Re: Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, for Approval of Negotiated Gas Redelivery Agreement with State Industries

Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, for Approval of Negotiated Gas Redelivery Agreement with Bridgestone/Firestone

Docket Nos. 98-00338 and 98-00339

Dear Mr. Waddell:

I am enclosing for filing in the above captioned proceeding the original and fourteen copies of the Testimony and Exhibits of Chuck W. Fleenor and Bill R. Morris on behalf of Nashville Gas Company.

I am enclosing an additional copy of the Testimony and Exhibits that I would appreciate your stamping "filed" and returning in the enclosed envelope.

Sincerely,

Jerry W. Amos

Docket Nos. 98-00338 and 98-00339

**Direct Testimony
of
Bill R. Morris**

REC'D TN
REGULATORY AUTH.
'99 APR 14 PM 12 49
OFFICE OF THE
EXECUTIVE SECRETARY

**On Behalf of
Nashville Gas Company**

April 13, 1999

1 Q. Please state your name and business address.

2 A. My name is Bill R. Morris, and my business address is 1915 Rexford Road,
3 Charlotte, North Carolina.

4 Q. By whom and in what capacity are you employed?

5 A. I am employed by Piedmont Natural Gas Company ("Piedmont") as Director of
6 Rates.

7 Q. By whom were you employed prior to being employed by Piedmont?

8 A. I was employed by Nashville Gas Company ("Nashville Gas") as Assistant Vice
9 President of Rates prior to my transfer to Piedmont in February 1986. Prior to my
10 employment by Nashville Gas, I was employed by the Tennessee Public Service
11 Commission ("TPSC") as a Financial Analyst from August 1974 through September
12 1981.

13 Q. Briefly describe your educational background.

14 A. I received a Bachelor of Science degree in accounting in 1974 from Austin Peay
15 State University. In 1979 I became a Certified Public Accountant in the state of
16 Tennessee.

17 Q. Have you previously offered testimony in any regulatory proceedings?

18 A. Yes, while with the TPSC, I entered testimony as a staff witness in numerous rate
19 cases. Since being employed by Nashville Gas and Piedmont, I have testified before
20 the North Carolina Utilities Commission, the Public Service Commission of South
21 Carolina and the TPSC. I have also entered testimony before the Federal Energy
22 Regulatory Commission (FERC).

23 Q. Are you a member of any professional associations?

24 A. Yes, I am a member of the American Institute of Certified Public Accountants, the
25 Tennessee Society of Certified Public Accountants, and the North Carolina

1 Association of Certified Public Accountants. I am a member of the Southern Gas
2 Association's Rate Committee and currently serve as Chairman.

3 Q. What is the purpose of your testimony in this case?

4 A. The purpose of my testimony is (1) to provide a brief history of these proceedings,
5 (2) to describe Rate Schedule 9, (3) to provide a brief explanation of when and why
6 Rate Schedule 9 was proposed by Nashville Gas and approved by the Tennessee
7 Public Service Commission ("TPSC") and subsequently by the Tennessee
8 Regulatory Authority ("TRA"), (4) to explain how transactions under Rate Schedule
9 9 affect Nashville Gas and its rates to other customers and (5) to describe the
10 circumstances under which we advised the Commission of our intent to serve
11 Bridgestone under Rate Schedule 9.

12 Q. Please provide a brief history of these proceedings.

13 A. As discussed in more detail in the testimony of Mr. Chuck Fleenor, in June 1997
14 Piedmont Natural Gas was notified by Bridgestone/Firestone that they had engaged
15 Summit Energy Services to conduct a feasibility study of constructing a transmission
16 line from Tennessee Gas Pipeline's line to its manufacturing facility located in
17 LaVergne. At that time, Bridgestone was contributing approximately \$390,000 in
18 margin to the Nashville Gas system under Rate Schedule 7I, Interruptible
19 Transportation Service. We began negotiations immediately in an attempt to
20 determine if the bypass threat was real and if it was real what rate would be
21 necessary to keep Bridgestone as a Nashville Gas customer. This process involved
22 discussions for the next several months, and as discussed by Mr. Fleenor, we
23 entered into a verbal agreement in January 1998.

24 As testified to by Mr. Fleenor, during the negotiation process it became
25 obvious that an immediate reduction in Bridgestone's rate was necessary to prevent

1 them from proceeding any further with their bypass action. Consequently, we
2 reduced their rate effective January 1, 1998 under the provisions of Rate Schedule
3 9.

4 On May 12, 1998, we filed an application with the TRA requesting the
5 authority to (1) approve a gas redelivery agreement pursuant to which we would
6 provide transportation services to Bridgestone/Firestone and (2) to permit us to
7 recover our future margin losses associated with that gas redelivery agreement.

8 On January 22, 1999, the Authority issued an order approving the terms of
9 the gas redelivery agreement; however, the Authority ruled that we could only
10 recover 90% of our future margin losses. In addition, the Authority ruled that we
11 could not recover any of our margin losses during the interim period (January 1,
12 1998 through July 31, 1998) when we transported gas to Bridgestone/Firestone
13 under negotiated rates under Rate Schedule 9.

