I. INTRODUCTION

Q1. PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND OCCUPATION FOR THE RECORD.

A1. My name is Clark Kaml. My business address is the Office of the Tennessee Attorney General, John Sevier State Office Building, 500 Dr. Martin L. King Jr. Blvd, Nashville, Tennessee 37243. I am a Financial Analyst employed by the Consumer Advocate Division in the Office of the Tennessee Attorney General (“Consumer Advocate” or “CAD”).

Q2. PLEASE PROVIDE A SUMMARY OF YOUR BACKGROUND AND PROFESSIONAL EXPERIENCE.

A2. I received a Bachelor of Science Degree in Economics from the University of North Dakota in 1987 and a Master of Arts Degree in Economics from the University of North Dakota in 1988. I have more than 30 years of experience working in the regulated utilities industries including electric, natural gas, telephone, and water. I have worked for various agencies including the Public Service Commission of North Dakota, the Kansas Corporation Commission, the Minnesota Public Utilities Commission, the Minnesota Office of the Attorney General, and the Grant County Public Utility District. I have worked with private companies, municipalities, and served on Rate Committees. I served as Co-Chair of the National Association of Regulatory Utility Commissioners (“NARUC”) Staff Subcommittee on Strategic Issues and am currently Co-Chair of the National Association of State Utility Consumer Advocates (“NASUCA”) Gas Committee. In addition, I am the author of the book “Don’t Fear the Cost Study.”¹

¹ Clark Kaml, Don’t Fear the Cost Study (2022).

1 **Q3. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY BEFORE THE**
2 **TENNESSEE PUBLIC UTILITY COMMISSION (“TPUC” OR THE**
3 **“COMMISSION”)?**

4 A3. Yes. I filed testimony in the Tennessee-American Water Company’s (“TAWC” or “the
5 Company”) recent rate case, TPUC Docket No. 24-00032, the Limestone Water Utility
6 Operating Company’s recent rate case, TPUC Docket No. 24-00044, Chattanooga Gas
7 Company’s Annual Rate Review, TPUC Docket No. 25-00028, the Kingsport Power
8 Company’s Alternative Rate Mechanisms, TPUC Docket No. 25-00022, Piedmont
9 Natural Gas’s (“Piedmont”) Annual Rate Review Filing, TPUC Docket No. 25-00036,
10 TAWC’s Approval of Merger, TPUC Docket No. 25-00040, Limestone’s Petition for
11 Approval of Loan Agreement, TPUC Docket No. 25-00066, Integrated Resources
12 Management’s Petition for an Alternative Rate Mechanism, TPUC Docket No. 25-
13 00072, Spire’s Petition to purchase Piedmont’s Tennessee operations, TPUC Docket No.
14 25-00074, Two Rivers Utility, LLC Application for a Certificate of Public Convenience
15 and Necessity, TPUC Docket No. 25-00073, TAWC’s PFAS Settlement Fund
16 Investigation, TPUC Docket No. 25-00086, TAWC Petition to adopt an Annual Review
17 Mechanism, TPUC Docket No. 25-00089, Limestone Water Utility Operating
18 Company’s Phase 2 of its Rate Case, TPUC Docket No. 24-00044, and Atmos’ 2026
19 Annual Rate Review, TPUC Docket No. 26-00009.

20 **Q4. ON WHOSE BEHALF ARE YOU TESTIFYING?**

21 A4. I am testifying on behalf of the Consumer Advocate Division.

22 **Q5. WHAT IS THE SCOPE OF YOUR REVIEW IN THIS PROCEEDING?**

23 A5. My testimony will discuss the Consumer Advocate’s review and recommendations with

respect to the 2025 Annual Rate Review Mechanism Petition (“ARM” or the “*Petition*”) filed by Spire Tennessee Inc. (“Spire” or the “Company”) for:

- a. Refunding the Revenue Surplus for Historic Base Period (“HBP”);
- b. Operating and Expense Adjustments;
- c. Rate Design;
- d. Intra-Class Rate Design; and
- e. Cost Studies and cross-subsidies.

Q6. WHAT DOCUMENTS HAVE YOU REVIEWED IN PREPARATION OF YOUR TESTIMONY?

A6. I have reviewed the Company’s Pre-Filed Testimony along with the exhibits and workpapers filed with the Company’s *Petition*, previous ARM petitions, Commission orders, and the settlement agreements in ARM proceedings for Piedmont, as well as the Settlement Agreement in TPUC Docket No. 21-00135 and the petition and order in TPUC Docket No. 25-00074. Additionally, I reviewed the Company’s discovery responses to the Consumer Advocate’s discovery requests issued and filed in this Docket.

II. SUMMARY AND RECOMMENDATIONS

Q7. WHAT ARE YOUR RECOMMENDATIONS?

A7. I am recommending:

- Spire be directed to refund the 2025 surplus earnings as a one-time credit to customers.
- Operating and maintenance expenses be adjusted by \$238,160² to remove dues and fees associated with the Chamber of Commerce dues, American Gas Association (“AGA”) dues, Southern Gas Association (“SGA”) dues, Energy Solutions Center dues, Natural Gas Vehicle Coalition dues³, and dues and donations without a vendor name or explanation.
- The Commission direct Spire to provide a refund of surplus revenue for the Historic Base Period of \$1,815,037 recommended below.

² Exhibit CDK-1.

³ Doing business as The Transport Project.

- The Commission approve the CAD proposed rate design with a 4 percent increase in revenue requirement.
- In future filings, Spire:
 - Provide and discuss specifically in testimony all proposed rate structure changes, including intra-rate class allocations.
 - Provide a comparison of the rates approved in TPUC Docket No. 21-00135 and the then pending ARM's proposed rates, and an analysis of the change(s) from TPUC Docket No. 21-00135 to the pending ARM's proposed rates and revenue requirement in the percentage of revenue contribution from each rate class.

Q8. CAN YOU PROVIDE A BRIEF DISCUSSION OF THE OVERALL PURPOSE OF AN ARM?

A8. In general, an alternative ratemaking mechanism is intended to provide a more streamlined option to traditional cost of service ratemaking processes while meeting traditional regulatory objectives of just and reasonable rates. In theory, alternative ratemaking mechanisms aim to be less burdensome and costly than traditional rate regulation and may enable a company to be more responsive to changing goals and needs of the company and the community.

Q9. WHAT IS THE PURPOSE OF SPIRE'S ARM?

A9. This case is unusual. The ARM in this filing as a partial continuation of Piedmont's ARM. The Commission authorized Spire's acquisition of Piedmont's Tennessee operations and "[t]he panel found that, as a matter of policy, ARRM's should not generally be transferred from one company to another in any event, including an acquisition or merger."⁴ The Commission also stated "[t]he evidentiary record establishes that, because certain material operations in Spire and Piedmont are dissimilar, an integration period of up to two years will be required to fully integrate Piedmont – Tennessee into Spire. The integration

⁴ *Order Approving Transfer of Authority to Provide Utility Services and Related Authorizations*, p. 27, TPUC Docket No. 25-00074, (June 2, 2026).

1 process will require the cooperation and assistance of Piedmont under the terms of the
2 TSA.”⁵ The continuation of the ARM is in part a function of the transfer and integration
3 of different systems and subject to restrictions.⁶ As a result, the purpose of an ARM in
4 this proceeding is unique.

5 **III. HISTORIC BASE PERIOD SURPLUS**

6 **Q10. EXPLAIN THE HISTORIC BASE PERIOD REVENUE SURPLUS.**

7 A10. The revenue surplus and calculation are addressed by Consumer Advocate witness David
8 Dittmore. He explains that Spire-TN will adjust rates for historical periods only if there
9 is an earnings surplus. Mr. Dittmore concludes that there was an earnings surplus of
10 \$1,815,037 in 2025.

11 **Q11. HOW SHOULD THE EARNINGS SURPLUS BE RETURNED TO**
12 **RATEPAYERS?**

13 A11. Apportioning the refund to customer classes based on margin revenues is consist with the
14 method utilized for rate changes in previous arms. For efficiency and accuracy, within
15 customer classes, the Consumer Advocate recommends allocating the surplus directly to
16 bills. This will avoid over or under refunding that could occur from fluctuations in sales.
17 Apportionment to the rate classes based on class margins and applied directly as a bill
18 credit for the year would result in the adjustments reflected in Table 1.

⁵ *Id* at p. 29-32.

⁶ *Id* at p. 29-30.

Table 1						
Class	Billing Determinants	ABRR Margins	% Total Revenue	Surplus	Credit per Bill	
Rate Schedule 301						
Winter	937,733					
Summer	1,310,160					
Total	2,247,893	\$ 132,976,422	59.6%	\$ 1,081,241	\$ 0.48

Total Determinants	2,473,447	\$ 223,222,322	100.0%	\$ 1,815,037		

IV. O&M ADJUSTMENTS

Q12. WHAT O&M ADJUSTMENTS ARE YOU SPONSORING?

A12. The O&M adjustments that I am recommending are identified on Exhibit CDK-1. The total expense adjustment is \$238,160 as shown on line 7.

Q13. YOUR ADJUSTMENTS ARE FOR ORGANIZATIONAL DUES. BRIEFLY EXPLAIN ORGANIZATIONAL DUES AND FEES.

A13. Organization dues are payments made to belong to a specific membership-based organization or association. The costs for membership in the organizations (along with

1 donations made to the organization) are often disputed due to lack of transparency,
2 concerns over the extent to which the funds are used for lobbying and political advocacy,
3 disagreement over whether customers would donate to those organizations, and questions
4 regarding evidence that the costs benefit customers.

5 **Q14. HOW ARE THE ENTITIES IN THE FIRST FIVE ADJUSTMENTS**
6 **ORGANIZED?**

7 A14. The Chamber of Commerce⁷, the AGA⁸, the SGA, the Energy Solutions Center, and the
8 Natural Gas Vehicle Coalition are classified as 501(c)(6) organizations under the Internal
9 Revenue Code. These entities are non-profit organizations with goals that include the
10 promotion of business interests.⁹

11 **Q15. WHAT IS YOUR FIRST RECOMMENDATION?**

12 A15. O&M adjustment No. 1 removes \$48,400 for fees and dues for Chambers of Commerce.

13 **Q16. HOW DID YOU DETERMINE THE AMOUNT YOU ARE RECOMMENDING BE**
14 **DISALLOWED?**

15 A16. The expenses were confirmed in the Company's Response to the Consumer Advocate's

⁷ United States Internal Revenue Service, Exemption requirements: Business Leagues, <https://www.irs.gov/charities-non-profits/other-non-profits/requirements-for-exemption-business-league> (last visited August 3, 2026). "Chambers of commerce and boards of trades are of the same class as business leagues, but rather than promoting one or more lines of business, their efforts are directed to promoting the common economic interests of all commercial enterprises in a given trade community." *Id.*

⁸ *Id.* "A business league is an association of persons having some [common business interest](#), the purpose of which is to promote such common interest and not to engage in a regular business of a kind ordinarily carried on for profit. To be exempt as a business league, an organization's activities must be devoted to [improving business conditions](#) of one or more [lines of business](#) (as distinguished from [performing particular services](#) for individual persons). It must be shown that the conditions of a particular trade or the interests of the community will be advanced." *Id.*

⁹ United States Internal Revenue Service, Business Leagues, [https://www.irs.gov/charities-non-profits/other-non-profits/business-leagues#:~:text=Section%20501\(c\)\(6,professional%20associations%20are%20business%20leagues](https://www.irs.gov/charities-non-profits/other-non-profits/business-leagues#:~:text=Section%20501(c)(6,professional%20associations%20are%20business%20leagues). (last visited August 3, 2026). "Section 501(c)(6) of the Internal Revenue Code provides for the exemption of business leagues, chambers of commerce, real estate boards, boards of trade and professional football leagues, which are not organized for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual." *Id.*

DR No. 1-9.¹⁰

Q17. WHY IS THIS ADJUSTMENT NECESSARY?

A17. Chamber of Commerce dues are a form of contribution to a non-profit organization that is not essential to the provision of natural gas services and does not directly benefit Spire's customers. The decision to belong to a chamber of commerce, and therefore the associated membership cost, is a discretionary decision by and for the corporation without a demonstrable benefit to ratepayers. These costs may serve corporate goals and initiatives but are not necessary in the provision of natural gas service. This point is noticeable in Spire's Response to discovery:¹¹

First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies.

Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.

The benefits listed above are benefits to the Company. To the extent that the membership and costs are beneficial to Spire's ratepayers, the decision to make such contributions should be made by the individual customers based on their individual preferences and values. Those contributions should not be made on behalf of captive customers without their input. The goals of shareholders and capital investors may not be aligned regarding legislation, regulation, and economics of ratepayers. Ratepayers should not be required to pay for costs designed to meet corporate goals or objectives that either

¹⁰ *Spire Tennessee Inc Responses to Consumer Advocate's First Set of Discovery Requests*, CAD DR No. 1-9, File <CAD DR1-9 Attachment – Dues and Donations1.xlsx>, Tab "Vendor Explanation," TPUC Docket No. 26-00042, (June 5, 2026). A copy of this response is attached as Exhibit CDK-2.

¹¹ *Id.*

1 support the interests of shareholders or are explicitly at odds with customers' interests.

2 Furthermore, there has been no demonstration that these costs are necessary to or directly
3 benefit natural gas customers; therefore, they should not be recovered in rates from
4 consumers.

5 **Q18. IS YOUR ADJUSTMENT CONSISTENT WITH COMMISSION PRECEDENT**
6 **REGARDING THE TREATMENT OF SUCH EXPENSES?**

7 A18. Yes. The Commission has previously held with respect to Tennessee American Water
8 Company ("TAWC"):¹²

9 The Commission voted unanimously to disallow the Chamber of Commerce
10 and STEM donations totaling \$45,000. The panel found that while these
11 donations may have indirectly contributed to economic growth in the
12 Company's service territory, these donations are not the type of "expansion of
13 infrastructure" that is contemplated by the statute. Further, disallowance of
14 these donations is consistent with the [Commission's] long-standing policy of
15 disallowing charitable contributions and donations for ratemaking purposes as
16 they do not satisfy the guiding principle of necessity and reasonableness, nor
17 is it apparent that they provide a clear benefit to ratepayers. As a result of its
18 decision regarding these donations, the panel voted unanimously that TAWC
19 be required to file amended calculations and tariffs consistent with the panel's
20 decision for the EDI Rider.

21 In another docket, the Commission rejected the utility's proposed recovery of
22 \$37,540 in Miscellaneous Expenses for donations to the civic, community and charitable
23 organizations of Chattanooga and Cleveland, Tennessee.¹³ The Commission explained:¹⁴

24 A majority of the [Commissioners] found that accounting principles and
25 standards under which regulated companies operate generally will not support
26 charitable contributions in a rate case. The majority concluded that such a
27 finding is consistent with the [Commission's] position in the Nashville Gas
28 case although charitable contributions were voluntarily withdrawn. A majority
29 of the Directors concluded that this was an inappropriate recovery, and adopted

12 *Order Granting in Part, and Denying in Part, Petition*, pp. 14-15, TRA Docket No. 14-00121 (February
1, 2016).

13 *Order*, pp 42-43, TRA Docket No. 97-00982 (October 7, 1998). A copy of this order is included as
Attachment 1.

14 *Id.*

the Advocate's position in which Miscellaneous Expenses in the determination of Net Operating Income were excluded.

Q19. WHAT IS YOUR SECOND ADJUSTMENT?

A19. Adjustment No. 2 is necessary to eliminate \$129,856 in allocated American Gas Association membership fees. Spire explained:¹⁵

The American Gas Association (AGA) is an advocate for local natural gas utility companies and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international gas companies and industry associates. The AGA advocates for the interests of their energy utility members and their customers...

Q20. WHY ARE YOU RECOMMENDING THAT THESE EXPENSES BE EXCLUDED?

A20. The AGA is a trade organization representing and advocating on behalf of energy companies. The AGA's membership categories are as follows:¹⁶

- U.S. Energy Utilities: U.S. natural gas distribution companies and their corporate parents.
- Transmission and Marketing Companies: U.S. natural gas transmission companies; Canadian and Mexican natural gas distribution and transmission companies; and natural gas marketers, brokers and gatherers.
- Exploration and Production Companies: Companies involved in the extraction and production of natural gas and liquefied natural gas companies
- Products and Services Companies: Suppliers; consultants; professionals in the operating, financial, marketing and legal communities; and others who provide products or services to the natural gas industry.
- International Energy Companies and Affiliates: Utilities or other entities outside North America interested in international gas activities.
- Industry Associates – Associations or organizations affiliated with the natural gas industry.

Membership dues for natural gas utility companies are calculated based on operating

¹⁵ *Spire Tennessee Inc Responses to Consumer Advocate's First Set of Discovery Requests*, CAD DR No. 1-9, File <CAD DR1-9 Attachment – Dues and Donations1.xlsx>, Tab "Vendor Explanation."

¹⁶ American Gas Association, About AGA, Become An AGA Member, Membership, <https://www.aga.org/about/membership/> (last viewed July 29, 2026).

income.¹⁷

Q21. IS THERE EVIDENCE THAT THE ORGANIZATION ENGAGES IN LOBBYING?

A21. Yes. The AGA’s website affirms that it is an organization engaged in lobbying, legislation, and regulation at the state and federal level. Regarding the specific importance of rate regulation, the AGA states: ¹⁸

The State Affairs Committee is the association’s committee responsible for analyzing industry rate issues and state economic regulatory trends. The committee develops information on matters pertaining to rate of return, rate base, rate design, revenue requirements, rate administration, rate case presentations, the impact of rates on load growth and financial results and the analysis of trends in innovative rate structures. The committee identifies current ratemaking concepts and helps member companies develop and share new strategies to influence change in state economic regulatory policies and programs.

Additionally, the website states that membership works to “protect the interest of the natural gas industry.”¹⁹ The protection of only industry interests is compounded by the fact that access to much of the AGA’s analysis and comments by non-members, such as the Company’s customers, is limited. Allowing AGA membership costs would directly result in ratepayers subsidizing political and regulatory activities with which they may not agree and that may be contradictory to the consumers’ interests because they protect industry interests.

Expenses recovered from consumers should have a clear benefit to customers and

¹⁷ American Gas Association, About AGA, Become An AGA Member, Membership, Categories, U.S. Energy Utilities Membership (form), <https://www.aga.org/wp-content/uploads/2026/06/Estimate-Application-for-U.S.-Energy-Utilities-Larry-Douglas-2.pdf> (last viewed July 29, 2026).

¹⁸ American Gas Association, Research & Policy, Policy: State, Rates and Regulatory, <https://www.aga.org/research-policy/regulatory/> (last viewed July 29, 2026).

¹⁹ American Gas Association, About AGA, Become An AGA Member, Membership, <https://www.aga.org/about/membership/> (last viewed July 29, 2026).

1 should be transparent.²⁰ There is no demonstration of what percentage of AGA
2 expenditures is associated with the promotion of natural gas. It cannot be reasonably
3 asserted that such fees have any clear benefit to consumers.

4 **Q22. WHAT IS YOUR CONCLUSION AND RECOMMENDATION?**

5 A22. Because the Company does not identify how the membership fees are utilized, it cannot
6 say that such fees provide any cognizable benefit to its ratepayers. Additionally,
7 consumers should not be forced to incur costs that potentially undermine consumer
8 interests and goals. Therefore, these fees and dues should be excluded from rate recovery.

9 **Q23. WHAT IS YOUR THIRD ADJUSTMENT?**

10 A23. Adjustment No. 3 is necessary to eliminate \$9,891 in allocated Southern Gas Association
11 membership fees. Spire explained:²¹

12 The first is by helping natural gas companies, such as PNG, improve their local
13 programs, practices, and procedures in all areas of their operation. In this
14 regard, SGA annually provides numerous forums and other vehicles through
15 which PNG employees can exchange information with their peers in other
16 companies in order to better serve its customers.

17 The SGA goals include promoting growth in the natural gas industry. It has
18 committees that focus on such topics as “market penetration, product development, market
19 expansion and diversification, current and emerging technology, marketing campaigns.”²²
20 Bloomberg states that Southern Gas Association “advocates for the natural gas industry
21 in the United States. SGA promotes the legislative and financial interests of the industry

²⁰ *Order Granting in Part, and Denying in Part, Petition*, pp. 14-15, TRA Docket No. 14-00121 (February 1, 2016).

