned to a specific
- 4 customer class. Therefore, a COSS is used as a tool to apportion expenses and rate base to
- each customer class that is served by the Company to reach a revenue requirement by
- 6 customer class. The fully allocated COSS results include cost responsibilities for each
- 7 customer class. The Company's COSS allocates the revenue requirement to the following
- 8 customer classes:

1

- 9 Residential
- Commercial
- Industrial
- 12 OPA
- 13 SFR
- Private Fire Service
- 15 Q. DOES TAWC USE GUIDELINES FROM THE AMERICAN WATER WORKS
- 16 ASSOCIATION ("AWWA") WHEN DEVELOPING THE CLASS COST OF
- 17 **SERVICE STUDY?**
- 18 A. Yes, the AWWA's Manual of Water Supply Practices titled Principles of Water Rates, Fees,
- and Charges, Sixth Edition, contains guidelines regarding the development of revenues,
- class cost of service studies, and rate design. The Company's COSS takes several of these
- 21 guidelines into consideration when developing the COSS, particularly the base-extra
- 22 capacity allocation methodology.

Q. HOW IS THE COMPANY'S COSS ORGANIZED?

- 2 A. The Company's COSS consists of the five tabs that I describe below.
- 3 "Summary" The "Summary" tab presents the results of the COSS that include the
- 4 Company's revenue requirement and the required adjustment necessary for revenue
- 5 recovery to be at cost of service for each rate class.
- 6 "Account Detail" The "Account Detail" tab presents the functionalization, classification,
- 7 and allocation of the Company's plant and expense accounts.
- 8 "Allocation Summary" The "Allocation Summary" tab summarizes all allocation factors
- 9 that are used in the model.
- 10 "Allocation Worksheet" The "Allocation Worksheet" tab utilizes billing determinant
- information from the "Usage Statistics" tab and presents calculations of the different
- 12 allocation factors.

1

- "Usage Statistics" The "Usage Statistics" tab contains billing determinant data that is
- used to calculate different allocation factors.

15 Q. PLEASE DISCUSS THE STEPS REQUIRED TO PRODUCE THE COMPANY'S

- 16 **COSS.**
- 17 A. Generally, three steps are required to develop a COSS. The first step of producing the
- 18 Company's COSS is functionalizing forecasted attrition year costs. Functionalization is
- the process of classifying the Company's plant and expense accounts into categories that
- represent the operational function of each cost incurred. Most accounts are easily assigned
- 21 to functional categories by relying on operational descriptions that are included in the
- Company's chart of accounts; however, some general costs cannot be directly assigned to

1 a functional category. Accounts that cannot be directly assigned to a functional category 2 are allocated based on various allocators. The Company's functional cost categories 3 include: Source of supply 4 5 Pumping 6 Water Treatment Transmission 7 8 Distribution 9 Storage 10 Meters 11 Services 12 Customers 13 Hydrants Once accounts are functionalized to the aforementioned cost categories, the next step is to 14 identify allocators that are related to cost drivers. Cost drivers generally fall into one of 15 16 the following categories. 17 Usage Capacity 18 19 Meters 20 Services 21 Customers 22 **Hydrants**

- 1 The final step is to allocate functionalized costs to the Company's classes of service by
- 2 utilizing appropriate allocations that are related to different cost drivers.

3 Q. WHAT GUIDES THE DEVELOPMENT OF THE FACTORS USED TO

4 ALLOCATE COSTS WITHIN THE COMPANY'S COSS?

- 5 A. Cost causation is the guiding principle relied upon to develop the allocation factors used to
- allocate costs within the Company's COSS. The development of appropriate allocation
- factors requires identifying relationships between billing determinants, such as usage, and
- 8 costs incurred by the Company. For example, transmission mains must be sized to have
- 9 adequate capacity in periods of peak demand requirements; therefore, it's logical to use a
- variation of peak water usage to allocate transmission mains cost to customer classes.
- When a cost cannot be directly correlated with a billing determinate, a general allocation
- is used to allocate the cost to classes of service.

13 Q. WHAT ALLOCATION METHOD DID THE COMPANY RELY ON TO

ALLOCATE MOST CAPACITY RELATED COSTS?

- 15 A. The Company applied variations of the Base/Extra capacity method to allocate most costs
- related to capacity requirements.

14

17 Q. PLEASE DESCRIBE THE BASE/EXTRA CAPACITY METHOD.

- 18 A. The Base/Extra capacity method is an allocation method that is based on customer usage
- and recognizes a combination of base capacity costs (i.e., costs related to ensuring the
- system can meet basic water usage needs) and extra capacity costs (i.e., additional costs
- related to peak water usage requirements).