14 On February 5, 1998, we filed a motion for rehearing.

15 The State Industries negotiations actually began during December 1995 when
16 a meeting was suggested by State. Although discussions continued for quite some
17 time, we were notified by State in May 1997 that because Tennessee Gas Pipeline's
18 transmission line actually ran across State's property we could not offer a rate low
19 enough to keep them as a customer. As Mr. Fleenor testifies, discussions stalled for
20 a period of time during which TGP filed with the Federal Energy Regulatory
21 Commission for approval to construct interconnection facilities with State. We filed
22 a protest of that application in December 1997.

23 It was not until the Office of the Consumer Advocate became involved that
24 negotiations resumed in January 1998. As explained by Mr. Fleenor, a mutually
25 agreeable rate was established during these negotiations, and, as part of the

1 agreement, we agreed to reduce State's rate on January 1, 1998 under the provisions
2 of Rate Schedule 9.

3 On May 12, 1998, we filed an application with the TRA requesting the
4 authority to (1) approve a gas redelivery agreement pursuant to which we would
5 provide transportation services to State Industries and (2) to permit us to recover our
6 future margin losses associated with that gas redelivery agreement.

7 On January 22, 1999, the Authority issued an order approving the terms of
8 the gas redelivery agreement; however, the Authority ruled that we could only
9 recover 90% of our future margin losses. In addition, the Authority ruled that we
10 could not recover any of our margin losses during the interim period (January 1,
11 1998 through July 31, 1998) when we transported gas to State Industries under
12 negotiated rates under Rate Schedule 9.

13 On February 5, 1998, we filed a motion for rehearing.

14 In each of the orders, the TRA defined the interim period under which we
15 transported gas to the two customers under Rate Schedule 9 as "Phase I" and the
16 subsequent period during which we transported (or will transport) gas to the two
17 customers under the negotiated contracts as "Phase II." I will use this terminology
18 in my testimony.

19 At its Agenda Conference on April 6, 1999, the TRA granted our requests
20 for rehearing and set the two matters for hearing.

21 Q. When was Rate Schedule 9 first filed with the TPSC?

22 A. Piedmont acquired Nashville Gas in 1985. Rate Schedule 9 was in effect at that
23 time. Although we are not certain when it was first approved, we are certain that
24 it was in effect at least as early as 1983. A copy of Rate Schedule 9 as approved in
25 Docket No. U-83-7223 effective March 18, 1983 is attached as Exhibit BRM-1.

1 Q. Has Rate Schedule 9 also been approved by the TRA?

2 A. Yes. It was approved in our last general rate case. A copy of Rate Schedule 9 as
3 approved in Docket No. 96-00977 effective January 1, 1997 is attached as Exhibit
4 BRM-2.

5 Q. Please describe Rate Schedule 9.

6 A. Rate Schedule 9 permits the Company to negotiate rates to customers who are
7 eligible to purchase gas under Rate Schedules 3, 4 or 10 or to customers who
8 transport gas under Rate Schedules 7F or 7I when necessary to avoid the loss of
9 margin provided by those customers as a result of alternate fuel competition.

10 Q. Does Rate Schedule 9 provide for the treatment of margin losses?

11 A. Yes. Rate Schedule 9 provides the following:

12 "Margin losses under this rate schedule shall be recovered by the
13 Company through the Company's Actual Cost Adjustment (ACA) as
14 provided in the Company's Purchased Gas Adjustment (PGA) Rider
15 (TRA Service Schedule 11).

16 Q. What is the purpose of Rate Schedule 9?

17 A. From time to time, Nashville Gas has large industrial customers who have an option
18 to discontinue purchasing or transporting gas with Nashville Gas and, instead,
19 consume some other source of energy. When that event occurs, Piedmont loses the
20 margin (revenues less cost of gas) that would otherwise be produced if the customer
21 continued to purchase or transport gas with Nashville Gas. Rate Schedule 9 was
22 designed to permit Nashville Gas to negotiate a lower rate in order to prevent the
23 loss of such customers.

24 Q. What would happen if Nashville Gas were to lose these customers?

25 A. When the TRA sets rates for Nashville Gas, it assumes that some volume of gas and
26 some margin will be earned from these customers. These assumptions are normally

1 based on the volumes of gas sold or transported and the margin earned during the
2 test period. If the TRA were to assume that Nashville Gas could sell 4,000,000 dts.
3 of gas at a margin of \$.25 cents to these large industrial customers, it would assume
4 a margin of \$1,000,000. The effect of this assumption would be to reduce the
5 revenue requirements (and, therefore, the rates) from Nashville Gas' other
6 customers by \$1,000,000. If Nashville Gas were to lose these large customers to
7 another energy source, Nashville Gas would initially fail to achieve its allowed
8 return as a result of the loss in margin. In its next rate case, however, this loss in
9 margin would be shifted to the other customers resulting in rates being higher in
10 order to produce the \$1,000,000 requirement. In order to avoid these undesirable
11 consequences, Nashville Gas is allowed to negotiate a lower competitive rate so that
12 these large customers produce some margin and the rates for other customers are
13 kept at a lower level. If, by negotiating a lower rate, Nashville Gas can compete to
14 keep these large industrial customers and obtain \$750,000 of margin, the ultimate
15 result would be to lower the revenue requirement and rates of other customers by
16 \$750,000. In short, Rate Schedule 9 permits the Company to obtain the maximum
17 contribution possible from these large customers in the competitive marketplace
18 and, therefore, obtain the minimum possible contribution from its other customers.
19 Since, in the above example, Rate Schedule 9 permits Nashville Gas to recover the
20 \$250,000 margin shortfall (the \$1,000,000 margin upon which its rates were based
21 and the \$750,000 it actually received), Nashville Gas is kept whole (*i.e.*, it is
22 permitted the opportunity to earn the rate of return allowed by the TRA). Thus,
23 Rate Schedule 9 is fair to all concerned.