²² SGA Natural Gas Association Customer Growth and Development Section <https://sganaturalgas.org/committees/customer-growth-and-development-section/> (last viewed July 29, 2026).

1 by acting as a lobbying group and information source.”²³ Similar to the AGA and
2 Chamber of Commerce, ratepayers should not be required to pay for lobbying expenses
3 that may be contrary to their interests.

4 **Q24. WHAT IS YOUR FOURTH ADJUSTMENT?**

5 A24. Adjustment No. 4 is necessary to eliminate \$4,378 in allocated Energy Solution Center
6 (“ESC”) dues. The ESC is a consortium of energy utilities and equipment manufacturers
7 that provides access to technical resources, training, and collaborative partnerships that
8 support the deployment of energy-efficient natural gas technologies. ESC facilitates
9 demonstrations, educational materials, and market-focused initiatives.²⁴ The ESC
10 “Provides its utility members with pro-gas educational and promotional materials and
11 guides them in various marketing strategies.”²⁵ It was noted that ESC and AGA share the
12 same Washington D.C. address.

13 Without a clear demonstration of how the expenses directly benefit Tennessee
14 customers, ratepayers should not be required to pay for these expenses.

15 **Q25. WHAT IS YOUR FIFTH ADJUSTMENT?**

16 A25. Adjustment No. 5 is necessary to eliminate \$5,935 in allocated Natural Gas Vehicle
17 Coalition (“NGVC”) dues. Spire explains that NGVC:²⁶

18 [P]rovides access to a national coalition of industry participants focused on
19 advancing clean, low-emission transportation solutions using natural gas and
20 renewable fuels. Through this organization, Piedmont gains insights into
21 emerging vehicle technologies, fuel applications, and policy developments that

24 *Spire Tennessee Inc Responses to Consumer Advocate’s First Set of Discovery Requests*, DR No. 1-9,
File <CAD DR1-9 Attachment – Dues and Donations1.xlsx>, Tab “Vendor Explanation.”

25 Energy Solutions Center, Energy & Policy Institute, <https://energyandpolicy.org/energy-solutions-center-2/> (last visited July 29, 2026). A copy of the article is attached as Exhibit CDK-3.

26 *Spire Tennessee Inc Responses to Consumer Advocate’s First Set of Discovery Requests*, DR No. 1-9,
File <CAD DR1-9 Attachment – Dues and Donations1.xlsx>.

1 support the deployment of cost-effective, lower-emission natural gas vehicles.
2 The Transport Project also conducts education, advocacy, and industry
3 collaboration that helps expand market opportunities and improve customer
4 awareness of alternative fuel options.

5 This organization operates primarily for the benefit of the natural gas industry.

6 Furthermore, it promotes an agenda that is subjective, that its customers may not share,
7 and has the potential to conflict with the goals of customers. Tennessee customers should
8 not be required to pay for these expenses.

9 **Q26. WHAT IS YOUR SIXTH ADJUSTMENT?**

10 A26. Adjustment No. 6 is necessary to eliminate \$39,701 in allocated Dues and Donations that
11 do not have an explanation. The Consumer Advocate requested a list of dues and
12 donations charged to Spire operations and “[f]or each vendor, explain why such costs
13 should be recovered from Spire customers.”²⁷ This adjustment reflects the total of dues
14 in the response for which there was no explanation of why the costs should be recovered
15 from Spire customers. Without a demonstrated benefit, Spire customers should not be
16 required to bear these costs.

17 **V. PROPOSED RATES AND RATE DESIGN**

18 **Q27. WHAT IS THE CONSUMER ADVOCATE RECOMMENDING AS AN**
19 **APPROPRIATE MARGIN INCREASE FOR SPIRE IN THIS PROCEEDING?**

20 A27. Consumer Advocate witness David Dittmore is recommending a margin increase of
21 \$8,928,893.

22 **Q28. WHAT ASPECTS OF RATE DESIGN DOES YOUR TESTIMONY ADDRESS?**

23 A28. My testimony addresses allocation of the marginal increase to the various classes, the

²⁷ *Consumer Advocate’s First Set of Discovery Requests to Spire Tennessee Inc.*, CAD DR 1-9.

1 intra-class revenue allocation, and discusses that modifications to rates through the ARM,
2 as proposed, results in changes to the rate design.

3 For purposes of transparency, and ease of customer understanding, the rate
4 changes resulting from filing should be clearly identified and explained. The method used
5 Spire does not change the monthly service charge, the one component where the bill
6 impact from a rate change is easily seen. Bill impacts resulting from a modification to the
7 base rates of volumetric charges are not as easily identified. The base volumetric rate is
8 one component that is then multiplied by sales. As a result, the customer bill impact is
9 not as clearly seen by customers and should be identified as a rate change.

10 **Q29. WHAT IS RATE DESIGN?**

11 A29. In a relatively recent publication NARUC provided the following comments on rate
12 design within the context of electric rates:²⁸

13 Rate design – the framework that utilities and regulators use to set prices for
14 electricity services – is a fundamental element of a well-functioning electricity
15 system. Rate design sits at the nexus between customers and utilities,
16 determining the prices that customers pay for electricity and impacting the
17 revenues that utilities raise to support commercial viability.

18 While this definition is within the context of electric rates, the same basic concept
19 applies to rate design across all utility types: that it is the determination of prices that
20 customers pay for goods or service. For any given company, rate design represents the
21 totality of the components of all charges and the prices that customers pay. Rate design
22 is different from an individual customer's bill.

²⁸ *Primer on Rate Design for Cost-Reflective Tariffs*, National Association of Regulatory Utility Commissioners for review by the United States Agency for International Development, p. 6 (January 2021). A copy of this document is available at <https://pubs.naruc.org/pub.cfm?id=7BFEF211-155D-0A36-31AA-F629ECB940DC>.

Q30. WHAT IS INTRA-CLASS RATE DESIGN?

A30. A fundamental question for a regulated utility is how to charge customers for service. This might include such components as monthly fixed charges, demand charges, energy or volumetric charges, block rates, and seasonal rates. In total, these components are considered the rate structure.

The establishment of the various components (“rate design”) and charges that apply to each of these rates within a specific customer class are intra-class rate design.

Two common components of rate structure are the monthly (“service”) or (“customer”) charge and the rate for the commodity, which is the price of the gas itself. The customer charge is usually a fixed cost, and the commodity charge is a volumetric, variable charge.

Q31. WHY IS THE ALLOCATION BETWEEN THE COMPONENTS AN IMPORTANT ISSUE?

A31. The rate design is a determination of how the revenue requirement will be recovered. That has been, and continues to be, the focus of debate for decades due to numerous factors including policy, fairness, and risk. How the rates are set impacts a customer’s ability to influence their monthly bill through behavior modification. Depending on individual needs, the rate design will impact customers differently. The topics being addressed in this testimony are simply mathematical, and do not address socio-economic issues such as those mentioned above. The topics here are the allocation between fixed and variable costs, and impact on revenue requirement variation among classes.

1 **Q32. GENERALLY, HOW ARE THE ALLOCATIONS OF RECOVERY FROM FIXED**
2 **CHARGES AND THE RATE CHARGED TO VARIABLE CONSUMPTION**
3 **IMPORTANT TO INDIVIDUAL CUSTOMERS?**

4 A32. The method of how rates are set has a direct impact on the ability of the customer to control
5 the bill, and thus, consumer behavior. If 100% of the revenue requirement for a class is
6 spread equally over each customer, all customers would have the same monthly bill,
7 regardless of use. The customer would not be able to change the bill and would have no
8 incentive to monitor usage. Conversely, if 100% of the revenue requirement is recovered
9 from rates applied to consumption, customers would have full control of the monthly bill.
10 Those with little or no use would pay little or nothing. Customers have different rate
11 design preferences based on various factors including ideology and lifestyle.

12 **Q33. HOW ARE THE RATES BEING ADJUSTED IN THE CURRENT *PETITION*?**

13 A33. Spire claimed that it is using the same rate design and methodology that TPUC approved
14 in last general rate case proceeding and payments previous annual ARM filings.²⁹ The
15 Company proposed to increase revenue by \$13,966,022 by changing the base margin
16 volume billing rates for each applicable Rate Schedule. Rate Schedule 310 is excluded due
17 to the absence of any active customers.³⁰

18 **Q34. HOW IS THE RATE INCREASE BEING IMPLEMENTED IN THE *PETITION*?**

19 A34. The *Petition* allocated the margin revenue increase evenly as a percent of total margin
20 revenue to all applicable rate classes. The Company proposed to recover the margins
21 from the base volumetric billing rates for each Applicable Rate Schedule.³¹ The statements

29 *Direct Testimony of Eric Bouselli* at 12:7-12.

30 *Id* at 12:14-19

31 *Id* at 13:14-17.

regarding rate design should be clarified.

Q35. IS SPIRE’S PROPOSED RATE ADJUSTMENT CONSISTENT WITH PREVIOUS ARMS AND THE METHOD IN THE LAST RATE CASE?

A35. Yes.

Q36. WHAT ASPECTS OF THE RATES ARE YOU ADDRESSING?

A36. There are three topics. First, the Company has applied a 6.3 percent increase for all customers when it is subject to a 4 percent cap. I am proposing rates reflecting a 4 percent increase. Second, I discuss Spire’s claim that it is proposing the same overall rate design that underlies existing rates.³² Third, I address Spire’s discussion regarding cross-subsidies and the movement of rates to more equalized rates of return across the customer classes.³³

Q37. BRIEFLY EXPLAIN THE 6.3 PERCENT INCREASE IN RATES PROPOSED BY THE COMPANY AND THE 4 PERCENT RATE CAP?

A37. As discussed in detail by Mr. Dittmore, the Company applied the 4 percent cap to

Table 2

³³ *Id* at 13:22 – 14:2.

Operating Revenues including Purchased Gas Adjustment (“PGA”) revenue as well as revenue associated with Home Protection services, Forfeited Discounts and other Miscellaneous revenues to determine revenue deficiency cap. When fuel and other revenues are included to determine the cap on revenue increases, it converts to a 6.3 percent increase in non-fuel revenues. As seen in the Company’s Schedule 26.4 of the *Petition* below, the revenue requirement being requested by Spire is a 6.3 percent increase in the base rates for each rate class.

Table 3 below applied a 4 percent increase in margin revenues. The allocation method of the revenue deficiency is consistent with the Spire’s approach, allocating the deficiency to the various customer classes based on the current margin (End of Period ABRR), and then applied to the base volumetric rate.

Table 3

1 **Q38. WHAT RATES DO YOU PROPOSE TO ACHIVE THE MARGINS?**

2 A38. Exhibit CDK-4 below contains proposed rates to recover the margin of \$232,151,215.

3 The layout is based on the *Petition*'s Schedule 26.2 allowing comparison of existing base

4 rates and proposed rates. The primary difference between Exhibit-4 and the Company's

5 schedule is the dollar amount being allocated among the classes. The Company allocates

6 \$13,966,022 among the classes compared to the Consumer Advocate's allocation of

7 \$8,928,893.

1 **Q39. WHY DOES THE COMPANY’S STATEMENT THAT IT IS PROPOSING THE**
2 **SAME OVERALL RATE DESIGN NEED CLARIFICATION?**

3 A39. Spire is following the approach used in the last rate case and previous Piedmont ARMs,
4 and is correct that the rate design includes fixed monthly charges, demand charges, and
5 volumetric rates, for each rate schedule, including step rates for Large General Service,
6 which underlies its existing rates. However, the specific method used by Piedmont, and
7 now by Spire, changes the rate design. It allocates a higher percentage of the revenue
8 requirement to volumetric rates charges.

9 The application of rate changes only to volumetric charges does not maintain the
10 same rate design. Applying rates to one component of rates in a multi-rate formula is
11 modifying rate design.

12 **Q40. WHY IS THIS DISTINCTION IMPORANT?**

13 A40. Rate design is often a contested topic within the context of a rate case. With positions
14 based on various factors such as theory, practical application, and policy. Ultimately, rate
15 design is a policy decision.

16 From a cost perspective, a Company’s revenue requirement is a component of both
17 fixed and variable costs. Each year, the change in the revenue requirement is some mix
18 of the Company’s variable and fixed costs. The fixed monthly service charge and the
19 variable volumetric rates charged to customers are not designed to specifically reflect the
20 fixed and variable costs experienced by the utility. These rates are designed with the goal
21 of achieving the revenue requirement as a whole. To maintain the existing rate design
22 while achieving the goal of recovering the full revenue requirement, all revenue
23 components, for all rate classes would need to be increased equally, ensuring equal

revenue contribution increases. Existing rate design, and rate changes that modify some components of the rate design should not be confused. Each time that some rates have been changed, without all rates and charges being modified on a proportionate basis, there is a new rate design. Thus, the current rate design and the proposed rate design are not the same as that approved by the Commission in TPUC Docket No. 21-00135.

Q41. ARE THERE FACTORS THAT COULD INFLUENCE RATE DESIGN WHEN APPLYING CHANGES IN REVENUE REQUIREMENTS?

A41. Yes. Due to changes in customer mix and consumption patterns, each time rates are modified to reflect the revenue requirement, individual customer impacts may differ.

Q42. HOW CAN AN EQUAL PERCENTAGE INCREASE IN CUSTOMER CLASSES HAVE CUSTOMER IMPACTS?

A42. At the basic level, the total revenue requirement responsibility is “allocated” or “assigned” to specific rate classes or services. Those revenue requirement responsibilities are then converted to rates, subject to independent variables such as number of customers and expected consumption.

To the extent that actual independent variables differ from those used to set rates, the revenue will differ from the assigned revenue requirement. This creates a dynamic situation in an ARM filing, where the goal is to meet an overall target revenue requirement while the values of the variables changing. When this occurs, it is rarely possible to maintain the revenue requirement responsibility apportionment by class and the rate design.

This is demonstrated in the simple example below. Assume:

- A revenue requirement of \$1,000;
- A Customer Class X, with 50 percent revenue apportionment (\$500);

- 10 customers;
- An average of 100 units of consumption per customer; and
- A rate design with a fixed charge of \$40 per month and a variable charge of \$0.10 per unit.

It would look like the following:

		Cust	<u>Rate</u>	<u>Revenue</u>	<u>Ratio</u>
Class X					
Fixed		10	\$ 40.00	\$ 400	80%
Variable Rate			\$ 0.10	\$ 100	20%
Total Revenue				\$ 500	

With these assumptions, 80 percent of the revenue from the class is being generated through the fixed charge. If one customer with the average consumption is lost, the revenue from that class would drop by \$50 (\$40 from the monthly charge and \$10 from the variable rate), total contribution to revenue requirement would have decreased to 47.37 percent of total revenue as the total revenue for the company decreased to \$950.

Class X		Cust	<u>Rate</u>	<u>Revenue</u>	<u>Ratio</u>
Fixed		9	\$ 40	\$ 360	80%
Variable Rate			\$ 0.10	\$90	20%
Total Revenue				\$ 450	47.37%

The question is how to recover that lost revenue.

- If the revenue apportionment is maintained, with the contribution from Class X remaining at 50%, the rate design must be modified to apply rates that would generate an additional \$50 in revenue. Even if the recovery within Class X is maintained, it will be modified with respect to other classes, as the fixed and/or variable cost must be increased. In the example below, the revenue targets for the rates is maintained at the original ratio:

Class X		Cust	<u>Rate</u>	<u>Revenue</u>	<u>Ratio</u>
Fixed		9	\$ 44	\$ 400	80%
Variable Rate			\$ 0.11	\$ 100	20%
Total Revenue				\$ 500	50.00%

- If the shortage is recovered through an equal apportionment to all classes, then both revenue recovery would change for all classes and rates for the classes would need to be altered. The revenue deficit of \$50 requires a 5.26% increase to meet the revenue requirement of \$1,000. Applying 5.26% increase to the \$450 current revenue from Class X, produces an increase of \$24 for a total revenue of \$474 from Class X. The customer class contribution remains at the lower 47.37%. There is an additional \$26 deficiency that needs to be recovered from other customers. Maintaining the fixed rate has the following rate design and revenue generation:

Class X		Cust	Rate	Revenue	Ratio
5.25% Increase					
Fixed		9	\$ 40	\$ 360	76%
Variable Rate			\$ 0.13	\$ 114	24%
Total Revenue				\$ 474	47.37%

Both class revenue apportionment and rate design can be changed in ARM proceedings. Modifications to rate design or revenue apportionment are policy considerations and should be given overt attention throughout the life of an alternative ratemaking mechanism.

Q43. THIS EXAMPLE IS DEPENDENT ON A CHANGE IN THE NUMBER OF CUSTOMERS. ARE CHANGES IN CUSTOMER COUNTS AND USAGE COMMON?

A43. Yes. This fact was demonstrated in the Piedmont's ARM petition last year.³⁴ Based on discovery, it appears that customer counts and usage per class change frequently.³⁵ In addition, the magnitudes of the changes fluctuate across customer classes. The Commission acknowledged this stating, "Over time a utility's mix of customer between rate classes and associated cost of service may change necessitating the Commission to

³⁴ *Petition of Piedmont Natural Gas Company, Inc. for Approval of its 2025 Annual Review of Rates Mechanism Pursuant to Tenn. Code Ann. § 65-5-103(d)(6)*, TPUC Docket No. 25-00036 (May 20, 2025).

³⁵ *Piedmont Natural Gas Company Inc. 's Responses to the Consumer Advocate Division's First Discovery Request*, CAD DR 1-43, File <CA DR 1-43 – Customer Count and Usage History.xlsx>, TPUC Docket No. 25-00036 (June 20, 2025).

review how revenue is collected from the different customer classes.”³⁶

The Company suggests that the proposed rates change the revenue requirement allocation. Specifically, the Company states “[t]his proposed rate design meets Spire Tennessee’s rate design objectives and will gradually lead to more equalized rates of return across the customer classes. (Emphasis added)”³⁷

Q44. ABSENT A CHANGE IN THE NUMBER OF CUSTOMERS OR USAGE PATTERNS, HOW CAN CHANGES IN THE RATE DESIGN FOR A CUSTOMER CLASS HAVE DIFFERING IMPACTS AMONG CUSTOMERS?

A44. Increasing a revenue apportionment for a class is not the same as spreading the revenue requirement increase equally to the individual component rates. Applying several revenue increases to one component can impact customers within the same rate class differently, depending on their usage patterns. The following is an example with the following assumptions:

- Revenue allocation is based on a 50/50 rate apportionment between fixed and volumetric charges.
- An annual increase of 5% allocated only to the customer charge over a 5-year period.

³⁶ *Order Denying Proposed Annual Review of Rates Mechanism*, p. 37, TPUC Docket No. 21-00135 (July 25, 2022).

³⁷ *Direct Testimony of Eric Bouselli*. at 13:23-14:2.

Years		5							
Increase/year		5%							
		Original		Percent		Year 5		Percent	Percent
		<u>Rate/Unit</u>	<u>Revenue</u>	<u>Revenue</u>		<u>Rate/Unit</u>	<u>Revenue</u>	<u>Increase</u>	<u>Revenue</u>
Fixed	10	\$5.00	\$50.00	61%	10	\$7.76	\$78	55%	61%
Volumetric	100	\$0.50	\$50.00	39%	100	\$0.50	\$50	0%	39%
Total Revenue			\$100.00				\$128	28%	
Customer 1: High Use				Percent				Monthly Bill	Percent
		<u>Rate/Unit</u>	<u>Revenue</u>	<u>Of Bill</u>		<u>Rate/Unit</u>	<u>Revenue</u>	<u>Increase</u>	<u>Of Bill</u>
Fixed	1	\$5.00	\$5.00	33%	1	\$7.76	\$7.76		44%
Volumetric	20	\$0.50	\$10.00	67%	20	\$0.50	\$10.00		56%
Total Revenue			\$15.00				\$17.76	18%	
Customer 2: Low Use				Percent					Percent
		<u>Rate/Unit</u>	<u>Revenue</u>	<u>Of Bill</u>		<u>Rate/Unit</u>	<u>Revenue</u>		<u>Of Bill</u>
Fixed	1	\$5.00	\$5.00	67%	1	\$7.76	\$7.76		61%
Volumetric	5	\$0.50	\$2.50	33%	5	\$0.50	\$2.50		39%
Total Revenue			\$7.50				\$10.26	37%	

At the end of the 5-year period:

- The average bill would have increased approximately 28%.
- The monthly rate for the customer charge would have increased approximately 55%.
- The percentage of revenue from the customer charge would have changed from 50% to approximately 61%.
- For a customer using double the average, the monthly bill increase would be approximately 18%.
- For a customer using half the normal consumption, the monthly bill would have increased approximately 37%.