There are two steps required to calculate the general Base/Extra capacity allocator for each class of service. First, the "Base" component, which is average daily usage, must be calculated for each class of service (class usage / 365 days). The base usage for each class of service is divided by the overall system daily average to calculate each base allocation factor. Second, the "Extra" component for each class of service is derived by calculating the difference between average daily usage and maximum daily usage (maximum day – average day). The "Extra" allocation factor is calculated for each class of service by dividing each class's extra demand value by the total sum of the extra demand values for all classes of service.

For each class of service, the "Base" and "Extra" components are weighted based on system total. The Base component is weighted by the total system average daily usage expressed as a percentage of the system maximum day usage (average daily system usage divided by maximum day usage), and the Extra component is weighted by one minus the average daily system load percentage. The weighted results of the "Base" and "Extra" components are added together for each class of service to arrive at Base/Extra Daily factors by class of service.

17 Q. IS THE BASE EXTRA CAPACITY METHOD AN INDUSTRY ACCEPTED

PRACTICE USED FOR ALLOCATING COSTS.

19 A. Yes, the Base/Extra capacity method is an industry accepted methodology used for 20 allocating costs to customer classes. The AWWA's Manual of Water Supply Practices 21 contains extensive details regarding the Base/Capacity method.

Q. ARE THERE DIFFERENT VARIATIONS OF BASE/EXTRA CAPACITY

FACTORS UTILIZED IN THE COSS?

- 1 A. Yes, variations of Base/Extra capacity factors are calculated to recognize usage
- 2 requirements for fire protection and hourly delivery. All Base/Extra capacity calculations
- can be found on the "Class Allocators" tab of Schedule HJB-1.

4 Q. HOW IS EACH CLASS'S MAXIMUM DAILY USAGE CALCULATED?

- 5 A. Maximum daily usage for each class of service in the Company's COSS is calculated by
- 6 multiplying average daily usage by the calculated peaking factor.

7 Q. HOW ARE DAILY AND HOURLY PEAKING FACTORS CALCULATED FOR

8 EACH CLASS OF SERVICE?

9

10

11

12

13

14

15

16

17

18

19

20

21

23

A. Maximum daily and hourly peaking factors for each customer class are estimated based on daily and hourly consumption data collected via Advanced Metering Infrastructure ("AMI") meter data. For Sales for Resale customer classes, maximum daily consumption values are estimated based on AMI data collected for those customers where data exists, with estimated data used for resale customers where AMI data is not available. For other classes, maximum daily consumption is estimated based on samples of customers across the American Water footprint for which American Water has AMI data. These samples, which are selected by customer class and subgroups within each class, are selected such that the customers in each customer class sample have monthly usage characteristics that are nearly identical to monthly usage characteristics that TAWC customers have and are expected to have during the attrition year, thus providing consistency between the usage characteristics of the customers in each sample and the usage characteristics of TAWC customers.

22 Q. PLEASE DESCRIBE THE TYPES OF COSTS THE COMPANY INCURS AND

HOW EACH IS ALLOCATED TO CUSTOMER CLASSES.

A. Variable

Variable costs are included in the following functionalized cost categories: Source of Supply, Pumping, and Water Treatment. Variable costs fluctuate and are dependent on the amount of water consumed by customers. For example, chemical costs for water treatment increase as customer usage increases. Since variable costs directly correlate with water consumption, each class's water usage is utilized to allocate these costs.

Capacity - General

Capacity costs refer to costs that do not vary directly with water usage and are those that are generally associated with ensuring that different functional aspects of the Company's water system can adequately serve all customers during periods of peak load requirements. Capacity requirements are related to several operational functions of the system which include source of supply, pumping, water treatment, and mains. Since capacity costs are incurred from ensuring the system can successfully operate while meeting all levels of water demand, the Company utilizes variations of the Base/Extra capacity method for allocations, which recognizes base use and peak water usage requirements.

Capacity – Source of Supply

Source of supply costs that are not part of the variable cost allocation are allocated using the Base/Extra capacity method.

Capacity – Water Pumping

Pumping costs that are not part of the variable cost allocation are allocated using the Base/Extra capacity method.

<u>Capacity – Water Treatment</u>

- Water treatment costs that are not part of the variable cost allocation are allocated to all
- 3 classes of service using the Base/Extra capacity method.

<u>Capacity – Transmission Mains</u>

- 5 Transmission mains costs are allocated using the Base/Extra capacity method that
- 6 recognizes public fire protection requirements. Generally, mains 10-inches and larger are
- 7 classified as serving a transmission function.

8 Q. ARE TRANSMISSION MAINS COSTS ALLOCATED TO ALL CUSTOMER

9 **GROUPS?**

1

4

12

- 10 A. Yes. All customer groups are considered to take service from the Company's transmission
- system and therefore transmission costs are allocated to all customer classes.