24 Q. Why do you contend Rate Schedule 9 is fair to all concerned?

25 A. Rate Schedule 9 permits large industrial customers to purchase or transport gas

1 from Nashville Gas at competitive rates, it provides the lowest possible margin
2 contribution from Nashville Gas' other customers, it provides Nashville Gas a
3 reasonable opportunity to earn its allowed return, and it prevents the necessity for
4 the filing of repeated general rate cases each time a large industrial customer has an
5 opportunity to select another source of energy. Thus, the negotiating customers, the
6 other customers, Nashville Gas and the Authority all receive significant benefits.

7 Q. How does the application of Rate Schedule 9 apply to the matter being heard in
8 these consolidated dockets?

9 A. As discussed in detail by Mr. Fleenor, we were advised by both State Industries and
10 Bridgestone/Firestone that they would discontinue transporting gas on our system
11 unless we lowered their existing rates. To prevent the loss of these two customers
12 and the associated margins, we entered into negotiations with these two customers.
13 Our objective was to obtain the highest rate possible. In order to keep these two
14 customers at the negotiating table, we agreed to provide some interim relief in the
15 form of negotiated rates under Rate Schedule 9.

16 Q. Did you notify the TRA of your intent to provide negotiated rates under Rate
17 Schedule 9?

18 A. By letter dated December 30, 1997, we notified the TRA that we had entered into
19 negotiations with Summit Energy Services, an agent for Bridgestone/Firestone,
20 "with the objective of competing with alternate fuels available to the customer by
21 way of a bypass of the Nashville Gas system." In that letter we advised the TRA
22 that "Nashville Gas intends to offer Bridgestone, effective January 1, 1998, a
23 reduced rate under the provisions of TRA Rate Schedule 9, Special Availability
24 Service, until such time as the terms of a mutually agreeable Special Contract can
25 be executed and filed for approved with the Authority." A copy of that letter is

1 attached as Exhibit BRM-3.

2 Q. Did you receive any objection from the TRA or any member of the TRA staff with
3 respect to your announced intent to negotiate rates under Rate Schedule 9?

4 A. No.

5 Q. What were Nashville Gas' negotiated margin losses with respect to
6 Bridgestone/Firestone and State Industries during the interim period in question?

7 A. The negotiated losses were \$64,061 for Bridgestone/Firestone and \$51,472 for State
8 Industries as shown on Exhibit BRM-4.

9 Q. In your opinion does Rate Schedule 9 apply to the Phase I transactions with
10 Bridgestone/Firestone and State Industries?

11 A. Yes. Rate Schedule 9 specifically provides that it is intended to permit the
12 Company to negotiate lower rates "for the purpose of enabling the Company to
13 compete with alternate fuels available for use by its customers." Webster's defines
14 the adjective "alternate" as: "In the place of another; substitute." Clearly, the
15 competitive treatment of bypass whereby one of our customers can purchase or
16 transport gas directly on a pipeline rather than purchasing gas from and/or
17 transporting gas on our distribution system meets the Webster's definition since
18 bypass transports are a "substitute" for and are "in place of" transactions with the
19 Company. Further, the fundamental reasons for and the benefits of Rate Schedule
20 9 apply to bypass transactions in exactly the same manner as is the case with other
21 alternate fuels such as coal, fuel oil, propane, woodchips, etc. If the Company does
22 not negotiate a lower rate for a bypass customer under Rate Schedule 9 the margin
23 contribution by the bypass customer will be lost.

24 Q. What relief did you request in your two motions for rehearing with respect to Phase
25 I?

1 A. We requested the TRA to permit us to recover 100% of our Phase I losses with
2 respect to both Bridgestone/Firestone and State Industries as provided in Rate
3 Schedule 9?

4 Q. What relief did you seek in your two motions for rehearing with respect to Phase II?

5 A. We requested the TRA to permit us to recover 100% of our Phase II losses in
6 connection with both Bridgestone/Firestone and State Industries. In the alternative,
7 and by way of compromise, we requested the TRA to permit us to recover 100% of
8 our Phase I losses, 90% of our Phase II losses and to keep at least 10% of the gains
9 on the Ford contract.

10 Q. Please explain what relationship the Ford contract has to the two dockets that are the
11 subject of this proceeding.

12 A. On February 25, 1998, Nashville Gas petitioned the Authority in Docket No. 98-
13 00128 for approval of a negotiated gas redelivery agreement with Ford Motor
14 Company. The contract's effective date was March 1, 1998 which coincided with
15 the expiration date of the previous contract with Ford which was approved by the
16 TPSC in Docket No. 90-07401. We are very proud of the fact that in the Ford
17 negotiations, we were able to negotiate a rate that was *higher* than the previous
18 contract rate. In our petition, we proposed to credit 100% of the difference between
19 the new rate and the old rate to the benefit of the other customers. Our proposal was
20 conditioned, however, in a footnote, on the "continued approval of the negotiated
21 loss recovery mechanism." In other words, we were willing to give back 100% of
22 the margin increase from Ford provided we were to receive equal treatment on
23 future margin losses under other contracts such as Bridgestone/Firestone and State
24 Industries.