Q45. WHAT IS THE RELEVANCE OF THIS ISSUE?

A45. The rate design encompasses numerous policy issues and is often the subject of significant debate. In addition to recovering revenue, rates can be used to send price signals to modify consumer behavior and meet goals such as promoting efficiency and ensuring affordability. To use rates as a tool, any changes in the rate design should be deliberate and consciously made as well as effectively communicated.

Like previous filings, Spire's rate design is being modified without a clear

notification that rate design is being changed and with no open discussion of the potential customer impact. Items that should be given more attention within this issue are:

- The residential monthly charges have remained the same since November of 2013. Exhibits CDK-5 and CDK-6 demonstrate that the monthly charge was \$17.45 for November-March and \$13.45 as of March 2012.
- The rate design is being changed within the ARM, without adequate customer notice of a rate design change.
- By applying the entire increase to the volumetric charge, to the extent that the rate increase is a result of changes in common costs and capital cost, a larger percentage of the fixed costs are being picked up by the volumetric charge. This may send incorrect price signals and has the potential for revenue recovery disparity within a customer class.

The last point above is a controversial issue in rate design proceedings due to the impact that it has on price signals and the potential rate increase disparity. As a result of the above discussion, there is a lack of transparency with customers, the Consumer Advocate, and Commission Staff with respect to changes in rate design.

Q46. WHAT IS YOUR RECOMMENDATION?

A46. The recommendations below have no numerical impact on the current proposed rate design and recovery of revenue requirement. However, changes in rate design should be highlighted and specifically noted in future filings. The *Petition* does include schedules that compare existing and proposed rates. The Consumer Advocate continues to recommend:

- Changes to rates be explicitly included and highlighted testimony.
- Customers be given sufficient notice of the proposed increases prior to the filing.
- Future filings compare proposed rates, by class, with the rates contained in the Settlement Agreement in TPUC Docket No. 20-00086; and
- Future filings compare the revenue contribution from each customer class approved in Docket 21-00135 with the proposed rates. This should include the values by class as a dollar value and a percentage of total revenue requirement.

1 **VI. COST STUDIES AND CROSS-SUBSIDIZATION**

2 **Q47. WHAT IS A COST STUDY?**

3 A47. Generally, a cost study is the process of identifying expenses associated with the provision
4 of a good or service. They are often used as analytical tools to enable more informed
5 decision making. Of singular importance is the fact that there are numerous types of cost
6 studies, employed for various purposes, and whose results are dependent on the opinions,
7 judgement, and decisions of those involved in developing the study. Thus, the output and
8 usefulness of any cost study depend on how the study design and data are employed, and
9 the understanding of the information resulting from the study.

10 As demonstrated below, definitions of profit, cost, and the type of cost studies are
11 critical to understanding the discussions around cost studies.

12 **Q48. WHAT IS CROSS-SUBSIDIZATION?**

13 A48. A common definition employed by for-profit utilities is the use of profits from a product
14 or service to cover the costs of another business or service.

15 **Q49. WHAT IS COST-OF-SERVICE RATEMAKING?**

16 A49. In the most basic terms, cost-of-service ratemaking is when a regulatory body determines
17 the revenue requirement “cost-of-service” that is necessary for a company to recover costs
18 and earn a fair return. Rates for services are then set to meet the approved revenue
19 requirement.

20 **Q50. HOW DOES THIS DIFFER FROM RATES SET BY THE MARKET?**

21 A50. In a competitive market, where multiple providers exist, and a consumer can easily choose
22 from various providers, the market determines the price of goods and services. The profit
23 of individual companies is the residual of revenues less costs, and providers can adjust

output and prices to maximize profits. Unlike companies in a free market, regulated utilities are required to provide the service and goods at the set prices and cannot adjust prices or output to maximize profits.

Q51. WHAT ROLE DO COST STUDIES PLAY IN RATE SETTING?

A51. Once a revenue requirement is determined, there are questions about who should be responsible for meeting the revenue requirement, and how the rates for meeting the revenue requirement should be set. Cost-of-Service Studies are frequently utilized to guide revenue requirement apportionment among various customer classes and provide direction for rate development within a class.

Q52. ARE THERE PARTICULAR COST STUDIES THAT ARE MORE CONTROVERSIAL THAN OTHERS?

A52. The use of any cost study to justify rate setting is subject to controversy. Regulators are faced with the goals of setting rates to recover costs and setting rates that are just and reasonable. With those goals in mind, there is a predisposition to rely on a “fully allocated cost study.” Due to the frequency of their use, the conclusions drawn, and the nature of how they are developed, fully allocated cost studies are often at the center of cost study debates.

Q53. WHAT IS A FULLY ALLOCATED COST STUDY?

A53. A fully allocated cost study assigns all costs, direct and indirect, for a period, to specific products and/or services. Even at this level, there is a fundamental question of how “cost” is being defined and measured.

Q54. DID SPIRE USE A COST STUDY IN THIS *PETITION*?

A54. Not directly. Spire provided a cost study supported by the direct testimony of John Taylor.

Mr. Taylor and the Company discussed the cost study, its role, and provided a general conclusion regarding the results of the proposed rate design. The rate design itself is based on previous methods, and the company did not propose any new rate designs utilizing the cost study contained in its *Petition*.

Q55. WHAT TYPE OF COST STUDY DID SPIRE INCLUDE IN ITS *PETITION*?

A55. A fully allocated Cost of Service Study (“COSS”).

Q56. DOES SPIRE REPRESENT THAT ITS COST STUDY IS AN EXACT SCIENCE?

A56. No. Mr. Taylor specifically states that it is not an exact science.³⁸ He explains its purpose is to aid in the design of rates.

Q57. IF SPIRE IS NOT USING THE COST STUDY TO INFLUENCE RATE DETERMINATION, AND IT ADMITS THAT IT IS NOT AN EXACT SCIENCE, WHAT IS YOUR CONCERN IN THIS PROCEEDING?

A57. Spire’s *Petition* includes:

- The results of the fully allocated cost study included a calculated current rate of return for each class.³⁹
- An explanation that “[g]enerally, the Company seeks to mitigate cross-subsidization by gradually and simultaneously moving each customer class toward parity with the overall jurisdictional rate of return to avoid customer bill volatility.”⁴⁰
- And a comment that “This proposed rate design meets Spire Tennessee’s rate design objectives and will gradually lead to more equalized rates of return across the customer classes.”⁴¹

Spire’s comments can be interpreted to suggest that cross-subsidies exist. The Commission should not be left with the impression that a cross-subsidization exists, or

³⁸ *Direct Testimony of John. D. Taylor* at 4:7-8.

³⁹ *Id.* at p. 20, Table 1 – Summary of Results of the Company’s COSS.

⁴⁰ *Direct Testimony Of Eric Bouselli* at 14:1-4.

⁴¹ *Id.* at 13:23-14:2.

that the Consumer Advocate agrees with the Company's cost study or its results.

Q58. ARE THERE ISSUES WITH UTILIZING FULLY ALLOCATED COST STUDIES TO DETERMINE WHETHER THE RETURN FROM A CUSTOMER CLASS IS SUFFICIENT?

A58. Yes. There are issues both with the use of a fully allocated cost study to establish rates and with the conclusions that Spire makes based on its cost study. A fully allocated cost study produces specific results that are misunderstood. The values from a fully allocated cost study are dependent on subjective design and data input, assumptions, and bias. Unfortunately, these values are then often used to support inaccurate conclusions.

Economists, William Baumol, Michael Koehn, and Robert Willig, clearly note that a full allocation cost of approach has been discredited by marginal and incremental cost analysis. They stated that the major purpose of the article was to:⁴²

[P]uncture the legend that a fully allocated cost calculation produces numbers approximately any substantive economic magnitudes. We will show that different and equally plausible allocation criteria yield shockingly different numerical results, so that by judicious choice of allocation criterion, the partisan calculation can make the process yield virtually any numbers he chooses (in advance) to obtain.

Relying on a study that is fundamentally based on arbitrary decisions will result in a similarly flawed decision.

Q59. IS THERE A REASON THAT FULLY ALLOCATED COST STUDIES ARE USED IN RATE REGULATED PROCEEDINGS?

A59. Regulatory rules often require cost studies to be included in rate proceedings. As noted

⁴² William Baumol, Michael Koehn, and Robert Willig, *How Arbitrary is 'Arbitrary'?- or, Toward the Deserved Demise of Full Cost Allocation*, p. 16, Public Utilities Fortnightly, (September 3, 1987). A copy of this article is included as Attachment 2.

1 by Baumol, *et al*:⁴³

2 If regulatory rules nevertheless require the undefinable to be defined, [the]
3 only option to those who must comply with the rules is to adopt some arbitrary
4 device, usually dressed up to give an appearance of reasonableness – an
5 arbitrary rule that divides up indivisible investment and costs. This of course,
6 is what full allocation means.

7 The authors go on to note that “there seems to be an impression that any such calculation,
8 if carried out with sufficient care, will yield a reasonable approximation to some
9 underlying true figure. That impression is totally unfounded.”⁴⁴

10 **Q60. HOW DOES THE FACT THAT FULLY ALLOCATED COST STUDIES ARE**
11 **ARBITRARY AFFECT RATE PROCEEDINGS?**

12 A60. With the understanding that such studies are arbitrary, we know that rates based on the
13 fully allocated cost study are not more “cost” justified than many other rates that might be
14 proposed using other measures. There is only a random probability that any rate would
15 be the same as that resulting in a competitive market. In addition, a fully allocated cost
16 study is unlikely to be able to demonstrate that any good or service is subsidized by
17 another good or service. The issue of subsidization will be addressed later in my
18 testimony.

19 With this knowledge, caution is the best strategy when drawing conclusions or
20 making absolute statements based on those studies.

21 **Q61. DO YOU HAVE ANY CONCERNS OR OBJECTIONS TO THE COMPANY’S**
22 **USE OF THE FULLY ALLOCATED COST STUDY?**

23 A61. Yes. There are several concerns. First, as noted above, a fully allocated cost study is
24 dependent on choice and discretion in its development. Thus, a goal of adjusting rates to

43 *Id.* at p. 17.

44 *Id.*

1 reach parity based on that study, and the resulting rates, are arbitrary. The cost study is
2 not a sound basis of support for the reasonableness of the proposed rates.

3 Second, a fully allocated cost study does not prove the existence of cross-
4 subsidies.

5 Third, although the cost study results are being presented, the Company does not
6 discuss the cost study results with respect to the actual rates being proposed.

7 In summary, the cost study used by the Company does not provide information
8 regarding marginal cost or cross-subsidization, and it does not discuss the desired price
9 signals or customer price response.

10 As discussed by Mr. Dittmore in his testimony, there are potential subsidy issues
11 associated with the Company's operations. However, those have not been addressed
12 within the context of the cost study or by the Company.

13 **Q62. EXPLAIN WHY FULLY ALLOCATED COST STUDIES DO NOT PROVE THE**
14 **EXISTENCE OF CROSS-SUBSIDIZATION.**

15 A62. The definition of a subsidy is the provision of financial aid in some form to promote a
16 given objective. Generally, this is viewed as reducing the cost of production or the
17 consumer rate (price). The definition of a cross-subsidy is generally viewed as using
18 profits from one product to offset losses or returns on another product.

19 From an economic perspective, profit is maximized where the marginal revenue
20 equals marginal cost. Some important observations are:

- 21 • In most regions of operation, a lower output would result in a lower profit.
- 22 • Marginal cost does not include allocated costs, such as common costs or embedded
23 costs, that would exist even without additional production.
- 24 • If marginal revenue from the additional output is meeting or exceeding the added
25 cost of production, the goods or services are not being subsidized.
- 26 • At the point where marginal cost is equal to marginal revenue, the allocation of

1 additional costs could create the perception that the marginal output was not
2 meeting its costs. This might cause some to say that the output is being subsidized
3 and possibly alter operations.

4 Because a fully allocated cost study assigns costs to output, it distorts the cost-benefit
5 analysis of goods and services. Without fully understanding the model, it can lead to
6 inaccurate conclusions.

7 **Q63. WHAT ARE THE CRITERIA FOR DETERMINING IF A CROSS-SUBSIDY**
8 **EXISTS?**

9 A63. Two conditions are necessary for a cross-subsidy to exist:

- 10 • A customer, service, class, or group of customers (this is definition dependent),
11 must be paying less than the marginal cost to service those customers.
- 12 • Another customer or group of customers must be paying more than their stand-
13 alone cost.

14 If a customer, or customer class, is paying rates that are more than the marginal cost
15 to provide service, any revenue above the marginal cost contributes to overhead and makes
16 the Company better off without additionally increasing costs to other customers.

17 **Q64. COMMENT ON JOE HAMPTON'S REPRESENTATION THAT**
18 **AFFORDABILITY IS ONE OF THE ISSUES PARAMOUNT TO THE**
19 **COMPANY?**

20 A64. Affordability is a topic attracting attention currently. Spire made a claim regarding the
21 importance of affordability to the Company.⁴⁵ However, it did not provide a definition
22 of affordability or documentation supporting how affordability is measured or applied in
23 its *Petition*. Its response to discovery requests suggests that Spire views affordability from
24 a subjective perspective. For example, the Company stated “[a]ffordability is always top

⁴⁵ *Direct Testimony of Joe Hampton at 4:6.*

1 of mind. Spire considers affordability when making all economic decisions” while being
2 unable to give specific examples, metrics, or data.⁴⁶ Given the importance of this topic,
3 the Consumer Advocate is concerned with Spire’s willingness to make such a claim
4 without providing more detailed support.

5 **Q65. DOES THIS COMPLETE YOUR TESTIMONY?**

6 A65. Yes. However, I reserve the right to incorporate any new information that may be
7 obtained.

⁴⁶ *Spire Tennessee Inc Responses to Consumer Advocate’s First Set of Discovery Requests*, CAD DR 1-063. A copy is attached as Exhibit CDK- 7.

**IN THE TENNESSEE PUBLIC UTILITY COMMISSION
AT NASHVILLE, TENNESSEE**

IN RE:

**PETITION OF SPIRE TENNESSEE INC.
FOR APPROVAL OF ITS 2026 ANNUAL
REVIEW OF RATES MECHANISM
("ARM") PURSUANT TO TENN. CODE
ANN. § 65-5-103(d)(6)**

DOCKET NO. 26-00042

AFFIDAVIT

I, Clark Kaml, on behalf of the Consumer Advocate Division of the Attorney General's Office hereby certify that the attached Testimony represents my opinion in the above-referenced case and the opinion of the Consumer Advocate Division.

CLARK KAML

Sworn to and subscribed before me

This 6th day of August, 2026.

NOTARY PUBLIC

My Commission Expires

May 12, 2030

**Spire Tennessee Inc.
Docket No. 26-00042
2025 Annual Rate Review**

Exhibit CDK-1

Summary of O&M Adjustments

Line No	Item	Amount
1	To Eliminate Chamber Of Commerce Dues and Donations	\$ 48,400
2	To Eliminate AGA Dues	\$ 129,856
3	To Eliminate Southern Gas Association Dues and Donations	\$ 9,891
4	To Eliminate Energy Solutions Center Dues	\$ 4,378
5	To Eliminate the Natural Gas Vehicle Coalition Dues and	\$ 5,935
6	To Eliminate Dues and Donations Without a Vendor Explanation	<u>\$ 39,701</u>
7	Total O&M Adjustments	<u><u>\$ 238,160</u></u>

Spire Tennessee Inc.
 2026 ARM Annual Filing
 Historical Base Period Ending 12/31/25

File Name:

Description of Schedule: List of Dues and Donations directly charged or allocated to TN operations.

Data Request: 1-9

Identify the Company's costs included in both the i) Historic Base Period and ii) Annual Base Rate Reset associated with:

- a. Dues and Donations charged directly to Piedmont-Tennessee operations; and
- b. Dues and Donations allocated to Piedmont-Tennessee operations.

For each vendor, explain why such costs should be recovered from Spire customers.

Identification of requested transactions

Using the *2025 TN Allocated O&M Transaction Level Detail* spreadsheet, transactions with any one of the resource types listed in the table below were excerpted and listed in the *Transactions* tab.

The transactions were then compared to excluded items listed in *Schedule 52Q Miscellaneous O&M Adjustments*. These transactions were identified as "HBP Only" on the *Transactions* tab. All other transactions were identified as "HBP & ABRR".

Vendor Explanations

Spire Tennessee Inc.
Docket No. 26-00042
CAD DR 1-9 Attachment

Row Labels	Sum of TN Amount	Benefit to Spire Customers
AMERICAN GAS ASSOCIATION	129,855.89	The American Gas Association (AGA) is an advocate for local natural gas utility companies and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international gas companies and industry associates. The AGA advocates for the interests of their energy utility members and their customers, and provides information and services promoting demand supply growth as well as operational excellence. Member utilities meet frequently to discuss best practices for safety and customer service, and share experiences with new technologies that can lower costs to serve customers. The AGA, as described in their mission statement, represents companies delivering natural gas safely, reliably and in an environmentally responsible way to help improve the quality of life for their customers every day.
BELLEVUE HARPETH CHAMBER OF COMMERCE	550.00	Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.
BELMONT UNIVERSITY	-	N/A - original charges were journaled out of O&M
CARTERET COUNTY HOME B	-	N/A - original charges were journaled out of O&M
ENERGY SOLUTIONS CENTER INC	4,377.50	Piedmont Natural Gas' membership in the Energy Solutions Center (ESC), a non-profit consortium of energy utilities and equipment manufacturers, provides access to technical resources, training, and collaborative partnerships that support the deployment of energy-efficient natural gas technologies. Through ESC programs, Piedmont gains insights into emerging technologies, customer applications, and best practices that help improve energy efficiency, reliability, and overall customer value. ESC also facilitates demonstrations, educational materials, and market-focused initiatives that enable Piedmont to better inform customers and promote cost-effective, energy-efficient solutions. These benefits ultimately support Tennessee customers by enhancing service offerings, improving energy performance, and advancing customer awareness of innovative energy options
HENDERSONVILLE AREA CHAMBER OF COMMERCE	2,500.00	Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.
MT JULIET CHAMBER OF COMMERCE	3,000.00	Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.
NASHVILLE AREA CHAMBER OF COMMERCE	33,325.00	Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.
NASHVILLE AREA HISPANIC CHAMBER OF OUR NATIONS ENERGY FUTURE COALITION	2,500.00	Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.

		PNG and its customers benefit from participation in SGA in two general ways. The first is by helping natural gas companies, such as PNG, improve their local programs, practices, and procedures in all areas of their operation. In this regard, SGA annually provides numerous forums and other vehicles through which PNG employees can exchange information with their peers in other companies in order to better serve its customers. In addition, SGA provides program "clearinghouse" services and industry Certification in several areas, enabling PNG staff to become more informed in a variety of areas, including customer relations, pipeline safety, cybersecurity protection, and workforce training and development. Through such clearinghouses, SGA maintains information on successful programs conducted by member companies, which is shared with other gas companies, who learn about new tools, technologies or practices that can reduce injuries to workers, reduce methane emissions, enhance customer safety, or improve customer satisfaction.
SOUTHERN GAS ASSOCIATION	9,891.05	
SQ SPARTANBURG COMMUN	-	N/A - original charges were journaled out of O&M
		Tennessee customers receive several benefits from the Company's participation in chambers of commerce. First, chambers of commerce promote economic development, attracting businesses and jobs and enhancing community prosperity. Second, the Company's membership provides valuable information and resources, helping the Company stay informed about local economies. Finally, the Company's participation facilitates collaboration and community stakeholder engagement, helping to build relationships and addressing community needs.
TENNESSEE CHAMBER OF COMMERCE & INDUSTRY	6,525.00	
		Piedmont Natural Gas' membership in the Natural Gas Vehicle Coalition, d/b/a The Transport Project, provides access to a national coalition of industry participants focused on advancing clean, low-emission transportation solutions using natural gas and renewable fuels. Through this organization, Piedmont gains insights into emerging vehicle technologies, fuel applications, and policy developments that support the deployment of cost-effective, lower-emission natural gas vehicles. The Transport Project also conducts education, advocacy, and industry collaboration that helps expand market opportunities and improve customer awareness of alternative fuel options. These benefits ultimately support Tennessee customers by promoting cleaner air, advancing decarbonization efforts, and supporting reliable, cost-effective transportation energy solutions.
THE NATURAL GAS VEHICLE COALITION	5,935.19

Energy Solutions Center

Energy Solutions Center

Energy Solutions Center, Inc. (ESC) is a 501(c)(6) non-profit organization that helps utilities expand the gas market. ESC, which has links to the American Gas Association, provides its utility members with pro-gas educational and promotional materials and guides them in various marketing strategies. The materials can be branded by the member utilities to use with their respective employees and customers. The Spring/Summer 2019 issue of **Natural Living** included articles titled “A Clean Energy Future: Is Residential Electrification the Answer?” and “Something Unique: Renewable Natural Gas, Good for the Planet, Good for the Home.”