Capacity – Distribution Mains

- Distribution mains costs are allocated using the Base/Extra capacity method that is
- modified to include a component that recognizes maximum hourly demand (at the
- distribution level) instead of maximum daily demand and recognizes public fire protection
- requirements. This is appropriate because the transmission main system functions as a
- 17 conduit from production facilities to the distribution system and is sized to accommodate
- varying water demands from customers that take service at the distribution level. Sizing
- at the distribution level needs to accommodate higher demands for shorter periods of time.
- It is therefore appropriate to consider hourly consumption requirements including public
- 21 fire protection for distribution mains allocation, as opposed to daily requirements.

Q. ARE DISTRIBUTION MAINS COSTS ALLOCATED TO ALL CUSTOMER

GROUPS?

A. No. Several of the Company's large industrial and SFR customers are served directly from the transmission system (mains 10 inches and above); therefore, it would not be appropriate to allocate costs related to the distribution system to these customers. A calculation is performed for the industrial class and SFR class to estimate the percentage of water sales served to each class by the transmission system. That portion of sales in each class is not subject to an allocation of distribution costs. It is only the distribution-level sales in each class that are allocated distribution-related costs.

Storage

Storage costs are allocated to customer class based on the Modified Base/Extra allocator using hourly estimated peak demand for the extra component and an additional component recognizing fire protection requirements.

Meters

Generally, the costs associated with a meter increase as the size of the meter increases; therefore, the Company applies an index based on equivalent meters, with a 5/8" meter being the base meter, to weight the count of meters by class. The total weighted count of meters by class is then used to allocate meter costs.

Services

Service line costs are allocated to customer classes by applying an index that has been developed using costs for service line installation by size.

Customer

2 Customer service costs are allocated to customer classes based on customer counts for each

3 class.

Fire Protection

Fire protection requirements are determined through a combination of information on firefighting requirements provided by the American Insurance Association. This information relates firefighting requirements in terms of maximum gallons per minute and the duration of time those requirements are needed to provide service for general population levels. Given the population of the TAWC service territory, a firefighting demand of 12,000 gallons per minute for ten hours was used in the Company's cost of service analysis. This firefighting demand was split between private fire and public fire protection based on the relative potential water demand for each class, which is in turn based on the number and size of service lines and hydrants for each type of fire protection service. Capacity related costs associated with fire protection are allocated to customer classes through the methods previously described in my testimony that account for fire protection service.

Hydrants

Hydrant costs are reallocated to residential, commercial, OPA, and industrial customer classes using a combination of meter equivalents and average usage.

Other Costs

General costs associated with labor can be identified by company account descriptions and are allocated using a labor allocation factor formulated utilizing labor costs from each functional category. Other general costs not associated with labor are allocated based on fixed O&M.

5 Q. HOW ARE DEPRECIATION COSTS ALLOCATED TO CLASSES OF SERVICE?

A. Annual depreciation expense is allocated based on the function of the facilities for each depreciable plant account. The original cost less depreciation of utility plant in service was similarly allocated for the purpose of developing factors for allocating items such as income taxes and operating income. These factors are based on the results of allocating other costs and are computed internally in the cost allocation model.

Q. HOW ARE INCOME TAXES, OPERATING INCOME, AND OTHER

11

12

18

OPERATING REVENUES ALLOCATED TO THE CLASSES OF SERVICE?

13 A. Rate base for each class of service is used to allocate income taxes, operating income, 14 and other operating revenues.

15 Q. PLEASE SUMMARIZE THE RESULTS OF THE COMPANY'S COSS?

A. Please refer to Petitioner's Exhibit COS – 1 - HB for the Company's COSS. A summary
 of the results of the study is displayed in the table below.

TABLE 3: Class Cost of Service Results

| Class | C | urrent Revenue | C | OSS Adjustment | COSS Adjustment % |
|-------------|----|----------------|----|----------------|----------------------|
| Residential | \$ | 32,458,901 | \$ | 10,512,646 | 32% |
| Commercial | \$ | 22,715,453 | \$ | (895,492) | -4% |

| Industrial | \$ 5,750,304 | \$ 1,977,564 | 34% |
|--------------|-----------------|-------------------|------|
| | | | |
| OPA | \$ 4,322,067 | \$ 1,774,789 | 41% |
| | | | |
| SFR | \$ 1,286,516 | \$ 1,200,734 | 93% |
| | _ | | |
| Private Fire | \$ 3,973,889 | \$ (1,018,030) | -26% |

The column labeled "Current Revenue" represents forecasted Attrition Year revenue under current rates. The column labeled "COSS Adjustment" represents the revenue adjustment necessary for each class to cover its' cost of service. The column labeled "COSS Adjustment %" represents the percentage adjustment necessary for each customer class to cover its' cost of service.