25 In its Order, the TRA approved the redelivery agreement and found that the

1 Company's proposal to give back 100% of the margin increase was fair "whereas
2 such ratepayers had paid for the prior lost margin on the agreement with Ford." The
3 Order made no mention of the conditional nature of the Company's proposal.

4 Q. In your opinion, is it fair and reasonable to require Nashville Gas to refund 100% of
5 any gains but to absorb 10% of any negotiated losses on negotiated contracts?

6 A. No.

7 Q Please explain your answer.

8 A. As I explained earlier, we are very proud of the fact that we were able to negotiate
9 a rate for Ford that was higher than the existing rate. We could have taken the much
10 easier approach and just offered the same rate, which obviously would have been
11 accepted by Ford. Under that scenario, the other customers would have received
12 no benefit. By giving back 100% of the gain from Ford, there is no incentive for the
13 Company to ever attempt to get a higher rate in contract negotiations. Also, as I have
14 previously discussed, by allowing only 90% recovery of margin losses and requiring
15 100% return of all margin gains, the Company is unable to ever achieve its allowed
16 rate of return, all other factors being equal.

17 Q. Is Nashville Gas willing to offer a settlement compromise on the recovery of its
18 Phase I and Phase II losses?

19 A. Yes. If provided an opportunity at the April 15, 1999 hearing, we are prepared to
20 offer a settlement compromise.

21 Q. Does this conclude your testimony?

22 A. Yes it does.

NASHVILLE GAS COMPANY
814 Church Street, Nashville, Tennessee 37203

SCHEDULE OF APPROVED RATES

As ordered by the
TENNESSEE PUBLIC SERVICE COMMISSION

For billing of all limited availability natural gas
service in the entire service area of the Company

Effective upon approval by and until further order of the Commission, the following schedule shall be charged by the Nashville Gas Company for natural gas served in the territory shown above for the class of service indicated, in accordance with the Company's Rules and Regulations, where the Company's distribution mains are suitable for supplying the desired service.

SPECIAL AVAILABILITY SERVICE
Schedule No. 9

AVAILABILITY

Available to any large commercial or industrial customer when the Company has gas supplies that it cannot sell at its established fixed rates. On such occasions, the gas is sold to the Company and its customers. This rate schedule is designed to permit the Company to sell such gas at special rates for the purpose of enabling the Company to compete with alternate fuels available for use by its customers.

Gas service under this rate schedule is available on a temporary basis to customers, who would otherwise qualify for rate schedules 3 and 4, who are connected to the Company's distribution system and to off-system customers who can be served by pipeline supplier transportation arrangements. Gas service may be provided under this rate schedule only in the event that the Company has volumes of gas that cannot be sold under other rate schedules of the Company. Service under this rate schedule is temporary and the Company has the right to discontinue such service up to 100% of capacity. Gas service under this rate schedule will be curtailed prior to service under any other rate schedule. Service under this rate schedule will be made available on a first request basis.

BASE RATE

The customer shall pay the Company for all gas supplied under this schedule at a predetermined rate negotiated prior to delivery. Said rate would not be lower than the cost of gas adjusted to include a provision for the cost of unaccounted for gas and revenue related taxes, now greater than that of the rate schedule under which the customer would otherwise be served.

CUSTOMER MONTHLY CHARGE

A monthly customer charge of \$30.00 will be billed to each customer for the availability of gas service in addition to charges for gas delivered from the time of initial service until termination at the customer's request, unless there is a temporary discontinuance of service in which case there will be a reconnect charge.

CONTRACT PERIOD AND BILLING

All customers taking gas under this rate schedule will be subject to standard contract and subject to the Company's Rules and Regulations as filed with the Tennessee Public Service Commission.

This tariff shall remain in effect through December 31, 1983, unless sooner modified or cancelled. Standard contracts shall be for periods in accordance with the foregoing effective period with monthly payment for service taken.

PAYMENT TERMS

All bills for service are due upon presentation and the above stated net rates shall be allowed if payment is made on or before the last day for payment as specified on the bill. Payments made after that day shall be for the gross amount which will be greater by five percent (5%) than the net billing.

PENALTY FOR UNAUTHORIZED USE

In the event customer uses gas in excess of the daily volume allowed by the Company during a curtailment period, customer agrees to pay in addition to the regular rate an amount equal to one dollar (\$1.00) per Ccf for each Ccf of such excess daily volume of unauthorized use. This penalty is due and payable immediately at time of unauthorized use.

It is not intended that the use of unauthorized gas will entitle customer to purchase such gas on any of the Company's applicable firm rate schedules.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule may be limited as to weekly, monthly and peak day volumes allowed and is subject to curtailment provisions specified by TPSC Service Schedule No. 6, Schedule for Limiting and Curtailing Service.

ADJUSTMENTS

Bills for service are subject to adjustment for changes in the cost of purchased gas in accordance with Rule 401.12 of the TPSC Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated base rates as per Rules, Regulations and Orders of the Commission and Laws of the State of Tennessee.