ESC’s membership includes some of the nation’s largest investor-owned gas utilities and several publicly-owned municipal gas companies. Several member utilities recover membership costs from their customers. For instance, according to **documents** filed with Connecticut utility regulators, Eversource’s subsidiary Yankee Gas paid ESC \$36,971 in 2020. Meanwhile, DTE Gas attempted to have customers pay for its **\$47,000 membership** to ESC during a 2020 rate case application – an increase from the \$5,000 payment in 2014. However, DTE **removed** the request to “minimize the issues in this case” after an intervenor objected to the payments and **requested** that the Michigan Public Service Commission require DTE to explain why customers should pay for ESC dues.

ESC is closely tied to the American Gas Association, the trade association for more than 200 companies that deliver fossil gas throughout the United States. Both groups share the same Washington D.C. address. David Weiss, ESC’s former Executive Director (who retired in mid-2021), was also listed in tax documents as an **AGA employee** compensated by the trade association.

ESC’s member utilities can join the group’s various ‘consortia,’ which focus on promoting gas in specific sectors of the economy. These include such consortia as “Residential,” “Multi-family,” “Industrial and Major Accounts,” “Gas Heat Pumps,” and “Blue Flame Alliance.” In the summer of 2020, ESC

started a new consortium – “Electrification” – in an effort to produce materials critical to electrification policies that reduce greenhouse gas emissions.

In an internal **industry presentation** from February 2021, a representative from Eversource labeled the new consortium as “ESC’s Consortium to Combat Electrification.” Eversource, which co-led the consortium, told the assembled utilities that gas is “in for fight of it’s life” [sic] and renewable natural gas (RNG) will “likely save” the gas business. A “call to action” slide framed several questions for the utilities to discuss, including: “how can we make sure we reach decision-makers” and “take advantage of power outage fear.” Other consortium members included Atmos, DTE Gas, Exelon, Enbridge, MDU, National Fuel, SoCalGas, South Jersey Gas, Spire, Summit, UGI, and Washington Gas.

The electrification consortium produced a number of “deliverables” for member utilities to share among their companies. These **included** short videos critical of electrification, handouts with such titles as “Understanding the Electrification Movement,” and various infographic materials that compare electrification to gas.

In media stories that revealed the work of the consortium, ESC denied that it was “anti-electrification” since it does not engage in lobbying, according to the group. Several months later, Eversource withdrew from the consortium, and the remaining members changed the name to the “Electrification Education Consortium.”

Important Notice

Piedmont Natural Gas Company is required by law to charge the rates on file with and approved by the Tennessee Regulatory Authority. Although the rates herein are believed to be an accurate representation of the approved rates as of the dates indicated on the rate schedules, no representation is made as to the accuracy or completeness of the rates shown above. The official rates can be reviewed at the office of the Tennessee Regulatory Authority.

Franchise Fee Notice

In accordance with the Tennessee Public Service Commission order in Docket U-7074, customers metered inside Davidson County are required to pay an additional 6.62% for collection of the Metro Franchise Fee. Customers served by the Fairview, Greenbrier, Hartsville, Mt. Juliet and White House systems are required to pay 5.0%. Customers served by the Franklin and Nolensville systems are required to pay 3.0%. Commercial customers on the Ashland City systems are required to pay 5.0%.

Natural Gas Vehicle Fuel Notice

The Monthly Charge for Rate Schedule 342 is not applicable to gas service provided at the Company's Premises. The Company may bill in units of Gas Gallon Equivalent ("GGE") for gas service provided at the Company's Premises under Rate Schedule 342. The rates convert 1.26 Therms to 1 GGE.

Spire Tennessee
26-00042

DR 1-063**Affordability**

Refer to the Direct Testimony of Joe Hampton, at 4:6: “paramount to the Company are affordability . . .”.

- a) Define “affordability” as used in this context.
- b) Explain how the Company is measuring or determining affordability. Explain whether it is on a customer-by-customer basis, total economy basis, or some other assessment.
- c) What customer information is Spire using to assess affordability?
- d) How is Spire obtaining that information?
- e) How is Spire considering affordability in its analysis? Include the stage at which affordability is considered (provide specific examples).
- f) How is the consideration of affordability affecting Spire’s decisions? Provide specific examples.

RESPONSE:

- a) As used in Mr. Hampton’s testimony, “affordability” refers to the Company’s efforts to ensure that the overall cost of natural gas service remains reasonable and manageable for customers, particularly in terms of total bill impacts, while still allowing the Company to safely and reliably provide service and recover prudently incurred costs consistent with Commission-approved rates and mechanisms.

Affordability is not defined by a single metric, but rather reflects a practical, bill-focused assessment of customer impacts within the context of the Company’s regulatory obligations and operational requirements.

- b) Spire primarily evaluates affordability by analyzing the incremental impact of proposed rate adjustments, including ARM changes, on the average residential customer bill, expressed in both dollar and percentage terms.

This assessment is conducted on a representative customer and customer-class basis, which is consistent with traditional ratemaking practices and prior ARM presentations. Spire considers affordability in the context of:

- Changes to the typical monthly bill for residential customers;
- The cumulative effect of multiple rate components, including base rates and gas costs

Spire does not currently assess affordability on a customer-by-customer basis, nor does it rely exclusively on economy-wide metrics. Instead, it applies a class-based, bill impact framework informed by broader economic awareness.

- c) At this time, Spire's ability to assess affordability using detailed, customer-specific or demographic data is limited. The Company is still in the integration process and operating on the legacy Piedmont customer billing platform, so it has not yet implemented systems or processes necessary to routinely analyze customer-level income or demographic data.

Accordingly, Spire primarily relies on aggregate billing and usage information by customer class, rather than individualized customer data, in its affordability considerations.

- d) Not applicable. See response to subpart c.

As integration efforts progress, Spire anticipates enhancing its systems and capabilities, which may allow for more refined affordability analyses in the future.

- e) Affordability is always top of mind. Spire considers affordability when making all economic decisions, including both capital deployment and O&M decisions.
- f) Affordability considerations inform Spire's decisions in several respects, while remaining consistent with its obligation to comply with Commission-approved tariffs and ensure safe and reliable service. As an example, Spire considers the timing and prioritization of capital investments and O&M expenditures to balance infrastructure needs with customer bill impact.

Name and title of responsible person: Joe Hampton, President, Spire Tennessee Inc.

**IN RE: PETITION OF CHATTANOOGA GAS COMPANY TO PLACE INTO
EFFECT A REVISED NATURAL GAS TARIFF, DOCKET NO. 97-00982**

This matter came before the Tennessee Regulatory Authority (hereafter the "Authority") upon the Petition of the Chattanooga Gas Company (hereafter the "Company" or "Chattanooga Gas"), a wholly owned subsidiary of Atlanta Gas Light Company, Inc. (hereafter "AGL") for a general rate increase. This matter was heard by the Authority from February 9 to 13, 1998.

I. PROCEDURAL BACKGROUND

On May 1, 1997, Chattanooga Gas Company, filed a Petition with the Authority pursuant to Tenn. Code Ann. § 65-5-203, to place into effect a revised natural gas Tariff, superseding its existing tariff and rate schedule presently filed with the Authority. On May 23, 1997, the Consumer Advocate Division, Office of the Attorney General (hereafter known as the "Advocate"), filed its Petition to Intervene and Participate as a Party. On June 25, 1997, Associated Valley Industries group (hereafter known as "AVI"), a coalition of certain industrial users of natural gas, filed a Petition to Intervene. The Petitions for leave to intervene from the Advocate and from AVI were granted at the Authority Conference on July 1, 1997, and Director Melvin J. Malone was appointed Hearing Officer in this matter. On July 23, 1997, Chattanooga Manufacturers Association (hereafter known as "CMA") filed its Petition for Leave to Intervene.

On August 6, 1997, a Pre-Hearing Conference was held before Authority Director Melvin J. Malone. At that Pre-Hearing Conference the admission of CMA as a party to the proceeding was approved. On August 13, 1997, a Report and Recommendation from the Hearing Officer was submitted to the Authority providing dates for the submission of any additional data requests and responses, for the filing of additional direct and rebuttal testimony, and for a Hearing. By Order,

dated September 3, 1997, the Authority adopted the procedural schedule set forth in the Hearing Officer's Report and Recommendation with amendments. The Authority set this matter for Hearing from October 13 through 17, 1997. On October 2, 1997, the Parties submitted a joint motion to continue the Hearing dates to a date to be determined by the Authority. At the Authority Conference on October 7, 1997, the motion was granted and Chattanooga Gas, through its counsel, waived its right under Tenn. Code Ann. § 65-5-203(b)(1), to place the proposed rate increase into effect within six (6) months of the date of the initial tariff filing.

On October 7, 1997, a Pre-Hearing Conference was held before Director Melvin J. Malone in his capacity as Hearing Officer. On October 29, 1997, a Report and Recommendation was submitted to the Authority from the Hearing Officer providing dates for the Hearing. By Order, dated January 30, 1998, the Authority adopted the Hearing schedule set forth in the Report and Recommendation. This matter was set for Hearing by the Authority from February 9 to 13, 1998.

II. HEARING AND APPEARANCES

On February 9 to 13, 1998, a Hearing was convened before the Directors of the Authority, at which time, the following appearances were entered by counsel:

FOR THE COMPANY:

William L. Taylor, Jr., Esq.
Spears, Moore, Rebman & Williams
P.O. Box 1749
Chattanooga, TN 37401

Gene Shiles, Esq.
Spears, Moore, Rebman & Williams
P.O. Box 1749
Chattanooga, TN 37401

L. Craig Dowdy, Esq.
Long, Aldrich & Norman, L.L.P.
303 Peachtree Street, Suite 5300
Atlanta, GA 30308

FOR THE ADVOCATE:

L. Vincent Williams, Esq.
Office of the Attorney General
426 - 5th Avenue, North
Nashville, TN 37243-0485

Vance Broemel, Esq.
Office of the Attorney General
426 - 5th Avenue, North
Nashville, TN 37243-0485

FOR AVI and CMA:

Henry Walker, Esq.
Boult, Cummings, Conners & Berry
414 Union Street, Suite 1600
Nashville, TN 37219

Dave Higney
Grant, Konvalinka & Harrison
633 Chestnut Street
Chattanooga, TN 37401

The Company presented testimony from Harrison F. Thompson, Kenneth A. Royse, H. Edwin Overcast, Gerald A. Hinesley, Victor L. Andrews, Donald S. Roff, Fred A. Carillo, Lisa E. Howard Wooten, Gregory E. Aliff, and James E. Kissel. AVI and CMA presented the testimony of Donald E. Johnstone, Michael Gorman, James Selecky, Robert Colby, Harry Faulkner III, Thomas E. Hodge, and Donald E. Huffman. The Advocate presented the testimony of Dr. Stephen N. Brown, Archie R. Hickerson, Daniel W. McCormac, and R. Terry Buckner.

At the Authority Conference on July 7, 1998, the Directors of the Authority, after public deliberation, announced their decision in this matter pursuant to Tenn. Code Ann. § 4-5-314.

III. LEGAL BACKGROUND AND CRITERIA FOR ESTABLISHING JUST AND REASONABLE RATES

The Authority considers petitions seeking adjustments of rates and charges under Tenn. Code Ann. § 65-5-203, which requires:

- 1) That the Authority shall have the power upon written complaint, or upon its own initiative, to hear and determine whether the increase, change or alteration being sought by a public utility is just and reasonable;¹
- 2) That the burden of proof to show that the increase, change or alteration is just and reasonable shall be on the public utility making the same; and
- 3) In determining whether such increase, change or alteration is just and reasonable, the Authority shall take into account the safety, adequacy and efficiency or lack thereof of the service or services furnished by the public utility.

The Authority has wide latitude in setting rates for public utilities under its jurisdiction.

C.F. Industries v. Tennessee Public Service Commission, 599 S.W.2d 536 (Tenn. 1980).

The court in C.F. Industries stated that, "[T]he process of setting rates is not required to follow any particular course, so long as the end result does not violate the just and reasonable standard." *Id.* at 543 (quoting Allied Chemical Corp. v. Georgia Power Co., 224 S.E.2d 396, at 399 (Ga. 1976)).

¹ The TRA has the power to fix just and reasonable rates "which shall be imposed, observed, and followed thereafter" by any public utility. Tenn. Code Ann. § 65-5-201. Consumer Advocate Division v. Tennessee Regulatory Authority, No. 01-A-01-9708-BC-00931, op. at 6 (Tenn. Ct. App., July 1, 1998) (further citing Consumer Advocate Division V. Bissell, No. 01-A-01-9601-BC-00049 (Tenn. Ct. App., Aug. 26, 1996)).

IV. TEST PERIOD

In a rate case the Authority must, as a preliminary determination, decide which test period is appropriate. The purpose in the selection of a test period is to provide an indication of the rate of return that is likely to be produced under the existing rate structure in the reasonably foreseeable future. The test period takes into consideration the estimated effect of reasonably expected revenues, expenses and investments.

The Company proposed a historical test period for the twelve (12) months that ended September 30, 1996, with adjustments for attrition through September 30, 1998. Each of the Parties in this case adopted this same test period for their forecasts. The Authority concludes, therefore, that this is a reasonable and appropriate test period in this case for rate setting purposes.

V. CONTESTED ISSUES

In its original filing, the Company requested a rate increase of \$4,422,602. The Advocate asserted that a rate increase was not just and that the Company should be ordered to reduce current rates by \$1,393,407.² AVI and CMA asserted that the Company could justify only a \$6,399 increase.³ The following sections represent the issues contested by the Parties.

V(a). RATE BASE

Rate Base is the Company's net investment, which is financed through investor supplied funds, in property used and useful in providing utility service. This is the amount of investment on which the Company should be allowed the opportunity to earn a fair and reasonable rate of return. The Company forecasted a Rate Base of \$101.4 million, while the Advocate and AVI proposed \$94.6 million and \$87.7 million, respectively.

V(a)1. PLANT IN SERVICE AND CONSTRUCTION WORK IN PROGRESS

Plant in Service represents the original investment cost to the Company of the assets used in providing utility service. Construction Work in Process ("CWIP") represents the cost of investment that is currently under construction and will be transferred to Plant in Service when completed.

The actual balance in this account at September 30, 1996, was \$125,916,379 to which the Company forecasted additions of \$14,098,556 through the midpoint of the attrition year. The Company provided a detailed project by project breakdown of the plant additions budgeted for

² See Advocate Pre-Filed Exhibit, Schedule I.

³ In Table 1 of AVI witness Michael Gorman's testimony, AVI proposed a zero (\$0) rate change. The calculations which result derive a rate increase of \$6,399. The difference can be attributed to rounding.

1997 and 1998. The Advocate used a "simple average" of previous plant additions to develop Utility Plant in Service that resulted in its Plant In Service forecast being \$0.600 million higher than the Company's budgeted forecast. AVI accepted the Company's forecasted amount for Plant In Service and CWIP. Additionally, no testimony was presented on these issues at the Hearing, either in direct or rebuttal testimony. Since the Company's attrition forecast of \$140,014,935 is supported by a detailed budget and workpapers, the Directors unanimously approved the Company's forecast.

V(a)2. ACQUISITION ADJUSTMENT

An Acquisition Adjustment represents the amount of investment by the utility that is over and above the original cost of assets placed in service. On September 30, 1988, Atlanta Gas Light Company purchased the assets of Chattanooga Gas from Jupiter Corporation for \$35 million, plus \$1,279,456 in legal and accounting fees, for a total of \$36,279,456. The purchase price exceeded the Company's September 30, 1988, book value of \$22,653,104 by \$13,626,352, which represents the total acquisition adjustment. Chattanooga Gas has been amortizing this acquisition adjustment over a 40-year period, and as of May 1, 1997, the unamortized balance was \$9,553,422.

Chattanooga Gas requested that the Authority recognize the unamortized balance of the acquisition adjustment, \$9,553,422, in Rate Base. Additionally, the Company requested that the annual amortization of \$411,024 be included in Cost of Service. This is the first time that the Company has asked for recognition of the acquisition adjustment in the Rate Base and Cost of Service from September 1988 to the present.⁴ In support of its request, the Company stated that the facts that existed at the time AGL first purchased the Chattanooga system have drastically changed. For example, the Company argues that extensive improvements and efficiencies were

⁴ Chattanooga Gas Company Post-hearing Brief, at page 7.

realized because of the acquisition. The Company provided supporting schedules showing savings to the ratepayers resulting from the acquisition. Finally, the Company portrayed the favorable results of its management audit and customer surveys as proof that the operations of Chattanooga Gas have improved to the ratepayers' benefit.

The Advocate opposed recognizing the Acquisition Adjustment for ratemaking purposes. The Advocate argued that recognizing the Acquisition Adjustment would force Chattanooga Gas' ratepayers to pay twice for assets that had been "over-depreciated" for book purposes. Additionally, the Advocate argued that the Company's exhibits showing savings to the ratepayers from the acquisition were in error. The Advocate highlighted errors in the Company's original exhibit quantifying the savings to ratepayers since the acquisition. The Advocate refined its original schedules to illustrate that customers of Chattanooga Gas were in a less favorable position after the acquisition by AGL. On September 10, 1997, the Company filed a revised exhibit that eliminated several of these errors. The Directors found that this later filing, however, still contained incorrect calculations. The Advocate maintained that correcting these errors revealed that additional payments in excess of benefits would have to be made by the ratepayers.

AVI opposed recognizing the Acquisition Adjustment in the Company's Cost of Service. The arguments advanced by AVI in opposition to the Acquisition Adjustment were structurally identical to those of the Advocate.

The Directors found that while the level of service provided by Chattanooga Gas may have increased from that of the Company's previous owners, such increases in service quality originated from investments in plant made by the current owners. This increase in investment, and therefore the change in service, has been recognized through increases to the Plant in Service component of Rate Base on which a fair rate of return is provided. The Directors also found that the Company's

arguments for recognition of an Acquisition Adjustment ten (10) years after the acquisition by AGL, were not dispositive of the issue. Therefore, the Directors of the Authority unanimously denied the Company's request to include an Acquisition Adjustment in the Rate Base.

V(a)3. CASH

Utility companies, including Chattanooga Gas, are required by their financial institutions to maintain certain minimum cash balances in order to avoid service charges. This cash balance represents an asset, supplied by the investors of the Company, and has been traditionally recognized by this agency as an addition to Rate Base. The Company included \$2,373,422 as the cash element of their Rate Base. This amount represents the average daily balance of their cash accounts, and correctly ties to the Company's ledger. Although the Advocate accepted the Company's calculation of cash, AVI objected to including cash in the Rate Base calculation. Michael Gorman, AVI's witness, stated in his direct testimony that the Company did not demonstrate that this minimum cash bank balance is necessary to avoid service charges.⁵ In his testimony, however, Mr. Gorman used the phrase "this minimum cash bank balance,"⁶ suggesting that a cash balance is warranted. Mr. Gorman, on behalf of AVI, only offered zero dollars as an alternative. The Company did not dispute AVI's objection in their rebuttal testimony.

A majority of the Directors found that utility companies are typically required to maintain minimum cash balances in order to avoid service charges, and that this Agency has traditionally recognized and approved cash balances of this type as an addition to Rate Base. A majority of the Directors concluded that it would be a contradiction to accept zero dollars as being reasonable, as

⁵ Michael Gorman Pre-Filed Direct Testimony, at page 17.

⁶ Id., at page 6.

suggested by AVI. For these reasons, the majority of Directors adopted the Company's position of \$2,373,422 as the appropriate cash element to include in Rate Base.⁷

V(a)4. MATERIALS AND SUPPLIES

Materials and Supplies ("M&S") generally refers to construction inventories. M&S includes items such as pipes, meters, and other equipment that will soon be placed into service. M&S can also include items that are kept on hand for emergency purposes.