7 IV. WATER SERVICE RATE DESIGN

8 Q. PLEASE PROVIDE A GENERAL DESCRIPTION OF THE COMPANY'S

CURRENT RATE DESIGN FOR WATER SERVICE.

- A. As described earlier in my testimony, TAWC has seven (7) rate zones that include multiple customer classes. Service charge rates, volumetric rates and the volumetric rate block structure vary across most rate zones.
 - Generally, customers in each rate class regardless of rate zone are subject to service charges. The service charges applicable to customers in Chattanooga, Lookout Mountain, and Lakeview escalate with meter size. The service charges applicable to customers in Suck Creek, Whitwell Inside City, Whitwell Outside City, and Jasper Highlands are flat and are not dependent on meter size. Private fire service charges escalate with the service connection size in all rate zones.

All rate zones have volumetric rate blocks that are the same for residential, commercial, industrial, and OPA customers within each rate zone. While the rate block structure is the same for each customer class within each rate zone, excluding SFR special contracts, the rates generally vary among customer classes. The majority of the Company's rate zones have a free first volumetric block or a low volumetric rate applicable to volume in the first block. The second rate block rate is generally higher and blocks assume a declining rate structure where each succeeding block is subject to a lower rate. The rate block structure in Chattanooga, Lookout Mountain, and Lakeview includes six volumetric rate blocks with the first being subject to a low volumetric rate. The rate block structure in Whitwell Inside City and Whitwell Outside City includes four rate blocks with a usage allowance of 2,000 gallons. The rate block structure in Suck Creek includes three rate blocks with a usage allowance of 1,500 gallons. The rate block structure in Jasper Highlands includes four rate blocks with a usage allowance of 2,500 gallons.

A.

SFR special contract customers are subject to a contracted usage rate that's applicable to all usage. Each contracted usage rate is unique for each customer.

Q. WHAT CHANGES IS THE COMPANY PROPOSING TO MAKE TO ITS RATE DESIGN?

The Company is proposing to move towards consolidated tariff pricing by consolidating rate structures applicable to Chattanooga, Lookout Mountain, Lakeview, Suck Creek, Whitwell Inside City, and Whitwell Outside City by combining rate zones and serving customers under consolidated rate structures. Under the Company's proposal, all rate zones, excluding Jasper Highlands, will be served under the same tariff schedules. The consolidated area will be defined as Rate Zone 1 and Jasper Highlands will be defined as

| 1 | | Rate Zone 2. Residential customers in Rate Zone 1 will be served under a residential tariff, |
|----|----|---|
| 2 | | and all other customers, excluding special contracts and private fire, will be served under |
| 3 | | a non-residential tariff. |
| 4 | Q. | PLEASE DESCRIBE THE RESIDENTIAL RATE STRUCTURE UNDER RATE |
| 5 | | ZONE 1? |
| 6 | A. | The Company is proposing fixed service charges that are dependent on meter size starting |
| 7 | | at \$21.50 for a 5/8" meter and escalating with meter size. Additionally, the Company is |
| 8 | | proposing to eliminate the current block structures and have a single volumetric rate of |
| 9 | | \$1.28091 per hundred gallons that is applicable to usage after a monthly allowance of 3,000 |
| 10 | | gallons. |
| 11 | Q. | PLEASE DESCRIBE THE NON-RESIDENTIAL RATE STRUCTURE UNDER |
| 12 | | RATE ZONE 1? |
| 13 | A. | The Company is proposing fixed service charges that are dependent on meter size starting |
| 14 | | at \$27.50 for a 5/8" meter and escalating with meter size. Additionally, the Company is |
| 15 | | proposing a six block rate structure that is based on the current Chattanooga industrial tariff |
| 16 | | volumetric rate proportions. |
| 17 | Q. | PLEASE PROVIDE A SUMMARY TABLE FOR RATE ZONE 1. |
| 18 | A. | Please see the table below for a summary of the Company's proposal. |
| 19 | | |
| 20 | | |
| 21 | | |

2

4

3 Q. PLEASE DESCRIBE THE COMPANY'S RATE PROPOSAL FOR JASPER

HIGHLANDS (RATE ZONE 2).

The Company is proposing a single set of rates for Rate Zone 2 that is applicable to all classes except private fire service. Under the Company's proposal, the current service charge of \$52.15 will be maintained for all meter sizes and the current volumetric rate blocks will be eliminated and a single volumetric rate of \$1.1790 per hundred gallons will be applicable to all volume after a monthly allowance of 2,500 gallons.