INCREMENTAL PRICING SURCHARGE

Gas service provided hereunder to industrial boiler fuel customers not qualifying for exemption from incremental pricing under S206 of the Natural Gas Policy Act of 1978 (NGPA) shall be subject to the provisions of incremental Pricing Tariff TPSC Schedule No. 8 as originally effective January 1, 1980 or as thereafter revised and made effective.

RATE SCHEDULE NO. 9

Special Availability Service

AVAILABILITY

Gas service under this rate schedule is available to any TRA Rate Schedule No. 3, 4, 7F, 7I, or 10 customer when the Company has gas supplies that it cannot sell at its established fixed rates where the Company's distribution mains are suitable for supplying the desired service. On such occasions, the gas is lost to the Company and its customers. This rate schedule is designed to permit the Company to sell such gas at special rates for the purpose of enabling the Company to compete with alternate fuels available for use by its customers.

Gas service under this rate schedule is available on a temporary basis to customers who would otherwise qualify for industrial rate schedules and transportation service who are connected to the Company's distribution system. Gas service may be provided under this rate schedule only in the event that the Company has volumes of gas that cannot be sold under other rate schedules of the Company. Service under this rate schedule is temporary and the Company has the right to discontinue such service up to 100% capacity. Gas service under this rate schedule will be curtailed prior to service under any other rate schedule.

In the event a customer has zero consumption during any billing period, this tariff will not apply and service shall be rendered pursuant to the Company's regular rate schedules for the class of service indicated.

BASE RATE

The customer shall pay the Company for all gas supplied under this schedule at a predetermined rate negotiated prior to delivery for limited term periods up to seven consecutive months.

SERVICE AGREEMENTS

All customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the above stated net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No.9

Original Sheet No. 9
Page 2 of 2

RETURNED CHECK CHARGE

In the event a customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the customer will be assessed a charge of \$20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated base rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be supplied based upon the Company's judgement as to the available gas supply, customer's load factor or use pattern, end use priority as specified by the Federal Energy Regulatory Commission (FERC), impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the curtailment provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service."

TREATMENT OF NEGOTIATED MARGIN LOSSES

Margin losses under this rate schedule shall be recovered by the Company through the Company's Actual Cost Adjustment (ACA) as provided in the Company's Purchased Gas Adjustment (PGA) Rider (TRA Service Schedule No. 11).

Piedmont
Natural Gas
Company

Post Office Box 33068
Charlotte, North Carolina 28233

December 30, 1997

Mr. David Waddell
Executive Secretary
Tennessee Regulatory Authority
460 James Robertson Parkway
Nashville, TN 37243-0505

Dear Mr. Waddell:

The purpose of this letter is to advise the Authority that Piedmont Natural Gas Company, through its Nashville Gas division, has entered into negotiations with Summit Energy Services, as agent for Bridgestone/Firestone, Inc., with the objective of competing with alternate fuels available to the customer by way of a bypass of the Nashville Gas system. Nashville Gas believes that a successful resolution can be accomplished through meaningful negotiations, however, in the interim, it is apparent that such negotiations cannot go forward without an immediate reduction in the rate currently being charged to Bridgestone for transportation services.

Nashville Gas intends to offer Bridgestone, effective January 1, 1998, a reduced rate under the provisions of TRA rate Schedule 9, Special Availability Service, until such time as the terms of a mutually agreeable Special Contract can be executed and filed for approval with the Authority.

Nashville Gas believes the immediate rate reduction is the public interest in that the permanent loss of such a substantial industrial load would be detrimental to the remaining Nashville Gas customers.

Sincerely,

A handwritten signature in black ink that reads "Bill R. Morris". The signature is written in a cursive, flowing style.

Bill R. Morris
Director-Rates

REC'D TN
REGULATORY AUTH.

The Tennessee Regulatory Authority

APR 14 PM 12 50

OFFICE OF THE
EXECUTIVE SECRETARY

Docket Nos. 98-00338 and 98-00339

**Direct Testimony
of
Chuck W. Fleenor**

**On Behalf of
Nashville Gas Company**

April 13, 1999

1 Q. Please state your name and business address.

2 A. My name is Chuck Fleenor. My business address is 1915 Rexford Road, Charlotte,
3 North Carolina 28211.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by Piedmont Natural Gas Company, Inc., (Piedmont) as Vice
6 President-Gas Services.

7 Q. Please summarize your educational and professional background.

8 A. I received a B.S. degree in Physics in 1972 from the University of North Carolina
9 at Charlotte. In 1979, I received a Masters degree in Business Administration from
10 the same university. I became a registered Professional Engineer in the state of
11 North Carolina in 1980. In 1987, I became a registered Professional Engineer in the
12 state of South Carolina. I was employed by Piedmont in 1974. Prior to my current
13 position as Vice President-Gas Services, I held the positions of Engineer-Gas
14 Supply, Manager-Technology, Director-Technology, Director-Energy Systems, and
15 Director-Gas Supply. I was promoted to Vice President - Gas Supply in 1985 and
16 held that position until April 1, 1996 when my position changed to Vice President -
17 Gas Services.

18 Q. Have you previously testified before this Commission or any other regulatory
19 authority?

20 A. Yes. I have testified before this Commission on several occasions. I have also
21 testified before the South Carolina Public Service Commission, the North Carolina
22 Utilities Commission and the Federal Energy Regulatory Commission.