The Company included its twelve (12) month historical average balance for M&S during the test period to arrive at its forecast of M&S. This amount was also accepted by AVI. Since the Advocate did not testify concerning their methods used to calculate M&S of \$346,273, or oppose the Company's position, the Authority unanimously adopted the Company's forecast of \$453,221 as the appropriate amount for M&S to include in Rate Base.

V(a)5. GAS INVENTORIES

Gas inventories represent the average value of gas that the Company stores for withdrawal during the peak winter months. While the actual cost of the gas placed into storage is recovered through the Authority's purchased gas adjustment ("PGA") process, the return on the investment required to store gas in inventory is recovered through a rate case proceeding.

The Company has included the twelve (12) month historical average balance during the test period of \$5,419,144 to arrive at its forecast of gas inventories. This amount was also accepted by AVI. Because the Advocate did not present any testimony or offer any evidence regarding its calculation of its \$6,659,404 forecast of gas inventory,⁸ the Directors unanimously approved the Company's forecast of \$5,419,144.

⁷ Director Kyle voted no on this issue.

⁸ Consumer Advocate Pre-Filed Exhibit, Schedule 3.

V(a)6. DEFERRED RATE CASE EXPENSE

Deferred Rate Case Expense represents the unamortized portion of costs the Company has incurred for regulatory proceedings before the Authority. This item also includes Chattanooga Gas' share of its total cost of proceedings before the Federal Energy Regulatory Commission ("FERC"). In addition, costs relating to the Company's Management Audit, which was ordered by the Tennessee Public Service Commission in the Company's last rate case, are included in this item. The Company capitalizes these costs and amortizes them over a previously prescribed period. The amortization of these costs is then treated on the income statement as an expense.

The Company has taken the balance in this account at September 30, 1996, added its estimated outside costs for completing this rate case of \$183,500, and continued with its current monthly amortization of \$1,288 to arrive at its average Deferred Rate Case Expense of \$200,668 in the attrition year for Rate Base. However, in computing Rate Case Expense for the Net Operating Income ("NOI"), the Company chose to increase the test period amount by their growth factor. The Company also excluded the deferred costs of their Management Audit in their forecast.

The Advocate included \$47,309 in Rate Base for their forecast of Deferred Rate Case Expense. The Advocate's calculations of \$144,500⁹ did not recognize the cost of the management audit. AVI accepted the Company's calculation of Deferred Rate Case Expense.

The Directors determined that the balance of the Deferred Rate Case Expense should relate to the amortization included as Rate Case Expense in the computation of Net Operating Income. To compute this item, the Directors concluded that the beginning balance should first be increased

⁹ There is no evidence in the record regarding how or why the Advocate chose to change the Company's original forecast of \$183,500.

by the estimated cost of this case and then amortized over a new three (3) year period as illustrated below:

DEFERRED RATE CASE EXPENSE	
9/30/96 Deferred Rate Case Expense	\$38,420
9/30/96 Deferred Management Audit Expense	135,744
Estimated Costs to Complete 1997 Rate Case	183,500
Total Deferred Balance	\$357,664
Amortization Period (Years)	3
Annual Rate Case Expense	\$119,221
Monthly Rate Case Expense	\$9,935
Months from 9/30/96 to 3/31/98 ¹⁰	18
Total Amortization at 3/31/98	\$178,830
Total Deferred Balance	\$357,664
Amortization through 3/31/98	178,830
Deferred Rate Case Expense at 3/31/98	\$178,834

The Directors found that they could not accept any one method proposed by the Parties for Deferred Rate Case Expense, and then ignore this calculation in the development of Rate Case Expense for Net Operating Income. The Directors, therefore, determined and adopted \$178,834 as the proper forecast for Deferred Rate Case Expense, and \$119,221 as the proper forecast for Rate Case Expense.

V(a)7. PREPAYMENTS

Prepayments are an investment in working capital that are made in advance of the period to which they apply and include items such as prepaid rents, insurance, and taxes. The amortization of these costs are then treated on the income statement as an expense.

¹⁰ March 31, 1998, represents the midpoint of the attrition year (October 1, 1997 -- September 30, 1998). Therefore, March 31, is the appropriate point in time to measure the Company's net investment against their earnings.

The Company included \$1,189,348 representing the test period average of this account from October 1995 to September 1996 as its forecast of Prepayments during the attrition year. AVI accepted the Company's forecast in their Exhibits. The Advocate included only \$769,193 in its Exhibits for Prepayments. Further, the Advocate presented no testimony or rationale on the methodology behind its forecast for Prepayments. The Advocate presented no cross-examination of any witness at the Hearing or made mention of this issue in its post-hearing briefs.

Since the Company's forecast of \$1,189,348 represents the test period average of this account for October 1995 to September 1996, the Directors unanimously adopted the Company's forecast as the proper estimate for Prepayments.

V(a)8. OTHER ACCOUNTS RECEIVABLE

The category "Other Accounts Receivable" represents amounts owed to the Company by their customers that are not associated with regular gas service. An example of Other Accounts Receivable would be for amounts due from customers for main extensions that are being paid on an installment basis.

The Company included \$92,028 representing the test period average of this account for October 1995 to September 1996 in Rate Base as its forecast of Other Accounts Receivable during the attrition year. AVI accepted the Company's forecast. The Advocate included \$138,738 in its case for Other Accounts Receivable. However, the Advocate presented no testimony or rationale regarding the calculation of its forecast. The Directors were not presented with cross-examination of any witness at the Hearing relating to this issue.

Because the Directors found no evidence to support any other forecast, the Directors unanimously adopted the Company's forecast as the proper estimate for Other Accounts Receivable.

V(a)9. LEAD LAG STUDY

The Lead/Lag Study measures the average amount of capital provided by investors, over and above the investment in other Rate Base issues, to finance company activities between the time expenditures are required to provide services and the time collections are received for services. The Lead/Lag Study recognizes that there is an investment required on the part of the stockholders to pay for the day-to-day expenses of the utility before they are recovered through rates charged to the ratepayer.

Each of the Parties adopted the Company's Revenue Lag Day forecast of 41.60 days. However, there arose a dispute over the proper number of expense lag days to include. The Advocate proposed a separate treatment on lag days for uncollectible expense, but offered no testimony regarding the rationale for this change. The Directors, therefore, unanimously accepted the position of the Company and AVI that lag days concerning uncollectible expense should be included with other operating expenses.

A second dispute concerned AVI's elimination of depreciation expense from the calculation of expense lag days. The Company and the Advocate each included Depreciation Expense in the Lead/Lag Study at zero (0) days. AVI contended that Accumulated Depreciation was already included in Rate Base and that the Company was already earning a return on those assets. However, the Directors recognized that including the Depreciation Expense in the Lead/Lag Study at zero (0) Lag Days is necessary to recognize that investor funding has occurred, but was not yet recovered. The Directors approved the positions of the Company and the Advocate on this item.

A third dispute involved the appropriate lag days for interest expense. The Company used zero lag days for this issue while the Advocate and AVI used 85.5 and 82.5 days, respectively. Because the Authority permitted the recognition of Interest Expense in the Lead/Lag Study in prior

cases, the Directors determined that the recognition of Interest Expense should be recognized in this case. The Directors unanimously concluded, therefore, that Interest Expense should be included in the Lead/Lag Study at 84 days.

A final area of dispute involved the appropriate lag days for Preferred Dividends and Net Earnings. Including the preferred dividends and net earnings in the Lead/Lag Study recognizes that investor funding has occurred, but that it has not been recovered. AVI excluded these items from the Lead/Lag Study based on its characterization of them as non-cash expenditures.

The Directors found that consideration of each of the prior adjustments produces an Expense Lag of 38.46 days, resulting in a net lag day effect of 3.14 days.¹¹ In addition, multiplying the net lag days by the daily cost of service of \$660,923 and taking incidental collections of \$49,828 into consideration gives \$266,399 for the results of the Lead/Lag Study.

LEAD/LAG STUDY RESULTS

	Company ¹²	Consumer Advocate ¹³	AVI ¹⁴	Authority
Revenue Lag Days	41.60	41.60	41.60	41.60
Expense Lag Days	34.80	38.40	42.98	38.46
Net Lag Days	6.80	3.20	-1.38	3.14
Daily Cost of Service	\$262,727	\$248,986	\$234,583	\$226,399
Operating Funds Advanced	\$1,786,544	\$805,866	\$-322,783	\$710,751
Incidental Collections	-49,828	-49,828	-49,828	-49,828
Lead/Lag Study Results	\$1,736,716	\$756,038	\$-372,611	\$660,923

The Directors, therefore, adopted \$660,923 as the appropriate amount to include for the Lead/Lag component of Rate Base.

¹¹ Preferred dividends and net earnings are included in the Lead/Lag Study at 0 days.

¹² Chattanooga Gas Exhibit 5, Schedule 8, Page 3 of 4.

¹³ Advocate Pre-Filed Exhibit, Schedule 5.

¹⁴ AVI Exhibit MPG-1, Schedule 8. However, on page 17 of his direct testimony, Mr. Gorman uses \$396,530 for his Lead/Lag results. He then carries the \$396,530 figure to his Rate Base calculation. This discrepancy remains unexplained.

V(a)10. ACCUMULATED DEPRECIATION

Recovery of the dollars invested in Plant in Service is permitted over the plant's estimated useful life by a systematic depreciation charge. The Accumulated Depreciation account represents the amount of plant that has already been recovered from utility customers through the annual Depreciation Expense charges on the income statement.

The Company applied the results of its Depreciation Study to its forecast of Plant in Service to calculate its Depreciation Expense and Accumulated Depreciation of \$46,569,377. AVI accepted this same amount of Accumulated Depreciation. The Advocate included \$46,478,394 as their forecast of Accumulated Depreciation. This figure is \$90,983 less than the Company's calculation. According to the Advocate, this difference is due to using a "simple average" rather than a thirteen (13) month average to develop Accumulated Depreciation.¹⁵

In consideration of the Authority's previous acceptance of the Company's forecast of Plant in Service, see section (V(a)1.), of this Order, that was based upon a thirteen (13) month average, the Directors unanimously adopted the Company's companion forecast of \$46,569,377 for Accumulated Depreciation.

V(a)11. ACCUMULATED AMORTIZATION OF ACQUISITION ADJUSTMENT

This item represents the Company's total accumulated amortization of their Acquisition Adjustment. Treatment of any Acquisition Adjustment governs the appropriate handling for the related Accumulated Amortization. Because of the action taken on the Acquisition Adjustment in section V(a)2. of this Order, the Directors determined that this issue was moot.

¹⁵ R. Terry Buckner Pre-Filed Direct Testimony, at page 18.

V(a)12. ACCUMULATED DEFERRED FEDERAL INCOME TAXES

The Directors found no disagreements among the Parties on the \$5,131,816 amount of Accumulated Deferred Federal Income Taxes ("ADFIT") forecast by the Company. The Directors, therefore, unanimously adopted the Company forecast in the amount of \$5,131,816 for ADFIT.

V(a)13. CUSTOMER ADVANCES FOR CONSTRUCTION

Customer Advances for Construction represent funds that are advanced from ratepayers for various construction projects. The Directors found no disagreement among the Parties over the forecast of Customer Advances, and unanimously adopted the Company's forecast of \$384,855 as the proper amount for this account.

V(a)14. CONTRIBUTIONS IN AID OF CONSTRUCTION

Contributions In Aid of Construction represents funds that are received from ratepayers for certain construction projects. These projects are undertaken when the Company's facilities are either extended or relocated at the customer's request in an area that is not likely to be economically feasible to serve under normal conditions. The Company forecasted an attrition year balance of \$1,908,645. AVI also used this amount in their calculation of Rate Base. The Advocate included \$1,858,651 in its exhibit for Contributions In Aid of Construction. The Advocate, however, presented no testimony or other rationale regarding the calculation of its forecast. Since the Company's forecast reflects the actual test period average balance, and because the record was absent evidence to support any other calculation, the Directors unanimously adopted the Company's forecast of \$1,908,645.

V(a)15. RESERVE FOR UNCOLLECTIBLE ACCOUNTS

The Company included \$278,723 in their Reserve for Uncollectible Accounts based on the development of an uncollectible factor that was then applied to estimated revenues for the attrition

period. While AVI accepted the Company's forecast for this issue, the Advocate projected an uncollectible reserve balance of \$257,864.

Based on the record, a majority of the Directors concluded, that it is reasonable that a Company with net revenues forecasted in excess of \$32 million may establish a bad debt reserve of \$257,864 or approximately 8/10ths of 1 percent of its projected revenue. Additionally, the majority concluded that, based on the Company's past bad debt experience, its estimate for the attrition period was reasonable. Further, the majority restated that no party challenged the Company's estimate, except the small undocumented adjustment by the Advocate. Therefore, a majority of the Directors adopted Chattanooga Gas' attrition period Reserve for Uncollectible Accounts in the amount of \$278,723.¹⁶

V(a)16. OTHER RESERVES

Other Reserves represents an allowance that the Company has established for maintenance of their liquefied natural gas (LNG) facility. This allowance represents the net accumulation of expenses that were previously recognized in Net Operating Income, and must be deducted from Rate Base. The Company included \$549,562 in their forecast for Other Reserves. This amount was also accepted by AVI in their forecast of Rate Base. The Advocate included \$409,201 for Other Reserves. The record reflects that the Advocate presented neither testimony nor rationale on the methodology used to calculate their forecast. As the record supported the Company's forecast, the Directors unanimously adopted the forecast by Chattanooga Gas for Other Reserves in the amount of \$549,562.

¹⁶ Director Kyle voted no on this issue.

V(a)17. CUSTOMER DEPOSITS

Customer Deposits represents funds received from ratepayers as security against potential losses arising from customer failure to pay for service. These funds represent a liability of the Company for repayment either after a specified period or upon satisfaction of certain credit requirements. These funds also represent a source of non-investor supplied capital, and must therefore be deducted from the Rate Base calculation.

The Company included \$3,766,190 in their forecast of Customer Deposits. AVI accepted this amount in its forecast of Rate Base. The Advocate, however, adjusted Chattanooga Gas' forecast to reflect a balance of \$1,917,229 based upon the Company's acknowledgment that it overstated its forecast of Customer Deposits. Since there were no disputes entered into the record by any of the Parties regarding the Advocate's forecast, the Directors unanimously adopted the Advocate's forecast in the amount of \$1,917,229 as the appropriate amount for Customer Deposits.

V(a)18. ACCRUED INTEREST ON CUSTOMER DEPOSITS

The rules of the Authority require gas utilities to accrue interest on Customer Deposits. This interest is then refunded to the customer along with the security deposit after a specified period when credit worthiness has been demonstrated. The Directors concluded that, because the Interest on Customer Deposits is recognized as an expense in computing Net Operating Income, the accrued interest that has not been paid out should be treated as a deduction to Rate Base.

All of the Parties included \$671,344, in Rate Base for their forecast of Accrued Interest on Customer Deposits. However, even though the Company admitted to an error in their forecast of Customer Deposits, none of the Parties made a corresponding adjustment to the Accrued Interest on Customer Deposits.

The Directors, therefore, unanimously approved \$686,049 which represents the thirteen (13) month test period average for this account, as the proper forecast for Accrued Interest on Customer Deposits. Therefore, the Directors found after considering the adjustments described previously, that a Rate Base of \$92,955,599 is calculated as illustrated in the following table.

COMPARATIVE RATE BASE CALCULATIONS

	Company ¹⁷	Advocate ¹⁸	AVI ¹⁹	Authority
Additions:				
Plant in Service and CWIP	\$140,014,935	\$140,614,494	\$140,014,935	\$140,014,935
Acquisition Adjustment	13,355,565	0	0	0
Cash	2,373,422	2,373,422	0	2,373,422
Materials and Supplies	453,221	346,273	453,221	453,221
Gas Inventories	5,419,144	6,659,404	5,419,144	5,419,144
Deferred Rate Case Expense	200,668	47,309	200,668	178,834
Prepayments	1,189,348	769,193	1,189,348	1,189,348
Other Accounts Receivable	92,028	138,738	92,028	92,028
Lead/Lag Study	1,736,716	756,038	-396,530	660,923
Total Additions	\$164,835,047	151,704,871	\$146,972,814	\$150,381,855
Deductions:				
Accumulated Depreciation	\$46,569,377	\$46,478,394	\$46,569,377	\$46,569,377
Accu Amort of Acq Adj.	4,196,041	0	0	0
Accumulated Deferred FIT	5,131,816	5,131,815	5,131,816	5,131,816
Customer Advances	384,855	384,974	384,855	384,855
Contributions in Aid of Const.	1,908,645	1,858,651	1,908,645	1,908,645
Reserve for Uncollectibles	278,723	257,864	278,723	278,723
Other Reserves	549,562	409,201	549,562	549,562
Customer Deposits	3,766,190	1,917,229	3,766,190	1,917,229
Accrued Int on Cust Deposits	671,344	671,344	671,344	686,049
Total Deductions	\$63,456,553	\$57,109,472	\$59,260,512	\$57,426,256
Rate Base	\$101,378,494	\$94,595,399	\$87,712,302	\$92,955,599

¹⁷ Company Exhibit 5, Schedule 8, Page 1 of 4.

¹⁸ Consumer Advocate Pre-Filed Exhibit, Schedule 3.

¹⁹ AVI Exhibit MPG-1.

V(b). NET OPERATING INCOME

Net Operating Income ("NOI") represents the earnings of the Company under present rates that are available after all issues of the cost of providing utility service have been considered.

V(b)1. BASE RATE REVENUES

Base Rate Revenues represent the gross margin, gas revenues less gas cost, of the Company at present rates. The Company forecasted their Base Rate Revenues under present rates to be \$31,206,762. In their forecast, the Company included the sales volumes for certain Industrial customers at contract rates that were proposed in other dockets, but were subsequently denied. Volumes to these customers should now be priced at the existing Industrial tariff rate. According to the Advocate, making this special contract change will add \$606,518 to the Company's base rate forecast, while AVI projects a \$635,458 adjustment. The Company did not dispute either of these adjustments in its rebuttal testimony.

As there was no dispute that the adjustments should be made, and because the amounts proposed are close, the Directors unanimously determined that an average of the two adjustments, or \$620,988 be adopted. Further, the Directors unanimously approved adding the \$620,988 adjustment to the Company's original forecast of \$31,206,762 that resulted in a forecast of \$31,827,750 for Base Rate Revenues.

V(b)2. OTHER REVENUES

Other Revenues represent revenues that the Company indirectly collects which are not necessarily involved in providing gas service. For example, discounts that are forfeited by the customers who do not promptly pay their bills are included in Other Revenues. The Company included \$929,361 in their forecast of Other Revenues. AVI accepted the Company's forecast for

this item. The Advocate made two adjustments to the Company's forecast. The Advocate first added \$13,862²⁰ for returned check charges. According to the Advocate, the Company omitted these charges from their forecast. There was no controversy with the Company regarding this issue.

The Advocate's second adjustment to the Company's forecast decreased forfeited discount revenue by \$59,657.²¹ The Advocate's calculation was based upon a five-year average ratio of forfeited discount revenue to total revenue. Again, there was no dispute on this adjustment with the Company or AVI for this item.

Due to the lack of objections on the record to the adjustments, the Directors unanimously adopted the Advocate's position and included the Advocate's \$883,749 amount in Other Revenues. In addition, the Directors also unanimously approved the Advocate's five-year average forfeited discount ratio of 0.006837²² for the Revenue Conversion Factor.

V(b)3. ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION

Allowance for Funds Used During Construction is not a revenue item, but represents a reduction, or capitalization, of interest expense and equity costs that the Company incurs on projects taking more than thirty (30) days to complete. All of the Parties accepted the Company's forecast of \$32,373 for this item. The Directors unanimously concluded, therefore, that the Company's forecast was reasonable and adopted a forecast of \$32,373 for this item.

²⁰ Daniel W. McCormac Pre-Filed Direct Testimony, at page 5.

²¹ Id.

²² Advocate Pre-Filed Exhibit, Schedule 14.

V(b)4. SALARIES AND WAGES

Salaries and Wages represent the direct labor and benefit expenses of the Company's employees in Chattanooga. The Company's calculation was \$3,136,136 for Salary and Wage Expense. AVI accepted the Company's forecast for Salary and Wages. The Advocate forecasted \$3,084,307 in Salary and Wage Expense, which was \$51,829 less than the Company's forecast. There is no mention in the Advocate's testimony of the cause for this difference. Because the record fails to reflect explanations for the difference in the Advocate's calculations, the Directors unanimously accepted the Company's forecast of \$3,136,136 for Salary and Wage Expense.