10 Q. DO YOU HAVE AN EXHIBIT THAT DISPLAYS THE CHANGES IN RATES AND 11 REVENUES UNDER THE PROPOSED RATE STRUCTURE?

- A. Yes, Petitioner's Exhibit Rev 2: Revenue at Present and Proposed Rates HB displays
 attrition year revenue under current and proposed rates for each rate zone.
- 3 Q. PLEASE DESCRIBE HOW THE COMPANY ALLOCATED THE REVENUE
- 4 **INCREASE.**

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

- 5 A. Proposed rates were quantified utilizing the process described below.
 - Jasper Highlands (Rate Zone 2) revenues were maintained at revenues being recovered through base rates, with the exception of private fire service, which results in an overall revenue reduction to the rate zone of \$201,000 or -28.9%
 - Private fire rates were determined by rolling in the current rider recovery revenues and increasing rates by an additional amount of half the overall retail increase of 19.22%.
 - SFR special contract rates were quantified by rolling in rider revenue recovery into proposed base rates. SFR special contract customers did not receive any of the retail increase in revenues.
 - Rate zone 1 residential meter rates were determined by first increasing the 5/8-inch Chattanooga residential meter rate by the rider amount being collected through the charge which is approximately \$5.68. After adding the rider amount collected through the 5/8-inch meter charge, an additional increase amount of half the overall retail increase was applied which equates to \$1.59. After rounding, the two adjustments result in a 5/8-inch meter rate of \$21.50. Subsequent meter rates were determined by increasing the 5/8-inch meter rate by the Company's equivalent meter capacity ratios.

| 1 | | • Rate zone 1 non-residential meter rates were quantified by maintaining the current |
|----|----|---|
| 2 | | differential between Chattanooga residential and commercial base rates. |
| 3 | | • Once the previously described steps were accounted for, a percentage increase of |
| 4 | | 36.3% to rate zone 1 volumetric recovery was determined to reach the total revenue |
| 5 | | requirement. An increase of 1.25 times the 36.3% increase was applied to rate zone |
| 6 | | 1 residential rates. Rate zone 1 non-residential volumetric rates received the |
| 7 | | remaining increase. |
| 8 | Q. | OF THE TOTAL REVENUES COLLECTED UNDER YOUR PROPOSED WATER |
| 9 | | RATES, HOW MUCH REVENUE IS BEING COLLECTED THROUGH FIXED |
| 10 | | CHARGES AND HOW MUCH REVENUE IS BEING COLLECTED THROUGH |
| 11 | | VOLUMETRIC CHARGES? |
| 12 | A. | Total proposed water revenue recovery from retail customers is \$84,059,343. Of this |
| 13 | | amount, \$35,214,894 is collected through fixed charges (32% of the total) and \$48,844,449 |
| 14 | | is collected through volumetric charges (58% of the total). |
| 15 | Q. | IS THE FIXED CHARGE RECOVERY PERCENTAGE HIGHER THAN THE |
| 16 | | CURRENT FIXED CHARGE RECOVERY PERCENTAGE OF TOTAL RETAIL |
| 17 | | REVENUE RECOVERY UNDER CURRENT RATES? |
| 18 | A. | No, when current base rates and the additional rider recovery is accounted for, the |
| 19 | | Company currently recovers approximately 49% of revenue through fixed charges. The |
| 20 | | Company's proposal results in a reduction of fixed charge recovery of approximately seven |
| 21 | | percent with total proposed fixed charge recovery accounting for 42% of revenue. |
| 22 | Q. | WHAT IMPACT DOES THE COMPANY'S PROPOSED REVENUE INCREASE |

HAVE ON TAWC CUSTOMERS ON A PER CLASS BASIS?

23

1 A. The table below displays the revenue increase impact on each customer class.

TABLE 5: Rate Proposal Impact by Customer Class

| Class | Current Revenue | Proposed Revenue | Increase \$ | Increase % |
|--------------|--------------------|---------------------|-----------------|------------|
| Residential | \$ 32,458,901 | \$ 39,218,107 | \$ 6,759,206 | 20.82% |
| Commercial | \$ 22,715,453 | \$ 27,461,381 | \$ 4,745,927 | 20.89% |
| Industrial | \$ 5,750,304 | \$ 6,581,262 | \$ 830,958 | 14.45% |
| OPA | \$ 4,322,067 | \$ 5,153,148 | \$ 831,081 | 19.23% |
| SFR | \$ 1,286,516 | \$ 1,288,075 | \$ 1,559 | 0.12% |
| Private Fire | \$ 3,973,889 | \$ 4,357,369 | \$ 383,480 | 9.65% |

4 Q. WHAT ARE THE AVERAGE RESIDENTIAL BILL IMPACTS UNDER THE

5 **COMPANY'S PROPOSAL?**

2

3

10

11

A. The Table below displays the residential bill impacts for an average customer using 3,800 gallons per month. Additional residential, commercial, and industrial bill impacts under varying usage parameters can be found in Petitioner's Exhibit Rev – 4 - HB, Petitioner's Exhibit Rev – 5 - HB, and Petitioner's Exhibit Rev – 6 - HB.