23 Q. In what areas have you testified before federal or state regulatory agencies?

24 A. I have presented testimony on a number of issues, including cost of service studies,
25 rate designs, cost of gas, projected sales and transportation volumes and revenue

1 requirements.

2 Q. Please describe the purpose of your testimony in this proceeding.

3 A. I will describe how Nashville Gas Company (Nashville Gas) attempts to avoid the
4 loss of margin that occurs when its large industrial customers switch to an alternate
5 source of energy and discontinue purchasing and/or transporting gas on Nashville
6 Gas' system. I will also explain the particular details surrounding our negotiations
7 with State Industries and Bridgestone/Firestone to keep them from selecting an
8 alternate energy source.

9 Q. What effect does the loss of a large industrial customer have on Nashville Gas' other
10 customers?

11 A. As explained in more detail in the testimony of Mr. Bill Morris, the ultimate result
12 is that other customers must pay higher rates in order to make up for the margin loss
13 from the customer who chooses to use an alternate source of energy. It was for this
14 reason that Rate Schedule 9 was adopted in Tennessee, and similar rate schedules
15 were adopted in our other service areas. If we can keep these large industrial
16 customers on our system by negotiating lower rates, we are able to maximize the
17 contribution from these large industrial customers and avoid substantial increases
18 to our other customers.

19 Q. What alternate sources of energy are available to your large industrial customers?

20 A. The type of alternate energy sources available to our large industrial customers
21 varies from customer to customer and from time-to-time depending upon a number
22 of factors, including prices, technology and regulation. Many years ago, the major
23 alternate source of energy was coal. Environment regulation eliminated coal as a
24 alternate source of energy for some, but not all, of our customers. In many
25 instances, fuel oil is a major alternate source of energy. Due to the nature of their

1 operations, some of our customers cannot use fuel oil but can use propane as an
2 alternate fuel. During the gas shortages of the late 1970's and early 1980's, some
3 of our customers developed the ability to use wood chips as an alternate fuel. In
4 recent years, changes in regulation have made it possible for some of our customers
5 to bypass our distribution system and purchase gas from and/or transport gas on an
6 interstate pipeline.

7 Q. Does the margin loss occur regardless of the alternate energy source selected by a
8 particular large industrial customer?

9 A. Yes. Anytime a customer leaves our system to use an alternate energy source, we
10 lose margin.

11 Q. What experience do you personally have in negotiating special arrangements with
12 large volume customers to avoid this loss of margin?

13 A. I am responsible for the commercial relations with all of Piedmont's large volume
14 customers within the three state territory that we serve. Most of these customers
15 have the capability to use alternate fuels to serve major portions of their energy
16 requirements, and, from time to time, Piedmont must negotiate discounts to its
17 published tariffs in order to maintain service levels. One of my responsibilities is to
18 assure that we only lower these rates when absolutely necessary and that, when we
19 do negotiate, we receive the maximum margin contribution possible.

20 Q. What experience do you have in negotiating agreements that protect the Company
21 from the threats of bypass?

22 A. Piedmont has or is negotiating with about one dozen of its largest customers,
23 representing about 13 million dts of annual load. I have successfully negotiated
24 agreements in all of the three states that Piedmont serves. I represented Nashville
25 Gas in the original Ford Motor Company contract in March 1993, the renegotiation

1 of that contract in 1998 (resulting in an increase in rates), and the contracts that are
2 being discussed today with State Industries and Bridgestone/Firestone.

3 Q. What variables are considered when Nashville Gas evaluates a potential loss of a
4 customer to bypass?

5 A. We must consider many of the same factors that the customer should evaluate to
6 determine the economic feasibility of constructing bypass facilities. Although the
7 bottom line is the potential savings that would be available to the customer, the sub-
8 components of this determination include: the current rate being charged; the
9 distance from the customer's facilities to an interstate pipeline and, therefore, the
10 cost; the consumption level of the customer; regulatory restrictions; and the nature
11 of the customer's needs (firm or interruptible).

12 Q. How do you respond to customers who intend to reduce their costs by constructing
13 bypass delivery facilities in competition to those provided by Nashville Gas?

14 A. Most of our large volume customers have been approached by consultants,
15 marketers, and pipeline contractors who often make unrealistic claims about the
16 amount of savings available to end users who bypass the local distribution system
17 and construct their own natural gas facilities. Discussions begin by scrubbing the
18 construction bids and estimates that third parties have given the customer. In most
19 cases, I will actually encourage the customer to obtain estimates from the interstate
20 pipeline for interconnection since the real cost is often much higher than the cost
21 estimated by the customer or its consultant. We also advise the customers of the
22 regulatory approval process, the possibility that the bypass facilities may not be
23 approved, and the timing of construction.