V(b)5. DISTRIBUTION EXPENSE

Distribution Expense relates to costs incurred in operating and maintaining the Company's gas distribution system. Some examples of items that would be classified as Distribution Expense would include expenses relating to dispatching, metering, and maintenance of the Company's mains and service lines. Because these types of expenses cannot be easily priced individually, the Parties agree that they must rely on a growth factor to forecast distribution expenses.

The growth factor contains an inflation component and a customer growth component that produces a measure of the expected annual growth. The annual growth factor is then compounded for the number of months to the end of the attrition period to produce a total growth factor. The test period level of expenses is then multiplied by the total growth factor to give the attrition period forecast expense.

V(b)5a. CUSTOMER GROWTH RATE

The Company computed a compound customer growth rate of 8.95 for twenty-four (24) months that produces a 4.38 percent annual growth. The Company's computation is slightly below the Advocate's proffered annual customer growth rate of 4.65 percent. The record reflects that the

Advocate made no adjustment to the Company's revenue calculation for customer growth. Since the record appeared to reflect that the Advocate accepted the Company's customer growth calculation for revenues, the Directors unanimously found that it was consistent to accept the Company's customer growth calculation for expenses. Therefore, on this sub-item, the Directors unanimously adopted the Company's annual customer growth calculation of 4.38 percent.

V(b)5b. CUSTOMER GROWTH ADJUSTMENT

The Advocate argued that 50 percent of the annual customer rate should be considered based on this Authority's historical practice of adjusting customer growth by 50 percent in natural gas company rate cases. The Company objected to this adjustment in their rebuttal testimony. The Directors determined that, historically, not all expenses increased over time due to customer growth. While some expenses such as vehicle maintenance expenses increase proportionately with customer growth, others such as office maintenance expenses have no correlation with customer growth. Therefore, on this sub-item, the Directors unanimously adopted the 50 percent adjustment proposed by the Advocate.

V(b)5c. COMPOUND INFLATION RATE

The Company computed a compound inflation rate of 6.67 percent for twenty-four (24) months as measured by the Consumer Price Index. This computation produced a 3.15 percent annual inflation rate. The Advocate used 2.19 percent as its annual inflation rate as measured by the gross domestic product ("GDP") deflator. At the Hearing, the Company witness stated that either index could be used as a measure of inflation. This Authority has recognized that the GDP index is a more appropriate measure for use in rate cases. Therefore, the Directors unanimously

adopted an annual GDP factor of 2.36 percent based on the blue-chip indicator's publication as stated on page 13 of Mr. Buckner's testimony from the Advocate's Office.²³

V(b)5d. COMPOUND GROWTH FACTOR

Considering all of the sub-items included in distribution expense, a compound growth factor of 9.31 percent is produced as shown below.

GROWTH FACTOR CALCULATIONS

	Company²⁴	Consumer Advocate²⁵	Authority²⁶
1. Annual Customer Growth Rate	4.38%	4.65%	4.38%
2. Percentage Allowed	100%	50%	50%
3. Net Annual Customer Growth Rate	4.38%	2.33%	2.19%
4. Annual Inflation Rate	3.15%	2.19%	2.36%
5. Total Annual Growth Factor	7.53%	4.52%	4.55%
6. Months to Compound	24	19	24
7. Total Compound Growth Factor	15.62%	7.25%	9.31%

The Directors adopted 9.31 percent as the proper factor to grow expenses in this matter that are not specifically priced out. By applying the 9.31 percent growth factor to the Company's September 30, 1996, adjusted test period distribution expenses of \$848,394, the growth factor produces an attrition period balance of \$927,379. The Directors found, therefore, that \$927,379 was a proper level of distribution expense.

²³ R. Terry Buckner Pre-Filed Direct Testimony at page 13.

²⁴ Gerald A. Hinesley Pre-Filed Direct, at page 4.

²⁵ The Advocate's total compound growth factor is 7.25 percent according to R. Terry Buckner Pre-Filed Direct Testimony, at page 13. His testimony describes this growth factor as compounded for a 19 month period (May 31, 1997 through September 30, 1998), it is, however, a 16 month period.

²⁶ The annual customer growth rate of 4.38 percent is the rate used by the Company.

V(b)6. STORAGE EXPENSE

Storage Expense relates to costs, other than labor and gas, incurred in operating and maintaining the Company's gas storage assets. The Company owns a liquefied natural gas (LNG) facility that is included in the Rate Base calculation under Plant in Service. The LNG facility cools natural gas to a very low temperature until it is converted into a liquid state. The liquefied gas is then stored until needed, at which time it is heated and vaporized back into a gaseous state. This process makes it efficient to store large quantities of natural gas in a relatively small containment area. The cost of operating and maintaining the LNG facility is accounted for as Storage Expense.

Chattanooga Gas and the Advocate forecasted Storage Expenses of \$987,610 and \$813,689, respectively. AVI accepted the Company's forecast for Storage Expense in their calculation of NOI. The Directors concluded that the difference between the Company and Advocate's calculation of Storage Expense resulted from the use of their different growth factors. After reducing the Company's test year Storage Expense for \$34,000²⁷ in certain non-recurring items, the Directors unanimously concluded that applying the adopted growth factor of 9.31 percent to the September 30, 1996, adjusted test period balance of \$820,191, produced an attrition amount of \$896,551. The Directors, therefore, approved \$896,551 as the proper level of Storage Expense.

V(b)7. CUSTOMER ACCOUNTS EXPENSE

Customer Accounts Expense relates to costs incurred, excluding labor, in billing and collecting amounts owed by Company customers. Some examples of items that would be classified as Customer Accounts Expense would include meter reading, cashiers, and collection expenses.

²⁷ See Authority clarification request #78 with response filed by Chattanooga Gas and copies to all Parties filed August 13, 1997. This Adjustment was not taken into account by either the Company or the Advocate.

The Directors unanimously concluded that applying the adopted growth factor of 9.31 percent to the September 30, 1996, adjusted test period balance of \$88,951 produced an attrition period balance in this category of \$97,232. The Directors, therefore, unanimously approved a balance of \$97,232 as the appropriate forecast for Customer Accounts Expense.

V(b)8. UNCOLLECTIBLE EXPENSE

Uncollectible expenses recognize the Company's annual provision for amounts due from customers that will not be collected. On October 1, 1996, the Company changed the methodology by which it recognizes uncollectible expenses to one that estimated the expense based on actual net write-offs in the uncollectible account. The Company's new methodology would not have been recognized in this rate proceeding because the test period ended September 30, 1996. Therefore, the Company chose to update their test period to the twelve (12) months that ended February 28, 1997, for Uncollectible Expense, and use the September 30, 1996, test period for all other items.²⁸ By updating the test period to February 28, 1997, the Company recognized \$385,019 in their forecast for Uncollectible Expense.

Both AVI and the Advocate disagreed with the Company's methodology. The Advocate argued that the Company's calculation was more than double the historical amounts for the previous six (6) fiscal years.²⁹ The Advocate also argued that the Company did not present any evidence that shows that the expense will continue at this rate. The Advocate chose to include only \$165,968 in its forecast as Uncollectible Expense. This amount represents the average of the Company's actual net write-offs for the last seven (7) years and eight (8) months. AVI also opposed the Company's proposed forecast of Uncollectible Expense because it is not based on test

²⁸ *In re: Petition of Chattanooga Gas Company to Place Into Effect a Revised Natural Gas Tariff, Hearing on the Merits before the Tennessee Regulatory Authority, Transcript of Proceedings, February 10, 1998, Volume 2B, at page 177.*

²⁹ R. Terry Buckner Pre-Filed Direct Testimony, at page 12.

year data as previously described.³⁰ AVI proposed instead to use the 1996 actual Uncollectible Expense of \$199,019 in its forecast.

The Directors concluded that it would not be appropriate to recognize an eight (8) month period in the development of any annual average as the Advocate has done. Rather, the Directors unanimously adopted the use of a seven (7) year average of the net write-offs from 1990 to 1996 as the proper forecast of Uncollectible Expense. This produces \$138,006 in forecasted Uncollectible Expense. The Directors concluded that this methodology recognizes that the aged delinquent accounts should be properly recognized as a recurring event over a longer period of time. This adoption also changes the Uncollectible Expense component of the Revenue Conversion Factor to 0.005368.³¹

V(b)9. SALES PROMOTION EXPENSE

Sales Promotion Expense relates to costs incurred, excluding labor, to promote or retain the use of utility services by present or prospective customers. Some examples of items that would be classified as Sales Promotion Expense would include demonstrating expenses, selling expenses, and advertising expenses.

The Company forecasted Sales Promotion Expense of \$455,531. The Company's forecast was made by taking the test period balance of Sales Promotion Expense in the amount of \$367,929³² and then eliminating labor expenses. The balance was then increased by the Company's compound inflation and customer growth factor. This forecast was adopted by AVI in their calculation of NOI.

³⁰ Michael Gorman Pre-Filed Direct Testimony, at page 21. *

³¹ Uncollectible Expense of \$138,006 / Test Year Residential and Commercial Revenues of \$25,707,838 = 0.005368.

³² Company Workpapers O&M-6 and O&M-7.

The Advocate recommended a forecast based on a standard criterion of .5 percent of revenues. Further, the Advocate stated that the Tennessee Public Service Commission found the .5 percent factor to be consistent with the rule on sales promotional expense, and referred to this factor as a policy. The Directors stated emphatically that neither the Authority nor the Tennessee Public Service Commission ever adopted a policy of .5 percent for the expense of promotions. The Directors found that in the 1984 Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc., for an Adjustment of its Rates and Charges, a .5 percent factor was applied to nonpayroll cost only. The .5 percent factor was unique to that case. The Directors clearly and unequivocally stated that there is no policy for this .5 percent factor as the Advocate asserted. Further, the Court of Appeals dispels the Advocate's argument on this issue.³³ Applying

³³ The Court of Appeals held:

This is an issue on which the briefs of the principal parties seem to be speaking different languages. The following explanation is the best we can glean from the record. In 1984 the Public Service Commission adopted a rule that disallowed as a recoverable expense by a utility any "promotional or political advertising." The prohibition covered advertising for the purpose of encouraging any person to select or use gas service or additional gas service. It did not cover (among other things) advertising informing customers how to conserve energy or to reduce peak demand for gas, or advertising promoting the use of energy efficient appliances. See former Rule 1220-4-5-.45, Tenn. Regis.

In a 1985 proceeding involving a rate increase application by NGC, the Commission deviated from the rule and allowed advertising expenses up to .5 percent of revenues. In March of 1996, the Commission repealed 1220A-5-.45 and proposed a new rule that would allow a utility to recover "all prudently incurred expenditures for advertising." Apparently the rule had not made it completely through the adoption procedure when the TRA heard this case below. Nevertheless, based on proof of \$1,486,000 in external advertising expenses, \$800,000 in marketing personnel payroll and \$300,000 in miscellaneous sales expenses, the TRA allowed the recovery of all but approximately half of the external advertising expenses. The CAD urged disallowance of all the related expenses except approximately \$647,000 and NGC claims that the TRA erred in reducing the external operating expenses because there was no proof that they were imprudently incurred.

We think the TRA was justified in its conclusion on this issue. Based on the testimony in the record that the advertising expenses were incurred to meet competition, to add new customers on existing mains, and to get existing customers to use more gas, the TRA concluded that the rate payers benefited from at least part of the external advertising.

Consumer Advocate Division v. Tennessee Regulatory Authority, No. 01-A-01-9708-BC-00931, op. at 8, 9 (Tenn. Ct. App., July 1, 1998).

the 9.31 percent growth factor discussed previously to the test period balance produces a forecast of \$430,670. The Directors, therefore, unanimously concluded that \$430,670 was an appropriate forecast for promotion expense, and adopted the sales promotion expense forecast of the Company.

V(b)10. ADMINISTRATIVE AND GENERAL EXPENSE

Administrative & General Expense ("A&G") relates to costs incurred, excluding payroll, in operating the utility that are not directly chargeable to a particular function. Some examples of items that would be classified as A&G Expense would include audit and pension expense. The Company calculated \$2,448,665 for A&G Expense while the Advocate only included \$2,115,562 in their forecast. AVI accepted the Company's forecast in their calculation of NOI. The table below highlights the differences between the Parties for A&G Expense.

DETAIL OF A&G EXPENSE

	Company and AVI	Consumer Advocate³⁴	Authority
Growth Factor	\$1,000,969	\$928,506	\$787,373
Rate Case Expense	168,144	64,334	119,221
Other Items	1,279,552	1,122,722	1,279,552
Total	\$2,448,665	\$2,115,562	\$2,186,146

Applying the growth factor of 9.31 percent³⁵ to the September 30, 1996, adjusted test period balance of \$720,312 produces an attrition amount of \$787,373. The Directors, therefore, unanimously adopted \$787,373 as the appropriate level of A&G Expense relating to customer growth and inflation.

³⁴ The Advocate's A&G Expenses related to growth based on the test period is the amount increased by the Advocate's growth factor. However, the difference in the calculation was not able to be reconciled with the Advocate's case.

³⁵ See Section V(b)5e.

The Company used their growth factor to determine the attrition year level of Rate Case Expense. The Company took the test period expense of \$145,428 and increased it by 15.62 percent³⁶ to arrive at an attrition-year-rate-case expense of \$168,144. The Advocate estimated the cost to complete the current case to be \$144,500.³⁷ The Advocate took this estimated cost and amortized it over three years to give an annual amortization of \$48,167. The Advocate then added one year of additional amortization or \$16,167 from the Company's 1995 rate case to obtain their total Rate Case Expense of \$64,334.

The Directors found that these Rate Case Expense calculations should have been related to the Deferred Rate Case Expense. The Directors concluded that the estimated cost of this case should be added to the test period Deferred Rate Case Expense with the total amortized over a new three year period. This calculation produced Rate Case Expense of \$119,221. The Directors, therefore, adopted \$119,221 as the proper level of A&G Expense relating to Rate Case Expense.

Finally, the Advocate reduced the Company's forecast of the remaining items of A&G Expense from \$1,279,552 to \$1,122,722. However, the Directors found that the Advocate failed to document its reasoning for this reduction in its testimony or through cross-examination at the Hearing. Therefore, the Directors unanimously adopted \$1,279,552 as the appropriate level of A&G Expense relating to "other items" of A&G Expense.

The total for all three components of A&G Expense equals \$2,186,146. Therefore, the Directors unanimously approved this amount as the proper level of A&G Expense.

³⁶ Gerald A. Hinesley Pre-Filed Direct Testimony, at page 4, and Company Workpaper O&M-1.
³⁷ R. Terry Buckner Pre-Filed Direct Testimony, at page 14.

V(b)11. CORPORATE ALLOCATIONS

During the 1996 fiscal year, corporate shared services were allocated based on a percentage of approximately 3.8 percent³⁸ of AGL's customers in Tennessee and Georgia. Beginning in October 1996, the Company changed its allocation methodology. The new overhead allocation methodology uses numerous allocation percentages, depending on the type of service rendered. Allocations can be based on the number of full-time employees, number of users, hours used, number of customers or any combination of these drivers. The allocation percentages are updated monthly using a computer allocation model.

James Kissel, a Senior Manager with Deloitte & Touche Consulting Group testifying for Chattanooga Gas, stated that the purpose of his testimony was to "demonstrate that the methodology is rational, fair and equitable."³⁹ He also stated that his testimony "addresses only the approach to allocating costs and not the actual cost levels of the various business functions."⁴⁰ In his Pre-filed testimony, he goes into great detail describing the various services that are allocated and the rationale for selecting the appropriate drivers to allocate these services. Using a "typical year," he stated that Chattanooga Gas would receive a composite allocation of 3.7 percent.⁴¹ This was reiterated where he stated that, "... the new methodology allocates 3.7 percent of the central service costs to Chattanooga Gas Company."⁴² He detailed, as did Mr. Thompson, President of Chattanooga Gas Company,⁴³ that there was an increase in cost allocation to Chattanooga Gas due to the inclusion of costs not formerly allocated to Chattanooga Gas.⁴⁴ Mr. Kissell's estimate of the

³⁸ James E. Kissel, Pre-Filed Direct Testimony, at page 15.

³⁹ Id., at page 2.

⁴⁰ James E. Kissell Pre-Filed Direct Testimony, at page 2.

⁴¹ Id, at page 11.

⁴² Id, at page 13.

⁴³ Harrison F. Thompson Pre-Filed Direct Testimony, at page 5

⁴⁴ James E. Kissell Pre-Filed Direct Testimony, at pages 11-13.

increase to Chattanooga Gas, when costs were fully allocated, was approximately \$2.3 million.⁴⁵ Mr. Kissell also responded that allocating costs on a single driver, such as customers, does not accurately reflect the amount of resources consumed by the individual business organization.⁴⁶

The Advocate argued that there were several problems with accepting the Company's new methodology for allocating common costs. First, because the methodology is excessively complex, it would be extremely difficult for a regulator to verify that costs are being accurately allocated to Tennessee. Secondly, because there are multifactors involved, the potential exists for AGL to manipulate costs between jurisdictions, thereby recovering over or under 100 percent of its common costs. A company's "external auditors rarely, if ever, certify the accuracy of charges between jurisdictions, but usually examine only the Company's operations in total."⁴⁷ Instead, the Advocate recommends that AGL allocate its common costs using a single allocation component based upon the number of customers in Georgia and Tennessee.⁴⁸ The Advocate also argued that this methodology would not only leave a cleaner audit trail, but also allow regulators to verify the accuracy of the charges allocated to Tennessee and Georgia customers.

In addition to disagreeing with the Company's allocation methodology, the Advocate also disagreed with the Company's allocated expenses of \$5.227 million. The Company annualized their fiscal year-to-date base costs. These annualized costs were then allocated to Chattanooga Gas using the new allocation model.

The Advocate also annualized the base costs to be allocated, and then used a single allocation percentage of 3.73 percent based on the number of Tennessee customers. The Advocate argued that the Company claimed that the new methodology allocates 3.7 percent of the central

⁴⁵ James E. Kissell Pre-Filed Direct Testimony, at page 11.

⁴⁶ Id., at page 15.

⁴⁷ R. Terry Buckner Pre-Filed Direct Testimony, at page 8.

⁴⁸ Id., at page 5.

service costs, while the actual composite percentage allocated to Chattanooga Gas in the Company's case is 5.13 percent. These different approaches account for \$1.249 million of the difference between the Advocate and the Company's case for this item. The Advocate next indicated that the difference in the rate of return on allocated net assets accounts for an additional \$0.155 million. Finally, the Advocate argued an additional difference of \$0.093 million occurred because the Company did not allocate any of its corporate office costs to non-utility operations. As a result of its analysis, the Advocate recommended an inclusion of \$3.730 million in Corporate Allocated Expenses.

AVI stated that the Company did not provide support for the allocation factors used to forecast its estimated shared service allocation to Chattanooga Gas.⁴⁹ AVI also argued that this item represents the largest single adjustment to the test year cost of service, and that the Company should be compelled to provide support to show the complete derivation of all elements used to establish this reallocation. Absent a clear demonstration of support for the Company's calculations, AVI asked that the reallocation be rejected.⁵⁰

While Company witness James Kissel testified that the new methodology is the "most fair, equitable and rational approach,"⁵¹ his colleague at Deloitte & Touche, Gregory E. Aliff, co-author of ACCOUNTING FOR PUBLIC UTILITIES, stated that:

For a utility, the basic goals of intercompany cost allocation methodologies are to:

- (1) prevent or limit, to the extent possible, any cross-subsidization of one activity or entity by another; and
- (2) minimize the time and expense necessary to reflect and audit the transactions.

The second goal of a cost allocation system is to minimize the time and expense necessary to record and audit transactions. This goal is important because the system for

⁴⁹ Michael Gorman Pre-Filed Direct Testimony, at page 22.

⁵⁰ Id., at page 22.

⁵¹ James E. Kissell Pre-Filed Direct Testimony, at page 15.

allocating shared costs must be understandable and workable. The personnel responsible for the accounting and reporting of the costs must be able to apply the system properly if it is to produce the desired results. In addition, an overly detailed or complex system could increase business costs and diminish any cost benefits of the shared activities. Thus, it is possible for the system to impact the economics of the business transaction.