TABLE 6: Average Residential Bill Impact

| Rate Zone | Cı | urrent | Pr | oposed | \$ (| Change | % Change |
|-----------------------|----|--------|----|--------|------|---------|----------|
| Chattanooga | \$ | 27.51 | \$ | 31.75 | \$ | 4.24 | 15.4% |
| Lookout Mountain | \$ | 35.84 | \$ | 31.75 | \$ | (4.09) | -11.4% |
| Lakeview | \$ | 31.82 | \$ | 31.75 | \$ | (0.07) | -0.2% |
| Suck Creek | \$ | 62.70 | \$ | 31.75 | \$ | (30.96) | -49.4% |
| Whitwell Inside City | \$ | 40.93 | \$ | 31.75 | \$ | (9.18) | -22.4% |
| Whitwell Outside City | \$ | 47.74 | \$ | 31.75 | \$ | (16.00) | -33.5% |
| Jasper Highlands | \$ | 97.33 | \$ | 66.68 | \$ | (30.65) | -31.5% |

12 V. <u>CONSOLIDATED TARIFF PRICING</u>

Q. THE COMPANY IS PROPOSING TO IMPLEMENT A SIGNIFICANT

2 MOVEMENT TOWARD CONSOLIDATED TARIFF PRICING. WHAT ARE THE

BENEFITS OF CONSOLIDATED TARIFF PRICING?

1

3

14

15

16

17

18

19

20

21

22

23

- 4 A. The following primary benefits are associated with consolidated tariff pricing:
- 1. Improved affordability for all customers: Consolidated pricing creates benefits for all 5 6 customers in the long run by spreading infrastructure investment over the total customer 7 base which in turn results in long-term rate stability. Typically, those customers that pay 8 lower than average prices do so because of aging infrastructure and therefore depreciated 9 infrastructure that will have to be replaced, and the new investment recovered in rates, 10 sooner rather than later. At some point in the future the utility will need to invest in all of 11 the areas that it serves. Significant investment in small rate zones without consolidated 12 tariff pricing could significantly impact water affordability for the customers in such a rate 13 zone.
 - 2. Lower administrative and regulatory costs: Simplifying rate structures also leads to lower administrative costs as utilities can more easily help customers who have questions, lower the cost of billing and collections, and reduce the regulatory cost of separate filings within a single rate proceeding.
 - 3. A consistent regulatory approach for all public utilities: Due to the lumpiness of investment, at any given time using a simple, static cost study will give a distorted picture of the true, long-term differences in costs between different regions of any large public utility. This is another reason why public utility rates tend to be standardized across an entire utility service territory. Consider, for example, the electric distribution system in a large metropolitan area. Investment inside the city may have been completed many years

ago while investment in high growth areas in the outer suburbs was more recently completed, and often at a much higher cost due to inflation and the lower population density. Taking a static cost of service view of this situation would lead one to the erroneous conclusions that it is significantly more costly to serve suburban customers and that those customers should pay a higher rate. Yet over time the investment in the city must be replaced and urban renewal in large areas of the city requires more investment, thereby rendering suspect the conclusion that cost differs significantly between regions. (Indeed, there are some factors that make it more costly to build infrastructure in a more densely populated area.) A similar argument can be made for gas distribution companies and water companies. Costs of service differ within a rate zone and sometimes even within a neighborhood, yet we ignore those cost differentials in setting district rates for many of the same reasons that support consolidated tariff pricing.

4. Support for water industry consolidation: In the past few decades, the water industry has changed dramatically. Many smaller water systems simply cannot attain the economies of scale needed to support the necessary investment and, as a result, the quality of water service suffers. Consolidated pricing removes a disincentive to invest in these small water companies as large utilities can recover the cost of needed investment over a larger customer base. This promotes more universal water infrastructure investment in the state and brings cost-effective, higher quality water services to a larger number of citizens.

Q. ARE THERE COMPROMISES THAT HAVE TO BE MADE WITH POLICY ISSUES TO OBTAIN CONSOLIDATED TARIFF PRICING?

A. Certainly. Generally, there are two common arguments against consolidated tariff pricing with the first being that it does not follow a traditional cost of service perspective where a

revenue requirement along with rates to recover the revenue requirement are developed for each separate rate zone. Costs and revenue recovery evaluated on a consolidated basis, however, provides the primary benefit of costs being recovered over a larger customer base. The second common argument is that customers don't directly benefit from investment made in the water system that they aren't directly connected to. This is a shortsighted mindset, because eventually, investment will need to be made in all areas of the system and all customers benefit by sharing the cost and impact of improved water system infrastructure. Policy makers must determine if the benefits of long-term affordable rates for all customers outweigh traditional perspectives on ratemaking for non-continuous systems which entails revenue requirements for each separate system, separate rates for recovery, and the potential risk for rate shock in smaller rate zones.