24 Q. Why is the regulatory approval process important to the negotiation of these
25 agreements?

1 A. It is important to understand what the customer wants. Often the customer is
2 willing to accept a ten cent reduction to their costs today instead of a fifteen cent
3 reduction two years from now. When the regulatory approval process before the
4 FERC is added to construction time, a customer may be looking at a delay of a year
5 or more before it could benefit from the capital expenditures and investments in a
6 bypass connection to an interstate pipeline. Nashville Gas takes into account the
7 regulation/construction requirements of bypass facilities when it negotiates a
8 competitive rate under Rate Schedule 9 and when it negotiates a long-term
9 redelivery contract. Without the ability to use Rate Schedule 9 to provide an
10 immediate discount while the parties are negotiating the terms of a longer term
11 special contract, the discounts in the long term special contracts would have to be
12 much higher. Thus, the ability to negotiate under Rate Schedule 9 ultimately
13 benefits our other customers by providing a greater margin contribution from the
14 contract customer than would otherwise be available.

15 Q. Under what circumstances does Nashville Gas negotiate with customers to avoid
16 margin loss due to bypass?

17 A. In certain cases, large volume users who are geographically close to an interstate
18 pipeline can materially reduce their energy costs and, therefore, their operating costs
19 by building their own pipeline. Exhibit CWF-1 is a map of the Nashville Gas
20 system showing the location of State Industries and Bridgestone/Firestone. State
21 Industries literally has Tennessee Gas Pipeline (TGP) in its backyard.
22 Bridgestone/Firestone is located on the eastern side of the Nashville system and sits
23 between two interstate pipelines, Columbia Gulf Transmission and Texas Eastern
24 Transmission (TETCO). Thus, in the case of both of these customers, bypass was
25 a very real threat.

1 Q. When did the negotiations with State Industries begin?

2 A. In the case of State Industries, a meeting was arranged by the customer for
3 December 12, 1995, for the specific purpose of discussing transportation options,
4 including bypass. Initial rate discounting offers were extended by Nashville Gas in
5 February of 1996. Without making Nashville Gas a counteroffer, State Industries
6 notified Nashville Gas in May of 1997 that it was proceeding with a bypass. The
7 Company extended another offer that same month while the customer discussed
8 interconnection plans with TGP. On October 14, 1997, TGP filed an application
9 with FERC (see Exhibit CWF-2) to construct interconnection facilities in order to
10 provide service to State Industries. The Company's negotiation intensity increased,
11 but because TGP actually crosses State Industries' property, the customer told us
12 that we could not offer a rate low enough to avert a bypass.

13 In December 1997, we filed a protest of the TGP application with the FERC.
14 In addition, we also filed an application with the TRA for "Authority to Abandon
15 Service to State Industries, Inc. and to Offer Future Service upon Negotiated, Non
16 Regulated Prices." Moreover, the Office of the Consumer Advocate (CA) became
17 involved to see if there was any way that the negotiations between Nashville Gas
18 and State Industries could proceed to a mutually beneficial compromise. The CA
19 had discussions with both parties and gathered data from each party to determine
20 if a settlement could be reached.

21 With the help of the CA and the understanding and cooperation of the parties
22 involved, an agreement as to a discounted rate was finally reached that all parties
23 could support. This discounted rate formed the basis for an agreement that provided
24 State Industries with a discounted rate that was provided under Rate Schedule 9
25 effective January 1, 1998, pending approval by the TRA of a longer term contract.

1 This temporary discount was originally provided by oral agreement, and the oral
2 agreement was reduced to writing and executed on February 2, 1998. It took
3 several months to draft the formal long term contract that was filed for approval with
4 the TRA on May 12, 1998.

5 Q. Who benefitted from the Rate Schedule 9 negotiated rate that was provided in the
6 January Phase I agreement?

7 A. This settlement benefitted State Industries by giving near-term relief to its operating
8 costs; it benefitted Nashville Gas by increasing the probability that State Industries
9 would remain a long-term customer, and it benefitted the ratepayers of Nashville
10 Gas by retaining a margin contribution from State Industries that would otherwise
11 be lost.

12 Q. Is it your testimony that without the agreement to provide a discount to State
13 Industries under Rate Schedule 9 during the period beginning on January 1, 1998
14 and ending on the date of the approval of the long-term contract, State Industries
15 would have proceeded with the bypass?

16 A. Yes. One of the principle conditions of the Phase I agreement was that State
17 Industries would direct TGP to withdraw its application with FERC to construct
18 interconnection facilities; therefore, without the Phase I agreement State Industries
19 would not have stopped or slowed their aggressive pursuit of alternate bypass
20 facilities. Stated another way, had we not negotiated a temporary rate reduction
21 under Rate Schedule 9, the State Industries margin loss would have been in a
22 greater amount (100%) and would have become permanent.

23 Q. When did the negotiations begin with Bridgestone/Firestone?

24 A. Although several preliminary discussions with the customer occurred in meetings
25 during 1996, intense negotiations began in June 1997 when Bridgestone notified us

1 that it was using the services of Summit Energy Services, Inc. to act as its agent in
2 any further negotiations and to assist with the planning of bypass facilities. We were
3 also advised that Bridgestone's management was close to making a decision. As a
4 result, we met with representatives of Summit to compare cost estimates and to
5 discuss regulatory approvals and other issues the customer would face by
6 proceeding with a bypass.

7 Q. Did Nashville Gas agree to provide Bridgestone a discounted rate at that time?

8 A. No. It was not until December of 1997 that Summit was able to obtain final cost
9 estimates for an interconnection to TETCO. At that time, Summit also advised us
10 that Bridgestone held options on most of the rights-of-way needed to proceed with
11 the bypass facilities. Upon receipt of this additional information, Nashville Gas
12 increased the intensity of the negotiations.