The time and expense necessary to audit the transactions is also an important consideration. Similar to accounting and reporting for these transactions, auditing intercompany transactions should not impose an extreme cost burden or be so time consuming as to prevent effective system testing. These requirements would most likely result in resistance to or nonacceptance of the system by regulators and others.”⁵²

The Directors’ review of the record in this matter compelled them to concur with the Advocate in concluding that the complexity of the allocation methodology implemented by Chattanooga Gas makes it difficult to accept. The Directors made no judgments regarding the accuracy of AGL’s allocation methodology, but did conclude that regulation requires a more audit-friendly environment. The Directors found further that the burden for determining fairness, equity, and accuracy of costs imposed on Tennessee ratepayers should not shift to the Authority either by design or by chance. While the Directors stated that they fully endorse systems that more accurately ascribe costs to cost causes, they determined that an allocation system must minimize the time and expense necessary to reflect and audit transactions. Therefore, the Directors unanimously concluded that the use of a single allocation formula based on customers in Tennessee and Georgia is the most appropriate method of allocation of common cost at the present time. Additionally, the Directors found that the Advocate correctly asserted that the Company did not allocate any of its corporate office costs to nonutility operations. Therefore, the Directors unanimously adopted the Advocate’s forecast of \$3.730 million in Corporate Allocated Expenses. Additionally, the Directors unanimously adopted the Advocate’s recommendation for a single allocation factor, based on

⁵² R.L. HAHNE AND G.E. ALIFF, ACCOUNTING FOR PUBLIC UTILITIES, Matthew Bender, Accounting Series, §19.02, page 19-4, 19-5.

customers for financial reporting purposes, and that this factor shall only be updated within a rate case.

V(b)12. INTEREST ON CUSTOMER DEPOSITS

Authority rules require gas utilities to accrue interest on Customer Deposits. This interest is then refunded to the customer along with the security deposit after a specified period when credit worthiness has been demonstrated.

The Company and AVI forecasted incorrect amounts for this issue. The Advocate had attempted to correct the error but ignored its effect on accrued interest in customer deposits. Therefore, the Directors found that the Advocates' forecast should be discarded. The Directors concluded that the test period balance for this account was representative of the attrition year. The Directors, therefore, unanimously adopted the test period balance of \$126,744 for Interest on Customer Deposits.

V(b)13. MISCELLANEOUS EXPENSE RELATING TO CHARITABLE DONATIONS

The Company included \$37,540, in their case as Miscellaneous Expense. This item represents donations to the civic, community and charitable organizations of Chattanooga and Cleveland, Tennessee. According to testimony from the Company's witness, Chattanooga Gas feels a responsibility to be a good corporate citizen and therefore makes these donations to various organizations.⁵³

The Advocate objects to these types of expenses and has excluded them from their case. According to the Advocate, charitable donations should not be allowed in setting rates.⁵⁴ AVI accepted the Company's calculation for charitable donations in their case.

⁵³ Gerald A. Hinesley Pre-Filed Rebuttal Testimony, at page 4.

⁵⁴ R. Terry Buckner Pre-Filed Direct Testimony, at page 14.

A majority of the Directors found that accounting principles and standards under which regulated companies operate generally will not support charitable contributions in a rate case. The majority concluded that such a finding is consistent with the Authority's position in the Nashville Gas⁵⁵ case although charitable contributions were voluntarily withdrawn. A majority of the Directors concluded that this was an inappropriate recovery, and adopted the Advocate's position in which Miscellaneous Expenses in the determination of Net Operating Income were excluded.⁵⁶

V(b)14. DEPRECIATION AND AMORTIZATION EXPENSE

Depreciation and Amortization Expense represent the systematic recovery of capital invested in assets placed in service by the Company. As Depreciation and Amortization Expenses are recognized, the balance of Accumulated Depreciation is increased in determining the proper level of Rate Base.

In this case, the Company submitted a new depreciation study, which changes their depreciation rates. The greatest reason for the change in depreciation rates is the Company's projected "net salvage value" percentage.

The Company testified that, historically, Account #376 (Mains) has experienced a negative salvage rate of 20 percent, but due to increases in the cost of removal related to cast iron main replacement, a negative 40 percent salvage value has been used in the proposed depreciation rates. For Account #380 (Services) the Company testified that the current rates include a 60 percent negative salvage rate and that they anticipate a "modest adjustment" in the salvage rate of this asset; therefore, the Company used a 55 percent negative salvage rate.⁵⁷

⁵⁵ In Re: Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc. for an Adjustment of its Rates and Charges, Docket No. 96-00977 (Tenn. Reg. Authority, February 19, 1997).

⁵⁶ Director Greer voted no on this issue, having previously moved to allow this expense to be included on the basis of public expectations that utilities would participate in the community.

⁵⁷ Donald Roff Pre-Filed Direct Testimony, at page 11.

Based on a historical analysis of the past fifteen years, AVI contended that a negative 15 percent salvage value more accurately reflects what will occur in the future for Account #376 (Mains). Reducing the net salvage value from 40 percent to 15 percent effectively reduces the annual depreciation percentage for this account from 2.81 percent to 2.31 percent. AVI testified that the net salvage value for Account #380 (Services) has averaged 42 percent over the last five years. Reducing the net salvage value from 55 percent to 40 percent effectively reduces the annual depreciation percentage for this account from 4.43 percent to 4.00 percent.⁵⁸ If AVI's salvage rates are used for these two categories, the result is an annual decrease in Depreciation and Amortization Expense of \$476,157. The Advocate proposed eliminating depreciation on land rights that would reduce the Company's Depreciation Expense by approximately \$10,000.⁵⁹

The Directors concluded that both AVI and the Advocate made solid arguments for the proper calculation of depreciation expense. However, the Directors were hesitant to accept AVI's or the Advocate's proposal without an accumulated depreciation quantification in the record. The Directors determined that absent such quantification in the record, the Company's proposal for purposes of this case must be given greater weight. Accordingly, the Directors approved the Company's forecast of \$4,820,597 for Depreciation and Amortization Expense.

V(b)15. TAXES OTHER THAN INCOME

Taxes Other Than Income includes Property Taxes, Franchise Taxes, Gross Receipts Taxes, Authority Fees, Payroll Taxes, and Other General Taxes. The Company included \$3,952,807 in their case for Taxes Other Than Income, while the Advocate only forecasted \$3,552,189 for a difference between these Parties of \$400,618. AVI accepted the Company's forecast of Taxes

⁵⁸ James T. Selecky Pre-Filed Direct Testimony, at page 2.

⁵⁹ R. Terry Buckner Pre-Filed Direct Testimony, at page 19.

Other Than Income in its forecast of NOI. The Directors determined that Taxes Other Than Income may be illustrated by each of the specific components shown in the following table.

TAXES OTHER THAN INCOME

	Company and AVI	Consumer Advocate	Authority
Property Taxes	\$2,310,714	\$2,094,035	\$2,094,035
Gross Receipts Tax	692,453	541,741	541,741
Payroll Taxes	242,890	238,749	242,890
TRA Inspection Fee	168,804	166,058	166,058
Franchise Tax	267,321	240,981	240,981
Other General Taxes	270,625	270,625	270,625
Total Taxes Other Than Income	\$3,952,807	\$3,552,189	\$3,556,330

The Advocate stated that the Company calculated their Property Taxes incorrectly by using the unequalized assessment value. In addition, the Advocate argued that the Company incorrectly calculated Gross Receipts Taxes by taking a five year average of the effective rate, which does not reflect the current effective tax rate. The Advocate then argued that the Company used its proposed Acquisition Adjustment in its calculation of the Franchise Tax. Since the Advocate recommended disallowance of the Acquisition Adjustment, they also recommended that it be removed from the Franchise Tax Calculation.⁶⁰

Finally, the Advocate reduced the Company's payroll taxes based on its proposed reduction in Salary and Wage Expense. Parallel to the Advocate's recommended disallowance of a portion of the Salary and Wage Expense, was the Advocate's recommendation that the associated payroll taxes be removed.⁶¹

⁶⁰ R. Terry Buckner Pre-Filed Direct Testimony, at page 16.

⁶¹ Id., at page 17.

The Directors determined from the record that of the various adjustments that the Advocate made to Taxes Other Than Income, the only issue to which the Company took exception was the Advocate's adjustment to payroll taxes. The record reflects that the Company's exception resulted from its belief that the Advocate's payroll adjustments were inappropriate.⁶² Therefore, because the Directors adopted the Company's calculation of Salary and Wage Expense, they also adopted the Company's calculation of payroll taxes. Further, the Directors found that there was a lack of discussion on the record contrary to the position of the Advocate on the remaining components of Taxes Other Than Income. Therefore, the Directors unanimously adopted the Advocate's forecast of Taxes other than Income. In addition, the Directors concluded that adoption of these adjustments results in a total forecast of \$3,556,330 for Taxes Other Than Income. Therefore, the Directors unanimously approved \$3,556,330, as the appropriate amount of Taxes Other Than Income.

V(b)16. TENNESSEE EXCISE TAX EXPENSE

Tennessee Excise Tax Expense represents the Company's income tax due to the state based on the tariffs currently in place. The Tennessee Excise Tax is a 6 percent income tax on the earnings of the Company. After considering all of the previous adjustments, a forecast of \$545,670 for Tennessee Excise Tax Expense was calculated. The Directors, therefore, unanimously approved \$545,670 as the appropriate forecast amount for Tennessee Excise Tax based upon the decisions adopted within this Order. See the chart following Section V(b)17 for calculations.

⁶² Gerald A. Hinesley Pre-Filed Rebuttal Testimony, at page 4.

V(b)17. FEDERAL INCOME TAX EXPENSE

Federal Income Tax Expense represents the Company's current income tax due to the federal government based on the tariffs currently in place. The federal income tax is a 35 percent income tax on the earnings of the Company.

Taking all previous adjustments into account, a forecast of \$2,992,092 for Federal Income Tax Expense is calculated. The Directors unanimously determined that the Federal Income Tax Expense must be calculated based upon the results of the decisions adopted within this Order. See the following chart.

CHATTANOOGA GAS COMPANY
Excise and Income Taxes
For the 12 Months ending September 30, 1998

Line No.		Authority	Company	Consumer Advocate	AVI
1	Operating Revenues	\$ 32,711,499	\$ 32,136,117	\$ 32,697,029	\$ 32,771,581

V(c). CAPITAL STRUCTURE AND FAIR RATE OF RETURN

The Directors found that, although the Advocate and AVI did not endorse Chattanooga Gas' proposed capital structure and cost rates for short- and long-term debt and preferred stock, neither did they suggest any alternatives. Therefore, the Directors adopted the capital structure and cost rates on debt and preferred stock proposed by Chattanooga Gas.

⁶³ Chattanooga Gas Exhibit 5, Schedule 4.
⁶⁴ Advocate Pre-Filed Exhibit, Schedule 8.
⁶⁵ AVI Schedule MPG-1.

On cost of equity, none of the witnesses' analyses went completely un rebutted. The Directors rejected the position of Dr. Andrews, the Chattanooga Gas witness, that Chattanooga Gas is an independent firm. The Directors adopted the testimony of Dr. Brown, for the Consumer Advocate, and Mr. Gorman, for AVI, that AGL is the appropriate company to reference for determining the cost of equity. This finding eliminated all of the cost of equity estimates underlying Dr. Andrews' recommended cost of equity of 12.25 percent, since he relied on data for firms "comparable" to Chattanooga Gas and not AGL. Moreover, the Directors concluded that Dr. Andrews' DCF estimate of 11.06 percent is biased and that his Capital Asset Pricing Model is flawed.

Dr. Brown's DCF estimate along with his capital asset pricing model and Mr. Gorman's DCF estimate and risk premium estimate of the cost of equity, taken as a group, provided enough useful information for deciding the cost of equity in this case. These estimates defined a range, from Dr. Brown's DCF estimate at 10.4 percent to his capital asset pricing model at 11.14 percent that includes Dr. Andrews' DCF calculation of 11.06 percent as well as Dr. Brown's recommended 10.55 percent and Mr. Gorman's recommended 10.80 percent.

The Directors rejected Dr. Brown's compounding theory that formed the basis of his recommended 10.55 percent cost of equity. This theory was rebutted by Dr. Andrews and not recommended by any other witnesses. This decision is consistent with the decision of the Authority in the most recent Nashville Gas Company rate case. Further, Dr. Brown testified at the Hearing that he did not know of any other jurisdiction where this approach had been adopted.

The Directors found that the range established between witness Dr. Brown's DCF estimate at 10.4 percent and his capital asset pricing model at 11.14 percent was sufficient to encompass returns on equity proffered by all Parties in this proceeding. Although Chattanooga Gas' witness

Andrews' DCF estimate was found to be biased, the upper range of his model at 11.06 percent is within the range identified by Dr. Brown between his DCF calculation on the low side at 10.4 percent and his capital asset pricing model estimate on the high side at 11.14 percent. Therefore, the Directors unanimously adopted 11.06 percent as the cost of equity in this proceeding. The Directors further noted for the record that this percentage falls within the range supported by all Parties.

The resulting overall cost of capital of 9.08 percent flows from the decisions on capital structure and cost rates as shown in the following table.

CAPITAL STRUCTURE AND COST OF CAPITAL

Component	Percent	Cost Rate	Weighted Cost
Short Term Debt	5.28	5.80 %	0.31 %
Long Term Debt	46.07	7.75 %	3.57 %
Preferred Stock	4.49	7.04 %	0.32 %
Common Equity	<u>44.16</u>	11.06 %	<u>4.88 %</u>
Total	100.00		9.08 %

V(d). REVENUE CONVERSION FACTOR

The Directors unanimously adopted a revenue conversion factor of 1.634321, illustrated below, to reflect the changes to the Company's rate case amounts for other revenues and uncollectible expenses.

REVENUE CONVERSION FACTOR

Line		Rate	Balance
1	Operating Revenues		1.000000
2	Add: Forfeited Discount Ratio	0.006837 ⁶⁶	0.006837
3	Balance		1.006837
4	Deduct: Uncollectible Ratio	0.005368 ⁶⁷	0.005405
5	Balance		1.001432
6	Deduct: State Excise Tax Rate	0.060000 ⁶⁸	0.060086
7	Balance		0.941346
8	Deduct: Federal Income Tax Rate	0.350000 ⁶⁹	0.329471
9	Balance		0.611875
10	Revenue Conversion Factor (Line 1/Line 9)		1.634321

V(e). REVENUE DEFICIENCY OR SURPLUS

The Directors found, that after placing into effect their decisions with respect to Docket No. 97-00982, Chattanooga Gas Company, Petition to Place Into Effect the Revised Natural Gas Tariff, the calculations from these decisions indicate that there is a revenue surplus in the amount of \$1,166,213⁷⁰ as illustrated in the following chart.

⁶⁶ See Section V(b)2.

⁶⁷ See Section V(b)8.

⁶⁸ Statutory Rate.

⁶⁹ Statutory Rate.

⁷⁰ The revenue design calculation deficiency was announced at the Authority Conference on July 21, 1998.

COMPARATIVE REVENUE DEFICIENCY (SURPLUS) CALCULATIONS

	Company	Consumer Advocate	AVI	Authority
Rate Base	\$101,378,494	\$94,595,399	\$87,712,302	\$92,955,599
Operating Income at Current Rates	\$7,027,293	\$9,227,212	\$7,863,865	\$9,160,319
Earned Rate of Return ⁷¹	6.93%	9.75%	8.97%	9.35%
Fair Rate of Return	9.61%	8.85%	8.97%	9.09%
Required Operating Income ⁷²	\$9,742,473	\$8,371,693	\$7,867,793	\$8,446,742
Operating Income Deficiency (Surplus) ⁷³	\$2,715,180	\$(855,519)	\$3,928	\$(713,577)
Gross Revenue Conversion Factor	1.628843	1.628727	1.628843	1.634321
Revenue Deficiency (Surplus) ⁷⁴	\$4,422,602	\$(1,393,407)	\$6,399	\$(1,166,213)

V(1). RATE DESIGN

V(1)1. IGCA RIDER, LOST AND UNACCOUNTED FOR PROVISION AND DAILY BALANCING PROVISION

The Directors found that there was mirroring in the Company's proposal to change the industrial tariff by including an interruptible gas cost adjustment ("IGCA") rider, a lost and unaccounted for provision, and a daily balancing provision. The Directors concluded that these changes could better reflect the cost of providing service to the industrial class. However, the Directors unanimously found that these types of tariff changes can best be negotiated between the Parties outside the context of a rate case, and denied the Company's request.

⁷¹ Operating Income at Current Rates / Rate Base.

⁷² Rate Base multiplied by Fair Rate of Return.

⁷³ Required Operating Income - Operating Income at Current Rates.

⁷⁴ Operating Income Deficiency (Surplus) multiplied by Gross Revenue Conversion Factor.

V(f)2. MISCELLANEOUS CHARGES FOR RECONNECTION AND SERVICE ESTABLISHMENT

The Directors unanimously determined from the record that rates charged by Chattanooga Gas for Reconnection and Service Establishment are higher than those of Nashville Gas and United Cities Gas, and therefore, concluded that these rates shall not be increased at this time.

V(f)3. BILLING VOLUME FOR OUTDOOR LIGHTING

The Directors found that the Company's proposal to change the billing volume for outdoor lighting was appropriate. The Directors further found that the Company's proposal to reduce the minimum daily volumes to qualify for the firm transportation tariff was appropriate. There was no opposition to these issues by the Advocate, AVI or CMA, and therefore, the Directors unanimously approved these two changes.

V(f)4. DETARIFFING

Detariffing is a term used to indicate the Company's proposal to substitute price cap formula regulation for some or all of the industrial segment of the Chattanooga Gas tariff. The Directors found that a formula may satisfy the tariff rate requirements of Rule 1220-4-1-.03. The Directors further found that rates do not have to be the same for all classes of customers to be nondiscriminatory.⁷⁵ However, while concluding that creative rate designs under strict rate of return regulations should not be discouraged, the Directors emphasized that there is an effective experimental bypass rule in place which, when properly applied, would effectively assist in keeping industry in the Company's industrial base. Therefore, the Directors unanimously rejected the Company's proposal for industrial rate detariffing.⁷⁶

⁷⁵

CF Industries v. Tennessee Public Service Commission, 599 S.W.2d 536 (Tenn. 1980).

⁷⁶

Chairman Malone did not agree with the rationale expressed by the majority, but joined in the result.

VI. SETTLEMENT OF RATE DESIGN ISSUES

On July 16, 1998, the Parties jointly submitted a Motion to Postpone a Decision on Rate Design to Allow the Parties to Propose a Settlement. This Motion was considered by the Directors at the Authority Conference on July 21, 1998. At that Conference the Directors unanimously approved the Motion to allow the Parties an opportunity to negotiate the Rate Design. The Parties were given until 12:00 Noon on Tuesday, July 28, 1998, to propose their Rate Design. On July 28, 1998, the Parties timely filed their proposed Rate Design. The proposed Rate Design is attached as Exhibit A. The proposed Rate Design settlement was considered by the Directors at the Authority Conference on August 4, 1998. At that Conference, the Directors unanimously approved the proposed Rate Design settlement and ordered that the tariffs, consistent with the provisions of the settlement, shall be filed not later than three (3) business days after the entry of a final Order in this case and shall be effective upon approval of the Authority.

VI(a). WEATHER NORMALIZATION

As a part of the Parties' proposed settlement of Rate Design, they agreed to permit the Company and the Authority Staff to determine the details of the Weather Normalization Adjustment ("WNA") factors. The WNA factors are used on a going forward basis to adjust the residential and commercial rates for weather that is either above or below the normal seasonal range. Accordingly, the Company and the Authority Staff agreed to jointly issue the use of the existing WNA factors from the Company's 1995 rate case, Docket No. 95-02116. The proposed Rate Design settlement, including adoption of the WNA factors, was considered by the Directors at the Authority Conference on August 4, 1998. At that Conference, the Directors unanimously approved the proposed Rate Design, including the provisions of the proposed settlement concerning the WNA factors.

**VII. DISPOSITION OF THE MOTION TO STRIKE REQUEST OF FINDINGS
FROM CHATTANOOGA GAS BY THE ADVOCATE**

On September 29, 1997, the Consumer Advocate Division filed an Objection and Motion to Strike Request of Findings submitted by Chattanooga Gas. The Hearing Officer requested the Parties to submit proposed charges of law, but did not request the Parties to file any proposed findings of fact or the Request of Findings as submitted by Chattanooga Gas. Therefore, the Directors unanimously granted the Objection and Motion to Strike Request of Findings submitted by the Advocate.