A.

Q. WHY SHOULD THE COMMISSION APPROVE THE COMPANY'S PROPOSAL FOR MOVEMENT TOWARD CONSOLIDATED TARIFF PRICING?

Ultimately the goal of rate design for large groups of customers should be to stabilize rates over the long run and smooth out rate increases over time, to the extent that rate increases are necessary to maintain proper investment in the system and to prudently manage the system. Spreading investment cost, operating cost, and the cost of meeting water quality requirements over the largest group of customers possible is the most practical way to do that. Consolidated tariff pricing achieves that goal. In the short run, there may be instances when subsets of customers might be paying more or less than the cost of providing service to that particular group of customers at a given point in time, assuming that cost of service can be calculated; but in the long run, all customers will be paying a commensurate share of the total cost of operating and maintaining the system, and changes in cost and rate

adjustment impacts will be relatively stable compared to a situation where cost increases could be large and unpredictable if small groups of customers were required to cover the full cost of providing service exclusively to them.

Q. IS CONSOLIDATED TARIFF PRICING RECOGNIZED AS A BEST PRACTICE?

Yes. As far back as 2005, the National Association of Regulatory Utility Commissioners ("NARUC") recognized consolidation of rates as a best practice and recommended that economic regulators consider and adopt as many as regulatory mechanisms identified as best practices as possible, including consolidation of rates. NARUC's 2005 resolution is attached hereto as Exhibit HB-1. In addition, a majority of the Company's regulated affiliates have some form of consolidated tariff pricing. A few examples of consolidated tariffs in Indiana, Iowa, New Jersey, Pennsylvania, and West Virginia are attached as Exhibit HB-2. Movement towards consolidated tariff pricing is an ongoing regulatory policy goal, as evidenced by further consolidation approved by the Indiana Utilities Regulatory Commission in Indiana-American Water Company's most recent rate case.

Q. WHY DID THE COMPANY NOT PROPOSE TO FULLY MOVE TO

CONSOLIDATED TARIFF PRICING BY INCLUDING JASPER HIGHLANDS IN

17 RATE ZONE 1?

4

5

6

7

8

9

10

11

12

13

14

15

16

18

19

20

21

A.

A. Generally, Jasper highlands current rates are substantially higher than all other rate zones.

The Company is proposing to gradually move Jasper Highlands to consolidated rates and the Company's proposal achieves a significant step by not increasing current base rates by the rider revenues currently being recovered in Jasper Highlands and by not allocating any

¹ NARUC, Resolution.Supporting.Consideration.of.Regulatory.Policies.Deemed.as.»Best.Practices., adopted by NARUC Board of Directors (July 27, 2005).

² See Cause No. 45870, Order.of.the.Commission, p. 118 (Feb. 14, 2024).

- of the retail increase to Jasper Highlands with the exception of private fire rates that will be the same for the entire TAWC footprint.
- 3 Q. IS IT A COMMON PRACTICE TO GRADUALLY MOVE AN AREA TO
- 4 CONSOLIDATED RATES THAT HAS SIGNIFICANTLY DIFFERENT RATES
- 5 OR AVERAGE BILLS?
- 6 A. Yes, it is a common practice to gradually move a rate zone to consolidated tariff pricing 7 that either has significantly different rates or significantly varying average bills compared to other rate zones or the overall consolidated tariff. Jasper Highlands current average 8 9 residential bill based on 3,800 gallons per month is \$97.33 and the proposed average 10 residential bill is \$66.68. The average residential bill for Jasper Highlands remains higher 11 than the average consolidated residential bill of \$31.75 in the proposed rate zone one; 12 however, the proposed adjustment is a significant movement in the right direction for total 13 consolidated tariff pricing.
- 14 Q. THE CHATTANOOGA RATE ZONE GENERALLY HAS LOWER RATES THAN
- 15 ALL THE OTHER ZONES. WHAT IS THE IMPACT OF CONSOLIDATION ON
- 16 THE CHATTANOOGA RATE ZONE?
- 17 A. If revenue collected from each existing rate zone was increased by the overall retail
 18 increase 19.22%, the Chattanooga rate zone would account for \$76,808,649 in total
 19 revenue recovery compared to total revenue recovery of \$77,951,818 under the Company's
 20 proposal. This equates to approximately 1.5% in additional revenue recovery from the
 21 Chattanooga rate zone than what an equal increase to each rate zone would produce.