13 Q. Why does it take so long to reach an agreement after a customer first threatens
14 bypass?

15 A. We realize that the longer it takes before a discount must be given, the longer we
16 can avoid shifting the margin deficiency to other customers, but when it comes time
17 to "fish or cut bait" the customer must see rate relief in the negotiations.

18 Q. When was that time for Bridgestone?

19 A. I was convinced in January of 1998 that Bridgestone's management was going to
20 make an immediate decision to proceed to bypass in the absence of a negotiated
21 settlement; therefore, as was the case with State Industries, we came to a verbal
22 agreement that was memorialized in February 1998.

23 Q. Based upon your years of dealing with industrial customers, are you convinced that
24 the Phase I agreement made with Bridgestone was necessary to prevent their
25 decision to proceed with the construction of bypass facilities?

1 A. There is no doubt in my mind that the time was appropriate to close the deal and that
2 the agreement structured was the best possible arrangement for all parties involved.

3 Q. Is it your testimony that without the agreement to provide a discount to
4 Bridgestone/Firestone during the period beginning on January 1, 1998 and ending
5 on the date of the approval of the long-term contract, Bridgestone/Firestone would
6 have proceeded with the bypass?

7 A. Yes. Without the temporary discount provided under Rate Schedule 9,
8 Bridgestone/Firestone would have filed with the FERC to bypass our system.
9 Stated another way, had we not negotiated a temporary rate reduction under Rate
10 Schedule 9, the Bridgestone/Firestone margin loss would have been in a greater
11 amount (100%) and would have become permanent.

12 Q. How can you be sure that bypass is a real threat?

13 A. Many industries in the United States have filed applications to bypass their local
14 distribution companies, and the FERC has routinely granted those requests. Several
15 local distribution companies and/or state regulatory agencies have appealed these
16 cases to the courts, but the courts have routinely affirmed the action of the FERC.
17 Finally, despite our efforts to avoid bypass through the negotiation of lower rates
18 under rate schedules similar to Rate Schedule 9, we recently lost a large industrial
19 customer in South Carolina to bypass.

20 Q. In your opinion is Rate Schedule 9 applicable to, and necessary to avoid, bypass
21 transactions such as those threatened by State Industries and Bridgestone/Firestone?

22 A. Absolutely. The purpose of Rate Schedule 9 is to avoid the substantial margin
23 losses that occur when a customer stops purchasing or transporting gas on Nashville
24 Gas' system in order to use an alternate fuel. The result for Nashville Gas and to
25 other customers is identical whether the alternate fuel is coal, fuel oil, propane,

1 woodchips or gas provided in a bypass situation. In all of these cases, a negotiated
2 rate under Rate Schedule 9 serves to reduce the burden on Nashville Gas' remaining
3 customers.

4 Q. Please summarize your testimony.

5 A. We negotiated very long and very hard to avoid a permanent loss of the margin
6 contribution by State Industries and Bridgestone/Firestone. Had we not negotiated
7 temporary rate discounts under Rate Schedule 9 with these two customers, the
8 margin contribution provided by these two customers would have been totally lost.
9 Thus, the negotiation of these temporary discounts under Rate Schedule 9 was of
10 substantial benefit to our other customers. During this entire process, we have
11 attempted to keep the TRA, its Staff and the Consumer Advocate advised of our
12 actions. Since we acted in good faith in a manner that provides substantial savings
13 to our customers, we believe it is unfair to deny us the right to recover our margin
14 losses as permitted by Rate Schedule 9 during the Phase I period.

15 Q. Does this complete your testimony at this time?

16 A. Yes.

Exhibit CWF-1

BILLING CODE 6717-01-M

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline
Company

)
)

Docket No. CP98-23-000

NOTICE OF REQUEST UNDER BLANKET AUTHORIZATION

(October 21, 1997)

Take notice that on October 14, 1997, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP98-23-000 a request pursuant to Sections 157.205 and 157.212 of the Commission's Regulations (18 CFR 157.205, 157.212) under the Natural Gas Act (NGA) for authorization to construct and operate delivery point facilities in Cheatham County, Tennessee, for Part 284 transportation services by Tennessee on behalf of State Industries, Inc. (State), under Tennessee's blanket certificate issued in Docket No. CP82-413-000, pursuant to Section 7 of the NGA, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Tennessee proposes to install the delivery point facilities, which consist of 2 2-inch hot tap assemblies and electronic gas measurement equipment, and explains that State, an end-user, will install approximately 3,500 feet of interconnecting pipe and measuring facilities. It is asserted that the facilities will be used to deliver up to 3,000 Dt equivalent of natural gas on a peak day and 42,000 Dt equivalent on an annual basis to State on an interruptible basis under Tennessee's Rate Schedule IT. It is estimated that the facilities will cost approximately \$80,600, for which Tennessee will be reimbursed by State.

It is stated that the proposal is not prohibited by Tennessee's existing tariff and that the quantities to be delivered to State will not exceed the total quantities authorized. It is further stated that Tennessee has sufficient capacity to make the accommodate the proposed changes without detriment or disadvantage to Tennessee's existing customers.

Any person or the Commission's staff may, within 45 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefor, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not

Docket No. CP98-23-000

2

withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

Lois D. Cashell
Secretary