IT IS THEREFORE ORDERED THAT:

1. The rates filed by Chattanooga Gas Company on May 1, 1997, are denied;
2. For purposes of the rates herein, the annual test period shall be the historical test period for the twelve (12) months that ended September 30, 1996, with adjustments for attrition through September 30, 1998;
3. For purposes of the rates herein, the cost of equity shall be 11.06 percent and the cost of capital shall be 9.08 percent;
4. The request of the Company for an Acquisition Adjustment to Rate Base is denied;
5. The allocation factor for the financial reporting of corporate expense shall be based on customers and be updated within a rate case;
6. The request of the Company for an industrial tariff interruptible gas cost adjustment rider, a lost and unaccounted for provision and a daily balancing provision is denied;
7. The request of the Company for an increase in Reconnection and Service Establishment is denied;
8. The request of the Company to change the billing volume for outdoor lighting is approved;
9. The request of the Company to reduce the minimum daily volume to qualify for the firm transportation tariff is approved;
10. The proposal of the Company for industrial rate detariffing is denied;
11. The Agreement on a Rate Design negotiated among the Parties and submitted in a filing to the Authority on July 28, 1998, is approved;
12. The Agreement among the Parties to permit the Authority Staff and the Company to determine the details of the Weather Normalization Adjustment factors is approved;

13. The Company is directed to file tariffs with the Authority that are designed to produce a reduction of \$1,166,213 in revenue for service rendered;
14. The tariffs shall be filed not later than three (3) business days after the date of entry of this Order and shall be effective upon approval of the Authority;
15. Chattanooga Gas Company shall file any and other tariffs necessary to be consistent with this Order;
16. The Objection and Motion to Strike Request of Findings submitted by the Office of the Attorney General, Consumer Advocate Division is granted;
17. Any party aggrieved with the Authority's decision in this matter may file a Petition for Reconsideration with the Authority within ten (10) days from and after the date of this Order; and
18. Any party aggrieved with the Authority's decision in this matter has the right of judicial review by filing a Petition for Review in the Tennessee Court of Appeals, Middle Division, within sixty (60) days from and after the date of this Order.

Re: *Petition of Chattanooga Gas Company*
Docket No. 97-00982

Dear David:

Attached is a rate design proposal submitted on behalf of all the parties to this case. The proposal is complete except for calculations relating to weather normalization which, the parties agree, should be worked out between Chattanooga and the TRA's technical staff. The proposed tariff provides rate reductions for all customer classes and addresses the problem of bypass by large industrial users.

The proposed tariff has been reviewed by rate design experts from Chattanooga and AVI/CMA. Chattanooga does not oppose the proposed tariff. AVI/CMA agrees to the proposal. The Consumer Advocate's Office has also reviewed and agreed to the proposal. In order to meet the TRA's noon deadline for filing this proposal, counsel for Chattanooga and the Consumer Advocate, both of whom are out of town, have authorized counsel for AVI/CMA to file this agreement on behalf of all parties. The parties' rate design experts (Dan McCormac, Don Johnstone, and Lisa Howard Wooten) are available to answer any questions the TRA or its staff may have about this proposed rate design.

Respectfully submitted,

BOULT, CUMMINGS, CONNERS & BERRY, PLC

How Arbitrary Is "Arbitrary"? — or, Toward the Deserved Demise of Full Cost Allocation

By WILLIAM J. BAUMOL, MICHAEL F. KOEHN, and ROBERT D. WILLIG

The authors of this article observe that an effort to deregulate some of the activities of a regulated company while continuing to subject other activities to a rate of return ceiling may lead utility regulators back to a full allocation of cost approach to regulation which has been discredited by marginal and incremental cost analysis. In a series of hypothetical and actual examples they demonstrate the futility of efforts to allocate joint and common costs or investments between various services or products of the same firm. They conclude that if a firm is to be partially regulated and partially unregulated, rate base and rate of return as the basis of regulation must be abandoned.

Recent moves toward deregulation of a number of industries have, paradoxically, brought with them a resurgence in regulatory reliance upon the discredited accounting device referred to as "full allocation" or "full distribution" of the fixed and common costs of the regulated firm. Despite a number of reasoned moves in Congress and the courts in the direction of a marginal and incremental analysis that economics so clearly suggests, regulators seem vulnerable to entrapment into readoption of the full allocation approach by their attempt to deregulate some of the firm's activities while continuing to subject the remaining activities of the enterprise to a rate of return ceiling. Whenever there are costs and investments common to the regulated and the unregulated activities only some sort of arbitrary apportionment (allocation) of these between the two sets of activities can permit the

calculation of a number that *pretends* to approximate the "true" rate of return on the regulated outputs.

This article briefly reviews the burdens upon consumers and the public generally that are likely to result. However, its major purpose is to puncture the legend that a fully allocated cost calculation produces numbers approximating any substantive economic magnitudes. We will show that different and equally plausible allocation criteria yield shockingly different numerical results, so that by judicious choice of allocation criterion, the partisan calculator can make the process yield virtually any numbers he chooses (in advance) to obtain.

Full Allocation and Sequential Deregulation

If a rate base and rate of return standard is used to

William J. Baumol is professor of economics at Princeton University and director of the C. V. Starr Center for Applied Economics at New York University. He has been president of the American Economic Association and three other societies of economists. He is a member of the National Academy of Sciences and the American Philosophical Society. **Dr. Baumol** received a Bachelor of Social Science degree from the College of the City of New York and a PhD degree from London University. He is the author of several books and professional articles.

Michael F. Koehn is a principal of Analysis Group, Inc., an economics consulting firm. He also teaches economics at the University of California in Irvine. He is the author of several professional articles and a book on finance and regulation. **Dr. Koehn** received a bachelor's degree in economics from the University of California and a PhD degree from the Wharton School at the University of Pennsylvania.

Robert D. Willig is a professor of economics and public affairs at Princeton University. He is a member of the New Jersey Governor's Task Force on Electricity and has written, lectured, testified, and consulted widely on the subjects of industrial organization, government and business, and microeconomic policy. **Dr. Willig** received a PhD degree in economics and an MS degree in operations research from Stanford University, and an AB degree from Harvard University.

govern the regulatory process, there is really no alternative to full allocation of costs and investments, given a decision to divide products of a firm which are closely related in their production into an unregulated portion and a regulated one. Where the activities of a firm benefit from substantial common investments or substantial common outlays (or both), there is no way to calculate a rate of return for any or all of the company's individual activities, one by one. Indeed, the difficulty is not that we cannot determine these numbers, but that such numbers themselves are necessarily figments of the imagination. An example will make this clear.

Imagine two processes, each of which requires its own machine, each costing \$1 million, and that both processes require a superclean atmosphere which a \$3 million item of equipment can simultaneously provide for the two activities. The bulk of the firm's investment is obviously devoted to the air purifier, and its cost is therefore the key component in a calculation of the company's overall rate of return. But who other than a medieval theologian can pretend really to know what portion of the firm's air purifier investment is truly to be ascribed to each of the firm's products? The truth of the matter is that the \$3 million investment is ascribable totally to the two products together, and that no particular percentage of the investment may be ascribable more defensibly than some other percentage figure to either of the products by itself. But without knowing what portion of the firm's total investment is properly attributable to either product it is impossible to calculate a rate of return on either product by itself. Indeed, no meaning can really be given to the concept.¹

If regulatory rules nevertheless require the undefinable to be defined, the only option open to those who must comply with the rules is to adopt some arbitrary device, usually dressed up to give it an appearance of reasonableness — an arbitrary rule that divides up indivisible investments and costs. This, of course, is what full allocation means.

But an arbitrary division criterion produces just the sort of results the term "arbitrary" implies. Depending upon the conventional criterion chosen for the division of investments and costs, one will obtain widely differing results from the calculation. It is generally acknowledged that the result will be affected by this choice. But there seems to be an impression that any such calculation, if carried out with sufficient care, will yield a reasonable approximation to some underlying true figure. That impression is totally unfounded. We have already shown here that where the common component of cost and investment is substantial, there is no such thing as the "true" rate of return on a portion of the firm's activities. But, in addition, although it is not generally realized, changes in the basis of allocation can make an enormous difference to the results that emerge, as will be demonstrated presently. In other words, one can have

absolutely no confidence in the results obtained from any such calculation. Moreover, the numbers that emerge readily lend themselves to manipulation by any interested party through selective choice of basis of allocation.

Social Costs of Regulatory Reliance on Full Cost Allocation

As a result of the arbitrariness of full cost allocation, only increased problems for rational regulation, for the regulated firm, and for the public, can follow from any attempt at partial or sequential deregulation while continuing to control what purports to be the rate of return of the portion of the company that remains under regulation. As we have seen, such a course of action makes arbitrary allocation of investments and costs inescapable. Because of the arbitrariness of such a process and the extreme volatility of its results when the basis of allocation is changed, one can be confident that it will lead to a profusion of protracted disputes over the figures and the shares of the joint and common costs that are to be recovered from different groups of ratepaying customers of the firm.

In addition, as deregulation proceeds, increasingly fine definitions of services will undoubtedly have to be employed, and the demands upon the allocation processes will grow correspondingly. Such developments are likely to make the very process of allocation of joint and common outlays all but unmanageable by the firm or by the regulator.

But administrative difficulties are not the central issue. Rather, a number of other consequences of the full allocation process that are clearly detrimental to the public interest should be the main concern here. This is not the place to review the many unfortunate results of use of full allocation to regulate rates and earnings, since these have many times been described at length (and perhaps ad nauseum). We will only note that because the numbers that emerge from the process are indeed arbitrary, any prices determined by the regulator with their aid can only have a random relation to the prices that would emerge in competitive markets; i.e., the prices required if economic efficiency is not to be undermined.

In addition, the full allocation approach to price setting tends to foreclose any opportunity for the regulated firm to obtain adequate earnings. It is true that regulators who set rates on the basis of fully allocated costs (FAC) attempt to select a set of rates which, if realized in practice, will yield a viable return to the enterprise. But no regulator can force consumers to pay more than they are willing to pay, given the alternatives competition offers to them. As a result, in any regulated market (however defined) customers will end up paying the lower of two pertinent prices: that dictated by market forces, and that decreed by the regulator on the basis of a cost allocation.

If in some markets (as is normally the case) the FAC price is below the free market level, while in other markets the relationship is reversed, the regulated firm will be unable to charge the free market price in the former, and will be precluded from charging the FAC price in the latter. The net result tends to be a shortfall in overall revenues from the regulated services that the firm cannot make up for by high prices in the deregulated arenas, which will all presumably have been selected to be sufficiently competitive to prevent such overpricing automatically.

Arbitrariness of the Fully Allocated Cost Figures

As has been said, the obvious (but specious) way to go about the calculation of the profitability of a subset of the products of a firm is the adoption of some allocation procedure for the purpose. It is all too easy to concoct defenses for the approach. It is said to be "practical" and have a long period of usage behind it. But here, to paraphrase Disraeli, practicality consists in practicing the blunders of our predecessors. It is said that by careful and rational choice of an allocation criterion, taking account of the use to which the figures will be put, one can arrive at defensible calculations. Two examples making absolutely no extreme assumptions will demonstrate the error of this conclusion. The first example is hypothetical and is intended to make clear the source of the problem. The second example uses actual data from a very real enterprise.

Railroad regulation has been an arena in which many metaphysical disputes over the proper method of allocation have long been under way. Faced with the industry's heavy investment in track, which is a cost incurred in common on behalf of every type of traffic, a variety of allocation criteria have been advocated over the years, each criterion having been selected carefully to comport with the interests of its advocate. To minimize the appearance of arbitrariness "relative use" has usually been agreed to as the proper allocative criterion. But how should relative use be measured? By volume of shipments (number of cars)? By their relative weight (ton-miles)? By their relative value?

Clearly, when the shippers of lead try to prove they are being overcharged, they will advocate the use of bulk or value rather than weight as the proper standard on which to allocate investment, so that lead shipment will be assigned a small share of the responsibility for the railroad's track investment, and the calculated rate of return on lead shipments will be comparatively high. Similarly, precious metal shippers on a comparable mission can be relied on to find arguments against the use of value of shipment as the proper basis of allocation, while shippers of balsa wood will dependably argue that volume is a defective allocative criterion.

The consequences of the choice among such allocative

criteria are not minor. This will first be shown with the aid of the following hypothetical example:

Suppose (i) that a railroad's traffic from origin A to destination B is composed exclusively of shipments of lead, precious metals, and balsa wood; (ii) that its investment in track, signals, tunnels, et cetera along the way is \$100 million, with another \$10 million of specialized investment on behalf of individual products; (iii) that the railroad derives annual net revenues (revenues minus direct costs) from each product equal to \$3.2/3 million. Then its overall rate of return on investment will be 10 per cent; i.e., $[3 \times 3.2/3]/110$.

Table 1 shows the hypothetical bulk (boxcar loads), weight, and values of the three products' annual shipments as well as their direct investments, on the assumption that these investments are proportionate to number of boxcars used.

Next, Table 2 shows the investment assigned to each product if the \$100 million of track is allocated proportionately to carloads, weight, or value. The arithmetic is straightforward.

Table 3 shows the investment assigned to each product when the \$10 million of specialized investment is included in the allocation.

Finally, Table 4 shows rates of return, calculated by dividing each product's \$3-2/3 million revenue contribution by its assigned investment figures in Table 3.

Table 1

Basic Data for Hypothetical Railroad

Commodity	Carloads (000)	Weight (000 Tons)	Value (Millions)	Direct Investment
Lead	10.0	90	5	2.0
Balsa Wood	39.5	1	5	7.9
Precious Metals	0.5	9	90	0.1

Table 2

Allocated Investments (\$ Millions)

Commodity	Allocation Basis		
	Carloads	Weight	Value
Lead	20	90	5
Balsa Wood	79	1	5
Precious Metals	1	9	90
Total	100	100	100

Table 3

Total Assigned Investments
(\$ Millions)

Commodity	Allocation Basis		
	Carloads	Weight	Value
Lead	22.0	92.0	7.0
Balsa Wood	86.9	8.9	12.9
Precious Metals	1.1	9.1	90.1
Total	110.0	110.0	110.0

It is clear from Table 4 that the figures for balsa wood span the narrowest of the ranges for the three commodities. Yet, it is seen that by judicious choice of the allocation criterion its rate of return can be changed from a clearly inadequate 4.2 per cent (Column 1) to an excessive 41 per cent (Column 2). The precious metals figure is even more sensitive, being transformable from a low of 4.1 per cent to a high well in excess of 300 per cent. This, surely, is a most curious way to calculate the rate of return for a product line.

Such maleability of fully allocated costs and rates of return is not a mere artifact of our hypothetical example. Tables 5 and 6 represent numbers for T. Rowe Price Associates, a large mutual fund manager, and one of its money market mutual funds, with which the authors of this article recently had occasion to work.² Table 5 shows for the entire firm and for Prime Reserve Fund four sets of data which were used as the bases for our five allocations of those costs of the firm which were not directly attributable to any one or another of its mutual funds. These costs were, in turn, allocated by us on the basis

Table 4

Attributed Rates of Return on Investment
(Per Cent)

Commodity	Allocation Basis		
	Carloads	Weight	Value
Lead	16.7	4.0	52.4
Balsa Wood	4.2	41.2	28.4
Precious Metals	333.6	40.3	4.1

of (1) relative mutual fund revenues, (2) relative number of labor hours utilized, (3) relative amounts spent on wages, and (4) relative number of customers served. (Because costs increase sharply with number of customers served in the mutual fund industry, in contradistinction to the size of their transactions, number of customers is not an unpersuasive allocation criterion.) Finally, since each of the preceding allocation criteria is to some degree persuasive, we have provided a fifth hybrid criterion (5), the balanced factors allocation, which uses a judiciously selected weighted average of criteria (1) to (4). The method of selection of the weights and its purpose will soon be clear.

Table 6 shows the results. For example, for 1980 the calculations allege that the rate of return on investment earned by Prime Reserve Fund was a horrendously unprofitable - 125 per cent if number of customers was used as the allocation criterion, while that same mutual fund was found from an allocation based on wage costs to be earning a shockingly excessive 247 per cent on its capital.

Of course, if Prime Reserve were seeking to justify its rate of return none of the preceding methods would

Division A	8,338	57,343	114,607	217,027
Division A as a				
Percentage of Total Firm	3.4%	20.4%	32.7%	47.1%
Expenses Allocated to A	\$602	\$4,041	\$7,515	\$15,054
e) Balanced Factors Allocation*				
Entire Firm	NA	NA	NA	NA
Division A	NA	NA	NA	NA
Division A as a				
Percentage of Total Firm	NA	NA	17.7%	25.9%
Expenses Allocated to A	NA	NA	\$3,991	\$7,916

*This allocation of costs is based on a judicious assessment of the relative roles of number of customers, revenues, direct labor hours, and direct labor dollars, assigning these the respective weights in 1980 of 46.4 per cent, 20.1 per cent, 19.6 per cent, and 13.9 per cent; and in 1981 of 44.5 per cent, 19.8 per cent, 22.6 per cent, and 13.1 per cent. These weights relate to the relative size of each activity — operations, research, sales promotion, and portfolio management — as measured by direct costs and the use of an allocation rule, revenue, number of customers, et cetera, thought "best" to reflect the activity of each department.

Attachment 2

really serve the purpose, since some indicate that its earnings were far too low while others seem to imply the opposite. However, any clever advocate defending Prime Reserve position has a better choice — the balanced factors method, whose weights have indeed been selected judiciously — to show that the fund earned a most reasonable return on capital, 15.4 per cent in 1980 and 6.7 per cent in 1981. Such are the wonders of cost allocation.

Concluding Comment

The implications of the preceding data are clear. Fully

allocated cost figures and the corresponding rate of return numbers simply have zero economic content. They cannot pretend to constitute approximations to *anything*. The "reasonableness" of the basis of allocation selected makes absolutely no difference except to the success of the advocates of the figures in deluding others (and perhaps themselves) about the defensibility of the numbers. There just can be no excuse for continued use of such an essentially random or, rather, fully manipulable calculation process as a basis for vital economic decisions by regulators.

Endnotes

¹Of course, it is possible to calculate each product's incremental investment, incremental cost, and incremental return, but there is no rational ground on which to regulate the *earnings* of a particular company activity on the basis of any or all of those figures. There is no reason, for example, to claim that it is desirable

for all services to yield equal *incremental* rates of return.

²The following analysis was prepared on behalf of T. Rowe Price Associates in Schuyt N. Rowe Price Reserve Fund, Inc., United States District Court, Southern District of New York. The data and analyses are a matter of public record.

Reviewing the Market Value of Assets

The chief financial officers of 200 of this country's largest corporations acknowledged in a recent survey that they are now paying a great deal of attention to the highest-value use of their companies' assets. Nearly three-quarters of the officers polled by Temple, Barker & Sloane, Inc., at the end of last year indicated that their firms have adopted the practice of scrutinizing the market value of assets. Of those firms that perform market value studies, some 57 per cent do them annually, while another 14 per cent review asset value every few years. The remainder (29 per cent) focus attention on the issue "when needed."

"Unfortunately," said Dr. Michael Tennican, a senior vice president of the Lexington, Massachusetts-based general management consulting firm, "for some firms in the latter category, 'when needed' might be better stated as 'too late.' We are aware of a number of situations," he said, "where companies have seriously begun thinking about restructuring only *after* receiving a call from an outsider who has a desire to take over the task from incumbent management — and who has the shares and the financing required to press the point."

According to Dr. Tennican, pressures for improvement from boards of directors and threats of takeover from corporate raiders will continue to motivate large U. S. corporations to look for opportunities to reinvigorate profitability through restructuring. A key first step to improving profitability, he argues, is for the firm to examine expected returns on the market value of assets dedicated to each identifiable line of business.

"Since traditional accounting systems provide data primarily on historic asset costs rather than market values, corporations need to undertake separate periodic market value studies in order to create maximum value for their shareholders," Dr. Tennican explained. The TBS survey found that when asset value studies are performed, they are typically done (in 90 per cent of the cases reported) by line of business. Approximately 40 per cent of the companies that had performed such studies engaged in some form of restructuring following their reviews.