VI. OTHER OPERATING REVENUE

1

8

9

10

11

12

13

14

15

16

17

22

| O. IS THE COMPANY PROPOSING TO MAKE C | IANGES IU | OTHEK |
|---------------------------------------|-----------|-------|
|---------------------------------------|-----------|-------|

| 2 | ODED | ATINO | REVENUE | FFFC9 |
|----|------|--------|---------|--------|
| .) | UPER | AIINCT | KEVENUE | , FEES |

- 4 A. Yes, the Company is proposing to change the following other operating revenue fees:
- The Company is proposing to eliminate the current activity fee and new service fee and establish a single activation fee of \$25 that will be applicable to all service establishment.
 - The Disconnection-Reconnection charge that is applied when a customer's service
 has been terminated due to non-payment is proposed to be \$30.00 per occurrence.
 The current fee is \$15 per occurrence.
 - The Disconnection-Reconnection charge that is applied when the Company is requested to disconnect water service due to sewer non-payment is proposed to be \$30.00 per occurrence. Currently customers are charged \$15.00 per occurrence for Disconnection-Reconnections that are due to sewer non-payment.
 - The Company is proposing to establish an after-hours charge of \$40 that will be applicable when the Company is requested to re-establish service outside of normal business hours.
- The Company is proposing to establish a meter tampering penalty fee of \$250.

 Currently, the Company has the option to charge \$92.00 for re-activating water service that has been discontinued due to the customer illegally establishing service.

21 Q. WHY IS IT IMPORTANT TO ADJUST THE REVENUES COLLECTED

THROUGH THE OTHER OPERATING REVENUE FEES DESCRIBED ABOVE?

| 1 | A. | Generally, other operating revenue fees should reflect the costs of providing the associated |
|----|----|--|
| 2 | | services. |
| 3 | | The Company's other operating revenue fees have not been comprehensively updated in |
| 4 | | more than 25 years. The Company's proposed charges better reflect the costs incurred to |
| 5 | | complete the service activities and better align rates and charges with cost-causation. That |
| 6 | | is, customers who cause and directly benefit from the various other operating revenue fees |
| 7 | | will contribute more to cover the costs incurred to provide the requested service. |
| 8 | Q. | WHAT IMPACT DOES THE PROPOSED CHANGES TO OTHER OPERATING |
| 9 | | REVENUE FEES HAVE ON TOTAL OTHER OPERATING REVENUES? |
| 10 | A. | The proposed modifications to the Company's other operating revenue fees result in an |
| 11 | | increase in other operating revenues of \$490,800. An additional increase in other operating |
| 12 | | revenues of \$87,990 is attributable to an increase in late payment fees. |
| 13 | Q. | DID THE COMPANY CONDUCT A COST STUDY TO ANALYZE THE |
| 14 | | APPROPRIATENESS OF THE PROPOSED ADJUSTMENTS TO THE OTHER |
| 15 | | OPERATING REVENUE FEES? |
| 16 | A. | A cost study that accounts for various costs related to each fee was conducted to estimate |
| 17 | | the cost per occurrence. Please refer to Petitioner's Exhibit COS – 2: Other Operating Fees |
| 18 | | Cost Study - HB for the results of the Company's cost study. |
| 19 | | The Company did not include the proposed meter tampering penalty fee as part of the cost |
| 20 | | study. The proposed rate of \$250 is designed to deter customers from illegally re- |
| 21 | | establishing service when it has been turned off for non-payment or other reasons deemed |
| 22 | | necessary by the Company. |

VII. <u>CONCLUSION</u>

1

- 2 Q. PLEASE PROVIDE A BRIEF SUMMARY OF THE COMPANY'S RATE
- 3 PROPOSAL AND THE BENEFITS TO CUSTOMERS IF SUCH PROPOSAL IS
- 4 **APPROVED?**
- 5 A. The Company is proposing to significantly simplify TAWC rates and create long term rate 6 stability and affordability by implementing a significant movement toward consolidated 7 tariff pricing by combining the Chattanooga, Lakeview, Lookout Mountain, Suck Creek, 8 Whitwell Inside City, and Whitwell Outside City rate zones. The implementation of the 9 proposed consolidated rate structure will benefit all TAWC customers in the long run by 10 spreading necessary infrastructure investment over a larger customer base, reducing 11 regulatory and administrative costs, and by reducing the risk of rate shock to customers 12 that reside in smaller rate zones. While consolidated tariff pricing may not follow the 13 traditional Commission approach, such as implementing rates based on cost of service for 14 each separate system, the benefits of long-term affordability for all TAWC customers under 15 consolidated tariff pricing significantly outweighs concerns over cost of service for each 16 separate rate zone.

17 Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

18 A. Yes.

19

20

21
